

22BEAS210 MACHINE DESIGN

Hours Per Week :

L	T	P	C
1	2	0	2

PREREQUISITE KNOWLEDGE: Fundamentals and working of Design of different machine elements.

COURSE DESCRIPTION AND OBJECTIVES:

This course deals with the design of different machine elements. The objective of this course is to make the students to familiarize with the various steps involved in designing the shape and dimensions of engineering components with quality functional and strength requirements.

MODULE-1

UNIT-1

4L+4T+0P=8 Hours

STATIC LOAD & THEORIES OF FAILURE :

Introduction: Meaning of design, Phases of design, design considerations, Common engineering materials and their mechanical properties. Design against static load: Types of loads and stresses, modes of failure, factor of safety, Theories of failure, selection and use of failure theories.

UNIT-2

04L+12T+0P=16 Hours

DYNAMIC LOAD :

Design against fluctuating load: Stress concentration and factor, Reduction of stress concentration. Fluctuating stresses, Fatigue failure, Creep, Endurance limit, Low cycle and high cycle fatigue, Notch sensitivity, Endurance limit, Design for finite and infinite life. Soderberg, Goodman and Modified Goodman diagram, Gerber Equation, Fatigue design under combined stresses.

MODULE-2

UNIT-1

2L+4T+0P=6 Hours

JOINTS:

Design of knuckle joint, cotter joint, Design of bolted: Joints loaded in shear and bolted joints subjected to eccentric loading. Design of welded joints subjected to static loads.

UNIT-2

6L+12T+8P=18 Hours

SPRINGS :

Design of helical and leaf springs, Design of shafts under torsion and combined bending and torsion.

SKILLS:

- ✓ Assemble the components of an engine.
- ✓ Part drawing of machine elements.
- ✓ Design of rivets, bolts and cotter joints.
- ✓ Design of spur and helical gears.

COURSE OUTCOMES:

Upon successful completion of this course, students will have the ability to:

CO No.	Course Outcomes	Blooms Level	Module No.	Mapping with POs
1	Apply a fasteners such as rivets, bolts and cotter joints properly in machines and real life practice according to the given load conditions.	Apply	1	1, 2, 3, 4
2	Apply design concepts for the components subjected to static and cyclic loading.	Apply	1	1, 2, 3, 4
3	Understand, the design procedure and selection of materials.	Understand	1	1, 2, 9, 10
4	Analyze power transmitted by shafts and couplings, also can design it.	Analyze	2	1, 2, 9, 12
5	Evaluate stress and load along with deformations of various types of springs.	Evaluate	2	1, 2, 5, 12
