Central Instrumentation Centre

Central Instrumentation Centre (CIC)

About:

Central Instrumentation Centre was established on 22nd Dec 2016 and operated by the department of ECE, to cater to product development, equipment maintenance, and support experimental research for various departments/centres of the VFSTR (Deemed to be university) by providing sophisticated instruments. It is equipped with various instruments necessary for testing and measuring and tools for service, maintenance, and repair works of all electronic equipment/appliances & teaching aid. Support for students and faculty across the university in the design and fabrication of instrumentation modules is provided by CIC.

Objectives:

The objectives of the CIC are to:

- Achieve excellence in instrumentation
- Maintenance of all Sophisticated Instruments of the University
- Repair & Service of Electronic equipment.
- Train students and faculty in instrument design and development
- Organizing training programmes to enhance the technical skills of scientific community

Outcomes:

- Quality improvement in instruments developed
- Extended life of the electronic systems
- Skilful students/faculty

Equipment list:

Major Equipment	
1.	Data Acquisition System DAQ6510/7700(Tektronics) – 800channels/second, 1 MS/s, 16 BitDigitizer
2.	Digital Multimeter (Tektronics) DMM6500 – 6 ½ Digit,
3.	RF Spectrum AnalyzerN9320B(Keysight)– Bandwidth 9 kHz to 3 GHz,
4.	Arbitrary Function Generator 33512B(Keysight) – 1 µHz to 20 MHz
5.	Multi Signal Oscilloscope MSO3024T(KEYSIGHT) – 16 digital channel, 200MHz, 2GS/s
6.	Moku Lock in Amplifier (Liquid Instruments) – 200MHz
7.	Scientific SM 6023 LCR Meter – 50 Hz to 100 kHz, 6 Digit Resolution
8.	Aadarsh Technologies Humidity Chamber 3CFT (90L) – 10°C to 60°C, 20RH to 75RH
9.	Multi-function calibrator Masibus UC 12
10.	Function Generator(APLAB) 2 MHZ
11.	Akademika Lab Solutions DSO 100MHz 1GS/s COLOR Digital storage oscilloscope with FFT
12.	USB-6211(NI) Bus-Powered M Series Multifunction DAQ Device
13.	My RIO-1900(NI) for student purchase WIFI and MSP Connector

14.	USB 9171(NI)single slot chassis
15.	USB 9237(NI) for Strain Measurement Input module.
16.	CAN interface bus compatible with my 19671RIO hardware platform.
17.	DAQ USB9181(NI) 4-Channel, SPST Relay Single slot chassis Data Acquisition System for Temperature and transport over Ethernet protocol.
18.	USB 9219(NI) 100 S/s/channel, 4-Channel C Series Universal Analog Input module for temperature module.
19.	USB IEEE 488(NI) GPIB HS Simulator and Instrument Simulator hardware bundle.
20.	Spectrum Analyzer Tracing Generator SN- EP160060 (GSAS) 3GHz
21.	PCB fabrication machine Eleven Lab (Entuple technologies) – Spindle Speed: 41,000rpm, Camera Monitoring System, working area of 229x320mm
Minor Equipment	
1.	Digital multimeter 17B+ (Fluke) – 3½ digit
2.	Gauss Meter GU 3001 (Lutron) – up to 3,000 mG, resolution 0.1 mG
3.	Clamp meter 317 (Fluke) – up to 600 A
4.	Panel meter SMP-72 (Meco) – 4 Digit, 0-1000V
5.	Infrared thermometer 62Max plus (Fluke) – -30°C to +650°C
6.	Lux meter 930P (Meco) – 0 to 2,00,000 Lux
7.	Sound meter SL 4030 (Lutron) – 30DB to 130DB, 31.5Hz to 8000 Hz
8.	Pressure switch KP 35(Danfoss) – -0.2 to 7.5 Bar
9.	Differential pressure calibrator(Magnalic gauge calibrator) PSI/PP1 (ACE) – 0 to 1410 mm.W.C
10.	Battery tester BM-63 (Meco) – 2,6,12V DC, 4-500 AH
11.	SMPS RS-15-5 (Mean well) – 5 VDC, 15W
12.	Digital differential pressure transmitter AI-DIGI-MAG-T (ACE) – Accuracy ±0.5 full scale
13.	Stereo Zoom MicroscopeSZB-45E Mag: 7x to 45x
14.	Digital Multimeter (APLAB) 3¾ Digit VC97
15.	Regulated DC Power Supply (APLAB) 0-32 V/2A
16.	Tachometer System Non-Contact Type tachometer-HTM-560
17.	Analog, Digital IC testers
Software	
1.	DAQMX driver software and Signal Express LE for Windows
2.	Lab View Academy Student Workbook for Student Use with Official Lab View Academy Program
3.	My DAQ - Student Kit - with Lab View & Multisim Student Edition
4.	PCB design software Cadence OrCADPCB 17.4 – 50 user licence
5.	Design prowith Converter and CAM – Importing design and controlling and setup PCB machine.
6.	Easy CAD for PCB design – Pattern creation, pattern drawing and editing
Consumables	
1.	**Sensors-** Temperature, RTD, ultrasonic, flex, capacitive, inductive, velocity, strain, piezoelectric, displacement, pressure, angle, force, accelerometer, PIR, Gyrometer, Fingerprint, RPM, AirQuality, Lidar, Water level,etc.

2.	**Actuators-** DC Motor, stepper motor, solenoidal valve, servomotor,etc
3.	**ICs-** ADC(TI-ADC),OP-Amps, Multiplexers, regulators, instrumentation amplifiers, etc
4.	**Discrete components-** Resistors, capacitors, diodes, transistors, led, Breadboards, etc
5.	**Tools-** Screw driver set, strippers, Gluegun, Tweezers, soldering gun, drilling machine etc

Services offered by CIC

Following are the services offered by CIC:

- Repair and Maintenance of Scientific Electronic and Electrical equipment
- Servicing of electronic devices
- Design of scientific instruments
- PCB design and component soldering for instrumentation
- Impedance, I-V, C-V measurements
- Electronic equipment testing under controlled humidity and temperature
- Support for Research and development activities for students and faculty

24th May, 2016

Recommendations of the committee for Establishment of Central Instrumentation Centre (CIC)

Ref: Letter dated 4th Mar 2016 for Establishment of Central Instrumentation Centre (CIC)

Following are the agenda points finalized by the members of internal committee for establishment of CIC:

1. The existing instrumentation lab (VTF-10) could be upgraded to CIC along with available instruments.
2. The following equipment need to be procured additionally:
    a. DAQ
    b. Regulated Power Supplies
    c. Digital multimeters
    d. Waveform generators.
    e. Soldering station & drilling machine.
3. Upgrade the facilities of CIC periodically.

1. Dr Usha Rani N
2. Dr B Seetharamanjaneyulu
3. Mr T Pitchiah
4. Ms. M Sarada
5. Mr.Y Ravi Shekhar
6. Ms. K. Annapurna
7. Mr. S Sivaji

Reg: Establishment of Central Instrumentation Centre (CIC)

To fulfill the instrumentation needs of university and based on the recommendations of the NAAC committee -2015, it has been decided that Central instrumentation Centre has to be established with new facilities.An internal committee has been constituted with the following members to identify and procure the equipment needed for the establishment of CIC.

1. Dr Usha Rani N
2. Dr B Seetharamanjaneyulu
3. Mr T Pitchiah
4. Ms. M Sarada
5. Mr.Y Ravi Shekhar
6. Ms. K. Annapurna
7. Mr. S Sivaji

VIGNAN'S UNIVERSITY

NAAC 'A'

About:

Central Instrumentation Centre was established by the department of ECE, to cater to product development, equipment maintenance, and support experimental research for various departments / centers of the university by providing sophisticated instruments. It is equipped with various instruments necessary for testing and measuring and tools for service, maintenance, and repair works of all electronic equipment/appliances & teaching aid. Support for students and faculty across the university in the design and fabrication of instrumentation modules is provided by CIC.

Objectives:

The objectives of the CIC are to:

- Achieve excellence in instrumentation
- Maintenance of all Sophisticated Instruments of the University
- Repair & Service of Electronic equipment.
- Train students and faculty in instrument design and development
- Organizing training programmes to enhance the technical skills of scientific community
- To allow outside users to utilize CIC equipment on a nominal payment basis.

Outcomes:

- 54 Intra Disciplinary projects (IDP) done by II, III & IV B Tech as part of their course.
- Designed and successfully implemented electronic part in Tree climbing robot project.
- One patent was filed.
- Patent published with title 'AUTOMATIC EYE BLINK DETECTOR USING NI MYRIO', Dr.N. USHARANI & Mr. Jhon William Carey Medithe.

Services offered by CIC:

Following are the services offered by CIC:

- Repair and Maintenance of Scientific Electronic and Electrical equipment
- Servicing of electronic devices
- Design of scientific instruments
- PCB design and component soldering for instrumentation
- Impedance, I-V, C-V measurements
- Electronic equipment testing under controlled humidity and temperature
- Support for Research and development activities for students and faculty

Equipment List

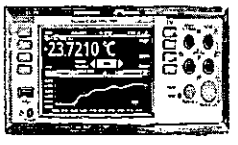
1. 6½-digit Data Acquisition AND System (KEITHLEY 6510) with 20 multiplexed channels & KickStart Instrument Control Software to quickly program a data acquisition test on a PC.
2. RF Spectrum Analyzer (Keysight N93208), 9 KHz to 3GHz.
3. Mixed Signal Oscilloscope (MSO) Keysight MSO3024T -200MHz, 4 Channel, 16 Digital Chann els, Memory depth of 4MPts. Update rate of 1,000,000 wfrms/s with standard segmented memory, 8.5-inch capacitive touch screen.
4. Arbitrary Function Generator (Keysight 335128) 20 MHz, 2-Channelwith Arb.
5. Liquid Instruments Moku: Lab Lock-In amplifier 200 MHz Range Along with touch screen apple iPad.
6. LCR Meter (Scientific 6023) Precision of LCR Meter -0.05% 50Hz-100KHz DCR Function, 6-digit resolution- for Impedance measurement
7. 6½-digit Bench/System Digital Multimeter (KEITHLEY DMM6500) with Scanning.
8. Humidity chamber with Temperature Range from 10° C to 60 °C +1 °C(tolerance) , Humidity Range up to 95% RH & 90 Ltr capacity.

Data Acquisition System

6½-digit DAQ6510 touchscreen provides simple configuration with visual and intuitive test setups to reduce setup and test time with 20 multiplexed channels.

Make a wider range of measurements:

- Voltage: 100 nV to 1000 V with 0.0025% basic DCV accuracy
- Current: 10 pA to 3A
- Resistance: 1 μÙ to 120 MÙ
- Capacitance: 0.1 pF to 100 μF
- Temperature measurement with thermocouples, resistance temperature detectors, and thermistors from -200°C to 1820°C
- 1 M sample/s, 16-bit digitizer with 7 million readings storage

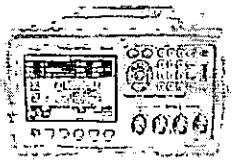


Fast PC automation with the KickStart Data Acquisition Application :

Use the KickStart Instrument Control Software to quickly program a data acquisition test on a PC. The software does not require programming; just enter a test setup using the menu screens. Then visualize your results in tabular and graphical formats.

LCR Meter

Description: LCR meter is a type of electronic test equipment used to measure the inductance (L), capacitance (C), and resistance (R) of an electronic component.[1] In the simpler versions of this instrument the impedance was measured internally and converted for display to the corresponding capacitance or inductance value.Usually the device under test (DUT) is subjected to an AC voltage source. The meter measures the voltage across and the current through the DUT. From the ra e the meter can determine the magnitude of the impedance. The phase angle between the voltage and current is also measured.



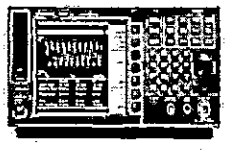
Features:

- Basic accuracy: 0.05%
- 6 digit reading resolution
- Maximum test frequency of 100 kHz
- 4.3" TFT LCD display
- Maximum test speed: 13 ms/time

Spectrum Analyzer

Description: A spectrum / signal analyzer measures the magnitude of an input signal versus frequency within the full frequency range of the instrument. The primary use is to measure the power of the spectrum of known and unknown signals. Given the challenge of characterizing the behavior of today's RF devices, it is necessary to understand how frequency, amplitude, and modulation parameters behave over short and long intervals of time.

Traditional tools like Swept Spectrum Analyzers (SA) and Vector Signal Analyzers (VSA) provide snapshots of the signal in the frequency domain or the modulation domain. This is often not enough information to confidently describe the dynamic nature of modern RF signals. To overcome these evolving challenges, it is crucial for today's engineers and scientists to be able to reliably detect and characterize RF signals that change over time, something not easily done with traditional measurement tools.

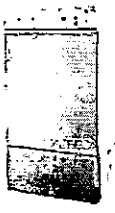


Specifications:

- Minimum non-zero span sweep time : < 10 ms
- Resolving power RBW : 10 Hz to 1 MHz
- Sensitivity DANL : -130 dBm, -148 dBm with preamp on
- Overall amplitude accuracy : ±0.5 dB
- Frequency : 9 kHz to 3 GHz
- Overall Amplitude Accuracy : ±0.5 dB
- Phase Noise @1 GHz (1 MHz offset) : -112 dBc/Hz
- Standard Attenuator Step : 1 dB
- Maximum Dynamic Range 3rd Order @1 GHz: 96 dB

Humidity Chamber

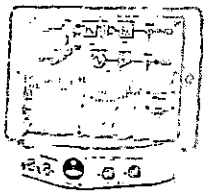
Description : An environmental test chamber artificially replicates conditions which machinery, materials, devices or components might be exposed to. It is also used to accelerate the effects of exposure to the environment, sometimes at conditions not actually expected.Chamber testing involves testing and exposing products to various environmental conditions in a controlled setting. Climatic Chamber testing and Thermal Shock testing are part of chamber testing. Climatic Chamber testing is a broad category of ways to simulate climate or excessive ambient conditions exposure for a product or a material under laboratory-controlled yet accelerated conditions.



Specifications:

- Temperature Range : 10° C to 60 °C +1 °C
- Relative Humidity : upto 95% RH
- Capacity : 3CFT(90L)

Lock - In Amplifier

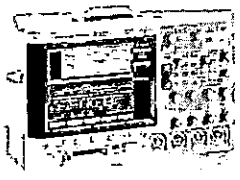


Description: A lock-in amplifier is a type of amplifier that can extract a signal with a known carrier wave from an extremely noisy environment. Depending on the dynamic reserve of the instrument, signals up to 1 million times smaller than noise components, potentially fairly close by in frequency, can still be reliably detected. It is essentially a homodyne detector followed by low-pass filter that is often adjustable in cut-off frequency and filter order. Moku:Lab's Waveform Generator enables users to generate two independent waveforms with a sampling rate of 1 GSa/s, a maximum frequency of 250 MHz and a output voltage range of ± 1 V into 50 ©. Select between sine, square, ramp, pulsed or DC waveform shapes. Modulate the phase, frequency or amplitude, or generate triggered bursts or sweeps from an internal or external source.

Features:

- Measure XY or Rè simultaneously relative to an internal or external reference
- Observe signals at different stages in the signal processing chain using probe points
- Demodulate signals at frequencies up to 200 MHz
- Reveal signals obscured by noise with more than 120 dB dynamic reserve
- Log data from any probe point at up to 1 MSa/s

MSO (Mixed Signal Oscilloscope)



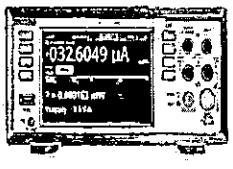
Description :A mixed signal oscilloscope (MSO) is a type of digital storage oscilloscope designed to display and compare both analog signals and digital signals. It has input channels for both analog signals and digital signals. Analog signals are displayed as voltage levels varying continuously over time. These voltage-versus-time waveforms are traditionally measured using oscilloscopes. Signals may be connected directly to the oscilloscope's analog input channels or connected through an oscilloscope probe.

In contrast, digital channels measure logic values (0 or 1). The determination of whether a signal represents 0 or 1 is based on a threshold value set by the user. Digital logic signals have traditionally been measured by logic analyzers, but for many tasks a mixed signal oscilloscope is more convenient. MSOs provide much of the basic capabilities of a logic analyzer, namely digital timing analysis.

Specifications:

- Bandwidth : 200MHz
- Channels : 4 analog channels
- Max sample rate : 5 GSa/s
- Display : 8.5-inch capacitive touch display
- Wfm update rate : > 1,000,000 waveforms per second

Digital Multi Meter

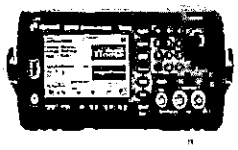


Description :DMMs, are used by electrical and electronic engineers to perform more advanced measurements and gain confidence in their designs. These instruments are extremely precise and have a variety of advanced functionality, including the ability to program automation, slow or speed up measurements to observe low-level or transient signal behavior, and interface with other instruments.

Features :

- 15 measurement functions including capacitance, temperature, and digitizing
- Expanded measurement ranges include 10 pA to 10 A and 1 µ&! to 100 M&!
- Large 5-inch (12.7 cm) multi-touch capacitive touchscreen with graphical display Large internal memory.
- store up to 7 million readings.
- Capture voltage or current transients with 1 MS/sec digitizer

Arbitrary Waveform Generator



Description: An arbitrary waveform generator (AWG) is a piece of electronic test equipment used to generate electrical waveforms. These waveforms can be either repetitive or single-shot (once only) in which case some kind of triggering source is required (internal or external). The resulting waveforms can be injected into a device under test and analyzed as they progress through it, confirming the proper operation of the device or pinpointing a fault in it. Unlike function generators, AWGs can generate any arbitrarily defined waveshape as their output. The waveform is usually defined as a series of "waypoints" (specific voltage targets occurring at specific timAes along the waveform) and the AWG can either jump to those levels or use any of several methods to interpolate between those levels.

Features:

- Amplitude ranges : 1 mVpp up to 10 Vpp
- sampling rate : 250 MSa/s
- amplitude resolution : 16-bit
- Waveform generator with arb capability
- THD : < 0.04%
- Jitter : < 40 ps

Applications:

Sensing & Instrumentation, Signal Processing, Test & Measurement, Medical

Estd. u/s 3 of UGC Act 1956
ACCREDITED BY NAAC WITH 'A' GRADE

Do's

- Lab attendance is mandatory.
- All the students must follow the proper dress-code.
- All the students must bring the lab records for every lab session.
- Do familiarize the procedures of the experiment before exercise in the lab.
- Follow all the written and verbal instructions carefully before starting the experiment.
- Always be sure that electrical equipment is turned in the off position before plugging into a socket.
- If any student has any problem in experimenting bring it to the notice of the faculty immediately.
- Any failure or break-down of equipment must be reported to the teacher immediately.
- Always be responsible in the laboratory.
- Keep your belongings at the designated area.
- Know all the operating procedures of safety equipment and their location.
- Arrange stools/chairs properly before leaving the lab.

Don'ts

- Don't eat and drink food items in the lab.
- Do not use mobile phones in the lab.
- Don't use the mouth for cutting wires, instead use cutter only.
- Do not be unattached when the experiment is going on.
- Do not meddle in other's experiments and distract, startle in the laboratory.
- Don't bring bags to the area of workbench.
- Don't use water if you find electrical fire, instead use the fire-extinguisher.
- Don't take away or misplace any equipment in the lab without any permission.

Safety rules:

- Be aware of all safety devices.
- If you notice any unsafe conditions in the lab immediately bring it to the notice of the faculty.
- If you notice the fire in your surroundings, immediately use the fire-extinguishers.
- In case of any injury use first-aid kit.

DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING

7th Sep, 2021

Central Instrumentation Centre (CIC)- Outcomes

1. 54 Intra Disciplinary projects (IDP) done by II, III & IV B Tech as part of their course.
2. 46 final year projects have been executed by the students in the last five years
3. Students have completed **200** projects that were displayed at various project expos
4. Designed and successfully implemented electronic control unit for Tree climbing robot project.
5. A patent has been granted for the **"A Novel Climbing Mechanism for Coconut Tree"** with patent number "2021102306" by IP Australia
6. Patent published with title **'AUTOMATIC EYE BLINK DETECTOR USING NI MYRIO'**, Dr.N USHARANI & Mr. Jhon William Carey Medithe.

Name of the few projects done in Central Instrumentation Center

- Smart City using IoT
- Tree climbing robot for coconut harvesting
- Polyhouse farming using IoT
- Smart water governing system
- Fire Fighting robot
- Advanced railway crossing system
- Automatic food dispensing system
- Smart home lighting
- Floor cleaning robot
- Smart helmet
- Health Monitoring Systems
- Line Following Robot
- Voice controlled Robot
- Hydraulic Wheel Chair

A PROJECT REPORT

ON

"COCONUT HARVESTING ROBOT"

SUBMITTED IN THE COMPLETE FULFILLMENT OF THE REQUIRMENT FOR THE DEGREE OF BACHELOR OF TECHNOLOGY

IN

ELECTRONICS AND COMMUNICATION ENGINEEERING

SUBMITTED BY

(Deemed to be University)

-Estd. u/s 3 of UGC Act 1956

2016-2020

DECLARATION

I hereby declare that the internship work entitled TREE CLIMBING ROBOTis being submitted to Vignan's Foundation for Science, Technology and Research (Deemed to be University) in partial fulfillment for the award of B.Tech degree in Electronics and Communication Engineering. The work was originally designed and executed by us under the guidance of Dr G N V R Vikram at Department of Electronics and Communication Engineering, Vignan's Foundation for Science Technology and Research (Deemed to be University) and was not a duplication of work done by someone else. We hold the responsibility of the originality of the work incorporated into this thesis.

Signature of the candidate

ORDER

Sub:-**Financial assistance for the project titled "Design and Development of Coconut Harvesting Robot" under the guidance of Dr. Ravi Kumar Mandava, Assistant Professor, Vignan's Foundation for Science, Technology and Research (VFSTR), Vadlamudi, Guntur-522213, Andhra Pradesh.**

Sanction of the President is hereby accorded to the approval of the above mentioned project at a total cost of **Rs.23,16,666/- (Rupees Twenty Three Lakh Sixteen Thousand Six Hundred Sixty Six only)** for a duration of three years. The detailed breakup of the grant for General & Capital Components are given below:-

General Component	:	Rs.21,95,166/-
Capital Assets	:	Rs.1,21,500/-
TOTAL	:	**Rs.23,16,666/-**

2. The sanction of the President is also accorded to the release of **Rs.8,36,822/- (Rupees Eight Lakh Thirty Six Thousand Eight Hundred Twenty Two only)** being the first instalment of grant under "General Component" for implementation of the above mentioned project. The item of expenditure for which the total allocation of **Rs.23,16,666/-** has been approved for a period of 36 months are given below:

Sl.No	Budget Head	1st year	2nd year	3rd year	Total
A	**Non-recurring**				
1.	Equipment	101500	20000	0	121500
	Sub-total (A)	**101500**	**20000**	**0**	**121500**
B	**Recurring**				
1.	Manpower : JRF-1 @ Rs. 31,000/- +16%HRA	431520	431520	431520	1294560
2.	Consumables	200000	75000	75000	350000
3.	Travel	50000	50000	50000	150000
4.	Demo/training programme/Testing	20000	10000	10000	40000
5.	Contingency/Other cost	50000	50000	50000	150000
6.	Overhead 10%	85302	63652	61652	210606
	Sub-total (B)	**8,36,822/-**	**6,80,172/-**	**6,78,172/-**	**21,95,166/-**
	Grand total (A+B)	**9,38,322/-**	**7,00,172/-**	**6,78,672/-**	**23,16,666/-**

3. This sanction is subject to the condition that the grantee organization will furnish to the Department of Science & Technology, financial year wise Utilization Certificate (UC) in the proforma prescribed as per GFR 2017 and audited statement of expenditure (SE) along with up to date progress report at the end of each financial year duly reflecting the interest earned/ accrued on the grants received under the project. This is also subject to the condition of submission of the final statement of expenditure, utilization certificate and project completion report within one year from the scheduled date of completion of the project.

4. The grantee organization will have to enter & upload the Utilization Certificate in the PFMS portal besides sending it in physical form to this Division. The subsequent/ final installment will be released only after confirmation of the acceptance of the UC by the Division and entry of previous Utilization Certificate in the PFMS.

12. Failure to comply with the terms and condition of the Bond will entail full refund with interest in terms of Rule 231 (2) of GFR 2017.

13. The expenditure involved is dubitable to Demand No.86, Department of Science & Technology for the year 2019-20:

3425	: Other Scientific Research (Major Head)
60	: Others
60.200	: Assistance to Other Scientific Bodes (Minor Head)
70	: Innovation, Technology Development and Deployment
70.00.31	: Grants-in-aid General for the year 2019-20 (Plan)
***(Previous**	: SSP-SEED-3425.60.200.08.11.31)

14. The amount **Rs.8,36,822/- (Rupees Eight Lakh Thirty Six Thousand Eight Hundred Twenty Two only)** will be drawn by the Drawing and Disbursing Officer DST and will be disbursed to Registrar, Vignan's Foundation for Science, Technology and Research (VFSTR), Vadlamudi, Guntur-522213, Andhra Pradesh. The bank details for electronic transfer of funds through RTGS are given below:-

7. "The grantee organisation will maintain separate audited account for the project and the entire amount of grant will be kept in an interest bearing account. For Grants released during F.Y. 2017-18 and onwards, all interests and other earnings against released Grant shall be remitted to Consolidated Fund of India (through Non-Tax Receipt Portal (NTRP), i.e. www.bharatkosh.gov.in), immediately after finalisation of accounts, as it shall not be adjusted towards future release of Grant. A certificate to this effect shall have to be submitted along with Statement of Expenditure / Utilisation Certificate for considering subsequent release of Grant/Closure of Project accounts."

8. As per rule of GFR 2017, it is mandatory for the grantee organization to purchase the equipment/consumables through the Government e-marketplace (GeM), to the extant availability there as the project involves Government funding.

9. DST reserves sole rights on the assets out of grants. Assets acquired wholly or substantially out of government grants (except those declared as obsolete and unserviceable or condemned in accordance with the procedure laid down in GFR 2017), shall not be disposed of without obtaining the prior approval of DST

10. The account of the grantee organization shall be open to inspection by the sanctioning authority and audit (both by C & AG of India and Internal Audit by the Principal Accounts Office of the DST), whenever the organization is called upon to do so, as laid down under Rule 226(1) of General Financial Rules 2017.

11. Due acknowledgment of technical support / financial assistance resulting from this project grant should mandatorily be highlighted by the grantee organization in bold letters in all publications/media releases as well as in the opening paragraphs of their Annual Reports during and after the completion of the project.

12. Failure to comply with the terms and condition of the Bond will entail full refund with interest in terms of Rule 231 (2) of GFR 2017.

13. The expenditure involved is debitable to Demand No 85, Department of Science & Technology for the year 2019-20.

3425 : Other Scientific Research (Major Head)
60 : Others
60.200 : Assistance to Other Scientific Bodes (Minor Head)
70 : Innovation, Technology Development and Deployment
70.00.35 : Grants for Creation of Capital Assets for the year 2019-20 (Plan)
*(**Previous** :SSP-SEED-3425.60.200.08.11.35)

14. The amount **Rs. 1,01,500/- (Rupees One Lakh One Thousand Five Hundred only)** will be drawn by the Drawing and Disbursing Officer, DST and will be disbursed to the Registrar, Vignan's Foundation for Science, Technology and Research (VFSTR), Vadlamudi, Guntur-522213, Andhra Pradesh. The bank details for electronic transfer of funds through RTGS are given below:-

Hi Ravi Kumar Mandava,

I am writing herein with reference to your innovative work entitled **An adaptive PID control algorithm for the two-legged robot walking on a slope**. As you are in the research field, we have approached to assist you in filing an Australian Innovation Patent for your research.

An innovation patent is different from the standard patent and is suitable for an invention with a short market life that might be superseded by newer innovations. The innovation patent is a relatively quick and inexpensive way to obtain protection for your new device, substance, method or process.

Term: Australian innovation patent lasts up to eight years.

Steps to Obtain the Australian innovation Patent:

Review of the Disclosure	Patent Attorney will review the disclosure and we will let you know the eligibility for the innovation patent	1-2 days
Preparation of Draft	An application will be drafted in accordance with the requirements of the patent act and claims, description, prior art details of the patents will be provided in the draft	5-6 days
Review	Applicant will review the innovation patent draft and provide his/her comments	1-2 days
Filing	Our team will file the innovation patent and provide filing receipt to the applicant	1-2 days
Review by Patent	The Australian patent office will review the	1-2 months

A Novel ClimbingMechanism for Coconut Trees

Authors: [1]Ravi Kumar Mandava, [2]Nanduri NarayanaRao, [3]G. N. V. R. Vikram

[1]Maulana Azad National Institute of Technology Bhopal, India.

[2,3]Vignan's Foundation for Science, Technology and Research, Guntur, India

Day by day, the usage of coconuts is increasing enormously in daily life. There are several problems that happened in the harvesting process due to height and trunk surface of the tree. It requires skilled labor to climb the long trees which becomes difficult and risk to the workers. Moreover, the harvesting of coconuts plays a very important role in agriculture and also a time takingprocess. It also plays as main role in the economy of many developing countries. Traditionally, this job is taken up by the socially and economically backward people in India. It also a risky job in which an accident might be fatal in some cases. It is also found that the people who engage in this job for several years faced issues related to their skin, foot and health problems. Also, as the new generation is becomingmore conscious about the social status, only a very few people select coconut harvesting as their career. So coconut harvesting is turned to be a big challenge in the agricultural field. Alternatives are to be identified to harvest the coconuts since the cutting process is difficult and risky. Up to now, researchers have developed various mechanisms for climbing the coconut trees but still it is operated by human beings. But, in the present research work, robots are proposed to replace human workers to eliminate the difficulties and risk and also reduce the time. It is proposed to design, develop and fabricate a novel tree climbing robot suitable for different kinds of coconut tree structures.

Researchers have developed different types of mechanisms and found various difficulties in the harvesting of coconuts. It may due the reason, tree cross sectional area may vary from one tree to another tree and it may vary the trunk diameter from top to bottom of the same tree. Moreover, the height of the tree is also another problem which plays an important role in control. Likewise, there are many problems that have to be considered while designing such a system. To overcome these problems proper communication channels have to be chosen for controlling the robot. In the present proposal the authors are planning to design, develop and fabricate the coconut harvesting robot which is a novel mechanism and fully automated and it does not require any human labor expect to control the robot from the ground. Figure 1 shows the climbing mechanism developed by the authors using model Creo (Modeling software). In this mechanism consists of one upper and one lower frame and the joining between these two frames using four

ORDER

Sub:-**Financial assistance for the project titled "Design and Development of Coconut Harvesting Robot" under the guidance of Dr. Ravi Kumar Mandava, Assistant Professor, Vignan's Foundation for Science, Technology and Research (VFSTR), Vadlamudi, Guntur-522213, Andhra Pradesh.**

Sanction of the President is hereby accorded to the approval of the above mentioned project at a total cost of **Rs.23,16,666/- (Rupees Twenty Three Lakh Sixteen Thousand Six Hundred Sixty Six only)** for a duration of three years. The detailed breakup of the grant for General & Capital Components are given below:-

General Component	:	Rs.21,95,166/-
Capital Assets	:	Rs.1,21,500/-
TOTAL	:	**Rs.23,16,666/-**

2. The sanction of the President is also accorded to the release of **Rs.8,36,822/- (Rupees Eight Lakh Thirty Six Thousand Eight Hundred Twenty Two only)** being the first installment of grant under "General Component" for implementation of the above mentioned project. The item of expenditure for which the total allocation of **Rs.23,16,666/-** has been approved for a period of 36 months are given below:

Sl.No	Budget Head	1st year	2nd year	3rd year	Total
A	**Non-recurring**				
1.	Equipment	101500	20000	0	121500
	Sub-total (A)	**101500**	**20000**	**0**	**121500**
B	**Recurring**				
1.	Manpower JRF-1 @ Rs. 31,000/- +16% HRA	431520	431520	431520	1294560
2.	Consumables	200000	75000	75000	350000
3.	Travel	50000	50000	50000	150000
4	Demo/training programme/Testing	20000	10000	10000	40000
5	Contingency/Other cost	50000	50000	50000	150000
6.	Overhead 10%	85302	63652	61652	210606
	Sub-total (B)	**8,36,822/-**	**6,80,172/-**	**6,78,172/-**	**21,95,166/-**
	Grand total (A+B)	**9,38,322/-**	**7,00,172/-**	**6,78,672/-**	**23,16,666/-**

3. This sanction is subject to the condition that the grantee organization will furnish to the Department of Science & Technology, financial year wise Utilization Certificate (UC) in the proforma prescribed as per GFR 2017 and audited statement of expenditure (SE) along with up to date progress report at the end of each financial year duly reflecting the interest earned/ accrued on the grants received under the project. This is also subject to the condition of submission of the final statement of expenditure, utilization certificate and project completion report within one year from the scheduled date of completion of the project.

4. The grantee organization will have to enter & upload the Utilization Certificate in the PFMS portal besides sending it in physical form to this Division. The subsequent/ final installment will be released only after confirmation of the acceptance of the UC by the Division and entry of previous Utilization Certificate in the PFMS.

5. If the grant has been released under capital head through separate sanction order under the same project for purchase of equipment(s), separate SE&UC has to be furnished for the released Capital head grant.

6. The grant-in-aid being released is subject to the condition that

(a) a transparent procurement procedure in line with the Provision of General Financial Rules 2017 will be followed by the Institute/Organization under the appropriate rules of the grantee organization while procuring capital assets sanctioned for the above mentioned project and a certificate to this effect will be submitted by the Grantee organization immediately on receipt of the grant.
(b) While submitting Utilization Certificate & Statement of Expenditure, the organization has to ensure submission of supporting documentary evidences with regard to purchase of equipment/capital assets as per the provisions of GFR 2017. Subsequent release of grants under the project shall be considered only on receipt of the said documents.

7. "The grantee organization will maintain separate audited account for the project and the entire amount of grant will be kept in an interest bearing account. For Grants released during F.Y. 2017-18 and onwards, all interests and other earnings against released Grant shall be remitted to Consolidated Fund of India (through Non-Tax Receipt Portal (NTRP), i.e. www.bharatkosh.gov.in), immediately after finalization of accounts, as it shall not be adjusted towards future release of Grant. A certificate to this effect shall have to be submitted along with Statement of Expenditure / Utilization Certificate for considering subsequent release of Grant/ Closure of Project accounts".

8. "Grantee Institute should also follow Rule 230 (17) of GFR, 2017 concerning reservation of SC/ST/OBC, if applicable."

9. As per rule of GFR 2017, it is mandatory for the grantee organization to purchase the equipment through the Government e-marketplace (GeM), to the extant availability there as the project involves Government funding.

10. Grantee organization is to adhere to the instructions of the Department of Expenditure guidelines for the travel budget head.

9. (a) DST reserves sole rights on the assets out of grants. Assets acquired wholly or substantially out of government grants (except those declared as obsolete and unserviceable or condemned in accordance with the procedure laid down in GFR 2017), shall not be disposed of without obtaining the prior approval of DST.

(b). DST reserves rights to close the project activity any time based on the review of progress of the project.
(c). A prior intimation to DST by grantee is must before leaving the country for attending conference/availing any short term fellowship abroad during the project tenure.

10. The account of the grantee organization shall be open to inspection by the sanctioning authority and audit (both by C & AG of India and Internal Audit by the Principal Accounts Office of the DST), whenever the organization is called upon to do so, as laid down under Rule 236(1) of General Financial Rules 2017.

11. Due acknowledgment of technical support / financial assistance resulting from this project grant should mandatorily be highlighted by the grantee organization in bold letters in all publications / media releases as well as in the opening paragraphs of their Annual Reports during and after the completion of the project.

25/02/2021

12. Failure to comply with the terms and condition of the Bond will entail full refund with interest in terms of Rule 231 (2) of GFR 2017.

13. The expenditure involved is dubitable to Demand No.86, Department of Science & Technology for the year 2019-20:

3425	: Other Scientific Research (Major Head)
60	: Others
60.200	: Assistance to Other Scientific Bodes (Minor Head)
70	: Innovation, Technology Development and Deployment
70.00.31	: Grants-in-aid General for the year 2019-20 (Plan)
*(**Previous**	: SSP-SEED-3425.60.200.08.11.31)

14. The amount **Rs.8,36,822/- (Rupees Eight Lakh Thirty Six Thousand Eight Hundred Twenty Two only)** will be drawn by the Drawing and Disbursing Officer, DST and will be disbursed to Registrar, Vignan's Foundation for Science, Technology and Research (VFSTR), Vadlamudi, Guntur-522213, Andhra Pradesh. The bank details for electronic transfer of funds through RTGS are given below:-

Institution Account Name	**Registrar, Vignan's Foundation for Science, Technology and Research (VFSTR), Vadlamudi, Guntur-522213, Andhra Pradesh**
Saving Account Number	**21890200000006**
Name of Bank	**UCO Bank**
RTGS/IFS Code	**UCBA0002189**
MICR Code	**520028104**

15. As per Rule 234 of GFR 2017, this sanction has been entered at S. No. 11 in the register of grants maintained in the Division for the scheme **(Scheme for Young Scientist and Technologists).**

16. This issues with the concurrence of IFD Vide their Concurrence Dy. No. **C/5764/IFD/2019-20** Dated 24.02.2020.

17. Niti Aayog Darpan Portal I.D. for the institute is **AP/2017/0153762.**

(57) Abstract :
The detection of eye blink plays a vital role in various applications of brain computer interface. The eye acts as a dipole consisting of cornea and retina, wherein the cornea is much more positive than the retina providing typically around fewer microvolts to around 100mv between them. When the eyelid slides over an eye it acquires potential of an eye. This potential varies with various factors like light intensity, nature of blinking. This potential can be acquired using electrodes positioned near to the ocular region, which is connected to bio signal amplifier and filters for signal processing. The developed signal is connected as analog input to the Mini System Port(MSP) of connector C in NI my RIO i.e. AI0/AI1. This has to be powered with external power supply and interfaced to a computer with USB. Fig.1

COMPLETE SPECIFICATION

(Section 10; rule 13)

Automatic Eye Blink Detector using NI myRIO

APPLICANT NAME: 1)USHA RANI NELAKUDITI

2) JOHN WILLIAM CAREY MEDITHE

NATIONALITY : INDIAN

ADDRESS :VIGNAN'S UNIVERSITY

VADLAMUDI - 522 213,

GUNTUR Dist., A.P., INDIA

The following specification particularly describes the invention and the manner in which it is to be performed:

Field of the invention

The present invention generally relates to the field of bio medical engineering and more specifically to the control of devices by the blink of the eye and its potential.

Background of the invention

There is research being performed to utilize the potential that is generated when the eyelid moves over the eye during the blink process for the control of the solid state devices through the brain eye coordination. When the eyelid moves over the eye as a result of the eye blink as a factor of high light intensity or dryness or moistness, the potential accumulated in the ocular region varies correspondingly which can be harnessed for the eye brain coordination of the device control.

An analysis of the prior art documents disclose that in an attempt to correlate a physiologic signal with brain coordination, Ulrika Svensson explored the use of the electrooculogram (EOG) in her thesis at the University of Linkoping. In general, the EOG comprises a record of the standing voltage of the retina, the layers of cells at the back of the eye that conduct vision processing. The EOG is correlated with eyeball movement and obtained by electrodes placed on the skin above and below, or left and right of, the eye. In Svensson's system, the use of two sensors complicate blink monitors processing through the addition of noise. Further, because Svensson employs primitive curve fit-, threshold- type algorithms for detection, the system has difficulty accommodating motion artifact or a large range of EOG morphologies.

But the present invention provides a simple and accurate system for the detection, capture, amplification, filtering and comparison of the eye potential for the brain eye coordination and for the application of the various real time utilities.

Summary of the Invention

The detection of eye blink plays a vital role in various applications of brain computer interface. The eye acts as a dipole consisting of the cornea and retina, wherein the cornea is much more positive than the retina providing typically around microvolts to 100mv between them. When the eyelid slides over an eye it acquires potential of an eye. This potential varies with various factors like light intensity, nature of blinking. This potential can be acquired using electrodes positioned near to the ocular region, which is connected to bio signal amplifier and filters for signal processing. The electrodes are kept near or around the ocular region for collecting and acquiring the potential of fewer micro volts to milli volts from the eye region. The amplifier amplifies the differential voltage between the active electrodes positioned in and around the ocular region and the reference electrode positioned on the lower region of the ear for further processing.The developed signal is connected as analog input to the Mini System Port(MSP) of connector C in NI my RIO i.e, AI0/AI1. This has to be powered with external power supply and interfaced to a computer with USB.

Object of the Invention

It is a primary object of the present invention to effectively utilize the potential generated by the eyelid movement over the eye during the blink process for the brain and external device interface applications.

It is another object of the present invention to collect the potential accumulated in the eye through the position of the plurality of electrodes in the ocular region for the collection of the few microvolts to 100mV.

It is also an object of the present invention to amplify the said potential by the bio amplifiers for the utilization in the brain and external device interface applications.

ABSTRACT

The detection of eye blink plays a vital role in various applications of brain computer interface. The eye acts as a dipole consisting of the cornea and retina, wherein the cornea is much more positive than the retina providing typically around fewer microvolts to around 100mv between them. When the eyelid slides over an eye it acquires potential of an eye. This potential varies with various factors like light intensity, nature of blinking. This potential can be acquired using electrodes positioned near to the ocular region, which is connected to bio signal amplifier and filters for signal processing. The developed signal is connected as analog input to the Mini System Port(MSP) of connector C in NI my RIO i.e, AI0/AI1. This has to be powered with external power supply and interfaced to a computer with USB.

Semi-Automated Polyhouse Cultivation Using LabVIEW

Prathiba Jonnala
School of Electronics, Vignan University
Vadlamudi, Andhra Pradesh, India

Sivaji Satrasupalli
School of Electronics, Vignan University
Vadlamudi, Andhra Pradesh, India

ABSTRACT
The optimum solution for polyhouse maintenance with minimum hardware and human effort is developed. By using this proposed model the temperature inside the polyhouse can be measured and controlled. For measuring the temperature inside the polyhouse LM35 sensor is used. And for maintaining constant temperature inside the polyhouse cooling fan is used. By using national instruments ELVIS-II board these hardware components are interfaced. The overall implementation is done with the help of LabVIEW programming. The proposed model provides the cost effective solution and has the advantage of easy installation. This model operates on the given threshold value of temperature. Whenever the temperature increases beyond the programmed value the cooling fan will starts working to lower the temperature without any further manual instruction. By provision of this automatic cooling function the human effort can be reduced to a maximum extent and cultivation can be performed in a fruitful way by providing optimum conditions for the growth of the plants. For this proposed model the threshold value temperature is taken as 35°C. The status of the environmental conditions inside polyhouse can be observed in the computer with the help of LabVIEW. The GUI provided by LabVIEW shows the value of temperature and its conditional parameters and status of cooling fan.

Keywords
DAQ, ELVIS II, LabVIEW, LM35, Polyhouse cultivation, Sensor.

1. INTRODUCTION
By using polythene sheets polyhouses are constructed to provide secured and controlled environment for the proper growth of the plant. As the plants grow in a controlled environment inside a polyhouse gives the advantage of high yield irrespective of environmental changes,climatic changes and also location. Also it provides suitable environment for the growth of the plant and protect the plants growing inside the polyhouse from abnormal weather conditions and from different plant diseases. The required environment for plants growth and increased productivity can be met by adopting polyhouse cultivation method. The automation of polyhouse is crucial for controlled the environment inside the polyhouse. For the proper growth of the plant and for high yield of production, the monitoring and controlling of different climatic parameters need to be maintained continuously. Few of the parameters that can be monitored and controlled are temperature, humidity,

Abstract - **In today, Smart cities are the contemporary urban IoT vision that are necessary for the people to maintain a sustainable standard of living. The violent increase in demand of smart city and Internet of Things had laid a foundation for many scientific and technological challenges exclusively for the improvement of reliable and efficient smart city that includes IoT. It is the hypothetical view of grouping distinct technologies to achieve smart and sustainable practices. The necessity of smart cities is to provide a livable infrastructure for the citizens, and offer requisite and progressive services. The most diagnostic claiming of the smart city is to provide a comfortable climate by improving advancement technologies and to address the troubles within a comprehensive and innovation –led world. Our proposed system will provide economic and efficient solution for the implementation of smart city which also provides the reliability and sustainability which enhances the way of living.**

Index Terms – Smart Cities, Internet of Things, Reliability, Sustainability.

I. INTRODUCTION

Internet of things is a network of interrelated connection between nodes through internet. Those nodes may be computing devices, mechanical and digital machines etc. that are provided with sensors, unique identifiers, with various protocols and which will have capability of inter communication among themselves without human-computer interaction [1]. It is estimated that there will be 21 billion IoT devices by 2025. This clearly indicates enormous advancements in IoT technology and its potential applications. IOT is paving a very good path for production and life in future. Among various applications of IoT, majority of them are interrelated to energy and environment specifically sustainable cities (smart city) [2]. Sustainable city which uses smart systems to that makes regular life of people comfortable and convenient and that city will have the ability to utilize all its resources properly in order to perform its specified operations which are assigned. Smart city uses various technologies such as smart waste management for managing the waste generated from a city ,Smart car parking system for proper parking maintenance of vehicles , smart street lights for the efficient use of energy, accident prevention system to prevent accidents of vehicles likewise smart fire detection system, smart gardening etc.

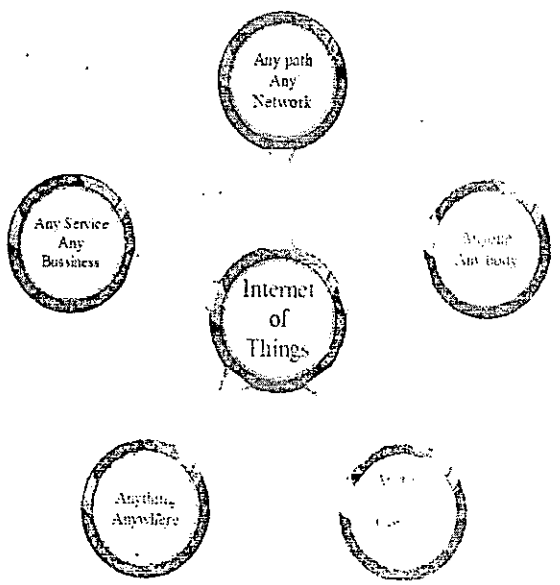

Fig.1. Definition of IoT

In all these technologies we use various sensors which will continuously measures and monitor various aspects and provide data at any point of time as per our requirement along with alarming facility at the time of emergency [3] or problem. For the entire system of smart city, sensors play a crucial role for its implementation without any flaws.

TABLE I. USAGE OF VARIOUS SENSORS

Name of the Sensor	Specifications	Application
Soil moisture sensor (FC-28)	Input voltage:3.3-5v Output voltage:0-4.2v Input current:35mA Output signal: both analog and digital	Smart gardening
Humidity sensor	Operating voltage:3.3 or 5v DC Measurement range: 20-95%RH,0-50 Resolution: 8 bit(temperature),8 bit(humidity)	Smart gardening
LDR module	Operating voltage:3.3-5v dc Operating current:15 mA Output digital:0-5v Output analog:0-5v based on light falling on LDR	Smart street lights

***Abstract*—A rapid change in the technologies can be seen in the fields of sensing, monitoring, communicating and actuating applications due to the evolution and development in the Internet of Things. Making use of this development in the era of polluted environment and evaporating agriculture, we designed a system to monitor the state of soil with sensors connected to Node MCU by analyzing and predicting the data with the help of the WEKA tool by using Raspberry Pi 3 as a broker for MQTT protocol. The key pay off of this system is to avoid human tampering with a low-cost design using IoT and MQTT to get Volumetric Water Content (VWC) in the soil. It is with the hope that this research can provide the current modernity in IoT for the most sophisticated research improvements.**

Keywords—sensors, internet of things, volumetric water content, raspberry pi 3, thingspeak cloud

I. INTRODUCTION

Agriculture is the main source of food in almost all countries [1] in the world. All these countries are still relying on labor work who doesn't know about the usage of specific pesticides for a specific crop. The hardest part to accept here is that labor is unaware of the amount of water to be used in a specific season. Here is the place where IoT acts as a kernel in watering the fields with the help of various sensors and antiquate data. With this, we can raise agricultural growth in the country gently. The communication between the IoT devices should be done by an IP address [2]. Nowadays, the world is associated with the internet around 5 billion objects. Almost 50 billion things or objects are connected to the web or internet in the year 2020. Fig. 1 illustrates the characteristics of IoT as shown below.

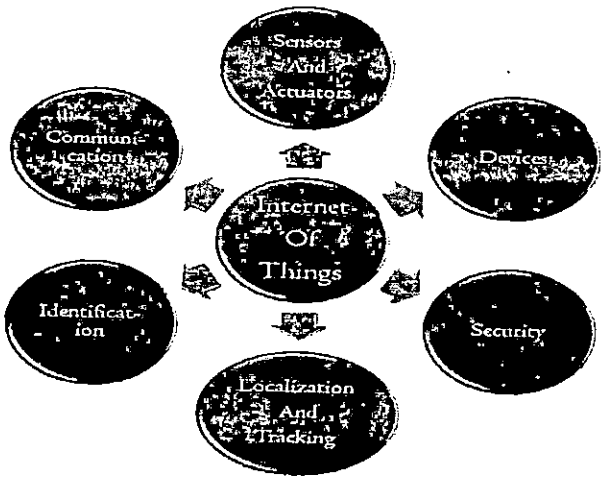

Fig. 1 Characteristics of IoT

II. RELATED WORKS

Vani et al. [4] have proposed in monitoring and measurement of agricultural parameters is vital in developing agriculture. The paper describes the design and development of the system for monitoring and measurement of soil moisture using the Android system and IoT Cloud and also the sensors for detection, Wi-Fi router for connection and a launchpad. The real-time data regarding the agriculture field is recorded by using Cloud technology and the Blynk app. The farmers can observe the field data anywhere and respond quickly depending upon the soil moisture. Rajeswari et al. [5] have explained to increase the better crop order and predict the crop yield based on the past crop order in the identical agriculture farm with the soil nutrients information (N, P, K) for the sustainable smart agriculture field. By keeping soil with health intact for minimizing the cost of fertilizer needs and improving crop production. Hence the expenses of agricultural products are controlled, and the farmers can access notifications in the form of current schemes for agriculture through mobile phones. Mekala et al. [6] have proposed Cloud computing with IoT technology. Li-Fi, when compared to Wi-Fi, provides good efficiency, security, and bandwidth. This paper describes two performance tasks like smart warehouse management which includes temperature and humidity maintenances. Warehouse management involves theft detection, spraying, weeding, animal, bird scaring, keeping vigilance, moisture sensing and so on. These activities are the remote-controlled process. Ali et al. [7] proposed a new Green IoT for real-time applications and economical based Precision Agriculture Monitoring System (PAMS) which is having less power consumption, less Green House Gas (GHG) emissions, and to help the farmers with an adaptable alliance. To monitor the changes in the parameters with their farms constantly from all over and anytime using their smartphones. Raikar et al. [8] proposed the amalgamation of Cloud computing (Cc) and the Internet of Things (IoT) for providing the finest solution to smart applications. With the help of wireless Sensor Networks (WSNs) and Raspberry Pi 3 are treated as one of the most essential peripherals in IoT and established a novel route of mature in the field of agriculture area. The increase in the performance of a smart irrigation system makes use of lightweight protocol like Message Queuing Telemetry Transport ((MQTT)) is to maintain effectively and protect the connection between the device/sensors and the users. Jino Ramson et al. [9] Explained on Sensor Networks based Water Quality Monitoring Systems for Intensive Fish Culture -A Review. This review describes the water quality monitoring in the all-inclusive fish culture concerns fostering fish in farms,

IoT Based Dust bin Monitoring System Using Node MCU

K. Lova Raju, *Member, IEEE,* Md. Abbas Hussain, KVNS. Umesh Chandra, V. Naga Phanendhra, D. Narendra

Vignan's Foundation for Science Technology & Research, Guntur, Andhra Pradesh, India .

Abstract- **These days it is being quite common to see that large portions of the detritus over the roadside, also in many localities, dustbins are not being cleaned in appropriate time. It results as creation of an unhygienic condition and expansive number of creepy crawlies and mosquitoes. The traditional procedure following these days is time taking and requires high human effort which is not anywhere comparable to present day innovations in any scenario . To overcome this issue, an undertaking called IOT based garbage monitoring system is proposed. The theme of this project is to portray savvy dustbins in view of arduino, ultrasonic sensor, Node MCU, Flame sensor and water level indicator which are interfaced with the mobile application through web server to put on a brilliant dustbin which will quantify the status of the dustbin. This system screens the trash canisters and educates about the level of waste gathered in the junk containers. This will likewise send status of bins to waste accumulation vehicles.**

Keywords: **Internet of Things, Node MCU, Ultrasonic Sensor, Flame Sensor, Water level indicator.**

I. INTRODUCTION

IOT, the internet of things means connecting the devices to the physical outside world with the functionality of ON and OFF switch with the help of Internet. This includes every Technology today from cell phones to wristbands and even every household things from TV's to washing machine. Objects in the physical world are provided with an IP address which helps to connect different objects like sensors etc.

IOT is the sunrise technology in the today's world. Till today there are more than 12 billion connected devices and there is a probability that the connectivity will increase to 50 Billion [1]-[4] till the end of 2020 this helps people to reduce their burden work. IOT is everywhere in the markets in even retail shops for monitoring and for the security. IOT changes our lifestyle and environmental growth with the healthy and effective manner.

This article is about the immediate cleaning of dustbin. Dustbin is the minimum basic need for every human [5] being and for the society it plays a vital role for the cleaning environment so it must be cleaned from time to time when it is full. In this project ultrasonic sensor and other sensors are placed which helps to detect the quantity of dustbin filled and also to detect the gas and water level quantity. If it reaches threshold level the message will be sent to the municipal office and they will take care of the dustbin immediately.

All the devices we are connected to the internet is a part of IOT. This is beneficial in growth of the infrastructure of the city and also reduces the cost burden to the government and on the other hand reduces the smell and mosquito growth thus helps to make the city free from diseases and insects by making City hygienic.

978-1-5386-8190-9/19/$31.00 © 2019 IEEE

II. LITERATURE SURVEY

The garbage monitoring in urban communities must be practical and effectively done. The different opinions was ahead in development and some of them officially actualized where successful project has not been proposed. So there is grip of knowledge done among various opinions and the review paper includes Study among several procedures followed for waste management in metropolitan areas utilizing Internet of things.

1. Authors are Vikrant Bhor, PankajMorajkar, MaheshwarGurav, DishantPandya. Title of this article is "Smart Garbage Management System", This article describes the level of dustbin is monitored with the help of ultrasonic sensor and it is interfaced with GSM module which will send message to the mobile phones.

2. Authors are S.S. Navghane, M.S. Killedar and Dr.V.M.Rohokale, Title of this article is "IoT Based Garbage and Waste Collection Bin", this article describes another strategy for waste management and administration. Dustbin is interfaced with the microcontroller and IR sensors which is interfaced with the wifi module to get the status of bin to the mobile phones.

3. Authors are Alexey Medvedev, PetrFedchenkov, ArkadyZaslavsky, Theodoros, Anagnostopoulos Sergey Khoruzhnikov.Title of this project is "Waste Management as an IoT-Enabled Service in Smart Cities". This report scrutinizes the different ways by which the refuse is gathering and also the difficulties in accumulation for the period 2005 to 2011 in creating nations.

4. Authors are Parkash1, Prabu. Title of this project is "IoT Based Waste Management for Smart City". The main component used in this project is IR sensor.

5. Authors are Krishna Nirde, Prashant S. Mulay, Uttam M.Chaskar. Title of this project is "IoTbased solid wastemanagement system for smart city". The main component usedin this project is GSM module and arduino.

6. Authors are Prof. S.A. Mahajan, Akshay Kokane, Apoorva Shewale, Mrunaya Shinde , Shivani Ingale. Title of this project is "Smart Waste Management System using IoT". The main component used in this project is rasberrypi with GSM module.

All the research papers and review papers that have gone through during this literature survey have utilised the resources and technologies related to Internet of things at the cost of power in some conventional form, but the proposed project has effective handling of refuse which can be watch over with the assistance of non-conventional energy resources.

2019 International Conference on Vision Towards Emerging Trends in Communication and Networking (ViTECoN)

Home Automation and Security System with Node MCU using Internet of Things

K. Lova Raju[1*], *Member, IEEE*, V. Chandrani[1], SK. Shahina Begum[1], M. Pravallika Devi[1],
[1]*Vignan's Foundation for Science, Technology & Research, Guntur, Andhra Pradesh, India*

***Abstract* - Internet of Things is composed of things that have unique identities and are connected to each other over internet. It is simply connecting and monitoring various devices and sensors through Internet. This paved the way for home automation and monitoring which makes human life more comfortable and secured. This paper describes the overall notion of the IOT based sensing systems and monitoring systems for implementing an automated home. The proposed prototype uses Node MCU board with internet being remotely controlled by Android OS smart phone. Node MCU is the heart of this system and it can perform as a micro web server and it acts as an interface for the wide range of hardware modules. To control lights, fans and other home appliances which are connected to the relay system, the system offers switching functionalities. It is also used for environmental monitoring by sensing and analyzing data about temperature and humidity. Another notifying feature in this system designed is the intrusion detection which is offered by this system using motion sensor. All these activities are controlled by using Android mobile app-Blynk.**

Index Terms – Node MCU, IoT, Blink app, Sensors, Security.

I. INTRODUCTION

IoT (Internet of Things) is the environment in which physical items interact with each other and user–to–computer communications, machine – to- machine communications are enabled and this communication is extended to "things" [1].The IOT devices have the capacity to exchange the contents depending upon the control of function in a specified manner. The benefit of IOT networks is that they can separate and create information by designating, filtering, handling and extracting the data. The authorities predicted that by the year 2020, around 50 billion devices will have internet connection [2].

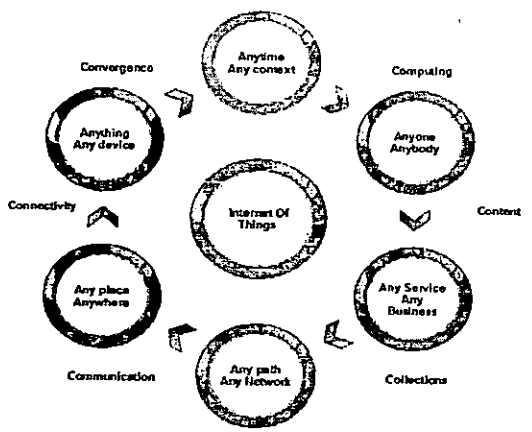

Fig. 1 Illustration of IoT

This article explains the various possibilities of connecting small devices and make it easier to the human life much easier. More than one device can be connected to a single network through the wireless fidelity technology.2.4GHZ is the frequency range which is officially agreed [3] for it.

IOT plays a virtual role of creating smart environments by connecting to the internet. The above Fig.1 represents the usage, maintenance, helpfulness, efficiency of IOT in rapidly growing technology at anywhere, any network, any time, any one [4].Also as IoT deals with large quantity of data received from different sensors which are deployed in the smart environment, sufficient care has to be taken for efficient maintaining, securing and for storing this collected data [5]. This system also works for the security purpose, if any inevitable incident happens, the user will immediately receive alert message in their smart phone.

II. RELATED WORK

Emerging technologies these days are playing a vital role in making human life automated. In this busy world human beings are absorbed with internet and automated devices. As a consequence automated homes or smart homes have become a buzz word and their implementation is increasing rapidly. Smart homes doesn't simply mean communication with hardware devices using internet, it should also include secured linking. We did a good research on the papers on Home automation and various designs implemented in the past. Some of the existing designs are briefed here.

Kumar Mandula in his paper implemented home automation in two ways using Bluetooth and using Ethernet. Arduino is used for programming and controlling various devices. Bluetooth is for short range communication. So, in smart home implemented using Bluetooth, one can operate the devices from home only within the vicinity of 10-20m.This limitation has been overcome in the next design using Ethernet. This paper discussed only the control of different electronic devices in home using mobile app but it did not include any security features.Mitul Sheth in his project discussed various possible devices that can be connected to Internet using Android App and different modes of using them; manual and automated mode. The Smart Santander Project deployed around 20 thousand sensors for measuring various parameters like temperature, moisture content, to detect levels of CO and NO2 gases for monitoring environment in gardens and parks.

III. PROPOSED SYSTEM

As the cost of the products is increasing in our routine life due to the development of technology a small idea called smart home project is introduced to reduce the cost and inconvenience. A smart home is able to control the home even though the person is not available in home [6]. The IoT system can be formed by the collaboration of MCU with other

IoT Technologies in Agricultural Environment: A Survey

K. Lova Raju[1] · V. Vijayaraghavan[1]

Published online: 28 April 2020

Abstract
Agriculture functions as an indispensable act in the world by meeting one of the basic needs of an individual named food, in spite of the fact that the assets are being reduced day by day and also various other problems arise irrespective of biases. In this scenario, unlike many technologies, when every other way fails to sense the routine of a crop, automation takes place by connecting to the invincible storages like cloud and streamlining the process by figuring its hardware and implementing user-friendly internet platform. IoT has set a benchmark in the technologies and has become a backbone to agriculture. This advancement in technology helps in farming automation, which helps in shaping a farmer's workspace, ensuring them with device management, connectivity management, and productivity as a result along with remote management. This paper gives an insight on introduction to IoT, agriculture IoT, emerging wireless technologies of IoT, architectures and applications of IoT.

Keywords Internet of things · Agriculture sensors · Cloud platforms · Wireless technologies · Hardware boards · Machine learning algorithms

1 Introduction

The INTERNET has undergone a drastic evolution in the last two decades. The transition from IPv4 to IPv6 is a piece of evidence for this dynamic change. The tag IoT is given to the connected physical devices on the internet by the executive director, Kevin Ashton at Auto-ID Labs, MIT [1]. According to [2] there will be 50 billion things linked to each other through the internet around the globe by the year 2020. Internet of things (IoT) is the technology for embedded systems wherein devices are allied to the internet consists of sensors, transducers, network connectivity and actuators used to gather and interchange information between themselves [3] as shown in below Fig. 2.

Equipment Details

Venue : VTF -10

S No	Name of the Equipment	Invoice number	Date of purchase	Supplier	Quantity	Price
1	Masibus-UC-12 Universal Calibrator	1056/01/2020-21	3-Nov-20	Instrukart holdings	1	110000
	Differential Pressure Gauge Calibrator				1	23000
	Digital Multimeter -Fluke 17B+				5	39195
	Gauss Meter-Lutron GU-3001				1	31000
	Infrared Thermometer - (-30 Deg C to 650 Deg C)				1	17000
	Clamp Meter				1	15960
	Lux Meter				1	2340
	Sound level Meter				1	4820
	Pressure Switch				5	4750
	Digital Differential pressure transmitter				2	14400
	Battery tester				1	1950
	Panel meter				5	2280
	Switched Mode Powe Supply				4	2880
2	Lock-in Amplifier 200 MHz Range	PTCS/043/20-21	1-Sep-20	PREMIER Test Cal Systems	1	525000
	LCR Meter				1	65000
3	Temp/Humidity chamber -Temperature range Range 10°C to 60°C +/-°C & Humidity Range upto 95% RH	AT/133/2020-21	1-Sep-20	AADARSH Technologies	1	110213
4	Digital Microscope	677	1-Sep-20	VAISHALI INDUSTRY	1	22000
5	Spectrum Analyzer, 9 KHz to 3GHz	IGST 20-002	18-Mar-20	SYNARGY MEASUREMENT TECHNOLOGIES PVT LTD	1	496211
	Mixed Signal Oscilloscope(MSO) 200MHz, 4 Channel, 16 Digital Channels				1	373098
	Arbitrary Waveform Generator 20 MHz, 2-Channel				1	187537

S No	Name of the Equipment	Invoice number	Date of purchase	Supplier	Quantity	Price
6	Digital Multi Meter with Scanning (DMM-[illegible]2 Digit)	PT-036/20-21	18-Mar-20	Peridot Technologies	1	80000

Sir,

Sub: VFSTR -Purchase Order for supply of equipment Instrumentation lab - Reg.
Ref: Your Quotation Ref. No. PT/TEK/VU/8738/1 dt. 17.03.2020.

With reference to your quotation and after final discussions, we hereby place a purchase order for the supply of equipment for Instrumentation Lab as per the details given below: -

Sl.No.	Part No.	Item Description	Qty.	Amount (Rs.)
1.	DAQ6510/7700	Data Acquisition and Multimeter system with 20 CH Multiplexer Card	01	1,57,000
2.	DMM6500	6-1/2 Digit Bench/System Digital Multimeter with Scanning	01	80,000
		Total (Rs.)		2,37,000
		GST @5%		11,850
		Total (Rs.)		2,48,850

The specifications of all the above equipment are as per the details provided by you through quotation.

Terms & Conditions:

1. Payment : 30% advance along with PO and the balance against delivery.
2. GST : 5% as added above against submission of DSIR certificate
3. Delivery Period : 2-4 weeks from the date of confirmed PO
4. Transportation : Free of cost
5. Warranty : 05 years

Copy to:

Sir,

Sub: VFSTR - Purchase Order to supply of Discrete Components – Reg.
Ref: Your revised Quotation no. Nil, dated 21.07.2020.

***

With reference to your quotation and after final discussions, we hereby place a purchase order for the supply of Discrete Components as per the specifications given below.-

Sl.No.	Item Description	Qty.	Amount (Rs.)
01	**Various Sensors** Various Acuators, ICS-ADC (TI-ADC), OP-AMPS, Multiplexers, Regulators, Instrumentation amplifiers **Discrete Components:** Resistors, Capacitors, Diodes, Transistors, Led (R,G,B) Multi colour led, Bread boards, Screw driver, Stripers, Gluegun with glue sticks, Tweezwers etc.	52 Items (List enclosed)	1,52,295
		Grand Total Incl GST (Rs.)	1,52,235

The specifications of all the above equipment are as per the details provided by you through quotation.

Terms & Conditions:

1. Payment terms : 100% payment against delivery & after verification of the components by University Officials.
2. Delivery Period : within one week from the date of receipt of order
3. Transportation : Free of cost
4. Warranty : Test guarantee on Hardware boards
