6. Three phase semi and fully controlled rectifiers with R and RL load using MATLAB/Simulink.
7. Boost chopper using MATLAB/SIMULINK.
8. Buck chopper using MATLAB/SIMULINK.
9. To study the operation of Switch-Mode DC-DC BUCK Converter
10. To study the operation of Switch-Mode DC-DC flyback Converter

17PE003 ELECTRIC DRIVES - I

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	36

WA/RA	SSH/HSH	CS	SA	S	BS
05	05	05	05	05	10

Course Description and Objectives:

This course deals with the basics understanding of main principles of DC drives, various modes of operation, control from converters and choppers.

Course Outcomes:

Upon successful completion of this course, the student should be able to:

a. Select and implement the drives for industrial processes.

b. Design scalar control drive for industrial application.

c. Implement various variable speed drives in electrical energy conversion systems.

SKILLS:

- The ability of taking decision over the design aspect of digital IC for a particular application increases.
- Skill of Designing new techniques for critical parameters in digital IC design like power is improved.
- Circuit and switch level simulation and verification in design tool skill acquired.

UNIT – I **L- 09**

Modeling of DC Machines: Theory of operation-Equivalent Circuit and Electromagnetic Torque-Electromechanical Modeling-State space modeling-Block diagram and Transfer functions

UNIT – II **L- 09**

Single Phase Controlled Converter DC Motor Drives: Principle of DC Motor Speed Control-Armature control-Field Control-armature and field controls. Single –phase semi converter and single-phase full converter fed Separately excited DC motor- for continuous and discontinuous modes of operation-Problems

UNIT – III **L- 09**

Three Phase Controlled Converter DC Motor Drives: Three-phase semi converter and three-phase full converter Separately excited DC motor for continuous and discontinuous modes of operation-Problems-Four Quadrant Operation using Dual Converters-Control modeling of three-phase converter-Two quadrant Three Phase Converter Controlled DC Motor Drive- Transfer Functions of the subsystems

UNIT – IV **L- 09**

Design of Controllers: Current controller-First order Approximation of Inner Current Loop- speed controller-Simulation of one quadrant DC Motor Drive-The Motor equations-filet in the speed feed back loop-Speed Controller- Current Reference Generator-Current Controller-Flow Chart for Simulation.

UNIT – V **L- 09**

Chopper controlled DC Motor drives: Principle of operation of the chopper – four quadrant chopper circuit – chopper for inversion – chopper with other power devices –model of the chopper – input to the chopper – steady state analysis of chopper controlled DC motor drives – rating of the devices - Closed loop operation of DC Motor drives- Speed controlled drive system current control loop – pulse width modulated current controller – hysteresis current controller – modeling of current controller – design of current controller.

ACTIVITIES:

- *Simulate single phase converter fed DC drive using PWM technique.*
- *Simulate three phase converter fed DC drive using SPWM technique.*
- *Controlling the speed of DC motor using Ward Leonard technique.*
- *Simulate chopper fed DC drive with dynamic braking.*

LABORATORY EXPERIMENTS

List of Experiments Total Hours-36

1. Speed control of DC motor using single phase half wave rectifier.
2. Speed control of DC motor using three phase half wave rectifier.
3. Speed control of DC motor using single phase full wave rectifier.
4. Speed control of DC motor using three phase full wave rectifier.
5. Speed control of DC motor using three phase SCR module.
6. Speed control of DC motor using IGBT power module.
7. Speed control of PMDC motor using PID controller.
8. Speed Control Of PMDC Motor Using Single Phase 4 Quadrant Chopper
9. Speed control of DC motor using ward-Leonard method.
10. Braking of DC motor using Plugging and rheostatic braking methods.

17PE005 FLEXIBLE OF AC TRANSMISSION SYSTEMS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
05	05	05	-	05	10

Course Description and Objectives:

This course deals with the fundamental concepts of FACTS technology which are emerging in the area of power systems. The objective of this course is to understand the role of FACTS technology in delivering quality power at bulk levels.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

a. Understand the importance of FACTS technology.

b. Analyze different FACTS devices in Transmission system.

c. Bring out the advantages of FACTS technology.

d. Design of FACTS controllers for different Power system applications.

SKILLS:

- Analyze the performance of given transmission system with and without FACTS technology.
- Review the static devices for series and shunt control.
- Select suitable FACTS device for specific power quantity/quality.
- Identify suitable location of FACTS controller for given transmission system.

ACTIVITIES:

- *Survey on FACTS devices existed in India.*
- *Simulation of Series FACTS Controllers using MATLAB.*
- *Simulation of Shunt FACTS Controllers using MATLAB.*

UNIT – I **L- 12**

Introduction: Power Flow in AC Systems, Loading capability Limits, Dynamic stability considerations, controllable parameters, basic types of FACTS controllers.

UNIT – II **L- 12**

Voltage Source Converters: Single phase and 3-phase full wave bridge converters, transformer connections for 12, 24, 48 pulse operation, 3 level voltage source converters, PWM converters.

UNIT – III L- 12

Static Shunt Compensation: Objectives of shunt compensation, Voltage in stability and its prevention, power oscillations and damping, controllable VAR generation, variable impedance type VAR generators.

UNIT – IV **L- 12**

SVC and STATCOM: Dynamic performance, transient stability enhancement with SVC and STATCOM- operating principle – V-I characteristics.

UNIT – V **L- 12**

Series Compensation & UPFC: Series capacitive compensation, transient stability improvement, Thyristor controlled series capacitor (TCSC), thyristor control power angle regulator (TCPAR), Unified power flow controller.

TEXT BOOKS:

17PE007 MODELING AND DYNAMICS OF ELECTRICAL MACHINES

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
05	05	05	-	05	10

Course Description and Objectives:

This course deals with the basics of electromechanical energy conversion and enables them to be acquainted with the mathematical modeling of various types of machines and the dynamics related to speed control of these machines

Course Outcomes:

Upon successful completion of this course, the student should be able to:

a. Design induction machine for starting, accelerating and braking w.r.to rotor resistance.

b. Analyze different control theories.

c. Model and simulate AC machines for further studies.

d. Utilize BLDC and SRM motors.

SKILLS:

- Able to understand the principle of coenergy.
- Able to understand the working of basic two pole machine.
- Able to transform a machine between reference frames.
- Able to analyze induction and synchronous machine.

ACTIVITIES:

- *Mathematical modeling of induction machine.*
- *Mathematical modeling of synchronous machine.*
- *Mathematical modeling of BLDC.*
- *Mathematical modeling of SRM.*

UNIT – I **L- 12**

Basic Principles of Electrical Machine Analysis

Operation and Steady State Behavior of Electrical Machines: Magnetically coupled circuits Electro-mechanical conversion – Principles of energy flow - Steady state equations of dc machines - rotating field theory – operation of Induction motor – operation of Synchronous motor – power angle characteristics.

UNIT – II **L- 12**

Theory of Two Pole Machine

Elements of generalized theory Basic two pole machine, Transformer and speed voltages in the armature, Kron's primitive machine, Analysis of Electric Machines.

UNIT – III **L- 12**

Reference Frame Theory

Linear transformation in machines-Invariance of power, transformation from a displayed brush axis, Reference theory Transformation from 3 phases–to-2 phase, (á-â and d-q transformation), Physical concept of Park s transformation. Transformation between reference frames.

UNIT – IV **L- 12**

Modeling & Analysis of Asynchronous Machines

Poly phase Induction Machines- Mathematical Modeling of Induction Machines. Voltage and torque equations in machine variables, Induction machine dynamics during starting and braking – Induction machine dynamics during normal operation

UNIT – V **L- 12**

Modeling & Analysis of Synchronous Machines

Synchronous motor – circuit model of a three –phase synchronous motor, flux linkages voltage equations–parks transformation to d,q,0 variables, Electromechanical equation –Motor operation – generator operation – small oscillations – general equations for small oscillations

17HS001 RESEARCH METHODS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

Objective of the course is to enable research scholars to have a general understanding of research methods and application of statistical tools in the analysis and interpretation of findings and guidelines for report writing.

UNIT - I

Introduction: Nature and Importance of research, the role of business research, aims of social research, research process, types of research. Data Base: discussion on primary data and secondarydata, probability and non-probability sampling techniques.

UNIT-II

Research Design: Meaning of research design. Functions and goals of research design. Questionnaire and Schedule.

UNIT – III

Measurement and Scaling Concepts: Attitude measurement, levels of measurement and types of scales, criteria for good measurement. Measures of central tendency, measures of dispersion,measures of variation, Correlation and Regression. Statistical Inference. Tests of significance for small samples, t-test, Chi-Square test and ANOVA-one way and two way classifications. Discriminate analysis, cluster analysis, conjoint analysis

UNIT-IV

Technical Report Writing: Pre-writing considerations, Thesis writing, formats of report writing, Formats of publications in Research Journals. Technique of Interpretation, Precaution inInterpretation, Significance of Report writing, Different steps in writing Report, Layout of the Research Report, Types of Reports, Report Format, Typing Instructions, Oral Presentations.

UNIT-V

Research Ethics and Morals: Issues related to plagiarism, collaborative models and ethics, Acknowledgements. *Intellectual Property Rights:* copyrights.

17HS002 EMPLOYMENT ORIENTATION PROGRAM

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Preamble:

It is common knowledge that students opting for the Masters Programme after B.Tech do so either because they have been unsuccessful in securing employment after their Bachelors or because they have not crystallized their career plan. Hence, students opting for M.Tech are found to be deficient not only in the technical knowledge but also in their communication skills and overall personality. There is a need to groom them and shape them into employable resources.

Program Objectives:

i. To impart employability skills to M.Tech. final students by honing their interpersonal and presentation skills.

ii. To equip them with the latest tools and techniques for effective communication through discussions, group work, presentation exercises, assignments, projects etc.

iii. To impart training for their overall personality development and shape them into confident, positive and ambitious professionals.

Course Contents

The course content, designed for 50 Hrs will comprise two modules:

- Communication skills & Overall personality improvement (10 * 2.5 = 25 Hrs)
- Pedagogy of Engineering Subjects & Making Project Presentations (10 * 2.5 = 25 Hrs)

Rationale for the Programme

On a more holistic view of higher education, the term “academic development” refers to development of multiple aspects of a student’s personality under this EOP for M.Tech

students, different types of development are envisaged like personal, interpersonal skills, career development and life planning. “Development” in the engineering education

according to national accreditation bodies like NBA and NAAC is understood to happen through activities and programmes designed to improve the ability to work to teams, express themselves confidently to their peers and present their views boldly before an audience and

get things accomplished through management of men and materials. This programme will improve student’s overall communication skills and raise his/ her potential as an employee graduate.

About this Programme

The 50 Hrs course will be rolled out in two spells of 25 Hrs each with the help of in-house and invited experts. It is aimed at improving the presentation skills in general and teaching ability of the M.Tech students in particular. AFD will seek the cooperation of all the Deans, HoDs and senior professors as subject experts, mentors from the departments to provide the essential knowledge and skill inputs for the trainees so that the course outcomes can be realized.63

Expected Outcomes:

Having gone through the 50 hrs rigorous training on presentation skills, pedagogy and overall personality grooming, the trainees will get equipped to face any interview confidently, make short and effective presentations during interviews and gain the confidence to handle engineering topics and perhaps also develop an aspiration for a career in teaching.

The trainees will be assessed for a total of 50 marks, which will be incorporated into the II year project marks. The summative assessment will be carried out by a special panel constituted for the purpose in consultation with the Dean, Evaluation and respective HoD.

- 5 Marks for attendance
- 5 Marks for formative assessment
- 40 Marks for summative assessment

17PE002 DIGITAL CONTROL OF POWER ELECTRONICS

Hours Per Week :

L	T	P	C
3	-	2	5

Total Hours :

L	T	P
45	-	36

WA/RA	SSH/HSH	CS	SA	S	BS
05	05	05	05	05	10

Course Description and Objectives:

This course deals with the concept of digital principles, digital instrumentation setup to control various power electronics based drives and the recent trends in digital instrumentation.

Course Outcomes:

Upon successful completion of this course, the student able to:

a. have basic concepts of Digital Signal Processing.

b. have better knowledge about DSP controllers in converters applications .

c. have better knowledge about DSP controllers in induction motors and other drives.

SKILLS:

- Able to understand analysis of basic concepts of digital controller
- Able to understand realization of PWM signals using DSP.
- Able to acquire a skill of understanding control of converters using DSP.
- Able to acquire a skill of understanding control of drive using DSP.

ACTIVITIES:

- Design of digital controller for buck DC-DC converter for battery charging application.
- Design of digital inverter for UPS.
- Design of digital voltage regulator .

UNIT – I **L- 09**

DSP Controllers: Introduction to TMS DSP controllers – C2xx DSP CPU and instruction set – Mapping external devices to the C2xx core and the peripheral interface – General purpose Input/ Output functionality – Interrupts – ADC – Event Managers.

UNIT – II **L- 09**

Digital PWM Generation Schemes: Signal analysis, Digital PWM generation schemes, Realization of different PWM's using DSP's.

UNIT – III **L- 09**

DSP BASED Control of Converters: DSP based – Implementation of Switched mode regulators–Boost –Buck-Boost, Flyback and Forward converters.

UNIT – IV **L- 09**

DSP BASED Control of Induction Motors : Park and Clarke's transformations. Space Vector Pulse Width Modulation. DSP-based vector control of induction motors.

UNIT – V **L- 09**

DSP BASED Control of Special Machines : DSP based control of stepper motors, DSP-Based control of permanent magnet brushless DC machines,DSP-based control of permanent magnet synchronous machines.

LABORATORY EXPERIMENTS

List of Experiments Total Hours-36

1. To study the speed control of PMDC motor using Micro2812 and IPM in open loop mode.
2. To study the speed control of BLDC motor using Micro2812 and IPM in closed loop mode.
3. To study the speed control of PMSM motor using Micro2812 and IPM in open loop mode.
4. To study the speed control of PMSM motor using Micro2812 and IPM in closed loop mode.
5. To study the speed control of induction motor using Micro2407 and IPM in open loop mode.
6. To study the speed control of induction motor using Micro2407 and IPM in closed loop mode.
7. To study the space analysis of switched mode DC-DC Buck converter using MATLAB.
8. To study the space analysis of Switched mode DC-DC Boost converter using MATLAB.
9. Design of digital PWM using MATLAB.
10. To study the space analysis of Switched mode DC-DC flyback converter using MATLAB.

17PE004 ELECTRIC DRIVES - II

Hours Per Week :

L	T	P	C
3	-	2	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	36	05	05	05	05	05	10

Course Description and Objectives:

This course deals with the introduction on operation and performance of Induction motor, Synchronous motor and brushless DC motor and their speed control technique.

Course Outcomes:

Upon successful completion of this course, the student should be able to:

a. Derive dynamic model of ac motor.

b. Compare scalar and vector control of induction motor.

SKILLS:

- Able to reduce the rotor copper losses using slip power recovery scheme.
- Able to design a speed controller for induction motor.
- Able to design a speed controller for synchronous motor.
- Able to choose a drive for different industrial applications.

ACTIVITIES:

- *Design of VFD for irrigation application.*
- *Simulate open loop v/f control of induction motor.*
- *Simulate Static Scherbius and Kramer drive.*
- *Simulate sensor less vector control of induction motor.*

UNIT – I **L- 09**

AC Machines for Drives: Induction Machines- torque production – equivalent circuit analysis – speed torque characteristics with variable voltage operation, variable frequency operation, constant v/f operation – variable stator current operation – induction motor characteristics in constant torque and field weakening regions.

UNIT – II **L- 09**

Control and Estimation of Induction Motor Drives : Scalar control voltage fed inverter control- open-loop volts/Hz control-speed control slip regulation – speed control with torque and flux control current controlled voltage fed inverter drive – current fed inverter control – independent current and frequency control- speed and flux control in current –fed inverter drive- Volts /Hz control of current-fed inverter drive -Slip power recovery drives – static Kramer Drive – Phasor diagram- torque expression – speed control of a Kramer Drive – Static Scherbius Drive –modes of operation.

UNIT – III **L- 09**

Vector or Field Oriented Control of Induction motor drives: DC Drive analogy-Principles of Vector control-vector control methods – direct vector control –Introduction to DTC.

UNIT – IV **L- 09**

Control and Estimation of Synchronous Motor Drives: Synchronous motor and its characteristics – control strategies – constant torque angle control-unity power factor control constant mutual flux linkage control- Flux weakening operation – maximum speed – direct flux weakening algorithm – constant torque mode controller – flux weakening controller – indirect flux weakening –maximum permissible torque – speed control scheme – implementation strategy – speed controller design.

UNIT – V **L- 09**

Brushless DC Motor Drives: Three-phase full wave brush less dc motor – sinusoidal type of brush less dc motor – current controlled blushless dc motor servo drive.

LABORATORY EXPERIMENTS

List of Experiments Total Hours-36

1. Speed control of three phase induction motor.
2. Speed control of BLDC motor.
3. Speed control of induction motor.
4. Speed control of three phase slip ring induction motor using MATLAB.
5. Speed control of universal motor using cyclo converter.
6. Multilevel inverter using MATLAB.
7. SPWM controlled Multi level inverter fed Induction Motor speed control.
8. SVPWM controlled Multi level inverter fed Induction Motor speed control.
9. To study the speed control of PMSM motor using Micro2812 and IPM in open loop mode.
10. To study the speed control of PMSM motor using Micro2812 and IPM in closed loop mode.

17PE006 HVDC TRANSMISSION SYSTEM

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
05	05	05	-	-	10

Course Description and Objectives:

This course deals with the characteristics of solar radiation, its global distribution, and conversion methods of solar energy to heat and power, design and application of solar photovoltaic systems for power generation on small and large scale electrification.

Course Outcomes:

Upon successful completion of this course, the student should be able to:

a. Understand the HVDC advantages and types of HVDC links.

b. Understand the Rectifier and inverter operation and characteristics.

c. Understand the DC power flow and firing angle control methods.

d. Understand the concept of MTDC systems and Harmonics

e. Understand the concept of over voltages and protection.

SKILLS:

- Able to understand importance of HVDC transmission over HVAC transmission.
- Able to understand the operation and control of converters.
- Able to acquire a knowledge of harmonics and elimination in HVDC systems
- Able to understand the converts faults and protection.

ACTIVITIES:

- o Draw the Complete Diagram of HVDC system.
- o Draw the wave forms and characteristics of Rectifier and Inverter
- o Draw the Firing Angle Control diagram of HVDC system.
- o Design Low and High pass filters.
- o Draw the over voltage and over current protection diagrams.

UNIT – I **L- 12**

Introduction& types of HVDC Links

Introduction to HVDC transmission, Comparison between HVAC and HVDC systems - Economic, technical- Power Handling Capabilities of HVDC Lines and reliability, limitations, Types of HVDC links - Monopolar,Bipolar and Homopolar links, Components of HVDC transmission system. Applications of HVDC lines, Basic Conversion principle.

UNIT – II **L- 12**

Converter Operation & Analysis

Analysis of HVDC Converters- Rectifier and Inverter operation of Graetz circuit without and with overlap angle. Complete Equivalent circuit of HVDC link. Complete characteristics of converter as Rectifier and Inverter. Analysis of 12-pulse converter. Power flow in HVDC Links.

UNIT – III **L- 12**

Control of HVDC Converter & Systems

Basic principles of HVDC system control, necessity of control in HVDC link, power reversal, Basic controllers - constant current and constant extinction, power control, high level controllers. Firing angle control- Individual phase control and equidistant firing angle control. Summary of converter control.

UNIT – IV **L- 12**

MTDC Systems, Harmonics and Filters

Multi-terminal DC links and systems- series, parallel and series parallel systems, their operation. Harmonics in HVDC system - Characteristic and uncharacteristic harmonics - Troubles due to harmonics – Harmonic filters - Active and passive filters - Reactive power control of converters.

UNIT – V **L- 12**

Over voltages, Converter Faults and Protection in HVDC Systems

Over voltages due to disturbances on DC side, AC side & internal converter side. Converter faults-misfire, arc through, commutation failure, over current protection - valve group, and DC line protection. Over voltage protection of converters, surge arresters.

17PE006 DESIGN OF POWER ELECTRONIC SYSTEMS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	05	05	05	05	05	10

Course Description and Objectives:

This course introduces the design of auxillary components used to support a power electronic circuit such as magnetic, thermal and protective elements. The objective of course is to analysis and design of inductors, transformers, heat sinks and driver circuits for converters.

Course Outcomes:

The student will be able to:

- specify various magnetic components for power semiconductor devices.
- specify design criteria (power, efficiency, ripple voltage and current, harmonic distortions, power factor) for a converter circuit.
- design driver circuits for converter.
- design of heat sink for power electronic devices.

SKILLS:

- *Design of gate driver circuits for different power semi conductor switches.*
- *Design of suitable flyback converter for an application.*
- *Design of suitable forward converter for an application.*
- *Design of suitable buck-boost converter for an application.*

ACTIVITIES:

- o *Design of Gate driver circuits for different power semi conductor switches.*
- o *Design flyback converter for Laptop charger*
- o *Design flyback converter for LED lighting system*
- o *Design flyback converter for Mobile phone charger*
- o *Design forward converter LED lighting system*
- o *Design forward converter Laptop charger*
- o *Design forward converter Mobile phone charger*

UNIT - 1 **L-12**

Design of Magnetics Components: Concept of magnetic materials , Core and copper winding, Thermal considerations of magnetic materials.

UNIT - 2 **L-12**

Design of Inductors: Analysis and design of specific Inductor, Inductor design procedure, Numerical problems.

Design of Transformers: Analysis and design of specific transformer, Eddy currents, Transformer leakage inductance, Transformer design procedure, Numerical problems.

UNIT - 3 **L-102**

Gate and Base Driver Circuits: Different driver circuits - DC coupled drive circuits, Electrically isolated drive circuits and cascode connected drive circuits; Design of thyristor drive circuit, Power device protection in drive circuits.

UNIT - 4 **L-12**

HEAT SINKS: Control of semiconductor device temperature, Heat transfer by conduction, Heat sinks, Heat transfer by radiation and convection.

UNIT - 5 **L-12**

DESIGN OF CONVERTERS: Design of single phase full bridge AC/DC converters, Design of DC-DC converters - Buck, Boost, Buck-boost, Flyback and forward converter.

COURSE CONTENTS

I SEM & II SEM

17VL001 ANALOG IC DESIGN

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

With an emphasis on CMOS technology, device models are briefly reviewed and developed further to cover channel-length modulation, sub threshold and short channel effects, as well as device parasitic capacitances. Integrated-circuit DC biasing techniques are presented starting from simple to more complex current mirrors, leading to analysis and design of current and voltage references. Temperature and power supply sensitivity, as well as absolute and mismatch parameter variations are introduced.

Course Outcomes:

- Develop an understanding of device and circuit theory sufficient to estimate the low and high frequency behavior of linear circuits, including noise.
- Develop an intuition for analog circuit behavior in both linear and nonlinear operation.
- Develop an ability to parse large circuits and systems into smaller, analyzable subunits, analyze them, and then apply the understanding gained from that process to analyze the system as a whole, including for noise and variation.
- Implement a circuit or subsystem at the transistor level to solve an open-ended problem and effectively communicate the constraints and critical aspects of that system.

SKILLS:

- Analog circuits design and verification techniques
- Detailed knowledge of the complete analog circuits design and analysis flow.

ACTIVITIES:

- *Current mirrors and Amplifiers.*
- *Frequency response analysis of Op-Amps.*
- *Able to do noise analysis.*

UNIT –I

CMOS device fundamentals: Basic MOS models, device capacitances, parasitic resistances, substrate models, transconductance, output resistance, frequency dependence of device parameters.

UNIT –II

Current Mirrors and Single stage amplifiers: CMOS current mirror, Common source amplifier, common drain amplifier or source follower, Common gate amplifier, Source degenerated current mirror, High output impedance current mirrors; Casode current mirror, Wilson current mirror, Cascode gain stage , MOS differential pair

UNIT –III

Frequency Response of Amplifiers: Miller effect, Common Source amplifier, Source follower amplifier, Common gate amplifier, Cascode gain stage.

UNIT –IV

Feedback topologies and Noise: Input mixing, Output sampling, Noise: Statistical characteristics, types of noise, Noise summation, Noise spectral density, White noise, 1/f or flicker noise, Noise bandwidth.

UNIT – V

CMOS Operational Amplifiers: Classification of Op Amps, Design of Op Amps, Compensation of Op Amps, Performance parameters, Design of two-stage Op Amps, Gain boosting, common mode feedback, Input range, slew rate, Power supply rejection, Noise in Op Amps. Stability and frequency Compensation, Buffered Op-amps, High speed / Frequency Op-amps, Differential output op-amps, low noise and low voltage op-amps.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS

I) Design and simulate the following analog circuits.

1. Verify the characteristics of nMOS and pMOS Transistor
2. Common Source Amplifier
3. Common Drain Amplifier
4. Common Gate Amplifier
5. Current Mirror
6. Cascaded Current Mirror
7. Differential Amplifier
8. CMOS Op-amp single Stage
9. Two stage operational amplifier
10. Cascade Amplifier
11. Folded Cascode amplifier
12. Push Pull Amplifier
13. Current Controlled Voltage source

II) Layouts

TEXT BOOKS:

1. Behzad Razavi, Design of Analog CMOS integrated circuits, McGraw-Hill International edition, 2002.
2. D. A. Johns and Martin, Analog Integrated Circuit Design, John Wiley, 1st edition 1997.
3. Paul B Gray and Robert G Meyer, Analysis and Design of Analog Integrated Circuits, 5th edition, Wiley, 2009.
4. Phillip E.Allen and Douglas R.Holberg, CMOS Analog Circuit Design, Oxford University Press, 1st edition, 2007.

REFERENCE BOOKS:

1. R Gregorian and G C Temes, Analog MOS Integrated Circuits for Signal Processing, John Wiley,1st edition, 1986.
2. R L Geiger, P E Allen and N R Strader, VLSI Design Techniques for Analog & Digital Circuits, McGraw Hill, 3 rd edition, 1990.

17VL003 DIGITAL IC DESIGN

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

- To learn the basic MOS Circuits
- To learn the MOS Process Technology
- To understand the operation of MOS devices.
- To impart in-depth knowledge about analog and digital CMOS circuits.

Course Outcomes:

Upon successful completion of this course student should be able to:

Upon successful completion of this course student should be able to:

- Analyse the operation of CMOS.
- Analyse the design rules and layout diagram.
- Design of low power Adders and Multipliers.
- Analyse the physical design process of VLSI design flow.
- Design of CMOS Memories.

SKILLS:

- The ability of taking decision over the design aspect of digital IC for a particular application increases.
- Skill of Designing new techniques for critical parameters in digital IC design like power is improved.
- Circuit and switch level simulation and verification in design tool skill acquired.

UNIT – I

CMOS Inverter: Introduction to MOS transistor, V-I Characteristics, Electrical Parameters, Static behaviour, switching Threshold, Noise Margins, Robustness revisited, Dynamic behaviour: Computing the capacitances, propagation delay, propagation delay from a design perspective, power,energy and energy delay.

UNIT – II

Combinational Logic Design: Introduction, Static CMOS Design: Complementary CMOS, ratioed logic, pass transistor logic dynamic CMOS Design: Dynamic logic, speed and power dissipation of dynamic logic, signal integrity issues in Dynamic design, cascading dynamic gates.

UNIT – III

Sequential Logic Design: Introduction, static latches and registers: The Bistablility principle, multiplexer based laches, master-slave edge-Triggered register, low-voltage static laches, Static SR Flip-flop, dynamic laches and registers, dynamic transmission, Gate Edge - triggered registers, CMOS NORA-CMOS True single - phase clocked register (TSPCER).

UNIT – IV

Timing Issues in Digital Circuits: Introduction, Timing classification of digital systems, synchronous design, Self-Timed circuit design, synchronizers and arbiters.

UNIT – V

Digital Integrated System Building Blocks: Introduction, Adders, Multipliers, Shifters, Memories, ROM, RAM, Internal structure, ROM 2 D Structure, SRAM, DRAM.

ACTIVITIES:

- *Discussing different case studies like real design examples*
- *Implementing existing design tool and verifying the response of that particular design IC.*
- *Taking a particular design and doing all steps in VLSI design flow.*

DIGITAL IC DESIGN LAB

List of Experiments

1. Design of Inverter and all logic gates
2. Design and Simulation of Full adder
3. Design and Simulation of Serial Binary Adder, Carry Look Ahead Adder.
4. Design of SRAM and DRAM
5. Design of pseudo logic gates
6. Design of DCVSL logic gates
7. Design of flip flops: SR, D, JK, T
8. Design of edge triggered registers
9. Design of barrel shifter
10. Design of Multiplier

Note: Implementing the above designs on Circuit level/ RTL level in Cadence/Xilinx and FPGA/ CPLD kits.

TEXT BOOKS:

1. Jan M. Rabaey, Anantha Chandrakasan and Borivoje Nikolic., Digital Integrated Circuits: A Design Perspective, Second Edition, **Pearson Education India,** 2003
2. Ken Martin, Digital Integrated Circuit Design, Oxford University Press, 1st edition, 1999.

REFERENCE BOOKS:

1. Neil H. E. Weste and D. M. Harris, CMOS VLSI Design, Third Edition, 2010. IEEE Trans Electron Devices, IEEE J.Solid State Circuits, and other National and International Conferences and Symposia, 29 December 2017

17VL005 VLSI TECHNOLOGY

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

- To understand the Fabrication of ICs and purification of Silicon in different technologies.
- To impart in-depth knowledge about Etching and deposition of different layers.
- To understand the different packaging techniques of VLSI devices.

Course Outcomes:

Upon successful completion of this course student should be able to:

- The ability to use metallization techniques to create three dimensional device structures and devices.
- The ability to know methodology to fabricate an IC's.

SKILLS:

ü Ability to apply knowledge on different fabrication steps and design of different technology circuits using MOSFETS.

ü Ability to utilize a System approach to design a chip and operational performance.

UNIT – I

Crystal Growth, Wafer Preparation, Epitaxy and Oxidation : Metallurgical Grade Silicon, Electronic Grade Silicon, Czochralski crystal growing, Silicon Shaping, Etching, Polishing, Chemical Cleaning, gettering treatment, Vapor phase Epitaxy, Epitaxial Evaluation, Growth Mechanism, Introduction to Oxidation Techniques.

UNIT – II

Lithography, Deposition,Diffusion and Ion Implantation : Optical Lithography, Electron Lithography, Deposition process, CVD, Poly-silicon, structure, properties of Silicon Dioxide, Annealing, Furnace Annealing.

UNIT – III

Metallization, VLSI Process Integration and Packaging : Physical Vapor Deposition (PVD), NMOS IC Technology, CMOS IC Technology, BICMOS IC Technology, Packaging, packaging types and Packaging Design Considerations.

UNIT – IV

Introduction to MOS Technology and Electrical Properties : Introduction to MOS technology, Basic MOS transistors, MOS transistor operation, Drain current Vs voltage derivation, MOS Transistor parameters: threshold Voltage, gm, gds, pass transistor, NMOS inverter, Various Pull ups, Determination of pull up to pull down ratio for an NMOS inverter, CMOS inverter, DC Characteristics, Bi-CMOS inverter, Latch up in CMOS circuits.

UNIT – V

VLSI Circuit Design Processes and Circuit concepts and characterization : VLSI Design Flow, MOS Layers, Stick diagrams, Design rules, Layout generation- nMOS, CMOS, Bi-CMOS, Sheet Resistance, Standard unit of capacitance, Delay estimation, Power dissipation, Interconnect, Design margin, Scaling.

TEXT BOOKS:

1. S.M.Sze, *VLSI Technology*, 2nd edition, McGraw Hill, 2003.
2. Kamran Eshraghian, Eshraghian Dougles and A. Pucknell, Essentials of VLSI circuits and systems, 1st Edition. PHI, 2005.

REFERENCE BOOKS:

1. Amar Mukherjee, *Introduction to NMOS and CMOS VLSI System Design*, 1st edition, PHI, 2000.
2. James D Plummer, Michael D. Deal and Peter B. Griffin, *Silicon VLSI Technology: Fundamentals Practice and Modeling*, 1st edition, PHI, 2000.
3. Wai Kai Chen, *VLSI Technology*, 1st edition,CRC press, 2003.
4. Rainer Waser ,*Nano Electronics and Information Technology* , Wiley VCH – April 2003. AND *.S.K. Ghandhi, VLSI Fabrication Principles, John Wiley Inc., New York, 2nd edition, 1983.*
5. Nandita Das Gupta, *VLSI technology,* NPTEL Courseware.
6. Neil H.E.Weste and D.M.Harris, CMOS VLSI Design, Third Edition, PEARSON, 2011

ACTIVITIES:

- *Very Fast and Low Power Carry Select Adder Circuit using cadence tool.*

17VL007 SEMICONDUCTOR DEVICE MODELING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

- This course provides a solid foundation in the physics of semiconductors so that students will be able to not only understand current devices and exploit them in novel applications.
- It also appreciate the workings of new semiconductor devices as they materialize and evolve in future years.

Course Outcomes:

Upon successful completion of this course student should be able to:

- At the end of this course you should be able to Explain the equations, approximations and techniques available for deriving a model with specified properties, for a general device characteristic with known qualitative theory.
- Apply suitable approximations and techniques to derive the model referred to above starting from drift-diffusion transport equations (assuming these equations hold).
- Offer clues to qualitative understanding of the physics of a new device and conversion of this understanding into equations.
- Simulate characteristics of a simple device using MATLAB, SPICE and ATLAS / SYNOPSYS.
- Explain how the equations get lengthy and parameters increase in number while developing a compact model
- List mathematical functions representing various non-linear shapes

SKILLS:

- Ability to apply knowledge on different device models and design of devices and circuits.
- Ability to undertake problem identification through simulation which in turn cuts the fabrication costs significantly.

UNIT – I

SEMICONDUCTOR PHYSICS : Metals, insulator, semiconductors, intrinsic and extrinsic semiconductors, direct and indirect band gap, free carrier densities, Fermi distribution, density of states, Boltzmann statistics, thermal equilibrium, current flow mechanisms, drift current, diffusion current, mobility, band gap narrowing, resistance, generation and recombination, lifetime, internal electro-static fields and potentials, Poisson's equation, continuity equations, drift-diffusion equations.

UNIT – II

PN-JUNCTION DIODES : Thermal equilibrium physics, energy band diagrams, space charge layers, internal electro-static fields and potentials, reverse biased diode physics, junction capacitance, wide and narrow diodes, transient behavior, transit time, diffusion capacitance, small signal model.

UNIT – III

BIPOLAR TRANSISTORS : Basic theory and operation, heavy doping effects, double diffused transistors, Ebers-Moll model, low forward bias, junction and diffusion capacitance, transit times, parasitic, small-signal models, Early effect, saturation and inverse operation, breakdown mechanisms, punch-through.

UNIT – IV

MOS TRANSISTORS : MOS capacitor, accumulation, depletion, strong inversion, threshold voltage, contact potential, oxide and interface charges, body effect, drain current, saturation voltage, gate work function, channel mobility, sub-threshold conduction, short channel effects, effective channel length, effects of channel length and width on threshold voltage, Compact models for MOSFET and their implementation in SPICE. Level 1, 2 and 3, MOS model parameters in SPICE.

UNIT – V

UDSM TRANSISTOR DESIGN ISSUES : Short channel and ultra short channel effects, effect of high k and low k dielectrics on the gate leakage and Source –drain leakage; tunneling effects; different gate structures in UDSM - impact and reliability challenges in UDSM.

TEXT BOOKS:

1. Y.P. Tsividis, The MOS Transistor, McGraw-Hill, international edition ed.,1988.
2. Nandita DasGupta, Amitava DasGupta, Semiconductor Devices: Modeling and Technology, PHI
3. S.M.Sze, Semiconductor Devices Physics and Technology, John Wiley & Sons Inc, (2/e).
4. Angsuman Sarkar, [2] Short Channel Effects(SCE's) in sub-100nm MOSFETs: A Review.

REFERENCE BOOKS:

1. Getreu, Modeling the bipolar transistor, New York, NY: Elselvier, 1978.
2. D. Roulston, Bipolar Semiconductor Devices, McGraw Hill, 1990.
3. N.Arora, MOSFETModels for VLSICircuit Simulation, Springer-Verlag, 1993.
4. P.Antognetti and G. Massobrio, Semiconductor DeviceModeling with SPICE,McGraw-Hill, 1988.
5. D.W. Greve, Field Effect Devices and Applications, Prentice Hall Series in Electronics and VLSI, 1998.

ACTIVITIES:

- *Modelling and simulation of III-IV and Ge transistors for logic and power applications.*
- *A simple sub threshold CMOS voltage reference circuit with channel- length modulation compensation.*
- *Extremely-wide-range supply-independent CMOS voltage references for telemetry-powering applications.*

17VL002 MIXED SIGNAL DESIGN

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

- To understand the types of filters.
- To understand the different techniques of ADC and DAC.

Course Outcomes:

Upon successful completion of this course student should be able to:

- The ability to use DAC and ADC techniques for data conversions.
- The ability to program, Mixed Signal VLSI Circuits.

SKILLS:

- Understand What SoC is and what the differences between SoC and Embedded System.
- Learn to employ specialized knowledge of subsystems like processor cores and other SoC components to design.
- Improve student's capabilities of using the technical knowledge of processor architecture, peripherals, programming, and CAD tools.

UNIT – I

PLL & Switched Capacitors : Characterization of a comparator, Basic CMOS comparator design, analog multiplier, PLL – simple PLL, charge-pump PLL, applications of PLL, Switched Capacitor circuits – basic principles, switched capacitor sensitive integrator and insensitive integrator, switched capacitor filter, switched capacitor amplifier.

UNIT – II

Sampling Circuits : Basic sampling circuits for analog signal sampling, performance metrics of sampling circuits, different types of sampling switches.

Sample-and-Hold Architectures: Open-loop & closed-loop architectures, open-loop architecture with miller capacitance, multiplexed-input architectures, recycling architecture.

UNIT – III

Digital - to Analog Conversion : Input/output characteristics of an ideal D/A converter, performance metrics of D/A converter, Resistor string 3 bit DAC , Binary scale DACs, Cyclic DAC.

D/A Converter architectures: Resistor-Ladder architectures, current-steering, Pipeline DAC

UNIT – IV

Analog-To-Digital Conversion Input/output characteristics and quantization error of an A/D converter, performance metrics of A/D converter.

A/D converter architectures: Flash architectures, interpolate and folding architectures, pipelined architectures, Integrating (Dual slope) ADC Successive approximation architectures.

UNIT – V

Analog CMOS Filters : Low Pass filters, active–RC fully differential integrator, Two transistor MOSFET–C integrator, g_m-C Integrator, Active RC integrators

Mixed Signal Design Lab

List of Experiments:

1. Design of Common mode feed-back circuits
2. Design of switched capacitor circuits
3. Design of High Speed Comparator
4. Design of High Gain comparator
5. Design of first order filters
6. Design of full wave rectifier
7. Design of sinusoidal oscillator
8. Design of Ring oscillator
9. Design of PLL
10. Design of ADC
11. Design of DACs
12. Mini project.

Note : All the experiments are to be carried out independently by each students with different specifications.

ACTIVITIES:

- o Students can conceptualize multi resolution techniques using CAD.
- o Ability of extract the MOS amplification parameters.
- o Design improved CMOS amplifiers and Operational Amplifiers.

TEXT BOOKS:

1. Razavi, *"Design of analog CMOS integrated circuits"*, McGraw Hill, 2001.
2. Razavi, *"Principles of data conversion system design"*, S.Chand and company ltd, 2000.
3. Jacob Baker et. all, "CMOS Mixed-Signal circuit design", IEEE Press, 2002

REFERENCE BOOKS:

1. Gregorian, Temes, "Analog MOS Integrated Circuit for signal processing", John Wiley & Sons.

17VL004 VLSI TESTING AND VALIDATION

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

- To involve the students in the theory and practice of VLSI test and validations.
- To introduce advanced techniques for efficiently testing and validating the VLSI design.
- To introduce the concept of Design for Test and the technique of automated test pattern generation.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Effectively test VLSI systems using existing test methodologies, equipments, and tools.
- Define a methodology to test the combinational and sequential circuits.
- To construct a Design for Testability (DFT) algorithm for VLSI Circuits.

SKILLS:

- Able to implement DFT techniques for VLSI Circuits
- Able to design any testable combinational logic circuit.
- Able to identify and analyse the yield of chips.

ACTIVITIES:

- How to detect the presence of fault in a circuit using different simulator techniques.
- Find a test vector for the circuit that stucks at 1 faults using combinational and sequential circuits.
- Find a device faults by using IDDQ technique.
- How to scan a by using system level approaches.
- How to test a memory by test algorithm.

UNIT – I

Introduction to VLSI Testing

Introduction - VLSI Testing Process And Test Equipment - Test Economics And Product Quality – Fault Molding-Logic And Fault Simulation.

UNIT – II

Test Generation for Combinational and Sequential Circuits Test generation for combinational logic circuits - Testable combinational logic circuit design - Test generation for sequential circuits - design of testable sequential circuits

UNIT – III

Advanced Testing Memory Test- Memory Density and Defect Trends, Faults **MEMORY TEST** Delay Test- IDDQ Test

UNIT – IV

Design for Testability : Design for Testability - Ad-hoc design - Storage cells for scan designs - Generic scan based design - System level DFT approaches

UNIT – V

Self Test and Test Algorithms : Built-In Self Test - Test pattern generation for BIST - Circular BIST – BIST Architectures - Testable Memory Design - Test algorithms - Test generation for Embedded RAMs.

TEXT BOOKS:

1. Viswani D.Agarval Michael L.Bushnell, “Essentials of Electronic Testing forDigitalMemory & Mixed Signal VLSI Circuit “, Kluwer Academic Publications, 2000.
2. L. T. Wang, C. W. Wu, and X. Wen, VLSI Test Principles and Architectures, Morgan

REFERENCE BOOKS:

1. Kaufmann Morgan Kaufmann Publishers, 2006 M. Abramovici, M.A. Breuer and A.D. Friedman, “Digital Systems and Testable Design”, Jaico Publishing House, 2002.
2. Alfred L.Crouch “Design for Test for Digital IC’s And Embedded Core Systems “, -PHI 1999

17VL006 LOW POWER VLSI DESIGN

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Objectives:

- The student will be able to understand the fundamentals of low power VLSI design.
- In this course, students can study low-power design approaches, power estimation and analysis.
- Another main object of this course is to motivate the graduate students to study and to analyze the low-voltage, low-power adders, Multipliers.
- The concepts of low-voltage, low-power memories and future trend and development of DRAM.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Understand the concepts of low-power design approaches.
- Design and analysis of low-voltage, low-power circuits.
- Extend the low power design to different applications.
- Understand of low-voltage, low-power memories and basics of DRAM.

SKILLS:

- Designing and analyzing skills acquired to words the low power and low voltage circuits.
- Spice circuits simulator usage skills improved.
- Students get skills in developing new techniques to decrement power in existing design for new designs and future use.

ACTIVITIES:

- Write a program for 8 bit addition by using different data types.
- Write a program for 8x1 multiplexer
- Write a program for D flip flop.
- Write a program for shift register.
- Write a program for ALU

UNIT - I

Fundamentals of Low Power VLSI Design: Need for Low Power Circuit Design, Sources of Power Dissipation – Switching Power Dissipation, Short Circuit Power Dissipation, Leakage Power Dissipation, Glitching Power Dissipation, Short Channel Effects –Drain Induced Barrier Lowering and Punch Through, Surface Scattering, Velocity Saturation, Impact Ionization, Hot Electron Effect.

UNIT - II

Low-Power Design Approaches: Low-Power Design through Voltage Scaling: VTCMOS circuits, MTCMOS circuits, Architectural Level Approach –Pipelining and Parallel Processing Approaches. Switched Capacitance Minimization Approaches: System Level Measures, Circuit Level Measures, Mask level Measures.

UNIT - III

Power estimation and analysis: SPICE circuit simulators, gate level logic simulation, capacitive power estimation, static state power and gate level capacitance estimation.

UNIT - IV

Low-Voltage Low-Power Adders, Low-Voltage Low-Power Multipliers Low-Voltage Low-Power Design Techniques –Trends of Technology and Power Supply Voltage, Low- Voltage Low-Power Logic Styles.

UNIT - V

Low-Voltage Low-Power Memories: Basics of ROM, Low-Power ROM Technology, Future Trend and Development of ROMs, Basics of SRAM, Memory Cell, Precharge and Equalization Circuit, Low-Power SRAM Technologies, Basics of DRAM, Self-Refresh Circuit, Future Trend and Development of DRAM.

TEXT BOOKS:

1. Low-Voltage, Low-Power VLSI Subsystems – Kiat-Seng Yeo, Kaushik Roy, TMH Professional Engineering.

REFERENCE BOOKS:

1. Low Power CMOS VLSI Circuit Design – Kaushik Roy, Sharat C. Prasad, John Wiley & Sons, 2000.

2. Practical Low Power Digital VLSI Design – Gary K. Yeap, Kluwer Academic Press, 2002.

17VL008 MODELLING AND SYNTHESIS WITH VERILOG HDL

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	45	15	30	-	5	5	-

Course Objectives:

- To design combinational, sequential circuits using Verilog HDL.
- To understand behavioral and RTL modeling of digital circuits.
- To verify that a design meets its timing constraints, both manually and through the use of computer aided design tools.
- To simulate, synthesize, and program their designs on a development board.
- To verify and design the digital circuit by means of Computer Aided Engineering tools.which involves in programming with the help of Verilog HDL.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Understand the basic concepts of verilog HDL
- Model digital systems in verilog HDL at different levels of abstraction
- Know the simulation techniques and test bench creation.
- Understand the design flow from simulation to synthesizable version
- Get an idea of the process of synthesis and post-synthesis

SKILLS:

- Able to design digital circuit by HDL.
- Able to realize digital circuit on FPGA kits

ACTIVITIES:

- o Write a program for 8 bit addition by using different data types.
- o Write a program for 8x1 multiplexer
- o Write a program for D flip flop.
- o Write a program for shift register.
- o Write a program for ALU

UNIT - I

Hardware modeling with the verilog HDL. Encapsulation, modeling primitives, different types of description.

UNIT - II

Logic system, data types and operators for modeling in verilog HDL. Verilog Models of propagation delay and net delay path delays and simulation, inertial delay effects and pulse rejection.

UNIT - III

Behavioral descriptions in verilog HDL - Verilog behaviors, behavioral statements, procedural assignments, procedural continuous assignments, timing controls and synchronization, blocking and non blocking assignments, constructs for activity flow control, tasks and functions, behavioral models of FSM.

UNIT - IV

Synthesis of combinational logic: HDL-based synthesis - technology-independent design, styles for synthesis of combinational and sequential logic, synthesis of finite state machines, synthesis of gated clocks, design partitions and hierarchical structures.

UNIT - V

Synthesis of language constructs, nets, register variables, expressions and operators, assignments and compiler directives. Switch-level models in verilog. Design examples in verilog.

HDL & FPGA Synthesis Lab

List of Experiments:

1. Design of combinational circuits using EDA Tools.
2. Design of sequential circuits using EDA Tools.
3. Design of 4-bit binary, BCD counters using EDA Tools (synchronous/ asynchronous reset).
4. Design of a N- bit Register using EDA Tools.
5. Design of Sequence Detector using EDA Tools (Finite State Machine- Mealy and Moore Machines).
6. Design of 4- Bit Multiplier, Divider using EDA Tools.
7. Design of ALU using EDA Tools.
8. Serial adder.
9. Memories.
10. Implement Real time small application digital circuit on FPGA - Case study.

TEXTBOOKS:

1. M.D.Ciletti, “Modeling, Synthesis and Rapid Prototyping with the Verilog HDL”, PHI, 1999.
2. S. Palnitkar, “Verilog HDL – A Guide to Digital Design and Synthesis”, Pearson, 2003.

REFERENCE BOOKS:

1. J Bhaskar, “A Verilog HDL Primer (3/e)”, Kluwer, 2005
2. M.G.Arnold, “Verilog Digital – Computer Design”, Prentice Hall (PTR), 1999.
3. Recent literature in Modeling and Synthesis with Verilog HDL.

17HS001 RESEARCH METHODS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

Objective of the course is to enable research scholars to have a general understanding of research methods and application of statistical tools in the analysis and interpretation of findings and guidelines for report writing.

UNIT - I

Introduction: Nature and Importance of research, the role of business research, aims of social research, research process, types of research. Data Base: discussion on primary data and secondarydata, probability and non-probability sampling techniques.

UNIT-II

Research design: Meaning of research design. Functions and goals of research design. Questionnaire and Schedule.

UNIT – III

Measurement and scaling concepts: Attitude measurement, levels of measurement and types of scales, criteria for good measurement. Measures of central tendency, measures of dispersion,measures of variation, Correlation and Regression. Statistical Inference. Tests of significance for small samples, t-test, Chi-Square test and ANOVA-one way and two way classifications. Discriminate analysis, cluster analysis, conjoint analysis

UNIT-IV

Technical Report Writing: Pre-writing considerations, Thesis writing, formats of report writing, Formats of publications in Research Journals. Technique of Interpretation, Precaution inInterpretation, Significance of Report writing, Different steps in writing Report, Layout of the Research Report, Types of Reports, Report Format, Typing Instructions, Oral Presentations.

UNIT-V

Research Ethics and Morals: Issues related to plagiarism, collaborative models and ethics, Acknowledgements. *Intellectual Property Rights:* copyrights.

TEXT BOOKS:

1. Bhattacharya, D. K., Research Methodology, Excel Books, New Delhi.
2. Gupta S.P., Statistical Methods, Sultan Chad, New Delhi, 2001.
3. Pannerselvam, Research Methodology, Prentice Hall of India, New Delhi, 2005.

17HS002 EMPLOYMENT ORIENTATION PROGRAM

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Preamble:

It is common knowledge that students opting for the Masters Programme after B.Tech do so either because they have been unsuccessful in securing employment after their Bachelors or because they have not crystallized their career plan. Hence, students opting for M.Tech are found to be deficient not only in the technical knowledge but also in their communication skills and overall personality. There is a need to groom them and shape them into employable resources.

Program Objectives:

i. To impart employability skills to M.Tech. final students by honing their interpersonal and presentation skills.

ii. To equip them with the latest tools and techniques for effective communication through discussions, group work, presentation exercises, assignments, projects etc.

iii. To impart training for their overall personality development and shape them into confident, positive and ambitious professionals.

Course Contents

The course content, designed for 50 Hrs will comprise two modules:

- Communication skills & Overall personality improvement (10 * 2.5 = 25 Hrs)
- Pedagogy of Engineering Subjects & Making Project Presentations (10 * 2.5 = 25 Hrs)

Rationale for the Programme

On a more holistic view of higher education, the term “academic development” refers to development of multiple aspects of a student’s personality under this EOP for M.Tech

students, different types of development are envisaged like personal, interpersonal skills, career development and life planning. “Development” in the engineering education

according to national accreditation bodies like NBA and NAAC is understood to happen through activities and programmes designed to improve the ability to work to teams, express themselves confidently to their peers and present their views boldly before an audience and

get things accomplished through management of men and materials. This programme will improve student’s overall communication skills and raise his/ her potential as an employee graduate.

About this Programme

The 50 Hrs course will be rolled out in two spells of 25 Hrs each with the help of in-house and invited experts. It is aimed at improving the presentation skills in general and teaching ability of the M.Tech students in particular. AFD will seek the cooperation of all the Deans, HoDs and senior professors as subject experts, mentors from the departments to provide the essential knowledge and skill inputs for the trainees so that the course outcomes can be realized.63

Expected Outcomes:

Having gone through the 50 hrs rigorous training on presentation skills, pedagogy and overall personality grooming, the trainees will get equipped to face any interview confidently, make short and effective presentations during interviews and gain the confidence to handle engineering topics and perhaps also develop an aspiration for a career in teaching.

The trainees will be assessed for a total of 50 marks, which will be incorporated into the II year project marks. The summative assessment will be carried out by a special panel constituted for the purpose in consultation with the Dean, Evaluation and respective HoD.

- 5 Marks for attendance
- 5 Marks for formative assessment
- 40 Marks for summative assessment

17VL009 SCRIPTING LANGUAGES

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- This course provides an introduction to the script programming paradigm
- Introduces scripting languages such as Perl, PHP and Python.
- Learning TCL

Course Outcomes:

- Comprehend the differences between typical scripting languages and application programming languages.
- Acquire programming skills using scripting languages.
- Gain knowledge of the strengths and weakness of Perl, TCL and Python and select an appropriate language for solving a given problem
- Ability to design web pages using advanced features of PHP.

SKILLS:

- Able to implement any program using scripting language.
- Able to resolve security issues in internet programming.
- Write a program of employs list of a company using perl.
- Write a programming of security issues on operative systems in perl.
- Write a program to store the data using TCL.
- Execute a program on addition by using eval function.
- Design a window and widget using TK.

ACTIVITIES:

- Write a program of employs list of a company using perl.
- Write a programming of security issues on operative systems in perl.
- Write a program to store the data using TCL.
- Execute a program on addition by using eval function.
- Design a window and widget using TK.

UNIT – I

Introduction to PERL and Scripting Scripts and Programs, Origin of Scripting , Scripting Today, Characteristics of Scripting Languages, Uses for Scripting Languages, Web Scripting, and the universe of Scripting Languages. PERL- Names and Values, Variables, Scalar Expressions, Control Structures, arrays, list, hashes, strings, pattern and regular expressions, subroutines.

UNIT – II

Advanced perl Finer points of looping, pack and unpack, filesystem, eval, datastructures, packages, modules, objects, interfacing to the operating system, Creating Internet ware applications, Dirty Hands Internet Programming, security Isses.

UNIT – III

TCL TCL Structure, syntax, Variables and Data in TCL, Control Flow, Data Structures, input/output, procedures , strings , patterns, files, Advance TCL- eval, source, exec and uplevel commands, Name spaces, trapping errors, event driven programs, making applications internet aware, Nuts and Bolts Internet Programming, Security Issues, C Interface. Tk-Visual Tool Kits, Fundamental Concepts of Tk, Tk by example, Events and Binding, PerlTk.

UNIT - IV

Python Introduction to Python langauge, python-syntax, statements, functions, Built-in-functions and Methods, Modules in python,Exception Handling. Integrated

UNIT – V

Web Applications in Python – Building Small, Efficient Python Web Systems, Web Application Framework.

SCRIPTING LANGUAGES LAB

LIST OF EXPERIMENTS

1. Write a script that calculates the average performance score and prints out the members of the groups meeting the following criteria (each criterion should produce one group, rather than identifying a group that meets all four criteria): (a)native language is English (b) age is greater than 20 (c) age is greater than 20 and native language is English (d) performance score is greater than 70

2. Suppose you're given the following arrays containing participant information: @firstnames = ("Sarah", "Jareth", "Ludo", "Hoggle"); @lastnames = ("Williams", "King", "Beast", "Dwarf"); Write a script that asks the user whether the names should be sorted by first or last names, and whether the names should be sorted alphabetically or reverse alphabetically. Then, sort the participant list this way, and print out the sorted list of participants. Look at sort names reverseABC.pl for an example of sorting these names reverse alphabetically.

3. Suppose you're given the following arrays containing participant information: @firstnames = ("Sarah", "Jareth", "Ludo", "Hoggle"); @lastnames = ("Williams", "King", "Beast", "Dwarf"); @ages = (15, 39, 33, 43); @nativelanguages = ("English", "English", "Romanian", "English"); @performancescores = (85, 99, 35, 75);

4. Suppose you're given the following arrays containing participant information: @usernames = ("Sarah1", "Sarah2", "sarah3", "sArah4"); @scores = (10, 7, 42, 3); Write a program that outputs the participant information, sorted in one of the following ways: (a) ASCII-betical by participant username (b) case-insensitive ASCII-betical by participant username (c) numerical order by participant score (lowest to highest) (d) reverse numerical order by participant score (highest to lowest) The user should be able to choose which sorting order is preferred (default ASCIIbetical

on username) using a command line option. If you get stuck, have a peek at sort revnum.pl for an example of sorting this information reverse numerically.

5. Write a program on Recursive Procedures in TCL?
6. Write a program on Procedures with Variable Arguments in TCL?
7. Write a program on how to create a namespaces in TCL?
8. Write a program on regular expressions in TCL?
9. Design widget using TK?
10. Write a program on tuples in python?
11. Write a program on how to create strings?
12. Write a program on how to send one e-mail using Python script.

17VL011 VLSI SIGNAL PROCESSING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- To understand the basic concepts of DSP algorithms.
- To analyze the various pipelining and parallel processing techniques.
- To analyze the retiming and unfolding algorithms for various DSP applications.

Course Outcomes:

- To learn DSP algorithms.
- To understand and analysis the concept of pipelining and other processing for DSP applications.

SKILLS:

- The physical design process of VLSI circuits, including: logic partitioning, floor planning, placement, global routing, detailed routing, clock and power routing, and new trends in physical design.
- Students acquired the knowledge CMOS digital circuits for a low voltage low power environment.
- To impart knowledge on implementation of graph theory in VLSI.

UNIT – I

Introduction to DSP systems-Typical DSP algorithms-Representation of DSP Algorithm - Iteration Bound - Pipelined and parallel processing.

UNIT – II

Retiming - Unfolding –Folding.

UNIT – III

Systolic architecture design -Algorithmic strength reduction in filters and transforms.

UNIT – IV

Pipelined and parallel recursive and adaptive filters- Bit level arithmetic architecture.

UNIT – V

Numerical strength reduction – Overview of low power design and programmable digital signal processors.

TEXT BOOKS:

1. Keshab K.Parthi, " VLSI Digital Signal Processing systems, Design and implementation ",Wiley, Inter Science, 1999.

REFERENCE BOOKS:

1. Mohammed Isamail and Terri Fiez, "Analog VLSI Signal and Information Processing", Mc Graw-Hill, 1994.

2. S.Y. Kung, H.J.White House, T. Kailath, "VLSI and Modern Signal Processing ",Prentice Hall, 1985.

3. Jose E. France, Yannis Tsividis, " Design of Analog - Digital VLSI Circuits for Telecommunication and Signal Processing ", Prentice Hall, 1994

ACTIVITIES:

- To introduce students to the process of designing application specific hardware implementations of algorithms for ASICs (FPGAs).
- Students will work with commercial computer aided design tools to synthesize designs described in hardware description languages by using CAD tools.
- To impart knowledge on automation methods for VLSI physical design.

17VL013 VERIFICATION METHODOLOGIES

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- This course gives a brief idea to Hardware Verification methodologies.
- It gives brief idea about Binary Decision Diagrams (BDDs) and algorithms over BDDs.
- It gives introduction to Combinational equivalence checking, Temporal Logics, Modeling sequential systems and model checking, Symbolic model checking.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Able to understand about Hardware Verification methodologies.
- Ability to understand the design of different algorithms over BDDS.
- Able to understand digital systems modeling and equivalence checking.

SKILLS:

- Able to identify combinational equivalence checking.
- Able to implement BDDS from combinational circuits.
- Able to identify the difference between model checking and symbolic checking.

UNIT – I

Introduction to Digital VLSI Design Flow, High Level Design Representation, Transformations for High Level Synthesis

Scheduling, Allocation and Binding

Introduction to HLS: Scheduling, Allocation and Binding, Problem, Scheduling Algorithms, Binding and Allocation Algorithms.

UNIT – II

Logic Optimization and Synthesis Two level Boolean Logic Synthesis, Heuristic Minimization of Two-Level Circuits, Finite State Machine Synthesis, and Multilevel Implementation.

UNIT – III

Verification Introduction to formal methods for verification, Temporal Logic: Introduction and Basic Operators, Syntax and Semantics of CTL, Equivalence between CTL Formulas.

UNIT – IV

Binary Decision Diagram: Introduction and construction, Ordered Binary Decision Diagram, Operations on Ordered Binary Decision Diagram, Ordered Binary Decision Diagram for Sequential Circuits.

UNIT – V

Verification Techniques Introduction to Verification Techniques, Model Checking, Symbolic Model Checking.

TEXT BOOKS:

1. D. D. Gajski, N. D. Dutt, A.C.-H. Wu and S.Y.-L. Lin, High-Level Synthesis: Introduction to Chip and System Design, Springer, 1st edition, 1992.

2. S. Palnitkar, Verilog HDL: A Guide to Digital Design and Synthesis, Prentice Hall,2nd edition, 2003.

3. Bushnell and Agrawal, Essentials of Electronic Testing for Digital, Memory & Mixed-Signal Circuits, Kluwer Academic Publishers, 2000.

ACTIVITIES:

- For any given problem apply any one of the scheduling algorithm..
- Design any one of finite state machine.
- Write a verilog HDL program using basic operators for addition and subtraction.
- Obtain a OBDD for the given logic function.
- Write a program for checking the errors in a code using code verification techniques.

17ES015 SYSTEM ON-CHIP DESIGN

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- To understand the concepts of System on Chip Design methodology for Logic and Analog Cores.
- To understand the concepts of System on Chip Design Validation.
- To understand the concepts of SOC Testing.

Course Outcomes:

- Upon successful completion of this course student should be able to: understand about SoC Design Methodology.
- Ability to understand the design of different embedded memories.
- SoC Design Validation and Testing Concepts can be understood.

SKILLS:

- He can know the different Bus protocols/architecture scan become an Expert in the following areas:
- Low Power, Security, Networking, Wireless, Flash Memory, Graphics, DSP.
- Good understanding of entire design flow, from RTL to GDS High RTL coding skills.

UNIT – I

Introduction- System tradeoffs and evolution of ASIC Technology- System on chip concepts and methodology – SoC design issues -SoC challenges and components.

UNIT – II

Design Methodological For Logic Cores- SoC Design Flow – On-chip buses –Design process for hard cores –Soft and firm cores – Core and SoC design examples.

UNIT – III

Design Methodology for Memory and Analog Cores- Embedded memories –Simulation modes Specification of analog circuits – A to D converter –Phase locked loops –High I/O.

UNIT – IV

Design Validation- Core level validation –Test benches –SoC design validation – Co simulation – hardware/ Software co-verification. Case Study: Validation and test of systems on chip.

UNIT – V

SoC Testing- SoC Test Issues –Cores with boundary scan –Test methodology for design reuse– Testing of microprocessor cores – Built in self-method –testing of embedded memories. Case Study: Integrating BIST techniques for on-line SoC testing.

ACTIVITIES:

- VHDL MODEL OF SMART SENSOR.
- VHDL Environment for Floating point Arithmetic Logic Unit - ALU Design and Simulation.
- DESIGN OF AN ON-CHIP PERMUTATION NETWORK FOR MULTIPROCESSOR SOC.
- Design and Synthesis of a Field Programmable CRC Circuit Architecture.
- Design of FPGA based 32-bit Floating Point Arithmetic Unit and verification of its VHDL code using MATLAB..

17VL015 CAD VLSI

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- To provide an introduction to the fundamentals of Computer-Aided Design tools for the modeling, design, analysis, test, and verification of digital Very Large Scale Integration (VLSI) systems. · To learn Physical design of VLSI Circuits ·
- To learn the Basics of Graph Theory Algorithms ·
- To understand the concept of CAD Tools. · To Learn the Physical Design of FPGA and MCMS

Course Outcomes:

Upon successful completion of this course student should be able to:

- Demonstrate knowledge and understanding of fundamental concepts in CAD.
- Demonstrate knowledge of computational and optimization algorithms and tools applicable to solving CAD related problems.
- Establish capability for CAD tool development and enhancement.
- Get the Overview of Physical Design of VLSI ICs .
- Gain the Knowledge of Graph Theory.
- Able to Design Backend Process using CAD Tools.
- To Get the Knowledge about Physical design of FPGA and MCMS.

SKILLS:

- Able to perform circuit extraction and simulation.
- Able to develop physical layout design.
- Able to perform logic verification.

UNIT – I

Introduction to VLSI Design Automation Introduction to VLSI Methodologies - VLSI Physical Design Automation - Design and Fabrication of VLSI Devices - Fabrication process and its impact on Physical Design.

UNIT – II

Graph Theory A Quick Tour of VLSI Design Automation Tools - Data structures and Basic Algorithms-Algorithmic Graph theory and computational complexity - Tractable and Intractable problems.

UNIT – III

CAD Tools General purpose methods for combinational optimization - partitioning - floor planning and pin assignment - placement - routing.

UNIT – IV

Simulation and Synthesis Simulation-logic synthesis -Verification-High level synthesis-Layout synthesis- Compaction.

UNIT – V

Design Automation of FPGA and MCMS Physical Design Automation of FPGAs, MCMS-VHDL-Verilog-Implementation of Simple circuits using VHDL and Verilog.

ACTIVITIES:

- o Design and testing of half adder /full adder.
- o Design and testing of 8 bit ALU.
- o Design a 6 transistor memory cell.
- o Design of dynamic logic d nand, d nor and d xor.

17VL017 ADVANCED DIGITAL SYSTEMS DESIGN

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- The objective of this course is to study methods to design of synchronous and asynchronous sequential circuits. This course also introduces testing algorithm techniques for combinational circuits, sequential circuits and PLAs & minimization and folding techniques of PLAs.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Ability to analyze and design synchronous and asynchronous sequential circuits.
- Ability to understand the testing of combinational, sequential and PLAs.
- Ability to understand the PLA folding and minimization.

SKILLS:

- Students able to learn the various digital systems and technologies include FPGA's.
- Students able to find how to test the digital circuit and what are different types of faults and how to eliminate those faults.

UNIT - I

SYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN & ASM CHARTS : Reduction of State Tables State Assignments,Sequential Circuit Design:- Design of Code Converter,Design of Iterative Circuits.Design of Sequential Circuits Using ROMs and PLAs, Sequential Circuit Design using CPLDs and FPGAs. ASM Charts.

UNIT - II

FAULTS IN DIGITAL CIRCUITS & TEST GENERATION FOR COMBINATIONAL CIRCUITS : Faults in Digital Circuits:-Failures and Faults, Modelling of Faults, Temporary Faults. Test Generation for Combinational Circuits:- Fault Diagnosis of Digital Circuits, Path Sensitization Technique, Boolean Difference Method, D-Algorithm, PODEM Algorithm, FAN, Delay Fault Detection. Detection of Multiple Faults.

UNIT - III

STATE-IDENTIFICATION EXPERIMENTS AND TESTING OF SEQUENTIAL CIRCUITS : Experiments, Homing Experiments,Distinguishing Experiments, Machine Identification, Checking Experiments, Design of Diagnosable Machines, Alternative Approaches to the Testing of Sequential Circuits, Design for Testability, Built-In Self-Test (BIST).

UNIT - IV

PROGRAMMABLE LOGIC ARRAYS : PLA Minimization and PLA Folding-The Compact Algorithm, Practical PLA s. PLA testing – Fault in PLA, Test Generation, DFT Schemes, Built-In Self Test.

UNIT - V

ASYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN : Analysis of Asynchronous Sequential Circuit (ASC) – Fundamental Mode Model, Flow Table, State Reduction, Design of ASC. Hazards, Races and Cycles.

TEXT BOOKS

2. Stephen Brown and Zvonk Vranesic, “Fundamentals of Digital Logic with VHDLDeisgn”, Tata McGraw Hill, 2002.

3. Mark Zwolinski, “Digital System Design with VHDL”, Pearson Education, 2004.

ACTIVITIES:

- Design an ALU using PLA.
- Algorithm for fault finding in sequential circuits.
- Students able to perform the experiment on FPGA’s (Spartan 3E,vertex) boards.
- Students able to design the testing circuits by using testing methods (BIST).

17VL010 NANO ELECTRONICS

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- To acquire knowledge about fundamental quantum mechanics.
- To study about architecture and operations of different nano structures.
- To comprehend the low dimension, high speed and low power design techniques and methodologies.

Course Outcomes:

Upon successful completion of this course student should be able to:

- To explain challenges due to scaling on CMOS devices, VLSI circuit design and fundamental limits of operation.
- To analyze and explain working of novel MOS based silicon devices and various multi gate devices.
- To analyze and explain working of SOI devices and their performance comparison with Silicon devices
- To understand the underlying concepts by setting up and solving the Schrödinger equation for different types of potentials in one dimension as well as in 2 or 3 dimensions for specific cases.
- To understand nanoelectronic systems and building blocks such as: low dimensional semiconductors, heterostructures, carbon nanotubes, quantum dots, nanowires etc.

SKILLS:

- knowledge about Quantum structures.
- Utilise the nano scale transistors for current applications.

UNIT - I

Challenges going to sub-100 nm MOSFETs – Oxide layer thickness, tunneling, power density, non-uniform dopant concentration, threshold voltage scaling, lithography, hot electron effects, sub-threshold current, velocity saturation, interconnect issues, fundamental limits for MOS operation. High-K gate dielectrics, effects of high-K gate dielectrics on MOSFET performance.

UNIT - II

Novel MOS-based devices – Multiple gate MOSFETs, Silicon-on-nothing, Silicon-on-insulator devices, FD SOI, PD SOI, FinFETs, vertical MOSFETs, strained Si devices 34.

UNIT - III

Hetero structure based devices – Type I, II and III Heterojunction, Si-Geheterostructure, hetero structures of III-V and II-VI compounds - resonant tunneling devices, MODFET/HEMT.

UNIT - IV

Carbon nanotubes based devices – CNFET, characteristics, Spin-based devices – spinFET, characteristics.

UNIT - V

Quantum structures – quantum wells, quantum wires and quantum dots, Single electron devices – charge quantization, energy quantization, Coulomb blockade, Coulomb staircase, Bloch oscillations

ACTIVITIES:

- o Using cadence tool, code should be written for FinFET and CNTFET, also simulated.
- o And schematics were drawn using MOSFETs.

17VL012 ASIC

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- To prepare the student to be an entry-level industrial standard ASIC or FPGA designer.
- To give the student an understanding of issues and tools related to ASIC/FPGA design and implementation.
- To give the student an understanding of basics of System on Chip and platform based design.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Demonstrate VLSI tool-flow and appreciate FPGA architecture.
- Understand the issues involved in ASIC design, including technology choice, design management, tool-flow, verification, debug and test, as well as the impact of technology scaling on ASIC design.
- Understand the algorithms used for ASIC construction.
- Understand the basics of System on Chip, on chip communication architectures like AMBA, AXI and utilizing Platform based design.
- Appreciate high performance algorithms available for ASICs IC.

SKILLS:

- Digital ASIC design and verification techniques
- Detailed knowledge of the complete ASIC design flow
-

UNIT - I

Types of ASICs, VLSI Design flow, Programmable ASICs - Antifuse, SRAM, EPROM, EEPROM based ASICs. Programmable ASIC logic cells and I/O cells. Programmable interconnects. Latest Version - FPGAs and CPLDs and Soft-core processors.

UNIT - II

Trade off issues at System Level: Optimization with regard to speed, area and power, asynchronous and low power system design. ASIC physical design issues, System Partitioning, Power Dissipation, Partitioning Methods.

UNIT - III

ASIC floor planning, Placement and Routing.

UNIT - IV

System-On-Chip Design - SoC Design Flow, Platform-based and IP based SoC Designs, Basic Concepts of Bus-Based Communication Architectures, On-Chip Communication Architecture Standards, Low-Power SoC Design.

UNIT - V

High performance algorithms for ASICS/ SoCs as case studies – Canonic Signed Digit Arithmetic, KCM, Distributed Arithmetic, High performance digital filters for sigma-delta ADC, USB controllers, OMAP

TEXT BOOKS

4. S.Pasricha and N.Dutt," OnChip Communication Architectures System on Chip Interconnect, Elsveir", 2008.

ACTIVITIES:

- o Design a SRAM memory cell.
- o Floor planning, routing and placing of adder in ASIC.
- o Design of digital filter of ADC.

17VL014 MEMS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- This course is an introduction to Micro Electro Mechanical Systems and is intended for Post Graduate students.
- Silicon-based integrated MEMS promise reliable performance, miniaturization and low-cost production of sensors and actuator systems with broad applications in data storage, biomedical systems, inertial navigation, micromanipulation, optical display and micro fluid jet systems.
- The course covers such subjects as materials properties, fabrication techniques, Mechanical sensor packaging, mechanical transduction techniques, pressure sensors, Force, torque and internal sensors.

Course Outcomes:

Upon successful completion of this course student should be able to:

- An introduction to microsensors and actuators and different applications in MEMS.
- Different micromachining technologies in MEMS
- Introduction on micromachinedmicrosensors and their different types
- MEMS Simulators and different FEA tools
- Bonding and Packaging of MEMS

SKILLS:

- Understand future applications of MEMS.
- Be able to apply all these skills to the design of a MEMS system.
  The above can be applied to understand the design and fabrication of NEMS

UNIT - I

An introduction to Micro sensors and MEMS, Evolution of Micro sensors & MEMS, Micro sensors & MEMS applications.

UNIT - II

Microelectronic technologies for MEMS, Micromachining Technology, Surface and Bulk Micromachining, working principle of various MEMS.

UNIT - III

Micro machined Micro sensors: Mechanical, Inertial, Biological, Chemical, Acoustic, Microsystems Technology, Integrated Smart Sensors and MEMS.

UNIT - IV

Interface Electronics for MEMS, MEMS Simulators, MEMS for RF Applications, Bonding & Packaging of MEMS, Conclusions & Future Trends.

UNIT - V

Polymer Mems Polymers in MEMS– Polimide - SU-8 - Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon - Application to Acceleration, Pressure, Flow and Tactile sensors.

TEXT BOOKS

1. Tai-ran Su, MEMS and Microsystems: design and Manufacture, Tata McGraw Hill.
2. S.K. Ghandhi, VLSI Fabrication Principles, John Wiley Inc., New York, 1983.

REFERENCE BOOKS

1. S.M. Sze (Ed), VLSI Technology, McGraw Hill, 1988.
2. Chang Liu, 'Foundations of MEMS', Pearson Education Inc., 2006.

ACTIVITIES:

- Design and Simulation of Inertia Sensors.
- Design and Simulation of Pressure Sensors.
- Design and Simulation of Electrostatic Actuators.
- Design and Simulation of Piezo resistive Actuators.

17VL016 SEMICONDUCTOR MEMORY DESIGN

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

To acquire knowledge about different types of semiconductormemories.

- To study about architecture and operations of different semiconductor memories.
- To comprehend the low power design techniques andmethodologies.

Course Outcomes:

Analysis the different types of RAM, ROM designs.

- Analysis the different RAM and ROM architecture and interconnects.
- Analysis about design and characterization technique.
- Analysis of different memory testing and design for testability.
- Identification of new developments in semiconductor memorydesign.

SKILLS:

- In-depth understanding of volatile and nonvolatile SRAMs, DRAMs.
  Analyse and test the advanced memory designs.

UNIT - I

Random Access Memory Technologies: Static Random Access Memories(SRAMs):SRAM cell structure- MOS SRAM architecture, MOS SRAM cell andperipheral circuit operation, bipolar SRAM technologies, silicon on insulator(SOI) technology, advanced SRAM architectures and technologies, applicationspecific SRAMs.

Dynamic Random Access Memories (DRAMs): DRAM technology development, CMOS CRAMs, DRAMs cell theory and advanced cell structures-BiCMOS DRAMs-soft error failure in DRAMs, Advanced DRAM designs andarchitecture, application specific DRAMs.

UNIT – II

Nonvolatile Memories: Masked Read, only memories (ROMs): High densityROMs, programmable read-only memories (PROMs)- bipolar PROMs, CMOSPROMs, erasable (UV)- Programmble read-only memories (EPROMs)-Floating Gate EPROM cell- one, time progammable (OTP) Eproms ElectricallyErasable PROMs (EEPROMs), EEPROM technology and architecture,nonvolatile SRAM-Flash memories (EPROMs or EEPROM), Advanced flashmemory architecture.

UNIT – III

Memory fault modeling, testing and memory design for Testability andfault tolerance, RAM fault modeling, electrical testing, Peusdo randomtesting, megabit DRAM testing nonvolatile memory modeling and testing,IDDQ fault modeling and testing, application specific memory testing.

UNIT – IV

Semiconductor memory reliability and radiation effects: General Reliability issues, RAM failure modes and mechanism, nonvolatile memory reliability,reliability modeling and failure rate prediction, design for reliability, reliability test structures, reliability screening and qualification.

Radiation effects, single event phenomenon (SEP)- radiation hardeningtechniques, radiation hardening process and design issues, radiation hardened memory characteristics, radiation hardness assurance and testing,radiation dosimetry, water level radiation testing and test structures.

UNIT – V

Advanced memory technologies and high-density memory packaging technologies:Ferroelectric Random Access Memories (FRAMs), Gallium Arsenide (GaAs)FRAMs, Analog memories magnetoresistive random access memories(MRAMs), Experimental memory devices.

Memory hybrids and MCMs (2D), Memory stacks and MCMs (3D), Memory MCM testing and reliability issues- memory cards- high density memory packaging future directions.

TEXT BOOKS

1. Ashok K.Sharma, Semiconductor Memories Technology, testing andreliability, Prentice hall of India Private Limited, New Delhi 1997.

2. Ashok K Sharna, Advanced Semiconductor Memories – Architecture, Designand Applications, Wiley 2002.

REFERENCE BOOKS

1. Anjan Ghosh, High Speed Semiconductor Devices, NPTEL Courseware,2009.

ACTIVITIES:

- Design of 6T SRAM, 7T SRAM, DRAM circuits
- Design of Sensing Amplifiers

17VL018 NANO SENSORS AND ITS APPLICATIONS

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

- The importance of nanoscale materials for sensing applications.
- Metallic and semiconductor nanoparticles.
- Organic and inorganic nanotubes and nanowires.
- Optical, mechanical and chemical sensors based on nanomaterials.
- Hybrid nanomaterial-based sensors.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Ability to enhance critical, creative, and innovative thinking.
- Approaches used for characterizing sensors based nanomaterials.
- Approaches used for tailoring nanomaterials for a specific sensing application

SKILLS:

- Ability to apply knowledge on different sensors and design of different technology circuits using sensors.
- Ability to utilize a system approach to design a chip and operational performance

UNIT-1

Sensor Characteristics and Physical Effects : Active and Passive sensors – Static characteristic - Accuracy, offset and linearity – Dynamic characteristics - First and second order sensors – Physical effects involved in signal transduction- Photoelectric effect – Photo dielectric effect – Photoluminescence effect – Electroluminescence effect – Hal effect – Thermoelectric effect – Peizoresistive effect – Piezoelectric effect – Pyroelectric effect –Magnetomechanical effect (magnetostriction) – Magneto resistive effect.

UNIT-2

Nano Based InorganicSensors : Density of states (DOS) – DOS of 3D, 2D, 1D and 0D materials – one dimensional gas sensors: - gas sensing with nanostructured thin films – absorption on surfaces – metal oxide modifications by additives – surface modifications – nano optical sensors – nano mechanical sensors – plasmon resonance sensors with nano particles – AMR, Giant and colossal magneto resistors – magnetic tunneling junctions.

UNIT-3

Organic / Biosensors: Structure of Protein – role of protein in nanotechnology – using protein in nanodevices – antibodies in sensing – antibody in nano particle conjugates – enzymes in sensing – enzyme nanoparticle hybrid sensors – Motor proteins in sensing – transmembrane sensors – Nanosensors based on Nucleotides and DNA – Structure of DNA – DNA decoders and microarrays – DNA protein conjugate based sensors – Bioelectronic sensors – DNA sequencing with nanopores – sensors based on molecules withdendritic architectures – biomagnetic sensors.

UNIT-4

Nano Sensors: Temperature Sensors, Smoke Sensors, Sensors for aerospace and defense: Accelerometer, Pressure Sensor, Night Vision System, Nano tweezers, nano-cutting tools, Integration of sensor with actuators and electronic circuitry Biosensors.

UNIT-5

Applications: Cantilever array sensors - Cantilever sensors for diagnosis of diabetes mellitus - Cantilever sensors for cancer diagnosis - Nanotube based sensors - Nanotube based sensors for DNA detection - Nanotube based sensors for capnography - Nanowire based sensors - Nanowire based electrical detection of single viruses – Nanowire based electrical detection of biomolecules.

TEXT BOOKS

1. Kourosh Kalantar – Zadeh, Benjamin Fry, “Nanotechnology- Enabled Sensors”, Springer,
2. H.Rosemary Taylor, “Data acquisition for sensor systems”, Chapman & Hall, 1997.

3. Vijay.K.Varadan, Linfeng Chen, Sivathanupillai, “Nanotechnology Engineering in Nano and Biomedicine”, John Wiley & Sons, 2010.

ACTIVITIES:

- Electrical and Optical Characteristics of InP Nanowires based p-i-n Photodetectors
- Modeling and Simulation of Carbon Nanotube Field Effect Transistors.
- Application of Porous Silicon in Terahertz Technology.

17VL020 RF INTEGRATED CIRCUIT DESIGN

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives

This course will develop electronic circuits for radio frequency applications, specific to CMOS integrated circuits. As the course title suggests, the course will be specific to CMOS integrated circuits, and specific to radio frequencies.

Course Outcomes

In particular, the course will focus on circuits for radio front-ends for mobile phone handsets. The course will cover low noise amplifiers, mixers and voltage controlled oscillators power amplifiers.

SKILLS:

- In-depth understanding of RF and analog circuit blocks such as LNAs, Mixers, Power.
- Amplifiers, VCOs, PLL, LO generation and base-band amplifiers.

UNIT-1

INTRODUCTION: RF systems- Basic Architectures, Transmission Media and Reflections, Maximum Power Transfer, Passive RLC Networks for Matching, Passive Impedance Transformation, Noise Models for Active and Passive Components, Classical Two-Port Noise Theory, Noise Figure, Friis Equation, Nonlinearity, Sensitivity and Dynamic range

UNIT-2

HIGH FREQUENCY AMPLIFIER DESIGN & LOW NOISE AMPLIFIERS DESIGN: High Frequency Amplifier Design – Bandwidth Estimation Using Open-Circuit Time Constants, Bandwidth Estimation Using Short-Circuit Time Constants, Risetime, Delay and Bandwidth, Zeros to Enhance Bandwidth , Shunt-Series Amplifier, Cascode Amplifier.Low Noise Amplifier (LNA) Design – LNA Topologies, Large Signal Performance, Design Examples.

UNIT-3

MIXERS: Mixer Fundamentals, Multiplier-Based Mixers, Sub-Sampling Mixers.

UNIT-4

VOLTAGE CONTROLLED OSCILLATORS: Resonators, Negative Resistance Oscillators.

UNIT – 5

RF POWER AMPLIFIERS: Class A, AB, B, C amplifiers, Class D, E, F Amplifiers,RF Power Amplifier Design Examples.

TEXT BOOKS

1. Thomas H. Lee ,"The Design of CMOS Radio-Frequency Integrated Circuits". Cambridge University Press, 2004.
2. Behzad Razavi ,"RF Microelectronics". Prentice Hall, 1998.

17FT001 PLANT FOOD TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

This course deals with technologies related to handling, processing, and storage of 'fruits and vegetables' and 'Cereal and Pulses'. The objective of this course is to impart skill and knowledge required to apply the principles and concepts behind 'fruit and vegetable' and 'cereals and pulses' processing including post-harvest handling, specific processing techniques, quality analysis and stabilizing shelf life of the products.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Gain knowledge on processing techniques of 'fruits, vegetables, Cereal and pulses
- Know about preservation techniques to improve the shelf life of seasonal fruits
- Know the utilization of by products from fruits, vegetables, cereals and pulses

SKILLS:

- ✓ Identify and predicts the post harvest handling factors affecting the shelf life of fruits, vegetables, cereals and pulses
- ✓ Suggest suitable processing and storage conditions for fruits, vegetables, cereals and pulses
- ✓ Handle cereal processing equipment.

ACTIVITY:

- Report on nutritional composition, processing and storage considerations for a particular fruit / vegetable product

UNIT –I

Production of fruits and vegetables in India. Composition of each of the major fruits and vegetables produced in the country -Mangoes, Pineapple, Guava, Papaya, Grapes among fruits - Beans, Carrot, Tomatoes, Potato, Onion, Brinjal among vegetables. Causes for heavy losses. Spoilage factors, post harvest field operations including methods to reduce the post harvest losses, General methods of preservation of fruits and vegetables. Canning of fruits and vegetables Reception, sorting and storage operations for fruit and vegetables. Preparation of fruits and vegetables for canning. – Washing, peeling, grating, slicing, dicing, deseeding, blanching - Importance of blanching operations - Batch and continuous blanching.-Hot water and steam blanching.- Canning operations – Precautions in canning operations, Spoilage of canned foods. Common machinery for operations like Peeling, Slicing/Dicing, Pulping, Grating and canning process.

UNIT –II

Production and preservation of fruits and vegetable juices, preservation of fruit juice by hurdle technology. Preparation of Jam, Jelly and marmalade, pickles, vinegar and tomato product. Juice and pulp extraction – various extractors used including Hydraulic Press - Hot and Cold Break processes- Clarification centrifuges – Decanters and desludgers. Processing of tea, coffee cocoa and mushroom technology.

UNIT –III

Specialty products - Fruit Bars, Fruit juice concentrates – methods of concentration - evaporators used for concentration of fruit juices and pulp - Tubular, Plate and scraped surface evaporators and Fruit Powders -Preparation of Fruit material for powder production - Working of Spray, Dryer and Drum Dryer – Fruit juice aroma Recovery and its importance. Brief on Aroma Recovery equipment.

UNIT –IV

Storage of cereals, Infestation measures; Drying of grains, Processing of rice and rice products. Milling of wheat and production of wheat products, including flour and semolina. Milling of corn, barley, oat, coarse grains including sorghum, ragi and millets. Milling of Pulses: Major Pulses grown in the country and their application, Status of Pulse milling industry in India, need for modernization, Traditional milling process - merits and demerits. Drying of legumes - Sun drying, Traditional Processing steps – Pre-cleaning, Pitting, Oil application, Conditioning, Dehusking and splitting - Machinery and equipment employed, mass balance, losses during milling. Modern milling process - Process flow chart - Mechanical hot air drying and conditioning – merits and demerits, Dehusking in Pulse Pearler, Water conditioning, splitting of pulses in Pulse splitter, Merits and demerits. Mini dhal mill – working principle - advantages and disadvantages. Grinding of split pulses, pulse, flour products, their applications, and equipment used.

UNIT – V

Grain Storage and Handling: Bag Storage -Advantages and Disadvantages- Bag Storage structure design. Parameters of good storage structure. Cover Plinth Storage Structures, CAP storage (Ceiling and Plinth Storage), Plans for Bag storage, lay outs, Dunnage, Materials for Dunnage, Pallets, Protection against Rodents, Fungi, Pests and Mites. Fumigation Processes for bag storage piles. Bulk Storage in silos and large bins -Problems of Silo storage, Construction of Silos - concrete and Metal Silos, Physical load and mechanical strength of Silos, Silo flow problems, Relative merits and demerits of Silo storage to Bag Storage, Conveyors and Elevators for feeding and discharging into Silos. In silo Aeration and Drying, Problems of Dust Explosion in Grain Storages, Quality Changes of Grains during storages and remedial measures to prevent unwanted quality changes.

17FT003 UNIT OPERTIONS IN FOOD PROCESSING ENGINEERING

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

- To understand the principle involved in food processing engineering
- To the principle and working of various processing equipments
- To know the methods of product recovery

Course Outcomes:

Upon successful completion of this course student should be able to:

- The students understand the operation of equipment
- The students know various factors affecting food processing equipments
- The students learn to select suitable processing equipment

SKILLS:

✓ Perform cumulative and differential particle size analysis

✓ Identify the suitable mixer required for mixing cohesive and non-cohesive solids

✓ Recognize the required specifications of the size reduction equipment for a given feed

✓ Identify the filtration equipment required for a specific application.

✓ Compare the efficiency of separation, size reduction, mixing and drying equipments

UNIT – I

Principles of fluid flow : Basic engineering mathematics - UNITs and dimension-conservation of mass and energy – principles of fluid flow – properties of liquids, fluid dynamics - mass and energy balance- potential energy, kinetic energy, pressure energy, friction loss, mechanical energy, Newtonian and non – Newtonian fluids-stream line and turbulent flow - flow measurement and measurement of viscosity.

UNIT – II

Evaporation and distillation : Blanching, pasteurization-LTLT, HTST and UHT process- evaporation – definition-single and multiple effect evaporator – mass and enthalpy balance – liquid characteristics – single and multiple effect evaporation-performance of evaporators and boiling point elevation – capacity – economy and heat balance-types of evaporators –short tube evaporators and long tube evaporators– agitated film evaporator- distillation - methods – flash distillation and differential distillation – steam distillation - distillation with Reflux and McCabe – Thiele method- Raleigh equation fractional distillation -steam requirements in food processing industries.

UNIT – III

Separation process : Sedimentation – gravitational sedimentation - Stoke's law - sedimentation of particles in fluids - cyclones – settling under sedimentation and gravitational sedimentation-centrifugal separations – rate of separations – liquid – liquid separation – centrifuge equipment - filtration –filter media – types and requirements-constant rate filtration – constant pressure filtration – filter cake resistance filtration equipment – rotary vacuum filter – filter press - membrane technology- classification – dialysis -gas permeation membrane process – types of membrane – equipments-Reverse osmosis membrane process – flux equation –ultra filtration membrane process – fluid equation – effects of processing variables filtration.

UNIT – IV

Contact equilibrium process : Concentrations - gas/liquid equilibria, solid/ liquid equilibria,- equilibrium concentration relationships - operating conditions- applications - gas absorption- rate of gas absorption- properties of tower packing – types – construction – flow through packed towers - extraction and washing – extraction equipments- washing – equipments and equilibrium diagram - equipment for leaching coarse solids – intermediate solids – crystallization - rate of crystal growth-crystallization equipments.

UNIT – V

Material handling, size reduction and mixing : Material handling equipments screw conveyor, bucket elevator, belt conveyor, chain conveyor, pneumatic conveyor-size reduction process- energy and power requirements in comminuting- Rittinger's, Bond's and Kick's laws of crushing - principles of milling equipments - hammer mill, attrition mill- pin mill, ball mill - homogenization principles - mixing – types of mixers –kneaders and blenders - gas liquid mixing – liquid solid mixing – applications – food plant layout and design - concepts- food plant hygiene - cleaning sterilizing waste disposal methods -- food packaging – functions, technique - machinery and equipment.

ACTIVITY:

- Evaluation of efficiency of drying for various fruits and vegetables using different dryers.

FOOD PROCESSING ENGINEERING LAB

List of Experiments

1. Experiment on minimal processing of fruits and vegetables
2. Experiment on microwave heating of food materials
3. Experiments on vacuum dryer
4. Experiments on freeze dryer
5. Experiments on extrusion cooking of foods
6. Experiments on value addition by flaking
7. Experiment on osmotic dehydration of fruits
8. Experiment on canning of fruits and vegetables
9. Experiment on freeze drying of fruits
10. Visit to cold storage
11. Manufacture of fruit squashes, RTS beverages
12. Experiment on irradiation of potatoes
13. Visit to fruit/vegetable processing UNIT
14. Experiment on vacuum packaging of fruits
15. Experiment on vacuum packaging of meat and meat products
16. Experiment on vacuum packaging of vegetables
17. Determination of tensile strength and elongation of packaging materials
18. Determination of water absorption of packaging materials
19. Experiments on modified atmospheric storage of fruits and vegetables
20. Experiment on packaging of powderedmaterials and oils using FFS machines
21. Visit to food industries and familiarize with packaging operations

TEXT BOOKS:

17FT005 FOOD QUALITY AND SAFETY ENGINEERING

Hours Per Week :

L	T	P	C
4	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

The course deals with global food safety laws, standards and regulations. The objective of the course is to impart knowledge to students on national and international food standards along with application of ISO and HACCP in food processing industries.

Course Outcomes:

Upon successful completion of this course student should be able to:

- understand about toxins from bacteria and fungi.
- know about different food additives, anti-nutrients, anti-vitamins used in food processing.
- explain about heavy metal contamination in foods.
- discuss about food safety and microbial standards

SKILLS:

✓ Identify the different sources of food contamination
✓ Categorize the contaminants on the basis of severity
✓ Prepare quality control charts for a given process
✓ Identify different allergens in foods
✓ Identify natural toxin present in food

UNIT – I

Criteria for quality control : Principles of food safety – Historical developments - need for quality control and safety- impact of food safety on world trade issues - strategy and criteria for food safety - microbiological criteria for safety and quality-sources of micro organisms for food spoilage –food borne diseases and their control - sampling plans and criteria for microbial assessments in foods food contaminants – physical, biological and chemical contaminants-factors affecting toxicity of compounds- quality control and food safety.

UNIT – II

Source of contamination : Causes of major failure of food safety – clothing and personal hygiene – –test for food safety. Quality control tools. Quality control chart – Quality factors in food – Nutritional labeling – Specification – Rules and Regulations - need for food plant sanitation –– cleaning and cleaners – Water supply- Good Manufacturing Practice. Metal contaminants- Sources of health hazard of metallic contaminants.

UNIT – III

Assessment of food safety: General and acute toxicity – Mutagenicity and carcinogenicity. Additives (Intention – direct) – Preservatives – antioxidants, sweeteners, flavors, colours, vitamins, stabilizers – indirect additives – organic resides – inorganic residues and contaminants. Food allergy, food intolerance, contaminants of processed foods, solvent residue, contaminants of smoked foods. Cleaner production is food industry-fruit and vegetable processing, sea food processing, brewing and wine processing.

UNIT – IV

Analytical Techniques in Foods : Application and operating parameters of Spectrophotometry, AAS, GC, HPLC, GC-MS, ICP, DSC, TGA,SEM, Colorimeter.

UNIT – V

Hygienic practices : Process equipment and machinery auditing, consideration of risk, environmental consideration, mechanical quality control - personnel hygienic standards- preventative pest control, cleaning and disinfesting system, biological factors underlying food safety.

17FT007 FOOD MICROBIOLOGY

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

This course deals with basics of food microbiology, preservation and spoilage of various food products. The objective of this course is to enable students to apply identification and enumeration techniques of microbes found in food products.

Course Outcomes:

Upon successful completion of this course student should be able to:

- understand the characteristics, morphology and classification of food borne microorganisms.
- understand microbiology of food products
- know about pathogens responsible for food spoilage
- understand the principles involved in food preservation techniques

SKILLS:

- ✓ efficient in preparing sterilize media and pure cultures of microbes
- ✓ able to Identify types of microorganisms present in food products
- ✓ expert in Isolation of microorganisms from the food sample

ACTIVITY

- Detection of different microbes from a given food products obtained from different sites (street foods, supermarket foods, hostel mess food etc).

UNIT – I

Foods as ecological niches, relevant microbial groups, Microbes found in raw materials and foods that are detrimental to quality, Factors that influence the development of microbes in food.

UNIT – II

Newer and rapid methods for qualitative and quantitative assay demonstrating the presence and characterization of microbes, Stress, damage, adaptation, reparation, death.

UNIT – III

Microbial growth in food: intrinsic, extrinsic and implicit factors, Microbial interactions, Inorganic, organic and antibiotic additives. Effects of enzymes and other proteins, Combination systems, Adaptation phenomena and stress phenomena, Effect of injury on growth or survival, Commercial available databases.

UNIT – IV

Microbial behavior against the newer methods of food processing, Adoption and resistance development, Microbes as test organisms, as sensors and as tools for future applications in energy production and food and non food industrial products.

UNIT – V

Modern methods of cell culture: synchronous and co- cell culture, continuous cell culture in liquid and solidmedia, Cell immobilization and applications, Pre and probiotics cultures.

FOOD MICROBIOLOGY AND ENZYMOLOGY LAB

Microbiology:

1. Evaluation of microorganism in raw and processed products by using various techniques
2. Study of factors influencing growth of microorganisms
3. Determination of effects of various preservatives including antibiotics on the suppression of microbial growth
4. Development of cell cultures using various techniques, production of newer microbial metabolites of industrial importance
5. Development of probiotics in lab.
6. Microbiological analysis of raw water quality
7. Isolation of micro organisms in fresh and processed foods.
8. Detection of food borne pathogens using polymerase chain reaction.

Enzymology :

9. Assay of enzymes for activity, specific activity, kinetics, stability (temperature, pH and storage)
10. Extraction and clarification of juices using enzymes
11. Applications of enzymes in baking
12. Starch and protein hydrolysis
13. Meat tenderization
14. Cheese making.
15. Preparation of wine and beer

Note: Out of the above experiments, a minimum of 12 experiments will be conducted in a semeste

3	-	-	3

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

Objective of the course is to enable research scholars to have a general understanding of research methods and application of statistical tools in the analysis and interpretation of findings and guidelines for report writing.

UNIT - I

Introduction: Nature and Importance of research, the role of business research, aims of social research, research process, types of research. Data Base: discussion on primary data and secondarydata, probability and non-probability sampling techniques.

UNIT-II

Research design: Meaning of research design. Functions and goals of research design. Questionnaire and Schedule.

UNIT – III

Measurement and scaling concepts: Attitude measurement, levels of measurement and types of scales, criteria for good measurement. Measures of central tendency, measures of dispersion,measures of variation, Correlation and Regression. Statistical Inference. Tests of significance for small samples, t-test, Chi-Square test and ANOVA-one way and two way classifications. Discriminateanalysis, cluster analysis, conjoint analysis

UNIT-IV

Technical Report Writing: Pre-writing considerations, Thesis writing, formats of report writing, Formats of publications in Research Journals. Technique of Interpretation, Precaution inInterpretation, Significance of Report writing, Different steps in writing Report, Layout of theResearch Report, Types of Reports, Report Format, Typing Instructions, Oral Presentations.

UNIT-V

Research Ethics and Morals: Issues related to plagiarism, collaborative models and ethics, Acknowledgements. *Intellectual Property Rights:* copy rights.

17FT002 EMERGING TECHNOLOGIES IN FOOD PROCESSING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Objectives:

To study about the concepts and principles of various techniques such as High Intensity Pulse techniques, Light Pulses and emerging aspects in food process engineering. To learn about the equipments used and working principle for the emerging aspects in food process engineering. To know the various applications of the new technologies in food process engineering.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Students are updated of the recent technological advancements in the field of Food Technology.
- Students are appraised of the alternate technologies in Thermal Processing of foods.
- The students are able to apply their knowledge on various technological advancements in the field of Food Technology.

SKILLS:

✓ Identify and compare various thermal and non-thermal treatment for a particular process.

✓ Understand process and equipment design of an emerging technique.

✓ Proficient knowledge of various value added products using emerging techniques.

UNIT – I

Thermal processing: Thermo bacteriology - thermal destruction of microorganisms - thermal death rate kinetics methods of sterilization and equipments involved- latest trends in thermal processing.

UNIT – II

Emerging technologies: Emerging technologies in food processing –necessity and advantages – hurdle technology – concepts and applications behavior of microorganisms during preservation – multi target preservation -minimal processing – optimal range of hurdles - super critical fluid extraction processes in food materials - electrical resistance heating – principles process and equipments.

UNIT – III

Non-thermal processing: High voltage electric pulse treatment in food preservation – radiation preservation of food- ionizing radiation- dosimetry lethal effects on microorganisms - UV light and pulsed light preservation –high hydrostatic pressure process of foods- equipment, processing and effect on microorganisms

UNIT – IV

Drying: Psychrometry - equilibrium moisture contents- theory of drying – drying models - drying rate constant –effective moisture diffusion– activation energy calculation during drying - heat requirements – driers for solid and liquid food- foam mat dryer, vacuum dryer, freeze dryer - microwave heating of food - Process and equipment- application - radio frequency drying, infrared drying, application of ultrasound - inactivation of microorganisms and enzymes

UNIT – V

Value addition processes: Extrusion - cold and hot extrusion – production of pasta - principles- extrusion cooking – single screw and twin screw extruders applications, process and quality of extrudates - value addition by flaking –process and quality assessment - encapsulation – micro and nano level process – process and methods – selection of core and wall materials –quality of encapsulated products - coating – coating materials and equipments – battering and breading, seasoning.

REFERENCE BOOK:

1. Leniger, H.A. and Beverloo,W.A. 1975. Food Process Engineering. First Edition D. Reidel Publishing Company, Dordrecht, Holland.

2. Marcus Karel Owen R.Fennema and Daryl B.Lund. 1975. Principles of Food Science Part II, Physical Principles of Food Preservation, Marcel Dekker, Inc. New York.

3. Paul Singh, R. and Dennis R. Heldman. 2004. Introduction to Food Engineering. Elsevier India Pvt. Ltd., New Delhi.

ACTIVITY

- Formulation of extruded products using single screw and twin screw extruders and evaluation of its quality.

17FT004 FOOD QUALITY SYSTEMS AND MANAGEMENT

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	45	15	30	-	5	5	-

Course Description and Objectives:

The course deals with global food safety laws, standards and regulations. The objective of the course is to impart knowledge to students on national and international food standards along with application of ISO and HACCP in food processing industries.

Course Outcomes:

Upon successful completion of this course student should be able to:

- understand about toxins from bacteria and fungi
- know about different food additives, anti-nutrients, anti-vitamins used in food processing
- explain about heavy metal contamination in foods
- discuss about food safety and microbial standards

SKILLS:

✓ Identify the different sources of food contamination

✓ Categorize the contaminants on the basis of severity

✓ Prepare quality control charts for a given process

✓ Identify different allergens in foods

✓ Identify natural toxin present in food

UNIT – I **8 hr**

Concept of quality: Quality attributes- physical, chemical, nutritional, microbial, and sensory; their measurement and evaluation; Sensory visàvis instrumental methods for testing quality

UNIT – II **12 hr**

Concepts of qualitymanagement: Objectives, importance and functions of quality control; Quality management systems in India; Sampling procedures and plans; Food Safety and Standards Act, 2006.

UNIT – III **10 hr**

Domestic regulations; Global Food safety Initiative; Various organizations dealing with inspection, traceability and authentication, certification and quality assurance (FSSAI Act, AGMARK, BIS); Labeling issues; International scenario, International food standard

UNIT – IV **8 hr**

Quality assurance, Total Quality Management; GMP/GHP; GLP, GAP; Sanitary and hygienic practices; HACCP; Quality manuals, documentation and audits; Indian & International quality systems and standards like ISO and Codex.

UNIT – V **10 hs**

Export import policy; export documentation; Laboratory quality procedures and assessment of laboratory performance; Applications in different food industries; IPR and Patent.

ACTIVITY:

- o Detection of natural toxins and allergens from various processed products.

FOOD PROCESS ENGINEERING LAB-II

1. Preparation of bread by straight dough methods
2. Preparation of yeast dough products - I
3. Preparation of yeast dough products - II
4. Preparation of Cakes and Cake decorations, cookies
5. Experiment on magnetic treatment of seeds.
6. Experiment on drying of seeds by thin layer drying.
7. Effect of microwave heating of seeds on germination of seeds.
8. Experiment with inclined belt separator.
9. Experiment with spiral separator.
10. Experiment with air screen cleaner.
11. Evaluation of specific gravity separator.
12. Evaluation of tomato seed extractor.
13. Evaluation of chillies seed extractor.
14. Experiment on distillation.
15. Experiment on centrifugal separation.

16. Experiment on vacuum filtration.
17. Experiments on ultra-filtration.
18. Experiment on reverse osmosis.
19. Experiments on pinmill and ball mill
20. Experiments on attrition mill and hammer mill.
21. Experiments on mixing of solids and liquids.
22. Preparation of regional fruit juices
23. Preparation of whey-based beverages
24. Preparation of iced and flavoured tea beverage
25. Preparation of carbonated and noncarbonated soft drinks
26. Preparation of soy milk, fruit milkshakes, herbal beverages

17FT006 ANIMAL PRODUCT TRAINING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

To understand about the composition, nutritive value of meat, poultry and fish. To know about processing technology of meat, poultry and fish. To learn the technology of meat products and eggs.

Course Outcomes:

Upon successful completion of this course student should be able to:

- The student will be able to understand about the composition of meat, poultry and fish.
- The student will have knowledge on the processing of meat, poultry and fish and their by products
- The students will have knowledge about meat plant sanitation, hygiene and standards.

SKILLS:

- ✓ Proficient in various meat preservation techniques
- ✓ Process meat, fish and poultry into various value added products
- ✓ Expert in various post mortem and ante mortem techniques
- ✓ Suggest regulations for meat processing plants

ACTIVITIES:

- o Mention the quality requirements for a fish processing UNIT
- o Mention the uses of by-products obtained from poultry processing UNIT

UNIT - I

Sources of meat and meat products in India, its importance in national economy. Chemical composition and microscopic structure of meat. Effect of feed, breed and management on meat production and quality. Slaughtering of animals and poultry, inspection and grading of meat. Factors affecting post- mortem changes, properties and shelf life of meat. Meat quality evaluation. Mechanical deboning, meat tenderization. Aging, pickling and smoking of meat. Meat plant sanitation and safety, byproduct utilization.

UNIT - II

Poultry: classification, composition, preservation methods and processing. Structure, composition, nutritive value and functional properties of eggs and its preservation by different methods. Processing of egg products. Factors affecting egg quality and measures of egg quality. Types of fish, composition, structure, post-mortem changes in fish. Handling of fresh water fish. Canning, smoking, freezing and dehydration of fish. Preparation of fish products, fish sausage and home makings.

UNIT - III

Fish products - production of fishmeal, fish protein concentrate, fish liver oil and fish sauce and other important byproducts; Quality control of processed fish; Fish processing industries in India. Milk processing: Milk processing flow sheet – Filtration / clarification, Storage of milk, Standardization – simple problems in standardization, Homogenization, pasteurization

– types of pasteurization process. Equipments used in each process - Cream separating centrifuges, Pasteurizers (Heat Exchangers), Homogenizers, Bottle and pouch fillers, Milk Chillers, Plant piping, Pumps.

UNIT - IV

Manufacture of dairy products: Manufacture of Cream, Butter, Ghee, Milk powder, Cheese – types and defects in cheese. Quality aspects of these products. Equipments used for manufacture of each product like butter, churn, ghee. Boiler, Spray and Drum Dryers, Product instantizing equipment etc.

UNIT - V

Manufacture of Ice Cream and other dairy products. Manufacture of Ice– Chemistry and technology – Microbiology of ice cream – Quality aspects. Manufacture of paneer, Toned Milk, Sweetened condensed milk, Khoa. Fermented dairy products: Fermented products – Yoghurt, curd, acidophilus milk, butter milk. dairy plant sanitization – Cleaning in place – bottle and can washing, cleaning of tankers and silos – Detergents and sanitizers used. Energy use in Dairy plant - sources and cost of energy, Control of energy losses and energy conservation. Quality control of milk and milk products; Milk plant hygiene and sanitation.

2. Milk & Milk Processing; Herrington BL; 1948, McGraw-Hill Book Company.
3. Portsmouth, J.I. 1979, Commercial Rabit Meat Production. 2nd Edn. Saiga Survey, England.

17FT008 FOOD PACKING TECHNOLOGY

Hours Per Week :

L	T	P	C
3	-	3	5

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

This course deals with types and functions of packaging material along with its various methods and equipment used for packaging. The objective of this course is to impart knowledge to students on applications of food packaging materials and methods effectively in accordance with relevant standard regulations, environment protection and ethical principles.

Course Outcomes:

Upon successful completion of this course student should be able to:

- understand various methods of packaging, factors affecting the shelf life of packaged foods
- know about hazards and toxicity associated with packaging materials
- understand various testing methods used for packaging materials
- Understand the design flow from simulation to synthesizable version
- develop knowledge on laws and regulations involved in safety and labeling of foods

SKILLS:

- ✓ Measure and evaluate properties of packaging materials
- ✓ Define the packaging requirements for a given food product
- ✓ Suggest suitable labeling requirements for a food package

ACTIVITIES:

- Prepare database for packaging materials with their functional properties
- Report on national and international packaging standards

UNIT-1

Introduction to principals of food packaging, Types of packaging. Functions of packaging; Type of packaging materials; Selection of packagingmaterial for different foods. Selective properties of packaging film; Methods of packaging and packaging equipment. Mechanical strength of different packaging materials; Printing of packages. Barcodes & other marking; Interactions between packaging material and foods; Environmental and cost consideration in selecting packaging materials.

UNIT-2

Testing of packaging; Rigid and semi rigid containers; Flexible containers; Sealing equipment; Labelling; Asceptic and shrink packaging; Secondary and transport packaging. Food packaging and law, shelf life testing,modern and traditional packaging material, physical and chemical properties, production, storage and recycling of packagingmaterials, regulation and equipment analysis of various existing packaging system and standards. Active and intelligent packaging techniques:Active packaging techniques, intelligent packaging techniques, Current use of novel packaging techniques, Consumers and novel packaging. Oxygen, ethylene and other scavengers: Oxygen scavenging technology, Selecting the right type of oxygen scavenger, Ethylene scavenging technology, Carbon dioxide and other scavengers. Antimicrobial food packaging: Antimicrobial agents, Constructing an antimicrobial packaging system, Factors affecting the effectiveness of antimicrobial packaging

UNIT-3

Non-migrating bioactive polymers (NMBP) in FoodPackaging: Advantages of NMBP, Inherently Bioactive synthetic polymers: types and application, Polymers with immobilized bioactive compounds,Applications of polymers with immobilized bioactive compounds. Time- temperature indicators (TTIs): Defining and classifying TTIs, Requirements for TTIs, The development of TTIs, Maximising the effectiveness of TTIs, Using TTIs tomonitor shelf- life during distribution. The use of freshness indicator in packaging: Compounds indicating the quality of packaged food products, Freshness indicators, Pathogen indicators Other methods for spoilage detection. Packaging-flavour interactions: Factors affecting flavour absorption, The role of the food matrix, The role of differing packagingmaterials, Flavourmodification and sensory quality. Moisture regulation: Silica gel, Clay, Molecular sieve, Humectant salts, Irreversible adsorption.

UNIT-4

Developments in modified atmosphere packaging (MAP): Novel MAP gases, Testing novel MAP applications, Applying high oxygen MAP. Recycling packaging materials: The recyclability of packaging plastics, Improving the recyclability of plastics packaging, Testing the safety and quality of recycled material, using recycled plastics in packaging. Green Plastics for food packaging: The problem of plastic packaging waste, The range of biopolymers, Developing novel biodegradable materials.

UNIT-5

Integrating intelligent packaging, storage and distribution: The supply chain for perishable foods, The role of packaging in the supply chain, Creating integrated packaging, storage and distribution: alarm systems and TTIs. Testing consumer responses to new packaging concepts: Newpackaging techniques and the consumer, Methods for testing consumer responses, Consumer attitudes towards active and intelligent packaging.

FOODQUALITY ASSURANCE LAB

List of Experiments:

1. Application of GC for pesticide residue analysis.
2. Exercise for identifying CCP in bakery processing.
3. Exercise for identifying CCP in milk processing.
4. Establishment of CCP Decision tree.
5. Visit to HACCP UNIT.
6. Exploring BIS and FPO and study their importance.

7. Exploring Codex standards and specifications and study their importance.
8. Experiments on food quality analysis – physical parameters
9. Experiments on food quality analysis – biochemical parameters
10. Visit to food quality analysis laboratory / BIS / Spice Board / AGMARK.
11. Visit to quality control laboratory of a food processing industry.
12. Chemical analysis of raw water quality
13. Assay of lipid degradation and polymerization products in fried foods and fried oils
14. Analysis of phytosterols, trans-fatty acids and omega fatty acids
15. Estimation of Gluten
16. Determination of alcoholic acidity
17. Determination of falling number/amylase
18. Determination of Pelshenke value
19. Determination of sedimentation value
20. Evaluation of quality of products stored in packaging films and glass bottles.
21. Quality analysis of vacuum packaged products after storage.
22. Estimation of sugar-acid ratio of fruits

Note: Out of the above experiments, a minimum of 12 experiments will be conducted in a semester.

Pilot Plants:

1. Vegetable processing plant
2. Automatic mango processing plant
3. Combined rice mill / paddy processing plant
4. Automatic idli / dosa making plant
5. Fully Automatic Pet Bottle Filling, Capping and Labeling plant
6. Honey Processing Plant
7. Soymilk and tofu processing plan

TEXTBOOKS:

1. A handbook of Food Packaging, FAPaine and HY Paine, Blackie & Sons Ltd., Glasgow, UK.
2. Modern Food Packaging, Published by Indian Institute of P ackaging,Mumbai (1998).
3. A Textbook of Food Science and Technology, ICAR, New Delhi (2001).

REFERENCEBOOKS:

1. Food Packaging and Preservation (theory & practice) by M.Mathlouthi Elsevier Applied science publisher, London and New york.
2. Plastics in packaging by forwarded by H.B Ajmera & M.R Subramanium – Indian institute of packaging. Published by A.P.Vaidya, Secretary IIP, E2, MIDC, Industrial Area.

17HS002 EMPLOYMENT ORIENTATION PROGRAM

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Preamble:

It is common knowledge that students opting for the Masters Programme after B.Tech do so either because they have been unsuccessful in securing employment after their Bachelors or because they have not crystallized their career plan. Hence, students opting for M.Tech are found to be deficient not only in the technical knowledge but also in their communication skills and overall personality. There is a need to groom them and shape them into employable resources.

Program Objectives:

i. To impart employability skills to M.Tech. final students by honing their interpersonal and presentation skills.

ii. To equip them with the latest tools and techniques for effective communication through discussions, group work, presentation exercises, assignments, projects etc.

iii. To impart training for their overall personality development and shape them into confident, positive and ambitious professionals.

Course Contents

The course content, designed for 50 Hrs will comprise two modules:

- Communication skills & Overall personality improvement (10 * 2.5 = 25 Hrs)
- Pedagogy of Engineering Subjects & Making Project Presentations (10 * 2.5 = 25 Hrs)

Rationale for the Programme

On a more holistic view of higher education, the term “academic development” refers to development of multiple aspects of a student’s personality under this EOP for M.Tech

students, different types of development are envisaged like personal, interpersonal skills, career development and life planning. “Development” in the engineering education

according to national accreditation bodies like NBA and NAAC is understood to happen through activities and programmes designed to improve the ability to work to teams, express themselves confidently to their peers and present their views boldly before an audience and

get things accomplished through management of men and materials. This programme will improve student’s overall communication skills and raise his/ her potential as an employee graduate.

About this Programme

The 50 Hrs course will be rolled out in two spells of 25 Hrs each with the help of in-house and invited experts. It is aimed at improving the presentation skills in general and teaching ability of the M.Tech students in particular. AFD will seek the cooperation of all the Deans, HoDs and senior professors as subject experts, mentors from the departments to provide the essential knowledge and skill inputs for the trainees so that the course outcomes can be realized.63

Expected Outcomes:

Having gone through the 50 hrs rigorous training on presentation skills, pedagogy and overall personality grooming, the trainees will get equipped to face any interview confidently, make short and effective presentations during interviews and gain the confidence to handle engineering topics and perhaps also develop an aspiration for a career in teaching.

The trainees will be assessed for a total of 50 marks, which will be incorporated into the II year project marks. The summative assessment will be carried out by a special panel constituted for the purpose in consultation with the Dean, Evaluation and respective HoD.

- 5 Marks for attendance
- 5 Marks for formative assessment
- 40 Marks for summative assessment

I

YEAR

FOOD PROCESSING TECHNOLOGY

M.Tech.

ELECTIVES

I SEMESTER

- 17FT009 - Equipment Design And Process Control
- 17FT011 - Food Biochemistry And Nutrition
- 17FT013 - Refrigeration And Coldstorage Construction
- 17FT015 - Nutraceuticals And Health Foods
- 17FT017 - Plantation Crops, Spices & Condiment Technology
- 17FT019 - Industrial Biotechnology
- 17FT021 - Traditional And Convenience Food Technology
- 17FT023 - Automation In Food Processing

II SEMESTER

- 17FT012 - Separation Techniques in Food Processing
- 17FT014 - Environmental Food Processing
- 17FT016 - Plant Layout And Process Economics
- 17FT018 - Heat&Mass Transfer Operations in Food Processing
- 17FT020 - Sugar And Confectionary Technology
- 17FT022 - Beverages Technology
- 17FT024 - Lipid Science And Technology
- 17FT026 - Dairy Technology

COURSE CONTENTS

I SEM & II SEM

17FT009 EQUIPMENT DESIGN AND PROCESS CONTROL

Hours Per Week :

L	T	P	C
3	1	0	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

This course deals with the principles, mechanism, selection and design of different equipments used in food industry. The objective of this course is to introduce students to a wide range of equipments such as heat exchangers, dryers, freezer, filters for different process operations, their design considerations and material selection.

Course Outcomes:

- know about the designing aspects of food processing equipment
- understand the applications of processing equipment in food industry
- gain knowledge on process parameters in mechanical, thermal and mass transfer operations carried out in food processing.

SKILLS:

✓ able to Design common equipment used in food processing industries

✓ Perform design calculations for heat exchanger, dryer and evaporators

ACTIVITIES:

- Selection and optimization of operating and performance parameters in different food processing equipments

UNIT – I

Basic Scientific and Engineering principles of equipment design and process control, Properties of substances, chemical equation and stoichiometry, phases and phases rule, material and energy balances, energy balance and open system. Engineering properties of food materials and their significance in equipment design. Principles of CAD and its simple application.

UNIT – II

Design of Vessels: Codes and regulations, Materials of construction, Design for pressures, Design pressure and temperature loadings, allowable stresses, minimum thickness after forming, corrosion mechanism,corrosion control, Design for internal and external pressure, cylindrical and spherical shell, formed heads, re-enforcement openings.

UNIT – III

Design of food storage tank, horizontal and vertical silos, insulated and uninsulated, process plant piping: codes and regulations, testing, fabrication requirements, overall economic and safety considerations, heat exchangers: shell and tube heat exchangers, construction codes, general design considerations, clad tube sheet, plate type exchangers, air cooled heat exchangers, heat exchanger cost economics.

UNIT - IV

Instrument terminology and performance system accuracy, flow sheet symbols, instrument evaluation, electrical, mechanical, magnetic and optical transducers formeasurement of process variables like temperature, pressure, flow, level, consistency and humidity, indicating and recording devices: direct acting and servo operated systems, digital indicators, strip and circular chart recorders, electronic data loggers, principles of automatic process control.

UNIT – V

Process characteristics, controller characteristics, closed loop system, pneumatic and electric controllers, final controlling elements, control valves, valve sizing, electronic actuators, motor drives and controls, introduction to programmable logic controllers (PLC): internal structure, inter facing with sensors and actuators, binary logic diagrams and ladder diagrams, choosing a PLC system.

17FT011 FOOD BIOCHEMISTRY AND NUTRITION

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

This course offers the students knowledge on biological basis of nutrition, metabolic pathways, enzyme activity and mechanisms by which diet can influence health. The objective of this course is to empower the students with methods and techniques for molecular weight estimation of proteins, qualitative analysis of edible fats and oils and make nutrient profiles for balanced diet and health.

Course Outcomes:

- describe the major metabolic pathways involved in the metabolism of nutrients in the human body
- analyze the roles of biomolecules in metabolic reactions and relate metabolism with human nutrition
- understand the basis of reactivity of biologically relevant molecules and their interactions.

SKILLS:

✓ Separation and molecular weight estimation of proteins

✓ Quality analysis of edible fats and oils

✓ Identify and recommend micro and macro nutrient profile for balanced diet and health

✓ Enzyme activity measurement and determining the mechanism of the reaction

UNIT – I

Basic Concepts of Carbohydrates: Structure and properties of Mono, Di, Oligo & polysaccharides, complex carbohydrates, Confirmation of pyranose & furanose ring, glycosidic bond, Glycogen, starch & dextran; as mobilizable stores of glucose. Cel lulose, glycoproteins, glycosaminoglycans & lectins; structure and function.

UNIT – II

Bioenergetics & Metabolism of Carbohydrate: Respiratory chain, Aerobic and anaerobic respiration. Glycolysis, Glucogenesis, Glycogenolysis, Gluconeogenesis, ED Pathway, Pentoses phosphate shunt & TCAcycle.

UNIT – III

Amino Acids: Amino acids - Classifications, Physico – Chemical Properties, Protein structure, folding & function, Nitrogen Cycle, Nitrogen Balance, reductive amination & transamination & Urea cycle. Synthesis of amino acids -Glutamate pathway; Serine pathway; shikimate pathway for the production of aromatic amino acids..

UNIT – IV

Lipids and their Metabolism: Classifications, Structures and roles of fatty acids; fatty acid breakdown; fatty acid synthesis; synthesis and metabolism of triglycerols, cholesterol structure and function. Lipoproteins – classification & function.

UNIT – V

Nutrition: Functions and energy of foods, basal energy metabolism, dietary allowances and standards for different age groups. Assessment of nutritional quality of foods, mineral and vitamins as functional constituents in human metabolism and deficiency diseases associated. Effect of processing on nutritive value of food. Vitamins and minerals: Classification, structure and role of vitamins in food. Aroma substances.

TEXTBOOKS:

1. Lehninger A.L, Nelson O.'L, M.M. Cox, "Principles of Biochemistry" 3rd ed., CBS Publications, 2005.
2. J.L. Jain, "Fundamentals of Biochemistry ", 7th ed., S.Chand Publishers, 2009.
3. Food: Facts and Principles-N. Shakuntala Manay, Shadksharawamis.
4. Fundamentals of Nutrition-L Loyd McDonald

REFERENCEBOOKS:

1. Voet D, Voet J. G, "Biochemistry", 3rd ed., John C Wiley and Sons, 1994.
2. L. Stryer, J.M. Berg, JLTymockzo, "Biochemistry" 5th ed., WH Freemen & Co., 2002.
3. K. Mathews, K.E. Van Holde, Kevin G Ahern, "Biochemistry", 3rd ed., Pearson education, 2005.

ACTIVITIES:

- Report on food particle disintegration in a prototype stomach model
- Review on starch modification methods and its applications in food industry
- Estimation of RDA values for different micro and macronutrients

17FT013 REFRIGERATION AND COLDSTORAGE CONSTRUCTION

Hours Per Week :

L	T	P	C
4	1	-	4

Total Hours :

L	T	P
45	15	-

xxxx

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

To enable the students to understand the various concepts behind refrigeration and air conditioning. To enable the students to solve simple problems in refrigeration and air conditioning. To enable the students to understand the various concepts behind cold storage construction, design, maintenance, and applications in food industry.

Course Outcomes:

Upon successful completion of this course student should be able to:

- The students are knowledgeable to construct refrigeration and air conditioning
- The students will be able to solve problems on refrigeration and air conditioning and design cold storage for food applications
- The students will be able to apply their knowledge on cold storage of perishable products.

SKILLS:

- ✓ Suggest producers about various parameters related to cold chain structure
- ✓ Able to select appropriate freeze dryers for different perishable commodity
- ✓ Knowledge on design considerations for chillers and chilled Storages

UNIT – I

Principles of Refrigeration:Refrigeration cycles, Vapour Compression and Vapour Absorption cycles, Refrigerants, characteristics of different refrigerants, Ozone Depletion Potentials, Green house Potential Refrigerants, use of non polluting refrigerants, net refrigerating effect, ton of refrigeration - Components of a Refrigeration system: Compressor, condenser, Evaporator, Expansion valves piping and different controls. Atmospheric air and its properties, Psychometrics, Energy considerations.

UNIT – II

Cold Storage Design and Construction: Small and large commercial storages, Cold Room temperatures, Insulation, properties of insulating materials, air diffusion equipment, Doors and other openings. Cold load estimation; prefabricated systems, walk-in-coolers, and Refrigerated container trucks: Freezer Storages, Freezer room Temperatures, insulation of freezer rooms: Pre-cooling and pre freezing. Cold Storage practice, Stacking and handling of material in and around cold rooms, Optimum temperatures of storage for different food materials-meat and poultry products, marine products, fruits and vegetables, spices and food grains.

UNIT – III

Operation and maintenance - Controlled atmosphere and modified atmosphere storages: Operation and maintenance, Cleanliness, defrosting practices, preventive maintenance, safety measures Controlled atmosphere and Modified atmosphere storages Principles and basics of their construction.

UNIT – IV

Chilling of Foods: Chilling equipment for liquid foods. Secondary refrigerants and direct expansion techniques in chilling. Chilled foods transport and display cabinets - Basics of Chilled foods microbiology, Packaging of Chilled foods - Hygienic design considerations for chillers and chilled Storages. Cool storages and their applications. Evaporative cooling and its applications.

UNIT – V

Freezing of foods: Freezing equipment, Freezing rates, growth rate of ice crystals, crystal size and its effect of texture and quality of foods, Freezer types, Blast freezers, Contact Plate Freezers, conveyorized quick freezers, Individual quick freezing. Cryogenic Freezing, Freezing practice as applied to marine foods, meat and poultry, fruits and vegetables.

ACTIVITIES:

- Performance evaluation of various freeze dryers using various food products

17FT015 NUTRACEUTICALS AND HEALTH FOODS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

xxxx

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

This course deals with the functional foods and nutraceuticals (FFN) products and their bioavailability and health benefits. The objective of the course is to impart knowledge to students on basics of functional foods and nutraceuticals, their significance, regulatory standards and role in disease prevention.

Course Outcomes:

- define functional foods and nutraceuticals
- understand the chemistry and physiological effects of FFN
- understand the role of selected FFN in health promotion and disease prevention and treatment
- discuss the regulations with respect to functional foods and Nutraceuticals

SKILLS:

- ✓ able to identify the bioactivities of the main functional ingredients and their health benefits, sources and safety issues
- ✓ proficiency in formulation, delivery and regulatory compliance related to FFN products

UNIT – I

Introduction to nutraceuticals: definitions, synonymous terms, basis of claims for a compound as a nutraceutical, regulatory issues for nutraceuticals including CODEX.

UNIT – II

Concept of angiogenesis and the role of nutraceuticals/functional foods; Nutraceuticals for cardio-vascular diseases, cancer, diabetes, cholesterol management, obesity, joint pain.

UNIT – III

Immune enhancement, age-related macular degeneration, endurance performance andmood dis-orders – compounds and their mechanisms of action, dosage levels, contraindications if any etc.

UNIT – IV

Manufacturing aspects of selected nutraceuticals such as lycopene, isoflavonoids, prebiotics and probiotics, glucosamine, phytosterols etc.; formulation of functional foods containing nutraceuticals – stability and analytical issues, labelling issues.

UNIT – V

Clinical testing of nutraceuticals and health foods; interactions of prescription drugs and nutraceuticals; adverse effects and toxicity of nutraceuticals; nutrigenomics – an introduction and its relation to nutraceuticals.

2. Robert EC. 2006. Handbook of Nutraceuticals and Functional Foods. 2nd Ed.Wildman.
3. Shi J.(Ed) 2006. Functional Food Ingredients and Nutraceuticals: Processing Technologies.. CRC

ACTIVITIES:

- Isolation of lycopene from tomato and its incorporation in beverages
- To study processing, health effects and stability of various bioactive components in wheatgrass juice

17FT017 PLANTATION CROPS, SPICES & CONDIMENT TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

This course deals with processing, packaging and storage of different types of spices and condiments. The objective of this course is to make students aware of various techniques involved in processing of spices and condiments, their value addition.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Understand scope, processing and production of spices and plantation crops
- Know about processing methods for value addition of spices and condiments
- Discuss standards, adulteration and packaging of spices and condiments

SKILLS:

- ✓ Analyze chemical composition of spices and plantation crops
- ✓ Suggest a technology for extraction of essential oils from different spices
- ✓ Select suitable packaging material for spice products
- ✓ Identify adulteration in spice and plantation crops

UNIT – I

Plantation Crops - Description of various types of Plantation crops, viz.,coconut, arecanut, coffee, tea, cocoa etc. Processing and preservation methods. Value-added products shelf- stable products viz., coconut water bottling, desiccated coconut powder, coffee concentrate, instant coffee powder, instant tea powder, cocoa processing. Leafy vegetables - Description of various types of leafy vegetables, viz., hibiscus, curry leaves, coriander leaves, etc. Their composition, nutritive value, health benefits. Preservation methods and packaging techniques.

UNIT – II

Spices & Condiments - Description of various types of spices and condiments, their composition, functional properties, flavouring agents. Nutritive value of spices and their health benefits. Intermediate Moisture Products – Intermediate Moisture Products viz., ginger paste, ginger –garlic paste, tamarind paste, tamarind concentrate. Their importance in culinary preparations. Flavour retention and packaging methods.

UNIT – III

Spice Powders & Curry Powders: Their importance in culinary preparations, their preparation methods, grinding and packaging methods for spice powders like chilli powder, turmeric powder, ginger powder, garlic powder; and Masala Powders for chicken masala, meat masala, biryani masala, chat masala etc. Importance of Cryogenic grinding of spices.

Spice Oils – Concept and importance of spice oils from spices like and condiments like clove, cardamom, cinnamum etc. Their application in food processing, and extraction methods of spice oils by various techniques, viz., solvent extraction, steam distillation etc.

UNIT – IV

Extraction of Oleoresins – Concept and importance of oleoresins in food processing, processing of spices like chilli, turmeric, pepper, ginger etc. for solvent extraction of Oleoresins technology, desolventization methods, regulatory and statutory requirements for oleoresin processing.Extraction of Natural Food Colours - Extraction of Natural Food colours from paprika, turmeric, blue grapes, beet root etc. Their importance in food processing.

UNIT – V

Herbs –Description of various types of herbs, viz., Basil, Chives, Cilantro,Dill, Coriander, Mint, Oregano, Parsely, Chives, Borage and Avocada leaves, Rose marry, Saga, Tarragon, Thyme,Winter savory and bolbo leaves, Papalo, Pipicha and Safflower. Their nutritive value & health benefits, their processing and Post harvest handling. Packaging methods for processed products.

TEXT BOOKS / REFERENCE BOOKS:

1. Spices: Morphology, History, Chemistry, J W Parry, Chemical Publishing Co., New York (1969)

2. D. K. Salunkhe and S. S. Kadam, “Handbook of Fruit Science and Technology: Production, Composition, Storage, and Processing”, 1st edition, CRC Press, 1995.

3. N. K. Jain, “Global Advances in Tea Science”, 1st edition, Aravali Books International, 1999

4. M. N. Clifford and K. C. Willson, “Coffee: Botany, Biochemistry and Production of Beans and Beverage”, 1st edition, AVI publishing Co.,1985

ACTIVITIES:

- Report on various adulterants used in spices and plantation products
- Flow chart of processing of local value added products of spices and condiments

17FT019 INDUSTRIAL BIOTECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

- This course will impart the knowledge to students abut prospectous of industrial biotechnology in food sector. By the end of this course students will be able to Understand biotechnology and application of biotechnology in food industry and agriculture.

Course Outcomes:

Upon successful completion of this course student should be able to:

- Get the knowledge about cell and tissue culturing techniques and downstream processing
- Know about Rdna technology and their application in different areas
- Know about application of biotechnology in particular to food industry

SKILLS:

- ✓ Understand the concept of cellular and microbial culture techniques and their downstream and upstream techniques.
- ✓ Gain perspectives to industrially important food products manufacture with the implication of biotechnology.
- ✓ Acquire field work techniques to study, observe and prepare documents, charts, ppts, models etc.

UNIT - I

Prospectus of biotechnology- definition, scope and applications, Application of Biotechnology in food (Food industries), pharmaceuticals and agriculture, Application of biotechnology for food plant waste utilization, biogas plants.

UNIT - II

Fermentation Process: General requirements of fermentation processes, Basic design and construction of fermentor and ancillaries, Main parameters to be monitored and controlled in fermentation processes; An over view of aerobic and anaerobic fermentation processes and their application in the biotechnology industry, solid substrate, slurry fermentation and its applications, whole cell immobilization, behaviour of microbes in different reactors (air lift, fluidized, batch, continuous and fed batch condition).

UNIT - III

Bioproces optimization: Conventional optimization process (one variable at a time approach), need for statistical experimental design, screening techniques-Plackett Burman design, response surface methodology-Box- Benken design, central composite design and self directing optimization.

UNIT - IV

Solid state fermentation: Introduction to solid state fermentation (SSF), comparison of SSF with submerged fermentation, applications in industry, growth kinetics in SSF, Heat and Mass transfer problems in SSF, SSF bioreactors, Scale up of SSF.

UNIT - V

Plant and animal cell cultivation: Plant and animal cells compared to microbial cultivation, Bioreactor considerations for plant cell-suspension culture, immobilazation culture and organized tissues. Methods used for cultivation of animal cells, Bioreactor conideration for animal cell culture suspension culture, anchorage dependent cultivation. Imporant industrial products from plant and animal cell cultivation.

TEXTBOOKS:

1. Bains W. 1993. Biotechnology fromA to Z. Oxford Univ. Press.

2. Stanbury P.F, Stephen J. Hall and Whitaker A - Principles of Fermentation Technology, 2nd edition, ButterWorth -Heinemann, An imprint of Elsevier, India pvt. Ltd., 2005.

3. Shuler, M.L. and Kargi - F. " Bioprocess Engineering – Basic concepts – Second Edition, Prentice Hall of India Pvt. Ltd., 2005.

REFERENCEBOOKS:

1. Bailey andOllis - " Biochemical Engineering Fundamentals", 2nd Edition, McGraw Hill,1986

2. Pauline M. Doran - Bioprocess Engineering Calculations, First edition, Blackwell Scientific Publications, 2005

3. James M Lee - Biochemical Engineering, First edition, Prentice Hall, 1992

ACTIVITIES:

- o Prepare a flowchart for the production process of industrially important food products using biotechnology.

17FT021 TRADITIONAL AND CONVENIENCE FOOD TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

· This course deals with technologies related to processing of various grain based snacks, flour based, extruded snack based foods and fruits and vegetables based products. The objective of this course is to impart skill and knowledge required for the processing, preservation and shelf life extension of various traditional food products.

Course Outcomes:

The students will be able to:

✓ Understand scope, processing and production of various traditional food products.

✓ Know about processing methods for value addition of different regional commodities.

✓ Discuss various UNIT operations for a particular process and its effect on uality of the food products.

SKILLS:

✓ Identify and predict the processing requirement for various traditional food products.

✓ Suggest suitable processing and storage conditions for a particular traditional food product.

✓ Handle various processing equipments

UNIT - I

Technology for grain-based snacks: whole grains – roasted, toasted, puffed, popped, malted and flakes, coated grains-salted, spiced and sweetened.

UNIT - II

Flour based – batter and dough based products; savoury and farsans; formulated chips andwafers, papads, instant premixes of traditional Indian snack foods.

UNIT - III

Technology for fruit and vegetable based snacks: Chips,wafers; Technology for coated nuts – salted, spiced and sweetened; chikkis .

UNIT - IV

Extruded snack foods: Formulation and processing technology, colouring, flavouring and packaging.

UNIT - V

Equipments for frying, Baking and drying, toasting, roasting and flaking, popping, blending, Coating, chipping.

TEXTBOOKS :

ACTIVITIES:

- Formulation of at least two processed product using cereal flour and proximate analysis of developed products.

17FT023 AUTOMATION IN FOOD PROCESSING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

- This course deals with various tools related to maintenance of food quality and safety. The objective of this course is to impart skill and knowledge required for the various activities like data analysis, modeling, data acquisition etc which ultimately affects the quality of processed food products.

Course Outcomes:

The students will be able to:

- Understand the tools and techniques used in food processing plants.
- Know about data analysis, modeling and control systems used in automated plants.
- Discuss various UNIT operations involved in an automated process.

SKILLS:

- ✓ Identify and predict a particular Modeling system for a process
- ✓ Suggest quality control and CIP for an automated process.
- ✓ Handle various tools used in automated industries.

UNIT - I

Introduction: electronic nose, food quality evaluation, indication variables, Data acquisition, elastography, ultrasonic, Data analysis, intramuscular fat, wavelet, marbled meat, statistical textural feature extraction from, elastography, Sampling, concept and system for data acquisition, image acquisition, ultrasonic B-mode imaging. DataAnalysis – Data processing, Dynamic data analysis, Image processing.

UNIT - II

Modeling system identification, Modeling strategy, linear statistical modeling, ANN Modeling, F statistic, null hypothesis Prediction Levenberg Marquardt algorithm, recurrent neural networks, gradient descent.

UNIT - III

Control objective function, neuro-fuzzy, membership functions Systems integration assembly language, high-level programming language. System integration, Robotics, Application of robotics and basic components of robotics, Features of II and II generation robots.

UNIT - IV

Bottle Washing Machine Automaton, Bottling Plant Drive System, Demineralization Plant Control System, Labeling Machine Control system, Charger level automation, Reverse Osmosis plant automation, Thermal plant automation, Dehydration and freezing pant automation.

UNIT - V

Automation in different UNITs of food processing, preparation of raw food and materials, sorting, grading, size reduction, mixing and agitation, thermal processing, dehydration, packaging, CIP, quality control.

ACTIVITY:

- List out various requirements for a Dehydration and freezing plant automation.

TEXTBOOKS:

1. Considne 2001. Process Control. AVI Publ.
2. Huang Y & Lacey RE. 2003. Principles of Robotics. CRC Press.
3. Huang Y,WhittakerAD & Lacey RE. 2001. Automation for Food Engineering. CRC Press.

REFERENCE BOOKS:

17FT012 SEPARATION TECHNIQUES IN FOOD PROCESSING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

- This course deals with various UNIT operations that a food processing industry uses to transform food ingredients into different forms for consumers. Separation techniques may be used to remove skins from fruits, water from juices, or whey from cheese. Each separation technique is customized to the amount of waste that needs to be removed, and the resiliency of the food product being processed.

Course Outcomes:

- To understand various separation techniques applied in food industry.
- To understand separation mechanism of different equipments.
- To understand separation technology for various food products.

SKILLS:

- ✓ Efficient in construction and design of a particular separation equipment.
- ✓ Suggest a particular equipment for separation of food commodities.
- ✓ Understand Operation layout of the modules involved in separation equipments.

UNIT - I

Introduction to various separation processes, Gas-Liquid, Gas–Solid, Liquid-Liquid, Liquid- Solid separation; Concept of phase equilibrium, Stage equilibrium, Stage efficiency, Equilibrium concentration; Single stage contact equilibrium, counter-current multiple contact stages, Concept of equilibrium line and operating line, Determination of optimum number of contact stages by analytical and graphical method.

UNIT - II

Rate of extraction, Rate of gas absorption, Individual and over all mass transfer coefficient; Calculation of tower height for gas absorption for both dilute and concentrated solution. Construction and working mechanism of different extraction equipments like single stage extraction, Multiple stage static bed system, Bollmann extractor, Hildebrandt extractor, Rotocell extractor.

UNIT - III

Solid Separation Process, Introduction, Concept of size, Shape, Cutsize, Sieving, Magnetic separation, Eddy-current separation, Wet separation, Ballistic separation, Color separation, Wet Separation Process, liquid-solid and liquid- liquid separation by hydrocyclones, Surface velocity classifier, Elutriators, Impingement separator, Electrostatic precipitation, Distillation: Introduction, boiling point diagram, differential or simple distillation, Flash or equilibrium distillation, Continuous rectification with and without reflux, Reflux ratio, Optimum reflux ratio, Batch distillation, Application of distillation in food processing.

UNIT - IV

Membrane Separation Technology: Introduction to micro-filtration, Ultrafiltration, Reverse osmosis, Electro dialyses, dialyses, physical characteristics of membrane separation, Factors affecting reverse osmosis process, Concentration polarization, Design of reverse osmosis and ultra filtration systems, Operation layout of the modules, Electrodialysis, pervaporization, Fabrication of membranes, Application of membrane technology in food industry.

UNIT - V

Powder Technology: Classification off powder, Separation of powder, Sieving, Air classification, Factors affecting air classification, Cyclone application, Air separation, Particle size distribution, Supercritical Fluid Extraction: Introduction, Properties of SCF, Food application, Application of SCFE in analytical technique, Pharmaceutical application.

ACTIVITY:

- o Calculate the efficiency of various separation equipments.

17FT014 ENVIRONMENTAL FOOD PROCESSING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

To enable the student understand the extent of wastes produced in a food industry and its environmental effects. To enable the student understand the nature of food wastes and methods of treatment. To enable the student know the importance of waste utilization in Food industries.

Course Outcomes:

- Students will attain knowledge about the methods of managing food wastes
- Students will gain knowledge on the methods for utilization of food wastes.
- Students will gain knowledge on getting value added products from wastes.

SKILLS:

- ✓ Efficient in understanding various categories of food wastes.
- ✓ Expert in utilization of by-products from various food industries.
- ✓ Proficient in organic waste utilization.

UNIT - I

Waste & its consequences in pollution and global warming, Types of food processing wastes & their present disposal methods.

UNIT – II

Treatment of plant waste by physical, chemical and biological methods, Effluent treatment plants, Use of waste and waste water.

UNIT – III

Types, availability and utilization of by-products of cereals, legumes & oilseeds, Utilization of by-products from fruits and vegetables processing industries, sugar and agro based industries, and brewery & distillery waste.

UNIT – IV

Status and utilization of dairy by-products i.e. whey, buttermilk and ghee residues, Availability & utilization of by-products of meat industry, poultry industry and fish processing UNITs.

UNIT – V

Biomethanation and biocomposting technology for organic waste utilization, incineration & efficient combustion technology, Integration of new and renewable energy sources for waste utilization.

TEXT BOOKS:

1. Beggs C. EnergyManagement and Conservation. Elsevier Publ.
2. Chaturvedi P. 2000. EnergyManagement: Challenges for the Next Millennium.
3. Energy Conservation through Waste Utilization.AmericanSociety of Mechanical Engineers, NewYork.

3. Patrick DR., Fardo SW, Richardson RE & Steven Patrick DR. 2006
4. Energy Conservation Guidebook. The Fairmont Press
5. Wulfinghoff DR. Energy Efficiency Manual. Energy Institute Press.

ACTIVITIES:

- o Design an efficient combustion technology.
- o To utlilize by-products from dairy industry.

17FT016 PLANT LAYOUT AND PROCESS ECONOMICS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

- To enable the student to understand the various factors involved in the site selection and design of food plant layout. To enable the students learn the concept of preparing cost estimate and economics. To understand the importance HACCP and food safety laws governing food industries

Course Outcomes:

- The student will gain knowledge to design and setting up of new food processing plant as Entrepreneur and/or consultant.
- The student can prepare cost estimate and economic analysis of food industry.
- The student can implement the food safety standards in food industries.

SKILLS:

- ✓ Proficient in layout deigning of a food processing plant.
- ✓ Expert in estimation of cost and economic analysis of food industry
- ✓ Implementation of food safety standards in food processing plant

UNIT-I

Basic concepts of plant layout and design with special reference to food process industries. Application of HACCP concept, ISO, FPO & MPO requirements in food plant layout and design. Design considerations for location of food plants. Basic understanding of equipment layout and ventilation in food process plants. Preparation of flowsheets for materialmovement and utility consumption in food plants.

UNIT-II

Plant layout and design of bakery and biscuit industries. Plant layout and design of fruits and vegetables processing industries including beverages. Plant layout and design of milk andmilk products. Miscellaneous aspects of plant layout and design like provision for waste disposal, safety arrangements etc.

UNIT-III

Introduction to economics: Meaning, scope, and contribution to business decisions. Analysis of Demand: Law of demand, Utility function, Rate of commodity substitution, Maximization of utility, Demand functions, Indifference curve analysis, Substitution and income effects. Market demand and demand elasticities: concept of market demand, price and income elasticities of demand, importance of elasticity. Demand forecasting: causes and techniques of demand forecasting.

UNIT-IV

Analysis of supply andmarket equilibrium: Law of supply, price elasticity of supply, equilibrium of demand and supply. Theory of the Farm: Production function, returns to scale, Optimizing behavior, Input demands, Cost functions, Profit maximization, economics & diseconomies of scale, break even analysis. Market structures perfect competition: Profit maximization and equilibrium of firm and industry, Short run and long run supply curves; Price and output determination, practical applications.

UNIT-V

Plant maintenance program; Role ofmaintenance staff and plant operators Preventive maintenance; Guidelines for good maintenance & safety precautions; Lubrication & lubricants; Work place improvement through '5S'. Hygiene and sanitation requirement in food processing and fermentation industries; CIP methods, sanitizing & disinfestation, pest control in food processing; storage and service areas.

3. Safety design criteria for industrial plants. Maurizio Cumo & Antonio Naviglia CRC Press.
4. J.M. Apple-Plant Layout andmaterial handling – John Willey & Son (1977)

ACTIVITY:

- Design a plant layout for mango juice processing industry.

17FT018 HEAT & MASS TRANSFER OPERATIONS IN FOOD PROCESSING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

This course deals on imparting fundamental understanding on the phenomena of heat and mass transfer. The objective of this course is to train students on principles of heat and mass transfer, methodologies for determining the rate of heat and mass transfer and perform heat exchanger design calculations.

Course Outcomes:

The student will be able to:

- understand the basic laws of heat and mass transfer.
- account for the consequence of heat transfer in thermal analyses of engineering systems.
- analyze problems involving steady state heat conduction in simple geometries
- obtain numerical solutions for conduction and radiation heat transfer problems.
- understand the fundamentals of convective heat transfer process.
- know about the basic mechanism behind boiling and condensation processes.

SKILLS:

- ✓ Estimate the rate of heat flow through a wall, cylinder or sphere.
- ✓ Insulation thickness estimation.
- ✓ Determine heat transfer coefficients.
- ✓ Estimate double pipe heat exchanger length required for specified conditions
- ✓ Perform basic calculations required for heat exchanger design.

UNIT-I

Conduction heat transfer: Introduction to heat and mass transfer and their analogous behaviour - steady and unsteady state heat conduction - analytical and numerical solution of unsteady state heat conduction equation - use of Gurnie-Lurie and Heisler Charts in solving problems on conduction heat transfer - applications in food processing including freezing and thawing of foods.

UNIT-II

Convective heat transfer: Convective heat transfer in food processing systems involving laminar and turbulent flow- heat transfer in boiling liquids- regimes of boiling - nucleate boiling - film boiling equation - heat transfer between fluids and solid foods - natural convection over vertical cylinders, inclined surfaces, horizontal cylinders, cylinder with axis perpendicular to flow - single sphere - banks of tubes – forced convection – boundary layer diffusion equations and convention regimes - solving numerical in forced convection.

UNIT-III

Heat exchanger: Design of heat exchanger - parallel and counter flow – types - plate heat exchanger, shell and tube type heat exchanger, scrapped surface heat exchanger and jacketed vessels - functional design of heat exchanger – solving problems on heat exchangers.

UNIT-IV

Radiation heat transfer: Diffused radiation - angle factor - rate of radiant loss - absorption factor method - uniform radiation - assumption for emissivity determination –Kirchhoff's law- radiation heat transfer –Plank's law black body radiation emissivity and absorptivity - radiation heat transfer coefficient - black bodies - grey bodies, combined radiation and convection heat transfer - radiation surface coefficient - applications in food processing.

UNIT – V

Mass transfer: Mass transfer-molecular diffusion in gases, liquids, solids, biological solutions and suspensions - unsteady statemass transfer and mass transfer coefficients, molecular diffusion with convection and chemical reaction, diffusion of gases in porous solids and capillaries, mass transfer applications in food processing.

TEXT BOOKS:

1. Bird R. Byron,Warren E. Stewart and Edwin N. Lightfoot. 2006. Transport Phenomena.Wiley India Pvt. Ltd., New Delhi.
2. Earle, R.L. 1985. UNIT Operations in Food Processing. Pergamon Press, UK
3. Geankoplis J. Christie. 1999. Transport Process and UNIT Operations. Third Edition, Prentice Hall of India, NewDelhi.

REFERENCE BOOKS:

1. McCabe L.Warren, Smith C. Jullian and Peter Harriott.1993. UNIT Operations of Chemical Engineering. McGraw Hill Inc. New York.
2. Paul Singh, R. and Dennis R. Heldman. 2004. Introduction to Food Engineering. Elsevier India Pvt. Ltd., NewDelhi.
3. Sinnott, R.K.2000. Coulson and Richardson's Chemical Engineering. Volume VI. Butterworth Heinemann, New delhi.

ACTIVITIES:

- Effect of radiation on test tube filled with water.
- Connecting shell and tube heat exchanger setup
- Design of shell and tube heat exchanger

17FT020 SUGAR AND CONFECTIONARY TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	15	30	-	5	5	-

Course Description and Objectives:

This course deals with bakery and confectionery sector of food processing. The objective of this course is to acquaint the students with preparation methods for various bakery and confectionary products, quality control aspects, processing parameters and handling of equipment's.

Course Outcomes:

The student will be able to:

- understand the role of various ingredients used in bakery and confectionary products.
- formulate ingredients and propose suitable methods for manufacturing of bakery and confectionary products.
- assess and control the processing and quality parameters of various bakery and confectionary products.

SKILLS:

- ✓ Prepare commonly consumed bakery products like bread and fermented foods, cookies, biscuits, cakes and Icing.
- ✓ Judge the quality of raw-materials.
- ✓ Determine heat transfer coefficients.
- ✓ Predict the physiochemical changes during processing.
- ✓ Handling of various bakery equipments.

UNIT-I

Introduction: Sugarcane and sugarbeet as sugar rawmaterials. Flowcharts for manufacture of Granulated sugar and Liquid sugars. Properties of Granulated sucrose and Liquid Sugars. Invert sugar and their characteristics. Speciality products of Sugar Industry. Back strap Molasses and its uses. Applications in animal feed

UNIT-II

Sugar production processes: Extraction of juice, extraction yields, drying and uses of Bagasse, Purification of juices-juice filtration and chemical purification, Clarification stages, Lime addition, pH control, Treatment of clarified juice, evaporation –multiple effect evaporators, Vacuum pans, Crystallization, Washing of sugar crystals and centrifugal separation/ dewatering of sugar and other related processes. Sugar Refining, Sugar analysis, Sugar recovery –improvement, Sugar balance, energy conservation, Sugar plant sanitation.

UNIT-III

Technology of Chocolate manufacturing: Ingredients and their role as food additives in chocolate manufacturing. Machineries involved in the process of manufacturing chocolates.

UNIT-IV

Technology of Confectionery manufacture: General technical aspects of industrial sugar confectionery manufacture, Manufacture of high boiled sweets – Ingredients, Methods of manufacture – Types – Center – filled, lollipops, coextruded products. Manufacture of gums and jellies –Quality aspects

UNIT – V

Manufacture of Miscellaneous Products: Caramel, Toffee and fudge – Liquorice paste and aerated confectionery, Lozenges, sugar pannings and Chewing gum, Countlines - Quality aspects

TEXT BOOKS:

1. E.B. Jackson: Sugar Confectionery Manufacture, Second edition, Aspen publishers Inc., 1999. Great Britain
2. Guilford L Spencer and George P. Made: Cane Sugar Hand Book (1993) JohnWiley and sons Inc. London
3. P. Manohara Rao: Industrial Utilization of Sugar Cane and its coproducts P.J.International Consultants, New Delhi.

REFERENCE BOOKS:

1. Maurice Shachman, Soft Drinks Companion: A Technical Handbook for the Beverage Industry, CRC press, Florida, USA (2005)
2. W.Ray, Junk & Harry M. Pancost: Hand Book of Sugars – for Processors, Chemists and Technologists: AVI Puvblishing, West port (1973)
3. Oliver Lyle: Technology of Sugar for Refinery Workers Chapman and Hall Ltd., (1950)
4. E.Hugott: Hand Book of Cane Sugar Engineering Elsevier Publishing/company, London (1986)

ACTIVITY:

- Prepare a flowchart for production process of bakery and confectionary products keeping safety regulations in consideration

17FT022 BEVERAGES TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

The aim of the Master's course Beverage Technology is to enable students to solve technological problems in the field of beverage technology in industrial practice. This course emphasizes on the utilization of seasonal fruits for beverage production so as to reduce its wastage. By the end of the semester students will be able to understand the various equipment's, process and regulatory requirements for beverage industry.

Course Outcomes:

The student will be able to:

- understand the role of various ingredients used in beverage processing.
- formulate ingredients and propose suitable methods for manufacturing of alcoholic and non-alcoholic beverage
- assess and control the processing and quality parameters of beverages

SKILLS:

✓ Efficient in preparation of commonly consumed beverages from seasonal fruits.

✓ Judge the quality of raw-materials.

✓ Predict the physiochemical changes during processing.

UNIT-I

Types of beverages and their importance; status of beverage industry in India; Manufacturing technology for juice-based beverages; synthetic beverages

UNIT-II

Technology of still, carbonated, low-calorie and dry beverages; isotonic and sports drinks; role of various ingredients of soft drinks, carbonation of soft drinks.

UNIT-III

Specialty beverages based on tea, coffee, cocoa, spices, plant extracts, herbs, nuts, dairy and imitation dairy-based beverages.

UNIT-IV

Alcoholic beverages- types, manufacture and quality evaluation; the role of yeast in beer and other alcoholic beverages, ale type beer, lager type beer, technology of brewing process, equipments used for brewing and distillation, wine and related beverages, distilled spirits.

UNIT – V

Packaged drinking water- definition, types, manufacturing processes, quality evaluation and raw and processed water, methods of water treatment, BIS quality standards of bottled water; mineral water, natural spring water, flavoured water, carbonated water.

TEXT BOOKS:

1. HardwickWA. 1995. Handbook of Brewing. Marcel Dekker.
2. Hui YH. et al 2004. Handbook of Food andBeverage Fermentation Technology. Marcel Dekker.
3. Priest FG & Stewart GG. 2006. Handbook of Brewing. 2nd Ed. CRC.
4. Richard P Vine. 1981. Commercial Wine Making – Processing and Controls. AVI Publ.

REFERENCE BOOKS:

1. Varnam AH & Sutherland JP. 1994. Beverages: Technology, Chemistry and Microbiology. Chapman & Hall.. Varnam AH & Sutherland JP. 1994. Beverages: Technology, Chemistry andMicrobiology. Chapman & Hall.
2. Woodroof JG & Phillips GF.1974. Beverages: Carbonated and Non Carbonated. AVI Publ.

ACTIVITY:

- Development of blended beverage and shelf life study of the product

17FT024 LIPID SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

This course deals with Lipid chemistry and characterization; processing of fats and oils; food applications; biobased applications; overview of lipid's role in health and nutrition. By the end of the semester students will be able to understnd lipid type, sources, structure, properties and food and non-food usage; lipid metabolisms and biotechnology; as well as lipid bioproducts and industrial processing technologies.

Course Outcomes:

The student will be able to:

- To develop a working knowledge of basic lipid chemistry, sources of fats and oils, refining of fats and oils, food and biobased industrial applications.
- To use additional resources for information gathering and critical review.
- To demonstrate scientific and creative proficiencies to solve practical problems associated with lipids.

SKILLS:

✓ Judge the quality of products formed during frying.

✓ Predict the physiochemical changes during frying of foods.

.✓ Measurement of flavour emulsions and their stability

UNIT-I

Nutritional aspects of food lipids and their sources– omega-3 and omega- 6 fatty acids and their significance, Phytosterols and their nutraceutical significance.

UNIT-II

Measurement of lipid degradation parameters during deep-fat frying and storage of foods. Flavour emulsions and their stability.

UNIT-III

Fat powders like cream, butter, cod-liver oil etc. and techniques involved such as micro encapsulation, Fat substitutes based on carbohydrates and proteins.

UNIT-IV

Formulation and characterization of low-fat spreads, whipped creams, margarines, mayonnaise, salad dressings etc. Bakery shortenings chemistry, formulation and technology. Alternative fats, low fat substitutes.

UNIT – V

Trans-fatty acids- formation during processing and nutritional aspects, Enzymatic approach to tailor made fats.

TEXT BOOKS:

1. Akoh CC. 2005. Handbook of Functional Lipids. Taylor & Francis.
2. Dutta PC. 2004. Phytosterols as Functional Food Components and Nutraceuticals. Marcel Dekker.
3. Garti N & Kiyotaka S.2001. Crystallization Processes in Fats and Lipid Systems. Marcel Dekker.

REFERENCE BOOKS:

1. Gunstone F. 2006.Modifying Lipids for Use in Food.Woodhead.
2. O'Brien RD.1998. Fats and Oils - Formualting and Processing for Applications. Woodhead.
3. Sikorski ZE & Kolakowska A. 2002. Chemical and Functional Properties of Food Lipids. CRC.

ACTIVITY:

- To carry out an experiment on deep fat frying of vegetables and to study degradation products from oil

17FT026 DAIRY TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
15	30	-	5	5	-

Course Description and Objectives:

This course deals with handling, processing, preservation of milk and milk products. The objective of this course is to impart knowledge about milk, milk processing methodologies, processing equipments, byproduct utilization and to bestow skills in the application of biological, chemical, biochemical, and engineering sciences in processing and preservation of milk and milk product.

Course Outcomes:

The student will be able to:

- Understand and describe the inherent compositional variability of milk composition
- Learn the milk processing methodologies
- Gain knowledge about the various milk processing equipments
- Understand the production of various products and its byproducts.

SKILLS:

✓ Determine physicochemical properties of milk

✓ Perform standardization of milk for different .

✓ Select suitable packaging material for spice products

✓ Identify adulteration in spice and plantation crops

UNIT-I

Dairy Chemistry and Microbiology: Introduction, Milk - composition, food and nutritive value, Physico-chemical properties. Buying and collection of milk – transportation of milk – milk reception – contaminants -Milk reception in dairies, Quality and Quantity tests at reception -Applications of enzymes in dairy industry

UNIT-II

Milk Processing: Milk processing flow sheet – Filtration / clarification, Storage of milk, Standardization – simple problems in standardization, Homogenization, Pasteurization – Types of pasteurization process. Equipments used in each process - Cream separating centrifuges, Pasteurizers (Heat Exchangers), Homogenizers, Bottle and pouch fillers, Milk Chillers, Plant piping, Pumps.

UNIT-III

Manufacture of Dairy Products: Manufacture of Cream, Butter, Ghee, Milk, powder, Cheese – Types and Defects in cheese. Quality aspects of these products. Equipments used for manufacture of each product like Butter churn, ghee boiler, Spray and Drum Dryers, Product in sanitizing equipment etc.

UNIT-IV

Manufacture of Ice Cream and other Dairy Products: Manufacture of Ice cream – Chemistry and technology – Microbiology of ice cream – Quality aspects. Manufacture of paneer, Toned Milk, Sweetened Condensed milk, Khoa. Extraction of casein from milk – properties - composition and industrial uses. Production of lactose.

UNIT – V

Fermented dairy products: Fermented products – Yoghurt, Curd, acidophilus milk, butter milk. Dairy plant sanitization – Cleaning in place – bottle and can washing, cleaning of tankers and silos – Detergents and sanitizers used. Energy use in Dairy plant - sources and cost of energy, Control of energy losses and Energy conservation.

TEXT BOOKS:

1. Sukumar De, Outlines of Dairy Technology,Oxford University Press, India (1980)
2. Tufail Ahmad: Dairy Plant Systems Engineering KitabMahal, Allahabad, India (1985)
3. Edger Spreer & AxelMixa: Milk and Dairy Product technology Mercel dekker Inc. N.Y. (1998)
4. National Institute of Industrial Research,Modern Technology of Milk processing and Dairy products, II Edition, NIIR Publications, India, 2004.

REFERENCE BOOKS:

1. Arthur W. Farral: Engineering of Dairy and food Products (II Edition 1970)Robert E. Krieger Publishing Co. New York
2. Garret Smit: Dairy Processing (Improved Quality) Woodhead Publishing Ltd. CRC Press (2003).
3. W.M. Clunie Harvey and Harry Hill: Milk Products Bio Tech Books, New Delhi (1999) Department of Food Processing Engineering
4. Prof. H.G. Kessler: Food Engineering and Dairy Technology Verlog Kessler Publishing House, Germany (1981).

ACTIVITIES:

- *Perform an experiment on various platform tests conducted in dairy industry*
- *Study on various regulatory standards implemented in dairy UNIT.*

I YEAR	COURSE CONTENTS	
I SEMESTER	17CE001	Theory of Elasticity
	17CE003	Structural Dynamics
	17CE005	Advanced Reinforced concrete Design
	17CE007	Mathematical Methods

Course Code	Course Title	L	T	P	C
17CE001	THEORY OF ELASTICITY	3	1	0	4

Course Objectives:

1. To make students understand the principles of elasticity.
2. To familiarize students with basic equations of elasticity.
3. To expose students to two dimensional problems in Cartesian and polar coordinates.
4. To make students understand the principle of torsion of prismatic bars.

Course Outcomes:

At the end of the course student will be able

1. To apply elastic analysis to study the fracture mechanics.
2. To apply linear elasticity in the design and analysis of structures such as beams, plates, shells and sandwich composites.
3. To apply hyper elasticity to determine the response of elastomer-based objects.
4. To analyze the structural sections subjected to torsion.

Activities:

1. Determination of Plane stress and plain strain for any 2D element using Excel and Mat-lab.
2. Determination of principle stress on 2D element by using Mat Lab.
3. Determination of Torsion in straight bars by using Mat Lab.

Skills:

1. Ability to analyze the elasticity problems using Mat Lab coding.
2. Developing the capability to use Mat Lab coding in elasticity problems

UNIT-I: Plane Stress and Plane Strain

Elasticity – Notation for forces and stresses – components of stresses and strains – Hooke's Law - Plane Stress – Plane strain – Differential Equations of equilibrium – Boundary conditions –Compatibility equations - Stress function – Boundary Conditions.

UNIT –II: Two Dimensional problems in Rectangular co-ordinates

Solution by polynomials – Saint Venant's principle – Determination of displacements – Bending of simple beams – cantilever and simply supported

UNIT-III: Two Dimensional problems in Polar co-ordinates

General equations in polar co-ordinates – Stress function and equation of compatibility with zero body forces – Analysis of thick cylindrical shells with symmetrical loading about the axis – Pure bending of curved bars – Strain components in Polar coordinates – rotating disk

UNIT-IV: Three Dimensional State of Stress

Analysis of stress and strain in three dimension - Principal stresses – Determination of principal stresses - Maximum shear stress – Homogeneous Deformation – General Theorems - Differential equations of equilibrium – Conditions of compatibility – Equations of equilibrium in terms of displacements – Principle of superposition – Uniqueness of solution –Reciprocal theorem.

UNIT-V: Torsion

Torsion of prismatic bars –St.Venant solution, stress function, Warp function - Bars with elliptical cross section – Other elementary solution – Membrane analogy – Torsion of rectangular bars

TEXT BOOKS:

1. Timoshenko & Goodier, "Theory of Elasticity" , McGraw Hill Company, 2006.

2. Martin H. Sadd, "Elasticity: Theory, Applications and Numeric", Academic Press, 2010

REFERENCES

1.C.T. Wang, "Applied Elasticity", McGraw Hill, 1953.

2.L.S. Srinadh, "Advanced Mechanics of Solids", TMH Publishing Company Limited, 1992.

3.Sadhu Singh, "Theory of Elasticity", Khanna Publishers, 1997.

Course Code	Course Title	L	T	P	C
17CE003	STRUCTURAL DYNAMICS	3	0	3	5

Course Objective:

1. The objective is to provide the fundamental understanding of the structural dynamics.
2. The problem solving ability for dynamic response in civil engineering design, analysis and research.
3. Introduce students to analytical and numerical methods in structural dynamics with emphasis on vibration.
4. Opportunities to optimize system for desired dynamic response.
5. To provide the basic framework for studying time-dependent response of mechanical systems to external excitations.

Course Outcomes:

The students will be able to

1. Write equation of motion for single and multi-degree of freedom systems
2. Understand the impact of damping on characteristics of vibrating system
3. Gain knowledge about arbitrary and pulse excitation
4. Write generalized equation to represent dynamic behavior of multi degree of freedom systems in global scale

Activities:

1. Construct a working model spring and Damper system
2. Make a mathematical model of a residential building and write equation of motion to find out natural frequency and amplitude
3. Construct a working model to demonstrate free and forced vibration

Skills:

1. Determine vibration characteristics of structures like frequency, amplitude, impedance, and time period
2. Differentiate the response of single and multi-degree of freedom systems
3. Determine the response of structures for pulse excitation like blast load

UNIT-I: Introduction

Introduction to Dynamic analysis; Elements of vibratory systems; single degree of freedom system, natural frequency ,force displacement relationship, damping force.

UNIT-II: Equation of Motions, Problem Statement, Solution Methods of Single Degree of Freedom Systems (SDOF)

Equation of motion, mass-spring-damper system, methods of solution of differential equation. Undamped free vibration, viscously damped free vibration, energy in free vibration.

UNIT-III: Response to Harmonic and Periodic Excitations (SDOF)

Harmonic vibration of undamped systems, Harmonic vibration with viscous damping, response to vibration generator, natural frequency and damping from harmonic test, force transmission and vibration isolation, vibration measuring instruments, energy dissipated in viscous damping. Response to periodic force.

UNIT-IV: Response to Arbitrary, Step and Pulse Excitations (SDOF)

Response to unit impulse, response to arbitrary force, step force, ramp force, response to pulse excitations, solution methods, effects of viscous damping.

Numerical Evaluation of Dynamic Response (SDOF)
Time stepping methods, methods based on interpolation of excitation, central difference method, Newmark's method, stability and computational error, analysis of nonlinear response by Newmark's method.

UNIT-V: Multi -degree of freedom systems (MDOF)
Equation of motions: simple system-two storey shear building, general approach for linear systems, static condensation, symmetric plan systems: ground motion. Multiple support excitation, methods of solving the equation of motions.
Free Vibration (MDOF) Natural frequencies and modes: systems without damping, modal and spectral matrices, orthogonality of modes, normalization of modes. Solution of undamped free vibration systems, solution methods for eigen value problem.

TEXTBOOKS:

1. Anil K Chopra, "Dynamics of structures" ; Prentice-Hall of India Limited, New Delhi.3rd edition 2006.
2. Mario Paz and leigh; "Structural dynamics", CBS Publishers, 1st edition 1985.

2. R.W. Clough and P.E. Penzien, "Dynamics of Structures" , McGraw-Hill. 1st edition,1975.

LABORATORY EXPERIMENTS

List of experiments:

1. Basic programming in MATLAB
2. Plotting of SFD, BMD and deflection diagrams for propped cantilever &simply supported beams in MATLAB
3. Study of Free and forced damped vibration using MATLAB
4. Plot the response spectrum for El-Centro ground motion using MATLAB
5. Generate time history response by Newmark's method using MATLAB
6. Generate time history response by CDM and impulse method using MATLAB

Course Code	Course Title	L	T	P	C
17CE005	ADVANCED REINFORCED CONCRETE DESIGN	3	0	3	5

Course Objectives:

1. To make the students be familiar with the limit state design of RCC beams and columns.
2. To design special structures such as Deep beams, Corbels, Deep beams, and Grid floors
3. To make the students confident to design the flat slab as per Indian standard.

Course Outcomes:

At the end of the course student will be able

1. Acquire knowledge on strength and serviceability of reinforced concrete elements.
2. Design special Reinforced Concrete elements such as deep beams, corbels, shear wall and grid floors.
3. Analyse and design the RC structures using software packages

Activities:

1. Design of reinforced concrete beam (Singly/Doubly)
2. Design of reinforced concrete slab (one-way/Two-way).
3. Analysis and design of multi storey buildings and Industrial building
4. Calculation of wind load as per IS 875 Part III.

Skills:

1. Ability to design of reinforced concrete beam
2. Ability to design of reinforced concrete slab
3. Ability to analysis and design of multi storey building and Industrial building

UNIT-I: Design of RC Elements and Serviceability Criteria

Limit state design - beams, slabs and columns according to IS Codes. Calculation of deflection and crack width according to IS Code.

UNIT –II: Design of Special RC Elements

Design of RC walls – Ordinary and shear walls – Design of corbels – Design of deep beams

UNIT-III: Flat Slabs and Grid Floor

Design of flat slabs and flat plates – Limitations - Analysis and design of Grid floors -Yield line analysis of slab

UNIT-IV: Inelastic Behaviour of Concrete Beams

Moment – Curvature (M - φ) relation of Reinforced Concrete Sections - Moment redistribution – Advantages and Disadvantages of Moment Redistribution

UNIT-V: Design Loads other than Earthquake Loads

Dead Loads – Imposed Loads (IS 875 Part 2) – Loads due to Imposed Deformations – General Theory of Wind Effects on Structures. Application of software packages and computer programming.

TEXT BOOKS:

1. P.C.Varghese, “Advanced Reinforced Concrete Design”, Prentice Hall of India, 2008
2. N. Krishna Raju, “Advanced Reinforced Concrete Design”, CBS Publishers and Distributors, 2007.
3. Punmia B.C, Ashok Kr. Jain, Arun Kr. Jain, “RCC Designs (Reinforced Concrete Design)” , 10th Edition, Lakshmi Publishers, 2006

REFERENCE BOOKS:

1. Park & Paulay , “Reinforced Concrete”, Robert Publisher,1975
2. Ashok.K. Jain, Nem Chand & Bors. “Reinforced Concrete”, Tata McGraw-Hill Publishing Company Limited, New. Delhi, 2003

LABORATORY EXPERIMENTS

List of experiments:

Any 6 of the following experiments are to be carried out

1. Design of High Performance Concrete Mix
2. Strength test, Durability test, NDT.
3. Testing of Simply supported reinforced concrete beams for flexure.
4. Testing of Simply supported reinforced concrete beams for shear
5. Wind Analysis and design of multi storey buildings by using STAAD Pro
6. Analysis and design of earthquake resistant buildings by using STAAD Pro
7. Analysis and design of Industrial building by using STAAD Pro
8. Drawing and detailing of Beam/Column/Slab
9. Calculation of wind load as per IS 875 Part III by using Excel.

Course Code	Course Title	L	T	P	C
17CE007	MATHEMATICAL METHODS	4	0	0	4

Course Objectives:

1. To impart knowledge about various methods of analysing linear equations numerically.
2. To familiarize students in the field of Interpolation
3. To expose the students to calculus of Numerical integration and differentiation techniques.
4. To familiarize the students in the field of partial differential equations to solve boundary value problems associated with engineering applications.
5. To expose students to the concept of linear programming optimization techniques.

Course Outcomes:

At the end of the course student will be able

1. To apply Eigen value problems in finding natural time period and mode shapes of structures.
2. To apply interpolation and differentiation formulas for calculating deflection of beams, analysis of columns and simply supported beams.
3. To apply numerical integration and differentiation techniques in calculation of slopes and deflections of beams.
4. To analyze one dimensional heat flow equations using partial differential equations.
5. To learn linear optimization techniques.

Activities:

1. Form Mass matrix and Stiffness matrix for any 3 story building and Find its Natural time period and Mode shapes using Eigen values and vectors.
2. Analyze any simply supported beam using numerical solutions of interpolation and differential techniques.
3. Calculate slope and deflection of any beam with different boundary conditions.
4. Apply partial differential technique for solving any 1-D heat problem
5. Optimize any quantity related to civil engineering problems using Linear Programming Techniques.

Skills:

1. Ability to develop Eigen values and vectors for finite element analysis
2. Develop the caliber to generate mathematical equations for elasticity problems
3. Optimization of structures by forming Linear Programing Techniques
4. Analysis of heat transformation using partial differential equations

UNIT-I: Solutions Of Linear Equations

Direct method – Cramer's rule, Guass – Elimination method - Gauss – Jordan elimination – Triangulation (LU Decomposition) method – Iterative methods Jacobi – Iteration method – Gauss – Siedel iteration, Eigen values and Eigen vectors: Jacobi method for symmetric matrices- Given's method for symmetric matrices-Householder's method for symmetric matrices-Power Method.

UNIT –II: Interpolation
Linear Interpolation - Higher order Interpolation - Lagrange Interpolation- Interpolating polynomials using finites differences, differentiation formulas by Interpolating parabolas – Backward, Forward and Central differences- Derivation of differentiation formulas using Taylor series**,** Boundary conditions- Beam deflection Numerical solution to spatial differential equations – Application to Simply Supported Beams, Columns.

UNIT-III: Numerical Integration And Differentiation
Numerical Differentiation: Difference methods based on undetermined coefficients- optimum choice of step length– Partial differentiation.
Numerical Integration: Method based on interpolation-method based on undetermined coefficient – Gauss – Lagrange interpolation method– Double integration using Trapezoidal and Simpson's method New Marks Method and Application to Beams – Calculations of Slopes & Deflections.

UNIT-IV: Applied Partial Differential Equations

One-dimensional Heat equation Cartesian, cylindrical and spherical coordinates (problems having axi-symmetry). Two-dimensional Laplace Equation in Cartesian, cylindrical and spherical coordinates (problems having axi-symmetry) – Analytical solution by separation of variables technique.

UNIT-V: Linear And Nonlinear Programming Techniques
Linear Programming Problem Formation, Graphical Method, Simplex method, artificial variable method-Big-M method-Two Phase Method. Non Linear Programming Problem Gradient method, Steepest Ascent Descent Methods
TEXT BOOKS:

1. M.K.Jain- S.R.K.Iyengar "Numerical Methods for Scientific and Engineering Computations". R.K.Jain Willey Eastern Limited. New Age International (p) Ltd., Publishers, 2004
2. Duffy, D.G. "Solutions of Partial Differential Equations", CBS Publishers, 1988

REFERENCES:

1. Dr. M.Shanta Kumar, "Computer based numerical analysis", Khanna Book publishers New Delhi.
2. Sankara Rao K., "Introduction to Partial Differential Equations", Prentice Hall of India Pvt. Ltd., New Delhi, 1997.

I YEAR	COURSE CONTENTS	
II SEMESTER	17CE002	Matrix methods & Finite Element Analysis
	17CE004	Earthquake Resistant Design of Structures
	17CE006	Theory of Plates and Shells
	17CE008	Repair and Rehabilitation of Structures

Course Code	Course Title	L	T	P	C
17CE002	MATRIX METHODS AND FINITE ELEMENT ANALYSIS	3	1	2	5

Course Objectives:

1. To study the energy concepts, analysis of structures by stiffness and flexibility approaches
2. To introduce finite element method and its importance in civil engineering applications.
3. To familiarize students in deriving shape functions of different elements.
4. To expose the students to write global stiffness matrix and its solution techniques.
5. To familiarize the students in the field of iso-parametric elements.

Course Outcomes:

At the end of the course student will be able

1. Apprehend the knowledge of analysis of structures using matrix method and flexibility method
2. Solve problems in beams, frames and trusses
3. Develop computer programs for matrix methods
4. Apprehend the knowledge of basics of Finite Element Method
5. Formulate element properties for structural engineering problems
6. Apply Finite Element Method for common structural Engineering problems

Activities:

1. Determination of the static and kinematic indeterminacy of frames and trusses
2. Analyze any truss structure using direct stiffness method and its solution techniques (use any programming software for analysis)
3. Analyze any beam in ANSYS with different boundary conditions and compare the results using finite element technique.
4. Solve any plane strain problem using constant strain triangle and compare the result with four node Iso parametric element

Skills:

1. Ability to determine the static and kinematic indeterminacy of frames and trusses
2. Ability to analyze any truss structure using direct stiffness method and its solution techniques (use any programming software for analysis)
3. Ability to analyze any beam in ANSYS with different boundary conditions and compare the results using finite element technique.
4. Ability to solve any plane strain problem using constant strain triangle and compare the result with four node iso parametric element

UNIT-I: Stiffness Method

Indeterminacy - Static, Kinematic– Degrees of Freedom – Structure stiffness matrix for beams, frames and trusses using displacement transformation matrix and coordinate transformation matrix - Internal forces due to thermal expansion and lack of fit

UNIT –II: Flexibility Method

Flexibility method applied to statically determinate and indeterminate structures; Choice of redundant; Primary structure- General formulation- Structures flexibility matrix using force transformation matrix – Internal forces due to thermal expansion and lack of fit.

UNIT-III: Introduction and Basics of FEM

A brief history of FEM, Need of the method, Equilibrium equations boundary conditions, Compatibility; Strain-displacement relations, Linear constitutive relations, Principle virtual work; Principle of stationary potential energy. Different types of elements, Shape functions.

UNIT-IV: Analysis of Trusses, Beams and Frames

Stiffness matrix for an axial element – transformation of vectors – plane truss analysis – beam stiffness – solution for beam problems – Two-Dimensional beam element – rigid plane frames.

UNIT-V: Plane Stress and Plane Strain Problems

Basic concepts of plane stress and plane strain – derivation of stiffness matrix for constant – strain, linear strain triangular elements – rectangular elements – iso parametric elements – Lagrange and Serendipity elements – axisymmetric elements.

LABORATORY EXPERIMENTS

Using ANSYS (ANY 3)

1. Analysis of Beams with UDL Loads and different Boundary Conditions.
2. Analysis of Beam with Multiple Loads
3. Analysis of 2D Trusses
4. Non Linear Analysis of Cantilever Beams

Using ABACUS (ANY 3)

5. Basics in Abacus (Mesh Generation, Geometry etc.,)
6. Analysis of Beams in Abacus
7. Analysis of Portal frame in Abacus
8. Analysis of Plates in Abacus

Course Code	Course Title	L	T	P	C
17CE004	EARTHQUAKE RESISTANT DESIGN OF STRUCTURES	3	1	2	5

Course Objective:

1. Deals with calculation of earthquake forces by different methods
2. This course integrates information from various engineering and scientific disciplines in order to provide a rational basis for the design of earthquake-resistant structures.
3. The course deals with special provisions and requirements of structures for their safety against earthquake forces.

Course Outcomes:

The students will be able to:

1. Gain knowledge about principles of earthquake engineering and design procedures
2. Analyze the structures for lateral forces like wind and earthquake using different dynamic approaches
3. Understand the working principle of different response control systems like base isolation and dampers
4. Understand the importance of ductility of building in Earthquake resistance design

Skills:

1. Calculation of Earthquake forces on structures
2. Determination of total base shear by using Static and Dynamic approaches
3. Ductile detailing of structures
4. Design of base isolation systems
5. Design and analysis of steel structures for lateral forces

Activities:

1. Take plan of a 6 storied residential building and calculate base shear using Static equivalent method
2. Using mode superposition technique find out total base shear for a residential building in your zone
3. Conduct dynamic analysis on a 4 storied residential building using STAAD Pro
4. Take any ongoing construction project and do ductile detailing by using IS 13920
5. Make a working model of a building to demonstrate base isolation.

UNIT-I: Design forces for buildings:

Introduction; Equivalent static method; Mode superposition technique; Dynamic inelastic-time history analysis; Advantages and disadvantages of these methods; Determination of lateral forces as per IS1893 (Part 1) – Equivalent static method, Model analysis using response spectrum.

UNIT-II: Earthquake resistant design of a long two-storey, two-bay RCC building:

Determination of lateral forces on an intermediate plane frame using Equivalent static methods and Model analysis using response spectrum; Analysis of the intermediate frame for various load combinations as per IS1893(Part 1); Identification of design forces and moments in the members.

UNIT-III: Steel Buildings:

Behavior of steel; Materials and workmanship; Steel frames – unbraced, braced; Ductile design of frame members; Flexural members; Frame members subjected to axial compression and bending; Connection design and joint behavior ; Steel Panel zones; Bracing members

UNIT-IV: Seismic protection of structures:

Introduction; Considerations for seismic isolation; Basic elements of seismic isolation; seismic- isolation design principle, Implementation of energy dissipation devices; Metallic yield dampers, friction dampers, viscoelastic dampers, tuned mass dampers, tuned liquid dampers; Shape memory alloy dampers; Modelling, linear and nonlinear procedures; Detailed system requirements; Application to multi-storey buildings; Testing of energy dissipation devices.

UNIT-V: Ductility considerations in earthquake resistant design of RCC buildings:

Introduction; Impact of ductility; Requirements for ductility; Assessment of ductility–Member/element ductility, Structural ductility; Factor affecting ductility; Ductility factors; Ductility considerations as per IS13920.

TEXT BOOKS :

1. Pankaj Agarwal and Manish Shrikhande, "Earthquake resistant design of structures" ,Prentice- Hall of India, 2006.
2. T.Paulay and M.J.N.Priestley, "Seismic design of reinforced concrete and masonry buildings", John Wiley & Sons, 1991.

REFERENCE BOOKS:

1. SK Duggal , "Earthquake resistant design of structures", Oxford University Press. 2007
2. F.Naeim, Kluwer "The seismic design handbook", Academic publishers, 2001

LABORATORY EXPERIMENTS

List of experiments

1. Perform Equivalent Static analysis on G+6 building using SAP2000
2. Perfom Linear dynamic analysis using SAP2000
3. Perform Non Linear Pushover Analysis on Bay frame of high rise building using SAP2000
4. Perform Non Linear Pushover Analysis with infill wall Bay frame of high rise building using SAP2000
5. Perform Non Linear time history Analysis considering different response spectrums of El centro, Kobe earthquakes etc using SAP2000.

Course Code	Course Title	L	T	P	C
17CE006	THEORY OF PLATES AND SHELLS	3	1	0	4

Course Objectives:

1. To introduce the concept of plate theory.
2. To study the behaviour and analysis of thin plates.
3. To study the behaviour and analysis of rectangular plates and circular plates.
4. To present the foundations of the classical theory of shells based on the Kirchhoff-Love assumptions.
5. To study the classification of shell surfaces

Course Outcomes:

At the end of the course student will be able

1. To assess the strength of plate panels under point, linearly varying and uniformly distributed loads.
2. To analyse plates under different boundary conditions by various classical methods and approximate methods.
3. To be familiar with classification of shells and classical shell theories and apply them in engineering design
4. To be exposed to singly curved shells, doubly curved shells and cylindrical shells.

ACTIVITIES:

1. Determination of maximum deflection in plates with different boundary conditions by using classical method and approximate methods
2. Create the rectangular and circular plate by using Ansys
3. Create a typical dome element by using any finite element software
4. Analysis of plate With/Without Central Hole

SKILLS

1. Ability to analyze the plate with different boundary conditions.
2. Ability to understand the basis of finite element software.

UNIT-I: Introduction To Plate Theory

Thin Plates with small deflection. Laterally loaded thin plates, governing differential equation, various boundary conditions

UNIT-II: Rectangular Plates

Rectangular plates. Simply supported rectangular plates, Navier solution and Levy's method, Rectangular plates with various edge conditions, plates on elastic foundation.

UNIT-III: Symmetrical Bending Of Circular Plates

Differential equation for symmetrical bending of laterally loaded circular plates - Simply supported edges - Clamped edges - Circular plate with a circular hole at the center - Circular plate concentrically loaded.

UNIT-IV: Introduction To Shells

Structural behaviour of shells - classification of shells - translational and rotational shells - ruled surfaces - Gaussian curvature - synclastic and anticlastic surfaces. Principal curvatures and lines of curvature

UNIT-V: Cylindrical Shells

Membrane theory of cylindrical shells; Bending theory of cylindrical shells loaded Symmetrically –Approximate solution by Schorer's method, Beam method of analysis

Course Code	Course Title	L	T	P	C
17CE008	REPAIR AND REHABILITATION OF STRUCTURES	4	0	0	4

Course Objectives:

1. To understand the causes of failure of structures.
2. To enable students to diagnose distress of structures.
3. To expose students to modern techniques of retrofitting.
4. To familiarize students with case studies.
5. To understand various seismic retrofitting strategies

Course Outcomes:

At the end of the course student will be able

1. To understand the causes of failure of structures.
2. To diagnose distress of structures.
3. To analyze the debonding pattern of externally plated members
4. To understand the significance of orientation of RC buildings.

Activities:

1. Compare the rate of corrosion for completely submerged and partially submerged structural steel.
2. Identify any distress observed in the university premises and suggest remedial measures.
3. Perform the cost analysis of various bonding techniques.
4. Illustrate the effect of discontinuity on load with the help of a working model.

Skills:

1. Ability to judge the rate of corrosion in various exposure conditions.
2. Developing the caliber to provide practical remedial solutions for distress.
3. Ability to select a suitable bonding technique as per the requirements.
4. Ability to judge the effect of seismic loads on discontinuities.

UNIT-I: Introduction

Deterioration of structures with aging – Need for rehabilitation – effects due to climate, temperature, chemicals, wear and erosion, design and construction errors, corrosion mechanism – effects of cover thickness and cracking – Method of corrosion production – corrosion inhibitors – corrosion resistant steel – coatings – cathodic production – causes of distress in structural members – Holistic models for deterioration of concrete – Types of damages – sources or causes for damage – case studies.

UNIT –II: Diagnosis and Assessment of Distress

Visual inspection – non-destructive tests – ultrasonic pulse velocity method – rebound hammer technique – ASTM classifications – pullout tests – Bremor test – Windsor probe test – crack detection techniques – case studies – single and multistoried buildings – Fibre optic method for prediction of structural weakness – An overview of structural Health monitoring – SHM Vs NDT

Case studies – buildings - heritage buildings - high rise buildings - water tanks – bridges and other structures.

UNIT-III: Materials and Methods of Repair and Repair Strategies

Definitions: Maintenance, Repair, Rehabilitation – Facets of Maintenance – Preventive measures on various aspects - Selection of repair materials for concrete - Essential parameters for repair materials - Strength and durability aspects, cost and suitability aspects - Materials for repair- Special concrete and mortar - concrete chemicals – Ferro cement – fibre reinforced concrete - Premixed cement concrete and mortars - polymer modified mortars and concrete – Shotcreting – Grouting – Jacketing - epoxy and epoxy systems including epoxy mortars and concrete, polyester resins, coatings

UNIT-IV: Bonded Installation Techniques

Externally bonded Steel - Externally bonded FRP- Wet layup sheet, bolted plate, near surface mounted FRP, fundamental debonding mechanisms-intermediate crack debonding- CDC debonding- plate end debonding- strengthening of floor of structures.

UNIT-V: Seismic Retrofitting of Reinforced Concrete buildings

Introduction – considerations in retrofitting of structures – sources of weakness in RC frame building – structural damage due to the discontinuous load path – structural damage due to lack of deformation – quality of workmanship and materials – classification of retrofitting techniques – Retrofitting strategies for RC buildings – Structural level (Global) retrofit methods – Member level (Local) retrofit methods – comparative analysis of methods of retrofitting.

17	17CE025	Advanced steel and Concrete Composite Structures

Course Code	Course Title	L	T	P	C
17CE009	PLASTICITY AND LIMIT STATE DESIGN OF STEEL STRUCTURES	3	0	0	3

Course Objectives:

1. The objectives are to provide students with advanced knowledge of steel structural design.
2. Application of the underlying principles to solve a wide range of structural steel problems.
3. This subject will provide students the basic principles of reliability based design on steel structures
4. Understanding of the relationship between structural analysis and design provisions.

Course outcomes:

The students will be able to

1. Gain knowledge about Plastic analysis of structures
2. Understand different types of connections in steel structures
3. Analyze industry buildings
4. Understand behaviour of Unstiffened and Stiffened Elements

Activities:

1. Design a 4 storey steel building in STAAD Pro using IS 800 code book
2. Conduct laboratory test of two welded plates to test strength of the connection
3. Analyse a steel tower using ETABS and do detailing
4. Design a steel industry building subjected to lateral loads such as wind or Earthquake load and analyze the structure

Skills:

1. Design and analysis of continuous beams for different loading systems
2. Different methods in welding the steel components
3. Design and analysis of steel towers both for gravity and lateral loads
4. Design and analysis of industry buildings

UNIT-I: Plastic Analysis of Structures

Introduction, Shape factor, Moment redistribution, Combined mechanisms, Analysis of portal frames, Effect of axial force - Effect of shear force on plastic moment, Connections - Requirement – Moment resisting connections. Design of Straight Corner Connections – Haunched Connections – Design of continuous beams.

UNIT-II: Design of Connections

Types of connections – Welded and riveted – Throat and Root Stresses in Fillet Welds – Seated Connections – Unstiffened and Stiffened seated Connections – Moment Resistant Connections – Clip angle Connections – Split beam Connections– Framed Connections.

UNIT-III: Analysis and Design of Steel Towers

Analysis and Design of Microwave / Transmission Line Towers - Types of bracing patterns -Sag and Tension calculations. Design of Self-supporting Chimney – Design of Base Plates, Foundations and Anchor bolts and Guyed Steel Chimney - Guy ropes - Stresses due to wind. Along with load calculation - Gust Factor Method.

UNIT-IV: Design of Industrial Structures

Design of members subjected to lateral loads and axial loads, Analysis and design of Industrial Buildings and bents, Sway and non-sway frames, Design of Purlins, Louver rails, Gable column and Gable wind girder - Design of Moment Resisting Base Plates – Analysis of Gable Frames.

UNIT-V: Design of Light Gauge Steel Structures

Behaviour of Compression Elements - Effective width for load and deflection determination – Behaviour of Unstiffened and Stiffened Elements – Design of webs of beams – Flexural members – Lateral buckling of beams – Shear Lag – Flange Curling – Design of Compression Members – Wall Studs.

TEXTBOOKS:

1. Subramanian.N, "Design of Steel Structures", Oxford University Press, 2008.
2. Dayaratnam.P, "Design of Steel Structures", A.H.Wheeler, India, 2007.

Course Code	Course Title	L	T	P	C
17CE010	FRACTURE MECHANICS	3	0	0	3

Course Objectives:

1. To examine the concept of failure in members with pre-existing flaws.
2. To familiarize students in the field of fracture mechanics.
3. To expose the students about linear and nonlinear fracture mechanics.
4. To familiarize the students on fracture process of concrete.
5. To expose students about behavior of fracture for different materials and its testing methods.

Course Outcomes:

At the end of the course student will be able

1. To acquire basic skills in fracture mechanism of brittle materials like concrete.
2. To apply fracture mechanics theory to calculate stress areas.
3. To examine failure of structural components from both the mechanics and micro structural point of view.
4. To calculate the "energy release rate'' around crack tips
5. To examine crack growth due to fatigue.

ACTIVITIES:

1. Design based on linear elastic fracture mechanics.
2. Fracture toughness as a function of specimen thickness using experimental determination of fracture zone for concrete
3. Examine variation of plastic zone over the thickness using experimental analysis.
4. Slip planes in plane strain and plane stress using experimental evidence

Skills:

1. Able to design based on linear elastic fracture mechanics.
2. Able to find out the variation of plastic zone over thickness of various elements.
3. Able to know about the plane strain and plane stress in slip planes.

UNIT-I: Introduction to Fracture Mechanics of Concrete:

Structural failure based on material performance; Concepts of linear elastic fracture mechanics; Fracture mechanics of concrete.

UNIT-II: Principles of Linear Elastic Fracture Mechanics:

Airy stress functions for problems in elasticity; Complex stress function; Elastic stress and displacement fields at crack tip; Stress intensity factors and crack opening displacements for useful geometries; Superposition of stress intensity factors; Plastic zone at crack tip; Griffith's fracture theory; Strain energy release rate for crack propagation; Relationship between stress intensity factor and strain energy release rate; Design based on linear elastic fracture mechanics.

UNIT-III: Principles of Non-Linear Fracture Mechanics:
Energy principles for crack propagation in non-linear materials; J-integral for nonlinear elastic materials; Fracture resistance (R curve); Crack tip opening displacement
UNIT-IV: Structure and Fracture Process of Concrete:
Constituents and microstructure of concrete; Fracture behaviour and strain localization of concrete; Fracture process zone and toughening mechanisms; Experimental determination of fracture zone; Influence of fracture process zone on fracture behaviour of concrete.

UNIT-V: Fracture Behavior of Different Materials and Test Methods:
Variation of plastic zone over the thickness, Slip planes in plane strain and plane stress, Experimental evidence, Minimum thickness for fracture toughness specimen based on plastic zone, Fracture testing – early attempts, Fracture toughness as a function of specimen thickness, Requirements of the test, Concrete fracture toughness, Compact tension and three point bend specimens, Chevron notch – visualization exercise

Course Code	Course Title	L	T	P	C
17CE012	CONSTRUCTION PLANNING AND PROJECT MANAGEMENT	3	0	0	3

Course Objectives:

1. To understand planning of construction projects
2. To understand scheduling of activities using network diagrams
3. To study the importance of cost and budget control
4. To understand quality control and safety in construction industry
5. To study various equipment being used for performing various construction activities.

Course Outcomes:

At the end of the course student will be able

1. To divide any project into manageable activities.
2. To perform scheduling using network techniques.
3. To familiarize with the importance of cost, budget, quality control and safety in construction field.
4. To understand the selection criteria behind the equipment used for performing various construction activities.

Activities:

1. Prepare WORK BREAKDOWN STRUCTURE for construction of 3 storey building and assign resources to each activity.
2. Schedule the given activities using bar chart, CPM and PERT methods.
3. Crash and level resources of activities according to the resource availability.
4. Articles in Workmen compensation act.
5. Usage of various equipment for construction activities like earth moving, erection, material transport, dewatering and concreting.

Skills:

1. Develop WBS of any structure and can estimate resources
2. Schedule activities using CPM, PERT
3. Crash and level resources to execute construction economically
4. Assess safety norms to be followed or being followed in construction
5. Decide the right equipment to be used in the construction.

UNIT- I: Introduction to Project Management:

Basic forms of organization with emphasis on Project and matrix structures- project life cycle-planning for achieving time, cost, quality- feasibility study.

Construction Planning

Basic concepts in the development of construction plans-choice of Technology and construction method-Defining Work Tasks-Precedence relationships among activities- Estimating Activity Durations-Estimating Resource Requirements for work activities- coding system.

UNIT- II: Scheduling Procedures and Techniques:

Relevance of construction schedules-Bar charts-The critical path method-Calculations for critical path scheduling. Activity float and schedules-Presenting project schedules-Critical path scheduling for Activity-on –node and with leads, Lags and Windows. Calculations for scheduling with leads, Lags and Windows-Resource oriented scheduling-Scheduling with resource constraints and precedencies- Use of Advanced Scheduling Techniques-Scheduling with uncertain durations-Crashing and time/cost tradeoffs-Improving the Scheduling process.

UNIT- III: Cost Control Monitoring and Accounting:
The cost control problem-The project Budget-Forecasting for Activity cost control-Financial accounting systems and cost accounts-Control of project cash flows-Schedule and Budget updates-Relating cost and schedule information.

UNIT-IV: Quality Control Monitoring and Safety Engineering:
Quality and safety concerns in Construction-Organizing for Quality and safety-Work and Material Specifications. Total Quality control- Quality control by statistical methods- Statistical Quality control with sampling by Attributes-Statistical Quality control by Sampling and Variables, safety measures and safety policies to be adopted- determination of safety parameters- personal protective equipment- Workmen Compensation Act.

UNIT- V: Construction Methods and Equipment:
Factors affecting selection of equipment - technical and economic, construction engineering fundamentals, Analysis of production outputs and costs, Characteristics and performances of equipment for Earth moving, Erection, Material transport, Pile driving, Dewatering, Concrete construction (including batching, mixing, transport, and placement) and Tunneling.

Course Code	Course Title	L	T	P	C
17CE014	ADVANCED FOUNDATION ENGINEERING	3	0	0	3

Course Objectives:

The primary objective of this course is

1. To equip the student with the knowledge of how to explore the soil
2. To estimate the bearing capacity of soil, design the foundations for different conditions and check the stability of structures.
3. To understand the basics of dynamics – dynamic behavior of soils – effects of dynamic loads and the various design methods

Course Outcomes:

At the end of the course student will be able to

1. Determine the earth pressures on foundations and retaining structures.
2. Analyse shallow and deep foundations.
3. Calculate the bearing capacity of soils and foundation settlements.
4. Able to design foundation for different machines.
5. Able to assess the influence of vibrations.

Activities:

1. Analyze active and passive earth pressures acting on to a retaining wall with the properties of the soil given, using any theory, using some soft wares
2. Determining the actual active pressure and the actual failure plane for a retaining wall backfill using Culmann's Graphical Method
3. Suggest a suitable foundation for the given soil and load conditions and justify it.
4. Make a working model of spring and dashpot system to understand behavior of foundation under vibrations
5. Take example for machine foundation and find out various modes of failures using Linear Elastic weightless spring method, Elastic half space method and Analogue models.

Skills:

1. Able to explore and examine a site
2. Able to analyze lateral soil pressures acting on to a wall
3. Able to determine bearing capacity of a soil using different theories at different conditions
4. Able to analyze various dynamic forces
5. Able to design a special foundations for vibrating machinery
6. Able to understand Indian codal specification for analysis and design of foundations for dynamic conditions

UNIT-I: Sub–Soil Investigation and Sampling:

Introduction; Methods of exploration; Methods of Boring; Soil Samples; Soil samplers and Sampling; Number and disposition of trial pits and borings; Depth of exploration; Ground water observations; Field test, Laboratory tests; Plate load test; Penetrometer tests; Geophysical methods.

UNIT-II: Shallow Foundations:

Concept of foundations; Types of foundations and their applicability; General requirements of foundations; Location and Depth of foundation, Bearing Capacity & Settlement Methods for bearing capacity estimation, total and differential settlements of footing and raft, code provisions. Design of individual footings, strip footing, combined footing.

UNIT-III: Deep Foundations:

Pile Foundations Estimation load carrying capacity of single and pile group under various loading conditions. Pile load testing (static, dynamic methods and data interpretation), settlement of pile foundation, code provisions, design of single pile and pile groups, and pile caps

Well Foundations Types, components, construction methods, design methods (Terzaghi, IS and IRC approaches), check for stability, base pressure, side pressure and deflection.

UNIT-IV: Lateral Earth Pressure & Retaining Walls:

Introduction; Effect of wall movement on Earth Pressure; Earth Pressure at rest; Rankine's theory of Earth pressure; Coulomb's theory of earth pressure; Culmann's graphical method for active earth pressure; Types of retaining walls, Design of cantilever retaining wall, design of cantilever sheet pile wall, design of anchored sheet pile wall.

UNIT-V: Dynamic Soil Properties:

Stresses in soil element; Determination of dynamic soil properties; Field tests; Laboratory tests; Model tests; Stress-strain behavior of cyclically loaded soils; Cyclic plate load test; Liquefaction.

Machine Foundations

Types of machines; Basic design criteria; Methods of analysis; Mass-Spring-Dashpot model; Elastic-Half-Space theory; Tschebotarioff's reduced natural frequency method; Types of foundations; Modes of vibrations; Vertical, sliding, torsional (yawing) and rocking (and pitching) modes of oscillations; Design guidelines as per codes; Typical design problems.

Course Code	Course Title	L	T	P	C
17CE015	MECHANICS OF COMPOSITE MATERIALS	3	0	0	3

Course Objectives:

1. To study the behaviour of composite materials.
2. To investigate the failure modes of composite materials.
3. To understand the fracture mechanics of composite materials.

Course Outcomes:

At the end of the course student will be able
1. Apprehend the stress strain relationship of orthotropic and anisotropic materials.
2. Analyze laminated composites.
3. Assess the failure criterion and fracture mechanics of composites.

Activities:
1. Investigation of failure and fracture characteristics of composite materials
2. Presentation
3. Case study of different composite materials

Skills:
1. Ability to investigate the failure and fracture characteristics of composite materials.
2. Ability to use the composite materials

UNIT-I: Introduction:
Introduction to Composites, Classifying composite materials, commonly used fiber and matrix constituents, Composite Construction, Properties of Unidirectional Long Fiber Composites, and Short Fiber Composites

UNIT-II: Stress Strain Relations:
Concepts in solid mechanics, Hooke's law for orthotropic and anisotropic materials, Linear Elasticity for Anisotropic Materials, Rotations of Stresses, Strains, Residual Stresses

UNIT-III: Analysis of Laminated Composites:
Governing equations for anisotropic and orthotropic plates. Angle-ply and cross ply laminates. Static, dynamic and stability analysis for simpler cases of composite plates. Inter laminar stresses.

UNIT-IV: Failure and Fracture of Composites:
Netting Analysis, Failure Criterion, Maximum Stress, Maximum Strain, Fracture Mechanics of Composites, Sandwich Construction.

UNIT-V: New Cement Composites:
FRC-Ferro cement-Nano cement composite- SIFCON-Polymer concretes.

TEXT BOOKS:
1. Daniel and Ishai, "Engineering Mechanics of Composite Materials", Oxford University Press, 2005.

1. Jones R.M., "Mechanics of composite materialsMcGraw-Hill, Kogakusha Ltd., Tokyo, 1975.

REFERENCE BOOKS:

1. Agarwal.B.D. and Broutman.L.J., "Analysis and Performance of fiber composites", John- Wiley and Sons, 1980.
2. Michael W.Hyer, "Stress Analysis of Fiber-Reinforced Composite Materials", McGraw Hill, 1999.

Course Code	Course Title	L	T	P	C
17CE016	GROUND IMPROVEMENT TECHNIQUES	3	0	0	3

Course Objectives:

1. To understand the engineering properties of soil and problems associated with weak deposit.
2. To understand the need for ground improvements.
3. To study the concept of soil stabilization.
4. To familiarize students in recent ground improvement techniques.
5. To get exposure to soil reinforcement techniques and geo-synthetics.

Course Outcomes:

At the end of the course student will be able

1. To understand the engineering properties of soil and problems associated with weak deposit.
2. Identify ground conditions and suggest method of improvement
3. Design and assess the degree of improvement
4. Understand the principles of soil reinforcement and confinement in engineering constructions
5. Design reinforced soil structures

Activities:

1. Design and make a model of a Reinforced Earth Wall
2. A model of stone columns in a clayey strata and observation of ground water depletion
3. Design a stone column and determine its load carrying capacity and settlements
4. Case studies on usage of different geo synthetics in soils
5. Test and compare the strength of the soil with different additives and justify the difference observed

Skills:

1. Able to suggest a suitable ground improvement technique
2. Able to design stone columns, reinforced earth walls
3. Able to diagnose problems associated with problematic soils
4. Able to design mix for various cement, lime and bitumen stabilization techniques
5. Able to suggest various grouting techniques for different problems and their design

UNIT-I: Ground Improvement in Cohesion less Soil:

Need for Ground Improvement, Different types of problematic soils, Emerging trends in ground Improvement. Shallow and deep compaction requirements, Principles and methods of soil compaction, Shallow compaction and methods. Properties of compacted soil and compaction control, Deep compaction and Vibratory methods Dynamic compaction.

UNIT-II: Ground Improvement in Cohesive Soil:

Drainage and Dewatering-Drainage techniques - Well points - Vacuum and electro osmotic methods. Preloading with and without vertical drains. Compressibility, vertical and radial consolidation, preloading methods. Types of Drains, Design of vertical Drains, Construction techniques. Stone Column: Function Design principles, load carrying capacity, construction techniques, settlement of stone column foundation.

UNIT-III: Reinforced Earth:

Principles, components of reinforced earth, governing design of reinforced earth walls, design principles of reinforced earth walls. Geotextiles-Introduction, types of Geotextiles, functions and their applications, tests for Geotextiles, Geogrids and their functions.

UNIT-IV: Mechanical Stabilization:
Soil aggregate mixtures, properties and proportioning techniques, soft aggregate stabilization, compaction, field compaction control. In situ soil treatment methods-Soil nailing, rock anchoring, micro-piles, construction techniques.

UNIT-V: Chemical Stabilization:
Cement Stabilization-Mechanism, factors affecting and properties, use of additives, design of soil cement mixtures, construction techniques. Lime and Bituminous Stabilization-Type of admixtures, mechanism, factors affecting, design of mixtures, construction methods-Grouting Techniques-Types of grouts - Grouting equipment and machinery - Injection methods – Grout monitoring – Stabilization with cement, lime and chemicals - Stabilization of expansive soils.

TEXT BOOKS:

1. Purushothama Raj. P, "Ground Improvement Techniques", 2nd ed., Laxmi Publications (p) Ltd., New Delhi, 1998.
2. Craig, R.F., "Soil Mechanics", 3rd ed., Van Nostrant Reinhold Co.,New York, 1993.
3. Koerner R.M., "Construction and Geotechnical Methods in Foundation Engineering", 3rd ed., McGraw Hill, 1994.

REFERENCES:

Course Code	Course Title	L	T	P	C
17CE017	BRIDGE ENGINEERING	3	0	0	3

Course Objectives:

1. To understand the various types of bridges
2. To understand the codal provisions for loading and design standards of bridges.
3. To design the superstructure of bridge using different methods and loading conditions.
4. To understand the design of bearings

Course Outcomes:

At the end of the course, student will be able

1. To familiarize with the usage of codal provisions in the design of bridges
2. To analyze and design substructure elements of bridges
3. To analyze and design various types of bridges like T-Beam bridge, Slab bridge, box culvert.
4. To understand the suitability of bearings for bridges.

Activities:

1. Determination of suitability of bridge to the site condition.
2. Make a model of bridge.
3. Analyse and design a bridge from substructure to super structure.

Skills:

1. Identify the type of bridge suitable for different soil and environmental conditions.
2. Design the bridge under primary and secondary loading conditions.

UNIT I: Introduction:

Introduction - Classification – Investigation for bridges - Economic span length- Loading standards – IRC and Railway loads – Impact.

UNIT-II: Bridge sub structure:

Evaluation of sub structures – Pier and abutments caps – Design of pier – Abutments – Type of foundations.

UNIT-III: Bridge super structure:

Super Structure: Slab bridge- Wheel load on slab- effective width method- slabs supported on two edges- cantilever slabs- dispersion length- box culvert.

UNIT-IV: T-Beam Bridge:

Design of T beam bridge- Pigeaud's method- design of longitudinal girders- Guyon-Messonet method- Hendry Jaegar method- Courbon's theory. (Ref: IRC-21).

UNIT-V: Bearings for Bridges:

Importance of Bearings – Bearings for slab bridges – Bearings for girder bridges – Electrometric bearing – Joints – Expansion joints. Understand the complexities in design of bridges.

TEXTBOOKS:

1. CBRI, "Building materials and components", India, 1990.
2. Gerostiza C.Z., Hendrikson C. and Rehat D.R., "Knowledge based process planning for construction and manufacturing", Academic Press Inc., 1994

Course Code	Course Title	L	T	P	C
17CE018	DESIGN OF TALL STRUCTURES	3	0	0	3

Course Objectives:

1. To study the behaviour of tall structures.
2. To learn analysis and design of buildings for wind loads
3. To study design criteria for tall structures.
4. To familiarize the students about stability analysis of tall structures.
5. To study behaviour of various structural systems under wind loads.

Course Outcomes:

At the end of the course student will be able

1. To apply all types loads on tall buildings according IS code
2. To analyze and Design tall buildings.
3. To understand behaviour of various structural systems under different loading conditions.
4. To design towers, chimneys and shear walls.
5. To check stability of tall structures against buckling, Torsion.

Activities:

1. Design any Tall building using IS code method and compare it using any design software.
2. Design a shear wall using IS code method and compares it using any design software.
3. Design a RCC Chimney using IS code method and compare it using any design software.
4. Design steel Chimney using IS code method and compares it using any design software.
5. Design a Tower Structure using IS code method and compare it using any design software.

Skills:

1. Able to design tall building as per IS code.
2. Able to design shear wall using IS code manually and using software.
3. Able to design tower structures and chimney using IS code.

UNIT-I: Introduction:

Basic Introduction and Importance of Tall Structures, Dead load, Live load, Impact load, Construction load, Sequential loading. Wind Loading – Static and Dynamic Approach, Analytical method, Wind Tunnel Experimental methods. Earthquake Loading – Equivalent lateral Load analysis, Response Spectrum Method, Combination of Loads.

UNIT –II: Analysis and Design of Tall Buildings:

Modelling for approximate analysis, Accurate analysis and reduction techniques, Analysis of structures as an integral unit, Analysis for member forces. Analysis of tall building for lateral loads, cantilever method, Portal method, Factor method; Design of structures for wind drift and Twist, Computer application in analysis & design

UNIT-III: Behaviour of Structural Systems:

Factors affecting the growth, height and structural form, Behaviour of Braced frames, Rigid Frames, In-filled frames, Shear walls, Coupled Shear walls, Wall–Frames, Tubular, Outrigger braced, Hybrid systems under wind loads.

UNIT-IV: Design of Various Tall Structures:

Introduction, Loads on towers, Analysis of towers, Masts, Trestles, Stresses in trestles due to vertical loads and horizontal loads, Design of members in towers. Design of Chimneys (RCC and Steel) and Design of shear wall according to IS code for wind loads.

UNIT-V: Stability Analysis:
Overall buckling analysis of frames, wall–frames, Approximate methods, Second order effect of gravity loading, P–Delta Effects, Simultaneous first order and P-Delta analysis, Translational instability, Torsional Instability, Out of plumb effects, Effect of stiffness of members and foundation rotation in stability of structures.

TEXT BOOKS:

1. Bryan Stafford Smith and Alex Coull, "Tall Building Structures - Analysis and Design", John Wiley and Sons, Inc., 1991.
2. S.N. Manohar, "Tall Chimneys: Design and Construction", McGraw-Hill, 1988.

REFERENCES:

3. Taranath B.S, "Structural Analysis and Design of Tall Buildings", McGraw-Hill, 1988
4. Design of Reinforced Concrete Structures by Pillai and Devdas Menon.

Course Code	Course Title	L	T	P	C
17CE011	ADVANCED PRESTRESSED CONCRETE	3	0	0	3

Course Objectives:

1. To develop an advanced understanding of the behavior, analysis and design of pre-stressed concrete members and connections.
2. By the end of the course, students should be able to calculate pre-stress losses.
3. Design a post-tensioned continuous beam for transfer, serviceability and strength.
4. Design a post-tensioned slab and Specify detailing and material.

Course Outcomes:

The student will be able to

1. Understand the basic concepts about prestressed concrete.
2. Analyze pre-stressed concrete structures.
3. Calculate deflections of pre-stressed members.
4. Gain the knowledge about composite structural members.

Activities:

1. Make a pre-stressed beam and analyze
2. Make a pre-stressed column and analyze
3. Find out deflections of pre-stressed
4. Design and analyze pre stressed frame

Skills:

1. Design and analysis of pre tensioned and post tensioned concrete members
2. Determination of deflections of prestressed members
3. Calculation of losses of prestress, creep and shrinkage.

UNIT-I: Introduction, Prestressing Systems and Material Properties:

Basic concepts of pre-stressing; Historical development; Advantages and Types of Prestressing, Pre-tensioning Systems and Devices, Post-tensioning Systems and Devices, Need for High strength steel and High strength concrete; Losses Of Prestress: Nature of losses of pre-stress; Loss due to elastic deformation of concrete, shrinkage of concrete, creep of concrete, relaxation of stress in steel, friction and anchorage slip; Total losses allowed for in design.

UNIT-II: Analysis of Prestressed Member:

Analysis of Members under Axial Load: Analysis at Transfer, Analysis at Service, Analysis for Ultimate Strength, Analysis of Member under Flexure:, Analysis at Transfer and at Service, Cracking Moment, Kern Point, Pressure Line, Analysis for Ultimate Strength, design loads and strength, Calculation of Crack Width, Variation of Stress in Steel, Analysis of a Rectangular Section, Analysis of a Flanged Section.

UNIT-III: Deflections of Prestressed Concrete Members:

Importance of control of deflections; Factors influencing deflections; Short term deflections of uncracked members. Long term deflection of cracked member; Transmission Of Pre-Stress: Transmission of Pre-stressing force by bond; Transmission length; Bond stresses; Transverse tensile stresses; End zone reinforcement; Flexural bond stresses in pre –tensioned and post – tensioned grouted beams, stress distribution in end block, Anchorage zone reinforcements. Shear And Torsion Resistance of Prestressed Concrete Member Shear and Principal stresses; Ultimate shear resistance of pre-stressed concrete members; Design of shear reinforcement, pre-stressed concrete members in torsion, Design of reinforcements for torsion, shear and bending.

UNIT-IV: Design of Pre-Stressed Members:

Design of sections for flexure, Design of Sections for Axial Tension, Design of Sections for compression and bending, design of pre-stressed section for shear and torsion, design of prestressed member for bond. Dimensioning of flexural member, design for pre-tensioning member, design of post-tensioning members.

UNIT-V: Composite Construction of Prestressed Concrete:

Composite structural member, types of composite construction, analysis of stresses, differential shrinkages, deflection of composite member, flexural strength of composite sections, shear strength of composite section; Design of Continuous Prestressed Concrete Member Advantages of continuous members, ultimate load analysis of continuous pre-stressed member, design of continuous pre-stressed concrete beams.

TEXT BOOKS:

1. N. Krishna Raju , “Prestressed Concrete”, Tata Mc Graw - Hill Publishing Company Limited, New Delhi.3rd edition, 1995.
2. T.Y. Lin & Ned H. Burns, “Design of Prestressed Concrete Structures”, John Wiley & Sons, 3rd edition, 1981.

REFERENCE BOOKS:

1. N. Rajagopalan, “Prestressed concrete”, Narosa Publishing House.2nd edition, 2005.
2. A. Nilson, “Design of Prestressed Concrete”, John Willey & Sons.2nd edition, 1987.

Course Code	Course Title	L	T	P	C
17CE019	STABILITY OF STRUCTURES	3	0	0	3

Course Objectives:

1. To evaluate and compare modern techniques and methods in structural stability.
2. The students will become familiar with calculation and experimental methods for defining critical external loads of sleek construction elements and constructions where unstable situations appear, which makes the construction unstable and results in inward or outward flexing.

Course Outcomes:

At the end of the course student will be able to

1. Apprehend the concepts of various structural elements.
2. Precise knowledge about buckling of diverse element.
3. Application of available methods in structural stability issues.

Activities:

1. Analysis of buckling of columns using energy methods and methods of neutral equilibrium
2. Analysis of beam column with concentrated and distributed load condition.
3. Analysis of frame with the methods of neutral equilibrium, matrix method and slope deflection equations.
4. Analysis of plates with different end conditions using energy and finite difference method.

Skills:

1. Able to analyze plate, frame and beam column.
2. Able to form differential equations for plate bucklings.

UNIT-I: Buckling of Columns:

Introduction – concepts of stability – methods of Neutral Equilibrium– Euler column – Eigen value problem – Axially loaded column – Eccentrically loaded column.

UNIT-II: Energy Principle:

Raleigh Ritz method – Galerkin method – Numerical methods (New mark's difference and matrix methods).

UNIT-III: Beams and Beam Columns:

introduction – lateral buckling of beams – beam column with concentrated and distributed loads – effect of axial load on bending stiffness.

UNIT-IV: Buckling of Frames:

Introduction – modes of buckling – critical load using various methods –Neutral equilibrium – slope deflection equations, matrix method.

UNIT-V: Buckling of Plates:

Differential equation of plate bucklings – critical load on plates for various boundary conditions – Energy method – Finite difference method.

TEXT BOOKS:

1. Alexandar Chajes, "Principles of Structural Stability Theory", Prentice Hall, New

Jersey,1980.

2. Timoshenko and Gere, “Theory of Elastic Stability”, Dover Publications, 1961.

REFERENCE BOOKS:

1. Allen and Bulson, “Background to buckling”, McGraw-Hill, 1980.
2. N.G.R.Iyengar, “Elastic stability of structural elements”, Macmillan India Ltd., 2007.

Course Code	Course Title	L	T	P	C
17CE020	STRUCTURAL OPTIMISATION	3	0	0	3

Course Objectives:

1. To introduce the concepts of design optimization and review major conventional and modern optimization methods used in structural optimization applications.
2. To understand the formulation of structural optimization problems.
3. To get familiarized with the application of linear and non-linear programming to structural optimization.
4. To get exposed to unconstrained and constrained optimization.
5. To understand direct and indirect methods, direct search and gradient methods.

Course Outcomes:

At the end of the course student will be able

1. To understand the causes of failure of structures.
2. To diagnose distress of structures.
3. To analyze the debonding pattern of externally plated members
4. To understand the significance of orientation of RC buildings.

Activities:

1. Identify the variables affecting a complex phenomenon and to perform a sensitivity analysis on them.
2. Solve a given Simplex problem using Mat-Lab.

Skills:

1. Aptitude to select the variables affecting a given phenomenon, so as to model the same.
2. Ability to apply optimization techniques using Mat-Lab.

UNIT-I: Introduction:

Formulation of Structural Optimization problems: Design variables - Objective function – constraints - Fully stressed design - Review of Linear Algebra: Vector spaces, basis and dimension, canonical forms.

UNIT –II: Linear and Non Linear Programming:

Linear Programming: Revised Simplex method - Application to structural Optimization - Nonlinear Programming: Deterministic Methods - Unconstrained and constrained Optimization - Kuhn-Tucker conditions, Direct search and gradient methods - One dimensional search methods - DFP and BFGS algorithms, constrained Optimization - Direct and Indirect methods – Successive Linear Programming(SLP), Sequential quadratic programming(SQP) and SUMT, Application of Non-Linear Programming (NLP) methods to optimal structural design problems.

UNIT-III: Optimality Criteria Based Methods:

Reanalysis techniques - Approximation concepts - Design sensitivity, Optimization of sections, steel and concrete structures - framed structures, bridge structures.

UNIT-IV: Stochastic Optimization Methods

Stochastic Optimization Methods: Genetic Algorithms - Binary coding - Genetic Operators - Simple Genetic Algorithm (SGA) and variable length Genetic Algorithm (VGA) - Simulated annealing - Applications to discrete size, Configuration and shape optimization problems.

UNIT-V: Artificial Intelligence and Neural networks

Artificial Intelligence and Artificial Neural Networks based approaches for structural optimization problems.

TEXT BOOKS:

1. Haftka, R. T. and Gurdal, Z., “Elements of Structural Optimization”, Springer, 3rd Edition, 1992.
2. Gurdal, Z, Haftka, R. T., and Hajela, P., “Design and Optimization of Composite Materials”, Wiley, 1998.
3. K. K. Choi and N. H. Kim, “Design Sensitivity Analysis for Linear and Nonlinear Structures”, Springer, 2005.

Course Code	Course Title	L	T	P	C
17CE013	ADVANCE CONCRETE TECHNOLOGY	3	0	0	3

Course Objectives:

1. To know the advancements in the field of concrete technology.
2. To understand the use of various chemical and mineral admixtures in concrete.
3. To understand the behavior of green materials for sustainable construction.
4. To be familiarize with the available Non-Destructive testing techniques for the testing of strength parameters of concrete.

Course Outcomes:

At the end of the course student will be able

1. To show understanding of concrete behavior, admixtures and polymers and their applications
2. To show appreciation of the factors affecting durability of concrete and know how durable concrete and special concretes are produced.
3. To be familiar with concepts of social, environmental and economic sustainability and engineering for sustainable development.

Activities:

1. Perform NDT on beams of Surveying lab to find strength.
2. Perform experimental investigation on strength of concrete in both fresh and hardened state when mineral admixtures are added to it.
3. Perform experimental investigation on strength of concrete in both fresh and hardened state when chemical admixtures are added to it
4. Analyze the behavior of concrete when green materials are used in concrete.

Skills:

1. Able to correlate the NDT test results to the strength of concrete.
2. Able to identify the effect of mineral and chemical admixtures on the strength of concrete.
3. Able to select the good material for the preparation of green concrete for the sustainable construction.

UNIT-I: Introduction:

Concrete - Understanding the quasi-brittle nature of concrete - Failure of concrete under low stress - Micro— cracking, crack propagation - stress concentration at openings –Destructive, semi-destructive & Non-destructive testing methodology - Rebound hammer test - Ultrasonic Pulse Velocity (UPV) Test - Penetration resistance test - Pull-out Test - Pull-off Method - Break-off test - Cover Measurement - Core Sampling and Testing - Half-cell electrical potential method - Resistivity Mapping Problems faced during Non-destructive evaluation - Microscopic Analysis – XRD, SEM, TEM Analysis.

UNIT-II: Admixtures and Polymers:

Chemical Admixtures- Mechanism of chemical admixture, Plasticizers and super Plasticizers and their effect on concrete property in fresh and hardened state, Marsh Cone test for optimum dosage of super plasticizer, retarder, accelerator, Air-entraining admixtures, and new generation super plasticiser.

Mineral Admixture-Fly ash, Silica fume, GGBS, and their effect on concrete property in fresh state and hardened state.

Polymers -Structural Plastics and Composites- Polymer Membranes Coatings.

UNIT-III: Durability Properties:

Permeability – chemical attack – Sulphate attack – Carbonation - Quality of water – marine conditions – Thermal properties of concrete – fire resistance – methods of making durable concrete

UNIT-IV: Special Concrete:

Light weight concrete, Fiber and Hybrid Fiber reinforced concrete, Polymer Concrete, Super plasticized concrete, Epoxy resins and screeds for rehabilitation Fly ash and High volume flyash concrete, -High performance concrete - Self compacting concrete - Self curing concrete – Recycled aggregate concrete - Bacterial concrete – Nanoconcrete

UNIT-V: Sustainability:

Introduction - Need for sustainability - Concept of sustainability - social, environmental and economic sustainability concepts. Sustainable development - Engineering for sustainable development - Threats for sustainability - Low Impact development techniques-Green materials -Material selection for sustainable design.

TEXT BOOKS:

1. Shetty M.S., “Concrete Technology”, S.Chand and Company Ltd. Delhi, 2013.
2. Gambhir.M.L., “Concrete Technology”, Tata McGraw Hill, Publishing Co. Ltd New Delhi, 2013.

Course Code	Course Title	L	T	P	C
17CE021	SMART STRUCTURES AND APPLICATIONS	3	0	0	3

Course Objectives:

1. To introduce passive and active systems.
2. To familiarize students with components of smart systems.
3. To make students exposed to different types of smart materials.
4. To make students understand control systems.
5. To introduce the methods and techniques for developing and designing multifunctional structures.

Course Outcomes:

At the end of the course student will be able

1. To understand the concept of passive and active systems.
2. To be familiar with components of smart systems.
3. To be exposed to different types of smart materials.
4. To better understand control systems.
5. To be familiar with the methods and techniques for developing and designing multifunctional structures.

Activities:

1. Presentation by students on the currently used Active and Adaptive Systems
2. Cost comparison for synonymously used Active & Passive Systems or Adaptive & Active Systems.
3. Debate on whether to integrate smart systems with the internet or not (IoT).

Skills:

1. Ability to gain knowledge on the available Smart Systems currently in practice.
2. Aptitude to choose a suited smart system based on requirement.
3. Ability to understand the economic, social and security implications of smart systems.

UNIT-I: Introduction:

Introduction to - passive and active systems - need for active systems - smart systems - definitions and implications - active control and adaptive control systems - examples.

UNIT –II: Components of Smart Systems:

Components of smart systems – system features and interpretation of sensor data – pro-active and reactive systems – demo example in component level – system level complexity.

UNIT-III: Materials and Modelling:

Materials used in smart systems – characteristics of sensors – different types of smart materials – characteristics and behavior of smart materials – modeling smart materials – examples.

UNIT-IV: Control Systems and Applications:

Control Systems – features – active systems – adaptive systems – electronic, thermal and hydraulic type actuators – characteristics of control systems – application examples.

UNIT-V: Integration of sensors and control systems:

Integration of sensors and control systems – modeling features – sensor - response integration – processing for proactive and reactive components – FE models – examples.

Course Code	Course Title	L	T	P	C
17CE022	PRE ENGINEERED BUILDINGS	3	0	0	3

Course Objectives:

1. To understand the importance of Prefabrication
2. To know the process of prefabrication of various structural elements
3. To understand the assembling and dismantling of prefabricated components
4. To study the design considerations in the process of prefabrication
5. To understand the joining techniques in prefabrication

Course Outcomes:

At the end of the course the student will be able

1. To know the procedure of prefabrication
2. To design the structural prefabricated elements.
3. To familiarize with joining techniques used for prefabrication
4. To know abnormal loads which are hazardous to the prefabricated structures.

UNIT I: Introduction:

Need for prefabrication – Principles – Materials – Modular coordination – Standarization – Systems – Production – Transportation – Erection.

UNIT II: Prefabricated Components:

Behaviour of structural components – Large panel constructions – Construction of roof and floor slabs – Wall panels – Columns – Shear walls

UNIT III: Design Principles:

Disuniting of structures- Design of cross section based on efficiency of material used – Problems in design because of joint flexibility – Allowance for joint deformation.

UNIT IV: Joint in Structural Members:

Joints for different structural connections – Dimensions and detailing – Design of expansion joints

UNIT V: Design for Abnormal Loads:

Progressive collapse – Code provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

TEXTBOOKS:

1. CBRI, “Building materials and components”, India, 1990.

Course Code	Course Title	L	T	P	C
17CE023	EXPERIMENTAL STRESS ANALYSIS	3	0	0	3

Course Objectives:

1. To understand the different strain gauge systems available.
2. To understand the utilization of strain gauges.
3. To study the importance of Non Destructive Testing.

Course Outcomes:

At the end of the course student will be able

1. To understand the mechanical properties of strain gauges
2. To understand the different methods in design the strain gauges.
3. To have a brief idea regarding two dimensional photo elasticity.

Activities:

1. Conduct an NDT test on various structural components using Rebound hammer.
2. Make Electrical Resistance strain gage using any of the design methods.
3. Conduct a laboratory experiment to determine Elastic moduli using a self-made Electrical Resistance strain gage.

Skills:

1. Ability to perform NDT Test and interpret the results
2. Ability to understand the science behind working of a strain gauge.
3. Understanding the practical applications of a strain gauge.
4. Determine the stress distribution in a acrylic block using the concept of photo elasticity.

UNIT-I: Introduction and Strain Measurement Methods:

Model & Prototype – Dimensional analysis-Factors influencing model design – Scale factors and Model material properties – Methods of model design - Definition of strain - its relation to experimental determinations - properties of strain gauge systems – Mechanical - Optical, Acoustic and Pneumatic types.

UNIT-II: Electrical Resistance Strain Gauges:

Introduction – gauge construction – strain gauge adhesives - mounting methods – gauge sensitivities and gage factor – performance characteristics of wire and foil strain gauges – environmental effects - Analysis of strain gauge data – the three element rectangular rosette – the delta rosette – correction for transverse sensitivity.

UNIT-III: Non – Destructive Testing:

Introduction - objectives of non destructive testing - Ultrasonic pulse velocity method – Rebound Hammer method – Acoustic Emission application to assessment of concrete quality

UNIT-IV: Photo Elasticity:
Introduction – temporary double refraction – Index ellipsoid and stress ellipsoid – the stress optic law – effects of stressed model in a polariscope for various arrangements - fringe sharpening.

UNIT-V: Two Dimensional Photo Elasticity:
Introduction - iso-chromatic fringe patterns – isoclinic fringe patterns – compensation techniques – calibration methods – separation methods – materials for photo- elasticity – properties of photo-elastic materials

TEXT BOOKS:

2. George Hamor Lee, "An Introduction Experimental Stress Analysis", John Wiley & Sons Publishers, 1950.
3. Sadhu Singh, "Experimental Stress Analysis", Khanna publications, 1990.

Course Code	Course Title	L	T	P	C
17CE024	SOIL STRUCTURE INTERACTION	3	0	0	3

Course Objectives:

1. To understand various principles governing soil-structure interaction effect.
2. To familiarise the students with design and analysis of sub-structures incorporating with the effect of soil-structure interaction.

Course outcomes:

The student will be able to

1. Understand scope of soil-foundation interaction effect
2. Gain knowledge about modelling of elastic foundation
3. Predict settlement and deflections of laterally loaded piles

Activities:

1. Model two different substructure in STAAD Pro with and without soil structure. Analyse the models to quantify soil structure interaction effect
2. Design a pile subjected to lateral load and find settlements and deflections
3. Make a mathematical and computer model to understand pile group interaction effect

Skills:

1. Determination of deflection of a laterally loaded pile
2. Differentiate the computer models of substructure with and without soil-structure interaction effect consideration

UNIT I: Soil-Foundation Interaction

Introduction to soil - Foundation interaction problems, Soil behaviour, Foundation behaviour, Interface, behaviour, Scope of soil-foundation interaction analysis, soil response models,

Winkler, Elastic continuum, Two parameter elastic models, Elastic plastic behaviour, Time dependent behaviour.

UNIT II: Beam on Elastic Foundation - Soil Models:

Infinite beam, Two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness.

UNIT III: Plate on Elastic Medium:

Infinite plate, Winkler, Two parameters, Isotropic elastic medium, Thin and thick plates, Analysis of finite plates, rectangular and circular plates, Numerical analysis of finite plates, simple solutions.

UNIT IV: Elastic Analysis of Pile:

Elastic analysis of single pile, Theoretical solutions for settlement and load distribution, Analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

UNIT V: Laterally Loaded Pile:

Load deflection prediction for laterally loaded piles, subgrade reaction and elastic analysis, Interaction analysis, and pile raft system, solutions through influence charts.

TEXTBOOKS:

1. Hemsley, J.A, "Elastic Analysis of Raft Foundations", Thomas Telford, 1998.

Course Code	Course Title	L	T	P	C
17CE025	ADVANCED STEEL AND CONCRETE COMPOSITE STRUCTURES	3	0	0	3

Course Objectives:

1. To develop an understanding of the behaviour, analysis and design of Steel concrete composite elements and structures.
2. To familiarize with the design and analysis procedure of steel and concrete composite elements.

Course Outcomes:

At the end of the course student will be able to

1. Analyze steel concrete composite structures.
2. Design composite structures and its connections.
3. Conduct case studies related to steel concrete composite constructions of buildings.

Activities:

1. Analysis and design of Composite structures using Software Packages
2. Cast the model using composite materials
3. Presentation

Skills:

1. Ability to analyse the composite structures by using software.
2. Ability to create the composite structure model

UNIT-I: Introduction:

Introduction to steel - concrete composite construction - theory of composite structures- Introduction to steel - concrete - steel sandwich construction

UNIT –II: Design of Composite Members:

Behavior of composite beams, columns, design of composite beams, steel, concrete composite columns - design of composite trusses.

UNIT-III: Design of Connections:

Types of connections, Design of connections in the composite structures - shear connection, Design of connections in composite trusses

UNIT-IV: Composite Box Girder Bridges:

Introduction - behaviour of box girder bridges - design concepts

UNIT-V: General Case Studies:

General case studies on steel - concrete composite construction in buildings - seismic behaviour of Composite structures

TEXT BOOKS:

I YEAR	COURSE CONTENTS FOR COMMON COURSES	
II SEMESTER	17HS001	Research Methods
	17HS002	Employment Orientation Program (EOP)

17HS001 Research Methods

L	T	P	C
3	0	0	3

Objective of the Course:
Objective of the course is to enable research scholars to have a general understanding of research methods and application of statistical tools in the analysis and interpretation of findings and guidelines for report writing.

UNIT - I
Introduction: Nature and Importance of research, the role of business research, aims of social research, research process, types of research. Data Base: discussion on primary data and secondary data, probability and non-probability sampling techniques.

UNIT-II
Research design: Meaning of research design. Functions and goals of research design. Questionnaire and Schedule.

UNIT – III
Measurement and scaling concepts: Attitude measurement, levels of measurement and types of scales, criteria for good measurement. Measures of central tendency, measures of dispersion, measures of variation, Correlation and Regression. Statistical Inference. Tests of significance for small samples, t-test, Chi-Square test and ANOVA-one way and two way classifications. Discriminate analysis, cluster analysis, conjoint analysis

UNIT-IV
Technical Report Writing: Pre-writing considerations, Thesis writing, formats of report writing, Formats of publications in Research Journals. Technique of Interpretation, Precaution in Interpretation, Significance of Report writing, Different steps in writing Report, Layout of the Research Report, Types of Reports, Report Format, Typing Instructions, Oral Presentations.

UNIT-V
Research Ethics and Morals: Issues related to plagiarism, collaborative models and ethics, Acknowledgements. *Intellectual Property Rights:* copy rights.

17HS002 Employment Orientation Program

L	T	P	C
2	0	0	2

Preamble

It is common knowledge that students opting for the Masters Programme after B.Tech do so either because they have been unsuccessful in securing employment after their Bachelors or because they have not crystallized their career plan. Hence, students opting for M.Tech are found to be deficient not only in the technical knowledge but also in their communication skills and overall personality. There is a need to groom them and shape them into employable resources.

Program Objectives:

i. To impart employability skills to M.Tech. final students by honing their interpersonal and presentation skills.
ii. To equip them with the latest tools and techniques for effective communication through discussions, group work, presentation exercises, assignments, projects etc.
iii. To impart training for their overall personality development and shape them into confident, positive and ambitious professionals.

Course Contents

The course content, designed for 50 Hrs will comprise two modules:

- Communication skills & Overall personality improvement (10 * 2.5 = 25 Hrs)
- Pedagogy of Engineering Subjects & Making Project Presentations (10 * 2.5 = 25 Hrs)

Rationale for the Programme

On a more holistic view of higher education, the term “academic development” refers to development of multiple aspects of a student’s personality under this EOP for M.Tech students, different types of development are envisaged like personal, interpersonal skills, career development and life planning. “Development” in the engineering education according to national accreditation bodies like NBA and NAAC is understood to happen through activities and programmes designed to improve the ability to work to teams, express themselves confidently to their peers and present their views boldly before an audience and get things accomplished through management of men and materials. This programme will improve student’s overall communication skills and raise his/ her potential as an employee graduate.

About this Programme

The 50 Hrs course will be rolled out in two spells of 25 Hrs each with the help of in-house and invited experts. It is aimed at improving the presentation skills in general and teaching ability of the M.Tech students in particular. AFD will seek the cooperation of all the Deans, HoDs and senior professors as subject experts, mentors from the departments to provide the essential knowledge and skill inputs for the trainees so that the course outcomes can be realized.

Expected Outcomes:

Having gone through the 50 hrs rigorous training on presentation skills, pedagogy and overall personality grooming, the trainees will get equipped to face any interview confidently, make short and effective presentations during interviews and gain the confidence to handle engineering topics and perhaps also develop an aspiration for a career in teaching.

Assessment:

The trainees will be assessed for a total of 50 marks, which will be incorporated into the II year project marks. The summative assessment will be carried out by a special panel constituted for the purpose in consultation with the Dean, Evaluation and respective HoD.

- ✓ 5 Marks for attendance
- ✓ 5 Marks for formative assessment
- ✓ 40 Marks for summative assessment

FARM MACHINERY (FM)

I SEMESTER

17AG501	-	Design of Farm Power Machinery System
17AG502	-	Tractor Systems Design
17AG503	-	Alternative Energy Design
17AG504	-	Computer Aided Design and Manufacturing
	-	Elective Course - I
	-	Elective Course - II

II SEMESTER

17HS001	-	Research Methods
17HS002	-	Employement Orientation Program (EOP)
17AG506	-	Soil dynamics in Tillage and Traction
17AG507	-	Ergonomics in Agro Systems
17AG508	-	Testing of Tractors and Agricultural Machinery
17AG509	-	Credit Seminar
	-	Elective Course - III
	-	Elective Course - IV

COURSE CONTENTS

I SEM & II SEM

17AG001 DESIGN OF FARM MACHINERY SYSTEM

Hours Per Week :

L	T	P	C
2	1	3	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-	-	-	-

Course Description and Objectives:

To acquaint and equip with the latest design procedures of farm power and machinery systems.

Course Outcomes:

· able to design the agricultural machines for tillage, planting/ sowing, threshing and combine harvesting etc.
· able to testing of agricultural machines for tillage, planting/ sowing, threshing and combine harvesting etc.
· mastering the methods and processes of design.
· having fundamental knowledge of theories of agricultural machinery and equipment.

· having knowledge and transfer of new technologies in the field of design and construction of agricultural machines and equipment.
· monitoring and implementation of new and contemporary solutions

SKILLS:

✓ Design tillage equipment

✓ Design weeding equipment

ACTIVITIES:

- *Design of MB Plough*
- *Design of cultivator.*
- *Design and prototype development of wheel hoe.*

UNIT –I

Modern trends, principles, procedures, fundamentals and economic considerations for design and development of farm machinery systems. Design considerations, procedure and their applications inagricultural machines. Reliability criteria in design and its application.

UNIT –II

Mechanics of tractor chassis, Forces acting upon tillage implement, Mechanics of tillage

UNIT –III

Design of selected farm equipments: – tillage, seeding, planting, interculture, plant protection, harvesting and threshing. Design of rotary, vibrating and oscillating machines.

UNIT –IV

Tractor –Implement matching and operation, Tractor Implement performance

UNIT – V

Safety devices for tractors & farm implements. Cabs & HVAC designs- designs of ROPS and FOPS, safety locations of PTO

Practical:

Statement and formulation of design problems of

1. Mould board ploughs
2. Disc ploughs
3. Harrows
4. Cultivators
5. Rotary tiller
6. Seed drills and planters
7. Transplanters and fertilizer applicators
8. Harvesters
9. Threshers
10. Forage handling equipment

Text books:

17AG003 TRACTOR SYSTEM DESIGN

Hours Per Week :

L	T	P	C
2	1	3	5

Total Hours :

L	T	P
45	-	36

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

- *To acquaint and equip with the latest design procedures of tractor and its systems.*

Course Outcomes:

At the completion of the course the student will:

- have knowledge and skills on power transmission system of a tractor
- know the design procedures of hydraulic systems and steering system.
- understand design features and selection of engine for tractor.
- know the testing procedures for tractor
- knowing the design of engine components
- knowledge and skills on, hydraulic, pumps used in machinery.
- knowledge on different kinds of valves.
- skills on trouble shooting in valves.
- knowledge on safety features and service requirements of various hydraulic and pneumatic circuits

SKILLS:

- ✓ *Desgin hydraulic system for tractor*
- ✓ *Design ergonomical seat for agricultural tractor*

ACTIVITIES:

- *Collection of rquistite parameters for design of hydraulic system* for tractor
- *Collection of relevant data for ergonomical desing of seat of agricultural*

UNIT – I

Technical specifications of tractors available in India, modern trends in tractor design and development, special design features of tractors in relation to Indian agriculture.

UNIT – II

Engine performance. Selection of engine for tractors. Design of principal engine components. Design of engine systems. Parameters affecting design of tractor engine and their selection.

UNIT – III

Hydraulic system & hitching, chassis, Tractor stability analysis. Single and three point hitch systems. Drawbar performance. Quick attaching couplers.

UNIT – IV

Tractor clutches and brakes. Design of power transmission systems. Power measurement of tractor, Tire selection

UNIT – V

Design and performance evaluation of traction and transport devices. Human factors engineering in tractor design. Driver's seat, work-place area and controls. Computer application and automation in tractor design

Practical:

1. Measurement of Rolling resistance and slip
2. Measurement of engine performance parameters
3. Study of dynamometers
4. Measurement of draft of tillage implement
5. Design problems of hydraulic system
6. Design problems of hydraulic system
7. Design problems of tractor mechanics
8. Design problems of tractor mechanics
9. Design problems of tractor transmission
10. Design problems of tractor transmission

Text books:

1. Barger EL, Liljedahl JB &McKibben EC. 1967. *Tractors and their Power Units*. Wiley Eastern.
2. Macmillan RH. *The Mechanics of Tractor - Implement Performance, Theory and Worked Example*. University of Melbourne.

Reference books:

1. Maleev VL. 1945. *Internal Combustion Engines*. McGraw Hill.
2. Ralph Alcock 1986. *Tractor Implements System*. AVI Publ. Co.
3. Arther W Judge 1967. *High Speed Diesel Engines*. Chapman & Hall.

17AG005 ALTERNATIVE ENERGY SOURCES

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	-	-	-	-	-	-

Course Description & Objective:

To acquaint with the knowledge on various energy sources like biofuels, wind and solar systems, their use, design and applications in different farming activities.

Course outcomes:

After completion of the course, students will be able to:

1. describe the fundamentals and main characteristics of renewable energy sources and their differences compared to fossil fuels.
2. explain the technological basis for harnessing renewable energy sources
3. recognize the effects that current energy systems based on fossil fuels have over the environment and the society
4. describe the main components of different renewable energy systems
5. compare different renewable energy technologies and choose the most appropriate based on local conditions
6. perform simple techno-economical assessments of renewable energy systems
7. perform and compare basic environmental assessments of renewable energy systems and conventional fossil fuel systems
8. design renewable/hybrid energy systems that meet specific energy demands, are economically feasible and have a minimal impact on the environment
9. suggest the best combination of technological solutions to minimize the emission of greenhouse gases and increase the sustainability of the energy system in specific areas/ regions
10. discuss how to utilize local energy resources (renewable and non-renewable) to achieve the sustainable energy system.

SKILLS:

- ✓ *Use renewable energy sources for desing of farm equipment*
- ✓ *Use biomass energy for engine power.*

ACTIVITIES:

- o *Design of solar operated power sprayer*
- o *Visit to biodiesel manufacturing plant*

UNIT I

Introduction to alternative energy sources-Types, advantages, disadvantages, conventional energy sources, World energy scenario, Applications of renewable energy in agriculture

UNIT II

Solar radiation and its measurement, Solar energy collectors, solar energy storage, applications of solar energy, Design of solar energy operated systems for heating, cooling, distillation, drying, water pumping and power generation for application in agriculture.

UNIT III

Wind energy, Types of wind mills and their characteristics. Mechanics of wind mills, Design of wind mills Applications, Utilization of wind energy for generation of electricity and mechanical power.

UNIT IV

Biomass conversion and biogas generation, types of biogas plants- construction and working, digester design considerations, Factors affecting biogas production, Design of biogas systems for heating, lighting and running IC engines, Economics of biogas utilization.

UNIT V

Thermo-chemical conversion of biomass, direct combustion, Pyrolysis and gasification, chemical combustion process, carbonization , briquetting, pelletization and densification of biomass, bioconversion into alcohols, methyl and ethyl esters, organic acids, solvents of amino acids, bio-fuels.

Practicals

1. Measurement of direct and diffuse radiation,
2. Study of solar cooker.
3. Study of solar water heater.
4. Study of solar sprayer.
5. Design problems on solar photovoltaic cell.
6. Design problems on collection of solar radiation.
7. Design problems on wind mill.
8. Design of biogas plant.
9. Briquetting.
10. Study of bio-fuel.

Text books:

17AG007 COMPUTER AIDED DESIGN AND MANUFACTURING

Hours Per Week :

L	T	P	C
3	1	3	4

Total Hours :

L	T	P
45	-	-

XXXX

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:
To acquaint and equip with the computer aided design and manufacturing of farm machinery with the help of CAD.

Course outcomes:
Successful achievement of master level outcomes is required to receive a passing grade in the course. .

1. Ability to create fully constrained solid models that can be quickly modified using standard software tools.
2. Ability to use, identify and explain standard features in solid modeling including protrusions, revolutions, cutouts, and patterns
3. Ability to use standard software tools to create engineering drawings, or other documents, to fully describe the geometries and dimensions of parts, as well as to document assemblies according to standard practice
4. Ability to use standard software tools to create part assemblies and check for clearances.
5. Ability to create the drawings of farm implements and their analysis.
6. Ability to write the CNC part programming

SKILLS:

✓ *Draw the different farm machinery components using drawing software*

ACTIVITIES:

- *Design drawing of different machine components*
- *Writing program for cutting of machinery*

UNIT I

Introduction: Introduction of CAD/CAM, Definition of CAD & CAM Tools, Design Process, Design criteria,Geometric modeling, entities, 2D & 3D Primitives.
2D & 3D Geometric Transformations: Translation, Scaling, Rotation, Reflection and Shearing, Conlatenation.

UNIT II

Wire frame modeling: Curves: Curve representation. Analytic curves – lines, Circles, Ellipse, Conis. Synthetic curves – Cubic, Bezier, B-Spline.
Surface Modeling: Surface entities, Surface Representation.Analytic Surface – Plane Surface, Ruled Surface, Surface of Revolution, Tabulated Cylinder.
Solid Modeling: Solid modeling techniques, Geometric and Topology, Types of solid modeling, Algorithms, CSG representation, 3D base primitives.

UNIT III

Application to farm machinery scheduling problem. Application to farm –factory co-ordination – case study. Design of farm machinery with the help of CAD.

UNIT IV

Introduction to Computer Control in NC, Computer Numerical control, Direct Numerical control, Combined DNC/CNC System, Adaptive control system. Introduction to NC Part programming,Manual Part Programming, Computer assisted part programming APT language, G&M codes and examples.

UNIT V

Introduction:Fundamentals of Rapid Prototyping, Advantages and Limitations of Rapid Prototyping, Commonly used Terms, Classification of RP process, Rapid Prototyping Process Chain: Fundamental Automated Processes, Process Chain.

Practical:

1. Understanding CAD software and its uses and application in design of farm machinery.
2. Description of the machinery scheduling problem in harvesting and transport system.
3. Development of 2D drawings
4. Development of part drawings for various components in the form of orthographic and isometric.
5. Generation of various 3D Models through pad,shaft ,shell sweep
6.Exercise on Feature based and Boolean based modeling
7. Assembly Modeling.
8. Demonstration on CNC machine
9. Exercise on G&M codes
10. Demonstration onRapid Prototyping machine

Text books:

1. Martenson, E. Micheal, Geometric Modelling, John Wiley & Sons, 1995.
2. Grover Mikell P. 2003. *Automation, Production Systems and Computer Integrated Manufacturing*. Prentice-Hall of India.

17HS002 EMPLOYMENT ORIENTATION PROGRAM

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	-	-	-	-	-	-

Preamble:

It is common knowledge that students opting for the Masters Programme after B.Tech do so either because they have been unsuccessful in securing employment after their Bachelors or because they have not crystallized their career plan. Hence, students opting for M.Tech are found to be deficient not only in the technical knowledge but also in their communication skills and overall personality. There is a need to groom them and shape them into employable resources.

Program Objectives:

i. To impart employability skills to M.Tech. final students by honing their interpersonal and presentation skills.

ii. To equip them with the latest tools and techniques for effective communication through discussions, group work, presentation exercises, assignments, projects etc.

iii. To impart training for their overall personality development and shape them into confident, positive and ambitious professionals.

Course Contents

The course content, designed for 50 Hrs will comprise two modules:

- Communication skills & Overall personality improvement (10 * 2.5 = 25 Hrs)
- Pedagogy of Engineering Subjects & Making Project Presentations (10 * 2.5 = 25 Hrs)

Rationale for the Programme

On a more holistic view of higher education, the term “academic development” refers to development of multiple aspects of a student’s personality under this EOP for M.Tech

students, different types of development are envisaged like personal, interpersonal skills, career development and life planning. “Development” in the engineering education

according to national accreditation bodies like NBA and NAAC is understood to happen through activities and programmes designed to improve the ability to work to teams, express themselves confidently to their peers and present their views boldly before an audience and

get things accomplished through management of men and materials. This programme will improve student’s overall communication skills and raise his/ her potential as an employee graduate.

About this Programme

The 50 Hrs course will be rolled out in two spells of 25 Hrs each with the help of in-house and invited experts. It is aimed at improving the presentation skills in general and teaching ability of the M.Tech students in particular. AFD will seek the cooperation of all the Deans, HoDs and senior professors as subject experts, mentors from the departments to provide the essential knowledge and skill inputs for the trainees so that the course outcomes can be realized.63

Expected Outcomes:

Having gone through the 50 hrs rigorous training on presentation skills, pedagogy and overall personality grooming, the trainees will get equipped to face any interview confidently, make short and effective presentations during interviews and gain the confidence to handle engineering topics and perhaps also develop an aspiration for a career in teaching.

The trainees will be assessed for a total of 50 marks, which will be incorporated into the II year project marks. The summative assessment will be carried out by a special panel constituted for the purpose in consultation with the Dean, Evaluation and respective HoD.

- 5 Marks for attendance
- 5 Marks for formative assessment
- 40 Marks for summative assessment

17AG002 SOIL DYNAMICS IN TILLAGE AND TRACTION

Hours Per Week :

L	T	P	C
4	1	3	5

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To acquaint and equip with the dynamic properties of soil, soil failure and design of tillage tools, prediction of traction performance and dimensional analysis of different variables related to soil- tire system.

Course outcomes:

Upon completion of this course, students will:

1. be able to measure and utilize physical and mechanical properties of soil in order to interpret and predict soil stress-strain behavior.
2. be able to design and implement safe and cost-effective mechanical soil tillage systems for producing desired physical states
3. be able to design and implement and cost-effective mechanical traction/transport systems which produce specified performance and acceptable alteration of affected soil profiles
4. understand the need to learn and apply improved methodologies through continuing education.

SKILLS:

- ✓ *Measure dynamic properties of soil*
- ✓ *Apply traction parameters in design of tractor*

ACTIVITIES:

o=Measurement of different dynamic properties of soil

o Measurement of traction parameters

UNIT I

Dynamic properties of soil and their measurement, stress-strain relationships, theory of soil failure.

UNIT II

Mechanics of tillage tools and geometry of soil tool system, design parameters and performance of tillage tools.

UNIT III

Dimensional analysis of different variables related to soil-tyre system; soil vehicle models; mechanics of steering of farm tractor; special problems of wet land traction and floatation.

UNIT IV

Introduction of traction devices, tyres-types, function & size, their selection; mechanics of traction devices. Deflection between traction devices and soil, slippage and sinkage of wheels.

UNIT V

Evaluation and prediction of traction performance, design of traction and transport devices. Soil compaction by agricultural vehicles and machines.

Text books:

1. Daniel Hill. 1962. *Fundamentals of Soil Physics*. Academic Press.

2. Gill & Vandenberg.1968. *Soil Dynamics in Tillage and Traction*. Supdt. Of Documents, U.S. Govt. Printing Office, Washington, D.C.

Reference books:

3. Sineokov GN. 1965. *Design of Soil Tillage Machines*. INSDOC, New Delhi.

4. Terzaghi K & Peck Ralph B.1967. *Soil Mechanics in Engineering Practices*. John Wiley & Sons.

Practicals:

1. Direct shear test.
2. Vane shear test.
3. Field measurement of soil strength.
4. Measurement of cone index by cone penetrometer.
5. Design problems on tillage tools.
6. Study of tractive performance parameters.
7. Study of tractive performance parameters.
8. Study of tire size, load, and air pressure Relationship.
9. Problems on tire selection.
10. Problems on dimensional analysis.

17AG004 ERGONOMICS IN AGRO SYSTEMS

Hours Per Week :

L	T	P	C
3	1	3	5

Total Hours :

L	T	P
-	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To acquaint and equip with the ergonomic aspects in the design of farm machinery for safety of human beings

Course outcomes:

1 demonstrate an awareness of the unique attributes involved with farm work and planning for safety on a farm

2 understand the impact of near misses, injuries and fatalities on the farm, including the daily workings, business finances, the wide range of people affected, etc.

3 understand what hazards are, how they manifest, and how they impact business efficiency

4 understand the elements involved in creating a farm safe plan

5 understand how developing a farm safe plan can be valuable tool for business management, risk management, and human resources management

6 understand basic occupational health and safety principles (including terminology) demonstrate an awareness of the legal responsibilities in farm safety planning

7 demonstrate an awareness of available resources and supports in the area of farm safety conduct an inspection of their own operations to identify areas for improvement create standard work procedures (swp) and general safety guidelines as they relate to farming practices

8 understand the difference between swp and general safety guidelines and when to use each understand how attitudes on a farm emerge and how farm climate can be altered regarding the importance of safety

SKILLS:

Apply knowledge of ergonomics in design of agricultural machinery

Apply knowledge of ergonomics in design of tractor components

.

ACTIVITIES:

- Ergonomic design of tractor seat
- Ergonomic design of wheel hoe

UNIT I

Importance of ergonomics and its application in agriculture , Anthropometry and Biomechanics: Anthropometric data and measurement techniques, analysis and application of anthropometric data, joint movement and method of measurement, , measurement of physical and mental capacities. Man-machine system concept. Human factors in adjustment of man and his work

UNIT II

liberation and transfer of energy in human body, concept of indirect calorimeter, work physiology in various agricultural tasks. Physiological stress indices and their methods of measurement: Mechanical efficiency of work, fatigue and shift work.

UNIT III Vibration and noise: Theory, Classification of vibrations, Governing equations, Energy methods. Sensors: Types, Theory and concept, Applications. use of isolators, application in tractor seat design. Biomedical aspects of tractor operation; Visual perception in tractor control panel design..

UNIT IV

Noise and vibration and their physiological effects, thermal environment; heat stress, thermal comfort, effect on performance and behavior, field of vision, color discrimination, Principle and design of ROPS, International standards and testing of ROPS. Simulation of tractor cabin enclosure in view of ergonomics

UNIT V

General guidelines for designing visual display, Design aspects of foot and hand controls on tractors and farm equipment, safety standards at workplace during various farm operations and natural hazards on the farm. Farm safety legislation. Design of operator's seat for agricultural equipment.

Practical:

1. Study of anthropometric data of agricultural workers
2. Identification of anatomical reference planes and directional terms of human body
3. Identification of anthropometric dimensions for agricultural machinery design.
4. Measurement of identified anthropometric dimensions of sample objects.
5. Measurement of identified anthropometric dimensions of sample objects.

2. Mathews J & Knight AA.1971. *Ergonomics in Agricultural Design*. National Institute of Agric. Engineering, Wrest Park Silsoe, Bedford.
3. Mathews J Sanders, CormicksMS &MCEj. 1976. *Human Factors in Engineering and Design*. 4th Ed. McGraw Hill.

17AG008 TESTING OF TRACTORS AND AGRICULTURAL MACHINERY

Hours Per Week :

L	T	P	C
4	-	3	5

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

To acquaint and equip with the test procedures of agricultural machinery and tractors

Course outcomes:

Upon completion of this course, students will be able to:

1. understand the standard testing procedures and rules.
2. familiarize with different instruments used in testing of agricultural machinery.
3. understand different test codes of ISO, RNAM, ASTM, ASABE etc.
4. carry out performance evaluation of different agricultural implements

SKILLS:

✓ *Test different form Implements.*

ACTIVITIES:

- *Testing of rotavator*
- *Testing of seed cum fertilizer drill*

UNIT I

Introduction to testing, ISO, RNAM, BIS standards, Importance of testing, benefits of testing, history of tractor testing, types of tests

UNIT II

Testing of Tractor- PTO performance, drawbar performance, air cleaner oil pull over tests, engine testing, hydraulic system testing

UNIT III

Testing of agricultural machinery- tillage implements, Rotavators, , intercultural implements.

UNIT IV

Testing of agricultural machinery- plant protection equipment, sowing and planting implements

UNIT V

Testing of agricultural machinery- harvesting and threshing equipment, chaff cutters, Dangerous machines act

Practical:

The following experiments may be conducted for this lab

1. Testing of tractor- PTO performance test
2. Testing of tractor- drawbar performance test
3. Performance evaluation of tractor and power tiller drawn tillage implements
4. Performance evaluation of seeding machinery
5. Performance evaluation of weeding machinery
6. Performance evaluation of plant protection machinery
7. Performance evaluation of harvesting and threshing machines.
8. Testing of animal drawn and manually drawn operated implements.
9. Testing of crop processing equipments.
10. Using Test codes of agricultural machines.

Text books:

1. Testing and evaluation of agricultural machinery; M L Mehta, S R Verma, S K Mishra, V R Sharma ,ISAE and ASABE Test codes

17AG009 MACHINERY SYSTEMS FOR PRECISION AGRICULTURE

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-	-	-	-

Course Description &Objective:

To acquaint and equip with the farm machinery used for natural resources management and machinery for precision farming.Use of GIS and GPS in farm machinery.

Course outcomes:

1. Students interested in technology will learn how satellite based guidance systems and other related technologiescan be utilized to track and manage agricultural inputs (i.e. seed, fertilizer, fuel) and better manage their farming operation
2. Take this knowledge directly to industry working for agricultural consults and manufacturers
3. Understanding how to set up an auto guidance system is only a small piece of the puzzle.
4. Students master precision agriculture technologies like soil and crop health sensors, yield monitors, GNSS, GIS and mapping, variable rate controllers, and automated guidance.
5. Graduates of this program are challenged to understand management and troubleshooting of the entire agricultural system

SKILLS:

- ✓ *Study various farm implements and off-road vehicles specifications*
- ✓ *Implement and vehicles selection*

ACTIVITIES:

- o Assembling and dissembling of laser land leveler
- o Study and analysis of off-road vehicles specifications.

UNIT I

Functional design, specifications, requirements and working of farmmachinery needed for natural resources management like rotavator,Precision sowing and planting machines, laser guided leveller, powersprayer ,straw chopper cum spreader, straw bailer , combine harvester etc.

UNIT II

Ag GPS parallel swathing option, data base management, functional systems documentation. Application of relevant software.

UNIT III

An introduction to precision farming. GIS/GPS positioning system for precision farming, Yield monitoring and mapping, soil sampling andanalysis. Computers and Geographic information systems.Precisionfarming- Issues and conditions.Role of electronics in farm machinery forprecision farming.

UNIT IV

Engineering fundamentals related to earth moving machinery: Swell,shrinkage and compaction measurements. Use of tractors & Crawlers andeffects of altitude & temperature on their performance.Grade resistanceand gradability.

UNIT V

Land cleaning and reclamation equipment. Land leveling equipment. Powershovels, drag lines, cam shells. Rubber tire for earth moving machinery.Trenching machineries and wagons.Economic analysis of landdevelopment machinery. Application of PERT and CPM to the problemsrelated to land development.

Text books:

1. De Mess M. N. Fundamental of Geographic Information System. John Willy and Sons, New York

2. Dutta SK. 1987. Soil conservation and land management. International distributors, Dehradun.

Reference books:

1. Kuhar, John. E. 1977. The precision farmimg guide for agriculturalist. Lori J. Dhabalt, USA.

2. Lille Sand, T and Kaiffer, R. Remote Sensing and Image Interpretation, John Willy and Sons, London.

3. Nichols HL& Day DH.1998. Moving the earth. The work book of excavation. Mcgraw Hill.

4. Peurifoy RL 1956.Construction, planning, equipment and methods. Mcgraw Hill

5. Sabbins, F. Remote Sensing Principle and Interpretation. Freeman, New York

6. Singh G.1991. Manual of soil and water conservation engineering. Oxford and IBH, Co.
7. Sigma & Jagmohan.1976. Earth moving machinery. Oxford & IBH

17AG011 INSTRUMENTATION AND RESEARCH TECHNIQUES

Hours Per Week :

L	T	P	C
2	-	2	3

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	-	-	-	-	-	-

Course Description & Objective:

To acquaint and equip with the concept of instrumentation used in farm power & machinery and measuring devices for force, torque and other parameters.

Course outcomes:

By the end of the module the student should be able to...

1. understand and respond to the need for rigorous and formal metrology concepts in designing and using measurement systems.
2. recognize the limits on data imposed by measurement and analyse uncertainty in an appropriate manner.
3. use basic statistical methods to aid data evaluation and decision making.
4. appreciate how to identify and specify sensors (or complete instruments) for controlling machines and processes.
5. understand the operating principles of a range of widely used instrumentation techniques and appreciate how to use them in the design of measurement systems

Skills:

- *Study of various sensors*
- *Recording and analysis of vibration.*
- *Knowledge of various mechanical gauges*

UNIT I

Strain and stress, strain relationship, strain gauges.Mechanical, optical,electrical acoustical and pneumatic etc. and their use. Various methods ofdetermining strain/stresses experimentally.

UNIT II

Measuring devices fordisplacement (linear and rotational), velocity, force, torque and shaftpower. Strain gauges: types and their application in two and threedimensional force measurement. Design and analysis of strain gauges.

UNIT III

Introduction to functional elements of instruments.Active and passivetransducers, Analog and digital modes, Null and deflection methods.Performance characteristics of instruments including static and dynamiccharacteristics.

UNIT IV

Devices for measurement of temperature, relative humidity, pressure,sound, vibration, flow etc. Recording devices and their type.Measuringinstruments for calorific value of solid, liquid, and gaseous fuels.Measurement of gas composition using GLC.

UNIT V

Basic signal conditioning devices - data acquisition system – microcomputers for measurement and data acquisition. Data storage and their application.

Practicals:

1. Study of temperature measuring instruments.
2. Study and calibration of Bourdon pressure gauge.
3. Measurement of load using load cell
4. Measurement of torque of rotating shaft using torsion meter/strain gauge torque transducer.
5. Measurement of speed of a motor shaft with the help of no-contact type pick-ups.
6. Study of LVDT.
7. Measurement of stress and strain using strain gauges mounted on simply supported beam/ cantilever beam.
8. Measurement of vibration.
9. Measurement of angular displacement using capacitive transducer.
10. Study of flow measuring devices.

Text books:

1. Ambrosius EE. 1966. *Mechanical Measurement and Instruments*. The Ronald Press.
2. BeckwithTG. 1996. *Mechanical Measurements*. Addison-Wesley.

Reference books:

1. Doeblin EO. 1966. *Measurement System - Application and Design*. McGraw Hill.
2. Ernest O Doebelin.1995. *Measurement Systems - Application and Design*. McGraw Hill.
3. Holman P 1996. *Experimental Methods for Engineers*. McGraw Hill.

o Vibration recording, analysis by using DEWESOFT and accelerometers at different locations in tractors

o Measurement of tractor engine speed using laser Tachometer

17AG013 PRODUCTION TECHNOLOGY FOR MACHINERY COMPONENTS

Hours Per Week :

L	T	P	C
4	-	3	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-	-	-	-

Course Description & Objective:

To equip with awareness on the methodology related to production aided manufacturing and its technology.

Course outcomes:

1. Promote, implement and maintain procedures that support safety, health, the environment, quality and risk management.
2. Prepare for and set-up production machines in an automotive or related environment.
3. Troubleshoot machine functioning in an automotive components environment. Discuss the importance of changing and setting tooling for production machines

SKILLS:

Knowledge on various production processes

Manufacturing of simple machine components

.

UNIT I

Elasticity-forms - Stress and strain relationship in engineering materials - Deformation mechanism -Strengthening material - Strain hardening, alloying, polyphase mixture, martensitic precipitation, dispersion, fibre and texture strengthening - iron carbon diagram.

UNIT II

Powder metallurgy process, process variables, Manufacture of friction lining materials for clutches and brakes – plastics-raw material –automobile components – molding – injection, compression and blow – PU foam molding - Machining of plastics. Forging materials - process flow chart, forging of valves, connecting rod, crank shaft, cam shaft, propeller shaft, transmission gear blanks, steering column.

UNIT III

Extrusions: Basic process steps, extrusion of transmission shaft, housing spindle, steering worm blanks, piston pin and valve tappets. Hydro forming - Process, hydro forming of manifold and comparison with conventional methods- Hydro forming of tail lamp housing – forming of wheel disc and rims. Stretch forming - Process, stretch forming of auto body panels –Super plastic alloys for auto body panels.

UNIT IV

Sand casting of cylinder block and liners - Centrifugal casting of flywheel, piston rings, bearing bushes, and liners, permanent mould casting of piston, pressure die casting of carburetor other small auto parts. Machining of connecting rods - crank shafts - cam shafts - pistons - piston pins - piston rings - valves - front and rear axle housings - fly wheel - Honing of cylinder bores - Copy turning and profile grinding machines.

UNIT V

Powder injection molding - Production of aluminum MMC liners for engine blocks - Plasma spray coated engine blocks and valves - Recent developments in auto body panel forming – Squeeze Casting of pistons - aluminum composite brake rotors. Sinter diffusion bonded idler sprocket – gas injection molding of window channel – cast con process for auto parts.

Practicals:

1. Moulding
2. Forging
3. Heat treatment
4. Extrusion
5. Testing of hardness of metals
6. Grinding
7. Casting
8. Drilling
9. Turning
10. CNC machining

Text books:

1. Kalpakjian, “Manufacturing Engineering and Technology”, 4th ed., Pearson ducation, 2005.

2. P.C. Sarma, “Production Technology”, 3rd ed., S. Chand, 2009.

Reference books:

3. M.P. Groover, “Automation, Production Systems and Computer Integrated Manufacturing”, 3rd ed., PHI Publications, 2008.

4. Kodgire UD, “Material Science & Matellurgy”, 12thed., Eve rest Publishing House.

5. William D. Callister, “ Materials Science and Engineering an Introduction”, Eigth edition - John Wiley & Sons, Inc.
2005.

2. P.C. Sarma, “Production Technology”, 3rd ed., S. Chand, 2009.

ACTIVITIES:

- *Manufacturing of connecting rods.*
- *Production of different types of nuts, bolts and studs*

17AG015 AGRO-ENERGY AUDIT MANAGMENT

Hours Per Week :

L	T	P	C
3	1	0	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-	-	-	-

Course Description & Objective:

To equip with the applications of land grading machinery, their design, operation and maintenance.To understand the different types of earth moving systems and their applications.

Course outcomes:

On completion of this course, the student would be able to:

1. clarify basic concepts associated with earth-moving machinery
2. understand the properties of soil and ground in earth-moving
3. recognize the basic tools used in the mechanization of leveling of land for what purpose these tools, learning how to use and where to use

SKILLS:

Study various off-road vehicles specifications

Study of various land levelers.

.

UNIT I

Engineering fundamentals related to earth moving machinery, swell, shrinkage and compaction measurements, use of tractors and crawlers and effect of altitude and temperature on their performance.

UNIT II

Grading of sloppy lands. Principles of mechanisms used in crawler mounted tractors. Dump trucks and their mechanisms. Load hoisting equipment.

UNIT III

Land cleaning and reclamation equipment, power shovels, drag lines and cam shells, rubber tyre for earth moving machinery.

UNIT IV

Earth diggers and ditchers. Bull dozers and scrapers. Elevating and self powered graders.Trenching machineries and wagons.

UNIT V

Automation of earth moving and grading machines.Boring machines.Different methods of boring.Economic analysis of land development machinery.

Text books:

1. Dutta S K. 1987. Soil conservation and land management, International Distributors, Dehradun.

2. Sigma and Jagmohan. 1976. Earth moving machinery, Oxford and IBH

Reference books:

3. Wood and Stuart. 1977. Earth moving machinery, Prentice Hall.

4. Nicolas H L, Day D H. 1998. Moving the earth, The work book of excavation, McGraw Hill

ACTIVITIES:

- Earth Moving by using Dozers
- PERT and CPM analysis of real time vehicles used in land grading in University.

17AG019 OPTIMIZATION TECHNIQUES

Hours Per Week :

L	T	P	C
3	1	0	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-	-	-	-

Course Description & Objective:

To familiarize the students with the modeling of mechanical engineering systems and obtaining the optimum solution.

Course outcomes:

Upon completion of the subject, students will be able to

1. analyze real-life problems, especially, logistics problems, through the use of mathematical modeling techniques;
2. gain familiarity with various modeling techniques to build mathematical models for real problems;
3. employ some optimization methods and techniques and apply them to some practical problems.

SKILLS:

Application of optimization techniques for agricultural produce

.

UNIT - I

Introduction& Linear Programming Problems- Introduction: Engineering applications of optimization, statement of an optimization problem, classification of optimization problems. Linear programming: Simplex method, Applications of linear programming, Two-phases of simplex method, Big-M method.

UNIT - II

Transportation & Assignment Problems: Allocation problems: Formulation - Optimal solution, unbalanced transportation problems. Assignment problem – Formulation – Optimal solution – Variations i.e., non (m x n) Matrix.

UNIT - III

Classical optimization techniques: Single variable optimization with and without constraints, multivariable optimization without constraints, multi – variable optimization with constraints – solution, by method of constrained variation method of Lagrange multipliers, Kuhn – Tucker conditions.Non linear programming unconstrained optimization techniques: (Numerical methods foroptimization)Direct search methods – Random search methods; Univariate method Pattern Directions, Hookeand Jeeves' method, Powell's method, Nelder Mead's Simplex search method.

UNIT - IV

Non Linear programming unconstrained optimization techniques:Indirect search methods: Gradient of a function, Steepest descent method, Newton's method.Davidon-Fletcher – Powell method, types of penalty methods for handling constraints.

UNIT - V

Non – traditional optimization algorithms: Genetic algorithms (GA) – working principle,reproduction, crossover, mutation, advanced GA operators. GA for constrained optimization, multimodalfunction optimization.Simulated annealing, working principle, Metropolis algorithm, differences and similarities betweenconventional and non-conventional algorithms, introduction to Neural networks and fuzzy logic as anoptimization tool.

Text books:

1. S.S.Rao, "Engineering Optimization", 3rd Edition, New Age Publishers, 2008.
2. Kalyanmoy Deb, "Optimization for Engineering Design", 1st Edition, PHI Publishers, 2009.

Reference books:

1. JasbirArora, "Optimal Design", McGraw Hill (International) Publishers.
2. D.E.Goldberg, "Genetic algorithms in Search, Optimization and Machine Learning", 1st Edition, John Wiley Publishers, 2009.
3. Kalyanmoy Deb, "Multi Objective Optimization Using Evolutionary Algorithms", 1st Edition, PHI Publications

ACTIVITIES:

- Analysis of chilly production using optimization techniques

17AG010 INTRODUCTION TO INTELLECTUAL PROPERTY LAW

Hours Per Week :

L	T	P	C
3	0	0	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To equip with the fundamentals of intellectual property rights, its significance and applications.

Course outcomes:

At the end of the course, the participants should be able to:

1. define in a very clear manner the role of intellectual property in the modern economy;
2. discuss the fundamentals of copyright protection and the laws pertaining thereto;
3. examine the fundamentals of patent law in the international community; and
4. explain the trademark law, what can be trademarked, and the various treaties and conventions which cover the law in the international realm.

SKILLS:

- ✓ Use renewable energy sources for desing of farm equipment
- ✓ Use biomass energy for engine power.

UNIT I

Place of Intellectual Property in other Forms and Kinds of Property and Respective Characteristics

UNIT II

Development of Right Jurisprudence and Significance of Proprietary Rights, Need for Development and Protection of Intellectual Property,

UNIT III

Types of Intellectual Property: Patent, Copyright, Design, Trademark, Farmer and Breeders Right on Plant Breeding, Integrated Circuit, Trade Secret,

UNIT IV

Geographical Indication, Nature, Term and Conditionality in Each Right, process of applying for a patent

UNIT V

Laws Dealing with the Rights, Expiration of the Right.Requirements and limitations of patentability

Suggested Readings:

1. Merges, Menell&Lemley, Intellectual Property in the New Technological Age (5th edition, Aspen 2010) (IPNTA)

Reference books:

1. Merges, Menell&Lemley, Intellectual Property in the New Technological Age: 2011 Case and Note Supplement (Aspen 2011)

2. Bagley, and Dauchy. Chapter 14 in *The Entrepreneur's Guide to Business Law*. Cengage Learning, 2011, pp. 558–69. ISBN: 9780538466462.

17AG012 SIMULATION MODELING IN FARM MACHINERY AND POWER ENGINEERING

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To acquaint and equip with the mathematical modeling of farm machinery, development of models using various techniques.

Course outcomes:

1. Student will be acquainted with the concepts of modelling and simulation from an interdisciplinary point of view.
2. Student will be able to implement and simulate models using MATLAB®.
3. Depending on the selected applications in the selectable chapters section student will acquire further knowledge of Image Processing, Optical Character Recognition, Machine Learning, Business Case Modelling and Knowledge Management.
4. If you are an enthusiastic student with only rudimentary programming knowledge Student can acquire an understanding of basic MATLAB programming.

SKILLS:

- ✓ Knowledge on designing of agriculture implements by using softwares like CREO.
- ✓ Knowledge on real time simulation of agriculture implements by using softwares like ANSYS.

ACTIVITIES:

- Modeling and simulation of cultivator with any one soil conditions.

UNIT I

System performance and modelling methodologies – transformation ofunits of measurement – dimensional homogeneity. Buckingham's PiTheorem. Simulation for system modelling, Formulations of simulation model, validation and testing of the simulation model.

UNIT II

Experimentation with physical models and their application in farm machinery design. Sensitivity of models, scale effects, scale factors. Use of models. Complete similarity, kinematics and dynamic similarity.

UNIT III

Modellaws, empirical methods in model engineering. Principle of similarity in mathematical investigations.Mathematical modelling and its limitations,etc.

UNIT IV

Mathematical modelling through ordinary differential equation of firstorder, second order, partial differential equations.Similarity conditions andbstract parameters determining characteristics of engines.

UNIT V

Similitude intillage tool studies, prediction models for traction devices.Analysis ofmodellingbehaviour in problems related to tillage, traction andearthmoving equipment.

Practical:

Simulation and modeling of

1. cultivator
2. rotavator
3. MB plough
4. disc plough
5. disc harrow
6. reaper
7. thresher
8. chaff cutter
9. sugarcane planter
10. transplanter

Text books:

1. Langhaar HL.1954. *Dimensional Analysis and Similitude*. McGraw Hill.

Reference books:

1. Sedov LI. 1991. *Similarity and Dimensional Methods in Mechanics*. Mir Publ., Moscow.

17AG014 ADVANCES IN HYDRAULICS AND ELECTRO PNEUMATIC CONTROLS

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To acquaint and equip with the latest developments in the field of hydraulics and pneumatics with special reference to the usage of these on the modern d ay tractors.

Course outcomes:

Upon completion of this chapter, the student should be able to:
1. explain the meaning of fluid power.
2. list the various applications of fluid power.
3. differentiate between fluid power and transport systems.
4. list the advantages and disadvantages of fluid power.
5. explain the industrial applications of fluid power.
6. list the basic components of the fluid power.
7. list the basic components of the pneumatic systems.
8. differentiate between electrical, pneumatic and fluid power systems.
9. appreciate the future of fluid power in india.

SKILLS:

Knowledge on different logic circuits using hydraulics and electro pneumatics components.

Design of circuits for various applications(Sequencing,timing,safety etc)

UNIT I

Fluid power, its advantages, properties of hydraulic fluids, viscosity, bulkmodulus, density. Concepts of energy of hydraulic systems, laws of fluidflow.

UNIT II

Distribution system, pressure rating of tubing and hoses, couplings.Basicsof hydraulic flow and hydraulic circuit analysis – pumps, types and theoryof operation.Pressure intensifiers.

UNIT III

Fluid power actuators, hydraulic rams,gear motors, piston motors and their performance characteristics, electrohydraulic motors and hydrostatic transmissions, control components.

UNIT IV

Directional pressure safety and servo valves. Hydraulic circuit design.Regenerative pump unloading, pressure intensifier circuits. Speed controlof hydraulic motors, mechanical hydraulic servo systems for tractors.

UNIT V

Pneumatic circuits – properties of air. Compressors, control elements.Design of pneumatic circuits.Electrical control for fluid power circuits.Electronic sensors/ circuits used as controls in modern farm equipment.Maintenance of hydraulic and pneumatic circuits and devices.Troubleshooting.

Practical:

1. Study of properties of hydraulic fluids.
2. Design problems on hydraulic pumps.
3. Design problems on hydraulic pumps.
4. Design problems on hydraulic motors.
5. Design problems on hydraulic motors.
6. Design problems on hydraulic cylinders.
7. Study of hydraulic circuits.
8. Design of hydrostatic transmission.
9. Study of hydraulic valves.
10. Design of pneumatic circuits.

Text books:

1. Anthony Esposito. 2003. *Fluid Power with Applications*. PearsonsEdu.
2. Krutz G.1984. *Design of Agricultural Machines*. John Wiley & Sons.

Reference books:

1. Merritt HE. 1991. *Hydraulic Control System*. John Wiley a& Sons.
2. Majumdar SR. 2003. *Oil Hydraulic System*. Tata McGraw Hill.

ACTIVITIES:

- o *Simulation of logic circuits and troubleshooting.*
- o *Seeding application using pneumatics.*

17AG016 ADVANCED INTERNAL COMBUSTION ENGINES

Hours Per Week :

L	T	P	C
3	0	3	5

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

This course studies the fundamentals of how the design and operation of internal combustion engines affect their performance, operation, fuel requirements, and environmental impact.

Course outcomes:

Upon completing the course the student should be able to:

1. describe and explain different types of reciprocating internal combustion engines (ICE), their typical design features and performance characteristics.
2. describe and analyse the power cycle of internal combustion engines using ideal gas cycles, air cycles, and fuel-air cycles. Compute indicated power and thermal efficiency.
3. describe and explain the gas exchange process and power boosting by means of turbo charging.describe and explain engine heat transfer and its relation to thermal loading of engine components and cooling.
4. compute rate of heat release based on measured dynamic cylinder pressure.
5. explain the characteristic of homogeneous combustion in SI-engines and spray combustion in CI-engines.
6. fuel quality requirements of SI- and CI-engines.
7. describe the main components of exhaust emissions and explain the mechanisms of emission formation.

SKILLS:

Knowledge on various engines,fuels,power developed

Knowledge on engine advancements like CRDI,MPFI,HCCI etc

UNIT I

Introduction Engine classification, Engine Design and Operating Parameters Engine geometry Brake Performance, Indicated Performance, Friction Relationships among performance parameters

UNIT II

Ideal Properties Models of Engine Processes and Cycles Constant volume (Otto) Constant pressure (Diesel) Limited pressure (Dual) Comparisons of ideal cycle results Ideal intake/ exhaust processes Open Cycle calculation with residual. Combustion Thermodynamics Air and Fuels Combustion Stoichiometry First law analysis of open reacting systems Combustion efficiency

UNIT III

Thermodynamic Properties of Engine Working Fluids Working fluids for engine processes Ideal gas mixtures Tables for species properties Curve fits for species properties Computer routines for properties and composition, Fuel/Air Cycle Analysis Fuel/air cycle computer simulation Fuel/air cycle results: efficiency and performance Comparison with actual cycles Deviation from Ideal Cycle Behavior

UNIT IV Spark-Ignition Engine Combustion Features of process Flame structure and propagation Factors affecting burning rate Abnormal combustion and knock Combustion chamber design 8. Diesel Engine Combustion Features of diesel combustion process Ignition delay Knock in diesel engines, SI and Diesel Engine Emissions

U**NIT V**

IC Engines: The Future Engine development prospects Stratified charge, direct injection systems Homogeneous charge, compression ignition Low temperature diesel combustion Advanced electronic-controlled engines Hybrids and fuel cells.

Practical:

1. Study of construction and working of two-stroke and four-stroke petrol engine.
2. Study of construction and working of two-stroke and four-stroke diesel engine.
3. Disassembly and assembly of engines.
4. Measurement of brake horse power of engine.
5. Analysis of exhaust gases of engine.

Text books:

1. V Ganesan. Internal Combustion Engines.
2. Maleev VL. 1945. *Internal Combustion Engines*. McGraw Hill.

Reference books:

1. Mathur ML & Sharma RP. 1988. *A Course in Internal Combustion Engines*. DhanpatRai& Sons.
2. John B Heywood, Internal Combustion Engine Fundamentals
3. Charles Fayette Taylor. The Internal Combustion Engine in Theory and Practice: Vol. 1 & 2

ACTIVITIES:

o *Measurement of engine efficiency by different fuels in different farm operations*

17AG018 ENERGY CONSERVATION AND MANAGEMENT IN FARM MACHINERY AND POWER ENGINEERING

Hours Per Week :

L	T	P	C
3	1	0	4

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:
To acquaint and equip with the energy use pattern in agriculture production systems, conservation of energy, energy planning and economics.

Course outcomes:
1. Determine what farm practices use the most energy for producing a crop.
2. Describe farm equipment options for reducing energy use.
3. Describe management options for reducing energy use

SKILLS:

Knowledge on various engines,fuels,power developed

Knowledge on engine advancements like CRDI,MPFI,HCCI etc

UNIT I

Energy requirement of different operations in agricultural production systems viz. crop, livestock and aquaculture.

UNIT II

Energy conservation through proper management and maintenance of farm machinery

UNIT III

Planning and management of agricultural production systems for energy conservation and energy returns assessment.

UNIT IV

Development of computer program for efficient energy management in agiven agricultural production system.

UNIT V

Energy use planning and forecastingfor a given system.

Text books:

1. Mittal JP, Panesar BS, Singh S, Singh CP &Mannan KD. 1987. *Energy in Production Agriculture and Food Processing*. ISAE and School of Energy Studies, Ludhiana. ISAE Publ.

Reference books:

1. Pimental D. 1980. *Handbook of Energy Utilization in Agriculture*. CRC Press.

ACTIVITIES:

- *Energy forecasting and budgeting for paddy crop and chilly crop.*

17ME020 MECHANICAL VIBRATIONS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To enlighten the concepts of natural frequencies and resonance of mechanical systems.

Course outcomes:

1. Appreciating the need and importance of vibration analysis in mechanical design of machine parts that operate in vibratory conditions

2. Ability to analyze the mathematical model of a linear vibratory system to determine its response

3. Ability to obtain linear mathematical models of real life engineering systems

4. Ability to use Lagrange's equations for linear and nonlinear vibratory systems

5. Ability to determine vibratory responses of SDOF and MDOF systems to harmonic, periodic and non-periodic excitation

6. General notion on frequency and time response of vibratory systems

SKILLS:

Study of various sensors

Recording and analysis of vibration

UNIT-1

Introduction:Harmonic and periodic motions, vibration terminology, Vibration model,Single-DOF Free Vibrations: Equation of motion-Natural Frequency,Energy method, Rayleighmethod, damping models.Viscously damped free vibrationSpecial cases: oscillatory, non-oscillatory and critically damped motions.Logarithmic decrement, Experimental determination of damping coefficient.Forced harmonic vibration, Magnification factor.Rotor unbalance, Transmissibility, Vibration Isolation, Equivalent viscous damping, Sharpness of resonance.

UNIT-2

Two-DOF Free Vibrations: Generalized and Principal coordinates, derivation of equations of motion, Lagrange's equation, Coordinate coupling, Forced Harmonic vibration, Vibration Absorber:Tuned absorber, determination of mass ratio.Tuned and damped absorber.

UNIT-3

Multi-DOF: Derivation of equations of motion, influence coefficient method, Properties of vibrating systems: flexibility and stiffness matrices, reciprocity theorem, Modal analysis: undamped, Modal analysis: dampedCalculation of natural frequencies: Rayleigh method, Stodala method, Matrix iteration method, Holzer method and Dunkerley's methodTorsional vibration: Simple systems with one or two rotor masses, Multi-DOF systems-transfer matrix method, Geared system

UNIT-4

Continuous systems: closed form solutions, Vibration of strings, Longitudinal and torsional vibration of rods, Transverse vibration of beams: equations of motion and boundary conditions, Transverse vibration of beams: natural frequencies and mode shapesContinuous systems: Approximate solutions, Rayleigh's energy method, Rayleigh-Ritz method, Assumed modes and Galerkin's method

UNIT-5

Signature analysis and preventive maintenance: Vibration testing equipment's: signal generation, measuring and conditioning instruments, Vibration testing equipment's: signal analysis instruments

Practical:

1. Verification of relation of simple pendulum.
2. Determination of radius of gyration of given compound pendulum.
3. Study of torsional vibrations of single rotor system.
4. Study of damped torsional oscillation & determination of damping coefficient.
5. Study of longitudinal vibration of helical spring and determination of frequency and time period of oscillation.
6. Study of undamped free vibration or equivalent spring mass system.
7. Study of forced damped vibration of equivalent spring mass system.
8. Study of forced vibration of the bean for different damping.

Text books:

1. Meirovitch, "Fundamentals of Vibration Analysis", 3rdEdition, McGraw Hill, 2001.
2. G.K. Groover, "Mechanical Vibrations", 8thEdition, S Chand and Brothers, 1996.

Reference books:

1. S. Graham Kelly, "Theory and Problems of Mechanical Vibrations", 8th Edition,
2. W.T. Thomson, "Theory of vibration with applications", 5thEdition, Prentice Hall, 1997.
3. Singiresu S. **Rao, "**Vibration of Continuous Systems, John Wiley & Sons, 2007

ACTIVITIES:

- Vibration recording, analysis by using DEWESOFT at different locations in tractors

17AG017 LAND GRADING AND EARTH MOVING MACHINERY

Hours Per Week :

L	T	P	C
2	1	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description & Objective:

To equip with the applications of land grading machinery, their design, operation and maintenance.To understand the different types of earth moving systems and their applications.

Course outcomes:

On completion of this course, the student would be able to:

1. clarify basic concepts associated with earth-moving machinery
2. understand the properties of soil and ground in earth-moving
3. recognize the basic tools used in the mechanization of leveling of land for what purpose these tools, learning how to use and where to use

SKILLS:

Study various off-road vehicles specifications.
Study of various land levelers.

UNIT I

Engineering fundamentals related to earth moving machinery, swell, shrinkage and compaction measurements, use of tractors and crawlers and effect of altitude and temperature on their performance.

UNIT II

Grading of sloppy lands. Principles of mechanisms used in crawler mounted tractors. Dump trucks and their mechanisms. Load hoisting equipment.

UNIT III

Land cleaning and reclamation equipment, power shovels, drag lines and cam shells, rubber tyre for earth moving machinery.

UNIT IV

Earth diggers and ditchers. Bull dozers and scrapers. Elevating and self powered graders.Trenching machineries and wagons.

UNIT V

Automation of earth moving and grading machines.Boring machines.Different methods of boring.Economic analysis of land development machinery.

ACTIVITIES:

- o Earth Moving by using Dozers
- o PERT and CPM analysis of real time vehicles used in land grading in University.

Text books:

1. Dutta S K. 1987. Soil conservation and land management, International Distributors, Dehradun.
2. Sigma and Jagmohan. 1976. Earth moving machinery, Oxford and IBH

Reference books:

3. Wood and Stuart. 1977. Earth moving machinery, Prentice Hall.
4. Nicolas H L, Day D H. 1998. Moving the earth, The work book of excavation, McGraw Hill

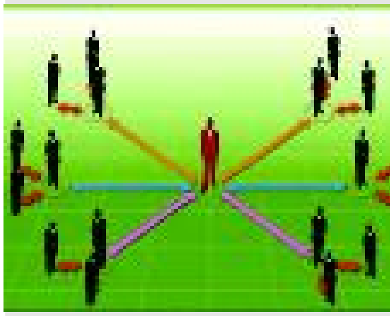
17MB101 PRINCIPLES OF MANAGEMENT AND ORGANIZATIONAL BEHAVIOUR



Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective:

- To gain basic understanding of principles of management including planning, organizing, directing and controlling
- To gain basic understanding of concepts for managing people including motivating, leading
- To improve ability to examine managerial issues and problems and to develop feasible alternatives that can result in better decision making
- To develop an awareness of multiple approaches that can be used to resolve managerial problems
- To give basic perspectives of theories underlying organizational behavior. This will form foundation for further study of functional areas of management and give a conceptual framework for understanding of individual behavior in Organization.

Course Outcomes:

On completion of this course, learners will be able to:

- Ananlise the functions of management of your educational organisation
- Draw the organisational structure of any software company
- Identify the power source of any manufactureing company
- visit any public sector unit and observe conflict resolution system of it.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *Different types of Organization Charts (structure).*
- ✓ *Chart of Staffing.*
- ✓ *Graphic representation of Maslow's Theory.*
- ✓ *Chart on Media of Communication.*
- ✓ *Draft Control chart of different industry/business groups.*
- ✓ *Prepare list of corporate strategies that are adopted by Indian Companies to face the challenges of competition.*
- ✓ *Select a successful retail store and give details of factor leading to its success.*
- ✓ *Select a failed venture, if any known to you, and bring out reasons for its failure (Note what we learn from these success & failure stories).*
- ✓ *Select a company and prepare a SWOT analysis for the same.*
- ✓ *Mention the characteristics and skills of managers in the 21st century.*

Unit-1 **10 Hrs**

Managers and management: Meaning of management, roles of managers, skills of managers, process of management, functions of management, evolution of management

Unit-2 **10 Hrs**

Planning and decision making: Meaning of planning, planning process, types of plans, management by objectives, decision making, decision making process, decision making tools – individual Vs group decision making, organizational design and structures.

Unit-3 **10 Hrs**

Directing: Motivation, theories of motivation, leadership, approaches to leadership, controlling, process of controlling, techniques of controlling.

Unit-4 **10 Hrs**

Introduction to Organizational behavior: Organizational behavior, nature and levels of organizational behavior, individuals in organization, individual differences.

Personality: Personality and determinants of personality, the big 5 model of personality, organizationally relevant personality traits.

Perception: The nature of perception, characteristics of the perceiver, target and situation, perceptual problems.

Unit-5 **10 Hrs**

Group dynamics: group dynamics, types of groups, formation of groups, teams and creating effective work teams. **Power & politics, managing conflicts and group dynamics:** power, identifying sources of power in an organization, politics and personality development for encountering politics.

Conflicts: Understanding conflicts, types of conflicts, Pondy's model of organizational conflict, conflict resolution strategies, allowing functional conflict for organizational effectiveness.

Text books:

17MB103 BUSINESS ECONOMICS

Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective:

This course provides students with the knowledge, tools and techniques to make effective economic decisions under conditions of risk and uncertainty. Demand, cost and pricing decisions are emphasized. Topics include decision-making criteria and procedures, demand and cost theory and estimation, pricing theory and practice (including price positioning), pricing new products and competitive bids and price quotes.

Course Outcomes:

On completion of this course, learners will be able to:

- Apply the economic way of thinking to individual decisions and business decisions.
- Understand how prices get determined in markets, how market participants benefit in the form of consumer surplus and producer surplus, and what are the consequences of government intervention.
- Understand the different costs of production and how they affect short and long run decision.
- Derive the equilibrium conditions for cost minimization and profit maximization.
- Understand economies of scale, diseconomies of scale, economies of scope, and cost complementarities, and how each affects the cost of production.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *To conduct a survey on the practical application of laws of economics.*
- ✓ *To collect data on sales of consumer durable goods and predict the sales for a later year.*
- ✓ *To find different case studies relating to different market conditions and to do an analysis.*
- ✓ *To find out low demand differentiates between normal and inferior goods.*
- ✓ *To analyze the role of a business economist in the everyday functioning of an organization taking live examples.*

UNIT - 1 10HRS

Introduction to Managerial Economics: Definition, Nature and Scope, Relationship with other areas in Economics, Significance of Managerial Economics in functional areas of business. The role of managerial economist. Basic economic principles.

UNIT - 2 10HRS

Theories of firm and Demand & Supply Analysis: Managerial theories of firm, Behavioral theories of firm, Elasticity of demand, types and significance of Elasticity of Demand. Measurement of price Elasticity of Demand, Law of Supply, Elasticity of Supply. Need for Demand forecasting, Types of forecasting techniques.

UNIT - 3 **10HRS**

Production Analysis: Production function, Marginal Rate of Technical Substitution, Production function with one/two variables, Isoquants and Isocosts, Cobb-Douglas Production Function, Returns to Scale and returns to factors.

UNIT - 4 **10HRS**

Cost theory and estimation: Cost concepts, determinants of cost, Cost – output relationship in the short run and long run, Average cost curves, Economies of scale. Cost-volume-profit analysis.

UNIT - 5 10HRS

Pricing and Profit Management: Features and Types of different competitive situations, Price-Output determination in Perfect competition and Monopolistic competition both in the long run and short run. Pricing methods in practice. Profit Management- Nature, scope and theories of profit.

TEXT BOOK:

1. Maheshwari K. L. , Varshney R.L. , Managerial Economics, 22nd Revised Edition 2014, Sultan Chand & Sons.

REFERENCE BOOKS:

1. Dominick Salvatore, Managerial Economics in a global economy, Indian Edition; Fourth Edition, 6/e, 2008, McGrawHill.
2. Craig H Peterson, W.Cris Lewis, Sudhir.k.Jain; Managerial Economics, 4/e, 2005, Pearson Publications.
3. P.L.Mehta; Managerial Economics, 1/e, 2016, Sultan Chand Sons.

17MB105 ACCOUNTING FOR MANAGERS

Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective

The objective of the course is to provide an understanding of practical aspects of accounting, managing assets, financial analysis, cost behavior and improve decision making skills.

Course Outcomes:

On completion of this course, learners will be able to:

- Demonstrate knowledge of the business accounting cycle for the corporate form of business.
- Understand the framework for preparation and presentation of financial statements.
- Develop decision making skills in the application of Revenue and monetary Assets.
- Acquire practical knowledge on application of cash flows and Ratio Analysis. Prepare and interpret cost behavior in organization.
- Demonstrate knowledge on cost sheet preparation.

SKILLS:

(*These activities are only indicative, the Faculty member can innovate*)

- ✓ Contact an NGO and find out their system of accounting.
- ✓ Collect information with regard to the practical reasons for charging
- ✓ Depreciation and the methods adopted for calculating the same.
- ✓ Generate different types of financial and cost related reports using excel and tally.
- ✓ Find out the accounting system adopted by a Sole Proprietor
- ✓ Differences between Double Entry and Single Entry systems of Book-keeping.
- ✓ Analyse the differences between Profit & Loss Account and Income & Expenditure Account/ Receipts & Payments Account.

UNIT - I **10HRS**

Basic Accounting Concepts: The nature and purpose of Accounting, Basic Accounting concepts: The Balance sheet, Basic Accounting concepts: Income statement.

UNIT - II **10HRS**

Revenue and Long lived Assets: Revenue and Monetary Assets and their Analysis. Long –lived nonmonetary assets and their amortization.

UNIT - III **10HRS**

Financial statement Analysis: Understanding the Financial Statement and their Analysis: overall Measures- profitability Ratios- Investment Utilization Ratios-Financial Condition Ratios-Dividend Policy-Growth measures-Making Comparisons.

UNIT - IV **10HRS**

The Behavior of costs: Relation of costs to Volume-Profit. Additional Aspects of product Costing Systems: Job Order Costing and process Costing Systems-Measurement of Direct Costs-Allocation of Indirect Costs.

UNIT - V **10HRS**

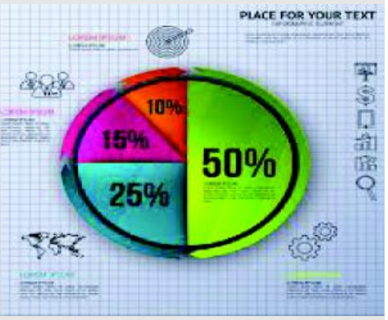
Cost Accounting - Elements of Cost - Types of Costs - Preparation of Cost Sheet.

TEXTBOOK:

1. Accounting Text and Cases by Robert Anthony, David Hawkins and Kenneth Merchant (13th Edition), The McGraw-Hill Companies , 2013.

REFERENCE BOOKS:

1. Financial Accounting by Needles & Powers (11th Edition), South Western Cengage Learning, 2012.
2. Financial Accounting by Gary Porter & Curtis Norton (6th Edition), Cengage Learning, 2007.
3. Managerial Accounting by Garrison, Noreen & Brewer (11th Edition), Tata Mcgraw Hill.
4. Introduction of Management Accounting by Horngreen, Sundem, Stratton, Burgstahler and Schatzberg (14th Edition), Pearson, 2012.
5. Indian Accounting Standards (Ind AS) & IFRSs for Finance Executives by T.P Ghosh (2nd Edition), Taxmann Publications Pvt Ltd., 2013.
6. IFRS – A Briefing for Chief Executives, Audit Committees and Board of Directors issued by IASB, 2012.
7. Red Book on International Financial Reporting Standards issued by IASB, 2014.



17MB107 BUSINESS STATISTICS

Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective:

The objective of this course is to provide the basic knowledge of the various statistical techniques useful to managers in their decision-making. Students will learn statistical tools like measures of central tendency, dispersion, Regression and Correlation analysis, sample tests and Hypothesis testing.

Course Outcomes:

The focus is on the use of statistical techniques to describe the data, thereby enabling the student to

- Define statistics, become aware of wide range of applications in statistics, types of data, tabulation of data, construct a histogram, frequency polygon, an give, pie chart,
- Apply various measures of central tendency –mean, median, mode, GM and H.M for grouped and ungrouped data. Apply various measures of variability-range, MD, QD, standard deviation, and to know percentiles, Deciles.
- Understanding the concepts of various measures of dispersion and its applications in business decisions.
- Understand the concepts of probability and its uses for making decisions in business.
- Understand the concepts of discrete and continuous probability distribution.

Skills:

(These activities are only indicative; the Faculty member can innovate)

- ✓ *Collect statistical information's from Magazines, Newspapers, Television, Internet etc.,*
- ✓ *Collect interesting statistical facts from various sources and paste it in your note book.*
- ✓ *Collect a primary data about the mode of transport of yourschool students. Classify the data and tabulate it.*
- ✓ *From the mark sheets of your class, form the frequencytables, less than and more than cumulative frequency tables.*
- ✓ *Get the previous monthly expenditure of your family andinterpret it into bar diagram and pie diagram. Based on thedata, propose a budget for the next month and interpretedinto bar and pie diagram.Compare the two months expenditure through diagrams*
- ✓ *Measure the heights and weights of your class students.Find the mean, median, mode and compare*
- ✓ *Find the mean marks of your class students in various subjects. Analysis of data by computing standard deviation and coefficient of variation.*
- ✓ *Collect the data from magazines, newspapers, and television, and publications. Present the data in graphs and diagrams.*

UNIT - I **10HRS**

Statistics, Data classification, tabulation and presentation: Meaning of statistics, growth and development of statistics, importance and scope of statistics, Limitations of statistics, Reasons for learning data, Classification of data, organizing data using data array, tabulation of data, graphical presentation of data, types of diagrams, exploratory data analysis.

UNIT - II **10HRS**

Measures of central tendency: Introduction, measures of central tendency, mathematical averages: Simple mean, weighted mean, Geometric mean, harmonic mean, averages of position: median, mode, quartiles, deciles, percentiles, deciles.

UNIT - III **10HRS**

Measures of Dispersion: Introduction, classification of measures of dispersion, distance measures: range, interquartile range, average deviation measures: mean absolute deviation, variance and standard deviation, coefficient of variation.

UNIT-IV **10HRS**

Discrete and continuous probability distributions: Introduction, difference between discrete and continuous random distributions, Discrete probability distributions: Binomial distribution, Poisson distribution: Continuous distribution: Normal distribution.

UNIT-V **10HRS**

Statistical decision theory: Introduction, elements of decision analysis, Decision making under uncertainty: Laplace criterion, Maximin and Minimax criterion, Maximax and Minmin criterion, Hurwicz criterion, regret criterion, Decision making under risk: EMV, EOL, and EVPI.

Text Book:

1. Business Statistics, Naval Bajpai, Pearson.

Reference books:

1. Statistics for management, Richard I. Kevin, Davis S. Rubin, Sanjay Rastogi, Masood Husain Siddiqui, Pearson, 7th edition.
2. J. K. Sharma, Business statistics problems and solutions, Pearson.
3. J. K. Sharma, Business statistics, Vikas, 4th edition.

17MB109 BUSINESS LAWS

Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective:

This course is designed to provide the student with knowledge of the legal environment in which a consumer and businesses operates, and to provide the student with knowledge of legal principles.

Course Outcomes:

On completion of this course, learners will be able to:

- Identify the fundamental legal principles behind contractual agreements.
- Examine how businesses can be held liable in tort for the actions of their employees.
- Understand the legal and fiscal structure of different forms of business organizations and their responsibilities as an employer.
- Acquire problem solving techniques and to be able to present coherent, concise legal argument.

Skills:

(*These activities are only indicative, the Faculty member can innovate*)

- ✓ Draft a ‘rent agreement’ incorporating all the essential features of a valid agreement.
- ✓ Draft the Memorandum of Association of a company.
- ✓ Case laws ‘involving points of law of contracts’.
- ✓ Draft a complaint against ‘unfair trade practice’ adapted by a businessman – to the consumer forum.
- ✓ List out the latest cases of both High Court and Supreme Court on Environmental issues with both facts and judgments [Atleast 2 cases]

Note: Few case studies be discussed in the class.

UNIT - I **10HRS**

The Indian Contract Act, 1872: Establishing the contract, Offer and Acceptance, Consideration, Capacity to Contract, Free consent, Legality of Object, Performance and Discharge of Contract, Remedies for Breach of Contract

UNIT - II **10HRS**

The Sales of Goods Act, 1930: Meaning and Essentials; Conditions and Warranties; Transfer of Property; Rights of Unpaid Seller; Performance of Contract

The Indian Partnership Act, 1932: Meaning and Characteristics; Formation of Partnership; Rights and Duties of Partners; Dissolution of a Partnership Firm.

UNIT - III **10HRS**

The Negotiable Instruments Act, 1881: Meaning and Characteristics; Notes- Meaning and Essential elements; Bills- Meaning and Characteristics; Cheque- Meaning, Crossing, Dishonoring; Discharge of Negotiable Instruments

The Consumer Protection Act, 1986: Aims and objectives; Consumer Protection Council; Consumer Disputes Redressal Agencies.

UNIT - IV **10HRS**

The Companies Act, 1956: Nature and Kinds of Companies; Formation of Companies; Company Management – Appointment of Directors; Company Meetings; Winding Up of a company.

UNIT - V **10HRS**

The Information Technology Act, 2000: Digital and Electronic Signature; Electronic Governance; Attribution, Acknowledgement and dispatch Electronic record; Electronic Signature Certificates; Penalties, Compensation and Adjudication; The Cyber Appellate Tribunal; Offences.

TEXT BOOK:

1. Legal Aspects of Business 3rd Edition, Ravinder Kumar, Cengage Learning.
2. Elements of Mercantile Law by N.D. Kapoor, Sultan Chand & Sons.

REFERENCE BOOKS:

1. Business Law by N.D. Kapoor, Sultan Chand & Sons.
2. Legal Aspects of Business by Akhileshwar Pathak, Tata McGraw Hill.
3. Business Law by Tejpal Sheth, PEARSON.
4. Business Law by D. Chandra Bose, PHI Learning Private Limited.
5. Business Law (6th Edition) by MC Kuchhal & Vivek Kuchhal, Vikas.

17MB111 BUSINESS ENVIRONMENT & ETHICS

Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective:

To analyze the overall business environment and evaluate its various components in business decision making. And provides an analysis and examination of significant contemporary ethical issues and challenges existing throughout the professional business arena. Emphasis will be placed upon the manager's social and environmental responsibilities to a wide variety of stakeholders, including employees, customers and the public.

Course Outcomes:

On completion of this course, learners will be able to:

- Familiarize with the nature of business environment and its components.
- The students will be able to demonstrate and develop conceptual framework of business environment and generate interest in international business.
- Understand the definition of ethics and the importance and role of ethical behavior in the business world today.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *List out the various cyber offences and the penalties for the same.*
- ✓ *List at least 3 MNCs of G-8 Countries operating in India along with products they manufacture.*
- ✓ *Collect the latest Fiscal, Monetary Policies on business*
- ✓ *Students are expected to study any five CSR initiatives by Indian organizations and submit a report for the same.*
- ✓ *A group assignment on "The relationship between Business houses and Society in Indian Context and relating the same with respect to the models studied.*
- ✓ *Mini Project: Collect details of unethical practices by businesses in today's context in the areas of Production, Marketing, HRM, and Financial services and make a report.*
- ✓ *Case studies/Role plays related ethical issues in business with respect to Indian context.*

UNIT - I **10HRS**

The Concept of Business Environment: Meaning of business environment – Types of environment – Nature and scope of business – Business objectives and its characteristics – Environmental Analysis and Forecasting – Importance of business environment.

UNIT - II **10HRS**

Economic systems and their impact on business: Capital Market – Money Market – Investor Protection and role of SEBI –Stock Exchange and its regulation - Liberalization – Privatization – Globalization.

UNIT - III **10HRS**

Industrial Policies: A brief review of industrial policies since independence, Industrial policy of 1991 and recent developments – policy on foreign direct investment in Indian Industry – Privatization and disinvestment.

UNIT - IV **10HRS**

Business Ethics: Nature of ethics - Ethical Principles in Business - Relationship between ethics and business – Ethical organization – Characteristics of ethical organization- ethical corporate code – Ethical leadership.

UNIT - V **10HRS**

Ethics in HRM: Ethics in Marketing - Ethics in Finance - Ethics at workplace – Corporate Social Responsibility – Corporate Governance – KM Birla Committee Report on Corporate Governance - Consumer Protection Act – Small Investor Protection.

TEXT BOOKS:

1. Francis Cherunilam: Business Environment: Text and Cases, 17th Edition, Himalaya, 2011.
2. Manuel G. Velasquez, Business Ethics: Concepts and Cases, 8th Edition, PHI, New Delhi, 2012.

REFERENCE BOOKS:

1. Justin Paul: Business Environment, 1st Edition, Tata MH. 2010
2. Misra and Puri: Indian Economy, 3rd revised edition, Himalaya, 2015.
3. Dutt and Sundaram, Indian Economy, S. Chand, New Delhi, 12th edition, 2016.

17MB113 MANAGERIAL COMMUNICATIONS - I

Hours Per Week :

L	T	P	C
4	0	0	4

Course Objective:

This course is designed to enable students to understand the nature and scope of communication and its implications in the real time business world. Expose to the receptive and productive skills of English language to attain proficiency. Familiarize the basic writing skills which lay a strong foundation for writing business documents.

Course Outcomes:

On completion of this course, learners will be able to:

- Understand the scope of communication and learn its importance and implication strategies.
- Recognize and learn the sub-skills of listening and speaking and be able to deliver effectively in the real time contexts.
- Imbibe the mechanics of writing and construct effective paragraphs which befit in a longer composition.
- Use different forms of written communication techniques to make effective internal and external business correspondence.
- Produce different types of reports with appropriate format, organization and language.

Skills:

(These activities are only indicative, the Faculty member can innovate)

✓ *Findout the barriers of communication by playing story telling games*

✓ *Write a letter to your manager and subordinates*

✓ *write a letter to your supplier about raw material requirement*

✓ *Have a telephone converstion with your clients*

✓ *Write a circular to your department regarding holiday cancellation*

UNIT - I **10HRS**

Communication - Nature and Scope: Communication - Significance - Process - Types - Flow of Communication - Basic Communication Skills - LSRW - Verbal and Non-verbal Communication - Formal Vs Informal Communication - Oral and Written Communication – Barriers to effective communication - organizational communication - Strategic implications of modern communication.

UNIT - II **10HRS**

Aural and Oral Communication: Listening - Active and Passive Listening - Barriers to effective listening – Strategies for effective listening - Introduction to presentations - Conversations - Role play - JAM - Debate - Extempore - Individual and Group Presentations - Group Discussions - Procedure - participation - Interviews - Business presentations - Addressing large groups - Public Speaking.

UNIT - III **10HRS**

Written Communication: Sentence Structure – Requisites of a good sentence – Writing paragraphs – Principles of writing a good paragraph – Development of paragraphs – Describing people, places, things and processes – Narrating events, incidents – Persuasive communication – Longer composition – Common errors in writing.

UNIT - IV **10HRS**

Business Correspondence: Internal Communication – External Communication – Writing a memo – Letter Vs memo – Form and Structure – Circular – Notice – Agenda – Proceedings of meetings – Minutes – Business Letters – Sales Letters – Enquiry – Quotations – Placing orders – Claims – Adjustments – Inviting – Appreciating – Thanking etc. – Writing Emails – Standard Email practices – Email etiquette – Sample Emails.

Communication Media: Meaning – Importance – Media for inter personal communication – Mail, Courier, Telex, Telephone, Fax, e-mail – Mass media – Notice board, Public announcement; Press – Radio – Television – Internet – Media technology.

UNIT - V **10HRS**

Reports, Proposals and Presentations: Purpose of writing Reports – Format and Style – Types of reports – Regular reports – Factual reports – Survey reports – Feasibility reports – Business presentations – Format – Key elements for winning business proposals – Business presentations – Planning – Preparing – Organizing – Rehearsing – Improving – Visual aids – Nuances of delivery.

TEXT BOOKS:

1. Koneru, A., “Professional Communication”, 2008, Tata McGraw Hill.
2. Bill Mascull, “Business Vocabulary in Use”, 2010, Cambridge University Press.

REFERENCE BOOKS:

17MB106 HUMAN RESOURCE MANAGEMENT

Hours Per Week:

L	T	P	C
4	0	0	4

Course Objective:

The course provides an understanding of how the human resources management function is led in organizations. By the end of the course the learner will be able to appraise HRM functions and know how they can be executed in the organizations.

Course outcomes:

By the end of the course the learners are expected to

- Gain knowledge of the overall functions of Human Resource Management and role of HR Dept. in organizations.
- Understand how the specific operational functions of HRM are executed in the organizations.
- Appraise the various HR needs and corresponding programmes to be implemented in organizations.
- Develop perspective to deal with Human Resources in organizations.

Skills*:*

*(*These activities are only indicative, the Faculty member can innovate*)*

- ✓ *Chart out the methods of appraising employees of any (one) organization of your choice.*
- ✓ *List out the HR policies of any one company.*
- ✓ *Select any two companies of your choice and write its HR policies.*
- ✓ *List out any 5 (five) welfare techniques for employees.*
- ✓ *Draft the executive development plan of any company.*
- ✓ *A study of different recruitment models in companies can be made.*

UNIT - I **10HRS**

Introduction: HRM at work - The Changing Environment and Changing Role of HRM - The HR Manger's Proficiencies - Labor Legislations in India - Equal Employment Opportunity, HR Process Outsourcing - Disruptive HRM - Business HR - Employee Engagement.

UNIT - II **10HRS**

Job Analysis: Basics, Methods - Writing Job Descriptions and Job Specifications - The Recruitment and Selection Process: Planning and Forecasting - Effective Recruiting, Internal and External Sources of Candidates, Developing and Using Application Forms - e-Recruitment: Use of social media - Recruitment Process Outsourcing.

UNIT - III **10HRS**

Selection: Importance, Assessment Centre, Types of Testing, Work Samples and Simulations - Background Investigation and other Selection Methods - Basic Features of Interviews - What can Undermine and Interview's Usefulness, Designing and Conducting an Effective Interview - Orientation: Purpose, Process - Training: Process - Training Methods - Management Development, Evaluating the Training Effort.

UNIT - IV **10HRS**

Basic Concepts in Performance Management: Introduction to Appraising Performance – Steps and Methods in Performance Appraisal – Appraising Performance: Problems and Solutions, The Appraisal Interview – Career Management, Career Planning and Career Development – Managing Promotions and Transfers

UNIT - V

10HRS

Factors Determining Pay, Establishing Pay Rates- Payroll Management – Competency Based Pay and other Compensation Trends – Incentives: Individual, Group and Organizationwide Plans – Employee Benefits – Employee Relations – Collective Bargaining Process - Handling Grievances – Trends in HR: HR Metrics, HR Analytics

TEXT BOOK:

1. Dessler, Varkkey: Human Resource Management, 12/e, Pearson Education India, 2014.

17MB108 BUSINESS RESEARCH METHODS

Hours Per Week:

L	T	P	C
4	0	0	4

Course Objective:

Business research is a systematic enquiry whose objective is to provide information to solve managerial problems. This course is an introduction on how to do business research with an emphasis on applied problem solving. It has a major emphasis on applied problem-solving strategies and communication skills.

Course outcomes:

Upon completion of this course you should able to:

- Understand the steps in conducting research and survey methods of data collection.
- Understand the concepts of Correlation, Regression and Multiple Regression analysis.
- Understand the concepts of testing Quantitative data using Statistical inference.
- Understand the concepts analyzing Qualitative data and effective way of Report preparation.

SKILLS:

(These activities are only indicative; the Faculty member can innovate)

- ✓ *Choose an area of interest, review a minimum of 4 literature on the same and formulate a topic for prospective research.*
- ✓ *For a given topic – collect data through primary and secondary sources.*
- ✓ *For a given data, analyze data using various statistical tools.*
- ✓ *For a given case study, prepare a research report in the required format.*

UNIT - I **10HRS**

Business Research and Sources of Data: Business Research: Introduction, Difference between Basic and Applied research, Business Research Process Design, Types of research: Exploratory Research, Descriptive Research.

Sources of Data: Secondary Data Sources, Survey methods of data collection.

UNIT - II **10HRS**

Questionnaire design and Sampling: Questionnaire: Introduction, Questionnaire design process-Pre-Construction Phase, Construction Phase, Post-Construction Phase.

Sampling: Introduction, Random Sampling methods: Simple random Sampling, Stratified Random Sampling, Cluster Sampling, Systematic Sampling, Multi Stage Sampling. Non-Random Sampling: Quota sampling, Convenience Sampling, Judgment Sampling.

UNIT - III **10HRS**

Correlation and Linear Regression: Correlation, Karl Pearson's Coefficient of Correlation, Introduction to Simple Linear Regression, Determining the equation of a Regression line, Multiple Regression model, Multiple Regression Model with two independent variables.

UNIT - IV **10HRS**

Hypothesis Testing: Introduction to Hypothesis testing, Hypothesis testing procedure, Two-tailed and One-tailed tests of hypothesis, Type and Type –II errors, Hypothesis testing for single mean, Two Population means using t-test, Hypothesis testing with z Statistic for the difference in the means of two populations, and two proportions, Statistical Inference about the difference between the means of two related Populations.

UNIT - V **10HRS**

Hypothesis Testing for Categorical Data and Report Writing: Introduction, Defining Chi-square statistic, Conditions for applying χ^2 test, - Goodness of fit, test of independence. Analysis of variance, Completely Randomized Design (ONE-WAY ANOVA), Randomized Block Design (TWO-WAY ANOVA), Introduction to Report Writing, Organization of the Writing Report.

17MB112 OPERATIONS MANAGEMENT

Hours Per Week:

L	T	P	C
4	0	0	4

Course Objective:

This course is designed to address the key operations and quality issues in service and manufacturing organizations that have strategic as well as tactical implications.

Course Outcomes:

At the end of the course students will be able:

- To apply analytical skills and problem-solving tools to the analysis of the operations problems
- To understand the strategic role of operations management in creating and enhancing a firm's competitive advantages
- To understand key concepts and issues of OM in both manufacturing and service organizations
- To understand the application of operations management policies and techniques to the service sector as well as manufacturing firms.
- To learn the quality improvement and maintenance aspects of operations management.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *Visit any factory and list out the physical facilities and type of production followed.*
- ✓ *Visit any factory and prepare a report on the production planning and control activities*
- ✓ *Visit a company and draw a chart on plant layout/ suggest suitable methods for productivity improvement.*
- ✓ *List out the functions of materials management in an organization.*
- ✓ *Visit any industry and list out the various quality measures /maintenance methods adopted.*

UNIT - I **10HRS**

Operations Management Systems: Systems concept of production, types of production

Systems- Flow, Shop, Batch, Cellular, flexible Manufacturing.Operations management functions, challenges in operations management, current priorities for operations management, operations strategy, world class manufacturing, emerging trends and implications for operations

UNIT - II **10HRS**

Planning and Controlling of Operations: Production planning and controlling activities,

Aggregate planning, Resources planning: MRP-1, MRP-2

UNIT - III **10HRS**

Productivity Improvement in Operations: Factors affecting productivity, Techniques for

improving productivity, Facility location and factors influencing facility location, Methods for facility location decision, Plant layout: types of layouts – process layout, product layout, hybrid layout, fixed position layout, Work study: method study, time study

UNIT – IV **10HRS**

Purchasing and Inventory Management: Purchase function, Procedures. Economic Order quantity, Inventory analysis Methods – ABC, VED, XYZ methods – their utility. Inventory Valuation Methods: Periodic and perpetual systems; FIFO, LIFO, Average cost and Weighted Average Cost Methods.

UNIT - V **10HRS**

Quality Improvement and maintenance: Inspection, Quality, Statistical Quality Control – Control Charts Deming concepts. Total Quality Management, maintenance management-need equipment life cycle, measurement of maintenance performance Total Productive Maintenance, Six sigma.

TEXT BOOKS:

17MB114 MANAGERIAL COMMUNICATION-II

Hours Per Week:

L	T	P	C
4	0	0	4

Course Objectives:

The Business Communication Laboratory course is aimed at improving business communication skills (LSRW – Listening, Speaking, Reading and Writing) of postgraduate students and preparing them for their profession as managers. This course will help students to understand Business communication and personality as two interlinked spheres of influence, and provide them with exposure to conventions of corporate communication involved in the functioning of the business world.

Learning outcomes:

Having gone through the course, students would be equipped to clear industry recognized certification such as BEC Vantage by the University of Cambridge. This will equip them to stand out in the professional and business setting. Since this certification looks at LSRW (Listening, Speaking, Reading and Writing) components in great detail, we hope to equip students to confidently and successfully attempt all the 4 critical components.

UNIT - I **10HRS**

Business English Vocabulary: Glossary of most commonly used words (formal and informal usage)

Elements of Technical Writing: Sentence structure, reducing verbosity, arranging ideas logically, building coherence, paragraph level and document level, topic sentence, cohesive devices, transitional words, paraphrasing and précis-writing.

Mechanics of Writing: Stylistic elements, the rapporteur, the purpose, the reader's viewpoint (audience), elementary rules of grammar, choice of diction, elementary principles of composition, matters of form, punctuation, conventions of business communication, language and professional tone, weak links in business correspondence, ethical concerns in business writing, code of conduct (not sending illegal, offensive, disparaging personal remarks or comments) in written business communication

UNIT - II **10HRS**

III Semester Electives - Marketing

MARKETING RESEARCH

Course Objective

The course is designed to inculcate the analytical abilities and research skills among the students to facilitate decision making in solving various marketing problems.

Course Outcomes:

At the end of the course students should be able to understand

- Typical applications of Marketing Research and Research process
- Research Methods and Design and instruments of data collection
- Statistical tools and their application in analyzing and resolving marketing problems

UNIT - I

Introduction to Marketing Research- Role of Marketing research in a Marketing plan- Marketing intelligence versus Marketing Research- Typical applications of Marketing Research- Limitations of Marketing Research- Secondary and Primary research- Ethical considerations in Marketing Research- Marketing research process- Defining the Research Objective- Research Designs- Exploratory, Descriptive and casual Research- Designing the research Methodology- Survey, Observation, experimentation, Qualitative techniques- Plan for sampling, Field work, and Analysis- Presentation, Report, and Marketing action

UNIT - II

Research Methods and Design- Sources of Secondary data- Disadvantages of Secondary Data- Exploratory and Conclusive research- Major qualitative Research Techniques- Depth Interview, Focus Group, Projective techniques- Validity of research- test Marketing- Questionnaire Design for Marketing research- scales of Measurement used in Marketing research

UNIT - III

Sampling Methods - Sample size and Sampling Techniques- sampling errors- Field procedures- Planning the Data analysis- Hypothesis Testing- Simple tabulation and cross Tabulation- Chi-squared test- ANOVA and the Design of Experiments

UNIT - IV

Correlation and Regression- Explaining Association and Causation- Discriminant Analysis for Classification and prediction

UNIT - V

Factor Analysis for data Reduction- Cluster Analysis for Market segmentation- Multidimensional Scaling for Brand positioning- Conjoint analysis for product Design

TEXT BOOKS:

SUPPLY CHAIN MANAGEMENT

Course Objective:
The objective of the course is to make the student know about the Supply Chain Mechanism, Strategies, diverse, metrics, supply chain relationships .To develop skills in managing global supply chains in the real world by correlating to the theory.

Course Objectives:

- To enable the students to gain knowledge about the concept of logistics and its importance in business environment.
- The students are able to design supply chain drivers and metrics.
- To enable the students to develop logistics and supply chain relationships.
- Hone their abilities for planning and managing inventories in supply chain.
- Able to develop skills for management of global supply chains

UNIT - I
Logistics: The logistics of Business. Objective and Importance of Supply Chain Process, Logistics and Strategies, Supply Chain Strategies, Achieving Strategic Fit, Expanding Strategic Scope, obstacles to achieving strategic fit.

UNIT - II
Supply Chain Drivers and Metrics: Drivers for Supply Chain Performance, Framework for Structuring drivers. Facilities, inventory, transportation, information, sourcing and pricing.

UNIT - III
Logistics and Supply chain relationships: Benchmarking the logistics process and SCM operations – Mapping the supply chain processes – Supplier and distributor benchmarking – setting benchmarking priorities – identifying logistics performance indicators – e-commerce and SCM.

UNIT - IV
Planning and Managing inventories in Supply Chain: Managing Economies of Scale in Supply Chain, managing Uncertainty in a supply chain, safety inventory, determining optimal level of product inventory.

UNIT - V
Managing global logistics and global supply chains: Logistics in a global economy – global operating levels – Global supply chain business processes – Global purchasing – Global logistics – Channel in Global logistics – Issues and Challenges in Global supply chain Management.

TEXT BOOK:

1. Sunil Chopra and Peter Meindl: Supply chain management: Strategy, Planning and Operation, 3/e, Pearson Education, New Delhi 2007.

CONSUMER BEHAVIOUR

Course Objective:
The course is designed to inculcate the concept of consumer behavior, decision making by consumers, behavior variables and influences on consumer behavior.

Course Outcomes:
At the end of the course students should be able to understand
- Application of consumer behaviour in marketing
- Individual and group determinants of consumer behaviour
- Environmental influences on consumer behaviour
- Consumer decision making process

UNIT - I
Introduction to Consumer Behaviour (CB):
Nature and Importance of CB, Application of CB in Marketing, Consumer Research process.
UNIT - II
Individual Determinants of CB:
Perception: process, Consumer Imagery, perceived risk, Learning: principles, theories, Personality: nature, theories, self concept, psychographic and life style, Attitude: Structural model of attitude, attitude formation & change, Motivation: needs/motives & goals, dynamic nature of motivation, Arousal of motives, theories
UNIT - III
Group Determinants of CB:
Reference group influence: types of consumer relevant groups, factors affecting group influence, application of reference group concept, Family: functions of family, family decision making, family life cycle(FLC), Opinion Leadership and Personal influence, Diffusion of Innovation: Adoption process., Diffusion process
UNIT - IV
Environmental Influences on CB:
Social class, Life style Profile of Social class, application to CB, Culture: characteristics, cross cultural understanding
UNIT - V
Consumer Decision making Process:
Problem recognition, Information Search Process and Evaluation, Purchasing process, Post purchase behaviour, Models of CB- Nicosia, Howard & Sheth, Engel-Kollat Blackwell

TOURISM MARKETING

Course Objective:
To make students familiar with the concepts and marketing of tourism

Course Outcomes:
At the end of the course student is expected to understand

- Nature of tourism marketing
- Tourist buying process
- STP of tourism marketing
- Tourism marketing management information system
- Survey and research of trends in tourism marketing

UNIT - I
Introduction to tourism marketing, Evolution, Definition, nature, process and system services & their marketing nature, characteristics of tourism products, its issues and challenges : Marketing mix

UNIT - II
Tourism Markets: Types, world tourism markets, inbound and outbound markets for India & Domestic markets: Tourist behavior. Travel purchase and tourist buying process. Tourist discussion making models

UNIT - III
Market segmentation, Targeting and positioning. Definition of market segmentation, discussions in market segmentation, Market targeting process, product positioning – purpose, process; P's of marketing.

UNIT - IV
Marking management information system and demand forecasting Introduction, structure of marketing management, information support system, demand forecasting.

UNIT - V
Market Research: Definition, research and survey methodologies, application, technology and trends in tourism marketing, role of government bodies, national, state tourism offices, local bodies, private organizations, NGO's in tourism marking.

PROJECT FINANCE

Course Objective:
To create an understanding about the Projects and the process, criteria and the appraisal methodology for projects.

Course Outcomes:
- To prepare and understand the concepts of project feasibility reports.
- To have a clear understanding of project financing techniques.
- Long term financing and control

UNIT - I
Introduction to Projects
Concepts of project, Importance and characteristics, Types of project, Phase of a Project & Project Life Cycle, Project identification and analysis, Ideas generation and screening.
UNIT - II
Project Appraisal
Project appraisal, techniques of project appraisal, Identifying risk, developing an appraisal process, Appraisal procedure of financial institutions in India.
UNIT - III Appraisal Measures
Appraisal measures, Meaning and use of appraisal measures, identifying the most appropriate measure for business payback, Discounted cash flow measures-NPV and IRR and other measures.
UNIT - IV Cost Benefit Analysis
Cost benefit analysis, Concept of uniform annual equivalent, Determination of economic life, Inflation and its impact on projects, Social cost benefit analysis (SCBA) different methods.
UNIT - V Financing and Control
Long term financing, Searching of finances and their appropriate mix, Loan Syndication, Consortium financing, Project monitoring and control, Control techniques, Concept of time and cost overrun.

TEXT BOOKS:
1. Prasanna Chandra: Project Planning, Analysis, Selection and Implementation.
2. Chaudhary S, Project Management.

REFERENCE BOOKS:
1. Harold Karzner, Project Management.

III Semester Electives - HR

INDUSTRIAL RELATIONS AND LABOUR LAWS

Course Objective:

The objective of the course is to enable students to have an insight into the relations between various sectors that have a bearing on management of industrial relations. The pre-requisite for this course is Human Resource Management offered in 2nd Semester.

Course Outcomes:

- Gain knowledge of the Industrial relations in the organization and its importance.
- Understand the reasons of industrial Conflicts and Disputes and the settlement procedure.
- Understand the origin and growth of Trade Unions in India and their role in the growth of the Country's economy.
- Gain knowledge of the labour legislations in India.
- Understand the different acts related to the wages and bonus of the employees.

UNIT - I

Industrial Relations: Economy and labour force in India – Approaches to IR –Employer organizations: Introduction, Origin and Growth.

Collective Bargaining: Collective Bargaining – Meaning & Definition, Levels, Process and Hindrances – Negotiating techniques and skills – Drafting of an agreement.

UNIT - II

Industrial Conflicts and Disputes: Conflicts: Introduction and Manifestation – Disputes: Introduction, Prevention and Settlement, Stages in Settlement, Effects.

UNIT – III

Trade Unions: Trade Unions: Introduction, Definition, History and evolution, Objectives, Reasons for joining Unions, Types, Structure, Growth, Theories, Problems, Recognition – Central Trade union Organizations – Trade Unions Act, 1926 – Employer Organizations.

UNIT - IV

Labour Legislation: The Factories Act, 1948 – The Industrial Disputes Act, 1948 – The Employment (Standing Orders) Act, 1946 – The Maternity Benefit Act, 1961.

UNIT - V

Wage Legislations: The Workmen's Compensation Act, 1923 – The ESI Act, 1948 – The Payment of Wages Act, 1936 – The Minimum Wages Act, 1948 – The Payment of Bonus Act, 1965 – The Payment of Gratuity Act, 1972 – The EPF Act, 1952.

TEXT BOOKS:

2. Sinha: Industrial Relations, Trade Unions and Labor Legislation, Pearson 2007.
3. P. K. Padhi: Labor and Industrial Laws, PHI, 2007.

TALENT PLANNING AND ACQUISITION

Course Objective:

The course provides an understanding of planning and acquiring organization's talent needs from a strategic perspective. The course is aimed to offer a deeper orientation of the staffing function of human resources that would enable the learner to perform the talent acquisition function confidently.

Course Outcomes:

By the end of the course the learners are expected to

- Gain conceptual knowledge and operational understanding of all the key aspects of staffing function including human resource planning, job analysis, recruitment and selection.
- Understand the role of human resource planning in creating effective organizations
- Get acquainted with techniques necessary for successful strategic human resource planning.
- Develop the skills to design and implement effective recruitment and selection processes and critically evaluate existing processes.
- Become familiarized with the latest trends and best practices in talent acquisition.

UNIT – I

Defining Strategic Staffing, Components, Goals, Integrating functional areas of HRM- Business and Staffing strategies: Resource Based View, Firm's Business Strategy, Firm's Talent Philosophy – Deriving the firms staffing strategy, The Firm's Strategic Staffing Decisions –Legal Context: Types of Employment Relationships, EEO, Affirmative Action, Bases for Employment Law Suits

UNIT - II

Job Analysis: Methods, Planning Job Analysis - Conducting Job Analysis, Developing Job Descriptions and Person Specifications – Workforce Planning Process, Forecasting the Firm's Labor Demand and Labor Supply- Qualitative and Quantitative Forecasting Methods & Techniques - Resolving the gaps between Firm's Labor supply and demand, staffing planning

UNIT - III

Recruiting: Effective recruiters, Training and Developing Recruiters- Recruiting Metrics, Developing Applicant Attraction Strategies – Measurement, Describing and Interpreting Data, Using Data Strategically – Characteristics of using successful measures, Creating and validating assessment systems – External Assessment Methods – Internal Assessment Methods.

UNIT - IV

Latest trends in Recruitment: e-recruitment, Social media recruitment, Recruitment management, mobile/video recruitment, Innovative recruitment practices – Selection tools and Techniques, Predictors of Job Performance- Testing: Types of Tests, The Selection Interview: Process, Conduct, Types, Pitfalls - Choosing Candidates, Job Offer Strategies

UNIT - V

The Employment Contract, Presenting a job offer, Negotiating, Closing the Deal – Orienting and Socializing New Employees – Managing the Flow of Workforce – Involuntary Employee Separations – Staffing Outcomes, Evaluating Staffing Systems – Technology and Staffing Evaluation

TEXT BOOKS:

1. Jean M. Phillips, Stanley M. Gully, Strategic Staffing, Pearson
2. Belcourt.M., Mc Bey K.J., Strategic Human Resource Planning, Cengage Learning.

REFERENCE BOOKS:

4. D K Bhattacharya, Human Resource Planning, Excel Books.

LEARNING AND DEVELOPMENT

Course Objective:
The course provides an understanding of planning and acquiring organization's talent needs from a strategic perspective. The course is aimed to offer a deeper orientation of the staffing function of human resources that would enable the learner to perform the talent acquisition function confidently.

Course Outcomes:
By the end of the course the learners are expected to
- Understand the Training Environment in organizations and the different models of Training
- Conduct needs assessment for training programs
- Design and execute effective training programs for employees using contemporary methods
- Evaluate the training process and measure the outcomes
- Appraise and make use of technology to enhance learning in organizational training context

UNIT - I
Introduction to Employee Training & Development: Training, Designing Effective Training – The Forces influencing working and Learning – Snapshot of Training Practices - The Strategic Training& Development Process - Organizational Characteristics that Influence Training –Training Needs in Different Strategies, Models of Organizing the Training Department – Outsourcing Training.
UNIT- II
Designing Training: Learning - Meaning, Theories – Learning Process- Training Needs Assessment: Why, Who, Methods – Needs Assessment Process –Competency Models, Scope of Needs Assessment – Considerations in Designing Effective Training Programmes.
UNIT- III
Transfer of Training: Introduction, Training Design – Work Environment Characteristics that influence transfer – Organizational Environments that Encourage Transfer – Traditional Training Methods: Presentation methods - Hands-on Methods - Group-building Methods – Choosing a Training Method.
UNIT- IV
Training Evaluation: Evaluation - Introduction, Reasons – Overview of Evaluation process– Outcomes used in Evaluation, determining whether outcomes are good – Evaluation Practices, Designs - Determining Return on Investment - Measuring Human Capital and Training Activity
UNIT – V
Employee Development: Employee Development, Approaches – Development Planning Process-Company Strategies, E-Learning and Development- E-Learning Technologies: Technology and Multimedia, Computer Based Training – Developing Online Learning, Blended Learning, Simulations, Mobile Technologies –Technologies for Training Support and Administration – Learning Management Systems – Special Issues in Training and Development

TEXT BOOKS:
1. Noe Raymond, Employee Training & Development,6e, Tata McGraw-Hill Education.
2. Pandu Naik.G., Training & Development, Excel Books India, 2009, ISBN - 8174465650, 9788174465658.

TALENT MANAGEMENT & SUCCESSION PLANNING

Course Objective:
To enable the students realize the challenges of acquisition and retention of talents for the competitive advantage of the organization and to make them ready to develop a diagnostic and practical perspective of management of talent in organizations.

Course Outcomes:
- To identify what drives the need for talent management in organizations today.
- To strategically manage the talent and performance in organizations.
- To implement proven strategies, tools, and processes to help manage talent and performance.
- To discover how to focus people more effectively on their performance by examining each phase of the performance management process.

UNIT - I
Talent Management: Introduction Talent Management - Meaning and significance of talent management - Aligning HRM goals to business, attracting talent, retaining talent - becoming the best employer by employer branding activities - inculcating performance culture, right sizing the workforce - work life balance initiatives - providing HR leadership to business.

UNIT - II
Competency Mapping: Competency Mapping - Features of competency methods, historical development, definitions - approaches to mapping and case studies in competency mapping - Competency mapping procedures and steps- tools for data collection, data analysis - validating the competency models,
Methods of Data Collection for Mapping: Observation, repertory grid, critical incidence technique - expert panels, surveys, automated expert system - job task analysis, behavioural event interview. - Developing competency models from raw data - data recording, analyzing the data.

UNIT - III
Employee Engagement: Employee engagement - meaning and significance - constituents of engagement, conceptual framework of engagement - behaviors associated with engaged employees, engaged, not engaged, actively disengaged - parameters to measure employee engagement - Q 12 model of Gallup, employee satisfaction survey.

UNIT - IV
Succession planning: Introduction, objectives, significance, process. Identifying managerial positions which are critical for the business. - Identifying second line of leaders and developing their capabilities to occupy the critical positions in the event of the exit of current incumbents - Taking up lateral hiring when there is discontinuity in the succession plans.

UNIT - V
Career Planning:
Career planning: Introduction, objectives, steps involved in career planning, Creating career growth opportunity. Mentoring employees for growth - Providing developmental job assignments, providing resources of learning and development opportunities - vertical promotions and horizontal postings to promote career progression - psychological contract and career anchors. *{T:1,2}*

INDUSTRIAL AND ORGANIZATIONAL PSYCHOLOGY

Course Objective:

To enable the students to understand the psychology of people in the workplace and the following are the outcomes of the course.

Course Outcomes:

By the end of the course the learners are expected to

- Understand Historical background and future prospects of Industrial and organizational Psychology.
- Identify how to develop the process and methods of personnel selection.
- How to implement different approaches to motivation employees.
- Understand and design basic leader skills and models of leadership.

UNIT - 1

Introduction to Industrial and Organizational Psychology: Industrial and organizational Psychology: Meaning, subject matter and functions of Industrial and organizational Psychology, Development of Industrial and organizational Psychology, Industrial and organizational Psychology NOW, Future of Industrial and organizational Psychology, Industrial and organizational psychology in the Indian context

UNIT - II

Personnel Selection: Determining job requirements: Uses and types of job information, and job analysis, Recruiting job applicants: Recruitment techniques, Personal history assessment: Standard application blanks, bio data items, resume and letter of reference, Assessment of current behavior: Interviews, psychological testing and assessment centers

UNIT - III

Evaluating Job Performance: Uses of performance evaluation: Downsizing, fair employment, employment-at-will and seniority, Sources of evaluation: The evaluator and performance information, Appraisal rating systems: Graphic rating scales and rating errors, Non-rating evaluation methods: Checklists and comparison methods

UNIT - IV

Job Satisfaction: Job satisfaction as a job attitude, Components of job satisfaction: Satisfaction with work, with pay and with supervision, measuring job satisfaction: Job Descriptive Index, Minnesota Satisfaction, Questionnaire, Need Satisfaction Questionnaire, Faces Scale, Relationship of job satisfaction to productivity and withdrawal behavior.

UNIT - V

Motivation and Leadership: Motivation: Work Motivation, Need theories: McClelland, Herzberg, Cognitive theories: Goal Setting Theory, Self Efficacy Theory, Using motivation theory at work

Leadership: Meaning, nature and styles, Approaches to leadership: Human Relations, Theory X & Theory Y, Fiedler's Contingency Model, Specific leader skills - Leadership through power, Leadership through vision: Transactional and Transformational, Leadership through persuasion

III Semester Electives - Operations & Business Analytics

SERVICE MANAGEMENT

Course Objective:

The objective of this course is to enable the students to gain knowledge about the service management. This course will develop skills of students in the area of designing the service enterprises, managing service operations, developing quantitative models and managing inventory and quality; to acquaint the students about various issues of service Operations management.

Course Outcomes:

At the end of the course the student will be able to

- Understand concepts; develop skills in the area of Operations management and Design of service enterprises
- Able to develop strategies and supply relationships for effective management of services.
- Hone their abilities for developing quantitative models for service management
- Hone their abilities to build the projecting and implement the project systematically
- Able to develop skills for management of inventory and service quality.

UNIT - I: Understanding Services: The concept of service operations, Role of Services in an Economy, States of Economic Development, Nature of the Service Sector, Sources of Services Sector Growth, Distinctive Characteristics of Service Operations, Classifying Services for Strategic Insights, An Open-Systems View of Services, The strategic Service Vision, Understanding the Competitive Environment of Service, Competitive Service Strategies, Strategic Analysis, Winning Customers in the Marketplace, The Competitive Role of Information in Services, the virtual value chain, Stages in Service Firm Competitiveness, service operations management practices and Service Benchmark.

UNIT - II: Designing the Service Enterprise: Innovation in Services, New service Development, Service Design Elements, Strategic Positioning through process structure, Service Blueprinting, Taxonomy for Service Process Design, Generic Approaches to Service System Design, Generic Approaches to Service System Design, Intellectual Property, Technology in the Service Encounter, The Emergence of Self-Service, Automation in Service, The Internet as Service Enabler, E-Commerce, E-Business Models, Economics of Scalability, Technological Innovation in Services.

UNIT - III: Managing Service Operations: Generic Strategies of Level Capacity, Strategies for Managing demand, Strategies for Managing Capacity, Managing waiting lines the Economics of Waiting, Queuing Systems, The Psychology of Waiting, Principles of Waiting Line Management, Essential Feature of Queuing Systems. Service Supply Relationships, Service Supply Relationships, Managing Service Relationships, Professional Service Firms, Outsourcing services, Globalization of Services, Domestic Growth and Expansion Strategies, Franchising, Globalization of Services, Global Service Strategies

UNIT - IV: Quantitative Models for Service Management and demand forecasting: Capacity Planning and Queuing Models, Analytical Queuing Models, Capacity Planning Criteria, Average Customer Waiting Time, Probability of Excessive Waiting, Minimizing the sum of Customers Waiting Costs and Service Costs, Probability of Sales Lost Because of Inadequate Waiting Area. **Forecasting Demand** for Services The Choice of Forecasting Method, Subjective Models, Causal Models, Time Series Models.

UNIT - V: Managing Service Inventory and Quality: Inventory Theory, Order Quantity Models, Inventory Management under Uncertainty, Inventory Control Systems, Single-Period Model for Perishable Goods, Retail Discounting Model, **Service Quality:** Concept of Service Quality, Measuring Service Quality, Quality Service by Design, Walk-Through Audit, Achieving Service Quality, Service Recovery, Stages in Quality Development.

SUPPLY CHAIN MANAGEMENT

Course Objective:

The objective of the course is to make the student know about the Supply Chain Mechanism, Strategies, diverse, metrics, supply chain relationships .To develop skills in managing global supply chains in the real world by correlating to the theory.

Course Objectives:

- To enable the students to gain knowledge about the concept of logistics and its importance in business environment.
- The students are able to design supply chain drivers and metrics.
- To enable the students to develop logistics and supply chain relationships.
- Hone their abilities for planning and managing inventories in supply chain.
- Able to develop skills for management of global supply chains

UNIT - I

Logistics: The logistics of Business. Objective and Importance of Supply Chain Process, Logistics and Strategies, Supply Chain Strategies, Achieving Strategic Fit, Expanding Strategic Scope, obstacles to achieving strategic fit.

UNIT - II

Supply Chain Drivers and Metrics: Drivers for Supply Chain Performance, Framework for Structuring drivers. Facilities, inventory, transportation, information, sourcing and pricing.

UNIT - III

Logistics and Supply chain relationships: Benchmarking the logistics process and SCM operations – Mapping the supply chain processes – Supplier and distributor benchmarking – setting benchmarking priorities – identifying logistics performance indicators – e-commerce and SCM.

UNIT - IV

Planning and Managing inventories in Supply Chain: Managing Economies of Scale in Supply Chain, managing Uncertainty in a supply chain, safety inventory, determining optimal level of product inventory.

UNIT - V

Managing global logistics and global supply chains: Logistics in a global economy – global operating levels – Global supply chain business processes – Global purchasing – Global logistics – Channel in Global logistics – Issues and Challenges in Global supply chain Management.

ESSENTIALS OF BUSINESS ANALYTICS

Course Objective

This course provides students the fundamental concepts and knowledge needed to understand the emerging role of business analytics in organizations and enable students how to apply essential tools in a spreadsheet environment. Emphasis is on business applications, concept development and effective interpretation of models and results, rather than theory and calculations. Students use a computer software package for data analysis.

Course Outcomes:

At the end of the course the student is expected to

- Understand the overview of business analytics
- Understand the models for summarizing, visualizing, and understanding useful information from historical data.
- Understand an overview of decision analysis approaches for incorporating a decision maker's view about risk into decision making.

UNIT - I

Introduction: Decision making, Business analytics defined, a cauterization of analytical methods and models: Descriptive analysis, predictive analysis, prescriptive analysis, big data. Business analytics in practice: Financial analytics, Human resource analytics, marketing analytics, supply chain analytics.

UNIT - II

Descriptive statistics

Overview of using data: definitions and goals, types of data, modifying data in excel, modifying data in excel, creating distributions from data, measures of location, measures of variability, analyzing distributions, measures of association between two variables.

UNIT - III

Data visualization:

Overview of data visualization, tables, charts, advanced data visualization, data dashboards.

UNIT - IV

Linear regression: The simple liner regression model, least square method, assessing the fit of the linear regression model, the multiple regression model, inference and regression, categorical independent variables, modelling non-linear relationships.

UNIT - V

Decision analysis: Problem formulation, Decision analysis without probabilities: Optimistic approach, conservative approach, minimax regret approach. Decision analysis with probabilities: decision analysis with sample information:

Text book:

TECHNOLOGY MANAGEMENT

Course Objective:
To understand the technology growth, changes, forecasting techniques, Assessment and competitiveness.

Course Outcomes:
To adopt recent technological changes, Assess alternatives and Compete in Industry.

UNIT - I
Introduction to Technology Management: Concept and Meaning of Technology and Technology Management- Technology; Technology management, Evolution and Growth of Technology, Role and Significance of Technology Management, Impact of Technology on Society and Business- Technology and competition; Key issues in managing technological innovation, Forms of Technology- Process technology; Product technology

UNIT - II
Technology Acquisition: Technology Acquisition, Alternatives for Acquiring New Technologies, Reasons Compelling a Company for Obtaining a New Technology, Management of Acquired Technology, Measures of Scale and Mechanisms for Acquiring Technologies- Economy of scale or Scale economy; Levels of scale; The measurement of scale; Factors affecting the choice of scale

UNIT - III
Technology Forecasting: Concept of Technology Forecasting- Characteristics of technology forecasting ; Technology forecast method; Principles of technology forecasting, Technology Forecasting Process, Need and Role of Technology Forecasting, Forecasting Methods and Techniques, Planning and Forecasting

UNIT - IV
Technology Strategy and Competitiveness: Technology Strategy-Technology strategy and management; Elements of an accessible technology strategy, Innovation Management, Competitive Advantage- Components of competitive advantage; Creating competitive advantage using value chain, Technology Management Evaluation or Assessment

UNIT - V
Product Technology: Product Development, Role of Government in Technology Management, Technology Development and Competition, Managing Research & Development (R & D), Intellectual Property Management

TEXT BOOKS:
1. White/Bruton, The Mangagement of Technology and Innovation: A strategic approach, Cegage learning, Ist,Edition 2010

OPERATIONS STRATEGY

Course Objective:

The objective of this course is to enable the students to gain knowledge about the Operations Strategies. This course will develop skills of students in the area of designing the operations management, capacity and process technology strategies, developing purchasing and supply strategies, strategies for improvement of operations. To acquaint the students about the process of operations strategies.

Course Outcomes:

At the end of the course the student will be able to

- Understand concepts; develop skills in the area of Operations strategy design and process.
- Able to develop strategies for substitutes and capacity.
- Hone their abilities for developing purchasing, supply and process technology strategies.
- Hone their abilities to build the skills for product and service improvement strategies.
- Able to develop skills for designing the process for operations strategies.

UNIT - I

Operation strategy:

Concept of operation strategy, operation strategy Vs management, operation strategy matrix, operation strategy process, Generic performance of objectives, targeting and operations focus,

UNIT - II

Substitutes for strategy and capacity

TQM, lean operations, business process reengineering (BPR), six sigma, capacity strategy, overall level of operations capacity, capacity change

UNIT - III

Purchasing, supply and process technology strategies

Strategies of purchasing and supplies, vertical integration decisions, contracting and relationship, supply network dynamics, managing supplier overtime, purchasing and supply chain risk, process technology strategies, product and process matrix, evolution of process technology

UNIT - IV

Improvement strategies, process and service development

Operations improvement, setting the direction, performance mapping importance, developing operations capabilities, deploying capabilities in the market.

Product and service development process, market requirement perspective, operations resources perspective.

UNIT - V

Process of operation strategies

Formulation and implementation: formulating operation strategy and role alignment, analysis needed for formulation, challenges and implementation of operation strategies.

Monitoring and control process, strategic monitoring vs control, strategic objectives tracking process, control of risk, learning contribution to strategic control.

Text Book:

1. Nigel Slack and Michael Lewis "Operations Strategy", 4e, Pearson.

II MBA II Semester

INTERNATIONAL BUSINESS

Course Objective:

The purpose of this paper is to enable the students learn nature, scope and structure of International Business, and understand the influence of various environmental factors on international business operations and acquainting the students with the structure and policy framework of India's foreign trade.

Course Outcomes:

At the end of the course students should be able to understand

- Nature and scope of International business and environmental factors influencing international business
- Global trading environment and institutions aid global trading
- Role of Technology in global business and International logistics
- Indian foreign trade policy in conjunction with global trade and legal framework
- Export and import procedures, promotions and policies

UNIT - I

Introduction to International Business: Importance nature and scope of International business; modes of entry and Theories of International Business; Framework for analyzing international business environment – Political, Economical, Social, Technological, Environmental and Legal environments and their impact on international business decisions.

UNIT - II

Global Trading Environment: World trade in goods and services – Major trends and developments; World trade and protectionism – Tariff and non-tariff barriers; International Economic Institutions and Agreements – WTO, IMF, World Bank, and other International agreements; Regional Economic Groupings in Practice- Global economic forum- BRICS - Regionalism vs. multilateralism, Structure and functioning of EC and NAFTA; Other Regional economic cooperation's

UNIT - III

Global Technology & International Operations: Global Technological Management – Technology and Business; Issues in international technology transfers; Management of International Operations – Location of production; Management of Inventory; Sourcing of Inputs ; International Logistics.

UNIT - IV

Indian Foreign Trade Policy: India's Foreign Trade – Trends and developments; Commodity composition and direction, India's foreign trade in global context. Recent Foreign Trade Policy – Legal frame work; Special Focus Initiatives.

UNIT - V

Export and Import Procedures & Promotions: Export and Import Procedures; Import Substitution and Export Promotion Policies – Export Incentives –duty exemption schemes, EPCG, duty draw backs; Role of commercial banks in foreign trade; EXIM Banks; Export credit insurance and ECGC. Infrastructure Support for Export Promotion – EPC; STO; EPZ/SEZ; EOUs; Foreign Investment Policy – Indians Joint ventures abroad, Multilateralism and Bilateralism in India's foreign trade.

IV Semester Electives - Marketing

INNOVATION AND PRODUCT DEVELOPMENT

Course Objective:

The objective of this course is to enable the students to gain knowledge about the Innovation and New Product Development. This course will develop skills of the students in the area of Innovation Management and Design of Innovation Process, Strategic alliances, New product and package development. To acquaint the students about various issues of new service innovation, market research and its influence on new product development.

Course Outcomes:

At the end of the course the student will be able to

- Understand concepts; develop skills in the area of innovation management.
- Able to develop strategic alliances and networks for innovation.
- Hone their abilities for development of new products.
- Hone their abilities for the development of new packaging for the products.
- Able to develop skills for new service innovation and market research for new products.

UNIT - I

Innovation Management: Introduction, importance and need of innovation, popular view of innovation, models of innovation, innovation as a management process, the role of state in innovation and the market, innovation diffusion theories.

Managing innovation with in firms: Managing uncertainty, organizational characteristics that facilitate the innovation process, role of individual in the innovation process, IT systems and their impact on innovation.

UNIT - II

Innovation and Operations Management: Design of innovation, innovation in the management of operations process, technology trajectories knowledge base of an organization, learning organization, degree of innovativeness, technology strategy.

Strategic alliances and networks: forms of strategic alliances, open innovation, technology transfer and models of technology transfer.

UNIT - III

New product development.

Product Strategy: New product plan, product strategy, differentials and positioning, competing with other products, new products and property, considerations when developing a new product development (NPD) strategy. NPD strategy for growth, over of NPD theories. Models of new product development.

UNIT - IV

Packaging and Product Development: Basic principles of packaging, characteristic of package, product rejuvenation, new product opportunities through packaging, product and packing size variation, packaging system and retailer acceptance.

UNIT - V

New Service Innovation and Market Research: New service innovation and market research and its influence on a new product development, different types of services, characteristics of a services, classification of service innovations, new service development models, service innovation and the consumer.

Market Research and New Product Development: Testing new products, techniques of testing new products, technology intensive products, new products as projects, NPD across different industries.

ADVERTISING AND BRAND MANAGEMENT

Course Objective:
To enlighten the students with the Concepts and Practical applications of advertising and brand management in promoting goods and services

Course Outcomes
At the end of the course the student is expected to understand

- Importance of advertising in promoting goods and services.
- Developing media strategy.
- Advertising Budget and evaluating advertising effectiveness.
- Brand Building and Positioning, measuring Brand Performance.

UNIT - I
Role of Advertising in Promotional Mix – Introduction to Advertising – Advertising and Communication – Integrated Marketing (IMC) – Challenges and Opportunities in Advertising – Economic, Social and Ethical Aspects of Advertising.

UNIT - II
Audience Analysis in Advertising – Media Planning – Media Mix Decisions – Developing Media Strategy – Creative Strategy and Copy Writing – Different Types of Appeals – Layout Design.

UNIT - III
Advertising Budgets – Methods of Formulating Advertising Budgets – Evaluating of Advertising Effectiveness – Advertising Agencies.

UNIT - IV
Direct Response Advertising – Home Shopping – Direct Mail – Catalogs – Telemarketing – Internet Advertising – International Advertising – Impact of Culture – Customs – Law and Regulations.

UNIT - V
Brand Management: Brand Building and Positioning – Measuring Brand Performance – Designing Brand Marketing Programmes – Evaluating Brand Performance – Branding in Retail Business – Role of Own Label – Emerging trends in Brand Management.

Text Books

1. William Wills, John Burnett and Sandra Mriarty – Advertising Principles and Practice – Pearson, ND.

SERVICES MARKETING

Course Objective:
To facilitate the students about the concepts of Services Marketing through cases.

Course Outcomes:
At the end of the course students should be able to understand

- Marketing Management of companies offering Services as product.
- Characteristics of services,
- Consumer behaviour in services, align service design and standards
- Delivering service, managing services promises.

UNIT - I: Foundations of Service Marketing: What are Services? Why Services Marketing? Role of Services in Modern Economy, Service and Technology, characteristics of services compared to goods, Services Marketing Mix, staying focusing on customer, Gaps model of Service Quality-Customer Gap, Provider Gap and Closing Gap. Case 1: The United Indian Bank (Govind Apte Page no 55-56) Case 2: Online air travel: Expedia, Orbitz and Travelocity lead the pack (John E.G.Bateson Page no 82- 83)

UNIT - II: Focus on the Consumer: Consumer behaviour in services, Consumer expectations in service, consumer perceptions of service, Understanding Consumer Requirements-listening to customers through research, building customer relationships, service recovery. Case1: The Crestwood Inn, (John E.G.Bateson Page no 320-321) Case 2: Population growth and the urban poor (Vinnie Jauhari, Kirti Dutta Page no 106-108)

UNIT - III: Aligning Service Design and Standards: Service innovation and design-challenges, types of service innovations, stages in service innovation and development, service blueprinting, high performance service innovations, new Service Development Processes, Customer defined service standards-factors, types, and development, Physical Evidence and the Services cape. Case 1: Physical evidence a case of KF. (Vinnie Jauhari Page 236-238). Case 2: IT Trainers Limited. (Govind Apte Page no 186).

UNIT - IV: Delivering and Performing Service: Employee's roles in service delivery, customer's roles in service delivery, delivering service through intermediaries and electronic channels, managing demand and capacity. Case 1: Relationship between Employee satisfaction, Customer satisfaction and market share: The case of Hewlett-Packard, (Vinnie Jauhari Page 336). Case 2: Total Assurance Ltd. (Govind Apte Page 207-208).

UNIT - V: Managing Service Promises: Integrated services marketing communications-need for coordination, five categories of strategies to match service promises with delivery, Pricing of Services-three key ways that service prices are different for customers, approaches to pricing services, pricing strategies that link to the four value definitions. Case 1: Why Differential Pricing helps the poor? (Vinnie Jauhari et al Page 336).

SALES AND DISTRIBUTION MANAGEMENT

Course Objective:
The aim of this course is to enable MBA students to understand Sales Management, Sales Process, role of distribution channels and manage channel partners. They can also emerge as good sales executives and support the organization's efforts towards business development.

Course Outcomes:
At the end of the course students should be able to understand

- Importance of Sales Management
- Sales Planning and Budgeting and characteristics of distribution channels
- Sales force management
- Managing channels

UNIT - I: Introduction to Sales Management: Evolution of Sales Management, importance of Sales Management, types of Selling, difference between Selling and Marketing, Modern Day Sales Activities, Selling Skills, Selling Strategies, Selling Process. Case: Plastic Industries, Inc., The role of Personal Selling in creating Market. (Richard R.Still page no 104,105) Case: United air flow manufacturer of household appliances sales persons job. (Richard R.Still page no 115 to 118)
UNIT - II: Sales Planning and Budgeting: Sales planning process, sales forecasting methods, sales budgeting process, methods used for deciding sales budget, types of quotas and quota setting procedure, reasons for establishing or revising sales territories, routing and scheduling sales persons, market cost analysis. Case: Augsberg Wiesel Ltd, manufacturer of table ware, establishment of sales territories (Richard R Still, Page no 603 to 605) Case: Midland office engineering, establishment of sales budgeting program, (Richard R Still, page no 588 to 589)
UNIT - III: Sales Force Management: Recruitment and selection of the sales force, training the sales force, sales force motivation, sales force compensation, sales force control and evaluation. Case: 1 Adjusting Compensation Plan to Motivate Sales Representatives (K.Sridhara Batt, page no 576 to 577) Case: 2 Sales Force Strategy at Life Insurance Corporation (K.Sridhara Batt, page no 579)
UNIT - IV: Introduction to Distribution Management Definition of Distribution Management, need for Distribution Channels, Distribution Channels for Rural Markets, designing the Marketing Channels, Motivating and Evaluating Channel Members, Capturing the Customer requirements Case: 1 Fed Ex's Value Chain Solutions, (K.Sridhara Batt page no 618 to 620) Case: 2 The National Handloom Development Corporation. (Tapan K. Panda, Sunil Sahadev page no. 504)
UNIT - V: Managing Channel Institutions Managing Channel Information Systems, Managing Retailers, Wholesalers, Franchisers, Designing Channel Systems, reasons for Channel Conflicts, Managing Conflict, Managing International Channel of Distribution, Ethical issues in Sales and Distribution Management Case: 1 Kinetic Engineering Company, Handling Channel Conflict, (Krishna K Havaldar, Vasant page no 461) Case: 2 Indian Ayurveda Pharmacy Limited, (Tapan K. Panda,Sunil Sahad page no 719) MBA R13 51

IV Semester Electives - Finance

FINANCIAL DERIVATIVES

Objective of the Course:
This course is aimed at enabling the student understand the issues involved in planning finances and investments at a personal level, and to be in a position to provide advice on the issues.

Course Outcomes
- Understand the meaning, nature, risk & derivatives and history of derivative market.
- To understand the concept of binomial and black-scholes option models.
- Understand the future and spot prices of future concept.
- Understand the relationship in delta, theta and gamma.
- Understand the concept of trading and analysis of commodities market.

UNIT - I
Introduction to derivatives: Meaning and Types of Derivatives& Traders, History of derivatives, Derivative Markets, Derivatives Trading in India, Forwards and Future Markets, Types of financial risks.

UNIT - II
Option: Types of Options, Valuation of Options-Binomial model and Black and Scholes Model, Strategies involving single option and stocks, Combinations, Spreads.

UNIT - III
Futures: Hedgers and speculators; Future contracts; Future contracts-clearing house, margins, trading; Future prices and spot prices.

UNIT - IV
Managing market risk: Hedging schemes – delta hedging, theta, gamma; relationship in delta, theta and gamma; Vega and rho; portfolio insurance.

UNIT - V
Commodity Markets: Role of MCX in commodities markets; commodities trading; Fundamental and Technical analysis of the commodities markets.

TEXT BOOKS:
1. Hull, J.: Options: Futures and other Derivatives, Prentice Hall, New Delhi.
2. Kolb, Robert W: Understanding Future Markets, Prentice Hall Inc., New Delhi.
3. Vijaya Bhaskar P: Derivatives Simplified, Response Books, New Delhi.

REFERENCE BOOKS:
1. Hull, John C., Futures Options and Other Derivatives, Pearson Education (2008).
2. Head, Red, Financial Derivatives: an Introduction to Forwards, Futures and Options, Prentice hall of India (2005).
3. Vohra, N.D. and Baghi, B. R., Futures and Options, Tat McGraw Hill (2002).
4. Rajiv Srivatsava., Derivatives and Risk management, Oxford University Press (2010).

FIXED INCOME SECURITIES

Course Objectives:

In the recent past, there has been a dramatic changes and introduction of new instruments in the fixed income markets. These developments in the market have led to tremendous growth and eventually landed at subprime crisis involving mortgage backed bonds, collateralized debt obligations and credit derivatives. This course helps the students to the world of fixed income securities, discusses the risk associated with these assets class. Besides, this course makes the students to pricing, term structure and valuation techniques used by the market.

Course Outcomes:

At the end of the course students should be able to understand

- Various features of fixed income market
- Appreciate the price fixing mechanism for G-bonds
- Assess the valuation of bonds from pricing models and yield curves
- Evaluate credit risk exposures for bonds
- Understand construction of mortgage-backed security and its valuation
- Value derivative instruments to speculate or hedge risk

UNIT - I

Overview of Markets & Debt securities; Price-yield conventions and repo markets; Central banks, Repo Markets and Funding securities; Auction of Treasury Debt securities;

UNIT - II

Corporate Bond Market In India; Bond Mathematics; Convertible Securities; Yield curve and term structure; Bond Indexing, methodology for construction on Bond Index

UNIT - III

Modelling Credit Risk and Corporate debt securities; Mortgages, Federal Agencies and Agency Debt; Mortgage-Backed Securities; Inflation-linked debt

UNIT - IV

Eurodollar futures contracts; Interest Rate Swap; Treasury Futures contracts; Credit default swaps; Collateralized Debt Obligations

UNIT - V

Interest rate derivatives: The Standard market models and Models of short rate

Text Book:

1. Suresh Sundaresan, 2009.Fixed Income Markets and Their Derivatives, Third edition.

REFERENCE BOOKS:

1. Frank J. Fabozzi, 2012 The Handbook of Fixed Income Securities, Eighth edition
2. Pietro Veronesi, 2010. Fixed Income Securities: Valuation, Risk, and Risk Management.
3. Ross, Westerfield, Jaffe and Kakani, 2009. Corporate Finance. Eighth edition.
4. John C. Hull, 2005. Options, futures, and other derivative securities. Sixth edition

CORPORATE RESTRUCTURING FINANCE

Course Objective
To acquire knowledge of the procedural and practical aspects of Corporate Restructuring in detail.

Course Outcomes
At the end of the course students should be able to understand

- How to analyze capital allocation options
- Evaluate pros & cons of M& A Deals
- Evaluate financing options

UNIT - 1
Introduction and Concepts: Meaning, Need, Scope and Modes of Restructuring; Emerging Trends, Planning, Formulation and Execution of Various Corporate Restructuring Strategies - Mergers, Acquisitions, Takeovers, Disinvestments and Strategic Alliances, Demerger and Hiving off; Expanding Role of Professionals

UNIT - II
Merger and Amalgamation: Legal, Procedural, Economic, Accounting, Taxation and Financial Aspects of Mergers andAmalgamations including Stamp Duty and Allied Matters; Interest of Small Investors; Merger Aspects under Competition Law; Amalgamation of Banking Companies and Government Companies; Cross Border Acquisition and Merger

UNIT - III
Corporate Demerger and Reverse Merger: Concept of Demerger; Modes of Demerger - by Agreement, under Scheme of Arrangement; Demerger and Voluntary Winding Up; Legal and Procedural Aspects; Tax Aspects and Reliefs; Reverse Mergers – Procedural Aspects and Tax Implications

UNIT - IV
Takeover: Meaning and Concept; Types of Takeovers; Legal Aspects – SEBI Takeover RegulationsDisclosure and Open Offer Requirements; Bail Out Takeovers and Takeover of Sick UNIT - s; Takeover Defenses; Cross Border Takeovers

UNIT - V
Financial Restructuring: Financial Alternatives; Funding through various Types of Financial Instruments including Equity and Preference Shares, Debentures, Securities with Differential Rights, Swaps, Stock Options; ECBs, Funding through Financial Institutions and Banks; Management Buyouts/Leveraged Buyouts; Reduction of Capital; Reorganization of Share Capital; Buy-Back of Shares;

TEXT BOOKS:

1. K. R. Sampath, Mergers/Amalgamations, Takeovers, Joint Ventures, LLPs and Corporate Restructure, Snow White Publications
2. Ray, Mergers and Acquisitions Strategy, Valuation and Integration, PHI

REFERENCE BOOKS:

2. ICSI : Handbook on Mergers Amalgamations and takeovers
3. Strategic Financial Management by Prasanna Chandra (PC), Mcgraw Hill
4. Financial Markets and Corporate Strategy by Sheridan Titman, 2nd Edition (Irwin/McGraw-Hill, 2002).

COMMODITIES MARKET

Course Objective

The principal aim of this course is to provide students with both theoretical and applied knowledge related to commodities trading. The specific objective include

- To differentiate commodity from financial derivatives.
- To know application of commodity futures.
- To understand the price mechanism of commodity futures.
- To learn about NCDEX and regulatory frame work and taxation aspects of the commodities market.

Course Outcomes:

- The principal underlying commodity markets and how they operate
- Principal determinants of price in commodity markets
- Main players, their trading characteristics and objectives
- Commodity derivatives exchanges
- How contract settlement and delivery is achieved
- Trading, hedging and investment strategies

UNIT - I
Introduction to commodity derivatives

Introduction to derivatives, products, participants and functions, derivatives markets, difference between commodity and financial derivatives, NCDEX – Structure, clearing and settlement system and commodities traded on the NCDEX.

UNIT - II
Application of commodity futures and options

Instruments available for trading – forward contract, introduction to futures and option, pay off for futures and options, price commodity derivatives, cost of carry model, hedging, speculation and arbitrage.

UNIT - III
Trading, clearing and settlement

Trading – futures trading system, entities in the trading system, commodity futures trading cycle, order types and trading margins for trading in futures, charges, hedge limits.

UNIT - IV
Regulatory frame work of commodity derivatives

Rules governing commodity derivatives exchanges, participants, investor grievance and arbitration.

UNIT - V
Tax aspects

Implications of sales tax, value added tax (VAT) and obligations, Electronic sport exchange – NCDEX spot exchange Ltd (NSPOT).

TEXT BOOK:

1. Indian Institute of Banking & Finance. Commodity Derivaties, 2007, Macmillan India Ltd.

REFERENCE BOOK:

1. "Guide to Indian Commodity Market" by Ankit Galax JItendra Gala – Publishing by – Buzzing Stock publishing house – 2007.

STRATEGIC COST MANAGEMENT

Course Objectives:
The objective of the program is to provide necessary skills to participants which can be easily adapted to their work environment. Understanding costs, using it for planning (budgeting), pricing, cross functional decision making as also for cost management is a key requirement.
Course Outcomes:
By end of this course it is expected that the student will be able to:

- Understand the basic use of cost management information in each of the four functions of management and in different types of organizations and the cost driver concepts at the activity, volume, structural, and executional levels.
- Apply CVP analysis for breakeven planning.
- Understand the role of budgets in the overall management process and importance of strategy and its role in the master budgeting process.

UNIT - I
Cost Management and strategy: Management Accounting and role of cost management – Four functions of management – Contemporary business environment – Strategic focus of cost management.
Basic Cost Management concepts: Cost, Cost driver, cost objects and cost assignments – cost concepts for product and service costing.
UNIT - II
Product costing: Departments, Joint products and by products – Strategic role of cost allocation – Cost allocation to service and production departments – cost allocation in service industries – Joint product costing.
UNIT - III
Process costing: Characteristics of Process Costing Systems -Equivalent UNIT - s,Flow of Costs in Process Costing, Steps in Process Costing-,Process Costing Methods- Weighted-Average Method -First-In, First-Out (FIFO) Method- Comparison of Weighted-Average and FIFO Methods ,Process Costing with Multiple Departments Transferred-In Costs ,Weighted-Average Method ,The FIFO Method.
UNIT - IV
Profit Planning: CVP Analysis: Cost-Volume-Profit Analysis -Contribution Margin and Contribution Income Statement –Strategic Role of CVP Analysis-CVP Analysis for Breakeven Planning - CVP Analysis for Profit Planning- Revenue Planning -CVP Analysis for Activity-Based Costing- Sensitivity Analysis of CVP Results Assumptions and Limitations of CVP Analysis.
UNIT - V
Strategy and Master budget: Role of Budgets -Strategy, the Long-Term Plan, and the Master Budget -Importance of Strategy in Budgeting -Formulation of Strategy-Strategic Goals and Long-Term Objectives -Short-Term Objectives and the Master Budget.
The Budgeting Process -Budget Committee -Budget Period -Budget Guidelines Initial Budget Proposal -Negotiation, Review, and Approval- budgeting in service industries-Alternative Budgeting Approaches- Behavioral issues in Budgeting.

TEXT BOOKS:

1. 1.Cost Management A strategic Emphasis , 5th Edition, Edward J. Blocher University of North Carolina at Chapel HillKenan-Flagler Business School
2. Cost Management: Measuring, Monitoring, and Motivating Performance, 2nd Edition Leslie G. Eldenburg, Susan K. Wolcott.

REFERENCE BOOKS:

1. Hand Book of Cost Management, 2nd Edition ,Roman L Well , Michael W. Maher.
2. Cost Management: Measuring, Monitoring, and Motivating Performance 2nd Edition by Leslie G. Eldenburg Susan K. Wolcott .

IV Semester Electives - HR

PERFORMANCE AND COMPENSATION MANAGEMENT

Course Objective:

To provide an outline of Managing Employee Performance and thus enabling those to establish and manage appropriate Compensation for the Employees and Executives.

Course outcomes:

By the end of the course the learners are expected to

- Be able to show awareness of the process and principles of Performance Management.
- Understand the governing body in the performance review process.
- Identify the negative aspects of appraisal system and consider how these can be overcome.
- Apply the compensation/reward system with regard to performance.
- Understand the designing and fixation of pay in relation to job.

UNIT - I

Performance Management: Introduction of Performance Management – Meaning and Definition, Concept & Perspectives, Pre-requisites, Principles, Elements, Imperatives and Challenges – Job Performance: Determinants and Five-Factor Model – Performance Management System: Elements, Objectives and Functions.

UNIT- II

Performance Management Process – I: Introduction of PMP – Performance Planning: Meaning & Definition, Objectives, Importance, Methodologies, Process – Competency Mapping: Meaning & Definition, Methods, Linkage to Performance Planning – Performance Managing – Meaning & Definition, Characteristics, Objectives, Process.

UNIT- III

Performance Management Process – II: Performance Appraisal: Meaning & Definition, Characteristics, Objectives, Principles, Process, Methods and Common Rating Errors, Elements of Good Performance Appraisal – Performance Monitoring: Meaning & Definition, Objectives, DSMC/ATI Model and Process – Role of HR: Role, Seven sins of HR Professionals, Seven rules of Excellence for HR Professional.

UNIT - IV

Compensation Management: Compensation: Perspectives and Types , Common terms, Theories – Job Analysis – Job Evaluation – Performance Related Pay: Introduction, Objectives, Individual Performance Related Pay, Advantages and Disadvantages – Team Performance Related Pay: Team Incentive Plans, Advantages and Disadvantages - Person-Based Compensation: Skill-based pay, Competency-based pay

UNIT – V

Pay Design and Structure: Types of Wage Differentials – Wage Fixation: Collective Bargaining, Process, Statutory Wage Fixation – Introduction, Designing Pay structure, Components – Executive Compensation: Introduction, Principal-Agent Theory, Components of Executive Compensation, Suggestions –Compensation Strategy: Components and Significance, Developing Compensation strategy, Policies that are strategically relevant – Global Compensation: Emerging Issues – Compensation Practices of Different Countries.

TEXT BOOKS:

1. A. S. Kohli and T. Deb, “Performance management”, 1/e, Oxford University Press, New Delhi, 2008.
2. Mousumi S. Bhattacharya and Nilanjan Sen Gupta, “Compensation Managemnt”,1/e, Excel Books, New Delhi, 2009

REFERENCE BOOKS:

1. Michael Armstrong & Angela Baron, “Performance management: The New realities”, Jaico Publishing House, New Delhi 2002.
2. Dewakar Goel: “Performance Appraisal and Compensation Management – A Modern Approach”, 2/e, PHI Learning, New Delhi, 2012.

STRATEGIC AND INTERNATIONAL HRM

Course Objective:
To enable the students to develop a strategic perspective of human resource management and understand the global HR management functions.

Course Outcomes:
At the end of the course students should be able to understand

- How to frame strategies in the organization.
- Latest Trends and Future Scenario in Strategic Human Resource Management
- Basic concepts of Domestic and International HRM with its difference
- Implementation of HR Functions in Global Context
- Latest Trends and Future Challenges in International Human Resource Management

UNIT - I
Concept of SHRM: Strategic HRM - Definition, Basis, Principles, and Aims – Concepts of SHRM, Perspectives on SHRM – HR Strategies: Overall HR Strategies, Specific HR Strategies – Strategic Role of HR - The Impact of HRM - Formulating HR Strategy.
UNIT - II
Strategic HR Systems: Staffing systems - Reward and compensation systems – Employee and career development systems - Performance management systems – HR Systems: The Link to Business Strategy and Firm Performance - Domestic and international labour market.
UNIT - III
Global Perspectives of HRM: Global Perspective - Nature, Drivers, Ripple Effects – Multiculturalism, Cultural Dimensions, Managing Across Cultures - Nature of IHRM: Defining International HRM, Differences between domestic and International HRM - Strategic IHRM: Nature of Strategic IHRM, organizational context of IHRM, Dimensions of strategic IHRM – Nature, Motives and extent of Mergers & Acquisitions – HR Interventions, Role.
UNIT - IV
International HR Functions: HR Planning, Recruitment & Selection – Recent Trends in International Staffing – Expatriate Training – Theoretical Frameworks for CCT – Performance Management: Steps in Global PMS – Issues in Managing Performance in the Global Context – Assessing Subsidiary Performance. *{T:3}*
UNIT - V
Compensation and Other Issues in IHRM: Compensation - Objectives, Philosophies, Theories & Strategy – Components of Compensation, Variables influencing Compensation – Compensation Packages – Repatriation: Benefits, Challenges, Process – International Industrial Relations: Nature, Approaches, Key Players – HR Practices in Different Countries: China, Japan, USA. *{T:3}*
NOTE: One case study be discussed – per unit – in the class

TEXT BOOKS:

HR ANALYTICS AND METRICS

Course Objective:
The objective of the course is to introduce HR Analytics for the aspiring HR professionals. The course will provide the necessary conceptual framework, models and introduce the application tools.

Course Outcomes:
By the end of the course the learners are expected to
- Appreciate the use of HR Analytics for various organizational purposes.
- Apply the Metrics and Models for HR Analytics
- Determine the various indicators.
- Analyze the HR trends using predictive models.
- Be able to Report HR Analytics effectively.

UNIT - I
INRODUCTION to HR Analytics
What is HR Analytics - Origin and evolution of HR Analytics – How to Approach-Metrics- Benefits of implementing HR Analytics- Models of HR Analytics
UNIT - II
HR Analytics - Rationale
Linking HR to Business drivers - Values and Culture - Key Strategic Themes - Introduction to the Balanced Scorecard- The HR aspect
UNIT - III
QUANTIFICATION and MEASUREMENT
First generation – Cost Determinants - Second generation- Lead and lag Indicators- Lead indicators for compensation - Lead indicators for recruitment- Lead indicators for performance management- Lead Indicators for Learning and Development- Business Application: Scenario Modeling and Business Cases
UNIT - IV
ANALYSIS TOOLS
Analytical Tools: From Descriptive Analytics to Predictive Analytics -Implementing Trend Analysis- Implementing Predictive analytics- Using Regression and Correlation - Benchmarking process – (Sample Cases for different Scenarios to be discussed)
UNIT - V
REPORTING
Visualization Tools - Creating charts and graphs - Creating Pivot Table - Creating HR Dashboards

TEXT BOOKS:

1. Tracey Smith, HR Analytics: The What, Why and How, Numerical Insights LLC, 2013, ISBN 1492739162, 9781492739166.
2. Dr Martin R. Edwards, Kirsten Edwards, Predictive HR Analytics: Mastering the HR Metric, Kogan Page Publishers, 2016.

REFERENCE BOOKS:

3. Gene Pease, Boyce Byerly, Jac Fitz-enz, Human Capital Analytics: How to Harness the Potential of Your Organization's Greatest Asset, Wiley and SAS Business Series, John Wiley & Sons, 2012.

ORGANIZATION DEVELOPMENT AND CHANGE

Course Objective:
To enable the managers to cope up with the changes that take place constantly in business and also to make them manage the OD programmes and Change Management activities effectively.

Course Outcomes:
By the end of the course the learners are expected to

- Develop an understanding of organizational development.
- Become aware of the OD process and profession
- Apply the diagnostic models to organizational scenarios
- Understand OD Interventions and apply them in organizations.
- Enable implementation of change management programmes in organizations.

UNIT - I
Organization Development: Introduction
Organization Development: Definition, Growth, Relevance – History and Evolution of OD – Theories of Planned Change – General Models of Planned Change- Types of Planned Change- OD Practitioner: Competencies, Values, Ethics.
UNIT - II
OD – Diagnosis
OD: Entering and Contracting- Diagnosing: Need, Open Systems Model – Organizational Level Diagnosis- Group Level Diagnosis – Individual Level Diagnosis – Methods for collecting and analyzing diagnostic data -Feeding Back the Diagnostic Data.
UNIT - III
OD - Implementing Interventions
Designing Effective Interventions – Overview of Human Process Interventions – Leading and Managing Change: Vision, Political Support, Transition, Sustaining – Evaluating OD interventions- Institutionalizing Organizational Change.
UNIT - IV
Different Types of Interventions
Process Consultation – Third-Party Peacemaking – Team Building – Organization confrontation meeting – Intergroup-relation interventions- Large-group interventions.
UNIT - V
Strategic Change Interventions
Transformational Change: Characteristics – Integrated Strategic Change- Organization Design, Culture Change – Continuous Change: Self-Designing organizations- Learning Organizations.

TEXT BOOKS:

1. Thomas G. Cummings, Christopher G. Worley, Organization Development & Change, 9E, Cengage Learning, 2009, ISBN- 0324421389, 9780324421385

2. Thornhill, Managing Change, Pearson, 2005.
3. Radha R Sharma: Change Management—Concepts and Applications, TMH, 2007.

LEADERSHIP & PEOPLE MANAGEMENT

Course Objective:
To empower the students with the concepts, theories and approaches to lead organizations. The knowledge gained will help the students to feel confident to add value to the organizations. To gain an overview of what it means to be an effective people manager. To have a deeper understanding of the different aspects of people management.

Course Outcomes:
The students will be able to understand in definitions, concepts and process of leadership. The will also understand the approaches and theories of leadership, leadership styles, leadership types like transactional leadership, transformational leadership, team leadership. The student will be able to appreciate the challenges faced by a first time manager.

UNIT - I
Introduction: Leadership definition and components, ways of conceptualizing leadership, Trait versus process leadership, leadership and management. Leadership Attributes – Styles – Theories of Effective Leadership – charismatic leader, transformational leader.

UNIT - II
Factors influencing Leadership Behavior I: Personality, types, theories, Perception, factors – Learning Styles – theories. Factors influencing Leadership Behavior II: Emotional Intelligence – skills for Emotional intelligence – Cultural – formation – changing culture, Organizational and Situational Factors.

UNIT - III
Description of teams in the organizations – organizational context of teams -- structure, culture, support, human resource policies – team topography – purpose of teams, types of teams, size, diversity, extent of use.

UNIT - IV
Introduction to People Management: Difference between People Management and Human Resource Management; impact of individual and organizational factors on people management. **Getting Work Done Through Others:** Challenges of getting work done; significance of prioritization and assigning work to team members.

UNIT - V
Counseling & Mentoring:
Counseling: Why counsel troublesome people, how to turnaround problem employees and employees with problems, Counseling Dilemmas: Traps & Pitfalls to avoid
Mentoring: What mentoring can do to help high achievers, Mentor as a role model, advocate, career counselor, Mentoring: traps to avoid

TEXT BOOKS:

IV Semester Electives - Operations & Business Analytics

INNOVATION AND PRODUCT DEVELOPMENT

Course Objective:

The objective of this course is to enable the students to gain knowledge about the Innovation and New Product Development. This course will develop skills of the students in the area of Innovation Management and Design of Innovation Process, Strategic alliances, New product and package development. To acquaint the students about various issues of new service innovation, market research and its influence on new product development.

Course Outcomes:

At the end of the course the student will be able to

- Understand concepts; develop skills in the area of innovation management.
- Able to develop strategic alliances and networks for innovation.
- Hone their abilities for development of new products.
- Hone their abilities for the development of new packaging for the products.
- Able to develop skills for new service innovation and market research for new products.

UNIT - I

Innovation Management: Introduction, importance and need of innovation, popular view of innovation, models of innovation, innovation as a management process, the role of state in innovation and the market, innovation diffusion theories.

Managing innovation with in firms: Managing uncertainty, organizational characteristics that facilitate the innovation process, role of individual in the innovation process, IT systems and their impact on innovation.

UNIT - II

Innovation and Operations Management: Design of innovation, innovation in the management of operations process, technology trajectories knowledge base of an organization, learning organization, degree of innovativeness, technology strategy.

Strategic alliances and networks: forms of strategic alliances, open innovation, technology transfer and models of technology transfer.

UNIT - III

New product development - Product Strategy: New product plan, product strategy, differentials and positioning, competing with other products, new products and property, considerations when developing a new product development (NPD) strategy. NPD strategy for growth, over of NPD theories. Models of new product development.

UNIT - IV

Packaging and Product Development: Basic principles of packaging, characteristic of package, product rejuvenation, new product opportunities through packaging, product and packing size variation, packaging system and retailer acceptance.

UNIT - V

New Service Innovation and Market Research: New service innovation and market research and its influence on a new product development, different types of services, characteristics of a services, classification of service innovations, new service development models, service innovation and the consumer.

Market Research and New Product Development: Testing new products, techniques of testing new products, technology intensive products, new products as projects, NPD across different industries.

TEXT BOOK:

1. Paul Trout "Innovation and New Product Development", Pearson Pub.

REFERENCE BOOKS:

1. Karl Ulrich, Steven and Anitha Goel "Product Design and Development", MHE.
2. CK Prahalad and MS Kisan "The New Age of Innovation", MHE.
3. Dariun Rafinejod "Innovation, Product Development and Commercialization", Cengage.

COMPETITIVE MANUFACTURING MANAGEMENT

Course Objective:

To enable the students to learn the modern concepts of Manufacturing like JIT, TQM, Continues improvement, Waste Elimination, Improvement of quality of products and processes and lean manufacturing. By adapting the concepts, manufacturing organizations will achieve the competitive advantages over their competitors.

Course Outcomes:

- To enable the students to gain knowledge about continuous improvement waste elimination and customer focus.
- Able to apply JIT and TQM in day to day operations of the organization.
- To enable the students to adopt lean manufacturing practices for efficiency improvement of organization.
- Able to develop skills in the lean manufacturing area.

UNIT - I

Continuous Improvement, Waste Elimination, Customer Focus: Fundamentals of Continuous Improvement, Continuous Improvement Strategy, Kaizen, Improvement Threshold, Innovation Improvement , Making the Leap, Improvement as Strategy Finding and Implementing Improvements, PDCA Cycle, Five-Why Process, Value Analysis, Value Engineering, Process Reengineering, Reengineering Fundamentals, Role of Systems Analysis, Employee Involvement.

UNIT - II

Just In Time (JIT), Total Quality Management (TQM) and Production Planning: Value-Added and Waste Elimination, Value –Added Focus, Source of waste, JIT Principles, The concept of JIT, TQM: Customer-Focused Quality, Framework for Managing TQM, Employee Involvement, Benchmarking, Implementing TQM.

Simplified Production Planning and Control Systems, Scheduling for Smooth Flow, Synchronizing and Balancing Process, Synchronization.

UNIT - III

Quality Products and Quality Process: Quality of Design, Concurrent Engineering, Quality Function Deployment, Design for Manufacture, Taguchi Methods, Quality Inspection and Statistical Sampling, Role of Inspection, Acceptance Sampling, Statistical Process Control, Control Charts, Process, Capability, Statistical Process Control in Practice, Systems for Eliminating Defects, Source Inspection and Pokayoke, Jidoka.

UNIT - IV

Elements of Lean Production: Small-Lot Production, Lot-Sizing, Lot-Size Reduction, Facilitating Small Lot Sizes, Setup-Time Reduction, Improve Setups, Setup-Reduction Methodology, Techniques for Setup Reduction, Setup-Reduction Projects, Maintaining and Improvement Equipment, Equipment Maintenance, Equipment Effectiveness, Preventive Maintenance Program, Total Productive Maintenance, Implementing TPM, Pull Production Systems, Pull systems and push systems, Group Technology, Focused Factory, Workcells and cellular Manufacturing, workcell Concepts, Workcell Applications.

UNIT - V

Lean Manufacturing: Implementation of Lean Manufacturing, Toyota Production System, Inventory and Variation, Lean Manufacturing Simplified, Significance of Lead Time, Five Strategies to Becoming Lean, Sustaining the Gains, A Lean Transformation, Planning and Goals, Constraint Management, Cellular Manufacturing.

TEXT BOOK:

1. John M. Nicholas, “Competitive Manufacturing Management”, TMH, New Delhi, 2001. 12th RP.

REFERENCE BOOKS:

1. Lonnie Wilson, “How to Implementing Lean Manufacturing”, MC Graw Hill, New Delhi, 2015.

PREDICTIVE ANALYTICS FOR MANAGERS

Course Objective:

This course aimsto introduce the statistical tools from an applied perspective using business relatedexamples. Microsoft Excel software will be used throughout the course to aid in statistical analysis.

Course Outcomes:

By the end of this course students would able to understand

- Understand the concept probability and decision trees
- Understand the concept of discrete and continuous probability distributions
- Understand the concept of hypothesis testing and its applications
- Understand the concepts of forecasting in time series analysis.

UNIT- I

Introduction to probability:

Basic ideas, relative frequency, sample space, the probability laws, the general addition law, conditional probability, statistical independence, probability tree diagrams, introduction to probability distributions, expectation and variance for probability distribution.

UNIT- II

Probability distributions:

Continuous probability distributions: Introduction, The normal distribution, the standard normal distribution, checking for normality.

Discrete probability distributions:

Introduction, Binomial probability distribution and Poisson probability distribution.

UNIT- III

Sampling distributions and estimating:

Introduction to the concept of a sample: why sampling, sampling terminology, types of samples, types of errors. Sampling from a population, using excel to generate sample from a sampling distributions, population point estimates: types of estimates, criteria of good estimate, population confidence intervals, calculating sample size.

UNIT- IV

Introduction to parametric and non-parametric hypothesis testing: Hypothesis testing rationale, one sample z-test population mean, two sample z-test for the population mean, Two sample z-test for the population proportions.

Non-parametric tests: Sign test, Wilcoxon signed rank sum test for dependent samples, Mann-Whitney U test for two independent samples.

UNIT-V

Time series data and analysis:

Introduction to time series, index numbers: Stationary and non-stationary time series, seasonal time series, Univariate and multivariate methods, scaling the time series. Trend extrapolation: a trend component, fitting trend to a time series, types of trends, using atrend chart function to forecast a time series, trend parameters and calculations.

TEXT BOOKS:

1. Glyn Davis and BrankoPecar (2013), “Business Statistics using Excel”, Oxford University Press, New Delhi.

REFERENCE BOOK:

1. David M Levine, David. F. Stephan & Kathryn A. Szabat, Statistics for Managers – Using MS Excel, PHI, 2015.
2. HaladyRaoPurba (2013), “Business Analytics an Application Focus”, *PHI Learning Private Limited*, New Delhi.
3. D P Apte : Statistical Tools for Managers USING MS EXCEL, Excel, 2012.

ENTERPRISE RESOURCE PLANNING

Course Objective:
To understand about ERP systems, ERP software and modules, Implementation of ERP, and Emerging trends on ERP.

Course Outcome:
Enhanced Evaluation of ERP systems, Business Analytics, Future trends in ERP systems.

UNIT - I
INTRODUCTION - Overview of enterprise systems – Evolution - Risks and benefits - Fundamental technology - Issues to be consider in planning design and implementation of cross functional integrated ERP systems

UNIT - II
ERP SOLUTIONS AND FUNCTIONAL MODULES - Overview of ERP software solutions- Small medium and large enterprise vendor solutions, BPR, Business Engineering and best Business practices - Business process Management. ERP modules -sales and Marketing, Accounting and Finance, Materials and Production management.

UNIT - III
ERP IMPLEMENTATION - Planning Evaluation and selection of ERP systems implementation life cycle - ERP implementation, Methodology and Frame work Training – Data Migration. People organization in implementation-Consultants, Vendors and Employees.

UNIT - IV
POST IMPLEMENTATION:
Maintenance of ERP- Organizational and Industrial impact; Success and Failure factors of and ERP Implementation

UNIT - V
EMERGING TRENDS ON ERP - Extended ERP systems and ERP add–ons -CRM, SCM, Business analytics etc- Future trends in ERP systems-web enabled, Wireless technologies so on.

TEXT BOOKS:
1. Alexis Leon, ERP demystified, second Edition Tata McGraw-Hill, 2015.
2. Jyotindra Zaveri, Enterprise Resource planning(ERP), Himalaya publishing house, New Delhi,2009

REFERENCE BOOKS:
1. Jagan Nathan Vaman, ERP in Practice, Tata McGraw-Hill, 2015
2. Mahadeo Jaiswal and Ganesh Vanapalli, ERP Macmillan India, 2015.

PRODUCTIVITY IMPROVEMENT AND COST CONTROL

Course Objective:
The objective of this course is to enable the students to gain knowledge about the Productivity Improvement and Cost Control. This course will develop skills of students in the area of productivity improvement and its techniques, vital areas of productivity improvement. To acquaint the students about the various issues related to cost control and reduction.

Course Outcomes:
At the end of the course the student will be able to

- Understand concepts; develop skills in the area of productivity improvement.
- Able to conduct productivity improvement programmes (PIP).
- Hone their abilities for developing techniques for improvement of productivity.
- Hone their abilities to identify and concentrate on the vital areas of productivity improvement.
- Able to develop skills for cost control and reduction.

Unit-I
Productivity nature, role and sources:
Productivity concept, importance and role, productivity improvement factors: Internal and external, productivity analysis, approach to productivity appraisal and analysis.
Unit – II
Productivity improvement:
Managing organization effectiveness: General considerations, productivity improvement programmes (PIP), organizational approaches to PIP, major variations of PIP.
Unit-III
Productivity improvement techniques
Work study, work simplification, Pareto analysis, Just-in-Time (JIT) method, management through value analysis, cost-benefit analysis, zero based burgeting, cost product vise allocation. Behavioral techniques: Organization Development, Brain-storming, force – field analysis, nominal group technique.
Unit –IV
Vital areas of productivity improvement:
Improving the use of capital resources – waste reduction and energy conservation programme, maintenance improvement, improving productivity through quality.
Effective human resource management: The role of management, manpower, motivation, workers participation, productivity training and work organization.
Unit –V
Cost control and cost reduction
Concept of cost control and cost reduction, benefits of cost control and cost reduction, control reports, cost control vs cost reduction, tools and techniques of cost control and reduction. Impact of cost control on manufacturing industries profitability, techniques for reducing costs in service sector, methods of costing.

TEXT BOOK:
1. Joseph Prokopenko “Productivity Management”, ILO-Geneva.

REFERENCE BOOKS:
1. Carmen pages “The Age of Productivity”, Macmilan 2010.
2. IOMA “Cost Reduction and control best practices”, John wiley and sons.

SYLLABUS Year I Semester I

MC115-Computer Programming and Problem Solving

Objective: This course is intended to teach the basics of computer hardware and software. This includes the understanding of algorithms and method of problem solving. To make the student understand the logical structure of a computer program and problem solving using C language.

Learning outcomes:

The student will be able to:

- Identify and understand the working of key components of a computer system (hardware, software, firmware etc).
- Understand computing environment, how computers work and the strengths and limitations of computers.
- Identify and understand the various kinds of input-output devices and different types of storage media commonly associated with a computer
- Identify and understand the representation of numbers, alphabets and other characters in computer system
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in 'C' language
- Write small programs related to simple/ moderate mathematical, and logical problems in 'C'.
- Study, analyze and understand simple data structures, use of pointers, memory allocation and data handling through files in 'C'.
    - Identify and understand the working of different operating systems like windows and Linux etc.

UNIT - I

Computer and Data: Introduction - Computer Hardware, Data, Computer Software, History, Classification of computers- Workstations, Mainframe, Super computers, client and server, Data Inside the computer, Representing Data. Algorithm - Concept, Algorithm representation, Sub algorithms. Evolution of Programming languages, Building a program, Program execution, categories of languages. CPU, Main memory, Input or Output, Interconnection of subsystems Operating systems- Definition, Evolution, Components.

UNIT - II

Introduction to C and Control Statements: Desirable Program Characteristics. Data types, Constants, Variables and Arrays, Declarations, Expressions Statements, Symbolic Constants, Operators and Expressions, Data Input and Output. Preparing and Running A Complete C Program.

Branching, looping, The Switch Statement, The break Statement, The continue Statement, The comma Statement, The go to Statement.

UNIT - III

Functions, Storage classes and Arrays: A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Passing Arguments to a Function, Recursion. Storage Classes, Automatic Variables, External (Global) Variables, Static Variables. Defining an Array, Processing an Array, Passing Arrays to Functions, Multidimensional Arrays, Arrays and Strings.

UNIT - IV

Structures, Unions and Pointers: Defining a Structure, Processing a Structure, User-defined Data Types (Typedef), Structure and Pointers, Passing Structures to Functions, Self-referential Structures, Unions.

Pointer Declarations, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers, Passing Functions to Other Functions

UNIT - V **(11 Hrs)**

Files: Why Files, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data Files, Concept of Binary Files

Text Books:

1. Foundations of computer science, Behrouz A. Forouzan, 2nd edition.

2. Introduction to computers, 6/e, Peter Norton TMH.

3. Byron S Gottfriend, "Programming with C", Second Edition, Schaum Out Lines, TATA Mc Graw Hill (2007)

Reference Books:

1. Sinha P., "Foundation of Computing", BPB Publication, 1st Edition, 2003

2. Rajaraman V, "Fundamental of Computers" (2nd edition), Prentice Hall of India, New Delhi. 1996.

3. Behrouy A. Foreuyan & Richard F. Gilberg, "Computer Science A structured programming Approach using C", Third Edition, Cengage Learning (2008).

4. Herbert Schildt, “The Complete Reference C”, Fourth Edition, TMH (2008)

5. Ashok N. Kamthane, “Programming with ANSI and Turbo C”, Pearson Education (2008)

MC117-Internet and Web Technologies

Objective:

This course is intended to teach the basics involved in publishing content on the World Wide Web. This includes the 'language of the Web' – HTML, the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the Web, and a general grounding introduction to more advanced topics such as programming and scripting. This will also expose students to the basic tools and applications used in Web publishing.

Learning Outcomes:
The student will be able to:

- Analyze a web page and identify its elements and attributes.
- Create web pages using XHTML and Cascading Style Sheets.
- Build dynamic web pages using JavaScript (Client side programming).
- Create XML documents and Schemas.
- Build interactive web applications using AJAX.

UNIT-I

Networking Protocols and Internet: Introduction, Protocols in Computer Communications, the OSI Model, OSI Layer Functions.

Why Internet Working?, Problems in Internet Working, Dealing with Incompatibility Issues, A Virtual Network, Internet Working Devices, Repeaters, Bridges, Routers, Gateways, A Brief History of the Internet, Growth of the Internet.

UNIT-II

WWW, HTTP, TELNET:

Introduction, Brief History of WWW, the Basics of WWW and Browsing, Hyper Text Markup Language, Common Gateway Interface, Remote Login.

UNIT-III

JavaScript and AJAX:

Introduction, JavaScript, Basic Concepts, Controlling JavaScript Execution, Miscellaneous Features, JavaScript and Form Processing, Pop-up Boxes.

AJAX: Introduction, How AJAX Works? , Life without AJAX, AJAX Coding, Life with AJAX.

UNIT-IV

Introduction to XML:

What is XML?, XML versus HTML, Electronic Data Interchange, XML Terminology, Introduction to DTD,Document-Type Declaration,Element-Type Declaration,Attribute Declaration,Limitations of DTDs, Introduction to Schema, Complex Types, Extensible Stylesheet Language Transformations, Basics of Parsing, JAXP

UNIT-V

Creating Good Web Pages:

Introduction, Top Level Navigation, Creating Sample Layouts, Metaphor, Theme, and Storyboard, Screen Resolution,3-Column Layout, Using Frameworks, Using Graphics, Usability for the Handheld Devices, Creating Multilingual Web sites, XHTML and Web Browser Compatibility Issues, Designing the Basic Elements of a Home Page.

TEXT BOOKS:

1. Achyut Godbole,Atul Kahate"Web Technologies:TCP/IP,Web/Java Programming, and Cloud Computing",Third Edition,McGraw Hill Education.

Reference Books:

1. Deitel, Deitel, Goldberg, "Internet & World Wide Web How to Program", Third Edition, Pearson Education, 2006.
2. Raj Kamal, "Internet and Web Technologies", Tata McGraw-Hill.

MC119-Computer Organization

Objective: This course is intended to teach the basics involved in data representation and digital logic circuits used in the computer system. This includes the general concepts in digital logic design, including logic elements, and their use in combinational and sequential logic circuit design. This course will also expose students to the basic architecture of processing, memory and i/o organization in a computer system.

Learning Outcomes:

The student will be able to:

- Identify, understand and apply different number systems and codes.
- Understand the digital representation of data in a computer system.
- Understand the general concepts in digital logic design, including logic elements, and their use in combinational and sequential logic circuit design.
- Understand computer arithmetic formulate and solve problems, understand the performance requirements of systems

UNIT - I

Data representation and Logic circuits: Number System, complements, fixed point representation, floating point representation, binary codes, error detection codes. Logic gates, Boolean algebra, maps simplification, combinational circuits, flip flops, sequential circuits.

UNIT - II

Digital components and RTL: integrated circuits, decoders, multiplexers, registers, shift registers, binary counters, memory unit. Register Transfer language, Register Transfer, Bus and memory transfers, Arithmetic Mircrooperatiaons, logic micro operations, shift micro operations, Arithmetic logic shift unit.

UNIT - III

Basic Processing Unit: Instruction codes, Computer Registers, Computer instructions – Instruction cycle, Memory – Reference Instructions. Input – Output and Interrupt. STACK organization, Instruction formats, Addressing modes, DATA Transfer and manipulation, Program control, Reduced Instruction set computer.

UNIT - IV

Micro Programmed Control and Computer Arithmetic: Control memory, Address sequencing, microprogram example, design of control unit, Hard-wired control. Microprogrammed control unit

Addition and subtraction, multiplication Algorithms, Division Algorithms, Floating – point Arithmetic operations. Decimal Arithmetic unit, Decimal Arithmetic operations.

UNIT -V

The Memory System and IOP: Memory Hierarchy, Main memory, Auxiliary memory, Associative memory, Cache memory, Virtual memory. Peripheral Devices, Input-Output Interface, Asynchronous data transfer Modes of Transfer, Priority Interrupt, Direct memory Access.

Text Books:

1. Computer System Architecture, Morris Mano, 3rd Edition.
2. Computer organization – Carl Hamacher, Zvonks Vranesic, SafeaZaky, Vth Edition, McGraw Hill.

Reference Books:

1. Computer System Architecture, Naush Jotwani- 7MM.
2. Digital Electronics, James W Bignel, Robert Donovan, 5th Edition, Cengage Learning Publications.
3. Digital Design – Morris Mano, PHI, 3rd Edition, 2006.
4. Taub & Schilling: Digital integrated electronics , McGraw-Hill
5. R P Jain : Digital Electronics, 4th Edition TMH.

MC121-Discrete Mathematical Structures

Objective: Discrete mathematics is the study of mathematical structures that are discrete rather than continuous. Discrete mathematics deals with discrete objects. Its objective is to extend student’s Logical and Mathematical ability to deal with abstraction. Also its goal is to introduce most of the basic terminologies used in computer science courses and application of ideas to solve practical problems.

Course Outcomes:

At the end of the course, students would have knowledge of the concepts needed to test the logic of a program.

- Have an understanding in identifying structures on many levels.
- Be aware of a class of functions which transform a finite set into another finite set which relates to input output functions in computer science.
- Be aware of the counting principles
- Be exposed to concepts and properties of algebraic structures such as semi groups, monoids and groups.

UNIT I - Mathematical reasoning

Propositions; negation disjunction and conjunction; implication and equivalence; truth tables; predicates; quantifiers; natural deduction; rules of Inference; methods of proofs; use in program proving; resolution principle; application to PROLOG.

UNIT II - Set theory

Paradoxes in set theory; inductive definition of sets and proof by induction; Peono postulates; Relations; representation of relations by graphs; properties of relations; equivalence relations and partitions; Partial orderings; Posets; Linear and well-ordered sets;

UNIT III -Graph Theory

Elements of graph theory, cut vertices and edges, covering, matching, Euler graph, Hamiltonian path, trees traversals, spanning trees Independent sets, Isomorphism, planarity.

UNIT IV - Functions

Mappings; injection and surjection; composition of functions; inverse functions; special functions; Peono postulates; pigeonhole principle; recursive function theory;

UNIT V -Group Theory& Elementary Combinatorics

Definition and elementary properties of groups, semigroups, monoids, rings, fields, vector spaces and lattices; Elementary combinatorics; counting techniques; recurrence relation; generating functions;

TEXT BOOKS:

1. K.H.Rosen, Discrete Mathematics and applications, TataMcGraw Hill, fifth edition, 2003.

2. C.L.Liu, Elements of Discrete Mathematics, McGraw-Hill Book, Second

Edition, 2006.

REFERENCE BOOKS:

1. J .L.Mott, A.Kandel, T.P .Baker, Discrete Mathematics for Computer Scientists and Mathematicians, Prentice Hall of India, second edition, 1986.

2. W.K.Grassmann and J.P.Trembnlay, Logic and Discrete Mathematics, A Computer Science Perspective, Prentice Hall, First edition, 1996.

MC123-Accounting and Financial Management

Objective: To Demonstrate an appropriate mastery of the knowledge, skills and tools of financial accounting principles, managerial accounting principles and cost accounting principles. To demonstrate competency in applying course knowledge to analyze and successfully solve course specific problems.

Learning outcome: Upon completion of this program, The student will be able to:

- Demonstrate an understanding of the functional areas of accounting and finance.
- Demonstrate an understanding of the global environment and responsibilities of business.
- Demonstrate the ability to use business tools.
- Demonstrate the ability to communicate effectively.
- Demonstrate the ability to apply knowledge of business concepts and functions in an integrated manner.
- Demonstrate knowledge in applications of marginal costing concepts.

UNIT I:

Accounting: Generally Accepted Accounting Principles (GAAP), Characteristics and limitations of single entry system, double entry system of accounting, introduction of basic books of accounts ledgers. Preparation of trial balance - Final accounts (with simple Adjustments) -. Users of Accounting Information, Role of Accountant in modern Organization

UNIT II;

Ratio Analysis - Advantages - limitations – Types of ratio's –Liquidity ratio-Solvency ratio-Profitable ratio-Turnover ratio

UNIT III:

Financial Management - Meaning , scope, Role, objectives - Time value of money - Basics of Financial decisions -Investment decisions - basic concepts in capital budgeting- working capital Management.

UNIT-IV:

Costing - Nature and importance and basic principles. Elements of cost ,Absorption costing vs. marginal costing - Financial accounting vs. cost accounting vs. management accounting. Marginal costing and Break-even Analysis: nature, scope and importance - practical applications of marginal costing, limitations and importance of cost - volume profit analysis.

UNIT V:

Standard costing and budgeting: nature, scope and computation and analysis - materials variance, labor variance and sales variance –Types of Budgets.

TEXT BOOKS:

1. Accounting for Management, T. Vijay Kumar, TMH.

2. Financial Accounting,S.N. Maheswari and S.K. Maheswari, Vikas

REFERENCE BOOKS

1. Financial Accounting, A. Mukherjee and M. Haneef, TMH
2. Basic Financial Accounting for Management, Ambaresh Gupta, Pearson

3. Accounts and Finance for Non Accounts, Chatterjee. D.K, Himalaya
4. Financial Analysis and Accounting, P. Premchand Babu and M.Madan Mohan, Himalaya.
5. Essential of Financial Accounting, Ashish. K and Ballacharya, PHI.
6. Guide to Financial Management, John Tannent, Viva.

MC125-Computer Programming and Problem Solving Lab

Course Description and Objective:

The purpose of this course is to introduce to students to the field of programming using C language. The students will be able to enhance their analyzing and problem solving skills and use the same for writing programs in C.

Course Outcomes:

The student will be able to:

- Apply and practice logical ability to solve the problems.
- Understand C programming development environment, compiling, debugging, linking and executing a program using the development environment
- Analyzing the complexity of problems, Modularize the problems into small modules and then convert them into programs
- Understand and apply the in-built functions and customized functions for solving the problems.
- Understand and apply the pointers, memory allocation techniques and use of files for dealing with variety of problems.

1. Programs using Input, output and assignment statements

a) Write a program to print Name, Address and Birth Date.
b) Write a program to add, multiply and divide two integers and float numbers.
c) Write a program to convert meters to Feet.
d) Write a program to accept number of days and print year, month and remaining days.

2. Programs using Branching statements

a) Write a program to find the largest of three numbers.
b) Write a program to check whether the entered number is prime or not.
c) Write a program to check whether the entered number is even or odd.
d) Write a program to find the roots of an equation ax2 + bx + c = 0.

3. Programs using Looping statements
a) Write a program to print 1 2 3 4 5 …..10.

b) Write a program to print series 2, 4, 6, 8,…….n.
c) Write a program to print series 2, 4, 16,……n*n using shorthand operator and while loop
d) Write a program to generate fibonnacci series.
(A Fibonacci Sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence)

e) Write a program to print the multiplication table.
f) Write a program to find a factorial of the given number.
g) Write a program to check whether the given number is Armstrong or not.
h) Write a program to check whether the given number is Strong number or not.
i) Write a program to check whether the given number is Perfect number.
j) Write a program to print all the numbers and sum of all the integers that are greater than 100 and less than 200 and are divisible by 13.

4. Programs using Functions
a) Write a program to find Fibonacci series till given number.
b) Write a program to check whether a number is a palindrome.
c) Write a program to print upper and lower triangular matrix.
d) Write a program to calculate sum and average of numbers in an array.
e) Write a program to calculate maximum and minimum value in an array.

5. Programs using Arrays
a) Write a program to find maximum element from 1-Dimensional array.
b) Write a program to sort given array in ascending order.
c) Write a program to transpose a matrix.
d) Write a program to add, subtract and multiply two matrices.

6. Programs using Structures
a) Define a structure called book that will describe the following information:Title of the book, Subject , Cost. Write a program to read the information about the 10 books and print subject-wise list containing name of the book with its cost.
b) Declare a structure with members: name, code, age, weight and height. Read the information of 10 persons and print the list of persons details whose weight is in between 35 and 50 kgs.

7. Programs using strings

a) Write a program to find string length.
b) Write a program that will read a text and count all occurrences of a particular alphabet
c) Write a program that will read a string and rewrite it in the alphabetical order. i.e.the word HELLO should be written as EHLLO.
d) Write a program that appends the one string to another string.
e) Write a program that finds a given word in a string.
f) Write a program that checks a given string for palindrome.
g) Write a program to find the number of vowels, blank spaces and other characters in a string.

8. Programs using Pointers

a) Write a program using pointers to read an array of integers and print its elements in reverse order.

b) Write a function to calculate the roots of the quadratic equation. The function must use two pointer parameters, one to receive the coefficients a, b, and c, and the other to send the roots to the calling function.
c) Write a function using pointers to add two matrices and to return the resultant matrix to the calling function.
d) Write a function to swap two values using pointers

9. Programs using Recursion

   a) Write a recursive program to calculate the factorial of a given number
   b) Write a recursive program to print Fibonacci series using recurssion

10. Programs using Files

   a) Write a program to create a file.
   b) Write a program to copy one file into another file
   c) Write a program to merge two files

TEXT BOOK :

1. Yashwanth P. Kanethkar, "Let us C", 8th ed., BPB Publisher, 2007.

REFERENCE BOOK :

1. B.A. Forouzan and R.F. Gilberg, "Computer science, A structured programming approach using C", 3rd ed., Thomson, 2007.

MC127-Internet and Web Technologies Lab

Course Description and Objective*:*

The purpose of this course is to introduce to students to the basics of internet and web technologies like HTML, DHTML, CSS, XML, Javascript, VBScript.

Course Outcomes:

- Understand, analyze and apply the role of languages like HTML, DHTML, CSS, XML, Javascript, VBScript and
- protocols in the workings of the web and web applications
- Analyze a web page and identify its elements and attributes.
- Create web pages using HTML, DHTML and Cascading Styles sheets.
- Create web pages using JavaScript
- Create XML documents and XML Schema.
- Build and consume web services.

1. Create a table in HTML to the following details

Book Name	**Author**
Operating Systems	Godbole
Data Communications and Networks	Godbole
Computer Networks	Rajkumar
OOPs	R.Nageswara Rao

2. Create a form by using various attributes of the input tags.

3. Create a web page multiple types of style sheet used in a single page.

4. Write a CGI sample program to send output back to the user.

5. Write a Java Script program by using variables.

6. Write a java script program to multiply two numbers and display the result in separate text box.

7. Write a java script program on Form Validations.

8. Write a AJAX program checking the presence of XMLHttpRequest object.

9. Write a program to create sales report for our books by using AJAX.

10.Create an XML document template to describe the result of students in an examination. The description should include the student's roll number,name,three subject names and marks,total marks,percentage and results.

11. Write an XSLT code to only retrieve the book titles and their prices.

12. Design a basic elements of a home page.

MC129-Communication Skills Lab - I

Objective of the Course:

To introduce students to the specific use of language for the purposes of Communication which would be an essential prerequisite for success in the areas of writing and speech. The teaching efforts in this course will be directed towards making students develop their business and general writing abilities using the fundamental principles that apply to the correct use of the English language free of grammatical and other related errors

Expected Learning Outcome:

Students are made

- to know the various ways to communicate
- to appreciate the intelligent and innovative use of rules
- to be able to generate creative output in tune with the demands of industry.
- To improve their power of comprehension and the ability to express themselves with rigor through writing and speech.

UNIT-1: COMMUNICATION – NATURE AND SCOPE

Communication – Significance – Process – Types – Flow of Communication – Basic Communication Skills – LSRW – Verbal and Non-verbal Communication – Formal Vs Informal Communication – Oral and Written Communication – Barriers to effective communication – organizational communication – Strategic implications of modern communication.

UNIT-2: AURAL AND ORAL COMMUNICATION

Listening – Active and Passive Listening –Barriers to effective listening – Strategies for effective listening – Introduction to presentations – Conversations – Roleplay – JAM – Debate – Extempore – Individual and Group Presentations –Group Discussions – Procedure – participation – Interviews - Business presentations - Addressing large groups – Public Speaking.

UNIT-3: WRITTEN COMMUNICATION

Sentence Structure – Requisites of a good sentence – Writing paragraphs – Principles of writing a good paragraph – Development of paragraphs – Describing people, places, things and processes – Narrating events, incidents – Persuasive communication – Longer composition – Common errors in writing.

UNIT-4: BUSINESS CORRESPONDENCE

Internal Communication – External Communication – Writing a memo – Letter Vs memo – Form and Structure – Circular – Notice – Agenda – Proceedings of meetings – Minutes – Business Letters – Sales Letters – Enquiry – Quotations – Placing orders – Claims – Adjustments – Inviting – Appreciating – Thanking etc. – Writing Emails – Standard Email practices – Email etiquette – Sample Emails.

UNIT-5: REPORTS, PROPOSALS AND PRESENTATIONS

Purpose of writing Reports –Format and Style – Types of reports – Regular reports – Factual reports – Survey reports – Feasibility reports – Business presentations – Format – Key elements for winning business proposals – Business presentations – Planning – Preparing – Organizing – Rehearsing – Improving – Visual aids – Nuances of delivery.

Text Books:

Year II Semester I

MC116-Data Structures

DATA STRUCTURES

Course Description and Objective:

The main objective of this course is to provide an introduction to basic data structures and manipulation by using C programming language. It enables the students to understand Abstract Data Types. It also enables the students to understand the behavior of data structures (lists, stacks, queues, trees (binary trees and tree traversals, height-balanced trees), graphs, hash tables). It improves his ability to analyze a problem and determine the appropriate data structure for the problem.

Course Outcome:

Having successfully completed this course, the student will be able to:

- Apply C programming techniques such as pointers, dynamic memory allocation, structures to developing solutions for particular problems.
- Design and implement abstract data types such as linked list, stack, queue and tree in C programming language using static or dynamic implementations.
- Evaluate and choose appropriate abstract data types to solve particular problems.

UNIT – I Introduction, Arrays and Linked Lists

Concept of Data Structures, Implementation of Data Structures Arrays: One-dimensional array, multidimensional arrays, pointer Arrays, linked lists: Types of linked list, applications of linked lists.

UNIT – II Stacks and Queues

Stack:- Introduction to stack, Representation of a stack, operations on stack, applications of stacks; Queue: Representation of Queues, Operations on Queue, various Queue structures, Applications of Queues.

UNIT-III Trees

Trees:- Definition and concepts of trees, Representation of Binary tree, types of Binary trees, Tree Traversals operations of Binary search tree, Introduction to AVL trees.

UNIT-IV Graphs

Graph Terminologies, Representation of Graphs, operations on graphs, Graph traversals, Applications of Graphs, minimum spanning trees.

UNIT-V Sorting and Searching

Sorting Techniques; Insertion sort, selection sort, merge sort, heap sort, searching Techniques : linear search, binary search and hashing.

Text Books:

1. Debasis Samanta, "Classic Data Structures", PHI Learning Private Limited, 2^{nd} edition, 2011.

2. E. Horowiz & S. Sahani, "Fundamentals of Data Structures", Galgotia Book Source Pvt.

Limited, 3^{rd} edition, 2003.

Reference Books:

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Second Edition, Pearson Education.

2. Sartaj Sahni, Data Structures, Algorithms and Applications in C++ , Universities Press, Second Edition, 2005

3. Jean Paul Tremblay and Paul G. Sorenson, An Introduction to Data Structures with Applications,Tata Mc-Graw Hill, Second Edition, 26^{th} Reprint 2004

MC118-Database Management Systems

Course Objectives:

The objective of the course is to present an introduction to database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a DBMS.

Learning Outcomes:

Upon successful completion of this course, students should be able to:

- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data.
- Improve the database design by normalization.
- Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

UNIT- I

Database System- concepts and architecture: Data modelling using the Entity Relationship (ER) modelling and Enhanced Entity Relationship (EER) modelling, Specialization and Generalization.

UNIT-II

The Relational Model: Relational database design using ER to relational mapping, Relational algebra and relational calculus, Tuple Relational Calculus, Domain Relational Calculus, SQL.

UNIT-III

Database design theory and methodology: Functional dependencies and normalization of relations, Normal Forms, Properties of relational decomposition, Algorithms for relational database schema design.

UNIT-IV

Transaction processing concepts: Schedules and serializability, Concurrency control, Two Phase Locking Techniques, Optimistic Concurrency Control, Database recovery concepts and techniques.

UNIT-V

Data Storage and indexing: Single level and multi level indexing, Dynamic Multi level indexing using B Trees and B+ Trees, Query processing and Query Optimization, Introduction to database security.

TEXT BOOK:

1. Ramez Elmasri and Shamkant B. Navathe, Fundamentals of Database Systems (5/e), Pearson Education, 2008

REFERENCE BOOKS:

1. Silberschatz, Korth, “Data base System Concepts”, 4th ed., McGraw hill, 2006.

2. Raghu Ramakrishnan and Johannes Gehrke, Database Management Systems (3/e), McGraw Hill, 2003.

3. Peter Rob and Carlos Coronel, Database Systesm- Design, Implementation and Management (7/e), Cengage Learning, 2007.

MC120-Software Engineering

Objective : This course will be helpful for the student to understand the concept of a software life cycle and the role of process maturity models and apply key elements and common methods for elicitation and analysis to produce a set of software requirements. To distinguish between the different types and levels of testing (unit,integration, systems, and acceptance)

.**Learning Outcomes:**

After completing the course attendees will be able to:

- appreciate the wider engineering issues that form the background to developing complex, evolving (software-intensive) systems;
- plan a software engineering process to account for quality issues and non-functional requirements;
- Employ a selection of concepts and techniques to complete a small-scale analysis and design project.
- Interact with a client to elicit input, and communicate progress.
- Employ group working skills - including general organization, planning and time management, inter-group negotiation, etc.
- Translate a specification into a design, and then realize that design practically, all using an appropriate software engineering methodology.
- Reflect on the appropriateness of different software engineering methodologies in different circumstances.
- Demonstrate knowledge of the wider software engineering context, software engineering processes and their applicability.

UNIT - I

Introduction to Software Engineering : Software engineering, The software process, Software myths**.** A generic process model, Process assessment and improvement, Descriptive process models.

UNIT - II

Requirement Engineering and Modelling: Requirement engineering, Building requirement models

Requirements analysis, Scenario based modeling, Data modeling concepts, Class based modeling, Flow oriented modeling, Creating a behavioral model

UNIT - III

Design concepts and Architectural design: The design process, design concepts, the design model. Software architecture, Architectural styles, architectural design.What is a component, Designing class based components, conducting component level design, Golden rules, user interface analysis and design.

UNIT - IV

Software Testing: A strategic approach to software testing, test strategies for conventional software, Validation Testing, System Testing.

White box testing, Basis Path Testing, Control Structure Testing, Black Box Testing.

UNIT - V

Product metrics and Quality : Metrics for requirement model, Metrics for design model, Metrics for source code model, Metrics for testing model, Metrics for maintenance model. Introduction to Software quality.

TEXT BOOKS:

MC122-Probability and Statistics

Course description and Objectives:

Aim of this course is to introduce statistical techniques which are useful in every walk of life. It also introduces some probability which has many applications. By the end of the course, student would have learned regression,correlation techniques, probability, distributions, test of hypothesis and their applications.

Course outcomes:

The students will understand

- the use of statistical techniques in every walk of life.
- The statistical techniques like regressions, correlation can be used for finding qualitative and quantitative relation between two or more variables
- Probability , probability distributions can be used in many places like academics ,real life problems for decision making.
- Test of hypothesis will be useful for them in taking decisions .
- All these topics are useful in academics as well as in research work.
- They find applications at work places as well as in their real life.

UNIT I - Descriptive Statistics

Basic Definitions, Frequencies, Graphical Representation, Histogram, Ogive curves, Measures of Central tendency, Arithmetic mean, Median, Mode, mean deviation, standard deviation, Symmetry and Skewness, Karl Pearson's Coefficient of skewness.

UNIT II - Curve Fitting and Correlation, Regression

Least squares method, curve fitting (straight line and parabola only) Covariance, Correlation, Types, Pearson's Coefficient of correlation, Rank correlation, Spearman's rank correlation. Regression, Regression lines, multiple regression.

UNIT III - Probability

Introduction, Definition (Classical and Axiomatic approach), Addition theorem, Conditional probability, Multiplication theorem, Total probability, Bayes theorem.

UNIT IV - Distributions

Random variables, Discrete and Continuous variables, Introduction to Distributions.

Binomial distribution : Definition, Mean and Standard deviation, Recurrence relation, Applications, Fitting of binomial distribution.

Poisson Distribution : Definition, Mean and Standard deviation, Recurrence relation, Poisson Distribution is an approximation of Binomial distribution, Applications, Fitting of Poisson distribution.

Geometric Distribution : Definition, Properties.Normal Distribution : Definition, Normal curve, Mean and Standard deviation,

Median, Mode, Normal Distribution applications, Normal Distribution is an approximation to Binomial distribution.

Exponential Distribution : Definition, Properties.

UNIT V - Sampling Methods

Population and Sampling, Parameters and Statistics, Types of sampling, Sampling Distributions, Central limit theorem, Standard Error of mean from infinite population, Standard deviation of variance.Test of hypothesis and test

of significance, confidence limits, confidence interval, Test of significance of Large samples, T-distribution, Chi square test.

TEXTBOOKS :

1. H. K. Dass and Er. Rajnish Verma, Higher Engineering Mathematics, S. Chand & Co., New Delhi, 2011.

2. Miller and Fruinds, Fundamentals of Probability and Statistics, PHI publication, 2003.

REFERENCEBOOKS :

1. S.C. Gupta and V.K .Kapoor, “Fundamentals of Mathematical Statistics”, Sultan Chand & Co., New Delhi, 2005.

2. B.V. Ramana, “Higher Engineering Mathematics”, 3rd Edition, Tata McGraw-Hill Publishing Co, 2008.

MC124-Computer Based Optimization Techniques

Objectives: To well ground students in the mathematical, engineering, and modeling skills that are the basis for computer based optimization techniques, and they will be prepared to apply those skills to the efficient design, analysis, operation and control of complex systems.

Learning Outcomes:

- Proficiency with tools from optimization, probability, statistics, simulation, and engineering economic analysis, including fundamental applications of those tools in industry contexts involving uncertainty and scarce or expensive resources.
- Facility with mathematical and computational modeling of real decision-making problems, including the use of modeling tools and computational tools, as well as analytic skills to evaluate the problems.
- Facility with the design, implementation, and analysis of computational experiments.

UNIT - I (10 Hrs)

Introduction: History and Development of OR,Types of models ,General methods for solving Operations Research models, Charecteristics, Phases, scientific method .**Linear Programming And IT's Applications:** Introduction,Linear programming formulation, Graphical solution , Simplex method, Artificial variable technique and Duality principle.

Transportation Problem: Mathematical formulation, Optimal solution, Degeneracy and Un-balanced Transportation

problem. **Assignment Problem:** Mathematical formulation, Optimal solution,Un-balanced assignment problem and variations.

UNIT - II (13 Hrs)

Replacement: Introduction, replacement of items that deteriorate when money value is not constant and constant, replacement of items that fail completely.**Job Sequencing:** Introduction, Principal assumption, solution of sequencing problem, optimal solution for processing n-jobs through two, three machines.

UNIT – III (13 Hrs)

Inventory Control: Meaning of. Inventory Control, Types,Reasons for carrying Inventory, economic lot size, quantity discounts, Deterministic models.

UNIT - IV (12 Hrs)

Network Models : Definitions – CPM and PERT – Their Algorithms Integer Programming : Branch and Bound Algorithms cutting plan algorithm.

UNIT - V (12 Hrs)

Theory of Games: Introduction, Minimax (maximin) criterion and optimal strategy, solution of games with saddle points, rectangular games with out saddle points, 2 X 2 games, dominance principle, m X 2 & 2 X n games, graphical method.

Dynamic Programming: Introduction, Bellman's Principle of optimality, solution of problem with finite number of stages, shortest path problem, linear programming problem.

MC126-Data Structures Lab

Course Description and Objectives:

The course is designed to develop skills to design and analyze simple linear and non linear data structures. It strengthen the ability to the students to identify and apply the suitable data structure for the given real world problem. It enables them to gain knowledge in practical applications of data structures .

Course Outcomes:

At the end of this lab session, the student will

- Be able to design and analyze the time and space efficiency of the data structure
- Be capable to identity the appropriate data structure for given problem
- Have practical knowledge on the applications of data structures

List of Experiments:

1. Design and Implement List data structure using i) array ii) singly linked list.
2. Design and Implement basic operations on doubly linked list.
3. Design and Implement stack using i) array ii) singly linked list
4. Design and Implement Queue using i) array ii) singly linked list
5. Design and Implement basic operations on Circular Queue
6. Design and Implement basic operations(insertion, deletion, search, findmin and findmax) on Binary Search trees.
7. Implementation of Breadth First Search Techniques.
8. Implementation of Depth First Search Techniques.
9. Implementation of Searching Techniques.
10. Implementation of Sorting Techniques.

6. R. G. Dromey, How to Solve it by Computer, Prentice-Hall of India.

MC128-Database Management Systems Lab

Learning Outcomes:

The student will be familiarized with

- Familiarization of Oracle RDBMS
- Data Definition, Table Creation, Constraints, Insert, Select Commands, Update and Delete Commands.
- Nested Queries and Join Queries
- Views
- Design and development of database using Oracle
- High level programming language extensions (Control structures, Procedures and Functions).
- Front end Tools
- Forms
- Triggers
- Menu Design
- Reports.
- Case Study/ Database application project.

1. Creation, altering and dropping of tables and inserting rows into a table (use constraints while creating tables) examples using SELECT command.

2. Queries (along with sub Queries) using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET, EXCEPT and Constraints.

3. Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and dropping of Views.

4. i) Creation of simple PL/SQL program which includes declaration section, executable section and exception –Handling section (Ex. Student marks can be selected from the table and printed for those who secured first class and an exception can be raised if no records were found)

ii) Insert data into student table and use COMMIT, ROLLBACK and SAVEPOINT in PL/SQL block

5. Program development using WHILE LOOPS, numeric FOR LOOPS, nested loops using ERROR Handling, BUILT –IN Exceptions, User defined Exceptions, RAISE- APPLICATION ERROR.

6. Programs development using creation of procedures, passing parameters IN and OUT of PROCEDURES.

7. Program development using creation of stored functions, invoke functions in SQL Statements and write complex functions.

8. Program development using creation of package specification, package bodies, private objects, package variables and cursors and calling stored packages.

9. Develop programs using features parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of clause and CURSOR variables.

10. Develop Programs using BEFORE and AFTER Triggers, Row and Statement Triggers and INSTEAD OF Triggers

TEXT BOOKS:

1. ORACLE DATA BASE LOG PL/SQL Programming SCOTT URMAN, Tata Mc-Graw Hill.

2. SQL & PL/SQL for Oracle 10g, Black Book, Dr.P.S. Deshpande.

3. SQL and PL/SQL for oracle 9i, Ivan Byross.

4. Oracle certified associate Mysql beginner's guide.

5. Oracle certified associate Oracle 10g &11g SQL fundamentals.

MC130-Statistical Techniques Lab

Course Description & Objectives:

The course provides a basic knowledge of statistics and make the students familiar with the software for statistics. It enables the students learn to solve simple technique which helps them to make analysis and effective decision making.

Course Outcomes:

The student will be able

- to learn basics of statistics
- and familiar with the software for statistics.
- to interpret and analyse data

List of Experiments:

1. Tabulation of data
   a) One way Frequency
   b) Two way Frequency
2. Construction of Histogram
3. Construction of Pie Chart
4. Construction of Line Chart
5. Construction of Scatter Chart
6. Descriptive Statistics
7. Correlation Analysis
8. Simple Regression Analysis
9. Multiple Regression Analysis
10. Fitting a trend line to an observed data

11. Polynomial Trends
12. Logarithmic, power and exponential trends
13. Moving averages

REFERENCE BOOK

MC 217 - OBJECT ORIENTED PROGRAMMING

Course Objectives:

To make the student able to understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries. To make the student able to write computer program to solve specified problems, by using the Java SDK environment to create, debug and run simple Java programs.

Learning Outcomes:

The student is expected to have the

- Understanding of OOP concepts and basics of java programming (Console and GUI based)
- Skills to apply OOP and Java programming in problem solving
- Should have the ability to extend his knowledge of Java programming further on his/her own.

UNIT – I Introduction, Classes and Objects

Creation of Java, Importance of Java to Internet, Byte code, Java buzzwords, OOP Principles- Encapsulation, Inheritance and Polymorphism, Data types, Variables, Declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Compiling and running of simple Java program, Concepts of classes and objects Class fundamentals – Declaring objects, Assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, this key word, Garbage collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and Inner classes, Exploring the String class.

UNIT –II Inheritance, Packages and Interfaces

Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, the Object class. Defining, Creating and Accessing a Package, Understanding CLASSPATH, Importing packages, Differences between classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and Extending interfaces.

11. Polynomial Trends
12. Logarithmic, power and exponential trends
13. Moving averages

REFERENCE BOOK

MC 217 - OBJECT ORIENTED PROGRAMMING

Course Objectives:

To make the student able to understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries. To make the student able to write computer program to solve specified problems, by using the Java SDK environment to create, debug and run simple Java programs.

Learning Outcomes:

The student is expected to have the

- Understanding of OOP concepts and basics of java programming (Console and GUI based)
- Skills to apply OOP and Java programming in problem solving
- Should have the ability to extend his knowledge of Java programming further on his/her own.

UNIT – I Introduction, Classes and Objects

Creation of Java, Importance of Java to Internet, Byte code, Java buzzwords, OOP Principles- Encapsulation, Inheritance and Polymorphism, Data types, Variables, Declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Compiling and running of simple Java program, Concepts of classes and objects Class fundamentals – Declaring objects, Assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, this key word, Garbage collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and Inner classes, Exploring the String class.

UNIT –II Inheritance, Packages and Interfaces

Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, the Object class. Defining, Creating and Accessing a Package, Understanding CLASSPATH, Importing packages, Differences between classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and Extending interfaces.

UNIT – III Exception Handling, Multithreading

Concepts of Exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and Finally keywords, Built-in exceptions, Creating own exception Sub classes, Concepts of Multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads, deadlocks, Thread groups.

UNIT – IVApplets and Event Handling & AWT Controls

Applet Class, Applet Architecture, Applet Skeleton - Applet Initialization and Termination, Overriding update(), Simple Applet, Display Methods, Requesting Repainting - A simple banner Applet, Using The Status Window, The HTML APPLET Tag, Passing parameters to Applets, Applet Context and show Document.

Event sources, Event classes – ActionEvent, AdjustmentEvent, ComponentEvent, Container Event, Focus Event, InputEvent, ItemEvent, KeyEvent and MouseEvent, Delegation event model, Event Listeners, Handling mouse and Keyboard events, Adapter classes.

UNIT – VAWT&Swing

Concepts of components, Container, Panel, Window, Frame, Canvas, Font class, Color class and Graphics. AWT Controls : Buttons, Labels, Text fields, Text area, Check boxes, Check box groups, Lists, Choice, Scrollbars, Menus, Layout Managers - Flow, Border, Grid, Card and Grid bag.

JApplet, JFrame and JComponent, Icons and Labels, Handling threading issues, Text fields, Buttons – The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

MC 219 - OPERATING SYSTEMS

Course Objectives:

To make the student understand how the operating system effectively manages system resources.

Course Outcomes:

The student will

· Understand the types of Operating systems and analyze the process scheduling Algorithms and Case study on processing Scheduling.

· Understand the resource sharing among the processes in the system.

· Understand how to manage the memory during the process execution (Memory Management) and File Management system.

UNIT I - Introduction

What Operating System do, Operating System structure. Process Concept:Overview, Process scheduling, Operations on process, Inter processcommunication. Process Scheduling: Scheduling Criteria, SchedulingAlgorithms, Multiple-Processor Scheduling, Case Study: Process scheduling

in Linux.

UNIT II - Process Synchronization

The Critical-Section Problem, Peterson's Solution, Synchronization Hardware,Semaphores, Monitors, Classical problems of synchronization, Case Study :Process Synchronization in Linux.

UNIT III - Deadlocks

Deadlock Characterization, Methods of Handling Deadlocks, Deadlockprevention, Deadlock avoidance, Deadlock Detection and Recovery.

UNIT IV - Memory Management

Continuous memory allocation, paging, structure of the page table,segmentation, demand paging, page replacement algorithms.

UNIT V - File System

File Concept, Access Methods, Directory Structure, File System Mounting,File Sharing, Protection, File-System Structure, File System Implementation,Directory Implementation, Allocation Methods, Free Space Management.

Secondary-Storage Structure: Overview of Mass-Storage Structure, DiskStructure, Disk Scheduling, RAID Structure.

TEXTBOOK:

2. Andrew S Tanenbaum ,"Modern Operating Systems", 3rd edition, , PrenticeHall, 2007.

MC 221 - Computer Networks

Course Objectives:

This course will focus on imparting knowledge about the aspects of data communication and computer network systems with the required basic principles behind them. To provide essential knowledge about the OSI model and TCP/IP model. To create a good foundation covering the physical, data link, network, transport and application layers.

Course Outcomes:

To understand the communication basics.

To have the knowledge of different networks.

To know about different protocols.

To understand how to find the routes by using different routing algorithms.

To Understand the basics of Internet.

UNIT – I Introduction

Use of computer networks, network hardware, network software, reference models, examplenetworks

UNIT – II Physical layerandMedium access control sublayer

Guided Transmission Media, The Data link layer: design issues, Error detection &correction, elementary data link protocols, sliding window protocols.

The channel allocation problem, Multiple access protocols, Data Link Layer Switching.

UNIT – III Network Layer

Design issues, routing algorithms, congestion control algorithms, quality of service, Internetworking, the network layer in the Internet.

UNIT – IVTransport layer

The transport service, elements of transport protocols, the internet transport protocols: UDP& TCP.

UNIT – VApplication Layer

DNS-Domain Name System. The World Wide Web, Multimedia.

TEXT BOOK:

1. Andrew S Tanenbaum, "Computer Networks", 4th ed., Pearson Education, 2003.

REFERENCE BOOKS:

1. Behrouz A. Forouzan, "Data communications and Networking", 3rd ed.,TMH, 2003.
2. William Stallings, "Data and Computer Communications", 7th ed., Pearson Education, 2004.

MC 223 – Advanced Data Structures

Course Objectives:

Describe and implement a variety of advanced data structures (hash tables,priority queues, balanced search trees). Demonstrate an understanding of external memory and external search and sorting algorithms. Data structures

for querying large collections of large strings.

Emphasis on object-oriented design, writing and documenting medium-sized programs.

Course Outcomes:

At the end of the course students should be able to :

· Analyze run-time execution of sorting methods.

· Understand and implement priority based queues;

· Understand and implement binary search trees;

· Understand and analyze heap sort;

· Knowledge on basic search and sort algorithms. Adequate knowledge to choose appropriate data structure and algorithm to solve a problem.

UNIT I - Sorting

Internal sorting -Insertion sort, Selection sort ,Shell sort , Bubble sort ,Quick sort ,Merge sort, radix sort. External sorting -Multi way merge. Searching Sequential search, Binary search and ternary search.

UNIT II - Hashing

General Idea, Hash function, separate chaining, linear probing, quadratic probing, double hashing, rehashing. Priority queues- Applications, heap sort,

Huffman codes.

UNIT III - Tree

Representation –insertion, deletion , searching. Balanced Search Trees AVL Trees: Representation –insertion, deletion , searching. Binary Search trees Red black trees: Representation –insertion, deletion , searching. B-Trees – Representation – insertion, deletion , searching.

UNIT IV - Graphs

Graph Representation, Graph Traversals, Shortest Paths Problems (Dijkstras Algorithm, Floyd warshalls Algorithm) Connectivity – Directed and Undirected Graphs, Minimum spanning trees- Prims Algorithm, Kruskals Algorithm, Topological Sort

UNIT V - Text Processing

String operations, pattern matching problems, Tries, Text compression, Text similarity testing. Sub string search problems: brute force method , knuth morris pratt, Boyer moore algorithm.

TEXT BOOKS:

1. Sartaj Sahni, Data Structures, Algorithms and Applications in Java, Universities Press, Second Edition, 2005.

2. A.Drozdek Data Structures and Algorithms in Java, 3rd edition, , Cengage Learning, 2008.

Algorithms in C++” WSE, WILEY, 2014.

2. Jean Paul Tremblay and Paul G. Sorenson, An Introduction to Data

Structures with Applications,Tata Mc-Graw Hill, Second Edition, 26thReprint 2004.

MC 225 - Principles of Management and Organization Behavior

Course Objectives:

The course provides the basic perspectives of management theories and practices and organization behaviour. This enables the students in knowing and understanding the functions of management, culture in organization, personality.

UNIT - I

Introduction to Management: Concept of Management…, nature of management – importance of management – functions of management … evoloution of management thought – scientific management – Modern management – human relations theories – management Vs administration.

UNIT - II

Planning: Importance – advantages – disadvantages – types of plans – process of planning – steps involved in planning, Techniques of planning – decision – Decision Making – Process

Organizing: Principles of organization – types of organization structures, merits, demerits and suitability – Departmentation, Centralization and decentralization

UNIT - III

Directing and Controlling: Meaning and Nature of Directing – leadership, Communications – formal and informal communication.

Controlling: Importance – Process and Techniques of controlling

UNIT - IV

Organizational Behaviour: Organizational Behaviour – Meaning – Nature and Scope of Organizational Behaviour – Contributions of different disciplines of OB – Context of OB – Organizational and Environmental context levels of OB

UNIT - V **(10 Hrs)**

Individuals in organization – Perception – Personality – Attitudes – Group & Teams – Team Process & Development – Organizational Culture: Meaning and Components.

Text Books:

1. P. Subba Rao, "Management & OB" Himalaya Publishing House, 2008
2. Mullins, " M & OB" 5 th Edition, Pearson Education, 2007
3. Rama Swamy, :Principles of Management", Himalaya Publication,2010.

5. Robbins, P Stephen, Timotny A judge: OrganisationBehaviour, 12/e, PHI, New Delhi, 2007.

MC227 - Object Oriented Programming Lab

Course Objectives:

This course is introduced to understand the basic concepts of Java,Classsyntax, data types, flow of control, classes, methods, objects, arrays, exceptionhandling, recursion, and graphical user interfaces (GUIs). Writing and testing applets for potential inclusion in web pages. Understanding how to accessenterprise data bases from the application programs.

Course outcomes:

The student is expected to have hands on experience with the following:

1. Basics of Java programming, multi-threaded programs andException handling

2. The skills to apply OOP in Java programming in problem solving

3. Use of GUI components (Console and GUI based)

List of Experiments:

1. Write a Java program that prompts the user for an integer and thenprints out all prime numbers up to that. Integer.

2. Write a Java program that checks whether a given string is a palindromeor not.

Ex: MADAM is a palindrome.

3. Write a Java program for sorting a given list of names in ascendingorder.

4. Write a Java Program that reads a line of integers, and then displayseach integer, and the sum of all the integers (use StringTokenizer class)

5. Write a Java program that reads a file and displays a file and displaysthe file on the screen, with a line number before each line.

6. Write a Java program that displays the number of characters, lines andwords in a text file.

7. Write a Java program for creating multiple threads

a) Using Thread class.

b) Using Runnable interface.

8. Write a Java program that illustrates how run time polymorphismisachieved.

9. Write a java program that illustrates the following

a) Creation of simple package.

b) Accessing a package.

c) Implementing interfaces.

10. Write a java program that illustrates the following

a) Handling predefined exceptions.

b) Handling user defined exceptions

11. APPLETS

a) Working with Frames and various controls.

b) Working with Dialogs and Menus.

c) Working with Panel and Layout.

d) Incorporating Graphics.

e) Working with colors and fonts

12. SWINGS

Jpanel- Jframe – Jtoolbar—JwindowFramework

REFERENCEBOOKS:

2. P.J.Deitel and H.M.Deitel, Java for Programmers, Pearson education,PHI, 2008.

3. P.Radha Krishna, Object Oriented Programming through Java,Universities Press, 2010.

4. Bruce Eckel, Thinking in Java, Pearson Education, 2010.

5. S.Malhotra and S.Choudhary, Programming in Java, Oxford Univ. Press,2009.

MC229 - Advanced Data Structures Lab

Course Objectives:

The fundamental design, and implementation of data structures. Principles for good program design, especially the uses of data abstraction.

Course Outcomes:

At end of this laboratory the student will be able to

· Write well-structured object-oriented programs of medium size of

code.

· Write programs and class libraries given a specification.

· Students will collaboratively design and then individually implement

a robust set of tools to efficiently and elegantly organize data, with

optimized access methods.

List of Programs:

1. Write Java programs that use recursive and non-recursive functions to traverse the given binary tree in

a) Preorder b) Inorder c) Postorder.

2. Write a Java program to perform the following operations:

a) Construct a binary search tree with given elements.

b) Search for a key element in the above binary search tree.

c) Delete an element from the above binary search tree.

3. Write Java programs that use both recursive and non-recursive functions for implementing the following searching methods:

a) Linear search b) Binary search

4. Write a Java program to implement priority queue ADT.

5. Write Java programs for implementing the following sorting methods:

a) Bubble sort b) Insertion sort c) Radix sort

6. Write Java programs for implementing the following sorting methods:

a) Quick sort b) Merge sort

7. Write a Java program to implement all the functions of a dictionary (ADT) using Hashing.

8. Write a Java program to perform the following operations:

a) Insertion into a B-tree b) Searching in a B-tree

9. Write a Java program that implements KMP algorithm for pattern matching.

REFERENCEBOOKS:

2. J.R.Hubbard, Data Structures with Java, 2nd edition, Schaum's Outlines, TMH, 2013.

3. S.Sahani Data structures, Algorithms and Applications in java, 2nd Edition, Universities Press, 2009.

MC 231 - Communication Skills Lab-2

Course Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students and enabling them to acquire employability skills. Designed to impart work related skills, the course will help trainees develop interpersonal communication, leadership and team skills. It will give them the required competence and confidence to handle professional tasks.

Training Methodology:

The training methodology is designed to bring about changes in attitudes through experience-based learning. Activities in simulated environments such as role plays, group discussions, micro-presentations, audio-video clippings, case studies, psychometric tests etc., will provide students insights into their strengths and weaknesses.

Course Outcomes:

The Soft Skills course will help students develop professional and non-personal ways of approaching people and work through the correct use of language and speech in a workplace environment along with the ability to think critically on issues demanding attention. This includes enhancing self-awareness and a sense of self-worth in the students in order to improve their productivity and performance at the workplace.

Course Contents:

UNIT-I:

a) Role of language in Personality – How language reflects, impacts personality – Using gender-neutral language in MNCs – being culturally sensitive.

Activity – Appraising each other – Worksheets related to the above

b) Career Planning- job vs. career- goal setting- SWOT analysis- planning and prioritization - four quadrant time management system - time management – self-management – stress-management.

Activity: Setting a SMART goal - SWOT analysis of the self – Writing a Statement of Purpose (SOP).

c) Effective Resume-Writing: structure and presentation - planning and defining the career objective - projecting one's strengths and skill-sets – summarizing - formats and styles - covering letter.

Activity: Resume preparation –writing a covering letter..

UNIT-II:

A) Functional English - Formal/informal context – purpose - interpersonal dynamics - ideation –content organization - initiating a conversation –responding appropriately - right body language.

Activity - Role play in different situations, - self-introduction - social background (family, home town etc.,) - role model - my future - likes/dislikes (movies, persons, places, food, music etc.,) - a mini project on functional English.

b) Vocabulary-Building: Etymology of words - word roots - prefixes & suffixes - synonyms & antonyms-collocations - one-word substitutes – analogies - idioms and phrases - contextual guessing of unfamiliar words – task-oriented learning (100 words).

Activity: Flash cards (200 words) – vocabulary exercises with hand-outs.

UNIT-III:

a) Group Discussion: Articulation and flow of oral presentation - dynamics of group discussion – intervention – summarizing - voice modulation – content generation – Key Word Approach (KWA) – Social, Political, Economic, Legal and Technical Approach (SPELT) – View Point of Affected Part (VAP) - language relevance

- fluency and coherence.

Activity: Mock sessions on four types of GD topics.

b) Facing Interviews: Interview process - understanding employer expectations - pre-interview planning - opening strategies - answering strategies – stress-based interviews - tele-interviews, video interviews- frequently asked questions (FAQs).

Activity: Writing responses to FAQs - mock interviews.

UNIT-IV:

a) Reading Comprehension: Reading as a skill- techniques for speed reading- skimming- scanning- appreciating stylistics - impediments for speed reading - eye fixation - sub-vocalisation - critical reading - reading based on purpose - reading for information - reading for inference -understanding tone.

Activity: Reading comprehension exercises with texts drawn from subject areas. (Hand-outs)

b) Listening Comprehension: Listening as skill - different types of listening - hidden data of communication - active listening - top-down approach - bottom-up approach.

Activity: Following different accents (Indian, British, American) listening comprehension exercises with audio and video excerpts.

UNIT-V:

a) Data Commentary: Deductive & inductive reasoning - data interpretation - tables & charts - bar charts - pie charts - line graphs - ratios & proportions – percentages - coding and decoding - reasoning by analogy - artificial language etc.,

b) Analytical Thinking: Statement and Conclusion - Data Sufficiency - Statement and Argument - Statement and Assumption - Logical Deduction - Logical Problems.

Activity: Exercises with handouts.

MC 226 - Object Oriented Analysis and Design

Course Objectives:

To gain enough competence in object-oriented software Engineering (OOSE) to tackle a complete Object Oriented project. Acquire UML, a common language for talking about requirements, designs, and component interfaces. Understand the main principles of good Object Oriented Design. Understand what major tasks are appropriate to developing Object Oriented models and software and the issues and options in reuse and component based development.

Course Outcomes

- To understand the fundamental principles of OO programming.
- To master key principles in OO analysis, design, and development.
- Be familiar with the application of the Unified Modeling Language (UML) towards analysis and design.
- To know common patterns in OO design and implement them.
- To be familiar with alternative development processes.
- rocesses.

UNIT –I Introduction to UML

Importance of modeling, principles of modeling, object oriented modeling, conceptual model of the UML, Architecture, Software Development Life Cycle.

UNIT – II Basic Behavioral Modeling and Basic Structural Modeling

Use cases, Use case Diagrams, Interactions, Interaction diagrams, Activity diagrams.

Classes, Relationships, common Mechanisms, and diagrams.

UNIT – III Class & Object Diagrams

Terms, concepts, modeling techniques for Class & Object Diagrams.

UNIT – IV Advanced Structural Modeling and Behavioral Modeling

Advanced classes, advanced relationships, Interfaces, Types and Roles, Packages.

Events and signals, state machines, processes and Threads, time and space, state chart diagrams.

UNIT – V Architectural Modeling

Component, Deployment, Component diagrams and Deployment diagrams.

TEXT BOOKS:

1. Booch G., Rumbaugh J. &Jacobsons I., “The Unified Modeling Language User Guide”, Addison Wesley, 2002.

REFERENCE BOOKS:

1. Meilir Page-Jones, “Fundamentals of Object Oriented Design in UML”, 4th ed., Pearson Education, 2008.
2. Pascal Roques, “Modeling Software Systems Using UML2”, 2nd ed., WILEY- Dreamtech India Pvt. Ltd, 2004.
3. AtulKahate, “Object Oriented Analysis & Design”, 1st ed., The McGraw-Hill Companies, 2008.
4. Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado, “UML 2 Toolkit”, 1st ed., WILEYDreamtech India Pvt. Ltd., 2003.

MC 228 - Middleware Technologies

Course Objectives:

The main objective of this course is to get on awareness of a the various technologies which can help in the implementation of the various live project

Course Outcomes:

Upon completion of the subject, students will be able to:

- Understand the basic structure of distributed systems;
- Understand the motivation of using middleware;
- Understand the basic concepts underlying the ASP.net and C#.net;
- Learn to make judgment in choosing a suitable middleware for application problems;
- Understand the basic concepts of Web Services and EJB.

UNIT I - Emergence of Middleware

Introduction,Objects, Web Services,Middleware Elements, Vendor Architecture, interoperability,Middleware in distributed applications, Types of Middleware,RMI, JDBC,Client/Server CORBA Style.

UNIT II - ASP.NET

Introduction, Lifecycle, Server Controls, Basic Controls, Directives, Validators, Database Access, ADO.Net, File Uploading, Data Sources, Data Binding, Custom Controls, Security, Data Caching, Multithreading, Deployment.

UNIT III - Fundamentals of C#& .NET platform

Comprehensive .NET Assemblies. OOPs with C#, Attributes, Reflection, Properties, Indexers ,Delegates ,Events, Collections, Generics, Anonymous Methods, Unsafe Codes and Multithreading

UNIT IV - Web Services

Introduction, Architecture, Components, Security, XML Web Service Standards, Creating Web Services, Extending Web Services, Messaging Protocol, describing, discovering, securing

UNIT V - EJB

Java Bean Component Model, EJB Architecture, Session Bean, Java Message Service, Message Driven Bean, Entity Bean

TEXT BOOKS:

1. Wortgang Emmerich John,"Engineering Distributed Objects", Wiley, 2000.
2. Mesbah Ahmed, Chris Garrett, Jeremy Faircloth, Chris Payne, DotThatCom.com, "ASP.net web developer guide", Wei Meng Lee (Series Editor),Jonothon Ortiz (Technical Editor),Syngress Publications, 2001.

REFERENCE BOOKS:

MC 230 - Formal Languages and Automata Theory

Course Objectives:

The purpose of this course is to acquaint the student with an overview of the theoretical foundations of computer science from the perspective of formal languages. Classify machines by their power to recognize languages. Employ finite state machines to solve problems in computing. Explain deterministic and nondeterministic machines.

Course Outcomes:

As a result of the content and structure of this course, students should be able to:

- Understand the functioning of Finite-State Machines, Deterministic Finite-State Automata, Nondeterministic Finite-State Automata and Pushdown Automata and Turing Machines.

- Create Automata to accept strings from various simple languages.
- Understand Formal Grammars.
- Beware of the Regular, Context-Free and Context-Sensitive languages.

UNIT I - Introduction & Notations

Alphabets, Strings and Languages; Automata and Grammars, Regular Languages. Deterministic finite Automata (DFA)-Formal Definition. State transition graph, Transition table, Language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata, Distinguishing one string from other, Myhill-Nerode Theorem. FA with output: Moore and Mealy machine, Equivalence of Moore and Mealy Machine, Applications and Limitation of FA.

UNIT II - Regular expressions

Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Kleen's Theorem, Regular expression to FA, DFA to Regular expression, Arden Theorem, Non Regular Languages, Pumping Lemma for regular Languages. Application of Pumping Lemma, Closure properties of Regular Languages, Decision properties of Regular Languages. (Proofs not required)

UNIT III - Grammar Formalism

Regular grammars-right linear and left linear grammars, equivalence between regular linear grammar and FA, Context Free Grammar, Definition, Examples, Derivation, Derivation trees, Ambiguity in Grammar, Inherent ambiguity, Ambiguous to Unambiguous CFG, Useless symbols, Simplification of CFGs, Normal forms for CFGs: CNF and GNF, Closure properties of CFLs, Decision Properties of CFLs: Emptiness, Finiteness and Membership, Pumping lemma for CFLs. (Proofs not required)

UNIT IV - Push Down Automata

Description and definition, Instantaneous Description, Language of PDA, Acceptance by Final state, Acceptance by empty stack, Deterministic PDA, Equivalence of PDA and CFG, CFG to PDA and PDA to CFG, Two stack PDA.

UNIT V - Turing Machines

Basic model, definition and representation, Instantaneous Description, Language acceptance by TM, Computable functions, Types of Turing machines, Universal TM, Church's Thesis, Recursive and recursively enumerable languages, Halting problem, Introduction to Undecidability, Undecidable problems about TMs. Post correspondence problem (PCP), Modified PCP.

3. Papadimitrou, C. and Lewis, C.L., "Elements of the Theory of Computation", 2nd ed., PHI, 2009.

Electives - I

MC 232 - Embedded Systems

Course Objectives:

Emphasis on Comprehensive treatment of Embedded Hardware and Real Time Operating systems along with case studies in tune with the requirements of Industry. The example-driven approach will put students on a fast track to understanding embedded-system programming and applying what they learn to their projects.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- Understand what is a embedded system and microcontroller.
- Understand different components of a microcontroller and their interactions.
- Become familiar with programming environment used to develop embedded systems
- Understand key concepts of embedded systems like I/O, timers, interrupts, interaction with peripheral devices

UNIT I - Introduction to Embedded Systems

Definition, Applications of ES, Examples of Embedded Systems, Embedded Hardware Units and Devices, Embedded Software, Design Metrics in ES, Challenges in ES Design.

UNIT II - Architecture of 8051

8051 Micro Controller Hardware, Input/Output Ports and Circuits, External Memory, Counter and Timers, Serial data Input/Output, Interrupts.

UNIT III - Programming Model of 8051

Data Transfer and Logical Instructions , Arithmetic Operations, Decimal Arithmetic, Jump and Call Instructions, Further Details on Interrupts.

UNIT IV - Real Time Operating Systems

Introduction**,** Tasks and Task States, Tasks and Data, Reentrancy, Semaphores and Shared Data, Basic Design Principles, Inter Process Communication: Message Queues, Mailboxes and Pipes.

UNIT V - Embedded Software Development

Timer Functions, Events, Memory Management, Interrupt Routines in an RTOS Environment, Host and Target Machines, Linker/Locator for Embedded Software, getting Embedded Software into the Target System.

TEXT BOOKS:

1. Raj Kamal, “Embedded Systems”, 2nd ed., TMH, 2009.

2. Kenneth J. Ayala, Thomson, “The 8051 Microcontroller”, 3rd ed., 2008.

2. Ajay V Deshmukhi,” Micro Controllers”, 1st ed., TMH, 2008.
3. Frank Vahid, Tony Givargis, John Wiley, “Embedded System Design”, Microcontrollers, 3rd ed.,Pearson Education, 2008.

MC 234 - Human Computer Interaction

Course Objectives:

The student will learn how interaction with computers takes place at user interface, which comprises both hardware and software. To facilitate communication between students of psychology, design, and computer science on user interface development projects. To facilitate communication between students of psychology, design, and computer science on user interface development projects.

Course Outcomes:

- The student will learn, The importance of User Interface and interaction with computers using a Graphical User Interface and Keyboard and function keys along with video drivers
- To provide the future user interface designer with concepts and strategies for making design decisions.
- To expose the future user interface designer to tools, techniques, and ideas for interface design.
- To introduce the student to the literature of human-computer interaction.

UNIT I - Introduction

Importance of user Interface - definition, importance of good design. Benefits of good design. A brief history of Screen design, The graphical user interface - popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user - Interface popularity, characteristics- Principles of user interface.

UNIT II - Design process

Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, and understanding business functions.

UNIT III - Screen Designing

Screen Designing:- Design goals - Screen planning and purpose, organizing screen elements, ordering of screen data and content - screen navigation and flow - Visually pleasing composition - amount of information - focus and emphasis - presentation information simply and meaningfully - information retrieval on web - statistical graphics - Technological consideration in interface design.

UNIT IV - Windows

New and Navigation schemes selection of window, selection of devices based and screen based controls. Components - text and messages, Icons and increases - Multimedia, colors, uses problems, choosing colors.

UNIT V - Software tools

Specification methods, interface - Building Tools. Interaction Devices - Keyboard and function keys - pointing devices - speech recognition digitization and generation - image and video displays - drivers.

TEXT BOOKS:

1. Wilbert O Galitz “The essential guide to user interface design”, Wiley Computer publishing 2nd edition.
2. Ben Shneidermann,CatherinaPlaisant “Designing the user interface”, Pearson Education Asia. 3rd Edition 2007,

MC236 - Open Systems For Web Technologies

Course Objectives:

It makes familiar of Open Source technologies like LINUX, MySQL, CGI, PHP, Webserver and various tools which are used to develop web programming.

Course Outcomes:

- Students can develop web pages using HTML
- Can write dynamic web pages
- Can write server programs handling database connection
- Can generate responses accordingly

UNIT I - Introduction

Nature of Open sources –Maturity Model- Design Strategy-Support Models-Advantages – Application of Open Sources.

General Overview - Case Study: Linux - Files and Directories - Intermediate File Management - Process Management-Memory Addressing - Process Scheduling - Signals – Virtual File System- Page Cache- Program Execution.

UNIT II - Open source Database

General Overview- Case Study: MySQL -Introduction – MySQL Basic- Directory Structure-Creating Users and Super Users- Designing a Relational Database-Managing Databases, Tables and Indexes-Operators-functions-Transaction Management

UNIT III - Open source programming languages

General Overview - Case Study: PHP -Introduction – Basics of PHP- functions-Error Handling- Interaction between PHP and MySQL Database using Forms-Using PHP to manipulate and Retrieve Data in MySQL.

UNIT IV - Open source web server

General Overview of Web Server - Case Study: Apache Web server – Working with Web Server – Configuring and using Apache Web services-Case Study Apache Tomcat.

UNIT V - Open source tools and technologies

Open Source IDE-Modeling Tools- Mozilla Firefox- Wikipedia- Eclipse

TEXT BOOKS:

1. Dan Woods and GautamGuliani,"Open Source for the Enterprise: Managing Risks, Reaping Rewards", O'Reilly, Shroff Publishers and Distributors, 2005.

2. Daniel.P.Bovet and Marco Cesati," Understanding the Linux Kernel ", O, Reilly, 2007.

REFERENCE BOOKS:

3. Vivek Chopra, Sing Li, Jeff genender, "Professional Apache Tomcat 6", Wiley India, 2007

Electives-2
MC 238 - Enterprise Resource Planning

Course Objectives:

This subject provides students with the basic concepts of ERP systems for manufacturing or service companies, and the differences among MRP, MRP II, and ERP systems and in-depth knowledge of major ERP components, including material requirements planning, master production scheduling, and capacity requirements planning.

Course Outcomes:

Upon completion of the subject, students will be able to

- Examine systematically the planning mechanisms in an enterprise, and identify all components in an ERP system and the relationships among the components;
- Understand production planning in an ERP system, and systematically develop plans for an enterprise;
- Use methods to determine the correct purchasing quantity and right time to buy an item, and apply these methods to material management;
- Understand the difficulties of a manufacturing execution system, select a suitable performance measure for different objectives, and apply priority rules to shop floor control.

UNIT I - Introduction to ERP

ERP Introduction, Benefits, Origin, Evolution and Structure**:** Conceptual Model of ERP, The Evolution of ERP, The Structure of ERP.

UNIT II - ERP Technologies

Business Process Reengineering, Data ware Housing, Data Mining, Online Analytic Processing(OLAP), Product Life Cycle Management(PLM),LAP, Supply chain management.

UNIT III - ERP Modules

ERP Marketplace and Marketplace Dynamics**:** Market Overview, Marketplace Dynamics, The Changing ERP Market. ERP- Functional Modules: Introduction, Functional Modules of ERP Software, Integration of ERP, Supply chain and Customer Relationship Applications.

UNIT IV - ERP Implementation

Basics, ERP Implementation Life Cycle, Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.

UNIT V - ERP & E-Commerce

Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into organizational culture. Using ERP tool: either SAP or ORACLE format to case study

TEXT BOOKS:

1. Alexis Leon, "ERP Demystified", Tata McGraw Hill
2. Rahul V. Altekar "Enterprise Resource Planning", Tata McGraw H**ill**

REFERENCE BOOKS:

4. Vinod Kumar Garg and Venkitakrishnan N K, "Enterprise Resource Planning – Concepts and Practice", PHI
5. Joseph A Brady, Ellen F Monk, Bret Wagner, "Concepts in Enterprise Resource Planning", Thompson Course Technology
6. Mary Summer, "Enterprise Resource Planning"- Pearson Education

MC 240 - Software Project Management

Course Objectives:

Students will be introduced to the following aspects of project management related to managing small software development and To describe activities of SPM highlights and train in the planning and implementation of project management. It brings a specific project to complete on time and on budget.

Course Outcomes:

- identify and describe the impact different project contexts will have upon all aspects of a software development project, including an understanding of the role professional ethics plays in the conduct of successful software development
- identify and describe the key phases of project management and the key skills associated with each
- determine an appropriate project management approach through an evaluation of the business context and project scope and knowledge of agile and traditional project management approaches
- demonstrate through application, knowledge of the key project management skills, such as product and work break-down structure, schedule; governance including progress reporting, risk and quality management
- as part of a small team research and produce a concise piece of writing suitable for presentation to senior management demonstrate an ability to present their ideas both formally and informally to a group of their peers.

UNIT I - Software Management & Software Economics

The waterfall model, conventional software Management performance. Evolution of Software Economics : Software Economics, pragmatic software cost estimation.

Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections.

UNIT II - The old way and the new & Life cycle phases

The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.Engineering and production stages, inception, Elaboration, construction, transition phases.

UNIT III - Artifacts of the process

The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts. Model based software architectures : A Management perspective and technical perspective.

UNIT IV - Project Organization and planning

Work breakdown structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning. Line-of-Business Organizations, Project Organizations, evolution of Organizations. Process Automation : Automation Building blocks, The Project Environment.

UNIT V - Project Control and Process instrumentation

The seven core Metrics, Management indicators, quality indicators, life cycle expectations, pragmatic Software Metrics, Metrics automation. Modern Project Profiles, Next generation Software economics, modern process transitions.

TEXT BOOK :

1. Walker Royce ,"Software Project Management", 1st ed., Pearson Education, 2005.

REFERENCES BOOKS :

1. Bob Hughes and Mike Cotterell, "Software Project Management", 3rd ed.,Tata McGraw - Hill Edition, 2005.
2. Joel Henry, "Software Project Management", 1st ed., Pearson Education, 2006.
3. Pankaj Jalote, "Software Project Management in practice", 1st ed., Pearson Education, 2005.

MC 242 - e-Commerce

Course Objectives:

Students will be introduced to the e-commerce environment, various approaches to safe e-commerce, various payment schemes.

Course Outcomes:

- Know about various environments and opportunities in e-commerce.
- Understand various protocols used fir safe e-commerce
- Know how internet is used in performing e-commerce.

UNIT – I Electronic Commerce Environment and Opportunities

Background, The Electronic Commerce Environment, Electronic Marketplace Technologies. Modes of Electronic Commerce: Electronic Data Interchange, Migration to Open EDI, Electronic Commerce with www/Internet, Commerce Net Advocacy, web Commerce Going Forward.

UNIT – II Approaches to Safe Electronic Commerce

Secure Transport Protocols, Secure Transactions, Secure Electronic Payment Protocol (SEPP), Secure Electronic Transaction (SET), Certificates for authentication Security on web Servers and Enterprise Networks.Electronic Cash and Electronic Payment Schemes: Internet Monetary Payment & Security Requirements. Payment and Purchase Order Process, On-line Electronic cash.

UNIT – III Internet/Intranet Security Issues and Solutions

The need for Computer Security, Specific Intruder Approaches, Security Strategies, Security Tools, Encryption, Enterprise Networking and Access to the Internet, Antivirus Programs, Security Teams.

UNIT – IV Master Card/Visa Secure Electronic Transaction

Introduction, Business Requirements, Concepts,payment Processing. E-Mail and Secure E-mail Technologies for Electronic Commerce: Introduction,The Means of Distribution, A model for Message Handling, E-mail working, Multipurpose Internet Mail Extensions, Message Object Security Services, Comparisons of Security Methods, MIME and Related Facilities for EDI over the Internet.

UNIT – V Internet Resources for Commerce

Introduction, Technologies for web Servers, Internet ToolsRelevant to Commerce, Internet Applications for Commerce, Internet Charges, Internet Access andArchitecture, Searching the Internet. Advertising on Internet: Issues and Technologies. Introduction,Advertising on the Web, Marketing creating web site, Electronic Publishing Issues, Approaches andTechnologies: EP and web based EP.

Text Books:

1. WebCommerceTechnologyHandbook, byDanielMinoli, EmmaMinoli, McGraw-Hill
2. Frontiers of electronicommerece by Galgotia.

Reference Books:

1. E-Commerce fundamentals and applications Hendry Chan, Raymond Lee, Tharam Dillon, Ellizabeth Chang, John Wiley.
2. E-Commerce, S.Jaiswal – Galgotia.
3. E-Commerce, Efrain Turbon, Jae Lee, David King, H.Michael Chang.
4. Electronic Commerce – Gary P.Schneider – Thomson.
5. E-Commerce – Business, Technology, Society, Kenneth C.Taudon, Carol

GuyericoTraver.

MC 244 - Seminar

MC 246 - Object Oriented Analysis and Design Lab

Course Objectives:

This course explains how a software design may be represented as a set of interacting objects that manage their own state and operations. It describes the activities in the object - oriented design process using UML.

Course Outcomes:

· To understand the fundamental principles of Object Oriented programming.

· To implement key principles in Object Oriented analysis, design, and development.

· Be familiar with the application of the Unified Modelling Language (UML) towards analysis and design.

Prepare the following documents for two or three of the experiments listed below and develop the software engineering methodology.

1. Program Analysis and Project Planning.

   Thorough study of the problem – Identify project scope – Objectives – Infrastructure.

2. Software requirement Analysis

1. Data Modeling

   Use work products – Data dictionary – Use diagrams and activity diagrams, build and test lass diagrams – Sequence diagrams and add interface to class diagrams.

2. Software Developments and Debugging

3. Software Testing

   Prepare test plan – perform validation testing – Coverage analysis – memory leaks – develop test case hierarchy – Site check and Site monitor.

Mini-Project - I: A Point-of-Sale (POS) System

A POS system is a computerized application used to record sales and handle payments; it is typically used in a retail store, it includes hardware components such as a computer and bar code scanner, and software to run the system. It interfaces to various service applications, such as a third-party tax calculator and inventory control. These systems must be relatively fault tolerant; that is, even if remote services are temporarily unavailable they must still be of capturing sales and handling at least cash payments. A POS system must support multiple and varied client-side terminals and interfaces such as browser, PDAs, touch-screens.

Mini-Project - II: Online Bookshop Example

Following the model of amazon.com or bn.com, design and implement an online bookstore.

Mini-Project - III: A Simulated Company

Simulate a small manufacturing company. The resulting application will enable the user to take out a loan, purchase a machine, and over a series of monthly production runs, follow the performance of their company.

Mini-Project - IV: A Multi-Threaded Airport Simulation

Simulate the operations in an airport. Your application should support multiple aircrafts using several runways and gates avoiding collisions/conflicts. Landing: an aircraft uses the runway, lands, and then taxis over to the terminal. Take-Off: an aircraft taxies to the runway and then takes off

Mini-Project -VIII: A Notes and File Management System

In the course of one's student years and professional career one produces a 1 lot of personal notes and documents. All these documents are usually kept 1 on papers or individual files on the computer. Either way the bulk of the I information is often erased corrupted and eventually lost. The goal of this 1 project is to build a distributed software application that addresses this "| problem. The system will provide an interface to create, organize and manage I personal notes through the Internet for multiple users. The system will also allow users to collaborate by assigning permissions for multiple users to view and edit notes.

Mini-Project - IX: A Customizable Program Editor

A programmer's editor will focus on an individual programmer's particular needs and style. The editor will act according to the specific language the current source file is in, and will perform numerous features, such as auto-completion or file summarization, on the file. These features will be turned on or off by the programmer, and the programming style of the user will be used to create *as* efficient an editing environment as possible.

Mini-Project - X: A Graphics Editor

Design and implement a Java class collection that supports the construction of graph editing applications, i.e., applications that include the ability to draw structured and unstructured diagrams.

E.g.,

1. The goal of the GEF project is to build a graph editing library that can be used to construct many, high-quality graph editing applications. Some of GEF's features are:

2. A simple, concrete design that makes the framework easy to understand and extend.

3. Node-Port-Edge graph model that is powerful enough for the vast majority of connected graph applications.

4. Model-View-Controller design based on the Swing Java Ul library makes GEF able to act as aUl to existing data structures, and also minimizing learning time for developers familiar with Swing.

5. High-quality user interactions for moving, resizing, reshaping, etc. GEF also supports several novel interactions such as the broom alignment tool and selection-action-buttons. Generic properties sheet based on JavaBeans introspection. XML-based file formats based on the PGML standard

Text Books:

1. Grady Booch, James Rumbaugh, Ivar Jacobson : The Unified Modeling Language User Guide, Pearson Education.

2. Hans-Erik Eriksson, Magnus Penker, Brian Lyons, David Fado: UML 2 Toolkit, WILEY-Dreamtech India Pvt. Ltd.

1. Meilir Page-Jones: Fundamentals of Object Oriented Design in UML, Pearson Education.

2. Pascal Roques: Modeling Software Systems Using UML2, WILEY- Dreamtech India Pvt. Ltd.

3. AtulKahate: Object Oriented Analysis & Design, The McGraw-Hill Companies.

MC 248 - Middleware Technologies Lab

Course Objectives:

The main objective of this course is to get on awareness of a the various technologies which can help in the implementation of the various live project

Course Outcome:

Upon completion of the Lab subject, students will be able to:

- Understand the RMI concept of distributed systems;
- Understand the basic concepts underlying the ASP.net and C#.net;
- Learn to make judgment in choosing a suitable middleware for application problems;
- Understand the basic concepts of Web Services and EJB.

LIST OF EXPERIMENTS

1. Create a distributed application to download various files from various servers using RMI
2. State management techniques in ASP.NET
3. Using Validation controls in ASP.NET
4. ADO.NET code to show records in Grid view control
5. ADO.NET code to insert, update and delete records from database
6. Creating a simple console application which displays HELLO WORLD using C#
7. Creating asimple console calculator in C#
8. Creating windows application in C#
9. Web Services Demo

10. Create a java bean to draw various graphical shapes and display it using or without using BDK

11. Develop an Enterprise Java Bean for banking operations

12. Develop an Enterprise Java Bean for Library operations

TEXT BOOKS:

1. Wortgang EmmerichJohn,."Engineering Distributed Objects", Wiley, 2000
2. Mesbah Ahmed, Chris Garrett, Jeremy Faircloth, Chris Payne, DotThatCom.com, "ASP.net web developer guide",WeiMeng Lee (Series Editor),Jonothon Ortiz (Technical Editor),Syngress Publications.

2. Keith Ballinger,".NET Web Services-Architecture and Implementation", Pearson Education

MC 250 - Mini Project - I

MC 325 - Data Warehousing and Data Mining

Course Objectives:

- To understand the issues relating to the feasibility, usefulness,effectiveness, and scalability of techniques used for the discovery of patterns hiddenin large data sets.
- To know the basic concepts of the data warehouse and other data repositories.
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering

Course Outcomes:

Students are able to

- Learn the basic concepts of Database Technology Evaluation steps and also understood the need of data

10. Create a java bean to draw various graphical shapes and display it using or without using BDK

11. Develop an Enterprise Java Bean for banking operations

12. Develop an Enterprise Java Bean for Library operations

TEXT BOOKS:

1. Wortgang EmmerichJohn,."Engineering Distributed Objects", Wiley, 2000
2. Mesbah Ahmed, Chris Garrett, Jeremy Faircloth, Chris Payne, DotThatCom.com, "ASP.net web developer guide",WeiMeng Lee (Series Editor),Jonothon Ortiz (Technical Editor),Syngress Publications.

REFERENCE BOOKS:

2. Keith Ballinger,".NET Web Services-Architecture and Implementation", Pearson Education

MC 250 - Mini Project - I

MC 325 - Data Warehousing and Data Mining

Course Objectives:

- To understand the issues relating to the feasibility, usefulness,effectiveness, and scalability of techniques used for the discovery of patterns hiddenin large data sets.
- To know the basic concepts of the data warehouse and other data repositories.
- To characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering

Course Outcomes:

Students are able to

- Learn the basic concepts of Database Technology Evaluation steps and also understood the need of data mining and its functionalities

- Explore the efficient and effective maintenance of Data Warehouses.
- Apply the data mining functionalities like Clustering, Classification, AssociationAnalysis to real world data.
- Discover interesting patterns and association rules from huge volume of data used to do classifications and predictions.
- Gain knowledge on developing areas like Web Mining, Text Mining, and Spatial Mining.

UNIT- I Introduction toData Warehousing and Mining

Why Data Mining, What is Data Mining, Kinds of Data, Kinds of Patterns, and Technologies used, Kinds of applications adopted, Major issues in Data Mining.

Basic Concepts, Data Warehouse Modeling, Data Warehouse Design and Usage, Data Warehouse Implementation, Data Generalization by Attribute-Oriented Induction

UNIT– II About Data and DataPreprocessing

Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity

An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

UNIT- III Mining Concept

Preliminary Concepts, Data Cube Computation Methods, Processing Advanced Kinds of Queries by Exploring Cube Technology, Multidimensional Data Analysis in Cube Space

Basic Concepts and Methods: Basic Concepts, Frequent Itemset Mining Methods, Which Patterns Are Interesting?—Pattern Evaluation Methods

Pattern Mining in Multilevel, Multidimensional Space, Constraint-Based Frequent Pattern Mining

UNIT- IV Classification

Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule-Based Classification, Model Evaluation and Selection, Techniques to Improve Classification Accuracy

Bayesian Belief Networks, Classification by Back propagation, Support Vector Machines, Classification Using Frequent Patterns, Lazy Learners, Other Classification Methods

UNIT- V ClusterAnalysis

Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid-Based Methods, Evaluation of Clustering, Probabilistic Model-Based Clustering, Clustering High-Dimensional Data

4.Margaret Dunham, “DataMining: IntroductoryandAdvancedTopics”,first edition, Prentice Hall,2002.

5.PaulrajPonnaiah, “DataWarehousingFundamentals”,first edition,WileyPublishers,2001.

Course Objectives:

The main objectives of this course is to enable the students with basic data analytic skills like regression analysis, classification techniques, clustering techniques, association rule mining. Further, this course also enables the students how to scale the above algorithms with different data environments like massive amount of data, streaming data, distributed data and provides hands on experience on real world problems using above theoretical background.

Course Outcomes

- Necessary theory background for processing analytics.
- Processing analytics on small scale data.
- Mining from massive datasets.
- Mining from distributed datasets.

UNIT I - INTRODUCTION TO BIG DATA

Introduction to BigData Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error.

UNIT II - MINING DATA STREAMS

Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.

UNIT III - HADOOP

History of Hadoop- The Hadoop Distributed File System – Components of HadoopAnalyzing the Data with Hadoop- Scaling Out- Hadoop Streaming- Design of HDFS-Java interfaces to HDFSBasics- Developing a Map Reduce Application-How Map Reduce Works-Anatomy of a Map Reduce Job run-Failures-Job Scheduling-Shuffle and Sort – Task execution - Map Reduce Types and Formats- Map Reduce Features

UNIT IV - HADOOP ENVIRONMENT

Setting up a Hadoop Cluster - Cluster specification - Cluster Setup and Installation – Hadoop Configuration-Security in Hadoop - Administering Hadoop – HDFS - MonitoringMaintenance-Hadoop benchmarks- Hadoop in the cloud

UNIT V - FRAMEWORKS

Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services – HiveQL – Querying Data in Hive - fundamentals of HBase and ZooKeeper - IBM InfoSphereBigInsights and Streams. Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications

TEXT BOOKS:

1. Michael Berthold, David J. Hand, “Intelligent Data Analysis”, Springer, 2007.

2. Tom White “ Hadoop: The Definitive Guide” Third Edition, O’reilly Media, 2012.

MC 329- Cryptography And Network Security

Course Objectives:

This Course focuses towards the introduction of network security using various cryptographic algorithms and understanding network security applications. It also focuses on the practical applications that have been implemented and are in use to provide email and web security.

Course Outcomes:

On successful completion of this course, the students

- Will have knowledge and understanding of: Classical encryption techniques, Block ciphers and the Data Encryption Standard, Basics of finite fields, Advanced Encryption Standard, Contemporary symmetric ciphers, Confidentiality using symmetric encryption, Basics of number theory, Key management, Public key cryptosystems, Message authentication, Hash functions and algorithms, Digital signatures and authentication protocols, Network security practice, Applications, E-Mail, IP and web security, System security, Intruders, Malicious software, Firewalls.

- Will develop their skills in: the programming of symmetric and/or asymmetric ciphers and their use in the networks.
- Will learn protocols used in Web Security and Transport layer Security

UNIT I - Network Security Introduction

Security attacks – Security services – Security Mechanisms – A Model for Network Security Model Classical Encryption Techniques – Symmetric Cipher Model – Substitution Techniques – Transposition Techniques – Rotor Machines – Steganography

UNIT II - Block Ciphers And Data Encryption Standard

Block Cipher Principles – Data Encryption Standard – Strength of DES – Differential and Linear Cryptanalysis - Block Cipher Design Principles.-Advanced Encryption Standard – Evaluation Criteria of AES – AES Cipher – More on Symmetric Ciphers – Multiple encryption and Triple DES – Block Cipher Modes of Operation – RC4.

UNIT III - Public-key Encryption And Hash Funcitons

Principles of Public –Key Cryptosystems – RSA Algorithm – Key Management – Message Authentication and Hash Functions – Authentication Requirements – Authentication Functions – Message Authentication – Hash Functions – Security of Hash Functions and MACs- Digital Signatures - Authentication Protocols – Digital Signature Standard.

UNIT IV - Network Security Applications

Kerberos – X.509 Authentication Service – Public Key Infrastructure – Pretty Good Privacy – S/MIME- IP Security Overview – IP Security architecture-Authentication Header – Encapsulating Security Payload – Combining Security associations – Key Management

UNIT V - Web Security

Secure Socket Layer and Transport Layer Security – Secure Electronic Transaction. SYSTEM SECURITY Intruders – Intrusion Detection – Password Management – Malicious Software - Firewalls – Trusted Systems.

4. William Stallings,”Cryptography and Network security”, 1st ed., Pearson Education, 2008.

Elective-III

MC 331- Software Testing Methodologies

Course Objectives:

Software testing is a subject where the student will learn and apply basic skills needed to create and automate the test plan of a software project.It aims to describe principles and strategies for generating system test cases and to understand the essential characteristics of tools used for test automation.

Course Outcomes:

Students who have completed this course would have learned

· Various test processes and continuous quality improvement

· Types of errors and fault models

· Methods of test generation from requirements

· Behavior modeling using UML: Finite state machines (FSM)

· Test adequacy assessment using: control flow, data flow, and program mutations

UNIT I - Introduction

Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs Flow graphs and Path testing: Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

UNIT II - Transaction Flow & Domain Testing

Transaction flows, transaction flow testing techniques. Dataflow testing:- Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.

Domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

UNIT III - Path products and expressions

Path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

UNIT IV - Logic Based Testing & State, State Graphs and Transition testing

Overview, decision tables, path expressions, kv charts, specifications. State graphs, good & bad state graphs, state testing, Testability tips.

UNIT V - Graph Matrices and Application

Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. Usage of JMeter and Winrunner tools for functional / Regression testing (Ref Text book2).

TEXT BOOKS:

1. Boris Beizer, “Software Testing Techniques”, 2nd ed., Dreamtech, 2006.

2. Dr.K.V.K.K.Prasad, “Software Testing Tools”, 1st ed., Dreamtech. 2008.

REFERENCE BOOKS:

1. Brian Marick, “The craft of software testing”, 2nd ed., Pearson Education,

2007.

2. Edward Kit, “Software Testing in the Real World “, 2nd ed., Pearson Education, 2008.

MC333 – Distributed Systems

Course Objectives:

To list the principles underlying the functioning of distributed systems, describe the problems and challenges associated with these principles, and evaluate the effectiveness and shortcomings of their solutions. Course Objective Should be in single paragraph

To build distributed system software using basic OS mechanisms as well as higher-level Middleware and languages.

Course Outcomes:

To be able to:

- Distinguish the theoretical and conceptual foundations of distributed computing.
- Recognize the inherent difficulties that arise due to distributed-ness

  of computing resources.

- Recognize the feasibilities and the impossibilities in managing resources.
- Identify the problems in developing distributed applications.

UNIT I - Basic Distributed System Concepts

Introduction, Distributed Computing Models, Software Concepts, Issues in Designing Distributed Systems, Client–Server Model.

UNIT II - Network & Inter Process Communication

LAN and WAN Technologies, Protocols for Network Systems, Protocols for Distributed Systems, Message Passing, Group Communication, API for Internet Protocol, RPC Communication

UNIT III - Synchronization

Clock Synchronization, Logical Clocks, Global State, Mutual Exclusion, Election Algorithms, Deadlocks in Distributed Systems

UNIT IV - Distributed System Management

Load-balancing Approach, Load-sharing Approach, Threads, Fault Tolerance, Basic Concepts of DSM, File Models in DFS

UNIT V - Emerging Trends in Distributed Computing

Grid Computing, SOA, Cloud Computing, The Future of Emerging Trends.

TEXT BOOKS:

1. Distributed Computing, S.Mahajan and S.Shah, Oxford University Press.
2. Distributed Computing, Principles, Algorithms and Systems, Ajay D. Kshemakalyani&MukeshSinghal, Cambrigde, rp 2010

REFERENCE BOOKS:

1. Distributed Systems Concepts and Design, G Coulouris, J Dollimore and T Kindberg, Fourth Edition, Pearson Education.
2. Distributed Systems, S.Ghosh, Chapman & Hall/CRC, Taylor & Francis Group, 2010.

MC335 – Script Programming

Course Objectives:

The course introduces students to algorithmic programming using two scripting languages widely used for web applications: PHP and JavaScript. Because web applications typically draw parts of their content from online databases, the course will introduce students to PHP's facilities for interacting with database systems.

Course Outcomes:

Students who complete this course successfully will be able to:

4.5 Explain the structure of the HTTP protocol and exchanging messages over the Internet

4.6 Identify the features of web servers and support of PHP on local database

4.7 Usage of PHP and JavaScript language constructs: variables, functions, objects, control structures, and data types.

4.8 Use PHP to query and update a database using SQL. Implement event-driven algorithms in JavaScript

UNIT I - Script and Perl

Introduction to Script programming in Linux and MS-windows, Perl programming

UNIT II - Python programming

Running Your Python Scripts from a Command Prompt Making Your Scripts Behave Like Normal Programs A Simple CGI Script Writing the Editor Script Writing the Save Script Running the Editor. Writing the Main Script Writing the View Script Writing the Edit Script Writing the Save Script Trying It Out

UNIT III - Php programming

Writing php first script, a script to acquire user input, file upload forms and scripts, Calling an External CGI Script with the virtual function getting information about php and your script

UNIT IV - Windows Power shell programming

Using power shell scripts, debugging power shell script.

UNIT V - Application Development

Applications development with Client/server architecture, graphs, GUI and graphics programming using script languages searching and search engine development using script languages

TEXT BOOKS:

1. Programming Perl, 3rd Edition By Larry Wall, Tom Christiansen, Jon Orwant O'Reilly
2. Beginning Python: From Novice to Professional, Magnus Lie Hetland, Apress, 2003

REFERENCE BOOKS:

1. Windows Power Shell™ 3.0 Step by Step Ed willson Microsoft publisher.
2. PHP A Beginner s Guide Vikram Vaswani McGrawhill

Elective - IV
MC337 – Cloud Computing

Course Objectives:

Cloud computing has evolved as a very important computing model, which enables information, software, and shared resources to be provisioned over the network as services in an on-demand manner. This course provides an insight into what is cloud computing and the various services cloud is capable.

Course Outcomes:

Compare the operation, implementation and performance of cloud computing systems, and the relative merits and suitability of each for complex data-intensive applications

- Explain and characterize different cloud computing models, namely, infrastructure as a service (IaaS), platform as a service (PaaS), and software as a service (SaaS)
- Identify security implications in cloud computing
- Write comprehensive case studies analysing and contrasting different cloud computing solutions

UNIT – I

Introduction: Definition, Historical developments, Computing platforms and technologies. Principles of Parallel and Distributed Computing: Parallel versus distributed computing, Elements of parallel computing, Elements of distributed computing, Technologies for distributed computing.

UNIT – II

Virtualization: Characteristics, Virtualization techniques, Virtualization and cloud computing, Pros and cons of virtualization, Technology examples.

Cloud Computing Architecture: Cloud reference model, Types of clouds, Economics of clouds, Open challenges.

Aneka: Cloud Application Platform: Framework overview, Anatomy of the Aneka container, Building Aneka clouds, Cloud programming and management.

UNIT – III

Concurrent Computing- Thread Programming: Programming applications with threads, Multithreading with Aneka, Programming applications with Aneka threads.

High Throughput Computing- Task Programming: Task computing, Task-based application models, Aneka task-based programming.

UNIT – IV

Data Intensive Computing – Map-Reduce Programming: Introduction, Technologies for data-intensive computing, Aneka MapReduce programming. Cloud Platforms in Industry: Amazon web services, Google AppEngine, Microsoft Azure.

UNIT – V

Cloud Applications: Scientific applications in – Healthcare, Biology, Geo-science; Business applications in – CRM and ERP, Productivity, Social networking, Media applications, Multiplayer online gaming.

Advanced Topics in Cloud Computing: Energy efficiency in clouds, Market based management of clouds, Federated clouds / InterCloud, Third party cloud services.

TEXT BOOKS:

1. Buyya R, Vecchiola C, Selvi S T, Mastering Cloud Computing, McGraw Hill Education (India), 2013.

REFERENCE BOOKS:

2. Rittinghouse J W, Ransome J F, Cloud Computing - Implementation, Management, and Security, CRC Press, 2010.

3. Velte A T, Velte T J, Cloud Computing - A Practical Approach, McGraw Hill, 2011.

4. Shroff G, Enterprise Cloud Computing - Technology, Architecture, Applications, Cambridge University Press, 2010.

5. Antonopoulos N, Gillam L, Cloud Computing - Principles, Systems and Applications, Springer, 2010.

6. Furht B, Escalante A, Handbook of Cloud Computing, Springer, 2010.

7. Sosinsky B, Cloud Computing Bible, Wiley, 2011. 8. Joseph J, Fellenstein C F, Grid Computing, Pearson, 2004.

MC339 – Soft Computing

Course Objectives:

To know about the components and building block hypothesis of Genetic algorithm. To understand the features of neural network and its applications and to study the fuzzy logic components

Course Outcomes:

- Implement machine learning through neural networks.
- Gain Knowledge to develop Genetic Algorithm and Support vector machine based machine learning system.
- Understand fuzzy concepts and develop a Fuzzy expert system to derive decisions.

- Able to Model Neuro Fuzzy system for data clustering and classification.

UNIT I - Neural Networks

History, overview of biological Neuro-system, Mathematical Models of Neurons, ANN architecture, Learning rules, Learning Paradigms-Supervised, Unsupervised and reinforcement Learning, ANN training Algorithms-perceptions, Training rules, Delta.

UNIT II - Fuzzy Logic

Back Propagation Algorithm, Multilayer Perceptron Model, Hopfield Networks, Associative Memories, Applications of Artificial Neural Networks. Introduction to Fuzzy Logic, Classical and Fuzzy Sets: Overview of Classical Sets, Membership Function, Fuzzy rule generation.

UNIT III- Fuzzy Sets & Fuzzy Arithmetic

Compliment, Intersections, Unions, Combinations of Operations, Aggregation Operations. Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on Intervals & Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations.

UNIT IV - Fuzzy Logic

Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges. Uncertainty based Information : Information & Uncertainty, Nonspecificity of Fuzzy & Crisp Sets, Fuzziness of Fuzzy Sets.

UNIT V - Fuzzy Logic & Genetic Algorithm

Introduction of Neuro - Fuzzy Systems, Architecture of Neuro Fuzzy Networks. Medicine, Economics etc. An Overview, GA in problem solving, Implementation of GA

TEXT BOOKS:

1. AI & Expert system, JankiRaman ,MacMillen,2003.
2. Artificial Intelligence, Knight ,TMH,1991.

REFERENCE BOOKS:

2. Artificial Intelligence, Patrickshenry ,Winston,Pearson education,2001.

3. Artificial Intelligence, Nilsson ,Morgon, Kufmann 1998.

4. George J. Klir and Bo Yuan, “Fuzzy Sets and Fuzzy Logic-Theory and Applications”, Prentice Hall, 1995.

MC341 – Mobile Computing

Course Objectives:

To provide basics for various techniques in Mobile Communications and Mobile Content services.

Course Outcomes

• Learn the basics of Wireless voice and data communications technologies.
• Have working knowledge on various telephone and satellite networks.
• Know the working principles of wireless LAN and its standards.
• Have knowledge on various Mobile Computing algorithms.
• To build skills in working with Wireless application Protocols to develop mobile content applications.

UNIT I -WIRELESS COMMUNICATION FUNDAMENTALS

Introduction – Wireless transmission – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks.

UNIT II - TELECOMMUNICATION NETWORKS

Telecommunication systems – GSM – GPRS – DECT – UMTS – IMT-2000 – Satellite Networks - Basics – Parameters and Configurations – Capacity Allocation – FAMA and DAMA – Broadcast systems – DAB - DVB.

UNIT III - WIRLESS LAN

Wireless LAN – IEEE 802.11 - Architecture – services – MAC – Physical layer – IEEE 802.11a - 802.11b standards – HIPERLAN – Blue Tooth.

UNIT IV - MOBILE NETWORK LAYER

Mobile IP – Dynamic Host Configuration Protocol - Routing – DSDV – DSR – Alternative Metrics.

UNIT V -TRANSPORT AND APPLICATION LAYERS

Traditional TCP – Classical TCP improvements – WAP, WAP 2.0.

TEXT BOOKS

1. Jochen Schiller, “Mobile Communications”, PHI/Pearson Education, Second Edition, 2003. (Unit I Chap 1,2&3- Unit II chap 4,5 &6-Unit III Chap 7.Unit IV Chap 8- Unit V Chap 9&10.)
2. William Stallings, “Wireless Communications and Networks”, PHI/Pearson Education, 2002. (Unit I Chapter – 7&10-Unit II Chap 9)

MC343 – Seminar

MC345 – Datawarehousing and Data Mining Lab

Course Objectives:

The main objective of this lab is to impart the knowledge on how to implement classical models and algorithms in data warehousing and data mining and to characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering. At the end to compare and contrast different conceptions of data mining.

Course Outcomes:

Students can able

• To evaluate the different models of OLAP and data preprocessing.

• To enlist various algorithms used in information analysis of Data Mining Techniques.

• To demonstrate the knowledge retrieved through solving problems

List of Experiments

1. Explore various commands given in PL/SQL in Oracle 8.0

2. Execute multi-dimensional data model using SQL queries.

3. Implement various OLAP operations such as slice, dice, roll up, drill up,

pivot etc.

4. Implementation of Text Mining on the data warehouse

5. Explore the correlation-ship analysis between the data set

6. Evaluate attribute relevance analysis on a weather data warehouse

7. Evaluate Information Gain of an attribute in the student database

8. Experiment to predict the class using the Bayesian classification

9. Find out a weight & bias updating using the Back Propagation Neural

Network

10. To perform various data mining algorithms on the give data base using

WEKA

MC347 –Cryptography and Network Security Lab

Course Objectives:

After the success full completion of this course the student is enable towards learning and overcome security attacks in future.

Course Outcomes:

· Understand computer security principles and discuss ethical issues for theft of information. Identify threatmodels and common computer network security goals

· Explain various encryption algorithms, hashing functions, one-way authentication and public key cryptology

List of Experiments

1. Write program for Ceaser cipher encryption and decryption

2. Write program for Mono alphabetic cipher encryption and decryption

3. Implementation of Play Fair cipher

4. Implementation of Vigenere cipher (Polyalphabetic substitution)

5. Implementation of Hill cipher

6. Implementation of Rail Fence cipher

7. Implementation of S-DES algorithm for data encryption

8. Implement RSA asymmetric (public key and private key)-Encryption

9. Implement Euclidean and Extended Euclidean algorithm for calculating

the GCD

10. Working with PGP

REFERENCEBOOKS:

AGRICULTURE ENGINEERING
PH085 - SPECIAL MANUFACTURING PROCESS

UNIT- I : Surface Treatment: Scope, Cleaners, Methods of cleaning, Surface coating types, and ceramic and organic methods of coating, economics of coating. Electro forming, Chemical vapor deposition, thermal spraying, Ion implantation, diffusion coating, Diamond coating and cladding.

UNIT- II : Processing of Ceramics: Applications, characteristics, classification .Processing of particulate ceramics, Powder preparations, consolidation, Drying, sintering, Hot compaction, Area of application, finishing of ceramics. Processing of Composites: Composite Layers, Particulate and fiber reinforced composites, Elastomers, Reinforced plastics, MMC, CMC, Polymer matrix composites.

UNIT- III : Fabrication of Microelectronic Devices: Crystal growth and wafe preparation , Film deposition oxidation, Lithography, bonding and packing, reliability and yield. Printed circuit boards, computer aided design in microelectronics , surface mount technology,Integrated circuit.

UNIT – IV : Micro and Nano Manufacturing Techniques;Methods of micromachining; Abrasive jet, Ultrasonic, Abrasive water jet micromachining, Micro turning, Microdrilling; Abrasive based, Nano finishing processes; Abrasive flow finishing, Chemomechanical polishing.

UNIT -V : Rapid Prototyping:Working Principles, Methods, Stereo Lithography, Laser Sintering, Fused Deposition Method, Applications and Limitations, Rapid tooling, Techniques of rapid manufacturing.

PH086 - UNCONVENTIONAL MACHINING PROCESS

Unit II
Thermal and Electrical Energy Based Processes
Electric Discharge Machining (EDM) – Wire cut EDM – Working Principle-equipments-Process Parameters-Surface Finish and MRR- electrode / Tool – Power and control Circuits-Tool Wear - Dielectric – Flushing –– Applications. Laser Beam machining and drilling, (LBM), plasma, Arc machining (PAM) and Electron Beam Machining (EBM). Principles – Equipment -Types – Beam control techniques – Applications.
Unit III
Chemical and Electro-Chemical Energy Based Processes
Chemical machining and Electro-Chemical machining (CHM and ECM)- Etchants – Maskant - techniques of applying maskants – Process Parameters – Surface finish and MRR-Applications. Principles of ECM- equipments-Surface Roughness and MRR Electrical circuit-Process Parameters-ECG and ECH – Applications.
Unit IV

Unit V
Recent Trends in Non-Traditional Machining Processes
Recent developments in non-traditional machining processes, their working principles, equipments, effect of process parameters, applications, advantages and limitations. Comparison of non-traditional machining processes.

Course Outcome:
Upon the completion of this course the students will be able to

- CO1 Explain the need for unconventional machining processes and its classification
- CO2 Compare various thermal energy and electrical energy based unconventional machining processes.
- CO3 Summarize various chemical and electro-chemical energy based unconventional machining processes.
- CO4 Explain various nano abrasives based unconventional machining processes.
- CO5 Distinguish various recent trends based unconventional machining processes.

BIOTECHNOLOGY

PH026 - MICROBIAL TECHNOLOGY

UNIT - 1 MATERIAL BALANCES: Introduction to biotechnology and biochemical engineering, bioprocess techniques, biotechnology products; Thermodynamic preliminaries, system and process, steady state and equilibrium, law of conservation of mass, types of material balance problem, material balances with recycle and bypass streams.

UNIT - 2 ENERGY BALANCES: Energy balance- basic energy concepts, intensive and extensive properties, studies of enthalpy for reactive and non-reactive processes; Heat of combustion, heat of reaction at non-standard conditions; Thermodynamics of microbial growth, energy balance equation for cell culture, unsteady state energy balance equations.

UNIT - 3 MEDIUM OPTIMIZATION: Medium optimization techniques with special emphasis on statistical techniques- Plackett-Burman design, ANOVA, central composite design, response surface methodology; Sterilization- media sterilization, kinetics of thermal death of cells and spores, design of batch and continuous thermal sterilization, coupling of Arrhenius equation and cell death kinetics, sterilization of air and filter design, radiation and chemical sterilization.

UNIT - 4 UNSTRUCTURED MODELS FOR MICROBIAL GROWTH: The development of different microbial growth kinetics- Malthus, Pearl and Read, Monod Model and Konark Model; The limitations of Monod model and development of other constitutive models- multi substrate model, inhibition models for substrate, product and toxic substances; Development of logistic equation; Maintenance and endogenous metabolism kinetics.

UNIT - 5 STRUCTURED MODELS OF MICROBIAL GROWTH: Kinetics based on molecular mechanismcompartment models, model of cellular energetics and metabolism, model of product formation, singles cell model, model of gene expression and regulation; Plasmid expression and replication; Model of plasmid stability, parameter estimation, model validation and bioprocess optimization.

TEXT BOOKS:

1. J.E. Bailey and D.F. Ollis, "Biochemical Engineering Fundamentals", McGraw Hill Inc., New York, 2010.

2. D.S. Clark and H.W. Blanch, "Biochemical engineering", CRC Press, 1997.

REFERENCE BOOKS:

1. K. Schugerl and K.H. Bellgart, "Bioreaction Engineering, Modeling and control", Springer Verlag, Berlin, 2000.

PH243 – INFLAMMATION

UNIT I

IMMUNE CELLS AND IMMUNE ORGANS:
Cells of the immune system, Classification, CD Markers of leukocytes and lymphocytes,Development and maturation of B-cells and T-cells, Lymph glands: Bone Marrow, Thymic Schooling, Mucosal associated lymphoid tissue.

UNIT II

ANTIGEN AND ANTIBODY:
Structure of an antigen, Types of antigens, Immunogen, Tolerogen, Adjuvants, Structure of Immunoglobulins, Allotypes, Idiotypes, Hybridoma Technology, Phage display of antibodies.

UNIT III

HYPERSENSITIVITY:
Definition and classification, IgE mediated (Type-1) hypersensitivity (allergy), IgG and IgM mediated (Type-II) hypersensitivity, Immune complex mediated (Type-III) hypersensitivity and Delayed (Type-IV) hypersensitivity.

UNIT IV

INFLAMMATION:
Introduction to Inflammation, what is inflammation? Characteristics of inflammation, Health benefits of inflammation, Health advantages of inflammation, the role of inflammation in disease, why we need inflammation? Acute inflammation, Chronic inflammation, Cytokines in inflammation, Wound healing, Arachidonic acid pathway.

UNIT V

CHRONIC INFECTION AND INFLAMMATION:
Atherosclorosis, Human papillomavirus, Liver Cirrhosis, Diabetes, Multiple Sclerosis, Gastric ulcers, Phyto-nutrients, Immunity and Inflammtion.

Basic Text Book:

Kenneth Murphy, Paul Travers and Mark Walport (2007) Janeway's Immunobiology, 7th Ed.

PH265 – CHEMOINFORMATICS

Unit – I : Introduction to the world of chemical informatics: Overview of the class; defining chemical informatics; chemical and bioinformatics; chemical informatics and the pharmaceutical industry; example applications

Unit – II : Representing 2D structures: Kinds of 2D structure representation; atom lookup and connection tables; graph theory; SMILES; SD files; Fragment codes & Fingerprints; descriptors

Unit – III: 2D chemical database applications: Types of searching; substructure searching with SMARTS; similarity searching with fingerprints; demonstrations of searching systems

Unit – IV: QSPR & QSAR: Feature selection, Model building, QSAR biological and physicochemical parameters, QSAR applications in drug design, QSAR model selection and validation, CoMFA

Unit – IV: High-Throughput chemistry (CombiChem): Mix and split synthesis, solid-phase synthesis, solution-phase synthesis, combinatorial biosynthesis, library design, virtual high-throughput screening

TEXT BOOK:

1. Leach, Andrew R., and Valerie J. Gillet "An introduction to chemoinformatics", 1st edition Springer, 2007".

REFERENCE BOOK:

1. Thomas Engel (2006). "Basic Overview of Chemoinformatics", 1st edition J. Chem. Inf. Model. 46 (6): 2267–77.

PH267 - PLANT NUTRACEUTICALS

UNIT 1 Phytochemicals: classification, biosynthesis and production

1.1 Secondary metabolites and phytochemicals –function of secondary products in plants, health benefits of phytochemicals

1.2 Phytochemical classes and chemical properties

1.3Biosynthetic pathways of secondary product classes –Terpenoid and shikimate pathways, isoprenoid pathway, polyketide pathway

1.4 In vitro techniques for the cultivation of nutraceutical plants, factors determining accumulation of secondary metabolites, strategies to improve metabolite production, biological elicitors of plant secondary metabolites (mode of action and use in production of nutraceutics)

1.5 Phytochemicals in plant cell bioreactors –plant bioreactors; commercial production of plant secondary metabolites

UNIT 2 Nutrigenetics and Nutrigenomics

2.1 Nutritional genetics vs nutritional genomics

2.2 Nutrients modulating genome expression –nutrient as signal molecule, mechanisms of nutrient perception

2.3 Nutrigenetic diseases and Nutrigenomic diseases –PKU, Obesity, CVD, Cancer, Inflammation, Diabetes, Osteoporosis

2.4 Variation in human populations -gene polymorphism, SNP, nutritional implications; personalized nutrition

2.5 Biomarkers –biomarkers of biological effect -enzyme function, oxidative stress, immune function, bone health, cell turnover; biomarkers for genetic susceptibility

UNIT 3 Advanced Tools in Nutrigenomics

3.1 Genetic selection- insertional inactivation and alpha complementation

3.2 Use of animal and cell models in nutrition and food research: in vitro models applicable in nutrigenomic studies, use of animal models–advantages and limitations

3.3 Transcriptomics- mRNA profiling, cDNA-AFLP, DNA microarrays, SAGE, MIAME/Nut; using transcriptomics to explain mechanism behind differences in response to diet

3.4 Proteomics-2D-DIGE, ELISA, protein microarray, MALDI-TOF, PSI (Proteomics Standard Initiative) –role of proteomics in nutrigenetics and nutrigenomics

3.5 Metabolomics-analytical tools–LC resolved and GC resolved mass spectrometry, NMR spectroscopy, global vs targeted metabolic profiling-applications to nutrition, metabolomics.

UNIT 4 Phytochemicals and Nutraceuticals in Health & Disease

4.1 Nutraceuticals **-** isoprenoid derivatives, phenolic compounds, carbohydrate derivatives, amino acid derivatives and minerals (Ca, Zn, Cu, K, Se)

4.2 Nutraceuticals and antioxidant function-oxidative stress and ROS, antioxidants (amino acids, peptides and proteins), antioxidant defense systems, phytochemicals

4.3 Phytochemicals and cancer-models of carcinogenesis, cancer risk -nutrients and phytochemicals; impact on cancer metastasis suppressor genes, phytoestrogen

4.4 Phytochemicals in immune function-carotenoids and flavonoid

4.5 Plant lipids in health and disease; plant tochopherols/tocotrienols and health

Activities:

1. To understand the importance of biofortified crops for enduring nutritional security

2. To study the importance of phytochemicals in treating various diseases.

ELECTRONICS & COMMUNICATION ENGINEERING
PH201 - BIOMEDICAL SIGNAL PROCESSING

Unit-I :Biomedical signal origin
Preliminaries; Biomedical signal origin & dynamics (ECG) ; the EEG Signal and its characteristics; Biomedical signal origin & dynamics (EEG, EMG etc.);
Filtering for Removal of artifacts Statistical Preliminaries – random noise, structured noise, stationary vs non stationary processes; Time domain filtering (Synchronized Averaging, Moving Average, Derivative-based operator to remove low frequency)

Unit-II :Frequency Domain Filtering
Removal of High-Frequency noise: butterworthlowpass filters; Removal of Low-Frequency noise: butterworthhighpass filters; Removal of periodic artifacts: Notch and Comb Filters. Optimal Filtering: The Weiner Filter, Adaptive Filters for Removal of interference : the adaptive noise canceller, the least mean squares adaptive filter, the recursive least square adaptive filter.

Unit-III :Event Detection
P, QRS and T wave in ECG, Derivative based Approaches for QRS Detection, Pan Tompkins Algorithm for QRS Detection, Detection of Dicrotic Notch, Correlation Analysis of EEG Signal.

Unit-IV :Waveform Analysis
Illustrations of problem with case studies: The QRS complex in the case of bundle-branch block, The effect of myocardial ischemia and infarction on QRS waveshape, ectopic beats, EMG interference pattern complexity, PCG intensity patterns.
Morphological Analysis of ECG: Correlation coefficient, The Minimum phase correspondent and Signal Length
Envelop Extraction & analysis: Amplitude demodulation, The Envelogram Analysis of activity Root Mean Square value, Zero-crossing, rate Turns Count, Form factor.

Unit-V :Frequency-domain Analysis
Averaged Periodogram Blackman-Tukey Spectral Estimator Daniellâ€™s Spectral Estimator, Measures derived from PSDs: moments of PSD functions, Spectral power ratios.

Text Book:
1. RANGARAJ M.RANGAYYAN, "Biomedical Signal Analysis: A case-study approach" , wiley interscience-2002.

Reference books:

2. MetinAkay, "Biomedical Signal Processing", Academic press, Inc.
3. Bruce, "Biomedical Signal Processing & signal modeling," wiley, 2001.

PH202 - FUNDAMENTALS OF MASSIVE MIMO

UNIT-I

Introduction: Point-to- point MIMO, Multi-user MIMO, Massive MIMO, Time Division verses Frequency Division Duplexing

Models and Preliminaries: Single-Antenna Transmitter and Single-Antenna Receiver, Coherence Time, Coherence Bandwidth, Coherence Interval, Interpretation of T_c and B_c in Terms of Nyquist Sampling Rate, TDD Coherence Interval Structure

UNIT-II

Single Cell Systems: Uplink Pilots and Channel Estimation: Orthogonal Pilots, De-Spreading of the Received Pilot Signal, MMSE Channel Estimation

Uplink Data Transmission: Zero-Forcing, Maximum-Ratio

Downlink Data Transmission: Linear Precoding, Zero-Forcing, Maximum-Ratio

UNIT-III

Multi Cell Systems: Uplink Pilots and Channel Estimation, Uplink Data Transmission, Zero-Forcing, Maximum-Ratio, Downlink Data Transmission, Zero-Forcing, Maximum-Ratio

UNIT- IV

Massive MIMO Propagation Channel: Favorable Propagation and Deterministic channels, Favorable Propagation and Random Channels, Finite-Dimensional Channels

UNIT- V

Capacity and Capacity Bounding Tools: Jensen's Inequality, Point-to-Point Scalar Channel Point-to-Point MIMO Channel, Multiuser MIMO Channel

Test Books

1. Thomas L. Marzetta, Erik G. Larsson, Hong Yang and HienQuoc Ngo, "Fundamentals of Massive MIMO", Cambridge University Press 2016.

2. David Tse and PramodViswanath, "Fundamentals of Wireless Communication", Cambridge University Press 2005.

Reference Books:

EzioBiglieri , Robert Calderbank et al "MIMO Wireless Communications" Cambridge University Press 2007.

Daniel W. Bliss and SiddhartanGovindasamy, "Adaptive Wireless Communications: MIMO Channels and Networks", Cambridge University Press, 2013.

PH203 - COMPRESSIVE SENSING

UNIT I: Introduction to Compressive Sensing,Sparse and Compressible Signal Models.

UNIT II: Uniqueness and Uncertainty, General Sparse Signal Representations using Dictionaries.
Dictionary Analysis.

UNIT III: Compressive Sensing and Sensing Matrices, Sensing Matrices for Exact Recovery, Recovery in the Presence of Noise,

UNIT IV: Sub-Gaussian Distributions and Sensing Matrices.

UNIT V: Recovery via l1 Minimization, Algorithms for Sparse Recovery, Applications.

Text Books: There is no required text but the following titles may prove useful

1. Probability and Random Processes by G. Grimmett and D. Stirzaker, 3rd. ed., Oxford University Press
2. Random Matrices by M. Mehta, 3rd ed., New York: Academic Press
3. Function Estimation and Gaussian Sequence Models by I. Johnstone.

Reference Books:

1. All of Statistics by L. Wasserman, Springer
2. Numerical Linear Algebra by LLoyd N. Trefethen and David Bau, III, SIAM
3. Convex Optimization by S. Boyd and L. Vandenberghe, Cambridge University Press
4. Introductory Lectures on Convex Optimization: A Basic Course by Y. Nesterov, Kluwer Academic Publisher
5. A Wavelet Tour of Signal Processing by S. Mallat, 3rd ed., Academic Press
6. Discrete Time Signal Processing by A. Oppenheim and R. Schafer, Prentice Hall.

PH204 - SPEECH PROCESSING

Unit-I Introduction to speech processing, Digitization and Recording of speech signal, Review of Digital Signal Processing Concepts

Unit-II Human Speech production, Acoustic Phonetics and Articulatory Phonetics, Different categories speech, sounds and Location of sounds in the acoustic waveform and spectrograms, Uniform Tube Modeling of Speech Production, Speech Perception

Unit-III Time Domain Methods in Speech Processing, Analysis and Synthesis of Pole-Zero Speech Models, Short-Time Fourier Transform, Analysis:- FT view and Filtering view, Synthesis:-Filter bank summation (FBS) Method and OLA Method.

Unit-IV Features Extraction, Extraction of Fundamental frequency, Speech Prosody, Speech Prosody Modeling (Fujisaki Model). Architecture of a large vocabulary continuous speech recognition system – acoustics and language models – n-grams, context dependent sub-word units; Applications and present status. Speech based Applications (TTS, ASR and spoken language acquisition).

Unit-V Text-to-Speech Synthesis: Concatenative and waveform synthesis methods, sub-word units for TTS, intelligibility and naturalness – role of prosody, Applications and present status.

Text Books:

1. Discrete-Time Speech Signal Processing: Principles and Practice by Thomas F. Quatieri
2. Theory and Applications of Digital Speech Processing, by L. R. Rabiner and R. W. Schafer,

PH206 - CONVEX OPTIMIZATION

UNIT 1: Introduction to optimization: Role of optimization, convexity, Examples of application (communications, signal processing). Review of linear algebra and mathematics background.

UNIT 2: Convex set and convex function, Convex set, convex functions, Operations that preserve convexity (both sets and functions), Conjugate function, conjugate sets, and separating hyper-plane theorem. Convex optimization problems. Optimization problem definition and examples, linear programming, Quadratic programming, Geometric programming, Semi-definite programming

UNIT 3: Duality: Lagrangian dual function (conjugate function), Lagrange dual problem i. Properties, weak and strong duality ii. Interpretation of dual variables, duality (geometric, saddle point, economics) Optimality conditions i. KKT, necessity and sufficiency ii. Sub-gradients for non-smooth functions

UNIT 4: Methods and algorithms: Unconstrained i. Gradient descent, steepest descent ii. Newton method with equality constraints i. Newton methods with equality constraints ii. ADMM method iii. Sub-gradient method. With inequality constraints i. Barrier interior point method ii. Primal-dual interior point methods.

UNIT 5: Advanced topics: First-order methods for large-scale optimization, i. First-order gradient descent ii. Application in machine learning, Schur convexity.

Text Book:

1. Boyd and Vandenberghe, Convex Optimization, Cambridge University Press, 2004.

Reference Books:

1. Ben-Tal and Nemirovski, Lectures on Modern Convex Optimization: Analysis, Algorithms, and Engineering Applications, MPS-SIAM Series on Optimization, 2001.
2. Nesterov, Introductory Lectures on Convex Optimization: A Basic Course, Springer, 2003.
3. David G. Luenberger, Optimization by Vector Space Methods, Wiley, 1997.
4. R. Tyrell Rockafellar, Convex Analysis, Princeton University Press., 1996.

PH211 - PHYSICALLY UNCLONABLE FUNCTIONS CONSTRUCTIONS, PROPERTIES AND APPLICATIONS

UNIT-1: Introduction to Physical Unclonable Functions (PUFs): Introduction, Trust and Security in a Modern World, Information Security and Cryptology, Physical Security and Roots of Trust, The PUF Concept, On PUFs and Fingerprints, PUF Class, PUF Instance, PUF Evaluation, Shorthand Notation, Details of a PUF Experiment, PUF Response Intra-distance, Inter-distance Statistics.

UNIT-2: Classification Non-electronic, Electronic and Silicon PUFs, Intrinsic and Non-intrinsic PUFs, Weak and Strong PUFs, Intrinsic PUF Constructions: SRAM PUF, Latch, Flip-Flop, Butterfly, Buskeeper PUFs, Bistable Ring PUF.

UNIT-3: Physically Unclonable Functions: Properties Introduction, Constructability and Evaluability, Reproducibility, Uniqueness and Identifiability, Unpredictability, Mathematics and True Unclonability, One-Wayness, Tamper Evidence, Unpredictability of a Physical Function System.

UNIT-4: Implementation and Experimental Analysis of Intrinsic PUFs Introduction, Test Chip Design, Top-Level Architecture, PUF Block: Arbiter PUF, Power Domains, Implementation Details, Experimental

UNIT-5: Modeling Attacks and Applications Modeling Attacks on Arbiter PUFs, Modeling with Machine Learning Techniques, Modeling Entropy Bound, Assessing Entropy Adversary Models and Basic Entropy Bounds, Completely Ignorant Adversary, Adversary Knows Global Bias, Adversary Knows Inter-Bit Dependencies

Text book:

1. Physically Unclonable Functions Construction, Properties and Applications: Role Maes, springer, DOI 10.1007/978-3-642-41395-7

PH214 - ANTENNA THEORY

UNIT I - FUNDAMENTAL CONCEPTS
Physical concept of radiation- Radiation pattern-near-and far-field regions,-antenna theoremformulation of fundamental antenna properties -Friis transmission equation-radiation integrals and auxiliary potential functions

UNIT II – RADIATION FROM WIREANTENNAS
Infinitesimal dipole-finite-length dipole-linear elements near, conductors- dipoles for mobile communication-small circular loop.

UNIT III - APERTURE AND REFLECTOR ANTENNAS
Huygens' principle- radiation from rectangular and circular apertures- design considerations -Babinet's principle -Radiation from sectoral and pyramidal horns-design concepts prime-focus parabolic reflector and cassegrain antennas.

UNIT IV - BROADBAND AND MICROSTRIP ANTENNAS
Log-periodic and Yagi antennas- frequency independent antennas- helical antennas -Basic characteristics of microstrip antennas -feeding methods- methods of analysis -design of rectangular and circular patch antennas-microstrip arrays.

UNIT V – ANTENNAARRAYS AND BASIC CONCEPTS OF SMART ANTENNAS
Analysis of uniformly spaced arrays with uniform and non-uniform excitation amplitudes, extension to planar arrays. Concept and benefits of smart antennas- Fixed weight beam forming basics- Adaptive beam forming.

Text Books:

PH234 - BIOMECHANICS

UNIT-1 Introduction to biomechanics: what is biomechanics, Fundamentals of biomechanics and qualitative analysis, Anatomical description and its limitations.

UNIT-2 Multiaxial deformations and stress analyses: Poisson's ratio, biaxial and triaxial stresses, stress transformation, principal stresses, Mohr's circle, failure theories, allowable stress and factor of safety, factors affecting strength of materials, fatigue and endurance, stress concentrations, torsion , bending and combined loading-problems.

UNIT-3 Applications of statics to biomechanics: skeletal joints and muscles, basics considerations, basic assumptions and limitations, mechanics of the elbow, shoulder, spinal column, hip, knee and ankle.

UNIT-4 Mechanical properties of biological tissues: viscoelasticity, analogies based on springs and dashpots, empirical models of viscoelasticity, time-dependent material response, comparison of elasticity and viscoelasticity, common characteristics of biological tissues, biomechanics of bone, tendons and ligaments, skeletal muscles and articular cartilage.

UNIT-5 Biomechanics of human movement: linear and angular kinematics of human movement, linear kinetics of human movement, equilibrium and human movement, and angular kinetics of human movement

Text books:

1. Duane Knudson, "*Fundamentals of Biomechanics*", 2ndedition Springer Science and Business Media, 2007.
2. Nihatozkaya and Margareta Nordin, " *Fundamentals of biomechanics-equilibrium, motion and deformation*" Springer, Second edition

PH215 - MICROWAVE AND MILLIMETER WAVE CIRCUITS

UNIT-1 Analysis of Microwave Circuits:Introduction, Microwave Components – E-plane Tee, H-planeTee, Magic Tee, Directional Coupler, Isolator, Circulator & their Scattering.

UNIT-2 Transformers &Resonators:Parameters, Impedance Transformers – Quarter wave Transformers, Microwave Resonators – Rectangular and Cylindrical Resonators.

UNIT- 3 Filters And Periodic Structures:Design of Narrow Band Low Pass, Band Pass and High Pass Filters, Maximally flat and Chebyshev Designs, Introduction to Periodic Structures, Floquet's Theorem, Circuit Theory Analysis of Infinite and Terminated Structures,

UNIT-4 Obstacles in Wave Guides:Introduction, Posts in Waveguides, Diaphragms in Waveguides, Waveguide Junctions, Waveguide Feeds, Excitation of Apertures

UNIT-5 Millimeter Wave Circuits:Wave Propagation in microstriplines, Discontinues in Microstrips, Parallel Coupled lines, Power Dividers and Directional Couplers, Microwave and Millimeter Wave Integrated Circuits.

Text Books:

1. Roger F. Harrington, "Time-Harmonic Electromagnetic Fields", Mcgraw-hill.
2. Robert E Collin, "Foundation For Microwave Engineering", McGraw-Hill.

Reference Book:

1. Analysis Methods for RF, Microwave, and Millimeter-Wave Planar Transmission LineStructures by Cam Nguyun

PH221 - BROADBAND WIRELESS TECHNOLOGIES

UNIT 1 Introduction to Wireless Communication. The Cellular concept, System design, Capacity improvement in cellular systems, Co channel interference reduction. Intelligent cell concept and applications.TechnicalChallenges.

UNIT2 Mobile radio propagation: Reflection, Diffraction. Fading. Multipath Propagation. Channel modeling, Diversity Schemes and Combining Techniques.

UNIT 3 Design parameters at the base station, Practical link budget design using path loss models. Smart antenna systems, Beamforming.MIMO Systems. RAKE receiver.

UNIT 4 Multiuser Systems: CDMA- Principle, Network design, Link capacity, Power control, WCDMA-Network planning, MC-CDMA, OFDM, Cellular mobile communication beyond 3G.

UNIT 5GSM, IS-95, GPRS, UMTS, WLAN, WPAN, WMAN, Ultra Wideband communications, 4G and beyond 4G.

Text Books:

1. *A.F.Molisch, Wireless Communications, Wiley, 2005.*
2. *A.Goldsmith, Wireless Communications, Cambridge University Press, 2005.*

6. *S.G. Glisic, "Adaptive CDMA", Wiley, 2003*

PH240 - MICRO STRIP ANTENNA

UNIT-1 BASICS OF MICROSTRIP ANTENNAS Origin of Microstrip radiators, microstrip antenna analysis methods, microstrip antenna advantages, disadvantages and applications; materials used for microstrip antennas, feed, ground and substrates and their properties, Common Feed methods, Characteristics of Resonance Frequency, Bandwidth, % BW, Return loss, VSWR, 50 Ohms Characteristic impedance, Axial ratio, Efficiency, Gain, Directivity, Rectangular & Polar Radiation Patterns, Experiment on the design of simple feeds.

UNIT-2RECANGULAR, CIRCULAR MICROSTRIP ANTENNA MODELS AND CHARACTERISTICS Rectangular microstrip antennas- common feed methods, TM10 and TM01 modes, return loss, radiation pattern, quarterwave rectangular microstrip antenna, single feed and dual fed circular polarized rectangular microwave antenna design, impedance and axial ratio bandwidth, efficiency. Circular micro strip antenna properties, directivity, input impedance bandwidth, gain, radiation pattern and efficiency, radiation modesTM11 bipolar mode, TM21 Quadra polar mode, TM02 unipolar mode, cross polarization.

UNIT-3DESIGN GUIDELINES OF MICROSTRIP Design guidelines for a linearly polarized rectangular microstrip antenna, Design guidelines for a circularly polarized rectangular microstrip antenna, electromagnetically coupled rectangular microstrip antenna, ultra-wideband rectangular microstrip antenna, design of SMSA, RMSA, UWB.

UNIT-4 Broadbandmicrostrip antennas, broadbanding, microstrip antenna matching with capacitive slot, microstrip arrays- planar array theory, array feeding methods – corporate fed and series fed; overview of printed antennas –omnidirectional microstrip antenna, stripline fed tapered slot antenna.

UNIT-5 DESIGN STRUCTURES AND APPLICATIONS OF DIFFERENT ANTENNAS Basic concepts of CPW-Coplanar Waveguide antennas, metamaterials, DRA-Dielectric Resonator Antennas, Micro strip antenna with DGS, MIMO antennas, reconfigurable antennas, Design structures of different antennasand applications of different antennas.

Text Books:

1. Randy Bancraft, "Microstrip and Printed Antenna Design",2nd Edition, Prentice-Hall of India, 2009
2. Ramesh Garg, PrakashBhartia, InderBaul and ApisakIttipiboon, "Microstrip Antenna Design Handbook", Artech House, 2001
3. Time Domain Finite Element Methods for Maxwell's equations in Metamaterials by Jichun Li, Yunqinghuang, 2013

Reference Books:

1. MIMO System Techonology for Wireless Communications by George tsoulos, 1st Edition
2. A CPW fed monopole antenna with uni planar EBG & Rhombic SRR by Madhav B.T.P &MeenaKumari
3. Rectangular Dielectric Resonator Antennas by Rajveer S. Yadhuvanshi& Harish ParthasarathyReconfigurable antennas by Jennifer T. Bernhard, 2007

4. Broadband microstrip antenna by Girish Kumar & KP Ray, 2003
5. Microstrip patch antennas by RedneyB.Waterhouse, 2003
6. Microstrip antennas by David M.Pozar& Daniel by H.Schaubert,1995
7. Electromagnetic band gap structure antenna by Fan Yang, YahyaRahmat-sail

PH241 - MICROWAVE MEASUREMENTS

UNIT I Introduction to Microwaves and Mathematical model of Microwave Transmission History of Microwaves, Microwave Frequency bands, General Applications of Microwaves, Advantages of Microwaves. Concept of Mode, Characteristics of TEM, TE and TM Modes, Losses associated with microwave transmission, Concept of Impedance in Microwave transmission, S-Parameters.

UNIT II Analysis of Microwave Transmission Lines and Waveguides Analysis of Microwave Transmission Lines and Waveguides Transmission line equations & solutions, reflection and transmission coefficient, standing wave and standing wave ratio, line impedance and admittance, impedance matching, using stub line, application of Smith Chart in solving transmission line, transients in transmission lines.

UNIT III Microwave Measurements Power, Frequency and impedance measurement at microwave frequency, Network Analyzer and measurement of scattering parameters, Spectrum Analyzer and measurement of spectrum of a microwave signal.

UNIT IV Antenna Pattern Measurements Basic Considerations, Pattern Formats, Fresnel Region Measurements, Modeling Techniques, Antenna Range Design and Evaluation: Introduction, Electromagnetic Design Consideration, Antenna Range Evaluation. Antenna Testing: Introduction, Types of of Ranges: Elevated Ranges, Ground Ranges, Near Field Ranges, Radar Cross Section Ranges.

UNIT VModern Trends in Microwaves Engineering Effect of Microwaves on human body, Medical and Civil applications of microwaves, Wireless Communications system, Radar Systems, Radiometer Systems, Satellite Communication, Remote sensing,

Text Books:

1. Samuel Liao - Microwave devices and circuits, PHI , Third Edition
2. Dennis Roddy - Microwave Technology, PHI
3. G. Kennedy - Electronic Communication systems, McGraw-Hill Book Company , Fourth Edition

Reference Books:

1. Annapurna Das, SisirK.Das- Microwave engineering, (TMG), Second Edition
2. Siteshkumar Roy &ManojitMitra - Microwave semiconductor devices, PHI , Third Printing
3. A. K. Gautam - Microwave engineering, (S. K. Kataria pub) , 2nd Edition
4. Sanjeev Gupta, Microwave Engineering, Khanna Pub., Third Edition
5. Evans, Gray E," Antenna measurements techniques", Artech House, Inc
6. J S Hollis, T J Lyon, L Clayton," Microwave Antenna Measurements” , Scientific Atlants, Inc Third Edition
7. David M. Pozar, "Microwave Engineering", Third Edition, Wiley India.

PH220 - ADVANCED DIGITAL COMMUNICATION

UNIT 1 Digital modulation techniques: Digital modulation formats, Coherent binary modulation techniques, Coherent quadrature - modulation techniques, No-coherent binary modulation techniques, Comparison of binary and quaternary modulation techniques, M-ray modulation techniques, Power spectra, Bandwidth efficiency, M-array modulation formats viewed in the light of the channel capacity theorem, Effect of inter symbol interference, Bit verses symbol error probabilities, Synchronization, Applications.

UNIT 2 Coding techniques: Convolutional encoding, Convolutional encoder representation, Formulation of the convolutional decoding problem, Properties of convolutional codes: Distance property of convolutional codes, Systematic and nonsystematic convolutional codes, Performance Bounds for Convolutional codes, Coding gain, Other convolutional decoding algorithms, Sequential decoding, Feedback decoding, Turbo codes. Communication through band limited linear filter channels: Optimum receiver for channel with ISI and AWGN, Linear equalization, Decision - feedback equalization, reduced complexity ML detectors, Iterative equalization and decoding - Turbo equalization.

UNIT 3 Adaptive equalization: Adaptive linear equalizer, adaptive decision feedback equalizer, Adaptive equalization of Trellis - coded signals, Recursive least square algorithms for adaptive equalization, Self recovering (blind) equalization.

UNIT 4 Spread spectrum signals for digital communication: Model of spread spectrum digital communication system, Direct sequence spread spectrum signals, Frequency hopped spread spectrum signals, CDMA, Time hopping SS, Synchronization of SS systems.

UNIT 5 Digital communication through fading multipath channels: Characterization of fading multipath channels, The effect of signal characteristics on the choice of a channel model, Frequency nonselective, Slowly fading channel, Diversity techniques for fading multipath channels, Digital signals over a frequency selective, Slowly fading channel, Coded wave forms for fading channels, Multiple antenna systems.

Text books:

1. John G. Proakis, **"Digital Communication"**, McGraw Hill, 4th edition, 2001.
2. Bernard Sklar, **"Digital Communication - Fundamental and applications",** Pearson education (Asia), Pvt. Ltd., 2nd edition, 2001.
3. Simon Haykin, **"Digital communications",** John Wiley and Sons.
4. Andrew J. Viterbi, **"CDMA: Principles of spread spectrum communications",** Prentice Hall, USA, 1995.

PH242 - METAMATERIALS

UNIT-I: Introduction to Metamaterials (MTMs): The concept of Metamaterials: Basic Electromagnetic and Optical properties, Basic structures, potential applications, Governing equations for Metamaterials, Brief overview of computational electromagnetics. Definition of Metamaterials and Left-Handed(LH) MTMs.

UNIT-II: Fundamentals of LH MTMs: Conventional Backward waves and Novelty of LH MTMs, Terminology, Transmission line approach, Composite Left/Right Handed MTMs, MTMs and photonic Band-Gap structures. Left-Handedness from Maxwell's equations, Entropy conditions in Dispersive media, Boundary conditions, Reversal of Doppler effect, Reversal of Snell's law, Focusing by a "Flat LH Lens".

UNIT-III: Simulations of Wave propagation in Metamaterials I: Interesting phenomena of wave propagation in MTMs: Demonstration of a PML model, Multiscale phenomena for Metamaterials, Demonstration of Backward Wave Propagation, Metamaterial electro magnetic cloak: Form Invariant property of Maxwell's equations, Design of Cylindrical and square cloaks, cloak simulation in Frequency domain.

UNIT-IV: Simulations of Wave propagation in Metamaterials II:

Solar cell design with Metamaterials: Brief Introduction, Mathematical formulation, Numerical Simulations, Problems needing special attention: Unit cell design and Homogenization, A posteriori error estimator.

UNIT-V: Future of MTMs:"Real-Artificial" Materials: the challenge of Homogenization, Three-Dimensional isotropic LH MTMs, "Magnet less" Magnetic MTMs, Terahertz Magnetic MTMs, Antenna Radomes and Frequency selective surfaces, Nonlinear MTMs, Active MTMs.

Textbooks:

1. "Time Domain Finite Element Methods for Maxwell's equations in Metamaterials" by Jichun Li, Yunqinghuang.
2. "Electromagnetic Metamaterials: Transmission Line Theory and Microwave Applications" The Engineering Approach by Christophe Caloz, Tatsuo Itoh

PH238 - CHANNEL CODING

UNIT – IINTRODUCTION TO ERROR CONTROL CODING: Introduction to error control coding, Introduction to block codes, linear block codes, Generator matrix and parity check matrix, Properties of linear block codes: Syndrome, error detection, Decoding of linear block codes.

UNIT – II LOW DENSITY PARITY CHECK CODES: Introduction to low density parity check codes,LDPC code properties, Construction of parity check matrix H, Representation using tanner graphs, Encoding of low density parity check codes, Efficient encoding of LDPC codes , Decoding of low density parity check codes.

UNIT – IIICONVOLUTIONAL CODES: Introduction to convolutional codes, Encoding of convolutional codes, Structural properties of convolutional codes - state diagram, catastrophic convolutional codes,Transfer function of convolutional encoder, Distance properties of convolutional codes, Trellis diagram, Decoding of convolutional codes- Viterbi algorithm- hard decision decoding, soft decision decoding.

UNIT – IVTURBO CODES: Introduction to turbo codes, Encoding of turbo codes, Turbo decoding – the BCJR algorithm, Performance analysis of the turbo codes.

UNIT –VSPACE-TIME CODING: Introduction to space-time coded MIMO system, Space-time block code, Decoding STBCs, Alamouti code - 2-transmit, 1-receive alamouti STBC coding, 2-transmit, 2-receive alamouti STBC coding, Higher order STBC's, Space-time trellis coding.

TEXT BOOKS:

1. K. Deergha Rao, "Channel Coding Techniques for Wireless Communications", Springer India, 2015.
2. Richardson T, "Modern Coding Theory", Cambridge University Press, 2008.

PH239 - WIRELESS AND CELLULAR COMMUNICATION

UNIT – IOVERVIEW OF CELLULAR EVOLUTION AND WIRELESS TECHNOLOGIES: Introduction, **2G/3G Cellular Systems and their features, Cellular evolution to 4G,Motivation and scope for 5G Cellular systems,Non-Cellular technologies for Internet of Things (IoT) and Smart grids,**Basic Cellular Terminology, Introduction to Antennas and Propagation Models, Link budget, Fading margin, Outage, Cellular concept, Cellular system design and analysis, Cellular Geometry and System Design, Cellular System Capacity, Trunking, Handoff and Mobility, Classification of signal variation, Shadowing, Outage, Multipath.

UNIT – IIMULTIPATH FADING ENVIRONMENT AND BER PERFORMANCE IN FADING CHANNELS: Rayleigh Fading and Statistical Characterization, Properties of Rayleigh Distribution, BER in Fading, Narrowband vs Wideband Channels, Characterization of Multipath Fading Channels, Choice of Modulation, Coherent versus Differential Detection, BER in Fading, Ricean Fading, Ricean and Nakagami Fading, Moment Generating Function.

UNIT – IIITRANSCEIVERS AND SIGNAL PROCESSING: Structure of a wireless communication link, Modulation formats, Demodulation, Diversity, Channel coding and information theory, Equalizers, BER in fading, Equal Gain Combining, Array Gain, Diversity Gain, Alamouti Scheme, Channel capacity, Capacity of fading Channels, Capacity with Outage, Channel State Information, Optimum Power Allocation.

UNIT – IVCDMA and OFDM: Optimum Power Allocation – Water filling, Introduction to Direct Sequence Spread Spectrum Communications, Properties of Spreading Sequences, Introduction to CDMA, Features of cdma2000 and WCDMA, Rake Receiver for multipath channels, Multiuser environment, CDMA system capacity, CDMA Multiuser Detectors, Orthogonal Frequency Division Multiplexing, Multiantenna systems.

UNIT – VMIMO: Multi User Introduction: Point-to- point MIMO, Multi-user MIMO, Massive MIMO, Time Division verses Frequency Division Duplexing, Models and Preliminaries: Single-Antenna Transmitter and Single-Antenna Receiver, Coherence Time, Coherence Bandwidth, Coherence Interval, Interpretation of Tc and Bc in Terms of Nyquist Sampling Rate,TDD Coherence Interval StructureDetection, MIMO, Space time codes.

TEXT BOOKS:

1. T. S. Rappaport, “Wireless Communications – Principles and Practice” (2nd edition) Pearson, 2010, ISBN 9788131731864.
2. A. Molisch, "Wireless Communications," Wiley, 2005Haykin & Moher, "Modern Wireless Communications" Pearson 2011 (Indian Edition).

3. J. G. Proakis, "Digital Communications," McGraw Hill.

4. A. Goldsmith, "Wireless Communications," Cambridge Univ Press, 2005.

5. D. Tse and P. Viswanath, "Fundamentals of Wireless Communications," Cambridge Univ Press, 2005.

MECHANICAL ENGINEERING

PH034 - COMPUTATIONAL FLUID DYNAMICS

UNIT I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS Basics of computational fluid dynamics - Governing equations of fluid dynamics - Continuity, Momentum and Energy equations - Chemical species transport - Physical boundary conditions Time-averaged equations for Turbulent Flow - Turbulent-Kinetic Energy Equations Mathematical behaviour of PDEs on CFD - Elliptic, Parabolic and Herbolic etuations –

UNIT II FINITE DIFFERENCE METHOD 9 Derivation of finite difference equations - Simple Methods - General Methods for first and second order accuracy - solution methods for finite difference equations - Elliptic equations - Iterative solution Methods - Parabolic equations - Explicit and Implicit schemes - Example problems on elliptic and parabolic equations.

UNIT III FINITE VOLUME METHOD (PM) FOR DIFFUSION 9 Finite volume formulation for steady state One and Two dimensional diffusion problems. One dimensional unsteady heat conduction through Explicit, Crank - Nicol son and fully Implicit schemes

UNIT IV FINITE VOLUME METHOD FOR CONVECTION DIFFUSION 1 10 Steady one-dimensional convection and diffusion - Central, upwind differencing schemes-properties of discretization schemes - Conservativeness, Boundedness, Trasnportiveness, Hybrid, Power-law, QUICK Schemes

UNIT V CALCULATION FLOW FIELD BY FVM Representation of the pressure gradient term and continuity equation - Staggered grid -Momentum equations - Pressure and Velocity corrections - Pressure Correction equation, SIMPLE algorithm and its variants. Turbulence models, mixing length model, two equation (k-C) models - High and low Reynolds number models LECTURE 45 TUTORIAL 15 TOTAL 60 TEXT

BOOKS: 1 T.J. Chung, Computational Fluid Dynamics, Cambridge University, Press, 2002 Versteeg, H.K., and Malalasekera, W., An Introduction to Computational Fluid Dynamics: The finite volume Method, Longman, 1998 REFERENCES; 1 Petarkar, S. J. Numerical Heat Transfer and Fluid Flo wr, HerrFsphere Publishing Corporation, 2004 2 Mura l idha r, 1 ., and Su n da ra rajan, T_, cam p utationel Fluid Flow and Feat Transfer. Morose Fublistrin; House, NewDelhi, 1995. :: hoshdastidar' , P.S., computer Simulati n floes end heat transfer, Tate McGraw Hill Publishing Company Ltd.. '1998 Pearson Education, 2005. 5 Anil W. Date ,Introduction to Computational Fluid Dynamics Cambridge University Press, 2005.

PH035 – FUELS AND COMBUSTION

UNIT-I Fuels- detailed classification - Conventional and Unconventional Sorid, Liquid, gaseous fuels and nuclear fuels - Origin of Coal - Analysis of coal. Coal - Carborisation, asification and liquification - Lignite: petroleum based fuels - problems. associated with very low calorific value gases: Coal Gas - Blast Furnace Gas Alcohols and eiogas_

UNIT II Prhciples of combustion - Chemical composition - Flue gas anlaysis. - dew point of products - Combustion stoichiOmetry. Chemical kinetics - Rate of reaction - R.eaction order - Molecularity Zeroth, first, second and third order reactions - complex reactions - chain reactions. Theories of reaction Kinetics - General oxidation behavior of HC's,

UNIT III Thermodynamics of combustion - Enthalpy of formation - Heating value of fuel - Adiabatic flame Temperature - Equilibrium composition of gaseous mixtures..

UNIT IV Laminar and turbulent flames propagation and structure - Flame stability - Burning velocity o fuels — Measurement of burning velocity - factors affecting the burning velocity. Combustion of fuel, droplets and sprays - Combustion systems - Pulverised fuel furnaces - fixed, Entrained and Fluidised Bed Systems.

UNIT V Environmental considerations - Air pollution - Effects on Environment, Human Health etc. Principal pollutants - Legislative Measures - Methods of Emission control_

PH049 – CONVENTIONAL MACHINE PROCESSING

UNIT - I Principles and Elements of machining - Types of cutting tools – Geometry of single point cutting tool – chip formation and types of chips, chip breakers. Orthogonal and Oblique cutting – Machinability - Merchant's force diagram – velocity relationship – cutting speed, feed, depth of cut. Tool life and wear – Tool materials, thermal aspects, surface finish, cutting fluids, empirical and analytical determination of cutting forces.

UNIT - II Work Holding Devices of Lathe: Three jaw chuck – Four jaw chuck – combination chuck and other work holding devices. Tool holders. Lathe Operations : Turning, facing – taper turning – thread cutting, special attachments, machining time and power estimation. Capstan & Turret Lathe: Differences, collet chuck, tool holders, tool layout, automatic lathes.

UNIT - III Shaper : Line diagram and parts, specifications, quick return mechanism for shapers – work holding devices and shaper operations. Planer : Types of planers, specifications, quick return mechanism of a planer – work holding devices. Slotting Machine : Line diagram and parts of a slotter – specifications – Ram drive mechanism, determination of vcm in accordance with the machine mechanism.

UNIT - IV Drilling Machine : Classification and Specifications – Drill bits – twist drill – nomenclature – Tool Holding devices – Drilling operations. Special purpose machines. Boring Machine: Boring operations and Jig Boring machines. Milling Machine : Classification of Milling Machines – Parts and Specifications – types of milling cutters – Milling Operations – Indexing heads – plain and universal dividing heads, milling mechanics, milling time and power estimation, special setups.

UNIT - V Grinding : Cylindrical - external and internal, surface and centerless grinding machines, grinding process, grinding process parameters. Grinding Wheel : Specifications - Abrasives, bonds, grit, grade and structure of grinding wheel. Fine Finishing Processes : Lapping, Honing and superfinishing operations.

PH231 – ADVANCED HEAT TRANSFER

1. **Conduction:** Introduction – Modes of heat transfer – Combined modes – Steady one-dimensional – Steady heat source system – Steady porous system – Steady two-dimensional system – Unsteady Conduction - Lumped heat capacity system - infinite solid flat plate - cylinder (Hcsillery charts).

2. **Fins:** Types of fins – Analysis of fins (Longitudinal & annular) of uniform cross section, effectiveness - Efficiency of fin.

3. **Convection:** Boundary layer flow with heat transfer - Equations of momentum and energy – Forced convection over a flat plate (similarity solution) – Empirical relations for forced and free convection - Mechanism of free convection in enclosed spaces – Mixed convection.

4. **Two Phase Heat Transfer:** Regimes of pool boiling – Flow boiling – Correlations – Types of condensation – Film condensation on horizontal and vertical surfaces.

5. **Radiation:** Overview of Mechanism – laws of radiation- Radiant heat exchange in gray - non-gray bodies - with transmitting - reflecting and absorbing media - specular surfaces - gas radiation

Heat Exchanger: Definition and classification - concept of LMTD and overall heat transfer coefficient - fouling factor- Derivation of LMTD and effectiveness for parallel and counter flow heat exchangers - NTU approach and design procedure – compact heat exchangers.

PH232 - RENEWABLE ENERGY TECHNOLOGIES

1. **Global and National Energy Scenario:** Over view of conventional & renewable energy sources - Need & development of renewable energy sources - Types of renewable energy systems - Future of Energy Use - Global and Indian Energy scenario - Renewable and Non-renewable Energy sources, Energy for sustainable development - Potential of renewable energy sources - Renewable electricity and key elements – Global climate change - CO2 reduction potential of renewable energy- Concept of Hybrid systems.

2. **Solar Energy:** Solar energy system - Solar Radiation – Availability - Measurement and Estimation - Solar Thermal Conversion Devices and Storage - Applications Solar Photovoltaic Conversion - solar thermal - Applications of solar energy systems.

3. **Wind Energy:** Wind Energy Conversion – Potential - Wind energy potential measurement - Site selection - Types of wind turbines - Wind farms - Wind Generation and Control - Nature of the wind - Power in the wind - Factors influencing wind – Wind data and energy estimation - Wind speed monitoring - Classification of wind – Characteristics - Applications of wind turbines - Offshore wind energy – Hybrid systems - Wind resource assessment - Betz limit - Site selection - Wind energy conversion devices - Wind mill component design - Economics and demand side management – Energy wheeling - Energy banking concepts - Safety and environmental aspects - Wind energy potential and installation in India.

4. **Biogas:** Properties of biogas (Calorific value and composition) - Biogas plant technology and status - Bio energy system - Design and constructional features – Biomass resources and their classification - Biomass conversion processes - Thermo chemical conversion - Direct combustion - biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion - Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production - Urban waste to energy conversion - Biomass energy programme in India.

5. **Ocean Energy:** Ocean wave energy conversion - Principle of Ocean Thermal Energy Conversion (OTEC) - Ocean thermal power plants - Tidal energy conversion - Tidal and wave energy its scope and development - Scheme of development of tidal energy.

a. **Small Hydro Power Plant:** Importance of small hydro power plants and their Elements - Types of turbines for small hydro - Estimation of primary and secondary power.

b. **Geothermal Energy**: Geothermal power plants - Various types - Hot springs and steam ejection.

PH233 - NANO MATERIALS AND FLUIDS FOR ENERGY AND ENVIRONMENT

Unit-I: Energy overview

Types of energy and utilization – energy characteristics, energy measures, fundamentals of environment, environmental aspects of energy utilization, public health issue related to environment pollution, public standards, environmental impact assement

Unit- II: Nanomaterial's used in energy and environmental application

Evaluation of properties and performance of practical power systems that benefit from optimization of materials processing approaches

Unit-III Device applications

Sensors, power semiconductors chips, fuel cells, superconductors, solar cells, energy storages and alternative power sources. Solar cells, thin film Si solar cells, chemical semiconductor solar cells, dye sensitized solar cells, polymer solar cells, nano quantum dot solar cells, hybrid nano-polymer solar cells

Unit-IV Introduction to fuel cells

Fuel cells, principle of working, basic thermodynamics and electrochemical principle, fuel cell classification, fuel cell electrodes and carbon nano tubes, application of power and transportation.

Unit V:Nano fluids: Preparation, Stability Mechanisms, and Applications

Introduction to Nanofluids.Preparation Methods for Nanofluids - Two-Step Method, One-Step Method, Other Novel Methods.The Stability of Nanofluid-The Stability Evaluation Methods for Nanofluids- Sedimentation and Centrifugation Methods- Zeta Potential Analysis- Spectral Absorbency Analysis-The Ways to Enhance the Stability of Nanofluids- Surfactants Used in Nanofluids-Surface Modification Techniques: Surfactant-Free Method- Stability Mechanisms of Nanofluids. Application of Nanofluids- Heat Transfer Intensification-Electronic Applications-

Transportation-Industrial Cooling Applications-Nuclear Systems Cooling-Space and Defense-Mass Transfer Enhancement-Energy Storage-Solar Absorption-Mechanical Applications-Friction Reduction

3. Introduction to Materials Science and Engineering, Yip-wah Chung, 2006, CRC

PH235 - MECHATRONICS AND MANUFACTURING AUTOMATION

Unit1 Introduction: Definition of mechatronics. Mechatronics in manufacturing, products and design. Review of fundamentals of electronics.

Unit 2. Mechatronics elements: Data conversion devices, sensors, micro sensors, transducers, signal processing devices, relays, contactors and timers.
Processors /controllers- Microprocessors, microcontrollers, PID controllers and PLCs.

Unit 3Drives and mechanisms of an automated system: Drives-stepper motors, servo drives. Ball screws, linear motion bearings, cams, systems controlled by camshafts, electronic cams, indexing mechanisms, tool magazines, and transfer systems

Unit 4 Hydraulic system Hydraulic systems: flow, pressure and direction control valves, actuators, and supporting elements, hydraulic power packs, and pumps. Design of hydraulic circuits.

Unit 5 Pneumatic system Pneumatics: production, distribution and conditioning of compressed air, system components and graphic representations, design of systems.
CNC technology and Robotics CNC machines and part programming. Industrial Robotics.

PH236 - ADVANCED SURFACE ENGINEERING TECHNIQUES

Unit 1: Introduction to materials, surface, thermodynamics of surface, surface dependent engineering properties. Common surface initiated engineering failure; mechanisms of surface degradation (wear, corrosion and high Temperature oxidation)

Role of microstructure and materials behavior in controlling the surface dependent failure of components, Importance of surface engineering, classification and scope of surface engineering of Materials. Introduction to surface modification and coating techniques.

Unit 2: Requirement of protective coatings, classification of organic, polymeric and inorganic coatings, conversion coatings, metallic coatings, electrodeposition and electroless coatings. Paint coatings for corrosion protection, role of resins, pigment, additives and solvents.

Unit 3: Application techniques: Surface preparation and its importance in coating, role of coating selection & design of coating, failure mechanism , maintenance coatings, industrial paint systems, modern paint coating systems and specific examples. coatings for underground pipelines, storage tanks, overhead pipelines, offshore structures, ship hulls, risers, reinforced bars and concrete structures. testing and evaluation.

Unit 4: Synthesis, processing and characterization of nano-structured coatings, functional coatings,advanced coating practices, characterization of nano-coatings, applications of nano-coatings,

Need of advanced methods for surface and coating testings, Size dependency in nanostructures of nanocoatings, Size effect in electrochemical properties of nanostructured coatings, Size effect in mechanical properties of nanostructured coatings, Size effect in physical and other properties of nanostructured coatings.

Unit 5: Microencapsulation: Processes, Microencapsulation: Kinetics of release, Plating of nanocomposite coatings, Advantages of microencapsulation over other conventional methods.

Current trends in surface modification of nanomaterials, Modified Nanomaterials: In-use for consumer products, Main problems in synthesis of modified nanomaterials.

7. Nanomaterials and Surface Engineering edited by Jamal Takadoum, John Wiley & Sons, Inc., USA.

8. Nanocoatings: Size Effect in Nanostructured Films By Mahmood Aliofkhazrae, Springer-Verlag, USA.

9. Introduction to Tribology byu Bharat Bhusan, John Wiley & Sons, USA.

PH237 - ADDITIVE MANUFACTURING TECHNOLOGIES AND APPLICATIONS

UNIT – I

Introduction: Prototyping fundamentals: Need for time compression in product development, Need for Additive Manufacturing, Historical development, Fundamentals of Additive Manufacturing, AM Process Chain, Advantages and Limitations of AM, Commonly used Terms, Classification of AM process. Fundamental Automated Processes: Distinction between AM and CNC, other related technologies.

UNIT – II

Liquid-based AM Systems:Stereo lithography Apparatus (SLA): Models and specifications, Process, working principle, photopolymers, photo polymerization, Layering technology, laser and laser scanning, Applications, Advantages and Disadvantages, Case studies. **Solid ground curing (SGC):** Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. **Polyjet:** Process, Principle, working principle, Applications, Advantages and Disadvantages, Case studies. Microfabrication.

Solid-based AM Systems:Laminated Object Manufacturing (LOM): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. **Fused Deposition Modeling (FDM):** Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. **Multi-Jet Modelling (MJM):** Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies.

UNIT – III

Powder Based AM Systems:Selective laser sintering (SLS): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. **Three dimensional Printing (3DP):** Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. **Laser Engineered Net Shaping (LENS):** Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies.**Electron Beam Melting (EBM):** Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies.**Wire Arc Additive Manufacturing (WAAM): W**orking principles, applications, advantages and disadvantages of WAAM. WAAM advantages over powder bed AM systems, case studies.

UNIT – IV

Rapid Tooling and Rapid Manufacturing process optimization: Introduction to Rapid Tooling (RT), Conventional Tooling Vs RT, Need for RT. Rapid Tooling Classification: Indirect

Rapid Tooling Methods: Arc Spray Metal Deposition, Investment Casting, Sand Casting. Direct Rapid Tooling: Direct AIM, LOM Tools, DTM Rapid Tool Process.

Rapid manufacturing process optimization- factors influencing accuracy, data preparation errors: part building errors; errors in finishing. Influences of part build orientation. Additive manufacturing software's.

UNIT –V

AM Applications: Application – Material Relationship, Application in Design, Application in Engineering, Analysis and Planning, Aerospace Industry, Automotive Industry, Jewelry Industry, Coin Industry, GIS application, Arts and Architecture. RP Medical and Bioengineering Applications: Planning and simulation of complex surgery, Customised Implants & Prosthesis, Design and Production of Medical Devices, Forensic Science and Anthropology, Visualization of Biomolecules. Web Based Rapid Prototyping Systems

Suggested Reading:

1. Rapid prototyping: Principles and Applications - Chua C.K., Leong K.F. and LIM C.S, World Scientific publications , Third Edition, 2010.

2. Rapid Manufacturing – D.T. Pham and S.S. Dimov, Springer , 2001

3. Wholers Report 2000 – Terry Wohlers, Wohlers Associates, 2000

4. Rapid Prototyping & Engineering Applications – Frank W.Liou, CRC Press, Taylor & Francis Group, 2011.

MANAGEMENT SCIENCES

PH210 - DECISION SUPPORT SYSTEM

UNIT - I

M.I.S and Its Role In Organizations Open-Systems and Closed Systems. D.S.S Its Relation to M.I.S, Characteristic Role of D.S.S as Different From M.I.S in an Organization, Expert DSS and Its Role as an Aid to Management Decision Process.

UNIT - II

Deterministic Models: Models Required to Cope With Uncertainty, Probabilistic Models and Fuzzy Sets, Fuzzy DSS and Fuzzy Expert DSS. *{Ref:2,3}*

UNIT - III

Application of DSS to Some Functional Areas of Management Like Finance, Marketing, Production Planning and Control Etc. *{Ref:2,3}*

UNIT - IV

Non-Optimizing Models of DSS, Simulation Techniques and Monte- Carlo Methods. Application of DSS Technical Feasibility and Financial Viability of DSS. Advantages and Limitations of DSS –Contemporary practices. *{Ref:1,2,3}*

UNIT - V

Introduction to Artificial Intelligence (AI): An Overview of AI– AI Technologies in Business, Domains in AI, Neural networks, Fuzzy logic systems in Business, Virtual Reality, Intelligent agents, expert system and its components, Applications of expert system, developing expert systems, value of expert systems. *{Ref:4,5}*

Reference Books:

1 Macllah: Decision Support Systems and Data Warehousing, TMH, 2003.

2 Turbon: DSS and Intelligent Systems, Pearson Education, 2001.

3 James A Obrien: Management Information systems—Managing information technology in the E-Business Enterprise, 5/e, TMH, New Delhi, 2002.

4 Janakiraman&Sarukesi: Decision Support Systems, PHI, New Delhi, 2002.

5 George M..Marakas:Decision Support Systems in the 21st Century, 2/e, Pearson Education, New Delhi, 2003.

CHEMISTRY

PH219 - CHROMATOGRAPHIC TECHNIQUES FOR API

Unit1: Basic Chromatographic Techniques
Chromatography - principle, classification and mechanism based on adsorption, partition, ion exchange, ion association, gel permeation and molecular sieving. Analytical and industrial applications of Column chromatography, Paper chromatography, Thin Layer chromatography, Ion–exchange chromatography; Advantages and Disadvantages

Unit2: Advanced Chromatographic Techniques
Gas chromatography –Principle, Instrumentation, column, mobile and stationary phase, detectors – operative principles of MS, TCD, FID and ECD; Liquid chromatography–HPLCand UPLC-Principle, Instrumentation, Columns,Detectors UV, PDA, ELSD, RI, Fluorescence; Applications, advantagesanddisadvantages of GC and HPLC.

Unit3: Method Development, validation and impurity profiling
HPLC method development for drugs –Strategiesincluding detectors; principle of validation, Methodology,Specificity,Precision,Accuracy,Linearity,Limit of Detection,Limit of Quantification,Robustness,Ruggedness; Stability testing-Protocol,Stress testing of drug products,Impurity profiling –impurity types.

Unit4: Regulatory Guidance for API
ICH Guidelines for analytical method validation; Q3A, Q3B and Q3C; US FDA guidelines;WHO guidelines for standard estimation of raw materials and finished products including herbal products;ICH guidelines for ImpuritiesandImpurity profiling study.

Unit5: STATISTICAL ANALYSIS
Types of errors, precision and accuracy, significant figures, various statistical tests on the accuracy, positive and negative deviation from accuracy, binomial, Gaussian and normal distribution of random errors; mean value, variance and standard deviation, reliability interval, deviations from the Gaussian law of error distribution, t-distribution and t-test; SPSS and Annova software

Test Books and Reference Books

1. Practical HPLC Method Development by Llyod R Snyder, joseph J.Krirkland and Joseph, L Glajch, 2nd edition, 2010, John Wiley and Sons.

2. Fundamentals of Analytical Chemistry by Douglas A Skoog, Donald M.Weast, F.James Holler, 8th Edition, 2003, Sanders College Publications.

3. Method Validation Pharmaceutical Analysis: A guide to Best Practice by Joachim Erner, John H.McB.Miller, 2005, Wiley.VCH.

4. ICH, US-FDA, USP Guidanceon Analytical Method Validation, Guidelines on Quality, Stability and Impurity.

5. Handbook of Stability in Pharmaceutical Development, Regulations, Methodologies and Best practices.

6. Instrumental Methods of Analysis – H.H.Willard, L.L.Merritt, J.a.Dean, F.A. Settle, CBS Publishers & Distributors, 1986.

PH253 - APPLICATIONS OF NANOMATERIALS AND CATALYSTS

UNIT - 1: Basics of Nanomaterials:
Definition - Classification – Difference between bulk and nanomaterials - General synthetic approaches (top-down and bottom-up) - Properties - Characterization Techniques (UV/Vis, Calculation of band-gap, relation to 1D box problem, Microscopy) – Aspect ratio - Applications with special emphasis on catalysis (Au/Ag catalysis) - Size and shape dependent activity (QDs)

UNIT – 2: Fundamentals of Heterogeneous- and Nano- Catalysis:
Introduction to catalysis - Differences between homogeneous and heterogeneous catalysis – Important steps in heterogeneous catalysis - Kinetics and Thermodynamic Concerns - Industrial significance

UNIT - 3: Metal-based Nanocatalysts for Industrial Chemical Transformations:
Introduction to metal/metal-oxide/sulfide/carbide nanoparticles - Synthesis and characterization - Selected catalytic reactions (noble-metal and non-noble-metal-based catalytic examples) - Industrial examples - Fischer–Tropsch process, strategies to control exhaust gases (zeolite, NO_x etc.)

UNIT – 4: Non-metal-based Nanocatalysts for Industrial Chemical Transformations:
Introduction to non-metal-based nanomaterials - Synthesis and characterization - Catalytic reactions involving silica and carbon (either as support for metal nanoparticles or homogeneous catalysts or as active catalysts) – Industrial examples (automobile and petrochemical industries) - Concept of carbocatalysis

UNIT – 5: Electro- and Photo-catalysis:
Electrocatalysis – Basics of electrocatalysis – Examples of electrocatalytic reactions – Recent trends in nanomaterials-based electrocatalysis (HER, OER etc.)
Photocatalysis – Basics of photocatalysis – Examples of photocatalytic reactions – Recent trends in nanomaterials-based photocatalysis (Water-splitting, artificial photosynthesis)

PH254 – POLYMERS AND ELASTOMERS

Unit I : Introduction to Polymers and Polymer Solutions
Types of Polymers, Applications, Different types of M.Wt and its significance, Polymerisation techniques, Thermodynamics of polymer solution: Flory-Huggins theory(liquid lattice theory), modified Flory-Huggins theory, entropy of mixing, enthalpy and free energy of mixing, dilute polymer solutions (Flory-Krigbaum theory), advantages and limitation of FH and FK theories.

Unit II: Polymerisation Mechanism, Kinetics and Reactivity ratio
Types**:** Radical, cationic, anionic and condensation polymerization, Kinetics and reactivity ratio of co-polymerisation, thermodynamic aspects of polymerization, Controlled Living Radical Polymerisation: nitroxide mediated polymerization (NMP), metal-catalyzed living radical polymerization (ATRP), reversible addition-Fragmentation Chain Transfer (RAFT) radical polymerization, coordination polymerization.

Unit III: Polymer Characterisation and Properties
For functional group characterisation: IR, UV, NMR. For M.Wt estimation : NMR, GPC, light Scattering. Thermal analysis: TGA, DSC, DTG, DMA. Rheology of polymers and polymer solution. Mechanical properties of polymers, Thermal properties.

Unit IV: Speciality polymers
Liquid crystalline polymers, conducting polymers, electroluminescent polymers, inorganic polymer, biomedical polymers, Poly electrolytes-water soluble charged polymers, solid polymer electrolytes (SPE), polymer colloids, polymeric gels, crosslinked polymers: synthesis, properties and applications, Elastomers- Natural and synthetic elastomers, Industrial application of Elastomers

Unit V: Polymeric composites:
Fundamental concepts, methods of fabrication, factors influencing the performance of polymer composites-aspect ratio, void content, length of the fiber, nature of the fiber. Structure property relationship between fiber and matrix, modifications of the fiber surface, degree of interaction between fiber and matrix, wetting behavior, degree of cross linking etc., Nanocomposite: Polymer/CNTs and Polymer/Nano clay based composites.

PH255 – ANALYTICAL CHEMISTRY

Unit – I: Principles of Analytical Chemistry
Elementary concepts: Sampling, Preparation of samples for analysis, Calibration standards, Significance of calibration; Evaluation of Analytical data: Errors, Accuracy and Precision, Law of distribution in case of indeterminate errors; Criteria for rejection of analytical data; Chemical equilibria.

Unit – II: Classical Methods of Analysis:
Titrimetric analysis: Acid-base, redox, complexometric, role of indicators; **Gravimetric analysis**: theory of crystal formation, co-precipitation, elementary gravimetry, precipitation reactions; **Colorimetry**: Spectrophotometric reagents, spectrophotometric titrations, turbidimetric methods.

Unit – III: Electroanalytical Techniques
Electroanalytical methods – **Electrogravimetry** with controlled potential and without potential control; **Voltammetry**, cyclic-voltammetry; **Polarography**, pulse-polarography, amperometric titrations.

Unit – IV: Chromatographic Techniques
Principle and classification of chromatographic techniques; Principle, instrumentation and applications of Gas chromatography (GC), Gas-Liquid chromatography, Gas-Solid chromatography, High-Performance Liquid chromatography (HPLC); Partition chromatography; Ion-exchange chromatography (IEC); Size-exclusion chromatography (SEC).

Unit – V: Importance of Analytical Chemistry to Industrial Research:
Importance of qualitative and quantitative analysis in R & D, industries and other branches of Sciences; Design of experiments for analytical method development and validation based on HPLC, LC-MS and GC-MS techniques

Text Books:

1. Skoog, Douglas A.; West, Donald M.; Holler, F. James; Crouch, Stanley R. Fundamentals of Analytical Chemistry. Belmont: Brooks/Cole, 2014.

8. Modern HPLC for practicing scientists by Michael W. Dong, Wiley Inter science, 2006.

PH256 – ELECTROCHEMISTRY AND BATTERIES

Unit – 1: Fundamental Measurements in Electrochemistry:
Types of cells, cell components, Nernst equation, electrical double layer, equilibrium electrode potential, ion-solvent interaction, IUPAC convention of electrode potentials, electrochemical series, thermodynamics of electrochemical cells and applications, Polarizable and non-polarizable electrodes, types of reference and working electrodes, cell geometry, choice of reference electrodes.

Unit – 2: Electrode Kinetics:
Current-potential relationship using Butler-Volmer and Tafel equations, types of overpotential and their minimization, types of diffusion of electroactive species, hydrogen evolution reaction, oxygen evolution/reduction reaction, transition state theory and Gibbs free energy of activation.

Unit – 3: Experimental Techniques:
Cyclic voltammetry, Linear sweep voltammetry, chronopotentiometry, chronoamperometry, electrochemical impedance spectroscopy, Nyquist and Bode plot, Randle's circuit, resistance, capacitance, inductance, constant phase element, fitting of impedance spectra with suitable circuit.

Unit – 4: Energy Conversion/Storage Systems:
Fuel cells (hydrogen-oxygen and methanol-oxygen, proton exchange membrane fuel cell), Batteries (primary and rechargeable batteries): Lead-acid battery, lithium ion battery, Zn-air battery, Photo-electrochemical cells, supercapacitor, and dye-sensitized solar cells.

Unit – 5: Corrosion and its Control:
The fundamental electrochemistry of corrosion, scope and economics of corrosion, different types of corrosion, influence of environment, Evans diagram, Pourbaix diagram (potential *vs*. pH), corrosion rate measurements, Stern Geary equation, mixed potential theory and prevention of corrosion. Pitting corrosion, localized corrosion, bimetallic (Galvanic) corrosion, cathodic protection, anodic protection, coatings and inhibitors.

Text Books:
1. Gileady, Physical Electrochemistry, Fundamental, Techniques and Applications, Wiley-VCH – 2011.
2. J. Bard and L. R. Faulkner, Electrochemical Methods: Fundamentals and Appications, 2nd Edition, Wiley 2001.
Reference Books:
1. H. Reiger, Electrochemistry, 2nd Edition, Springer 1994.
2. Newman and K. E. Thomas-Alyea, Electrochemical Systems, 3rd Edition, Wiley Interscience, 2004.

4. M. E. Orazem and B. Tribollet, Electrochemical Impedance Spectroscopy, A. John Wiley & Sons, Inc., Publication, 2008.

PH257 – ENVIRONMENTAL AND SUSTAINABLE CHEMISTRY

UNIT 1: Environment and Sustainable Development
Concept of environment and its problems (emphasis on industrial pollution), Sustainable Development, Sustainability and Sustainability Indices (SD), Ecological footprint, Environment Conservation Strategies, Environmental Laws and Acts, Environmental Audit (EA), Environmental Impact Assessment (EIA).

UNIT 2: Environmental Chemistry
Components of environmental chemistry (equilibrium, redox, etc.) Biogeochemical cycles; Environmental aspects of air-chemistry: Air pollutants and their reactions in atmosphere (Photochemical smog; Oxygen and Ozone chemistry). Environmental aspects of water-chemistry, Concept of DO, BOD, COD, Total hardness, Carbonate system. Environmental aspects of soil-chemistry: Inorganic and Organic components of soil, Nitrogen pathways in soil; NPK in soils.

UNIT3: Waste Water Management and Treatment Technologies.
Water resources, Contaminants from industrial sources, Primary treatment, Secondary treatment (Precipitation, Coagulation, aerobic process, activated sludge system, trickling filters, anaerobic process), Tertiary treatments, Advanced waste water treatments (Ion-exchange, Adsorption, Electrodialysis etc.) and reuse of wastewater, Industrial effluent treatment systems, Reactors and bioreactors for water treatment.

UNIT 4: Solid Waste Management and Treatment Technologies
Types of Solid wastes (Municipal solid waste, Industrial solid waste etc.), Determination of composition of solid wastes, Integrated solid waste management - Planning for integrated waste management, Operation of solid waste management system, landfills, pyrolysis, composting, bio-fertilizers, Plastic wastes, Recycling technologies and Biodegradability.

UNIT 5: Hazardous Waste Management and Treatment Technologies
Definition and classification of hazardous waste, Sources of hazardous wastes Storage, collection and disposal/treatment of hazardous wastes, Heavy metal waste, its impact and remediation, Nuclear Wastes, Characteristics and–management of nuclear wastes, Biomedical and Chemical Wastes Biomedical waste, Types, management and handling, control of biomedical wastes, E-wastes. Hazardous wastes from industries and their management.

Text Books:

1 Environmental Science, Botkin and Keller, Wiley publications

2 Environmental Chemistry, Stanley E. Manahan, CRC Press

3 Water and Wastewater Technology, Mark J. Hammer and Mark J. Hammer Jr., PHI learning Pvt. Ltd

4 Solid and Hazardous Waste Management, S. C. Bhatia, Atlantic Publishers and Distributers (P) Ltd

Reference Books:

1 Essential Environment: The science behind the stories, Withgott and Laposata, Pearson publishers.

2 Environmental Chemistry: Green Chemistry and Pollutants in Environment, Lichtfouse, Eric, Schwarzbauer, Jan, Robert, Didier (Eds.), Springer-Verlag Berlin Heidelberg

3 Water and Waste water Engineering: Design principles and practice Mackenzie L. Davis. Mc graw Hill publication.

4 Wastewater Engineering: Treatment and Reuse Metcalf and Eddy, Tata McGrawHill

5 Sustainable Solid Waste Management: A Systems Engineering Approach, Chang and Pires, Wiley

PH258 – FOOD, AGRO AND PHARMACEUTICAL CHEMISTRY

Unit 1: Principles of Food Processing, Food Additives and ingredients, Food Processing, Food Toxicology.

Unit 2: Advances in Food chemistry and Nutrients, Nutraceuticals and health foods, Enzymes and Food processing, Flavour chemistry and Technology.

Unit 3: Carbohydrates, lipids, protein chemistry and Technology, Technology of Fruits and veg processing.

Unit 4: Crop production: concepts and Practices; Post harvest Management of fruits and vegetables, Agrochemicals and residues in foods.

Unit 5: Pharmaceuticals: Introduction to drug discovery: Sources of drugs-natural products, drugs from organic synthesis, drug discovery and development – Stages of drug-discovery with suitable examples

PH259 – MEDICINAL CHEMISTRY

UNIT-I

Introduction - to medicinal chemistry, intermolecular binding forces, Introduction to various drug targets; Drug activity and physico-chemical properties: Solubility, partition coefficient, hydrogen bonding, chelation, bioisosterism, optical and geometrical isomerism**,** prodrugs and soft drugs. Drug-receptor interaction forces, mechanism of action.

UNIT-II

Drug synthesis

Introduction -The Drug Discovery and Development Process, combinational & parallel synthesis, Solid Phase techniques, mix and split method in combinational synthesis, dynamic combinational synthesis, solid phase synthesis, diversity-oriented synthesis, Strategies for the Synthesis of Small Molecule Libraries, structure-activity relationships, QSAR.

UNIT-III

Drug metabolism: Drug metabolism principles- Phase I and Phase II reactions, factors affecting drug metabolism, analytical methods in metabolism, ADME, bioavailability, pre-clinical and clinical development, therapeutic index & therapeutic window, Drug resistance mechanisms and synergism.

UNIT-IV

General introduction to antibiotics: Mechanism of action of lactam antibiotics and non-lactam antibiotics, antiviral agents, stereochemistry, biosynthesis and degradation of penicillins - An account of semisynthetic penicillins - acid resistant, penicillinase resistant and broad spectrum semisynthetic penicillins; Synthesis of Penicillin G, Penicillin V.

UNIT-V

Interactions: DNA-protein interaction and DNA-drug interaction. Introduction to rational approach to drug design, physical and chemical factors associated with biological activities, mechanism of drug action.

PH260 – STEREO-SELECTIVE ORGANIC SYNTHESIS

Unit 1: Liquid Surface, Interface and surface forces

Surface tension and its measurement, surface excess, Laplace equation, Kelvin equation, Gibbs energy and surface tension, Gouy – Chapman Theory and Grahame equation, the Stern layer and Gibbs free energy of the double layer. Surface forces – Van der Waals forces between molecules, DLVO forces, capillary forces, Surface energy and Hamaker constant, Measurement of surface forces. Contact angle and its measurements. Wetting and Adhesion Characteristics.

Unit II: Surfactant, Micelles and Emulsion

Surface active agents and their classification, packing factor, micellization, critical micellar concentration (CMC), determination of CMC, factors affecting CMC of surfactants, thermodynamics of micellization, aggregation number, shape & size of aggregates, determination of aggregation number, shape and size, shape transition, reverse micelles, vesicles, colloids, emulsion, microemulsion and Macroemulsions: properties, Evolution, Aging, Coalescence and Demulsification.

Unit III: Applications of Self assembled structures

Application of surfactants in gel electrophoresis, colloids and interfaces, Micellar Catalysis, Quantitative Models, Micellar Enzymology, Phenomenon of Solubilization, Solubilization in Mixed Micelles, Drug Surfactant Interaction, Protein Surfactant Interactions, Industrial Application of Surfactants: Detergents, paints, blends, composites, emulsions, in drilling oil, oil spillage, etc.

Unit IV: Surface Chemistry, Adsorption and Catalysis

Surface Phenomena, solid-liquid interfaces, solid-gas interface, Surface Films, Langmuir-Blodgett films, self assembled mono layers, collapse pressure, Surface film of liquids. Physisorption and Chemisorption, Various adsorption isotherms: Freundlich, Langmuir and BET isotherms, Dubinin-Radushkevich isotherm, Temkin isotherm. Surface area determination. Kinetics of surface reactions involving adsorbed species, Langmuir-Hinshelwood mechanism, Langmuir-Rideal mechanism, Rideal-Eley mechanism. Mechanism of heterogeneous catalysis, phase transfer catalysis.

Unit V: Surface Analysis

Chemical analysis of surfaces and interfaces: Tensiometer, Particle Size analyser, Static and dynamic light scattering, SNS, Fluorescence spectroscopy, Langmuir-Blodget technique: Surface films-different types, surface pressure and its measurement, surface potential and its measurements and interpretation. Examination of surfaces using low energy electron diffraction, photoelectron spectroscopy, ESCA, scanning probe microscopy, Auger electron spectroscopy , SEM and TEM.

PH262 – SYMMETRY AND MATHEMATICS

UNIT I

Symmetry of molecules: Symmetry elements and operations, point groups. Matrix representation of symmetry operations-Great Orthogonality Theorem-Character tables. Direct product representations. Projection operators and symmetry adapted linear combinations. Applications.

UNIT II

Numbers, Functions and Variables: Numbers: Real and Complex number algebra. Vector algebra. Applications. Functions & Variables : Differential calculus-first- and higher-order derivatives, evaluation of minimum and maximum, limits & continuity. Partial differentiations. Exact and inexact differentials. Numerical differentiation. The gamma and delta functions.

UNIT III

Integral Calculus and Differential Equations: Integral Calculus: Indefinite and definite integrals, improper integrals. Methods of integration. Surface and volume integrals. Numerical integrations. Differential Equations: Ordinary first- and second-order differential equations. Partial differential equations. Solution of inexact differential equations by the method of integrating factors. Power series and extended power series solutions. Numerical solutions.

UNIT IV

Special Functions, Matrices and Determinants: Special functions: Hermite, Legendre and Laguerre polynomials, recursion relations. Matrices and Determinants. Eigenvalues and eigenvectors. Orthogonal transformation. Rank & inverse of matrix.

UNIT V

Linear systems, Non linear systems and Curve fittings: Solution of Linear Systems: Gaussian elimination, Cramer's rule. Gauss-Jordan elimination. Gauss-Seidel and Jacobi methods.
Solution of non-Linear Systems: Newton-Raphson method. Curve fittings. Probability and Statistics: Permutation & Combination. Probability. Stirling's approximation. Lagrange multipliers.

Text books:

3. Numerical Analysis: A Practical Approach. Melvin J. Maron, Macmillan Publishinh Co., Inc. NY & Collier Macmillan Publishers, London

CHEMICAL ENGINEERING

PH216 STRUCTURE MECHANICS OF FIBRES , YARNS AND FABRICS

UNIT - I

Basic geometry of twisted yarn – The idealised helical yarn geometry – yarn count and twist factors – Limits of twists – Real and idealised yarns – Schwarz Constant - Twist contraction: Contraction & retraction

UNIT - II

Packing of fibers – yarn idealised packing – concept of open and close packing – Deviations from ideal forms of packing – specific volume of yarns – Measurement of packing facts – yarn diameter concept and formulas

UNIT - III

Fiber migration – ideal migration – Tracer fibre technique – characteristics of migration – Strain mechanics: Strain in yarns – with and without lateral change – determination of twist angles before and after straining (simple numerical problems)

UNIT - IV

Elements of fabric geometry – pierce cloth geometry – Problems on Pierce geometry model – Concept of Kemp's race track model– Derivation of formula of Arial density of fabrics, Problems on fabric weight, cover factor and fabric cover .

UNIT - V

Tensile properties of woven fabric – Geometrical changes during extension – the load extension modulus (without considering bending energy) – Geometry of plain knitted fabrics – Empirical dimensionless relation ships, Concept of Runners ratio.

TEXT BOOKS:

1.Hearle, Grosberg and Backer , "Structural Mechanics of Fibers, Yarns and Fabrics", Wiley – Inter-Science, New York, 1987.

2.B.C.Goswami, "Textile Yarns", John Wiley & Sons, New York, 1987.

REFERENCE BOOKS:

1.Mechanics of Flexible Fiber Assemblies – J.W .S. Hearle, The Textile Institute, Manchester , 1971.

2.D.Joing, "The Mechanics of W ool S tructures – Post al", New South W ales University Publication, New South W ales, Australia, 1998.

PH217 PHYSICAL PROPERTIES OF TEXTILE FIBRES

UNIT I –
Need and Scope of Physical properties of Textile fibres – Uses from Application point of view
Fibre Structure
Introduction to fiber structure – Micellar theory, continuous theory, fringed micelles theory, fringed fibrils theory, modified fringed micellar theory – fine structure of natural, fine structure and cross-section of regenerated and synthetic fibres, Degree of order, degree of localization of order, length/width ratio of localized units, degree of orientation.

UNIT II - Characterization Techniques
Brief introduction of Methods of investigating textiles – X – Ray diffraction, IR, NMR, Thermal Analysis, Electron microscopy, Scanning Electron microscopy.- Recent development in these methods.- Role of HPLC, GPLC, TLC , TEM in understanding the fibre structure .

UNIT III - Fibre density & Tensile Properties
Fibre density – Measurement, Relation between density and order -Equilibrium absorption of water, Relation between regain and RH, Comparison of relation between regain and RH of various textile fibres (influence of temperature)- Heat of sorption – measurement of sorption. Tensile properties – factors determining the results of tensile experiments, load elongation and stress-strain curves.

UNITIV – Properties of fibres
Properties of cotton, linen, wool and silk fibres
Effects of variability – Introduction to elastic recovery –, time effect – Creep, Flexural, Torsional Rigidity.

UNIT V - Properties of fibres
Properties of polyester, nylon, viscose, acrylic fibres
TEXT BOOKS:
1. W.E.Morton and J W S Hearle, "Physical Properties of Textile Fibers", The Textile Institute, Manchester, 1994.
2. J.E.Booth, "Principles of Textile Testing", Butterworths, London, 1987.

PH218 NON WOVEN TECHNOLOGY

UNIT - I

Non woven –

Need and Scope , Definition of Nonwoven fabric -Differences between woven, knitted and Nonwovens - Classification of nonwoven on various grounds – General flow sheet of Nonwoven manufacturing process. Application of Nonwovens and role of Reverse Engineering in Nonwovens production . – Structure of Nonwoven fabrics

UNIT - II

Dry laid webs – fibre selection, web formation, Dry web making process- Fibre arrangement and different approaches for Transverse laid , Vertical laid and Random laid webs
Cross Lapper : need and types and calculations
Wet laid nonwoven – Raw materials, production process principle, special features of the wet laid process and its product. Spun laced webs choice of fibre.
Structure of Dry and Wet laid webs

UNIT - III

Mechanical Bonded Webs: Introduction to needle punching – passage of material through needle loom - Pre-needling and final needling-- specification of needle-Ornamentations in needle punching -Application of needle punching.- Structure and properties of Needle punched fabrics - Research on Needle punched nonwovens
Stitch bonded nonwoven – Machines used - stages of production –selection of materials – Properties and applications.

UNIT - IV

Hydro Entangled Nonwovens: Bonding process, properties of spun laced webs, applications-Structure , Properties ,Research and Development of Spunlaced Nonwoven fabrics
Chemical Bonded Nonwoven: Latex binder, formulation, , bonding technology – saturation, foam bonding, spray bonding, print bonding, powder bonding, application of chemical bonded nonwoven- Structure , properties , Research and Development of Adhesive Bonded Nonwoven fabrics

UNIT - V

Thermal Bonded Nonwovens: Binder , binding fibres, binding powder binding webs, methods of thermal bonding – Hot calendaring, belt calendaring, oven bonding, ultrasonic bonding, radiant heat bonding.- Structure , properties , Research and Development of Thermal Bonded Nonwoven fabrics
Melt blown nonwovens : Basic concept, Machines used , Sanjeev Malkans invention , Structure , properties , Research and Development of Melt Blown Nonwoven fabrics

TEXT BOOKS:

1.Turbak, “Nonwoven Process Performance & Testing”, Tappi Press, 1993.
2.Wilhelm Albrecht, “Nonwoven Fabric Construction Synthetic Fibres”, JWS Publications, 2007..
3. International Textile Bulletin – Nonwoven Fabric – No. 1, 2, and 3 1988 to 1990
4. Needle Punching – Purdy

MATHEMATICS

PH132 - MATHEMATICS

Unit 1 : Mathematical Logic

Statements and notations, Connectives ,Well formed formulas , truth Tables, Tautology , Equivalence implication , Normal Forms.

Unit 2 : Recurrence Relations

Generating Functions, Function of Sequences , Calculating coefficient of generating function , Recurrence Relations , Solving recurrence relations by substitution and generating functions, characteristic roots , Solution of in homogeneous recurrence relation

Unit 3 : Numerical methods

Solution of linear systems by Gauss Elimination Method and Gauss Jordan Method , Iterative Methods , Gauss Jacobi and Gauss Seidel methods.

Multi Step Method : Adams predictor and corrector methods

Unit 4 : Quadratic forms

Quadratic forms , Canonical form, Reduction to Canonical form , Rank , Positive and Negative definite ,Semi definite ,Index , Signature , Sylvester's law

Unit 5 : Solution of Differential Equations – Qualitative Properties

Qualitative properties of solutions , Strum comparison theorem , Eigen values , Eigen functions and the vibrating string

PH230 - GRAPH THEORY

Unit 1 : Graphs

Graphs, Simple Graphs , Graph isomorphism, Incidence and Adjacency matrices , Sub graphs, Vertex degrees degrees, Paths, Cycles

Unit 2 : Trees

Trees, Cut Edge, Bonds, Cut Vertices, Cayley's Formula, The connector problem

Unit 3 : Connectivity

Connectivity, Blocks, Euler Tours,Hamilton Cycles, The travelling Salesman problem

Unit 4 : Vertex Colouring

Introduction , Chromatic Number, Chromatic Polynomials , Brooks Theorem

Unit 5 : Planar Graphs

Plane and Planar Graphs, Dual Graphs, Euler Formula, Bridges

PHYSICS

PH042 – POLYMER COMPOSITES

UNIT-I
Introduction to composite materials, comparision of different materials with compositesadvantages
and disadvantages. Principles of composite reinforcement. Effect of fibrous reinforcement on composite strength.

UNIT-II
Types of reinforcement such as natural, glasses, carbon/graphite, aramid fibers, high strength and high modulus fibers. Surface treatment and various forms of fibers.

UNIT-III
Thermosetting and thermoplastic materials for the composites and their selection for a particular application

UNIT-IV
Processing and production techniques like hand-layup, bag moulding, filament winding and pultrusion

UNIT-V
Prepegs, their manufacture and characterization. Sheet moulding and dough moulding compounds and their processing. Preform and resin transfer mouldings. Hybrid and sandwich type composites.

PH053 - MATERIAL SCIENCE & ENGINEERING

Unit-1: Dielectrics and Ferroelectrics Macroscopic description of the static dielectric constant, the electronic and ionic polarizabilities of molecules, orientational polarization, measurement or dielectric constant of a solid, the internal field of Lorentz, Clausius-Mosotti relation, elementary ideas on dipole relaxation. Classification of Ferroelectric crystals-BaTiO3 and KDP, Dielectric theory of ferro electricity, Spontaneous polarization and ferroelectric hysteresis.

Unit-2: Magnetic materials Magnetic parameters, Bohr Magneton, Origin of Permanent Magnetic Moment, Theories of para magnetism, Spontaneous magnetization, Weiss theory of Spontaneous magnetization, Nature and origin of Weiss Molecular Field, Hysteresis, The Block wall, Ferro magnetism, Anti ferromagnetic materials, Ferri magnetic materials, Hard and Soft magnetic materials, Ferrite's and their Applications.

Unit-3: Superconducting Materials Occurrence of Superconductivity, Experimental observations, Persistent Currents. Effect of magnetic fields, Meissner effect, Type I and Type II super conductors, Intermediate states, Entropy and heat capacity, energy gap, Isotope effect, Thermal conductivity, Theoretical explanations, London's equation, Penetration depth, Coherence length Cooper pairs, Elements of BCS theory, Giaver Tunneling Josephson effects (basic ideas), Applications.

Unit-4: Biomaterials Biomechanism, Developemnt of biomaterials, Classification of Biomaterials, Processing and Properties, Applications.

Unit-5: Physical Acoustics-Ultrasonics Classification of Ultrasonic waves, Properties of Ultrasonic waves, Generation of Ultrasonic waves, Ultrasonic velocity Measurements, Absorption and Dispersion of Ultrasonic waves, Applications-Industry

Textbooks: 1. Materials Science & Engineering by W.D. Callister (Jr) 2. Engineering Physics by V Rajendran, McGraw Hill Education (India) Pvt. Ltd. 3. Introduction to Solid State Physics by Charles Kittel, John Wiley & Sons Reference books: 1. Solid State Physics by A J Dekker, MCMILLAN Publishers.

ENGLISH

PH212 – LITERARY THEORY

Unit I

Why literary theory? ~ What do we do when we read? ~ Different approaches ~ Humanism ~ Romanticism ~ Realism ~ Surrealism~ Existentialism ~ Literary criticism vs. literary theory

Unit II

Russian formalism ~ New criticism ~ Reading like a New Critic ~ Reader response theory ~ Narratology **~** Dialogism ~Structuralism ~ Reading like a structuralist

Unit III

Post- Structuralism ~ Deconstruction ~ Reading like a post-structuralist ~ Psychoanalysis and literature ~ the human subject ~ Freud and post-Freudian schools of thought

Unit IV

Dialectics and Marxist Theory ~ Ideology ~ Politics and theory ~ Feminism and literary theory ~ Reading post-colonial literature ~ New Historicism

Unit V(6Hrs)

New directions in literary theory ~ The post-modern perspective ~ From the gender perspective ~ Reading like a feminist critic ~ From the subaltern perspective ~ From the eco-critical perspective ~ You, the critic and theorist

Suggested Texts for Reading :

- Barry, Peter. *Beginning Theory: An Introduction to Literary and Cultural Theory*, Manchester University Press. 3rd edition. 2017
- Eagleton, Terry. *Literary Theory: An Introduction*. Blackwell, Oxford, 1996, 2nd edition or 2008, anniversary edition.
- Barthes, Roland. “The Death of the Author”, David Lodge., Ed.Modern *Criticism and Theory: A Reade*r. London: Longman, pp. 166-172.
- Showalter, Elaine. Ed., *The New Feminist Criticism: Essays on Women, Literature and Theory*. New York: Pantheon Books, 1985**.**
- *Veeser. H. Aram. E*d.*, The New Historicism*, London: Routledge, 1989.
- Gandhi, Leela. *Postcolonial Theory: A critical introduction.* Allen & Unwin, 1998
- Gyan Prakash. “Subaltern Studies as Postcolonial Criticism.” The American Historical Review, Vol. 99, No. 5 (Dec., 1994), pp. 1475-1490
- Bakhtin, Mikhail. *Problems of Doestoevsky’s Poetics*. Trans. Caryl Emerson. Manchester: Manchester Univ. Press, 1984. pp. 5-46.

PH213 – ENGLISH LANGUAGE TEACHING

Unit 1: Background

Development of English Language Teaching in India: The exploration and transportation phase, The consolidation phase: The grand design, The dissemination phase, The identity phase: National policy on education 1968, The study group report on teaching English, National policy on education 1986, AcharyaRamamurthi Commission 1990, The globalization phase- **Areas of Research in ELT**: Materials Evaluation and Development, Methods, Testing and Evaluation, Teacher Training, and Language skills (Listening, Speaking, Reading, & Writing) Grammar and Vocabulary, English for Specific Purposes (ESP)

Unit 2 ELT Methods and Approaches

Methods and Approaches of English Language teaching~ Grammar Translation Method, Direct Method, Audio Lingual Method, Communicative Approach, Task Based Language Teaching, Desuggestopedia, The Silent Way, Community Language Learning, Technology in Language Teaching and Learning, Eclectic Approach

Unit 3: Introduction to SLA

What is Second Language Acquisition? ~ The place of second language in the world today~ Why study second language acquisition~ Development of the field of SLA~ The scope of SLA research~ Research methodology in SLA: qualitative versus quantitative methodologies~ Types of data analysis: contrastive analysis, error analysis, performance analysis, discourse analysis

Unit 4: Factors Affecting SLA

Age: studies of age and SLA, explanations of age-related differences~ Aptitude~ Social-psychological factors: motivation, attitude~ personality~ cognitive style~ hemisphere specialization~ learning strategies and other factors

Unit 5: Theories in SLA

Nativist theories: Chomsky's Universal Grammar, Krashan's Hypotheses~ Schumann's Pidginization hypothesis and acculturation model, Givon's Functional-Typological theory~ The ZISA's group's Multidimentional Model~ Swain's Output hypothesis ~ current researches in SLA

Suggested Reading:

1. Heaton, J B. (1975). *Writing English Language tests*. New York: Longman.
2. Krishnaswamy,N and Lalitha Krishnaswamy. (2006*).* *The Story of English in India*. New Delhi: Foundation
3. Larsen-Freeman, Diane & Long, Long, Michael H. (1991). *An Introduction to second language acquisition research.*Newyork: Longman

4. Richards, Jack C & Rodgers, Theodore. (1986). *Approaches and methods in language teaching*. Cambridge: CUP
5. Ur, Penny. (1991). *A course in language teaching*. Cambridge: CUP

PH222- NAYANTARA SAHGAL IN THE CONTEXT OF INDIAN WRITING IN ENGLISH

Unit I
Introduction to Indian writing in English ~ Indian Aesthetic Tradition (Theory of Rasa etc) ~ Indian Narrative Theory ~ The post colonial frame work

Unit II
Early concerns in Indian Writing in English ~ Works of some prominent Indian writers in English ~ Raja Rao ~ R. K. Narayan ~ Mulk Raj Anand ~ Bhabhani Bhattacharya ~ Salman Rushdie ~ Amitav Ghosh ~ Arundhathi Roy ~ Aravind Adiga ~ Jhumpa Lahiri

Unit III
Humanism and Renaissance ~ Humanism and Enlightenment ~ Humanism to Antihumanism ~ New Humanists ~ Irving Babbitt ~Paul Elmer More~ Stuart Pratt Sherman ~ Norman Foerster ~ Robert Shafer~ Allan Bloom ~ Rabindranath Tagore **~** M.N.Roy

Unit IV
Nayantara Sahgal, her life and her works ~ Living in postcolonial India ~ A Time to Be Happy ~ This Time of Morning ~ Storm in Chandigarh ~ Sunlight Surrounds You ~ The Day in Shadow ~ Plans for Departure ~ Rich Like Us ~ Mistaken Identity ~ A Situation in New Delhi ~ Lesser Breeds

Unit V
- As a researcher, what makes you choose the author and the genre of writing you have chosen?
- Justify your topic and its relevance to society
- What literary theories are relevant to interpret the texts you have chosen to research on?

Suggested texts for reference:

- Iyengar, K. R. Srinivasa. *Indian Writing in English* Sterling Publishers, 1984.
- Meenakshi Mukherjee. The Twice Born Fiction: Themes and Techniques of the Indian Novel in English, Arnold-Heinemann, 1974.
  Barry, Peter. *Beginning Theory: An Introduction to Literary and Cultural Theory*, Manchester University Press. 3rd edition. 2017.

PH223 - KAMALA MARKANDAYA IN THE CONTEXT OF INDIAN WRITING IN ENGLISH

Unit I

Introduction to Indian writing in English ~ Indian Aesthetic Tradition (Theory of Rasa etc) ~ Indian Narrative Theory ~The post colonial frame work

Unit II

Early concerns in Indian Writing in English ~ Works of some prominent Indian writers in English ~ Raja Rao ~ R. K. Narayan ~ Mulk Raj Anand ~ Bhabhani Bhattacharya ~ Salman Rushdie ~ Amitav Ghosh ~ Arundhathi Roy ~ Aravind Adiga ~ Jhumpa Lahiri

Unit III

Ecocritcism **~** Role of Nature and Culture **~** Ecological crisis ~ Environmental Psychology ~ Landscaping as a plot and character ~ Nature and Environment ~ Degraded environment ~ Eco literacy and Ecological Justice ~ Global capitalism~ Eco survival ~ Toxic consciousness

Unit IV

Kamala Markandaya, her life and her works **~** *Bombay Tiger* ~ *Shalimar* ~ *The Golden Honeycomb* ~ *Two Virgins* ~ *The Nowhere Man* ~ *The Coffer Dams* ~ *A Handful of Rice* ~ *Possession* ~ *A Silence of Desire* ~ *Some Inner Fury* ~ *Nectar in a Sieve*

Unit V

- As a researcher, what makes you choose the author and the genre of writing you have chosen?
- Justify your topic and its relevance to society
- What literary theories are relevant to interpret the texts you have chosen to research on?

Suggested texts for reference:

- Iyengar, K. R. Srinivasa. *Indian Writing in English* Sterling Publishers, 1984
- Mukherjee, Meenakshi. *The Twice Born Fiction: Themes and Techniques of the Indian Novel in English*, Arnold-Heinemann, 1974
- Barry, Peter. *Beginning Theory: An Introduction to Literary and Cultural Theory*, Manchester University Press. 3rd edition. 2017
- Glotfelty, Cheryll & Harold Fromm, *The Ecocriticism Reader: Landmarks in Literary Ecology* University of Georgia Press, 1996
- Guha, Ramachandra. *Environmentalism: A Global History, Penguin UK 2014.*
- Huggan, Graham & Helen Tiffin. *Postcolonial Ecocriticism: Literature, Animals, Environment*, Routledge, 2015

PH224 – DYNAMICS OF POWER AND OPPRESSION : AN INTERDISCIPLINARY STUDY OF TOTALITARIANISM

Unit-1 Some key political theories ~ Major "isms" that have shaped the world: liberalism, nationalism, imperialism, socialism, communism and fascism. ~ Some key thinkers ~ Thomas Hobbes & Leviathan ~ John Locke & philosophy of natural rights ~ Jean-Jacques Rousseau & the Social Contract ~ Montesquieu & the theory of the separation of powers ~ John Stuart Mill & his principle on liberty ~ Hannah Arendt on Totalitarianism

Unit-2 Narrative Theory ~ Testimony as a form of literary representation ~ The aspect of history and memory ~ Aspect of identification ~ Political Psychology ~ The nature of political behavior of rulers / heads of state

Unit-3 The Dairy of Anne Frank ~ George Orwell, Nineteen Eighty Four ~ Aldous Huxley, Brave New World ~ Tie Ning, The Bathing Women

Unit-4 Svetlana Alexievich, Second-Hand Time ~ Jung Chang , Wild Swans ~ Julia Alvarez, In the time of Butterflies ~ Zoya Phan, Undaunted ~ Shirin Ebadi, Until we are Free ~ Mario Vargas Llosa, The Feast of the Goat

Unit-5 As a researcher, what makes you choose the author and the genre of writing you have• Justify your topic and its relevance to society•chosen? What literary theories are relevant to interpret the texts you have chosen to research on?• Fludernik, Monika. An Introduction to Narratology Routledge, 2009

Suggested Books for reference Huhn, Peter, et al. Handbook of Narratology, Walter de Gruyter GmbH• & John T. Jost, Jim Sidanius, Ed. Political Psychology: Key Readings Psychology Press, 2004•Co KG, 2014. Langer, Lawrence L. Holocaust Testimonies: The Ruins of Memory,Yale University Press,• 1991 Ratiani, Irma, Totalitarianism and Literary Discourse: 20th Century Experience, Cambridge• Scholars Publishing, 2011.

PH225 - NARRATIVE TECHNIQUE AND PSYCHOLOGICAL REALISM IN THE WORKS OF KHAZUO ISHIGURO

Unit-1

Narrative Theory ~ Functions stories play in human affairs ~Structural analysis and what it reveals about the nature of narratives? ~Culture and its affect on the interpretation and telling of stories ~ Aspects of time and memory

Unit -2

Elements of a narrative ~ Narrative techniques ~ Difference between a Literal and a Natural narrative ~ Narrative perspectives ~ Four points of view ~ Retrospective & Introspective narrative ~ A Frame narrative

Unit-3

Key theories on the Narrative ~ Peter Brooks~ Roland Barthes ~ Algirdas Greimas ~ The ethics of narrative truth~ Space /Time Orientation in a narrative ~Literary examples of different narrative styles

Unit-4

Khazua Ishiguro, his life and his works ~ *A Pale View of Hills* ~ *An Artist of the Floating World* ~ *The Remains of the Day* ~ *The Unconsoled* ~ *When We Were Orphans* ~ *Never Let Me Go* ~ *The Buried Giant*

Unit-5

- As a researcher, what makes you choose the author and the genre of writing you have chosen?
- Justify your topic and its relevance to society
- What literary theories are relevant to interpret the texts you have chosen to research on?

Suggested Reading

- Felluga, Dino. "General Introduction to Narratology." *Introductory Guide to Critical Theory*.
- Fludernik, Monika. *An Introduction to Narratology* Routledge, 2009
- Foster, E.M. Aspects of a Novel. Hodder & Stoughton Ltd. London. 2016
- Kenan, Shlomith Rimmon *Narrative Fiction: Contemporary Poetics,* Routledge, 2003
- Lodge, David. The Art of Fiction. Random House. 2012
- Huhn, Peter, et al. *Handbook of Narratology,* Walter de Gruyter GmbH & Co KG, 2014

PH226 - REFLECTIVE TEACHING FOR LANGUAGE TEACHERS

Unit 1: Classroom Approaches

What is reflective teaching?~ Framework for Reflecting on Practices~ Approaches to classroom investigations : journals, lesson reports, surveys and questionnaires, audio or video recording of lessons, observation, action research ~ Historical Roots of Reflective Teaching ~Dewey's contribution: open-mindedness, Responsibility, Whole-heartedness ~ Schon's " Reflection-on-Action" and "Reflection-in-Action"

Unit 2: Exploring teachers' beliefs

The source of teachers' beliefs~ beliefs about English~ Beliefs about learning~ beliefs about teaching~ beliefs about the program and the curriculum~ Beliefs about language teaching as a profession

Unit 3: The Role of the Teacher

The nature of roles~ Roles reflecting institutional factors~ Role reflecting a teaching approach or method~ Role reflecting a personal view of teaching~ Cultural dimensions of roles ~ professional development through reflective practice teaching

Unit 4: Teacher Decision Making

Planning Decisions~ Interactive Decisions~ Evaluative Decisions~ Negotiating Course Content with learners~ The Structure of a Lesson: Openings, Sequencing, Pacing, Closure

Unit 5: Current Researches

Action research: Scope, Teacher Awareness, Instruments~ Critical Reflection~ Flipped classroom~ Dialogic Reflection for professional development~ Video supported Reflection~ Implicated Reading

- As a researcher, what makes you choose the author and the genre of writing you have chosen?
- Justify your topic and its relevance to society
- What literary theories are relevant to interpret the texts you have chosen to research on?

Suggested Reading

1. Borg, S. (2015). *Teacher Cognition and Language Education: Research and Practice*. Bloomsbury
2. Posner, G. (2000). *Field Experience: A Guide to Reflective Teaching.* New York: Longman.

3. Richards, J. C. & Lockhart, C. (1994). *Reflective Teaching in Second Language Classrooms*. Cambridge: CUP

Zeichner, K., & Liston, D. (1996). *Reflective teaching: An introduction*. Mahwah, NJ: Lawrence Erlbaum Associates.

PH227 - TEACHING AND TESTING OF VOCABULARY IN SECOND LANGUAGE

Unit 1: Introduction to vocabulary

Concept of a word ~ Concept of word knowledge ~ Dimensions of word knowledge: Form, Meaning and Use ~ Aspects of word knowledge

Unit2: Vocabulary learning

Processes involving vocabulary learning: Labeling, Categorizing and Network building ~ Issues involving vocabulary learning: False friends, Real friends, Strangers and Acquaintances ~ Role of schema in vocabulary learning ~ Learning burden of a word ~ Incidental learning vs. planned learning

Unit 3: Vocabulary teaching and testing

How many and which words to teach? ~ Repetition and vocabulary learning ~ Vocabulary teaching techniques ~ Challenges in vocabulary teaching ~ Rich instruction ~ Vocabulary and LSRW~ **Issues involving testing vocabulary**: Which words to test? How many words to test? Which aspects of word knowledge to test? ~ Vocabulary breadth and depth test ~ Vocabulary tests and their focuses ~ vocabulary test development

Unit 4: Vocabulary in ESP context

Academic vocabulary and Technical vocabulary: Nature, Role and Importance ~ Teaching and learning specialized (academic and technical) vocabulary ~ Contribution of CORPUS to specialized vocabulary~ Approaches to identifying specialised vocabulary for ESP

Unit5: Researching Vocabulary

Vocabulary use and acquisition~ Vocabulary and language skills~ Measuring Vocabulary Size~ measuring the quality (depth) and quantity (breath) of vocabulary knowledge~ Measuring speed processing~ Measuring organization~ Measuring attrition and degree of residual lexical retention

- As a researcher, what makes you choose the author and the genre of writing you have chosen?
- Justify your topic and its relevance to society
- What literary theories are relevant to interpret the texts you have chosen to research on?

Suggested Reading

1. Nation, I.S.P. (2001). *Learning Vocabulary in Another Language*. Cambridge: CUP

2. Schmitt, N. (2010). *Researching Vocabulary: A Vocabulary Research Manual*. New York: Macmillan
3. Thornbury, S. (2006*). How to Teach Vocabulary*. New Delhi: Pearson

PH245 - INDIAN WRITING IN ENGLISH

UNIT I CONSCIOUSNESS AND SENSIBILITY
Origin and evolution of Indian Writing in English(IWE) – Cultural heritage and modernization of values system in India- Direction of Indian Writings in English - Consciousness and sensibility in Indian English Literature.

UNIT 2 MYTHS VS. REALISM IN IWE
Novel as a genre ---Realism and the Indian Novel-- Realistic works in fiction as plausible interpretation of life --Myths in Indian Writings in English – Myths in novelists Mulk Raj Anand and R.K Narayan and others – Myths as structural parallels – Myth and religion.

UNIT 3 INDIAN ENGLISH FICTION AND NATIONAL CONSCIOUSNESS
Indian English fiction as a mirror to the changing facets of Indian life and reality --- Indian English Fiction and the freedom struggle- Gandhian Influence on IWE

UNIT 4 WOMEN WRITERS IN IWE
Study of the prominent women writers in English – Anita Desai – Bharathi Mukherjee – Arundathi Roy – Kamala Markhandeya – Kiran Desai - Nayantara Sahagal – Identity crises as a concept in Indian Women novelists – Psychological exploration of inner mind of Indian women.

UNIT 5 FEMINISM IN ANITA NAIR'S NOVEL
Introduction to feminism – Feminism and modern Indian women novelists – Women's role in maintaining or resisting patriarchy.

Suggested Readings:

- Chakravarty Joya (ed.): *Indian Writing in English: Perspectives*. New Delhi : Atlantic, 2003
- King Bruce (Ed.): *Critical Essays on Indian Writing in English*, New Delhi: O.U.P., 1968.

- Roy, Anuradha. *Pattern of Feminist Consciousness in Indian Women Writers*. New Delhi, Prestige, 1999.
- Srinivasa, Iyengar. *Indian Writing in English*. 5th Ed. Delhi: Sterling, 1985.

PH247 - CURRENT RESEARCH & PRACTICE IN TEACHING & LEARNING VOCABULARY

Unit-1 Nature of Vocabulary and language learning

Significance of Vocabulary-types of vocabulary-productive and receptive-size of the vocabulary and its impact on language acquisition-discussion about structural words/content words-vocabulary and LSRW Skills

Unit-2 Approaches to Vocabulary Instruction

Three approaches of vocabulary learning and instruction-incidental learning-extensive reading and listening-benefits of extensive learning form low –proficiency students-explicit instruction-difference between high-frequency and general academic words- knowing about General Service List (GSL) and university word list-the effect of academic success.

Unit-3 Independent Strategy Development

Importance of Independent learning-guessing from the from the context-inferring word meanings-dictionary-using habits-role of corpus-based vocabulary instruction- Coining Words: Neologisms and Lexicon of a Language-denotation and connotation-types of Register / Tone

Unit -4 Techniques as aids for Vocabulary

Translation as a technique-using realia-using drawings and pictures- mime- paraphrasing-building relationships-collocations and learner strategies- listening fluency-reading speed-writing fluency

Unit-5 Testing Vocabulary and Review of Literature

The role of testing- types of tests: summative and formative- merits and short comings of testing-proficiency tests- placements tests- criteria for testing- samples tests- review of current research.

5. Nation, I.S.P. (2001). *Learning Vocabulary in Another Language*. Cambridge: Cambridge University Press.

PH248 - LANGUAGE ACROSS CURRICULUM IN ESL PEDAGOGY

Unit 1 Nature and function of Language

Language- meaning and concepts- functions of language- role of language across curriculum – language learning theories –teaching L1 and L2- barriers in using language

Unit 2 language Diversity in classroom

Learning mother tongue- significance of first language - L1 interface in L2 acquisition- teaching second language - bilingualism- multilingualism- context of culture in language learning-analysis of existing models of language approaches in SLA

Unit-3 Culture and language teaching

Notion of culture- language vs culture- Language as Lingua Franca (LLF)- need for inclusion of multi languages in ESL pedagogy- communicative competence- cross cultural communication- sociolinguistics- notions of globalization, localization and glocalization of language curriculum- issue of alterative pedagogies-beyond post method.

Unit-4 Teacher Beliefs and Professionalism

Teacher cognition-belief systems- feasibility in using cross cultural pedagogy in language classes- similarities and differences in adoption of integration of skills- problem /issues related to ICT and CALL in English classes- teachers' use and awareness- gap between theory and practice- discussion of recent developments in teacher education.

Unit-5 Curriculum and material design

Syllabus vs Curriculum- principles of material development-teacher as material designer-criteria for textbook evaluation- gap between materials designers and language teachers- current debates on materials design and production- checklist for text book evaluation.

References

1. Brown, Douglas. (2001). *Teaching by Principles: An Interactive Approach to Language Pedagogy*. London: Pearson Longman.

5. Krashen, S. (1985). *The Input Hypothesis*. London: Longman.

PH249 - SPEAKING SKILLS

Unit 1 Nature and function of Language

Language- meaning and concepts- functions and notions of language- types of skills - language learning theories –teaching L1 and L2- barriers in using language- receptive vs productive skills-role of oral and oral skills- role of LSRW and relation between listening and speaking.

Unit-2 Communication

Communication, meaning and concept- elements of communication – process of communication - types of communication, verbal and non-verbal communication – interpersonal, intrapersonal, group communication and mass communication – ways and means of developing communication skills- communication barriers.

Unit-3 Introduction to Phonetics

Role of pronunciation in language learning- relevance of Native variety vs local variant speech- vowels and consonants- role of intonation and rhythm and word stress-debate on 'Best English'- various approaches to teach spoken English for ESL context-interrelation between listening and speaking

Unit-4 Approaches to Teaching Speaking

Form-focused and meaning-focused- inductive vs deductive approaches to language teaching- listening and vocabulary- sub skills of speaking- 'world Englishes' and relevance of Indian variety of English – social media and language development

Unit-5 Materials, Activities and Training

Selection of texts for oral proficiency- language learning in controlled situations- authenticity in materials and input- language in real-life situations- tasks for learner interest- role plays and discussion skills- drama- information gap activities and jigsaw-nuances of speaking course- discussion about recent literature on speaking/oral proficiency – Analysis of standardized tests- IELTS/TOEFL/BEC.

PH251 - ENHANCING COMMUNICATION SKILLS THROUGH DRAMATIZATION

Unit 1 Background

Language Skill: Listening, Speaking, Reading and Writing~ Process of communication: language features, mental and social processing~ Classroom activities: acting from a script, communication games, discussion, prepared talks, questionnaires, simulations and role plays~ writing lesson sequences ~ Current research on application of dramatization technique for developing communication skills

Unit 2 Dramatization Technique

Dramatization as a method ~ Paradigm and its application to SLA ~Asperger Syndrome ~ Psycholinguistic issues ~ Speech accommodation theory ~ Neuropsychology and second language acquisition ~ Hemispheric differences ~ Multiple Perspectives: Classroom research perspective ~ Sociolinguistic perspective ~Bilingual education perspective

Unit 3: Communication skill

Physical description ~ Narrative ~ Comparison and contrast ~ Language and Style ~ Transcription ~ Discourse markers~ Body Posture ~ Gestures ~ Eye Contact ~ Facial Expressions ~ Appearance ~ Space Distance ~ Para Language ~ Tone ~Pace ~ Pitch ~ Pause

Unit 4: Testing communication skills

Tools available to test communication skills ~ Aspects of communication skills that can be tested ~ Issues in testing communication skill ~ standardized tests available in the literature

Unit 5: Communication Skill and Dramatization

- As a researcher, what makes you choose the area you have chosen?
- Justify your topic and its relevance to society
- What ELT theories are relevant to the area you have chosen to research on?

Suggested Reading:

- Wharton Tim (2009). *Pragmatics and non-verbal communication.* UK: Cambridge.
- Fast Yvona et.al. (2004). *Employment for individuals with Asperger syndrome or non-verbal learning disability: stories and strategies*. Philadelphia, USA: Jessica Kingsley Publishers.

PH252 - CRIMINAL RECORD DOCUMENTATION: A LINGUISTIC STUDY

Unit 1 Background

Language Skill: Listening, speaking, Reading and Writing ~ process of writing ~ Types of writing ~ language features, mental and social processing ~ Introduction to legal English ~ Law and writing

Unit 2 English for Specific Purposes (ESP)

ESP vs EAP ~ need of ESP ~ ESP and General English ~ English for Professional Purposes ~ English for vocational purposes (EVP) ~ ESP in Indian Context ~ CLT approaches to ESP ~ English as Lingua-Franca ~ Elements of Legal Documentation: Apparatus ~ Limitations ~ Principles of Clear Writing ~ Principles of Diction ~ Principles of Tone ~ Principles of Grammar ~ Principles of Syntax ~ Principles of Punctuation ~ Principles of Paragraph Construction ~ Principles of Organization ~ Principles of Format.

Unit 3: Legal English and ESP

Art of Legal Writing ~ Process of Legal Writing ~ Obtaining the facts ~ Physical description ~ Narrative ~ Comparison and contrast ~ Language and Style ~ Transcription ~ Discourse markers ~ Case studies analysis ~ Legal jargon/genera of legal writing ~ Nuances of legal documentation and general writing ~ Office Memoranda ~ Motion Memoranda ~ Paragraphing ~ Effective Style.

Unit 4: Testing and Evaluation of Legal English

Evaluation of legal documents ~ Legal Writing and Law ~ Rule-Based Reasoning ~ Issues, Facts, Precedents, and Statutes ~ Interviewing the Client ~ Academic and Legal format ~ Tools to be adopted to legal documentation ~ Issues in testing legal English ~ standardized tests available in the literature

Unit 5: Researcher’s perception

- As a researcher, what makes you choose the area you have chosen?
- Justify your topic and its relevance to society
- What ESP theories are relevant to the area you have chosen to research on?

Suggested Reading:

PH093 - COGNITIVE RADIO TECHNOLOGY

UNIT I –

Introduction Aware, Adaptive and Cognitive Radios. Cognitive Radio Technology, Cognitive Radio Network Architectures, Cognitive Radio Networks Applications.

UNIT II –

Cognitive Radio Networks Network Coding for Cognitive Radio Relay Networks. Cognitive Radio Networks Architecture. Terminal Architecture for CRN. Mathematical Models toward Networking Cognitive Radios. Scaling Laws of CRN.

UNIT III –

Spectrum Sensing and Spectrum Management Spectrum Sensing to detect specific Primary System. Spectrum Sensing for Cognitive Radio OFDMA Systems and Cognitive Multi-Radio Networks. Spectrum Management- Spectrum Sharing, Spectrum Pricing, Mobility Management to Heterogeneous Wireless Networks, Regulatory Issues and International Standards.

UNIT IV –

Trusted Cognitive Radio Networks Framework of Trust in CRN; Trusted Association and Routing; Trust with Learning; Security in CRN.

UNIT V –

Software Defined Radio Introduction to SDR. Evolution of SDR Baseband Requirements. SDR Architectures – Ideal SDR Architectures, Realistic SDR Architecture. SDR and Cognitive Radio Relationship.

Text Books:

1. Kwang-Cheng Chen and Ramjee Prasad, “Cognitive Radio Networks”, John Wiley & sons, 2009.
2. Ahmed Khattab, Dmitri Perkins, MagdyBayoumi, “Cognitive Radio Networks: From Theory to Practice”, Springer, 2013.
3. Walter Tuttlebee, “Software Defined Radio- Baseband Technology for 3G Handsets and Base stations”, John Wiley @ Sons, 2004

MECHANICAL ENGINEERING

PH084 - METAL MATRIX COMPOSITES

Unit-1:

Introduction and Overview of Metal based composites, overviews, key technologies and issues in the area, Fabrication of Metal Matrix Composites: Commonly used Matrices, Basic Requirements in Selection of constituents.

Unit-2:

Solidification processing of composites - XD process, Spray processes - Osprey Process, Rapid solidification processing, Dispersion Processes

Unit-3:

Stir-casting & Compo casting, Screw extrusion, Liquid-metal impregnation technique - Squeeze casting.

Unit-4:

Pressure infiltration, (Lanxide process), Principle of molten alloy infiltration, rheological behaviour of melt-particle slurry

Unit-5:

Synthesis of in situ Composites, Solid state processing techniques, powder metallurgy techniques

Reference:

PH099 - MODERN TECHNIQUES OF MATERIAL CHARACTERIZATION AND TESTING

Unit: 1

Introduction to optical microscopy, scanning electron microscopy (SEM), transmission electron microscopy (TEM), scanning tunneling electron microscope (STEM), atomic force microscope (AFM). Florescent microscopy

Unit: 2

Introduction to X-Ray diffraction (XRD) method, scanning parameters, indexing, Bragg's Law, phase identification and analysis

Unit: 3

Introduction to microanalysis and spectroscopy. Particle analysis methods. Thermal analysis: DTA, DSC etc

Unit: 4

Different tests to assess the mechanical behavior of materials, basic principles of micro hardness, Nano indentation, tensile, fracture, fatigue and creep tests, samples preparation methods.

Unit: 5

Tribology, Wear, surface analysis. Surface roughness and surface energy measuring techniques.

Reference books:

PH100- FRICTION STIR WELDING AND PROCESSING

Unit: 1

General introduction, Historical development of welding, Fusion and pressure welding techniques, solid- state joining processes.

Unit: 2

Principle operation of friction stir welding (FSW), heat transfer and material flow in FSW, Recovery, Recrystallization, Grain Growth and Dynamic recrystallization, micro structural concepts and micro structural evolution in pure metals and alloys

Unit: 3

Tool Material Selection, Tool Features, Tool and welding design, Friction stir tools, Effect of tool geometry on material flow and weld properties, effect of process parameters in FSW.

Unit: 4

Friction Stir Processing (FSP) for Super plastic Forming**,** Friction Stir Casting Modification, Friction Stir Channeling (FSC), Composite fabrication via FSP

Unit: 5

Localized Surface Modification, Processing of Powder Metallurgy Alloys, Micro structural Refinement, Influence on Mechanical Properties, Ultra fine Grained structure/materials via FSP

Text Books:

1. Advances in Friction-Stir Welding And Processing By M-K Besharati-Givi; Parviz Asadi Woodhead Publishing is an imprint of Elsevier Publishing2014.
2. A Hand Book on Friction Stir Welding By prof. (Dr.) Bharat Raj Singh, India Edition: First, Publisher: LAP Lambert Academic Publishing, UK, Editor: A. Covali.

Reference books:

4. Friction stirs welding and processing by R.S. Mishra, Z.Y. Ma Institute of Metal Research, Elsevier 18 August 2005 B.V. All rights reserved.

PH101 - SOLAR ENERGY

UNIT – I

Principals of Solar Radiation: Role and potential of new and renewable source, the solar energy option, Environmental impact of solar power, physics of the sun, the solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on titled surface, instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT– II

Solar Energy Collection: Flat plate and concentrating collectors, classification of concentrating collectors, orientation and thermal analysis, advanced collectors.

UNIT– III

Solar Energy Storage and Applications: Different methods, Sensible latent heat and stratified storage, solar ponds. Solar Applications – Solar heating / cooling technique, solar distillation and drying, photovoltaic energy conversion.

UNIT – IV

Solar Cells: Formation of a pn – junction - Space charge and internal field - Quasi - Fermi levels - The Shockley diode equation - Structure of a solar cell - The solar cell equation - Fill factor and maximum power - Various electron - hole-pair recombination mechanisms - Crystalline silicon solar cells - Thin film solar cells: CIGS, Cite and a – silicon - Tandem solar cells - Dye - sensitized solar cells - Organic solar cells

UNIT– V

Solar Electrical Energy Conversion: Solar photovoltaic energy conversion - Principles - Physics and operation of solar cells. Classification of solar PV systems, Solar cell energy conversion efficiency, I-V characteristics, effect of variation of solar insulation and temperature, losses. Solar PV power plants.

TEXT BOOKS:

1. Solar Energy, Principles of Thermal Collection and Storage, S.P. Sukhatme, Tata Mc Graw Hill Publishers, Fourth Print.
2. Solar Energy, Sukhatme S.P., Tata McGraw Hills P Co., 3rd Edition.
3. The Physics of Solar Cells. Nelson, Imperial College Press.
4. Solar Energy Fundamentals and Applications, Garg H.P., Prakash J., Tata McGraw-Hill.
5. Solar Energy Engineering Processes and Systems, Kalogirou S., Elsevier.

PH102 - NANO TECHNOLOGY

UNIT-I

Importance of Nano-technology, Emergence of Nano-Technology, Bottom-up and Top-down approaches, challenges in Nanotechnology.

General Introduction: Basics of Quantum Mechanics, Harmonic oscillator, magnetic Phenomena, band structure in solids, Mossbauer and Spectroscopy, optical phenomena bonding in solids, Anisotropy.

UNIT-II

Silicon Carbide: Application of Silicon car bide, nano materials preparation, Sintering of SiC, Xray Diffraction data, electron micro scopy sintering of nano particles, Nano particles of Alumina And Zirconia: Nano materials preparation, Characterization, Wear materials and nano composits.

UNIT-III

Mechanical properties: Strength of nano crystalline SiC, Preparation for strength measurements, Mechanical properties, Magnetic properties.

UNIT-IV

Electrical properties: Switching glasses with nano particles, Electronic conduction with nano particles.

Optical properties: Optical properties, special properties and the coloured lasses.

UNIT-V

Process of synthesis of nano powders, Electrode position, Important nano materials Investigating and manipulating materials in the nano scale: Electron microscopes, scanning probe microscopes, optical microscopes for nano science and technology, X-ray diffraction.

TEXT BOOKS:

1. A.K.Bandyopadhyay,"Nano Materials",1st Edition,New Age Publishers,2009

2. T.Pradeep,"Nano the Essentials",3rd Edition,Tata McGraw Hill, 2009

REFERENCE BOOKS

1. Guozhong Cao,"Nano structures and Nano Materials: Synthesis, Properties and Application" 1st Edition, Imperial College Press, 2004.

2. Bharat Bhusan, "Springer's Hand Book of Nano-technology", 2nd Edition, Spingers Publihsers, 2007.

CHEMISTRY

PH078 - ADVANCED ORGANIC SYNTHESIS HETERO CYCLES

Unit-1: Introduction to Heterocycles 1. Defination, 2. Classification 3. Uses of heterocyclic compounds

Unit-2: Synthesis of Heterocyclic compounds 1. Pyridine, 2. Quinoline 3. Isoquinoline 4. Furan 5. Thiophene 6. Indole

Unit-3: Protection and deportation in organic chemistry 3.1) Protection and deportation of the following functional groups 1. Hydroxyl 2. Carbonyl 3. Amino and 4. carboxyl with 5. Applications

Unit-4: Stereo chemistry: 1 Classification of isomers into structural and stereo types-Optical isomerisationElementary of symmetry and chirality – Configuration of optically active molecules – DL and RS notations – Resolution of recemic mixtures. Cis and Trans isomerism; E-Z configuration. Conformational analysis of acyclic systems like Ethane and cyclic systems like cyclohexane

Unit-5: Structural elucidation of organic compounds by using instrumentation 1. Spectroscopy: a) Basic concepts, operational principles and applications of UV-VIS, and FT-IR spectroscopy. 2. Resonance spectroscopy: a) Fundamentals, b) Operational principles, types and C) Applications of Nuclear magnetic resonance (NMR) spectroscopy.

Text Book 1. March's Advanced Organic Chemistry: Reactions, Mechanisms, and Structure, 7th Edition, ISBN: 978-0-470-46259-1, March 2013 Reference Book 1. Advanced Organic Chemistry, Francis A. Carey, Richard A. Sundberg, 5th Edition, 2007, ISBN-13: 978-0-387-68350-8, Springer

PH083 - ADVANCES IN ALKALINE EARTH METALLIC CHEMISTRY AND CATALYSIS

Unit – I: Alkaline-Earth Metals and their physical properties: Introduction, Alkaline earth metals, electronic configurations, periodic properties, Organomagnesium chemistry, Heavier alkaline earth metals, General protocol for the synthesis of organometallic complexes.

Unit – II: Polymer Science: Definition of polymer, Homo polymer, copolymer, Number average molecular weight, Weight average molecular weight, PDI, Polymerization principles and processes - Step, Chain and other polymerizations, polymer kinetics, Polymerization techniques, Polymer manufacture, Polymer characterization, Polymer applications: Biodegradable polymers, Non biodegradable polymers biomedical polymers, conducting polymers. Co-polymerization

Unit – III: Alkaline-Earth Metal Complexes in Homogeneous Polymerization Catalysis: Introduction, σ-Bond Metathesis and Insertion Reactivity, Schlenk Equilibrium, Chain Growth Polymerizations, Ring-Opening Polymerization of cyclic esters – -Caprolactone and Lactide polymerization, Olefin polymerization - Polymerization of Styrene and Conjugated Dienes.

Unit – IV: Heavier Alkaline-Earth Metal Chiral Complexes – Asymmetric Reactions: Asymmetric Aldol and related reactions, Asymmetric Michael and related reactions, Asymmetric Mannich and related reactions, Asymmetric Benzoylation reactions and Asymmetric Diels–Alder-type reactions.

Unit – V: Structural Diversity in Alkaline-Earth Metal Organometallic Compounds: Experimental techniques to prepare alkaline earth metal complexes, Schlenk technique, cannula techniques, Crystallization techniques, Tris(pyrazolyl)borate complexes of the Alkaline-Earth metals, Amidophosphine–Borane complexes of Alkali and Heavier Alkaline-Earth metals, Homoleptic 1,2,4-Diazaphospholide Alkaline-Earth metal complexes and Alkaline-Earth Metal complexes of a Phosphine-Borane-Stabilized 1,3-Dicarbanion. Use of Ortep, Mercury for publication materials. Reference Books: 1. Alkaline-Earth Metal Compounds – oddities and applications: Topics in Organometallic Chemistry, 2013. Editor: Sjoerd Harder. 2.

Text book of “Synthesis of Polymers: New Structures and Methods”: Editor: Dieter A. Schluter, Craig Hawker, and Junji Sakamoto, 2012. References: 3. (a) Harder, S. Chem. Rev. 2010, 110, 3852. Törnroos, Cäcilia Maichle-Mössmer, and Reiner Anwander, Organometallics, 2012, 31 (8), pp 3119–3127.

PH087 - ADVANCED ORGANIC SYNTHESIS AND IDENTIFICATION OF NATURAL PRODUCTS

UNIT-I

REACTIVE INTERMEDIATES & HETEROCYCLIC CHEMISTRY:

Generation, Structure, Stability and reactivity of Carbocations, Carbanions, free radicals, Carbenes, nitrenes and Benzyne. Synthesis and Reactions of furan, thiophene, pyrrole, pyridine, quinoline, isoquinoline and indole; Skraup synthesis, Fisher indole synthesis.

UNIT-II

STEREOCHEMISTRY & CONFORMATIONAL ANALYSIS:

a) Criteria for chirality (one and more than one chiral centers); R – S nomenclature Optical activity in the presence and absence of chiral carbon. Racemic mixture- racemisation and resolution of racemic mixture. Stereo chemistry of compounds containing nitrogen, sulphur and phosphorous.
b) Geometrical isomerism – E, Z- nomenclature – physical and chemical methods of determining the configuration of geometrical isomers.
c) Conformations of monocyclic compounds – cyclohexane- chair, boat and twist boat cyclohexanes, energy profile diagram – Mono and di- substituted cyclohexanes –conformations and physical properties.

UNIT-III

SYNTHESIS IN ORGANIC CHEMISTRY:

Oxidation- Swern, Prevost and Woodward oxidations, Reduction- LiAlH4 , NaBH4 , Clemmensens reduction, Birch reduction, Modern Organic Synthetic Reactions: Aza-Cope and Aza-Wittig reactions, Baylis-Hillman reaction, Click reaction, Heck reaction, Julia- Kocienski olefination, Mukiyama aldol reaction, Mitsunobu reaction, McMurray reaction, Peterson's stereoselective olefination, Suzuki coupling.

UNIT-IV

PRINCIPLES OF SPETROSCOPY:

i) IR Spectroscopy: Introduction, Principles, Characteristic vibrational frequencies of functional groups, Fermi resonance, Effect of hydrogen bonding on vibrational frequencies.
ii) Electronic spectroscopy: Introduction, Principles and Wood -Ward Fieser rules.
iii) NMR Spectroscopy (1 H NMR): Introduction, Principles, factors effecting the chemical shifts, spin spin coupling, first order spectra
iv) Mass Spectrometry: Introduction, Principles, use of isotopic peaks, salient feature of fragmentation of organic compounds, McLafferty rearrangements, retro Diels-Alder fragmentation and ortho effects.
v) Simple problems on structure determination based on the above spectral methods.

UNIT-V

NATURAL PRODUCT CHEMISTRY:

Natural Product Chemistry: a) IR, UV, 1 HNMR and mass spectral studies of the following classes of Natural Products: i) Coumarins ii) Flavones iii) Isoflavones iv) Flavanones v) monoterpenes vi) Quinoline and isoquinoline alkaloids (cusparine and papaverine).

TEXT BOOKS

1. Stereo Chemistry of carbon compounds – E.L. Eliel.

2. Modern organic Reactions, H.O.House, Benjamin.
3. Spectrometric identification of organic compounds - pavia

REFERENCE BOOKS

1. Advanced organic chemistry – reaction, mechanism and structure, Jerry March, John Wiley.
2. Advanced organic chemistry, F.A.Carey and R.J.Sundberg, Plenum.
3. Organic Chemistry Volume 2 FINAR, Pearson Education.
4. Spectrometric Identification of Organic Compounds- Robert M. Silverstein, FX

PH089 – INSTRUMENTAL METHODS & CHARACTERIZATION TECHNIQUE

UNIT 1 : Spectroscopy Uv-visible-FTIR Spectrophotometry-Raman Spectroscopy-Instrumentation-Quantitave analysisApplications.

UNIT 2 : Fluorometry and Phosphorimetry Introduction- Comparison of absorption and Floroscent Methods-Instrumentation-Applications of Fluorometry and Phosphorimetry-Comparison of Fluorometry and Phosphorimetry.

UNIT 3 : Magnetic Resonance Spectroscopy Introduction to NMR-Instrumentation-Chemical shift-Applications,Introduction to ESR-TheoryInstrumentation-Applications.

UNIT 4 : X- ray Diffraction X-ray diffraction - DebyeScherrer formula-Powder method of diffraction - Determination of particle size-Applications.

UNIT 5 : Imaging Techniques Scanning Electron Microscopy (SEM) - Transmission Electron Microscopy (TEM) - Scanning Tunneling Microscope (TEM)-Field Ion Microscopy (FEM).

Text books: 1. Instrumental methods and analysis-Willards,Merrit et.al (CBS)2011 2. Instrumental Methods of Chemical Analysis-Gurudeep R.Chatwal, Sham K.Anand., Himalaya publishing house (2009) 3. Text book of Nanoscience and Nano technology-B.S.Murthy et.al, University Press(2012) Reference books: 1. Enclopedia of characterization-C.Richard Brundle et.al(2006)

PH097 - NANO BIOTECHNOLOGY

Unit 1: Introduction to Nanomaterials and Nanobiotechnology

History of nanomaterials, Different Classification Schemes of nanomaterials, Various applications of nanomaterials, Concept of nanobiotechnology, Important areas of Nanobiotechnology.

Unit 2: Synthesis and Characterization of Nanomaterials:

Different synthetic strategies, Top-down and Bottom-up approach, Biological and Green synthesis of nanomaterials, Functional Nanomaterials, Important Characterization techniques, Microscopy, X-ray-based techniques, Spectroscopic techniques, Surface Area Analysis, Magnetic Nanomaterials.

Unit 3: Nanomedicine and Nanoparticle-based Drug Delivery Systems:

Idea of nanomedicines, Recent examples and current challenges of nanomedicines, Nanobiomaterials, Different types of drug-delivery systems**,** Silica, Carbon, Polymers, metal-composites, Loading of drugs**,** Different strategies for controlled release of drugs, Current status and future direction.

Unit 4: Nanobioimaging and Nanobiosensors:

Concept of Bioimaging and Biosensing**,** Immuno Fluorescent Biomarker Imaging, Immuno gold labelling, Colorimetric Sensing, Iron Oxide Nanoparticles in Magnetic Resonance Imaging, Optical nanosensors for intracellular imaging, Cancer imaging, Nanolithography.

Unit 5: Environmental Applications of Nanobiotechnology:

Application of Nanobiotechnology in removal of pollutant, Risk Analysis in Food Technologies, Applications of Nanobiotechnologies in Food Preservation, Water Purification Techniques, Current status, challenges and future potential.

PH096 - HYDRO FRACTURING & APPLICATIONS

UNIT-1

Engineering Instruments

Viscometer, water bath, pressurised Atmospheric consistometer, atmospheric consistometer, ultrasonic cement analyser, static gel strength analyser, gas migration, high temperature curing chamber, fluid loss equipment.

UNIT-II

Drilling fluids and Cementing

Fundamental concept of cementing, cementing Design, low weight slurrys , high weight slurrys, cementing chemicals, like retarder , accelerator's, cement dispersant, bonding agents, fluid loss agents, silica properties.

UNIT-III

Hydra fracturing Fluids and Applications

Types of fracturing, preparation of frac concentration XLFC-1B, breakers, solvents, antisettling agents, operational applications.

UNIT-IV

Simulation Fluids and Applications

Concept of simulation, preparation of simulation fluids, classification, operational application.

UNIT-V

Acidizing Fluids and Applications

Base concept of acidizing , preparation of 15 % acid mixture , corrosion inhibitor ,antibacterial agents, types of acidizing chemicals in operational application.

CHEMICL ENGINEERING

PH094 - TECHNICAL TEXTILES

UNIT 1: Overview of Technical Textil:s projections tions of technical textiles., ', : ClassificatiZ inducts, "'rii' market overview azind0gro0wt4hk—i•Automotive Textiles: Applicatiori of textiles in au airbags and bekts. Their production and properties otofmteoxbtiilleess.uRseedg uinirethmeestraspopf pneumatic tyres, applications.

UNIT 2 :Architectural and Construction Textiles: I Construction ,Applications of Coated Fabrics in Structures, Awnings and Canopies, Textiles as Roofing Materials n ntroduction, Fabrics for Architecture and , Storage Vessels, Fibre Reinforced Co Textiles for Acoustic and heat Insulation ncrete and Cements,

UNIT 3 : (Protective Textiles: Requirements of textiles used against fire, chemicals, ballistic, wind, rain. Interactions between protection and thermal comfort xtiles in sports: Physiological comfort of sportswear .Types of textiles used in the manufacturing of sports textiles. Functional requirements of these textiles

Unit 4 : Military and Defense Textiles: Introduction, Protective Clothing and Individual uipment, Textile Used in Defense Systems and Weapons. ,■'" nctional requirements and types of textiles used for paper making, medic) agricultural, packaging and footwear, Aerospace applicatiss,- 4

UNIT-5 Gerpal Industrial Text' Textiles in Agriculture, Textile in Ele •onics, Transp,t.-- Bags ya Sheets, Fabrics to Control Oil Spills, Canvas Covers and Tara ins, Ropes and Nets, Home and Office Furnishings, Miscellaneous Applications, Cloth tech

REFERENCE BOOKS" I. The Textile Institute Advances in Fibre Science by S. K. Mukhopadhya Textile Fibres: Developments & Innovations Vol. 2 by V. K. KothTaeri 2. chnomic Publishing 3. MATHEMATICS

PH098 - NUMERICAL ANALYSIS

UNIT-I

SOLUTION OF EQUATIONS: Roots of equations-method of false position-Newton's method-statement of fixed point heorem - Fixed point iteration: $x = g(x)$ method-Solution of linear system by Gauss Elimination and Gauss-Jordan Methods-Iterative Methods : Gauss Jacobi and Gauss-Seidel Methods.

UNIT-II
INTERPOLATION AND APPROXIMATION: Lagrange polynomials-Divided difference-Newton's Forward and Backward Difference Interpolation Formulas. Finite differences and divided differences.

UNIT-III
NUMERICAL DIFFERENTIATION AND INTEGRATION: Numerical Integration by trapezoidal and Simpson's 1/3 and 3/8 Rules-Two and three point Gaussian quadrature formulas-Double integrals Using trapezoidal and Simpson's Rule.

UNIT-IV
INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS: Single Step Methods:Taylor Series Method-Euler and Modified Euler Methods-Fourth order Runge-Kutta Method for solving first and second order equations-Multi Step Methods: Adams predictor and corrector Methods.

UNIT-V

BOUNDARY VALUE PROBLEMS IN ORDINARY DIFFERENTIAL EQUATIONS AND INITIAL & BOUNDARY VALUE PROBLEMS IN PARTIAL DIFFERENTIAL EQUATIONS: Finite difference solution of second order ordinary differential equation-Finite difference solution of one dimensional heat equation by explicit and implicit methods-one dimensional wave equation and two dimensional Laplace and Poisson equation.

TEXT BOOKS

1. Engineering Mathematics-Koneru Sarveswara Rao Published by Orient BlackSwan/ Universities Press (2002)
2. Numerical Methods-S.R.K.Iyengar,R.K.Jain.
3. *Numerical Methods* for Scientific and engineering Computations-M. K. Jain, *S.R.K.*Iyenger and *R.K. Jain*

REFERENCE BOOKS

3. H. K. Dassand Er. RajnishVerma, Higher Engineering Mathematics, S.Chand& Co., New Delhi, 2011.

PH105 - ORDINARY & PARTIAL DIFFERENTIAL EQUATIONS

UNIT-I

Differential equations of first order and their applications: Overview of differential equations- exact, linear and Bernoulli. Applications to Newton's Law of cooling, Law of natural growth and decay, orthogonal trajectories.

UNIT-II

Higher Order Linear differential equations and their applications: Linear differential equations of second and higher order with constant coefficients, RHS term of the type f(X)= e ax , Sin ax, Cos ax, and xn, e ax V(x), x n V(x), method of variation of parameters. Applications bending of beams, Electrical circuits, simple harmonic motion.

UNIT-III

Partial Differential Equations: solutions of first order linear (Lagrange) equation and nonlinear (standard type) equations. Classification of second order linear Partial Differential Equations, solutions of one dimensional heat equation, wave equation and two-dimensional Laplaces equation under initial and boundary conditions

UNIT-IV

Applications of partial differential equations: Method of Seperation of Variables, Equation of Vibrating String, Solution of Wave Equation by Dalembert's Method, One Dimensional Heat flow, Two dimensional Heat flow, Equation of Heat flow in two Dimensions in polar Coordinates, Transmission Line Equations, Laplace Equation, Vibrating Membrane, Solution of Equation of the Vibrating Membrane.

UNIT-V

Laplace and Fourier Transforms and their applications: Laplace Transforms Properties. Solution of Differential Equations by Laplace Transforms, Electric Circuit, Solution of Simultaneous Differential Equations by Lapalce transforms, Solution of Partial differential equations by Laplace transforms. Fourier Transforms Properties and its application to solve initial and boundary value problems.

TEXT BOOKS

1. Engineering Mathematics-Koneru Sarveswara Rao Published by Orient BlackSwan/ Universities Press (2002)
2. Engineering Mathematics – I by T.K. V. Iyengar, B. Krishna Gandhi & Others, S. Chand.
3. Higher Engineering Mathematics – B.S. Grewal, Khanna Publications.

4. A text Book of Engineering Mathematics, Shahnaz Bathul, Right Publishers.

PHYSICS

PH088 - GLASS SCIENCE

Unit-1:

The non-crystalline solids & the glasses: Formation from liquid phase. Formation from a gaseous phase. Formation from a solid phase. Definition of glass. Vitreous transition. Phenomenological study.Thermodynamic study. Theory of vitreous transition. Determination of transition temperature

Unit-2:
Conditions of verification, Structural theory (Zachariasen model etc.) Kinetic theory of glass (Nucleation & Growth). Structure of Glass: XRD, SAXS and other methods of determining glass structure. Structural models of glass. Reaction mechanisms. Ion exchange & network breakdown processes. Glass durability controlling factors.

Unit-3:
Thermodynamic basis of phase separation in glasses, Immiscibility in glasses. Kinetics of demixing. Application of immiscibility diagrams. Spindale decomposition.

Density & Thermal expansion measurements
Density & Thermal expansion measurements & their implications and their dependence on compositions. Thermal history effects. Effect of crystallization. Additive rule.

Unit-4:
Diffusion in Glasses. Electrical conductivity of glasses, Dielectric properties. Optical properties of glasses. Refractive index, Molar volume & Ionic refractivity, Birefringence. Photosensitive/Photo chromic glasses

Unit-5:
Glass production, Basic processes of glass making, Batch process, Continuous process, Raw materials selection, Batch house & mixing, Batch transportation, Tank furnace, Batch feeding, Melting & refining, Bottle glass, Sheet glass, Other glasses, Annealing, Thermal treatment, Chemical treatment, Production control & planning

Text books:

1. Glasses and the Vitreous State **Author**: J. Zarzycki
2. Chemistry of Glasses **Author**: A. Paul
3. Handbook of Glasses **Author**: R. H. Doremus

Reference books:

1. Spectroscopy & Structure of Glasses **Author**: C. A. Angell
2. Handbook of Glass Manufacture **Author**: F.V. Tooley

3. Glass Engineering Handbook **Author**: E. B. Shand.
4. Handbook of Glass Properties **Author**: G. W. Morey
5. Handbook of Glasses **Author**: R. H. Doremus

BIOTECHNOLOGY

PH008- ADVANCED BIOPROCESS ENGINEERING

UNIT - I

KINETICS OF MICROBIAL GROWTH, STERILISATION AND PRODUCT FORMATION: Different modes of operation - batch, fed batch and continuous cultivation. Simple unstructured kinetic models for microbial growth- Monod model, Growth of filamentous organisms, Substrate and product inhibition on cell growth and product formation. Different types of industrial sterilization, Thermal death kinetics of microorganisms, Batch and continuous heat sterilization of liquid media, Filter sterilization of liquidmedia, Air sterilization and design of depth filters.

UNIT - II

METABOLIC STOICHIOMETRY AND ENERGETICS: Stoichiometry of cell growth and product formation, Elemental balances, degrees of reduction of substrate and biomass, Available electron balances, Yield coefficients of biomass and product formation, Maintenance coefficients energetic analysis of microbial growth and product formation, Oxygen consumption and heat evolution in aerobic cultures.

UNIT - III

BIOREACTOR OPERATION: Choosing the cultivationmethod, design and operation of a typical aseptic, aerobic fermentation process, Environmental requirements for animal cell cultivations, Reactors for large scale production using animal cell, plant cell cultivation, Active and Passive Immobilization of cells, Diffusional limitations in Immobilized cells, Bioreactorconsiderations in Immobilized cell.

UNIT - IV

TRANSPORT PHENOMENA IN BIOPROCESS SYSTEM: Gas – Liquid mass transfer in cellular systems, Determination of oxygen rates, Mass transfer for freely rising or falling bodies, Correlations formass transfer coefficient and interfacial area, Mass transfer across free surface, Other factors affecting K_La, Heat transfer correlations.

UNIT - V

MIXED CULTURE AND SOLID STATE FERMENTATION: Introduction, Major classes of interactions inmixed cultures, simple models describing mixed cultures interactions, Mixed cultures in nature and industrial utilization of mixed cultures, Solid-state fermentation.

TEXT BOOKS:

1. Shuler, M.L. and Kargi, F. "*Bioprocess Engineering – Basic concepts* – 2nd Ed., Prentice Hall of India Pvt. Ltd., 2005
2. Peter F. Stanbury, Stephen J. Hall & A. Whitaker, *Principles of Fermentation Technology,* 2nd ed., Butterworth – Heinemann anImprint of Elsevier India Pvt. Ltd., 2005.

REFERENCEBOOKS:

1. Bailey and Ollis, "Biochemical Engineering Fundamentals", 2nd Ed., McGrawHill, 1986.
2. Pauline M. Doran, "Bioprocess Engineering Calculation", Blackwell Scientific Publications.

PH036 – MACHINE LEARNING FOR BIOTECHNOLOGISTS

Unit-I : Introduction to the world of machine learning: What is ML; Problems, data, and tools; Visualization; Matlab

Unit – II : **Regression:** Linear regression; SSE; gradient descent; closed form; normal equations; features Overfitting and complexity; training, validation, test data

Unit – III: Unsupervised learning: clustering, k-means, hierarchical agglomeration, discussion on clustering and EM

Unit – IV : **Supervised learning:** Regression, Classification, Support vector machines and large-margin classifiers, Markov models; autoregressive models

Unit – IV: **Clustering:** k-means, adaptive hierarchical clustering, Gaussian mixture model.

TEXT BOOK:

1. Ethem Alpaydin, Introduction to Machine Learning, Second Edition, http://mitpress.mit.edu/catalog/item/default.asp?ttype=2&tid=12012. This book will cover all the material in the course.

REFERENCE BOOK:

- ✓ Tom Mitchell, Machine Learning http://www.cs.cmu.edu/~tom/mlbook.html.

PH037 - PLANT GENOMICS & BIOTECHNOLOGY

UNIT 1 Plant Genomics

1.1 Plant nuclear genome- genome organization in plant nucleus, Plant organellar genomes - plastid and mitochondrial genomes

1.2 Plant epigenome –epigenomic reprogramming in gametogenesis and seed development in plants, endosperm imprinting, histone modifications in response to light, natural epigenome variation in plants, heterosis

1.3 Plant genome sequencing strategies- high-throughput sequencing technologies, single molecule and real time sequencing, assembly & alignment programs, genome browsers

1.4 Plant proteomics- high throughput approaches–mass spectrometry based proteomics

1.5 Plant metabolomics- analytical platforms–GC-MS, NMR, MALDI

UNIT 2 Plant Metabolic Engineering

2.1 Secondary metabolites-transport storage and turnover, ecological functions & uses of secondary metabolites in biotechnology

2.2 Terpenoids- synthesis of IPP, phenyltransferase and terpene synthase reactions, modification of terpenoid skeletons

2.3 Alkaloid biosynthesis– nicotine and tropane alkaloids, benzyl isoquinoline alkaloids, moneterpene indole alklaoids

2.4 Phenolic compounds – phenyl propanoid, phenyl propanoid-acetate pathways, Lignin& flavonoid biosynthesis

2.5 Coumarins – classification, simple coumarins and Furanocoumarins, stilbenes, styrylpyrones and arylpyrones

UNIT 3 Plant Cell Biotechnology

3.1 Introduction to plant cell culture – different plant tissue culture media, role of plant growth regulators in tissue culture

3.2 Plant cell culture technique- callus and cell suspension cultures; applications of plant cell cultures

3.3 Somatic embryogenesis – induction of somatic embryos, production and applications of synthetic seeds

3.4 Cryo-preservation- theoretical basis, methods and applications of cryo-preservation.

3.5 Plant secondary metabolites produced by cell cultures, strategies to improve secondary metabolite production in plant cell cultures –cell line selection, medium optimizations, permeabilization, elicitation, cell immobilization, biotransformation

UNIT 4

Transgenic Plants

4.1 Co-integrated vectors, binary vectors, novel and specialized vectors for transformation

4.2 Selectable markers (positive & negative selection), novel selection methods and restriction enzymes to control T-DNA integration; marker free transgenic technology; analysis of transgenic plants

4.3 Chloroplast transformation – advantages of chloroplast transformation; transplastomic plants -applications

4.4 Molecular farming- advantages of transgenic plants as bioreactors, expression systems, sub-cellular targeting, plant expression hosts, downstream processing & purification

4.5 Molecular farming for biopharmaceuticals – (plantibodies, plantigens, therapeutic proteins & edible vaccines)

Activities:

1. To isolate commercially important secondary metabolites.

2. To develop transgenic plants for stress tolerance.

PH041 - PLANT MOLECULAR BREEDING

UNIT 1Principles of Plant Breeding

1.1 Introduction to plant breeding: Domestication of crop plants – Centers of origin and diversity

1.2 Basic features of plant breeding, Objectives of plant breeding

1.3 Plant genetic resources and conservation strategies: Sources of plant genetics resources; Methods of germplasm conservation; Evaluation and utilization of plant genetic resources

1.4 Reproductive systems in plants: Sexual reproduction – self and cross fertilization – Autogamy, Allogamy and often cross pollinated plants; Asexual reproduction and Apomixis

1.5 Genetic basis of breeding: Mating systems of plants

UNIT 2 Plant Breeding Methodologies

2.1 Breeding Methods in self-pollinating crops: Pure line selection; Pedigree method; Bulk population methods; Single seed descent method; Back cross method and Multilines

2.2 Breeding methods in cross pollinating crops: Mass selection; Ear-torow selection; Progeny selection and Recurrent selection methods

2.3 Hybrid Breeding – Development and evaluation of inbred lines, A, B and R lines, Development of hybrids, male sterility systems

2.4 Mutation breeding: types of mutations – mutagenic agents: physical and chemical mutagens; Mutation breeding in seed crops and vegetative propagated crops – TILLING and EcoTILLING

2.5 Cultivar release - Seed certification and multiplication

UNIT 3 Specific Breeding Methods

3.1 Breeding for disease resistance: Genetics of pathogenicity, Genetics of disease resistance; Methods of breeding for disease resistance

3.2 Breeding for insect resistance: Mechanisms of insect resistance; Breeding methods for pest resistance

3.3 Breeding for abiotic stress tolerance - drought, salinity

3.4 Breeding for abiotic stress tolerance - cold stress tolerance, heat stress tolerance and flooding tolerance

3.5 Breeding for yield and morphological traits – ideotype concept, lodging and shattering resistance, photoperiod response, early maturity

UNIT 4 Biotechnological Approaches for Crop Improvement

4.1Introduction to plant cell-tissue culture: Cellular totipotency, factors affecting shoot bud differentiation; Plant tissue culture techniques in crop improvement - Micropropagation

4.2 Tissue culture applications; Haploids and di-haploids in breeding, Somaclonal variations and their role in crop improvement, Protoplast fusion in crop improvement and breeding, germplasm preservation

4.3 Transgenics in crop improvement: Gene transfer methods in plants, Production of transgenics for biotic and abiotic stress tolerance; Cisgenic approaches

4.4 Transgenic male-sterility systems and development of hybrids

4.5 Gene silencing: RNAi mechanism & its applications for crop improvement

PH061- BIO ANALYTICAL TECHNIQUES

UNIT - I

SPECTROSCOPY: Principle, instrumentation and application of Colorimeter, UV – Visible Spectrophotometer, IR spectrophotometer, Flourimeter, Flame photometer, x-ray spectroscopy, NMR spectroscopy.

UNIT - II

MICROSCOPY AND ELECTROPHORESIS: Basics of phase contrast, confocal and fluorescent microscopy; electron microscopy – SEM and TEM; Flow cytometry; Electrophoresis – principles, supporting materials-paper, starch, agarose, polyacrylamide types – gel and capillary electrophoresis; disc; Isoelectric focussing; immuno-electrophoresis; isotachophoresis.

UNIT – III

CHROMATOGRAPHY: Chromatography – principles; types - paper, thin layer, adsorption, ion-exchange, affinity, gel filtration, gas liquid and HPLC; GC-MS; Simulation moving bed.

UNIT - IV

RADIOACTIVE TECHNIQUES: Radioactive isotopes, radioactive decay and their types; principles of scintillation counting; isotope dilution technique; radioactive techniques-RIA; GM counter; Scintillation counter; Autoradiography; Applications in Medicine & Diagnosis; Radiation hazards and methods for containment and prevention.

UNIT – V

THERMO ANALYTICAL TECHNIQUES: Theory of thermal analysis; thermo gravimetric; Basic theory, construction and working of Differential Thermal Analysis (DTA); Differential Scanning Calorimeter (DSC).

TEXT BOOKS:

1. Willard and Merrit, “Instrumental Methods and Analysis” . 6th ed, CBS Publishers & Distributors.
2. Keith Wilson, Kenneth H. Goulding, “A Biologist Guide to Principles and Techniques of Practical Biochemistry”, 3rd ed., ELBS series.
3. Skoog and West, “Fundamentals of Analytical Chemistry”, 1982.

REFERENCE BOOKS:

1. Ewing GW, “Instrumental Methods of Chemical Analysis”, McGraw Hill Book Company, 1989.

Braun. H, “Introduction to Chemical Analysis”, McGrawHill, 1987.

PH062-PHARMACEUTICAL SCIENCES

UNIT-I

INTRODUCTION TO PHARMACEUTICALS: History & Definition of Drugs. Sources of Drugs - Plant, Animals, Microbes and Minerals, Routes of drug administration. Different dosage forms.

UNIT-II

BIO PHARMACEUTICS: Introduction, their role in formulation development & clinical settings, fate of drugs after administration. Drug absorption: drug absorption mechanisms, factors affecting drug absorption (physiochemical, biological, metabolic, formulations and dosage form considerations).

UNIT-III

DRUG DISTRIBUTION & PROTEIN BINDING OF DRUGS: Distribution of drug through organ /tissue - factors affecting distribution (Physicochemical properties of drugs, organ/tissue size, blood flow to the organ, physiological barriers to the distribution of drugs, drug binding blood / tissue / macromolecules). Protein /tissue binding of drugs- factors affecting protein binding of drugs, significance and kinetics, tissue binding of drugs.

UNIT-IV

DRUG METABOLISM & EXCRETION OF DRUGS: Biotransformation of drugs- drug metabolizing enzymes & organs, phase I & phase II reactions, factors affecting biotransformation, drug metabolism significance, Excretion of drugs - renal excretion of drug, factors affecting renal excretion of drugs, nonrenal routes of excretion of drug & factors affecting them, enterohepatic circulation.

UNIT-V

PHARMACOKINETICS: Introduction, basic concepts- rate processes in biological systems, Pharmacokinetics drug interaction and their significance in combination therapy. Clinical pharmacokinetics: dosage adjustment in patient with and without renal and hepatic failure.

TEXT BOOKS:

1. Brahmankar DM, Jaiswal SB Biopharmaceutics and pharmacokinetics. VallabhPrakashan Publishers 2015.
2. Ram I Mahato, Ajit S. Narang Pharmaceutical Dosage Forms and Drug Delivery, Second Edition CRC press 2011.
3. Katzung, Basic and clinical pharmacology 11th edition, Tata McGraw Hill edition, 2009.

REFERENCE BOOKS:

1. Sabine Globig and William Hunter Jr.Current Research in Pharmaceutical Technology 1st Edition Apple Academic Press 1st edition. 2011.
2. Rang and Dales, Pharmacology 6th edition, Churchhill living stone Elsevier Publiction, 2008.
3. KD Tripathi, Essentials of medical pharmacology 6th edition, Jaypee brothers Medical Publishers (P) Ltd, 2008.

PH063-EXPERIMENTAL STUDIES ON CERTAIN SELECTED MANGROVE SPECIES OF NIZAMPATNAM SANCTUARY

UNIT-1

Mangrove vegetation and niches of Indian sub-continent special emphasis of peninsular India.

UNIT-2

Estuaries and influence of mangrove vegetation with concern to the climate changes and its impacts.

UNIT-3

Research articles and literature sources of mangrove plant wealth.

UNIT-4

Ex-situ and *in-situ* conservation practices for mangrove restoration programmes.

UNIT-5

Govt. and non Govt.agencies and N.G.Os role to conservation and sustainable utilization of mangrove plant wealth.

TEXT BOOKS /REFERENCE BOOKS:

1. T. Ravi Shankar, L. Gnanappazham R. Ramasubramanian D. Sridhar M. NavamuniyammalV.SelvamAtlas of Mangrove Wetlands of India Part-2, Andhra Pradesh.(2002)

2. Forest Survey of India. 1999. Status of Forest Report, Ministry of Environment and Forest, Government of India, New Delhi.

3. Blasco, F. and Aizpura, M. 2002. Mangroves along the coastal stratch of the Bay of Bengal: Present status, IndianJournal of Marine Sciences, 9 - 20.

4. Mittal, R. 1993. Management plan for Coringa Wildlife Sanctuary, Forest Department, Government of Andhra Pradesh, Hyderabad.

5. Rangarao, V., Reddy, B. S. R., Raman, A. V.andRamana Murthy, M. V.2003. Oceanographic features of the Bay _ Mangrove water ways of Coringa, East coast of India, Proceedings of AP Akademy Sci., 135-142.

6. Reddy, B.S.R. and Prasad, K.V.S.R.1982. The sand spit near Kakinada - Further studies, Indian J Ear Sci., 9: 167 -173.

PH064-CLINICAL BIOTECHNOLOGY

UNIT-I

FUNDAMENTALS OF CARDIOVASCULAR DISEASE: Global burden of cardiovascular disease, cardiovascular disease in India, functional anatomy of heart, physiology of cardiovascular system, cardiac pathology

UNIT-II

CORONARY ARTERY DISEASES: Valvular Diseases, Dilated cardiomyopathy, restrictive & infiltrative cardiomyopathy, hypertrophic cardiomyopathy, Myocarditits and specific cardiomyopathies, Anti-platelet therapy.

UNIT-III

PHYSIOLOGY OF CARDIAC FUNCTION: Cardiac rate and rhythm, disturbances of cardiac rhythm, cardiac contraction, factors affecting cardiac function, drugs affecting cardiac function, cardiac hypertrophy and chronic heart failure in mice. Recording the effects of acetyl choline and non-adrenaline on the B.P and ECG of an anesthetized rat.

UNIT-IV

MOLECULAR TECHNIQUES: Purification of genomic DNA from living cells, Manipulation of purified DNA; Introduction of DNA into living cells - methods of Gene transfer, DNA methylation, DNA hybridization, DNA sequencing, DNA fingerprinting;

UNIT-V

EXPRESSION AND DETECTION OF CLONES: Cloning strategies, sequencing, DNA fingerprinting; Blot analysis- Southern, Northern, Western blot; dot and slot blot; PCR- Principles, designing of primers, methodology. Applications of PCR.

TEXT BOOKS :

1. T.A.Brown, "Gene Cloning & DNA analysis", 5th Ed., Blackwell, 2006.
2. Primrose SB, "Principles of Gene manipulation and Genomics", 5th edition, Blackwell Scientific Publications, 2006.
3. S.K.Kulkarni (2011), Hand book of experimental pharmacology, VallabhPrakashan publishers, 2011.

REFERENCE BOOKS:

1. David Friefelder, "Essentials of Molecular Biology", 7th ed., Narosa Publishing house, 2006.
2. Rang and Dales, Pharmacology 6th edition, Churchhill living stone Elsevier Publication, 2008.

PH065-MEDICAL BIOTECHNOLOGY

UNIT-I

INTRODUCTION TO THYROIDISM: Thyroid gland; Thyroid disorders-Hypothyroidism, Hyperthyroidism, TreatmentCongenital hypothyroidism; Hypothyroidism in infants; Hypothyroidism in children and teens; Complications of untreated hypothyroidism

UNIT-II

CONGENITAL HYPOTHYROIDISM: Screening for congenital hypothyroidism, Initial diagnosis, Interpreting results and starting treatment, Long term care of congenital hypothyroidism patients.

UNIT-III

GENE STRUCTURE AND MUTATIONS: Spontaneous and induced mutations; Selection of mutants-Ames test; Chromosomal aberrations; Fine structure of genes in prokaryotes and Eukaryotes; Genetic control of development in Drosophila.

UNIT-IV

MOLECULAR TECHNIQUES: Purification of genomic DNA from living cells, Manipulation of purified DNA; Introduction of DNA into living cells - methods of Gene transfer, DNA methylation, DNA hybridization

UNIT-V

EXPRESSION AND DETECTION OF CLONES: PCR- Principles, designing of primers, methodology, Applications of PCR. Cloning strategies, Sequencing, DNA fingerprinting; Blot analysis-Southern, Northern, Western blot; dot and slot blot.

TEXT BOOKS:

1. Werner and Ingbar Thyroid-A fundamental and clinical text. Tenth Edition 2012.
2. T.A.Brown, “Gene Cloning & DNA analysis”, 5th Ed., Blackwell, 2006.
3. Primrose SB, “Principles of Gene manipulation and Genomics”, 5th edition, Blackwell Scientific Publications, 2006.
4. P.K. Gupta, “Genetics”, 3rd ed., Rastogi Publications, 2005.

REFERENCE BOOKS:

1. David Friefelder, “Essentials of Molecular Biology”, 7th ed., Narosa Publishing house, 2006.
2. William H. Elliott and D.C. Ellioit, “Biochemistry & Molecular Biology”, 3rd ed., Oxford University Press, 2007.

PH066-MOLECULAR GENETICS

UNIT-I

GENERAL MICROBIOLOGY: Physical and chemical methods of sterilization techniques - Basic techniques for isolation, cultivation and enumeration of microorganisms – Staining of microorganisms – Microscopy-Collection, preservation and transportation of specimens for microbiological analysis – Structure, composition and functions of bacterial cell and its different components.

Unit-II

SYSTEMIC BACTERIOLOGY: Systematic study of taxonomic position, distribution, morphology and staining characters, growth requirements and characteristics, antigenic structure, virulence factors, pathogenecity, diagnosis, immunity and control of with respect to the gram positive and gram negative anaerobic organisms.

UNIT-III

BACTERIAL GENETICS: Bacterial growth; measurement of bacterial growth, bacterial growth curve-Maintenance and preservation of bacteria. Stock culture collections; Preservation methods; Short and long term preservation at low temperatures Cryopreservation and freeze drying. Gene transfer mechanisms – conjugation, transformation, transduction, Plasmids, transposons, cosmids, insertion sequences, and Recombinant DNA technology -Antimicrobial agents: Classes of antimicrobials and mechanism of action.

UNIT-IV

MOLECULAR BIOLOGY: DNA replication in prokaryotic and eukaryotic cells — Isolation and purification of DNA/RNA from prokaryote Types and function of DNA polymerases Principle and applications of molecular diagnostic tests: PCR and its types, application of PCR-Gel electrophoresis: Agarose and PAGE –native PAGE, SDS-PAGE –genomic DNA Preparation – DNA Sequencing techniques.

UNIT-V

GENETIC ENGINEERING/RECOMBINANT DNA TECHNOLOGY: Restriction endonucleases-cloning and expression vectors, plasmids, cosmids, phages – shuttle vectors – cloning and expression in prokaryotic and eukaryotic hosts –screening and characterization of DNA clones, transformation of bacterial and animal cells- oligonucleotide synthesis-DNA markers and their applications. Biotechnological approaches for disease diagnosis - safety aspects of genetic engineering – ethical issues related to use of biotechnology products – patenting and intellectual property rights.

PH067-METHOD DEVELOPMENT & VALIDATION FOR QUANTITATIVE ESTIMATION OF BIOACTIVE MOLECULES IN PHARMACETICAL DOSAGE FORMS & BIOLOGICAL SAMPLES

UNIT I

MEDICINAL & AROMATIC PLANTS

Indian System of Medicine, Medicinal & Aromatic Plants in India, Basic principles of plant taxonomy, Agronomic features, Description of at least 10 plants species. Database on medicinal plants. Traditional knowledge and digital library.

UNIT II

PHYTOCHEMICAL SCREENING AND ISOLATION

Phytochemicals- Classification and types: Alkaloid, Flavonoid, Polyphenol, Tannin, Terpenoid and Saponin. Preparation of crude extracts and essential oils. Plant Tissue Culture techniques to enhance secondary metabolite production.

UNIT III

PHYTOCHEMICALS CHARACTERIZATION

Qualitative and quantitative identification and characterization methods for crude drugs and active phyto compounds: TLC, HPTLC, Column Chromatography, UV-Vis, FTIR, GCMS, LCMS, and NMR, QSAR and molecular docking.

UNIT IV

APPLICATIONS OF PHYTOCHEMICALS AND NATURAL PRODUCTS

Antimicrobial,antioxidant, anti-inflammatory, antiulcer, antidiabetic, anti-cancer, antihypertensive, hepatoprotective, wound healing and immunomodulatory phytochemicals. Biocides, biofungicides and biopesticides. Nutraceuticals. Cosmetic products.

UNIT V

IPR AND TYPICAL EXAMPLES OF PHYTODRUGS

Definition of the terms: Patent, IPR, Breeder's right, Bioprospecting and Bio piracy. A few examples of phytodrugs and their mode of action: Andrographolide, Vinblastine, Vincristine, Curcumin, Asiaticoside, Cinnamaldehyde, Anthocyanins, Ferulic acid, Kaempferol, Morindin.

Books:

1) P.C. Trivedi (2009) Indian Medicinal Plants, Vedic Books, New Delhi, ISBN: ISBN:9788179102787.

2) Dr. Biren Shah (2019) Pharmacognosy and Phytochemistry, free ebooks publisher.

PHBT032-PHARMACOLOGICAL SCREENING OF INDIAN MEDICAL PLANTS FOR ANTI-MICROBIAL,ANTI-OXIDANT & AMP; ANTI-CANCER BIOLOGY

UNIT I

MEDICINAL & AROMATIC PLANTS -

Indian System of Medicine, Medicinal & Aromatic Plants in India, Basic principles of plant taxonomy, Agronomic features, Description of at least 10 plants species. Database on medicinal plants. Traditional knowledge and digital library.

UNIT II

PHYTOCHEMICAL SCREENING AND ISOLATION -

Phytochemicals- Classification and types: Alkaloid, Flavonoid, Polyphenol, Tannin, Terpenoid and Saponin. Preparation of crude extracts and essential oils. Plant Tissue Culture techniques to enhance secondary metabolite production.

UNIT III

PHYTOCHEMICALS CHARACTERIZATION

Qualitative and quantitative identification and characterization methods for crude drugs and active phyto compounds: TLC, HPTLC, Column Chromatography, UV-Vis, FTIR, GCMS, LCMS, and NMR, QSAR and molecular docking.

UNIT IV

APPLICATIONS OF PHYTOCHEMICALS AND NATURAL PRODUCTS

Antimicrobial, antioxidant, anti-inflammatory, antiulcer, antidiabetic, anti-cancer, antihypertensive, hepatoprotective, wound healing and immunomodulatory phytochemicals. Biocides, biofungicides and biopesticides. Nutraceuticals. Cosmetic products.

UNIT V

IPR AND TYPICAL EXAMPLES OF PHYTODRUGS

Definition of the terms: Patent, IPR, Breeder's right, Bioprospecting and Bio piracy. A few examples of phytodrugs and their mode of action: Andrographolide, Vinblastine, Vincristine, Curcumin, Asiaticoside, Cinnamaldehyde, Anthocyanins, Ferulic acid, Kaempferol, Morindin.

Books:

1) P.C. Trivedi (2009) Indian Medicinal Plants, Vedic Books, New Delhi, ISBN: ISBN:9788179102787.

2)Dr. Biren Shah (2019) Pharmacognosy and Phytochemistry, free ebooks publisher.

PH266 - GENES, GENOMICS & PROTEOMICS

UNIT I

Introduction to Genes and Genomics: Definition of gene, genome, trancriptome and proteome; Organization and structure of genomes; Genome size; Sequence complexity; Introns and Exons; Isolation of Chromosomes; chromosome micro dissection and its applications.

UNIT II

Gene Identification and Expression: Genome annotation; Traditional routes of gene identification; Open-reading Frame definition and it's detection; Identifying the function of a new gene; Gene ontology; Global expression profiling; Traditional approaches to expression profiling.

UNIT III

Analysis of Proteomics: Introduction to Proteomics; Mining proteomes; Bridging Genomics and Proteomics; Analysis of proteomes – SDS-PAGE; Detecting proteins in Polyacrylamide gels; Two-dimensional polyacrylamide gel electrophoresis- Procedure, Image analysis of 2-DE gels; Mass spectrometry.

UNIT IV

Analysis of Genomics: Micro array techniques- Types of micro arrays, Designing a microarray experiment, Applications of Microarray Technology, Chip array, Shotgun method**.**

UNIT V

Applications of Genomics and Proteomics: Insights from genome sequencing of various species; Applications of proteome analysis; Applications of Proteomics.

TEXT BOOKS:

1. S. B. Primrose and R.M. Twyman "Principles of Genome Analysis and Genomics", 7th Edition, Blackwell Publishing, 2006.
2. S. Sahai, "Genomics and Proteomics, Functional and Computational Aspects" Plenum Publication, 1999.

REFERENCE BOOKS:

1. Andrezej K Konopka and James C. Crabbe, "Compact Hand Book – Computational Biology", Marcel Dekker, USA, 2004.
2. Pennington & Dunn, "Proteomics from Protein Sequence to Function", 1 st edition, Academic Press, San Diego, 1996.

ELECTRONICS & COMMUNICATION ENGINEERING

PH059 - DIGITAL IMAGE PROCESSING

UNIT-I

FUNDAMENTALS STEPS OF IMAGE PROCESSING: Components of an Image processing system, Image sampling and quantization, relationship between the pixels. Gray level transformation, Histo-gram processing, Smoothing and sharpening spatial filters, Smoothing and sharpening fre-quency domain filters.

UNIT-II

IMAGE COMPRESSION AND SEGMENTATION: Compression models, Error free coding, lossy coding, compression standards. Image segmentation: Edge linking and boundary detection, Thresholding, Region based segmentation.

UNIT-III

VIDEO REPRESENTATION: Video formation, perception and representation: Color perception and specification, Video capture and display, Analog video raster, Analog color TV systems, Digital Video Sampling: Basics of lattice theory, sampling over lattice, Sampling of video signals, filtering operations, Conversion of signals sampled on different lattices, Sampling rate conver-sion of video signals.

UNIT-IV

VIDEO MODELING: Camera model, illumination model, object model. Scene model, Two dimen-sional motion models 2-D motion estimation: Optical flow, General methodologies, Pixel based motion estimation, Block matching algorithm, Mesh-based motion estimation, Global motion estimation. Application of motion estimation in video coding.

UNIT-V

VIDEO CODING: Information theory, binary encoding, Scalar quantization, Vector quantization, Wave- form based video coding: Block based transform coding, Predictive coding, Object based scalability, and Wavelet Transform based coding.

TEXTBOOKS:

1. Digital Image Processing 3e by Rafael C. Gonzalez Richard E. Woods Pearson Education India; Third edition (23 June 2016).

2. Video Processing and Communications (Prentice-Hall Signal Processing Series) by Yao Wang JornOstermannYa-Qin Zhang Pearson (27 September 2001).

REFERENCEBOOKS:

1. Digital Video Processing (Prentice-Hall Signal Processing Series) by A. Murat Tekalp Prentice Hall; 2 edition (18 June 2015).

2. Handbook of Image and Video Processing (Communications, Networking and Multimedia) 2nd ,Kindle Edition by Alan C. Bovik Academic Press; 2 edition (21 July 2010).

PH081 – TRANSFORM TECHNIQUES

UNIT -I : Fourier Analysis:Vector space, Hilbert spaces, Fourier basis, FT- Limitations of Fourier Analysis, Need for time-frequency analysis, DFT, 2D-DFT: Definition, Properties and Applications, IDFT, Hilbert Transform, STFT.

UNIT -II : Transforms:Walsh, Hadamard, Haar and Slant Transforms, DCT, DST, KLT,– definition, properties and applications

UNIT -III : Continuous Wavelet Transform (CWT):Short comings of STFT, Need for wavelets, Wavelet Basis Concept of Scale and its relation with frequency, Continuous time wavelet Transform Equation-Series Expansion using Wavelets- CWT- Tiling of time scale plane for CWT. Important Wavelets: Haar, Mexican Hat, Meyer, Shannon, Daubechies.

UNIT -IV : Multi Rate Analysis and DWT:Need for Scaling function – Multi Resolution Analysis, Two-Channel Filter Banks, Perfect Reconstruction Condition, Relationship between Filter Banks and Wavelet Basis, DWT, Structure of DWT Filter Banks, Daubechies Wavelet Function, Applications of DWT.

UNIT -V : Special Topics: Wavelet Packet Transform, Multidimensional Wavelets, Biorthogonal basis-BSplines, Lifting Scheme of Wavelet Generation, Multi Wavelets

TEXT BOOKS: 1. Raghuveer M.Rao and Ajit S. Bopardikar, “Wavelet Transforms-Introduction theory and applications” Pearson Edu, Asia, New Delhi, 2003. 2. Soman. K. P, Ramachandran. Mallat,v, ”A Wavelet Tour of Signal Processing” , Academic Press, 2nd Edition 5. S.Jayaraman, S.Esakkirajan, T.Veera Kumar, “Digital Image Processing” , TMH, 2009.

ELECTRICAL & ELECTRONIC ENGINEERING

PH002- ADVANCED POWER SYSTEM PROTECTION

UNIT-1

Static Relays classification and Tools

Comparison of Static with Electromagnetic Relays, Basic classification, Level detectors and Amplitude and phase Comparators – Duality – Basic Tools – Schmitt Trigger Circuit,Multivibrators, Square wave Generation – Polarity detector – Zero crossing detector – Thyristor and UJT Triggering Circuits. Phase sequence Filters – Speed and reliability of static relays.

UNIT-2

Amplitude and Phase Comparators (2 Input)

Generalized equationsfor Amplitude and Phase comparison – Derivation of different characteristicsof relays – Rectifier Bridge circulating and opposed voltage type amplitude

Comparators – Averaging & phase splitting type amplitude comparators –Principle of sampling comparators.

UNIT-3

Static over current (OC) relays

Instantaneous, Definite time, Inversetime OC Relays, static distance relays, static directional relays, static differentialrelays, measurement of sequence impedances in distance relays, multi inputcomparators, elliptic & hyperbolic characteristics, switched distance schemes,

Impedance characteristics during Faults and Power Swings

UNIT-4

Carrier plot protection scheme

Carrier current protection schemes,relative merits & demerits, carrier aided distance protection schemes, transferschemes, blocking scheme and acceleration schemes.

Differential relay Principle and characteristics, mal-operation of differential relay,protection of transformers, protection of generators.

UNIT-5

Numerical Protection

Introduction, numerical relay, numerical relayingalgorithms, mann-morrison technique, Differential equation technique, discretefourier transform technique, odeling zed harr transform technique, wavelettransform technique, numerical overcurrent protection , numerical distanceprotection , numerical differential protection.

PH028 - POWER SYSTME AUTOMATION

UNIT-1
INTRODUCTION TO SCADA
Evolution of Automation systems, History of Power system Automation, Supervisory Control and Data Acquisition (SCADA) Systems, Components of SCADA systems, SCADA applications, SCADA in power systems, SCADA basic functions, SCADA application functions in Generation, Transmission and Distribution.

UNIT-2
SCADA SYSTEM COMPONENTS
Advantages of SCADA in Power Systems, The Power system 'Field', Types of data &signals in the Power system, Flow of Data from the field to the SCADA Control center. Building blocks of SCADA systems, Classification of SCADA systems.

UNIT- 3
FEATURES OF RTU
Remote Terminal Unit (RTU), Evolution of RTUs, Components of RTU, Communication, Logic, Termination and Test/HMI Subsystems, Power supplies, Advanced RTU Functionalities.

UNIT-4
COMMUNICATION SYSTEM STANDARDS FOR SCADA
Intelligent Electronic Devices (IEDs), Evolution of IEDs, IED functional block diagram, The hardware and software architecture of IED, IED Communication subsystem, IED advanced functionalities, Typical IEDs, Data Concentrators and Merging Units, SCADA Communication Systems.

UNIT-5
FEATURES OF HMI
Master Station, Master station software and hardware configurations, Server systems in the master station, Small, medium and large master station configurations, Global Positioning Systems, Master station performance, Human Machine Interface (HMI), HMI components, Software functionalities, Situational awareness, Case studies in SCADA.

TEXT BOOKS
1. Mini S. Thomas, John D McDonald, Power Systems SCADA and Smart Grid, CRC Press, Taylor and Francis, 2015.
2. Electric Power Substation Engineering John D. Mc Donald CRC Press, Taylor and Francis, 2012.

REFERENCE BOOKS
1.Control and Automation of Electrical Power Distribution systems, James North cote- Green, R Wilson, CRC Press, Taylor and Francis, 2006.
2.Electric Power Distribution, Automation, Protection and Control, James Momoh, CRC press, Taylor and Francis, 2008.
3. Biswarup Das, Power Distribution Automation, IET, 2016.

PH029 – POWER SYSTEM PLANNING AND RELIABILITY

UNIT-1
PLANNING AND FORECASTING
Objectives of planning – Long and short term planning - Load forecasting – characteristics of loads – methodology of forecasting – energy forecasting – peak demand forecasting – total forecasting – annual and monthly peak demand forecasting.

UNIT-2
CONCEPTS OF RELIABILITY AND RELIABILITY IN GENERATION
Reliability concepts – exponential distributions – meantime to failure – series and parallel system – MARKOV process – recursive technique. Generator system reliability analysis – probability models for generators unit and loads – reliability analysis of isolated and interconnected system – generator system cost analysis.

UNIT-3
TRANSMISSION SYSTEM AND RELIABILITY ANALYSIS
Transmission system reliability model analysis – average interruption rate - LOLP method - frequency and duration method - Sub transmission lines and distribution substations- -Design primary and secondary systems .

UNIT- 4
INTERCONNECTED SYSTEMS
Two plant single load system - two plant two load system - load forecasting uncertainty - Interconnections benefits- Introduction to system modes of failure – the loss of load approach – frequency & duration approach.

UNIT- 5
EXPANSION PLANNING
Basic concepts on expansion planning-procedure followed for integrate transmission system planning, current practice in India-Capacitor placer problem in transmission system and radial distributions system

TEXT BOOKS

1.Sullivan, R.L., 'Power System Planning', Heber Hill, 1987.Digitized 5 August 2011
2.Roy Billington,Ronald L Allan, 'Reliability Evaluation of Power System', Springer USA , 1996
3.*Eodrenyi, J., 'Reliability Modeling in Electric Power System' John Wiley, 1980.*

REFERENCE BOOKS

1. X. Wang & J.R. McDonald, "Modern Power System Planning", McGraw Hill Book Company,1994.
2. Pabla, A.S., Electric Power Distribution, Tata McGraw−Hill (2008)
3. Roy Billington, 'Power System Reliability Evaluation', Gordan& Breach Scain Publishers,1990

PH030- SMAR GRIDS

UNIT- 1
INTRODUCTION TO SMART GRID
Introduction - Evolution of Electric Grid, Smart Grid Concept - Definitions and Need for Smart Grid – Functions – Opportunities – Benefits and challenges, Difference between conventional & Smart Grid, Technology Drivers

UNIT-2
ENERGY MANAGEMENT SYSTEM
Energy Management System (EMS) - Smart substations - Substation Automation - Feeder Automation, SCADA – Remote Terminal Unit – Intelligent Electronic Devices – Protocols, Phasor Measurement Unit – Wide area monitoring protection and control, Smart integration of energy resources – Renewable, intermittent power sources – Energy Storage.

UNIT- 3
DISTRIBUTION MANAGEMENT SYSTEM
Distribution Management System (DMS) – Volt / VAR control – Fault Detection, Isolation and Service Restoration, Network Reconfiguration, Outage management System, Customer Information System, Geographical Information System, Effect of Plug in Hybrid Electric Vehicles

UNIT-4
SMART METERS
Introduction to Smart Meters – Advanced Metering infrastructure (AMI), AMI protocols – Standards and initiatives, Demand side management and demand response programs, Demand pricing and Time of Use, Real Time Pricing, Peak Time Pricing.

UNIT-5
COMMUNICATION NETWORKS & IOT
Elements of communication and networking – architectures, standards, PLC, Zigbee, GSM, BPL, Local Area Network (LAN) - House Area Network (HAN) - Wide Area Network (WAN) - Broadband over Power line (BPL) - IP based Protocols - Basics of Web Service and CLOUD Computing, Cyber Security for Smart Grid.

TEXT BOOKS
1.JanakaEkanayake, Nick Jenkins, KithsiriLiyanage, Jianzhong Wu, Akihiko Yokoyama, 'Smart Grid: Technology and Applications', Wiley, 2012
2.StuartBorlase 'Smart Grid: Infrastructure, Technology and Solutions', CRC Press 2012.

REFERENCE BOOKS
1. Mini S. Thomas, John D McDonald, 'Power System SCADA and Smart Grids', CRC Press, 2015
2. Kenneth C.Budka, Jayant G. Deshpande, Marina Thottan, 'Communication Networks for Smart Grids', Springer, 2014.

PH031 – SOFT COMPUTING

UNIT-1
Fundamentals of optimization techniques
Definition-Classification of optimization problems-Unconstrained and Constrained optimization-Optimality conditions-Classical Optimization techniques (Lamda Iteration method, linear programming, Quadratic programming). Brief introduction to lamda iteration method, formulate the Lagrange function, Lamda iteration method to solve Optimal dispatch problem. Introduction to quadratic programming, Working principle, sequential programming, linear constrained optimization problem.

UNIT- 2
Linear programming
Examples of linear programming problem, The Simplex Method I, Fundamental theorem of linear programming, Weak and strong duality theorems, Integer programming, Network flow, develop a linear programming model from problem description.

UNIT-3
Genetic Algorithm
Introduction to genetic Algorithm, working principle, Principles of Genetic Algorithm- Evolutionary Strategy and Evolutionary Programming-Genetic Operators-Selection, Crossover and Mutation fitness function. GA operators; Similarities and differences between GA and traditional methods; Unconstrained and constrained optimization using Genetic Algorithm.

UNIT-4
Particle Swarm Optimization
Fundamental principle-Velocity Updating-Advanced operators-Parameter selection- Hybrid approaches (Hybrid of GA and PSO, Hybrid of EP and PSO) -Binary, discrete and combinatorial

UNIT-5
Differential Evolution
Fundamental principle, developing DE based solution techniques for OPF problems with single and multiple objectives and comparing the performance and computational effectiveness of DE with other evolutionary and conventional techniques.

REFERENCE BOOKS

1. S.S.Rao, Engineering Optimization, 3rd Edition, New Age International (P) Ltd.
2. Soft computing Technique and its application in electrical Engineering by Chaturvedi,
3. An Introduction to Optimization, 3rd Edition by K.P. Chong, Stanislaw H. Zak.

PH264 – ENERGY AUDITING AND MANAGEMENT SYSTEM

UNIT-1
INTRODUCTION
Need for energy management - energy basics- designing and starting an energy management program – energy accounting -energy monitoring, targeting and reporting-energy audit process.

UNIT-2
ENERGY COST AND LOAD MANAGEMENT
Important concepts in an economic analysis - Economic models-Time value of money- Utility rate structures- cost of electricity-Loss evaluation- Load management: Demand control techniques-Utility monitoring and control system-HVAC and energy management-Economic justification.

UNIT-3
ENERGY MANAGEMENT FOR MOTORS, SYSTEMS, AND ELECTRICAL EQUIPMENT
Energy efficient motors , factors affecting efficiency, loss distribution , constructional details , characteristics - variable speed , variable duty cycle systems, RMS hp- voltage variation-voltage unbalance- over motoring-motor energy audit. Transformer Loading/Efficiency analysis, Feeder/cable loss evaluation, case study. Reactive Power management-Capacitor Sizing-Degree of Compensation-Capacitor losses-Location-Placement-Maintenance

UNIT- 4
METERING FOR ENERGY MANAGEMENT
Relationships between parameters-Units of measure-Typical cost factors- Utility meters - Timing of meter disc for kilowatt measurement - Demand meters - Paralleling of current transformers - Instrument transformer burdens-Multitasking solid-state meters – Metering location vs. requirements

UNIT-5
LIGHTING SYSTEMS & COGENERATION
Concept of lighting systems - The task and the working space -Light sources - Ballasts –Luminaries - Lighting controls-Optimizing lighting energy - Power factor and effect of harmonics on power quality - Cost analysis techniques-Lighting and energy standards
Cogeneration: Forms of cogeneration - feasibility of cogeneration- Electrical interconnection.

TEXT BOOKS
1. Amit K. Tyagi, Handbook on Energy Audits and Management, TERI, 2003.
2. Energy management by W.R. Murphy & G. Mckay Butter worth, Heinemann publications. 2016

REFERENCE BOOKS
1. Energy efficient electric motors by John .C. Andreas, Marcel Dekker Inc Ltd-2nd edition, 1995
2. Energy management by Paul o’ Callaghan, Mc-graw Hill Book company-1st edition, 1998.

MECHANICAL ENGINEERING

PH033 – COMPOSITE MATERIALS

Unit — I: Basic concepts and characteristics: Geometric and Physical definitions, natural and man-made composites. Acrospace and structural applications, types and classification of composites,

Reinforcements: Fibres- Glass, Silica, Kevlar, carbon, boron, silicon carbide, and born carbide fibres. **Particulate composites, Polymer** composites, Thermoplastics, Therrnosetts, Metal matrix and ceramic composites.

Unit—II

Manufacturing methods: Autoclave, tape production, molding methods, filament winding, man layup. pultrusion. **RTM,**

Micromechanics: Unidirectional composites, constituent materials and properties, elastic properties of a lamina, properties of typical composite materials, laminate characteristics and configurations. Characterization of composite properties_

Unit — III Coordinate transformations: Hooke's law for different types of materials, Hooke's law for two dimensional unidirectional lamina, Transformation of stress and strain, Numerical **examples of** stress strain transformation, Graphic interpretation of stress strain relations. Off -axis, stiffness modulus, off - axis compliance,

Elastic behavior of unidirectional composites: Elastic constants of lamina, relationship between engineering constants and reduced stiffness and compliances, analysis of laminated composites, constitutive relations.

Unit **IV Strength of unidirectional lamina:** Micro mechanics of failure. Failure mechanisms, Strength of an orthotropic lamina, Strength of a lamina tinder tension and shear maximum stress and strain criteria, application to design.

Unit — V Analysis of laminated composite plates: Introduction, thin plate theory, specially orthotropic plate, cross and angle pLy laminated plates, problems using thin plate theory.
Reference Books:

1, Mechanics of Composite Materials/ R.. M. Jones/ Mc Draw **Hill** Company, New **York, 1975,**

2. Engineering Mechanics of Composite Materials by Isaac and M Daniel, Oxford University Press, 1994.

3, Analysis and performance of fibre Composites/ B. D. Agarvcial and L, **J.** Broutman/ Wiley -Inter-science, New York, 1980.

4. Mechanics of Composite Materials/ Second Edition (Mechanical Engineering)/ Autar K. Kaw Publisher: CRC

. Analysis of Laminated Composite Structures/ L. R. Calcote/ Van NostrandRainfold, New York, 1969.

6+ Advanced Mechanics of Composite Materials/ Vasiliev&MorozoviElsevier/Second Edition

PH048-POLYMER CHARACTERIZATION

UNIT I : STANDARDS AND SPECIMEN PREPARATION
Standards - BIS, ASTM, ISO, specifications and their importance with reference to polymer Preparation of test specimen by various techniques for thermoplastics, thermo sets, and elastomers conditioning and test atmospheres- Analytical tests: determination of specific gravity, density by density gradient method, bulk density, moisture absorption, particle size analysis.

UNIT II : MECHANICAL PROPERTIES
Tensile, compression, flexural, shear, tear, impact, abrasion, hardness, Creep and stress relaxation, fatigue. Friction and wear-abrasion testfatigue-burst strength-and folding endurance.

UNIT III : THERMAL AND RHEOLOGICAL PROPERTIES
Transition temperatures, Vicat softening temperature, heat distortion temperature, coefficient of expansion, specific heat, thermal conductivity, shrinkage, brittleness temperature, thermal stability, and flammability, melt flow index, Viscosity (Rotational viscometer, MDR, capillary rheometer, and torque rheometer) , DSC, TGA, DTG, etc

UNIT –IV : MORPHOLOGICAL PROPERTIES
Microscopy techniques. Electron microscopy: scanning electron microscopy (SEM), transmission electron microscopy (TEM). Scanning probe microscopy: atomic force microscopy (AFM),scanning tunneling microscopy (STM). Optical spectroscopy: UVVisible spectroscopy, Fourier Transform infrared (FTIR) spectroscopy, Raman spectroscopy.

UNIT –VOPTICAL&ELECTRICAL PROPERTIES
Optical Properties– Refractive index – light transmission – haze – clarity – gloss –colour guard and microscope.
Electrical properties- Effect of polymer structure , Insulation resistance-power factorpermittivitydielectric
strength-tracking resistance-arc resistance and antistatic test.

TEXT BOOKS:
1. Vishu Shah, "Handbook of Plastics Testing Technology", John Wiley, NY, 1998.
2. ASTM: 8.01 & 8.04; 9.01 & 9.02,2000

MANGEMENT SCIENCES

PH006 - FINANCIAL MANAGEMENT

UNIT - I

Perspectives on Financial Management: Finance Function & Inter linkages with other functions. Objective of the finance Function, Investment, Financing and dividend, firm value maximization, Agency Problems, Time value of Money.

UNIT - II

Capital Budgeting Decisions: Investment Appraisal Methods- NPV and other techniques.
Fundamentals of Capital Budgeting- Forecasting earnings, Risk Analysis in capital Budgeting.

UNIT - III

Working capital management: Cash cycle, operating cycle, estimation, Factors affecting working capital, Types of working capital- Inventory management, Cash Management.

UNIT - IV

Capital Structure: Cost of Capital- Component cost of capital and WACC. Capital structure and impact on firm value- MM Hypothesis with and without taxes, traditional models.

UNIT - V

Dividend Policy: Forms of dividend, Theories of dividend, Dividend payout theories and comparison of dividends versus buy backs.

TEXT BOOK:

1. Ross, Westerfield and Jaffe and Kakani (RWJK) Corporate Finance, 10/e, 2014,Tata Mc Graw Hill.

REFERENCE BOOKS:

1. Michael C Ehrhardt and Eugene F Brigham, Corporate Finance- A Focused Approach, Cengae Learning, 5/e, 2013.

4. Anthony, Hawkins and Merchant, Accounting: Text & Cases, 13/e, 2010.

PH013- HUMAN RESOURCE MANAGEMENT

UNIT - I

Introduction, HRM at work - The Changing Environment and Changing Role of HRM - The HR Manger's Proficiencies - Labor Legislations in India - Equal Employment Opportunity, HR Process Outsourcing - Disruptive HRM - Business HR - Employee Engagement.

UNIT - II

Job Analysis: Basics, Methods - Writing Job Descriptions and Job Specifications - The Recruitment and Selection Process: Planning and Forecasting - Effective Recruiting, Internal and External Sources of Candidates, Developing and Using Application Forms - e-Recruitment: Use of social media - Recruitment Process Outsourcing.

UNIT - III

Selection: Importance, Assessment Centre, Types of Testing, Work Samples and Simulations - Background Investigation and other Selection Methods - Basic Features of Interviews - What can Undermine and Interview's Usefulness, Designing and Conducting an Effective Interview - Orientation: Purpose, Process - Training: Process - Training Methods - Management Development, Evaluating the Training Effort.

UNIT - IV

Basic Concepts in Performance Management, Introduction to Appraising Performance – Steps and Methods in Performance Appraisal – Appraising Performance: Problems and Solutions, The Appraisal Interview – Career Management, Career Planning and Career Development – Managing Promotions and Transfers.

UNIT - V

Factors Determining Pay, Establishing Pay Rates- Payroll Management – Competency Based Pay and other Compensation Trends – Incentives: Individual, Group and Organizationwide Plans – Employee Benefits – Employee Relations – Collective Bargaining Process - Handling Grievances – Trends in HR: HR Metrics, HR Analytics.

TEXT BOOK:

1. Dessler, Varkkey: Human Resource Management, 12/e, Pearson Education India, 2014.

REFERENCE BOOKS:

1. Armstrong, Taylor: Armstrong's Handbook of Human Resource Management Practice, 13/e, Kogan Page, 2014.

2. Decenzo, Robbins: Fundamentals of Human Resource Management, 11/e Wiley, 2013.

PH055- SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT

UNIT - I
The Investment Environment, Financial Instruments, Markets for investments and Trading.

UNIT - II
Risk and Return calculation, Efficient markets: concepts and forms of market efficiency, testing market efficiency. Economic analysis, Industry Analysis, company Analysis, Technical Analysis.

UNIT - III
Introduction to portfolio management, Portfolio selection and Markowitz portfolio theory, Index models, capital Asset pricing Model.

UNIT - IV
Equity Analysis and valuations, introduction to Bond Analysis, Bond pricing and yield, Bond pricing theories.

UNIT - V
Portfolio performance evaluation-Forecasting portfolio performance.

TEXT BOOKS:
1. Investments by Bodie, Kane, Marcus and Mohanty,8th edition (BKMM), Mcgraw Hill, 2012.
2. Investment Analysis and Portfolio Management by Prasanna Chandra, Tata McGraw Hill, 2013.

REFERENCE BOOKS:
1. Business Analysis and Valuation using financial statements by Palepu, Healy and Bernard (PHB), 3rd edition, Cengage Learning, 2013.
2. Chapters of book: Corporate Finance by Ross, Westerfield, Jaffe and Kakani, 8th Edition, Tata Mcgraw Hill, 2014.
3. Security Analysis and Portfolio Management by Fisher and Jordan, Prentice Hall India, 2014.
4. Damodaran on Valuation(AD)-Security Analysis for Investment and Corporate Finance, 2nd edition, Wiley, 2013.
5. Investment Analysis and Portfolio Management by Railley and Brown, Cengage, 2012.

CHEMISTRY

PH038 - INSTRUMENTAL METHODS OF CHEMICAL ANALYSIS

UNIT-I ' SPECTROSCOPY Basic concepts operational principles and applications of UV-VIS' FT-IR and Raman Spectroscopy.

UNIT-II RESONANCE SPECTROSCOPY FundamentWsr operational principles, type5 and applications of Nuclear magi tic Resonance (NM H), 'Electron Spin 1e5onance (EST), FerrOrnagnetic Rescrnance (FM Ft), Mossbauer Spectroscopy.

UNIT-Ill THERMAL ANALY51$ AND SPECTROSCOPY Therirriogravirnetylc Analysis (T 'I - Differential Scanning Calorimetry (DS) - Therrnomechanical. Anal ysis (TMA).

UNIT-IV X-Ray Differentiation of X. ray diffraction - Deb Schemer formula - powder diffraction - dislocation density strain and stre55-partide Sine Dnaly5i$ by schemer formula -Weber- Frenchmen method of p2irtIcle size determination-H RX.R.Dana lysis and imaging,

UNIT-IV MICROSCOPY Atomic manipulations - AFM - different met d5 of 0 peratiOn- 5Canning Tunneii4 Electron MicrOstopy (STEM) - Scanning Probe Microscopy (5PM). Field Erin issicl n Scanning Electron Microscopy - FESEM TrariSrrirSSOn electron microscopy-11 RTEM — Energy dispersive x-ray Spectroscopy (E CAS) and Quantitative microanalysis using ' E DS, H5

PH039- SEPARATION METHODS AND ANALYTICAL TECHNIQUES

UNIT I

PRODUCT RECOVERY METHODS:

Extraction (liquid-liquid extraction, aqueous two-phase extraction and leaching) Membrane-based separations (micro, ultra filtration, reverse osmosis, dialysis) – theory, design and configuration of membrane separation equipment applications.

UNIT II

PRODUCT PURIFICATION:

Adsorption, Ion exchange, Gel filtration, Affinity chromatographic separation processes.

UNIT III

PRODUCT FINISHING AND EMERGING TECHNOLOGIES:

Pervaporation, super liquid extraction, foam based separation and Crystallization.

UNIT IV

CHROMATOGRAPHIC AND ELECTROPHORETIC ANALYSIS:

GC, HPLC, FPLC, Electrophoretic separations and analysis (Agarose gel, SDS – PAGE and Capillary Electrophoresis).

UNIT-V

VALIDATION OF ANALYTICAL PROCEDURES:

Methodology for validation of analytical procedures. ICH guideline for Specificity, Linearity, Range, Accuracy, Precision, Limit of detection (LOD), Limit of quantification (LOQ) and Robustness.

TEXT BOOKS:

1. BIOTOL.' Series - Product Recovery in Bioprocess Technology (2004), 1st edition, Butterworth Publications.
2. Instrumental Methods of Analysis, B.K. Sharma (2001), 20th Edition, Goel Publishing House.
3. Bioseparations, B.Shivasankar (2006), Third Edition, PHI publications.

REFERENCES:

PH060- RECENT ADVANCES IN MATERIALS CHEMISTRY (RAMC)

Unit-1

Introduction to solids:

Solids – types of solids –Crystal Structure-Crystalline solids, crystal systems point groups.

Unit II

Synthesis of Materials:

Preparative methods–Solid state reaction, precipitate reactions, sol-gel route, hydrothermal, salvo thermal methods, ion exchange reactions, intercalation / deintercalation reactions.

Unit-III

Properties of Materials:

Properties of solids-electrical properties, magnetic properties and optical properties etc.

Unit IV

Metal Organic Frame works:

Introduction, Preparation methods, properties and applications of few MOFs

Unit V

Characterization Techniques:

Methods of characterizing - Powder and single crystal x-ray diffraction, BET surface analysis, Adsorption by various gases.

Text Books:

1. A. R. West, Solid State Chemistry and its Applications, 2nd Edition, wily Publishers 2014.
2. David Farrusseng, *Metal-Organic Frameworks Applications from Catalysis to Gas Storage*. Wiley Publisher 2011.

Reference books:

1. Emil Zolotoyabko, Basic Concepts of X-Ray Diffraction, Wiley Publisher 2014.

PH068 – MANUFACTURING PROCESS OF FIBER REINFORCED POLYMER COMPOSITES

Unit – I: Manufacturing of Natural Fibre-Reinforced Polymer Composites
The Relationship Between Manufacturing and Design for Manufacturing in Product Development of Natural Fibre Composites; Green Composite Manufacturing via Compression Molding and Thermoforming. Compaction, Permeability and Flow Simulation for Liquid Composite Moulding of Natural Fibre Composites.

Unit – II: Manufacturing and Processing
Kenaf Fibre-Reinforced Epoxy Composites via Different Methods; Critical Concerns on Manufacturing Processes of Natural Fibre Reinforced Polymer Composites; Challenges in Machining of Natural Fibre Composites and The Manufacturing of Natural Fibre-Reinforced Composites by Resin-Transfer Molding Process.

Unit – III: Manufacturing and Techniques
Manufacturing and Properties, Manufacturing of Natural Fibre-Reinforced Polymer Composites by Solvent Casting Method, Manufacturing of Coir Fibre-Reinforced Polymer Composites by Hot Compression Technique,

Unit – IV: Bio-Nanocomposites
Bio-nanocomposites from Natural Fibre Derivatives: Manufacturing and Properties and Processability of Wood Fibre-Filled Thermoplastic Composite Thin-Walled Parts Using Injection Molding.

Text Book:
1. Manufacturing of Natural Fibre Reinforced Polymer Composites by Editors: Salit, M.S., Jawaid, M., Yusoff, N.B., Hoque, M.E, Springer International Publishing, 2015.

PH069 - CHARACTERIZATION OF FIBER REINFORCED POLYMER COMPOSITES.

Unit – I: Fiber Reinforced Polymers
Introduction, Properties of Fiber Reinforced Polymers, Classification and synthesis of Fiber Reinforced polymers, Compaction, Permeability and Flow Simulation for Liquid Composite Moulding of Natural Fibre Composites.

Unit – II: Characterization of FRPs
Chemical Characterization: Paper chromatography (PC), Thin layer chromatography (TLC), Gas chromatography (GC), Liquid column chromatography (LCC)

Unit – III: Spectroscopic Techniques for FPRs
Chemical Characterization: FT-IR, Raman spectroscopy, Mass spectrometry, NMR, , , X-Ray Powder Diffraction (XRPD),

Unit – IV: Physical Characterization
Microscopic Characterization: Optical microscopy, Scanning Electron Microscopy (SEM), Scanning Electron Microscopy with Energy Dispersive spectroscopy (SEM/EDS) and Transmission Electron Microscopy (TEM)

Unit – V: Mechanical Characterization
Aspect ratio of reinforcement, reinforcement orientation, volume fraction, thickness, and number of layers of reinforcement (in case of composite laminates). Tensile test, Compression Test, Flexural Test, Impact Test, Shear Test; Durability Characterization: Creep Testing, Fatigue Testing, Wear Testing, Fire Testing, Environmental Testing.

Text Book:

1. Characterization Techniques of Reinforced Polymer Composites, Manish K. Lila Ujendra K. Komal Inderdeep Singh, Wiley-VCH Verlag GmbH & Co. KGaA. 2014.

2. Manufacturing of Natural Fibre Reinforced Polymer Composites by Editors: Salit, M.S., Jawaid, M., Yusoff, N.B., Hoque, M.E, Springer International Publishing, 2015.

PH072- ADVANCED ORGANIC SYNTHESIS

UNIT-I
REACTIVE INTERMEDIATES
Generation, Structure, Stability and reactivity of Carbo cations, Carbo anions, free radicals, Carbenes, nitrenes and Benzyne.

UNIT-II
HETEROCYCLIC CHEMISTRY
Synthesis and Reactions of furan, thiophene, pyrrole, pyridine, quinoline, isoquinoline and indole; Skraup synthesis, Fisher indole synthesis.

UNIT-III
STEREOCHEMISTRY & CONFORMATIONAL ANALYSIS
a)Recognition of symmetry elements and chiral structures (one and more than one chiral centers); R – S nomenciature Optical activity in the absence of chiral carbon. Stereochemistry of compounds containing nitrogen, sulphur and phosphorous.
b)Geometrical isomerism – E, Z- nomenclature – physical and chemical methods of determining the configuration of geometrical isomers.
c) Conformations of monocyclic compounds – cyclohexane- chair, boat and twist boat cyclohexanes, energy profile diagram – Mono and di- substituted cyclohexanes –conformations and physical properties.

UNIT-IV
SYNTHESIS IN ORGANIC CHEMISTRY
Oxidation and reduction of functional groups, Protecting groups, Reagents for modern organic synthesis, Named Organic Reactions and rearrangements – applications in organic synthesis, common catalysts and reagents (organic, inorganic, organometallic and enzymatic), Retrosynthesis, synthons, umpolung of reactivity

UNIT-V
ORGANOCATALYSIS
Basic concepts, enamine-, dienamine-, trienamine- catalysis, Iminium catalysis, HOMO-, LUMO-, SOMO-activation, Recent trends in organo catalysis.

TEXTBOOKS
1.Stereo Chemistry of carbon compounds – E.L. Eliel.
2.Modern organic Reactions, H.O.House, Benjamin.

REFERENCE BOOKS
1.Advanced organic chemistry – reaction, mechanism and structure, Jerry March, John Wiley.
2. Advanced organic chemistry, F.A.Carey and R.J.Sundberg,Plenum.

PH076 - FLAVONOIDS

Unit – I: The Stereochemistry of Flavonoids Introduction, Nomenclature of 2-Phenylbenzopyrans, Isoflavonoids, Neoflavonoids; Synthesis of flavonoids: Chalcones, Dihydrochalcones and Racemic Flavonoids; Asymmetric Epoxidation of Chalcones and chiral dioxiranes;

Unit – II: Isolation and Identification of Flavonoids Isolation of Flavonoids and their conjugates from biological materials; Structural characterization of Flavonoids and their conjugates by using NMR and Mass spectrometry; Identification of Flavonoid conjugate mixtures from various chromatographic techniques.

Unit – III: The Biosynthesis of Flavonoids History of Flavonoids biosynthesis, Proanthocyanidin biosynthesis, Dihydroflavonol Reductase, The 2-ODD Enzymes, Flavonoid Glycosyltransferases and Acetyltransferases, Peroxidases and Frontiers in the study of flavonoid metabolism.

Unit – IV: Transport of Flavonoids Entrance of Flavonoids into membrane-bound compartments: Proton-dependent transporters, ABC-type Transporters, MATE-type transporters; Factors involved in Flavonoid transport: GST proteins, Acylation of Flavonoids and Cytological aspects of Flavonoid transport.

Unit – V: Flavonoids as Nutraceuticals Introduction, Antioxidant activity, Anticarcinogenesis, Suppression of cancer growth and Molecular mechanisms of cancer chemoprevention by Flavonoids.

Text Books: 1. The Science of Flavonoids by Erich Grotewold, Springer publishers, 2006. 2. The Flavonoids by Jeffrey B. Harborne, Helga Marby and T. J. Marby, Springer US, 1975. 3. The Handbook of Natural Flavonoids, Volume 2, Jeffrey B. Harborne and Herbert Baxter, Wiley publishers, 1999.

PH079 – PHARMACEUTICAL WASTE WATER TREATMENT

Unit – I: Categorization of the Pharmaceutical Industry Fermentation plants; Synthesized organic chemicals plants; Fermentation/synthesized organic chemicals plants (generally moderate to large plants); Biological production plants (production of vaccines–antitoxins); Drug mixing, formulation, and preparation plants (tablets, capsules, solutions, etc.).

Unit – II: Pharmaceutical Manufacturing Processes. Challenges for Pharmaceutical Manufacturing, Technologies for Continuous Drug Product Manufacturing: Feeding, Blending, Granulation, Wet granulation, Dry granulation, Particle size reduction, Compression, Coating; Emerging technologies for continuous drug product production; Process integration and Process monitoring and control

Unit – III: Significant Parameters in PWT pH-Fecal coliform; Temperature-Manganese; BOD5, BODUlt-Phenolics; COD-Chromium; Dissolved oxygen-Aluminum; TOC-Cyanides; Solids (suspended and dissolved)-Zinc; Oil and Grease-Lead Nitrogen, (NH_4 and organic-N)-Copper Sulfides-Mercury; Toxicity-Iron.

Unit – IV: Advanced treatment Methods of Pharmaceutical Wastewater Coagulation and sedimentation, Flotation, Activated carbon adsorption, Advanced oxidation processes, Wet air oxidation(WAO), Supercritical water oxidation(SCWO), Photocatalytic oxidation, Ultrasound oxidation, Electrochemical oxidation, Ozonation, Membrane separation, Microfiltration(MF), Ultrafiltration(UF), Reverse osmosis(RO), Electrodialysis(ED) and Biological treatment.

Unit – V: Hybrid Technologies for Pharmaceutical Wastewater Treatment Combination among advanced oxidation processes, Ozonation at high pH environments, Peroxone process (O_3/H_2O_2), O_3/catalyst, UV/H_2O_2, UV/O_3, UV/SO_4^{2-}, UV/Cl_2, Electrochemical AOPs, Catalytic AOPs: Fenton process, Catalytic AOPs: Photocatalytic AOPs, Physical AOPs: Electrohydraulic discharge (plasma) oxidation, Physical AOPs: Ultrasound, Physical AOPs: Microwave, Physical AOPs: Electron beam, Combination: AOPs and other physicochemical processes, Combined AOPs and biotreatment technology, Adsorption-based combinations, Membrane-based combinations, Biological treatment-based combination,

Text Books: 1. The Science and Technology of Industrial Water Treatment by Zahid Amjad, Springer US, 2002. 2. Wastewater treatment in the pharmaceutical industry by R. Chen and K. Crowell, Springer publishers, 2012.

PH080 – QUINONE ISOXAZOLE THIOPHENE HYBRIDS

Unit I: Heterocycles: Synthesis and reactivity of Azepines, Oxepines and Thiapines. Synthesis and rearrangements of Diizipines. Synthesis of Benzoazepines, Benzodiazepines, Benzooxepines, Benzothiapines, Azocines and Azonines, synthesis of selenophenes, TGellerophenes, phospholes and Boroles.

Unit II: Synthesis of Novel Isoxazole fused Heterocycles Vilsmeir–Haack Reaction of 3-Aryl-isoxazol-2-ene-5-ones; Synthesis of 3-aryl-5-chloro-4- formyl-isoxazoles and 2,4-dichloro-3-formyl-6 unsubstituted quinolines, Synthesis of 5-chloro-4- formyl-3-phenyl-isoxazole and 2,4-dichloro-3-formyl quinoline.

Unit III: Novel thiophene derivatives Design and Synthesis of novel thiophene derivatives with sulfonamide, isoxazole, benzothiazole, quinoline and anthracene moieties; Biological evaluation and anti-cancer agent studies.

Unit IV: Diaziridinyl Quinone Isoxazole Hybrids Design, synthesis and biological evaluation of diaziridinyl quinone isoxazole hybrids: Confirmation of regioselectivity for diaziridinyl compounds; Biological evaluation: Antibacterial activity, Minimum bactericidal concentration (MBC), Biofilm inhibition assay, Antifungal activity, Minimum fungicidal concentration (MFC) and Cytotoxic activity

Unit V: Isoxazole Platform for Polyketide Assembly: Cycloaddition of Stable Benzonitrile Oxides to Stable ortho-Quinone Mono-acetals and Dehydro -genation; Claisen isoxazole synthesis TEXT AND REFERENCE BOOKS: 1. Heterocyclic Chemistry by T. Gilchrist. 2. An Introduction to the Chemistry of Heterocyclic Compounds by R M Acheson. 3. Heterocyclic Chemistry by J A Joule and K. Mills. 4. Principles of Modern Heterocyclic Chemistrry by A Paquette. 5. Handbook of Heterocylic Chemistry by A R Katritzky.

PH268- HETEROCYCLES

UNIT-I INTRODUCTION TO HETEROCYCLES:

1. Defination, 2. Classification 3. Uses of heterocyclic compounds

UNIT-II SYNTHESIS OF HETEROCYCLIC COMPOUNDS:

1. Pyridine, 2. Quinoline 3. Isoquinoline 4. Furan 5. Thiophene 6. Indole

UNIT-III PROTECTION AND DEPORTATION IN ORGANIC CHEMISTRY:

3.1) Protection and deportation of the following functional groups

1. Hydroxyl 2. Carbonyl 3. Amino and 4. carboxyl with 5. Applications

UNIT-IV STEREO CHEMISTRY:

1 Classification of isomers into structural and stereo types-Optical isomerisation-Elementary of symmetry and chirality – Configuration of optically active molecules – DL and RS notations – Resolution of recemic mixtures. Cis and Trans isomerism; E-Z configuration. Conformational analysis of acyclic systems like Ethane and cyclic systems like cyclohexane

UNIT-V

STRUCTURAL ELUCIDATION OF ORGANIC COMPOUNDS BY USING INSTRUMENTATION:

1. Spectroscopy: a) Basic concepts, operational principles and applications of UV-VIS, and
FT-IR spectroscopy. 2. Resonance spectroscopy: a) Fundamentals, b) Operational principles, types and C) Applications of Nuclear magnetic resonance (NMR) spectroscopy.

TEXT BOOK:

1. March's Advanced Organic Chemistry: Reactions, Mechanisms, and Structure, 7th Edition, ISBN: 978-0-470-46259-1, March 2013

REFERENCE BOOK:

1. Advanced Organic Chemistry, Francis A. Carey, Richard A. Sundberg, 5th Edition, 2007, ISBN-13: 978-0-387-68350-8, Springer.

CHEMICAL ENGINEERING

PH001 - ADVANCED CHEMICAL PROCESS EQUIPMENT DESIGN AND DRAWING

UNIT - I

Shell and Tube Heat Exchanger Design: 1-2 parallel – counter flow: Shell and Tube Exchanger, Flow arrangements for increased heat recovery, Calculations for process conditions.

UNIT - II

Vessel Supports: Introduction and classification support, design of skirt support, considering stresses due to dead weight, wind load, seismic load and period of vibration, design of basic plates, skirt bearing plate, anchor bolt and bolting chair.

UNIT - III

Storage Vessels: Study of various types of storage vessels and application. Atmospheric vessels, vessels for storing volatile and non-volatile liquids. Storage of gases, Losses in storage vessel. Various types of roofs used for sotrage vessels. Manholes, Nozzles and mounting. Design of cylindrical storage vessels as per IS:803 should include base plates, shell plate, roof plate and wind griders.

UNIT - IV

Sieve Tray Design: Introduction, Sieve Trays: Tower Diameter, Plate Spacing, Entrainment, Weepage, Tray Layout, Hydraulic Parameters, Worksheet for Sieve Tray Design, Design of a Sieve tray Tower for Distillation.

UNIT - V

Mechanical Design: Introduction, The Mechanical Design of Heat Exchangers: General Thicknesses of various components, The Mechanical Design of Columns: Vessel Design, Vessel Supports, Manholes and Flanges,Materials of Construction.

Text Books:

1. M.V.Joshi, "Process Equipment Design", 3rd ed., McMillan India.,2000D.
2. Backhurst and Harker, "Process Plant Design", 1st ed.,Heinmann Educational Books,1973

Reference Books :

1. Q.Kern, "Process Heat Transfer", 2ne ed.,Mc Graw Hill Co.,1983.
2. Coulson and Richardson, "Chemical Engineering", Volume 6, 2nd ed., Butterworth-Heinemann Ltd,1996

PH003 - ADVANCED PROCESS DYNAMICS AND CONTROL

Unit - I

Frequency Response: Polar plots, Nyquist stability criterion, Gain margin and Phase margin, effect of addition of poles and zeros. Inverse polar plots, stability criteria in the inverse plane. Closed loop frequency response: M and á circles, correlation between transient and frequency responses.

Unit - II

Introduction to Advanced Control Systems: Cascade control, Feed forward control, Adaptive Control, Inferential control, Internal model Control, Model predictive control, Dynamic matrix control, Ratio control, Selective and split range control, Plant wide control.

Unit - III

State Space Methods: State Space representation of Physical systems: State variables, State space description, Selection of state variables, Transfer function matrix, Transition matrix, Solution of state space models.

Unit - IV

Controllability and Observability. Multivariable control: control of interacting systems, Primary and Cross controllers, Relative Gain Analysis (RGA).

Unit - V

Response of multi loop control system, Non interacting control, Decouplers. Stability of multivariable control systems.

Text Books:

1. I.J.Nagrth and M.Gopal, “Control Systems Engineering”, New Age International Publishers, 1999.
2. Donald R Coughnowr, “Process Systems Analysis and Control, Mc Graw-Hill Inc.,1991.

PH004 - ADVANCED SEPARATION PROCESSES

Objective of the Course :

Objective: The course will · Promote the application of membrane science and technology to improve processing technologies, reduce energy utilization and waste treatment techniques. This course will offer scope of research and development that can lead to next generation of products.

Unit-I

Introduction to SeparationProcesses:

Classification of separation processes; Equilibrium-based separations: General properties, operation, and complexities of Separations that involve Mass separating agents and Energy separating agents; Review of Vapor- Liquid Equilibria and other equlibria; Thermodynamic consistency test for vapor-liquid equilibrium data; Phase rule and Degrees of freedom estimations; Equlibrium ratio concept and its estimation from Depriester's charts; Bubble-point and Dew-point Calculations; Flash Calculations, Estimation of state of the mixture.

Unit-II

Binary Separation Processes:

Common approach for process design (estimation of feed locations, product qualities and theoretical stages) of Equilibrium based separations: Single Stage- Single component and Multi Stage- Single component Separation Processes involving absorption, stripping, liquid-liquid immiscible extraction, adsorption and distillation; Kremser- Brown equation and its limitations; Process design (estimation of feed locations, product qualities and theoretical stages) of Multi stage Multiple Feeds and Side Streams processes.

Unit-III

Multicomponent Separation Processes: Multicomponent Distillation: Introduction to Multicomponent Distillation, Key Components; Estimation of Minimum Theoretical Stages (Fenske's equation); Distribution of non key components in overhead and bottom products at total reflux; Determination of minimum Reflux ratio (Underwood's Method);

Approximate calculation shortcut methods for multicomponent, multistage distillation (estimation of actual reflux ratio and theoretical stages): Fenske-Underwood-Gilliland method; Feed- Stage Location (Kirke-Bride's equation); Distribution of non-key component at actual reflux; Batch Multicomponent Distillation with Reflux: Shortcut method for multicomponent Batch Distillation with constant reflux, Stage-by-stage method for Multicomponent Distillation

Unit-IV

Rate Based Separations: Membrane Separation Processes: Principles, characteristic, and classification of membrane separation processes; Membrane materials, structures, and preparation techniques; Membrane modules; Membrane characterization: Pore size and pore distribution; Bubble point test; Challenge test; Factors affecting retentivity, concentration polarization, gel polarization, fouling, cleaning and regeneration of membranes.

Unit-V

Mechanisms of Separation: Porous membranes, dense membranes, and liquid membranes. Membrane separation models: Irreversible thermodynamics; Capillary flow theory; Solution diffusion model; Viscous flow models; Models for separation of gas (vapour) mixtures; Science and technology of microfiltration, reverse osmosis, ultrafiltration, nanofiltration, dialysis and electrodialysis, pervaporation, liquid membrane permeation, gas permeation. Membrane reactors: Polymeric, ceramic, metal and bio-membrane.

Text Books:

1. R.E. Treybal, "Mass Transfer Operations", 3rd ed., McGraw-Hill, 1980.
2. G.J. Geankoplis, "Transport Processes and Unit Operations", 3rd ed., Prentice Hall, NJ, 1993.

12. Kestory, R.E., “ Synthetic Polymeric Membranes”, Wiley, New York, 1987.
13. Osadar, Varid Nakagawa I, “Membrane Science and Technology”, Marcel Dekkar, 1992.
14. Mulder M, “Basic Membrane Technology”, Kluwer Publishers, 1996.

PH005 - ADVANCED TRANSPORT PHENOMENA

UNIT - I

Basic Concepts and Review of Classical Flow Problems Using Shell Balances: Review of mathematics, Scalar, Vectors, Tensors, divergence, relation between rectangular coordinates and cylindrical coordinates, relation between rectangular coordinates and spherical coordinates, partial derivative, substantial derivative, total derivative, line integral, surface integral, integral theorems, frame of reference (Eularian and Lagrangian).

UNIT - II

The Equations of Change for Isothermal Flow: Equations of continuity, equation of motion, the equation of mechanical energy, application of Navier-Stokes equation to solve problems, the equations of change for incompressible non-Newtonian fluids.

The Equations of Change for Non-Isothermal Flow: Equations of energy, the energy equation in curvilinear coordinates, use of equations of change to set up steady state heat transfer for problems.

UNIT - III

The Equations of Change for Multi Component Systems: The equations of continuity for a binary mixture, the equation of continuity of A in curvilinear coordinates, the multicomponent equations of change in terms of the flows, the multi component fluxes in terms of the transport properties, use of equations of change to setup diffusion problems.

UNIT - IV

Velocity, temperature and concentration distributions with more than one independent variables, unsteady flow, stream function, potential flow, boundary layer theory, steady state two dimensional flow for momentum, heat and mass.

UNIT - V

Turbulent Flow: Introduction, fluctuations and time smoothened equations for velocity, temperature and concentration, time smoothing of equation of change, equation of energy, equation of continuity of A, Reynolds stresses.

Dimensional Analysis: Introduction, momentum, heat and mass transfer.

Text Books:

1. R. B. Bird, W. E. Stewart and E. N. Light foot, “Transport Phenomena”, Wiley International Edition, New York, 2002.
2. G.K. Batchelor, “An Introduction to Fluid Dynamics”, Cambridge University Press, Cambridge, 1967.

Reference Books :

2. James R. Welty, Chrles E. W icks and Robert E. Wilson, “Fundamentals of Momentum, Heat and Mass Transfer”, John Wiley & Sons, Inc New York.

PH007 - APPLIED NUMERICAL METHODS

UNIT - I

Solution of Simultaneous Linear Algebraic Equations: Introduction, Engineering Applications, Basic Concepts of Solution, Linearly Independent Equations and conditioned equations, Matrix Inversion, Equation with special form of coefficient matrix, Over – determined, Undetermined, and Homogeneous Equations.

UNIT - II

System of Equations: Simultaneous equations in matrix form, consistency of equations, types of solutions, methods of solving simultaneous equations: Giraff'S root square method, determinant method, Tri - Diagonal Matrices, Inverse Matrix, LU Factorization, Cholesky, Jacobi, Pivoting Methods, Iterative Refinement, Linear Programming-Simplex Method.

UNIT - III

Interpolation and Polynomial Approximation: Lagrange polynomial Interpolation and Approximation, Newton Interpolation Polynomial, Hermite Polynomial Interpolation, Legendre Polynomials.

UNIT - IV

Curve Fitting: Least Squares Lines, Least Squares Polynomials, Nonlinear Curve Fitting, Logistic Curve, FFT and Trigonometric Polynomials, Conic Fit, Circle of Curvature.

UNIT - V

Numerical Integration: Midpoint Rule, Newton-Cotes Integration, Trapezoidal Rule for Numerical Integration, Simpson's Rule for Numerical Integration, Simpson's 3/8 Rule for Numerical Integration, Adaptive Simpson's Rule, Gauss-Legendre Quadrature, Cubic Spline Quadrature, Monte Carlo Pi, Monte Carlo Integration, 2D Trapezoidal and Simpson Rules.

Text Books:

1. Dr.B.S.Grewal, "Higher Engineering Mathematics", Khanna Publishers, 37th ed.
2. Erwin Kreyszig, "Advanced Engineering Mathematics", John Wiley & Sons,7th ed., 2001.
3. S.S.Sastry, "Introductory Methods of Numerical Analysis", PHI Publishers, 4th ed.,
4. Singeresu S.Rao, "Applied Numerical Methods", Pearson Education Inc., Illustrated, 2001.

Reference Books:

1. Santosh K Gupta, "Numerical Methods for Engineering", New Age International Publishers, 1st ed.,
2. M.K.Jain, S.R.K.Iyengar and R.K.Jain, "Numerical Methods for Scientific and Engineering Computation", 5th ed.,New Age International Publication, 2007.

PH009 - CHEMICAL PROCESS EQUIPMENT DESIGN

UNIT - I

Shell and Tube Heat Exchanger Design: 1-2 parallel – counter flow: Shell and Tube Exchanger, Flow arrangements for increased heat recovery, Calculations for process conditions.

UNIT - II

Vessel Supports: Introduction and classification support, design of skirt support, considering stresses due to dead weight, wind load, seismic load and period of vibration, design of basic plates, skirt bearing plate, anchor bolt and bolting chair.

UNIT - III

Storage Vessels: Study of various types of storage vessels and application. Atmospheric vessels, vessels for storing volatile and non-volatile liquids. Storage of gases, Losses in storage vessel. Various types of roofs used for sotrage vessels. Manholes, Nozzles and mounting. Design of cylindrical storage vessels as per IS:803 should include base plates, shell plate, roof plate and wind griders.

UNIT - IV

Sieve Tray Design: Introduction, Sieve Trays: Tower Diameter, Plate Spacing, Entrainment, Weepage, Tray Layout, Hydraulic Parameters, Worksheet for Sieve Tray Design, Design of a Sieve tray Tower for Distillation.

UNIT - V

Mechanical Design: Introduction, The Mechanical Design of Heat Exchangers: General Thicknesses of various components, The Mechanical Design of Columns: Vessel Design, Vessel Supports, Manholes and Flanges,Materials of Construction.

Text Books:

1. D.Q.Kern, “Process Heat Transfer”, Mc Graw Hill Co.
2. Backhurst and Harker, “Process Plant Design”, Heinmann Educational Books.

Reference Books :

1. M.V.Joshi, “Process Equipment Design”, McMillan India.
2. Coulson and Richardson, “Chemical Engineering”, Volume 6 Pergamon Press.

PH010 - CHEMICAL PROCESS SAFETY

UNIT - I

Introduction: Importance of process safety with examples of major accidents; which might cover chemical, petroleum & petroleum chemical Industrial.
Material Hazards: Flammability, toxicity, Reaction Hazards, Burning Characteristics, Material Properties and Hazards.

UNIT - II
Process Hazards: Temperature & Pressure effects and deviations, flow, level and other process deviations.
Ignition Sources: Flames, Hot surfaces, static electricity, and the like Explosions: Confined & Unconfined explosions, BLEVES, Dust Explosions.

UNIT - III
Hazard Analysis: Check – lists, fault trees, cause consequence diagrams, HAZOP and other methods of study. Dow procedures for safety assessment.

UNIT - IV
Safety Devices: Relief valves and Rupture disks Explosive relief, flare systems.
Safety in Plant Design & Lay-out: Electrical area classification, control of entry to confined spaces.

UNIT - V
Emergency preparedness & handling analysis of major accidents & preventive measures.

Text Books:

1. Daniel A. Crowe, Joseph F Louvar "Chemical Process Safety Fundamentals with Applications", 2nd ed., Prentice Hall International Series, 1990.
2. Roy and Sanders, "Chemical Process Safety", 3rd ed., Prentice Hall International Series, 2000.

Reference Book :

1. S.N.Saha, "Fundamentals of Chemical Engineering", 1st ed., Dhanpatrai Publishers, 2002.

PH011 - COMPUTATIONAL METHODS

UNIT - I

Variables, Operations and Plotting:

Introduction to process modeling and simulation, Examples of chemical, Biochemical and environmental engineering problems arising in fluid mechanics, thermodynamics, heat and mass transfer, separation processes, reaction engineering, process dynamics, and transport phenomena. Introduction to MATLAB, introducing the theory of variable and matrices, basic operations and plotting.

UNIT - II
Visualization & Programming:

Introducing advanced visualizations commands in MATLAB. Introduction to basic built-in MATLAB functions. Getting familiar with building user- defined functions, and understanding the importance of them for solving advanced chemical engineering models. Practicing basic flow-control in MATLAB by applying if, else, elseif, for, while loops in various problems.

UNIT - III
Solving Equations, Fitting:

Case study problems in chemical processes involving algebra, polynomials, integral functions, differentiation and integration. Applications and importance of parameter estimation in process models, linear, multiple linear and non-linear least square methods, Statistical analysis of fitted equation, Importance and applications of statistical experimental design in engineering, Sensitivity analysis, Case studies.

UNIT - IV
Differential Equations in ChemicallEnvironmental Processes: Modeling of batch and continuous processes involving heat, mass & momentum transfer, dynamic operation of chemical processes and reaction engineering that give rise to linear or nonlinear, first or higher order, ordinary or partial differentialequations.

UNIT - V
Numerical solution techniques for solving the initial and boundary value problems; Introduction to the main differental equations solvers in MATLAB. Case studies.

Text Books:

1. Curtis F. Gerald and Patrick O. Wheatly, "Applied Numerical Analysis", Addison-Wesley, 1999.
2. Holly Moore, "MATLAB for Engineers", Pearson Prentice Hall, 2007.

Reference Books :

1. Laurene V. Fausett, “Numerical Methods: Algorithms and Applications”, Pearson Prentice Hall, 2003.
2. Gerald Recktenwald, “Numerical Methods with MATLAB: Implementation and Application”, Prentice Hall, 2000.
3. Michael B. Cutlip and Mordechai Shacham, “Problem Solving in Chemical Engineering with Numerical Methods”, Prentice-Hall, 1999.
4. Steven C. Chapra and Raymond P. Canale, “Numerical Methods for Engineers”, McGraw Hill, 1998.
5. A. Constantinides and N. Mostoufi, “Numerical Methods for Chemical Engineers with Matlab Applications”, Prentice Hall International, 1999.
6. Timothy Sauer, “Numerical Analysis”, Addision Wesley, 2006.
7. Ajay K. Ray and Santosh K. Gupta, “Mathematical Methods in Chemical and Environmental Engineering”, Thomson Learning, 2nd ed., Revised, 2005.

PH012 - ENERGY MANAGEMENT

UNIT - I

Energy Scenario: Introduction, Primary and Secondary Energy, Commercial Energy and Non commercial Energy, Renewable and Non Renewable Energy, Global Primary Energy Reserves, Indian Energy Scenario, Energy Needs of Growing Economy, Long Term Energy Scenario for India, Energy Pricing in India, Energy Sector Reforms, Energy and Environment, Energy Security, Energy Conservation and its Importance, Energy Strategy for the Future, The Energy Conservation Act, 2001 and its Features.

UNIT - II

Basics of Energy and its Various Forms: Definition, Various Forms of Energy, Electrical Energy Basics, Thermal Energy Basics, Units and Conversions. Energy action planning: Introduction, Energy Management System.

Project Management: Introduction, Steps in Project Management.

UNIT - III

Energy Management and Audit: Definition & Objectives of Energy Management,Energy Audit: Types and Methodology, Energy Audit Reporting Format, Understanding Energy Costs, Benchmarking and Energy Performance, Matching Energy Usage to Requirement, Maximizing System Efficiency, Fuel and Energy Substitution, Energy Audit Instruments.

UNIT - IV

Material and Energy Balance: Basic Principles, The Sankey Diagram and its Use, Material Balances, Energy Balances, Method for Preparing Process Flow Chart, Facility as an Energy System, How to Carryout Material and Energy (M & E) Balance.

UNIT - V

Financial Management: Introduction, Investment Need, Appraisal and Criteria, Financial Analysis, Financial Analysis Techniques, Sensitivity and Risk Analysis, Financing Options.

Energy monitoring and targeting: Definition, Elements of Monitoring & Targeting System, A Rationale for Monitoring, Targeting and Reporting, Data and Information Analysis, Relating Energy Consumption and Production, CUSUM, Case Study.

Text Books:

1. General Aspects of Energy Management and Energy audit by Beuro of Energy studies.
2. Encyclopedia of Energy - McGraw Hill Publication.
3. Basics of Energy, Energy action planning and Project Management.

Reference Books :

1. Handbook of Energy Engineering , The Fairmont Press Inc - Albert Thumann.
2. Energy Handbook, Von Nostrand Reinhold Company - Robert L. Loftness.
3. BP Statistical Review of World Energy.
4. Financial Management, Energy monitoring and Targeting.
5. The Energy and Resources Institute (TERI).
6. Energy Dictionary, Van Nostrand Reinhold Company, New York - V Daniel Hunt.
7. Energy Management Handbook, John Wiley and Sons - Wayne C. Turner.
8. Guide to Energy Management, Cape Hart, Turner and Kennedy.

PH015 - ENZYME AND MICROBIAL TECHNOLOGY

UNIT - I

Introduction to Microbiology: Discovery of microorganisms, Theory of spontaneous generation, Germ theory of diseases, Major contribution and events in the field of Microbiology, Development of pure culture methods, Enrichment culture methods.

UNIT - II

Major Groups of Microorganisms: Micro diversity, Diversity classification of Woese et al. Three domains of life. Five - kingdom system of Whittaker. Classification systems - Phylogenetic, Phenetic, Taxonomic ranks, Major characteristics used in Taxonomy, Molecular approaches to microbial taxonomy.

UNIT - III

Introduction to Enzymes: Methods used for investigating the kinetics of enzyme catalysed reactions, Kinetics of single substrate reactions; Estimation of Michaelis – Menten parameters,Types of inhibition & models for substrate and product.

UNIT - IV

Multi-substrate and Allosteric Enzyme Catalysed Reactions: Multisubstrate reactions mechanisms, steady state kinetics, Allosteric regulation of enzymes, Monod - Changeux -Wyman model, Koshland- Nemethy-Filmer (KNF) model.Deactivation kinetics- pH and temperature effect on enzymes.

UNIT - V

Enzyme Immobilization and Purification of Enzymes from Natural Sources: Physical and chemical techniques for enzyme immobilization

– advantages, disadvantages and applications. Effects of external mass transfer resistance, analysis of intraparticle diffusion and reaction, simultaneous film and intraparticle mass transfer resistances, immobilised enzyme bioreactors. Production and purification of crude enzyme extracts from plant, animal and microbial sources.

Text Books:

1. Prescott LM, Harley JP, Klein DA, "Microbiology", 6th ed., Wm. C. Brown, McGrawel, 2005.
2. Roger Y Stanier, "General Microbiology", Macmillan, 5th ed., 2005.

Reference Books :

1. Palmer T., "Enzymes: Biochemistry, Biotechnology and Clinical Chemistry", First East -West Press Edition, 2004
2. James E Bailey, David F., "Ollis Biochemical Engineering Fundamentals", 2nd ed., Mc GrawHill Intl. Edition.

PH016 - FERMENTATION TECHNOLOGY

UNIT - I

Fermentation Processes and Parameters: Over view on fermentation technology, history & development of fermentation industry. General requirements of fermentation processes and an overview, configuration of fermentor and ancillaries, main parameters to be monitored and controlled in fermentation processes.

UNIT - II

Media Design for Fermentation Process: Criteria for good medium, medium requirements for fermentation processes, points to be considered in the selection of different nutrients including oxygen, formulation of optimal growth and product formation, examples of simple and complex media, design of various commercial media for industrial fermentations– medium optimization methods.

UNIT - III

Sterilisation of Media: Introduction, design of batch sterilization processes – calculation of Del factor, holding time, Richard's rapid method for sterilization cycles, design of continuous sterilization processes, Sterilisation of fermenter, feeds, liquid wastes, filter sterilization of media, air, exhaust air, theory and design of depth filters.

UNIT - IV

Instrumentation for Measurement and Control of Variables: Introduction to process variables, instruments used for measurement and control of temperature, flow measurement and control, measurement and control of pressure, rate of stirring, control of foam, oxygen and pH.

UNIT - V

Production of Value Added Compounds from Renewal Sources: Production of primary and secondary metabolites: Biopolymers, Biodeseal, Bioethanol, aminoacids, antibiotics.

Text Books:

1. Peter F. Stanbury, Stephen J. Hall & A. Whitaker, "Principles of Fermentation Technology", 2nd ed., Butterworth – Heinemann An Imprint of Elsevier India Pvt. Ltd., 2005.
2. Shuler, M.L. and Kargi,F. "Bioprocess Engineering - Basic Concepts", 2nd ed., Prentice Hall of India Pvt. Ltd., 2005.

Reference Books :

1. Mukhopadhyay S.N., "Process Biotechnology Fundamentals", 2nd ed., Viva Books Private Limited, Chennai 2004.

2. Wang D.I.C., Cooney C.L., Demain A.L., Dunnil.P., Humphery A.E., Lilly M.D., " Fermentation And Enzyme Technology ", John Wiley and Sons, 1980.
3. Bailey and Ollis, "Biochemical Engineering Fundamentals", McGraw Hill, 2nd ed., 1986.
4. Pauline M. Doran, "Bioprocess Engineering Calculation", Blackwell Scientific Publications, 1st ed., 2005.

PH017 - INTERFACIAL SCIENCE & ENGINEERING

UNIT- I

Introduction: General introduction of colloids, interfaces, surfactants, and micellization. Intermolecular forces, Van der Waals forces, Brownian motion and Brownian flocculation.

UNIT- II

Surface and interfacial tension, surface free energy, Surface tension for curved interfaces, Surface excess and Gibbs equation.

UNIT- III

Thermodynamics of interfaces, Thermodynamics of micelle formation, Electrical phenomena at interfaces (Electrokinetic phenomena, Electrical double layer), Colloidal systems and colloidal stability, Emulsion and micro-emulsion.

UNIT- IV

Applications: General applications, Enhanced petroleum recovery, Novel fabrication of nanostructured particles, Engineering surfaces and interfaces, Self-assembled & nanostructured biomimeticinterfaces.

UNIT- V

Measurement techniques of surface tension, zetapotential, particle size, dynamic surface tension.

Text Books:

1. Hiemenz, P. C. and Rajagopalan, R., "Principles of Colloid and Surface Chemistry", 3rd ed., Marcel Dekker, N.Y., 1997.
2. M. J. Rosen, "Surfactants and Interfacial Phenomena", Wiley - Interscience Publication, NewYork, 1978.

Reference Books :

1. Adamson, A. W. Gast, A. P., "Physical Chemistry of Surfaces", Wiley-Interscience, New York,1997.
2. Russel, W. B., Saville, D. and Schowalter, W.R., "Colloidal Dispersions", Cambridge University Press, Cambridge, 1989.
3. "Foundation of Colloid Science", Vol. I and II, Oxford University Press, Oxford, 1992.

4. Jacob Israelachvili, “Intermolecular and Surface Forces”, Academic Press, New York, 1992.
5. D. J. Shaw, “Colloid & Surface Chemistry”, Butterworth Heinemann, Oxford, 1991.

PH018 - MATHEMATICAL METHODS IN CHEMICAL ENGINEERING

UNIT – I

Ordinary Differential Equations:

Introduction, Order and degree, First order differential equations: Batch Chemical Reactor Analysis, Variation of Tank Temperature with time, Second order differential equations: Heat Transfer through electrode, Linear differential equations: Simultaneous diffusion and chemical reaction in a tubular reactor, Continuous hydrolysis of tallow in a spray column, Simultaneous differential equations: Sulphuric acid cooling system.

UNIT – II

Partial Differentiation and Partial Differential Equations: Introduction, Interpretation of partial derivatives**,** Formulating partial differential equations: Unsteady state heat conduction in one dimension, Mass Tranfer with axial symmetry, The continuity equation, Boundary conditions: Cylindrical furnace, Particular solutions of partial differential equations: One dimensional heatconduction.

UNIT – III

Finite Differences:

Introduction, The difference operator, □ , other difference operators, Interpolation, Finite difference equations, Linear finite difference equations: Plate absorption column, Stirred tank reactors in series, Spray column, Non - linear finite difference equations: CSTRs in series, Distillation column, Differential - difference equations: Stirred tank reactors in cascade, Counter current extractor.

UNIT – IV

Treatment of Experimental Results:

Introduction, Graph Paper, Theoretical properties, Contour plots, Propagation of errors, Curve fitting, Numerical Integration.

UNIT – V

Numerical Methods:

Introduction, First – order ordinary differential equations, Higher order differential equations (Initial value type), Higher order differential equations (Boundary value type), Algebraic equations, Difference – differential equations: Absorption column, Partial differential equations: Tubular catalytic reactor.

Text Books:

1. V.G.Jenson & G.V.Jeffreys, "Mathematical Methods in Chemical Engineering", 2nd ed., Academic Press, London, 2000.
2. T.S.Sherwood & C. Reed, "Applied Mathematics in Chemical Engineering", 2nd ed., Tata McGraw Hill Publishers, 1998.

Reference Books :

1. Steve Chopra, " Numerical Methods for Chemical Engineering", 5th ed., Tata McGraw Hill Publishers, 2009.
2. Pushpavanam ,Kondaswamy, "Numerical Methods for Chemical Engineering", 1st ed., PHI Publishers, 2005.

PH019 - MEMBRANE TECHNOLOGY

UNIT - I

Introduction: Separation processes, introduction to membrane processes, history, definition of a membrane, membrane processes.

UNIT - II

Materials and Material Properties: Introduction, polymers, stereoisomerism, chain flexibility, molecular weight, chain interactions, state of the polymer, effect of polymeric structure on Tg, glass transition temperature depression.

Preparation of Synthetic Membranes: Introduction, preparation of synthetic membranes, phase inversion membranes, preparation technique for immersion precipitation, preparation technique for composite membranes.

UNIT - III

Characterization of Membranes: Introduction, membrane characterization, characterization of porous membranes, characterization of ionic membranes, characterization of non porous membranes.

Transport in Membranes: Introduction, driving forces, non equilibrium thermodynamics, transport through porous, non porous, and ion exchange membranes.

UNIT - IV

Membrane Processes: Introduction, osmosis, Pressure driven membrane processes, concentration driven membranane electrically driven processes, membrane reactors.

Polarization Phenomenon and Fouling: introduction, concentration polarization, turbulence promoters, pressure drop, gel layer model, osmotic pressure model, boundary layer resistance model, concentration polarization in diffusive membrane separations and electro dialysis, membrane fouling, methods to reduce fouling, compaction.

UNIT - V

Module and Process Design: Introduction, plate and frame model, spiral wound module, tubular module, capillary module, hollow fiber model, comparison of module configurations.

Text Book:

1. M.H.V. Mulder, “Membrane Separations”, Kluwer Publications.

PH020 - MODELING AND SIMULATION OF CHEMICAL PROCESS

UNIT - I

Mathematical Models for Chemical Engineering Systems: Principles of Modeling, fundamentals, introduction to fundamental laws: Total Continuity Equation, Equation of Energy, Equation of Motion, Transport laws.

Examples of mathematical models of chemical engineering systems: Constant hold up CSTRs, Variable Hold up CSTRs, Gas pressurized CSTR, non-isothermal CSTR, Two heated Tanks.

UNIT - II

Examples of Mathematical Models of Chemical Engineering Systems: Single component vaporizer, Batch reactor, reactor with mass transfer, ideal binary distillation column, batch distillation with hold up. **Classification of mathematical modeling**: static and dynamic models, the complete mathematical model, Boundary conditions, the black box principle.

Artificial Neural Networks: Network training, Models of training, Network architecture, Back-propagation algorithm, ANN applications.

UNIT - III

Computer Simulation: Simulation examples of Three CSTRs in series, Gravity Flow tank, Binary distillation column, Non-isothermal CSTR. **Models in Reaction Engineering:** Chemical reaction with diffusion in a tubular reactor, chemical reaction with heat transfer in a packed bed reactor, gas absorption accompanied by chemical reaction.

UNIT - IV

Models in Heat Transfer Operations: Steady state heat conduction through a hollow cylindrical pipe, Unsteady state steam heating of a liquid, heat transfer in a thermometer system, Unsteady state heat transfer by conduction.

UNIT - V

Modular Approaches and Equation Solving Approach: Modular approaches to process simulation. Analysis versus design mode.

The Equation Solving Apporach: Procedence - Ordering of equations sets, Disjointing, Tearing of system of equations.The SWS algorithm, maintaining sparsity.

Text Books:

1. Luyben, William, “Process Modelling, Simulation and Control for Chemical Engineers”, McGraw Hill, New York,1990.

2. B.V.Babu, “Process Plant Simulation”, Oxford University.

Reference Books :

1. Crowe, C.M., Hamielec, A.E., Hoffman, T.W., Johnson, A.I. Woods, D.R.and Shannon, P.T., “Chemical Plant Simulation”, Prentice Hall, inc., Englewood Cliff, New Jersey, 1971.

PH021 - OPTIMIZATION TECHNIQUES

UNIT - I

Introduction to Process Optimization: formulation of various process optimization problems and their classification.

Basic Concepts of Optimization: convex and concave functions, necessary and sufficient conditions for stationary points.

UNIT - II

Optimization of Unconstrained Functions: one-dimensional search: Numerical methods for optimizing a function of one variable, scanning and bracketing procedures, Newton's, Quasi-Newton's and Secant methods of uni-dimensional search, region elimination methods, polynomial approximation methods.

UNIT - III

Unconstrained Multivariable Optimization: Direct methods, random search, grid search, uni-variate search, simplex method, conjugate search directions, Powell's method, indirect methods- first order, gradient method, conjugate method, indirect method-second order: Newton's method.

UNIT - IV

Constrained Optimization Algorithms: Kuhn-Tucker conditions, Transformation methods: Penalty function method, method of multipliers, Sensitivity analysis, Liberalized search techniques: Frank-Wolfe method, Cutting plane method.

UNIT - V

Specialized Algorithms: Integer Programming: Penalty function method, Branch and bound method. **Nontraditional Optimization Algorithms**: Genetic Algorithms: Working principles, differences between GAs and traditional methods, similarities between GAs and traditional methods, GAs for constrained optimization, other GA operators, Real-coded GAs, Advanced GAs.

Text Books:

1. T.F.Edgar and D.M.Himmelblau, "Optimization of Chemical Processes", Mc Graw Hill, International Editions, Chemical Engineering Series, 1989.
2. Kalyanmoy Deb, "Optimization for Engineering Design", Prentice Hall of India.

Reference Books :

1. G. S. Beveridge and R. S. Schechter, "Optimization Theory and

Practice”, Mc Graw Hill, New York, 1970.
2. Rekllitis, G.V., Ravindran, A., and Ragdell, K. M., “Engineering Optimization Methods and Applications”, John Wiley, New York, 1983.
3. S.S Rao, “Optimization Theory and Applications”.

PH022 - PARTICULATE TECHNOLOGY

UNIT- I

Introduction: Processes involving contact between solid particles and a Fluid, Packed Beds, Fluidized Beds advantages and disadvantages of fluidized beds for industrial applications. Fundamental fluidized bed behaviour, Fast fluidization circulating fluidized beds.

Particles and Fluidization: Physical properties of solid particles, size, sharp, size range, surface area of particles in a bed, Bed voidage, classification of particles according to fluidization characteristics, pressure drop across packed beds, minimum fluidization velocity and its determination.

UNIT -II

Two – Phase Theory of Fluidization: Bubbles and Fluidization Regimes, Bubble rise velocity, Bed expansion, Bubble growth and slugging, Mixing, Elutriation and Transport of solids, General mechanism of mixing of particles, mixing and segregation of particles, Terminal velocity of particles, Elutriation, transport disengaging height, solids transport. Davidson's Medal, Diffusion model, Bubbling bed model, ideal mixing stage model, two resign models.

UNIT- III

Fluidized Bed Heat Transfer : Heat Transfer in Beds of Particles, Gas

– to – particle heat transfer, Bed – to surface heat transfer, particle convection component, interphase gas connective component, Radioactive component, Estimation of Bed – to surface Heat Transfer coefficient, Heat Transfer between the Bed-Distributor, side walls, immersed tubes or components, Heat Transfer to surfaces located above the Bed, Free surface, Design for physical operation, Batch and continuous operation for Mass & Heat Transfer and Drying of solids.

UNIT- IV

Design of Simple Fluidized Beds: Introduction, Estimation of Bed Dimensions and Fluidizing velocity, Transport disengaging Height, Distributors, Heat removal from fluidized beds, staging of the beds counter flow staging, cross flow staging, cooling tubes in the bed, optimum size of a fluidized bed reactor, power consumption.

UNIT -V

Fluidized Bed Combustion: Introduction, combustion systems for solid fuels combustors and the first law of thermodynamics, fluidized Bed combustion of solid fuels, pressurized fluidized bed combustion, size of fluidized bed combustion system. Heat removal requirements, size of inert particles in the bed, velocity of fluidizing gas, turndown efficiency of fluidized bed combustion, Equipment, combustion of fuel particles in a fluidized bed, distinction between boiler and furnaces, methods of starting up, circulating or ‘fast’ fluidized bed combustion systems, control of emission.

Text Books:

1. J.R. Howard Adam Hilger, “Fluidized Bed Technology (Principles & Applications)”, IOP, Publishing Ltd., NY,1989.
2. Diazo Kunll & Octave Levenspiel, “Fluidization Engineering”, Wiley – International Edition, John Wiley & Sons, 2002.

PH023 - PETROLEUM REFINERY PROCESSES

UNIT- I

Sources of Petroleum:

Past, present and future of petroleum refining, Characterization of petroleum & Petroleum products, Chemical Composition of Crude Petroleum.
Various processes and techniques involved in thermal cracking, Catalytic cracking, Fluidized catalytic cracking, Steam reforming and partial Oxidation.

UNIT- II
Thermal Cracking:

Mechanism involved during thermal cracking reaction, Fundamentals of initiation, propagation, disproportionation and termination steps during free radical reactions.
Recent trends in the production of LDPE and HDPE, Details of thermal cracking to produce light olefins from various feed stocks.

UNIT- III
Petroleum Feed Stocks:

Effect of various parameters i.e temperature, residence time and C/H ratio on yields of important products from various feed stocks during thermal cracking.

UNIT- IV
Catalytic Cracking:

Coke formation during thermal cracking and catalytic cracking reactions from Various petrochemical feed stocks, Simple models of coke formation during thermal cracking reactions to produce maximum light olefins.

UNIT- V
Petrochemical Industry Scenario:

Various structures of deposited coke during pyrolysis, Various ways to inhibit coke formation.
Global economic scenario, Environmental aspects in general, Present Indian Scenario of Petroleumindustry,

Text Books:

1. Dr B.K. Baskara Rao, "Petroleum Refining", 3rd ed., Oxford – IBH, 1998.
2. Dr B.K. Baskara Rao, "Petrochemicals", 2nd ed., Kanna Publishers, 1998.
3. Nelson, W.L. "Petroleum Refinery Engineering", 1st ed., McGraw Hill, New

York 1961.

Reference Books :

1. Hengstebeck R.J., “Petroleum Refining”, 1st ed., McGraw Hill, New York 1959.
2. Steiner H, “Introduction to Petroleum Chemical Industry”, 1st ed., Pergamon, London, 1961.
3. V.Y.Sern, “Gas Phase Oxidation”, 2nd ed., Pergamon, London, 1964.
4. A.L. Waddams “Chemicals from Petroleum”, 1st ed., Chemical Publishing co, 1969.

PH024 - POLYMER ENGINEERING

UNIT - I

Polymer Fundamentals: Defining polymers, classification of polymers and fundamentals concepts, chemical classification of polymers based on polymerization Mechanisms. Molecular weight distributions, configuration and crystallinity of polymeric materials.

Step Growth Polymerization: introduction, esterification of homologous series and the equal reactivity hypothesis, kinetics of A-R-B polymerization using the equal reactivity hypothesis, average molecular weight in step growth polymerization, molecular weight distribution in step growth polymerization.

UNIT - II

Chain Growth Polymerization: Introduction, Radical Polymerization, Kinetic model of radical polymerization, average molecular weight in radical polymerization, verification of the kinetic model and the gel effect in radical polymerization, temperature effect in radical polymerization.

Ionic and anionic polymerization, Zigler-Natta catalyst in stereo regular polymerization, kinetic mechanism in heterogeneous stereo regular polymerization, stereo regulation by Zigler – Natta catalyst, rates of Ziegler – Natta polymerization. Diffusional effect in Ziegular- Natta polymerization

UNIT - III

Emulsion polymerization, Introduction, aqueous emulsifier solutions, Smith and Ewart theory for state II of the emulsion polymerization Estimation of the total number of particles, Nt determination of molecular weight in emulsion polymerization, emulsion polymerization in homogeneous continuous flow stirred tank reactors (HCSTRs), time dependent emulsion polymerization.

UNIT - IV

Measurement of molecular Weight and its distribution: Introduction, End group analysis colligative properties, light scattering Ultracentrifugation, Intrinsic viscosity, gel permeation chromatography.

Thermodynamics of polymer mixtures: Introduction, criteria for polymer solubility, the Flora- Huggins theory, free volume theory, the solubility parameter, Polymer blends.

UNIT - V

Theory of Rubber Elasticity: Introduction, probability distribution for the freely jointed chain, elastic force between chain ends, stress- strain behavior, the stress tensor (matrix) measurement of finite strain, the stress constitution equation, vulcanization of rubber and swelling equilibrium.

Text Book:

1. Anil Kumar, Rakesh K. Gupta, “Fundamentals of Polymers”, McGraw Hill International Edition, 1998.

PH025 - REACTION ENGINEERING & REACTOR DESIGN

UNIT - I

Non-Ideal Flow: Two- parameter models- Modeling real reactors with combination of ideal reactors, testing a model and determining its parameters.
Mixing of Fluids: Zero parameter models, segregation model, and maximum mixedness.

UNIT – II
Fluid-Particle Reactions: Application to design of various types of contacting in gas- solid operations, Development of performance equation for frequently met contacting pattern assuming uniform gas composition, application to a fluidized bed with entrainment of solid fines.

UNIT - III
Fluid-Fluid Reactions: Applications to design- Towers for fast reaction; Towers for slow reaction, Mixer- settlers (Mixed flow of both phases), semi-batch contacting patterns, Reactive distillation and extractive reactions.

UNIT - IV
External Diffusion Effects on Heterogeneous Reactions: External resistance to mass transfer.

Diffusion and reaction in porous catalysts- Diffusion and reaction in spherical / cylindrical Catalyst pellets, Internal effectiveness factor, Falsified kinetics, Overall effectiveness factor, Estimation of diffusion and reaction limited regines.
Catalysis and Catalytic Reactors: Design of reactors for gas- solid reactions. Heterogeneous data analysis for reactor design, moving bed reactors, fluidized bed reactors.

UNIT - V
Non- Isothermal Reactor Design: energy balance, non- isothermal continuous Flow, reactors at steady state, equilibrium conversion; multiple steady states-heat removed term, heat of generation, ignition- extinction curve.

Text Books:

1. Fogler, H.S., “Elements of Chemical Reaction Engineering”, Prentice

Hall, New Jersey, 1986.
2. Octave Levenspiel, “Chemical Reaction Engineering”, Wiley Eastern university, 3rd ed., New Delhi, 2001.

MATHEMATICS

PH073 – MULTI VARIATE STATISTICS

UNIT-I

ReviewsofMultivariateDistributions,MultipleandPartialCorrelation and Regression,

Multivariate Normal Distribution, Marginaland ConditionalDistributions-Maximum likelihood Estimators ofsampleMean and dispersion Matrix.

UNIT-II

DistributionofmeanvectorandSampleDispersion Matrix- James-SteinEstimator for the

MeanVector,Wishart Distribution and its Properties (withoutderivation)-Distribution of Total, Partial and Multiple correlationundernullcase–Maximumlikelihoodestimatorsof total, partial and multiple correlation– Test basedon total, partial and multiple correlations.

UNIT-III

Tests basedon Mean Vectors for oneandtwo Multivariate NormalDistributions- Hotelling'sT2 andMahalanobisD2 teststatisticswiththeirnullandnon-nulldistributions- Related ConfidenceRegions-TestingandIllustration usinglikelihood Ratio Criterion.

UNIT-IV

Principal Component Analysis, Factor Analysis Underlying Models and Illustrations-

Identification Problem, Estimation -Maximum likelihood Method Centroid Method, Canonical Correlation–Extraction -Properties.

UNIT-V

Classification Analysis using Discriminant functions- Clustering techniques-

Hierarchical Clustering-Agglomerative techniques, Single Linkage Method, Complete average linkagemethod–Non-hierarchicalmethod–K-Meanconceptofmultidimensional scaling and correspondence analysis.

Books forStudy:

1. Anderson, T.W.(1980):An Introduction Multivariate Statistical Analysis,

Second Edition, WileyEastern.

2. Applied Multivariate Statistical, 5thEdition, Richard A.JohnsonDean.W.Wichern.

3. M.JambuandLebeaux,M.O.(1983):Cluster Analysis andDataAnalysis,North- Holland PublishingCompany.

Books forReference:

1. Kshirsagar, A.M.(1972):MultivariateAnalysis, Marcel Decker.

2. Morrison, D.F.(1976): MultivariateStatistical Methods, Second Edition, McGrawHill.

3. Afifi,A.A.andAzen,S.P.(1979):StatisticalAnalysis- A Computer Oriented Approach, Academic Press.

4. N.Giri, Multivariate StatisticalInference, Academic Press.

5. Reucher, MultivariateAnalysis, AcademicPress.

PH263 - STATISTICAL METHODS

UNIT I ESTIMATION THEORY

Estimators :Unbiasedness, Consistency, Efficiency and sufficiency – Maximum likelihood estimation – Method of moments.

UNIT II TESTING OF HYPOTHESIS

Sampling distributions - Small and large samples -Tests based on Normal, t, Chi square, and F distributions for testing of means, variance and proportions – Analysis of r x c tables – Goodness of fit.

UNIT III CORRELATION AND REGRESSION

Multiple and partial correlation – Method of least squares – Plane of regression – Properties of residuals – Coefficient of multiple correlation – Coefficient of partial correlation – Multiple correlation with total and partial correlations – Regression and partial correlations in terms of lower order co - efficient.

UNIT IV DESIGN OF EXPERIMENTS

Analysis of variance – One way and two-way classifications – Completely randomized design – Randomized block design – Latin square design - 2 2 Factorial design.

UNIT V MULTIVARIATE ANALYSIS

Random vectors and matrices – Mean vectors and covariance matrices – Multivariate normal density and its properties – Principal components : Population principal components – Principal components from standardized variables.

PHYSICS

PH040 - VACUUM & THIN FILM TECHNOLOGY

Unit – I Production of vacuum:

Vacuum pumps: Principles of pumping , Mechanical oil sealed rotary pumps, Roots pump, Diffusion pump, Cryogenic pumps, ion pumps.

Unit – II Measurement of Low Pressure:

Manometer, Mac Leod gauge, radiometer gauge, Thermal conductivity gauges - Pirani gauge, Thermocouple gauge, Semiconductor gauge, Ionization gauges - Hot-Cathode ionization gauge , Cold – cathode ionization gauge (Penning gauge).

Unit- III Nucleation and Film growth:

Thermodynamics of nucleation, nucleation theories: Capillarity model, Atomistic or statistical model, Comparison of two models of Nucleation, Film growth

***Thickness measurement*:** Microbalance technique, crystal oscillator technique, Optical methods - Photometric method, Ellipsometry and Interferometry

Unit – IV Thin film deposition methods*:*

Introduction to thin film – Basic principle-

Physical methods: Ball milling, Thermal evaporation, Flash evaporation, Activated Reactive Evaporation (ARE), Electron beam (EB) evaporation, DC Magnetron sputtering, RF Magnetron sputtering, Pulsed laser deposition, Molecular Beam Epitaxy, Lithography, Electron Beam Lithography, Nanoimprint Lithography, Dip Pen Nanolithography.

Chemical methods: Chemical vapour deposition, Vapour Phase Epitaxy, spray pyrolysis, Spin coating, Sol-gel process, electrochemical deposition.

Unit – V Applications of thin film technology:

Thin film resistors, Thin film capacitors, Thin film solar cells, Gas sensors, Thin film solid state micro batteries, Micro and opto electronic devices, Chromogenic devices.

Text Books:

PH074 - CONDENSED MATTER PHYSICS AND CHARACTERIZATION TECHNIQUES

Unit: I Solids and Crystal Structure:

Formation of solids- Interatomic forces, Types of Bonding, Crystal lattice and Unit cell, Planes and Miller Indices, Crystal System and Symmetry, Inter-planar Spacing, Polymorphism, Single crystal and Poly crystalline material, Amorphous and Liquid state, Liquid Crystal-Solid state imperfections.

Unit – II Band theory of Solids

Remarks in free electron theory, The Bloch Theorem, The Kronig-Penney model, The motion of electrons in one dimension according to the Band theory, The distinction between metals, insulators and intrinsic semiconductors, Brillouin Zones: density of states and overlapping of energy bands.

Unit - III Spectroscopy:

Properties of Light, Optical Constants – Methods for determining optical constants: reflection & transmission methods, UV-Visible Spectrophotometry, FTIR, RAMAN (Quantitative Analysis).

Unit – IV Crystal Growth and Structural Analysis*:*

Methods of crystal growth- Hydrothermal growth, Gel growth, Growth from melt , Electrocrystallisation, Growth from vapour, Low temperature solution growth.

Bragg's law, Bragg's Spectrometer, X-ray diffraction, Laue method, Powder Crystal method, Rotating Crystal method, GIXRD.

Unit – V Texture and Morphological Studies:

Atomic Force Microscopy (AFM), Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Scanning Tunneling Electron Microscopy (STM), Energy Dispersive X-ray analysis (EDXA), X-ray Photo Electron Spectroscopy (XPS), Field Emission Scanning Electron Microscopy (FESEM), High Resolution Transmission Electron Microscopy (HRTEM).

BC101-DIGITAL COMPUTER FUNDAMENTALS

Course Description and Objective: The student should learn the Fundamental components used in a Digital Computer which is essential for the programme.

Course Outcomes: After Completion of the subject student should able to

- Identify the logic gates and their functionality

- Perform Number Conversions from one System to another System
- Design basic electronic Circuits(combinational circuits)
- Understand the Construction of Memory

Unit 1- Introduction to Number System and Codes

Decimal Numbers, Binary Numbers, Decimal to binary Conversions, Binary Arithmetic, 1's and 2's complements of Binary Numbers, Signed Numbers, Arithmetic Operations with Signed numbers, Hexadecimal Numbers, Octal Numbers, Digital Codes, Error Detection Codes.

Unit 2- Logic gates

The Inverter, The AND gate, The OR gate, The NAND gate, NOR gate, The Exclusive – OR gate and Exclusive NOR gate. Boolean Algebra and Logic Simplification: Boolean Operations and Expressions, Laws and Rules, DeMorgan's Theorems, Boolean Expressions and Truth tables, The karnaugh Map, SOP minimizations.

Unit 3- Combinational Logic Analysis

Basic combinational Logic Circuits, Implementing Combinational Logic, The Universal Property of NAND and NOR Gates. Functions of Combinational Logic: Basic Adder, Parallel Binary Adders, Comparators, Decoders, Encoders, Code Converters, Multiplexers, Parity Generator/Checkers.

Unit 4- Latches and Flip-flops

Latches, Edge Triggered Flip-Flops, Flip-Flop Operating characteristics, Flip-Flop Applications. Counters: Asynchronous Counters, Synchronous counters.

Unit 5- Memory and Storage

Memory Basics, The RAM, The ROM, Programmable ROMs, The Flash Memory, Memory Expansion, Special Types of Memories, Magnetic and Optical Storage.

TEXT BOOK(s): 1. Floyd, Thomas L: "Digital Computer Fundamentals", 10^{th} Edition, 1997. University Book Stall.

REFERENCE BOOK(S):

1. Malvino, Paul Albert and Leach, Donald P: "Digital Principles and Applications" 4th Edition, 2000. TMH.

2. Malvino, Paul Albert and Leach, Donald P: "Digital Computer Fundamentals" 3rd Edition, 1995. TMH. 3. Bartee, Thomas C: "Digital Computer Fundamentals" 6th Edition, 1995. TMH.

BC103- COMPUTER PROGRAMMING

Course Description and Objective:

The purpose of this course is introduce to students to the field of programming using C language. The students will be able to enhance their analyzing and problem solving skills and use the same for writing programs in C.

Course Outcomes: After Completion of the course student should able to

- Know the basics of computer science
- Know concepts in problem solving
- To do programming in C language

UNIT – 1 Computer and Data

Introduction - Computer Hardware, Data, Computer Software, History, Classification of computers- Workstations, Mainframe, Super computers, client and server, Data Inside the computer, Representing Data.

Algorithm - Concept, Algorithm representation, Sub algorithms. Evolution of Programming languages, Building a program, Program execution, categories of languages. CPU, Main memory, Input or Output, Interconnection of subsystems Operating systems- Definition, Evolution, Components.

UNIT –2 Introduction to C

Desirable Program Characteristics. Data types, Constants, Variables and Arrays, Declarations, Expressions Statements, Symbolic Constants, Operators and Expressions, Data Input and Output. Preparing and Running A Complete C Program.

Control Statements: Preliminaries, Branching, looping, The Switch Statement, The break Statement, The continue Statement, The comma Statement, The go to Statement.

UNIT –3 Functions

A Brief Overview, Defining a Function, Accessing a Function, Function Prototypes, Passing Arguments to a Function, Recursion.

Program Structure: Storage Classes, Automatic Variables, External (Global) Variables, Static Variables.

Arrays: Defining an Array, Processing an Array, Passing Arrays to Functions, Multidimensional Arrays, Arrays and Strings.

UNIT - 4Structures and Unions:

Defining a Structure, Processing a Structure, User-defined Data Types (Typedef), Structure and Pointers, Passing Structures to Functions, Self-referential Structures, Unions.

Pointers: Fundamentals, Pointer Declarations, Passing Pointers to a Function, Pointers and One-dimensional Arrays, Dynamic Memory Allocation, Operations on Pointers, Pointers and Multidimensional Arrays, Arrays of Pointers, Passing Functions to Other Functions

UNIT - 5Data Files:

Why Files, Opening and Closing a Data File, Reading and Writing a Data File, Processing a Data File, Unformatted Data Files, Concept of Binary Files

TEXT BOOK(S):

1. Foundations of computer science, Behrouz A. Forouzan, 2nd edition.
2. Introduction to computers, 6/e, Peter Norton TMH.
3. Byron S Gottfriend, “Programming with C”, Second Edition, Schaum Out Lines, TATA Mc Graw Hill (2007)

REFERENCE BOOK(S):

1. Sinha P., “Foundation of Computing”, BPB Publication, 1st Edition, 2003
2. Rajaraman V, "Fundamental of Computers" (2nd edition), Prentice Hall of India, New Delhi. 1996.

3. Behrouy A. Foreuzan& Richard F. Gilberg, "Computer Science A structured programming Approach using C", Third Edition, Cengage Learning (2008).
4. Herbert Schildt, "The Complete Reference C", Fourth Edition, TMH (2008)

BC105- PRINCIPLES AND PRACTICE OF MANAGEMENT

Course Description and Objective*:*

Objective of the course is to provide basic perspectives of Management theories and practices. This will form foundation for further study of functional areas of management and give a conceptual framework for understanding.

Course Outcomes: After Completion of the course student should able to

- Know the basics concepts of management
- Know about various theories of Management
- Know about various functions of Management

UNIT -1 Introduction to Management

Concept of management – evaluation of management - nature ofmanagement – scope of management – functions of management – theories of management – scientific management theory – Henry fayol's theory – classification theory – human relations theory – behavioral theory – management Vs administration – universality of management

UNIT-2 Planning

Importance – advantages – disadvantages – types of plans – process of planning – steps involved in planning- Decision – Decision Making – Process and Techniques

UNIT-3 Organizing:

Principles of organization – types of organization structures, merits, demerits and suitability – Departmentation, Delegation and decentralization

UNIT-4 Directing:

Meaning and Nature of Directing - types of leaders – leadership qualities – leadership theories – motivation theories, Maslow's need hierarchy theory – Herzberg's two factor theory – theory X and theory Y – equity theory – expectations theory – communications – importance – formal and informal communication.

UNIT-5 Controlling:

Importance of controlling – need for controlling – steps involved in controlling – process of controlling – techniques in controlling.

Text Book(s):

BC107- MATHEMATICS – I

Course Description and Objective*:*

Objective of the course is to provide basic knowledge in mathematics which is used in several branches of science and engineering. This will form foundation for further study of computer science.

Course Outcomes: After completion of the course student should able to

- Know the basics of matrices and its applications, solving system of equations
- Know about differential equations and its applications
- Know about number theory used in computer science applications

Unit -1 Matrices

Matrix, Types of matrices, Algebraic operations on matrics, Determinants, Elementary row (column) operations, Rank of a Matrix by reducing it to echelon from, Rank of a matrix by normal form, Finding the inverse of a matrix.

Unit -2Matrices – 2

Homogeneous and non-Homogeneous system of equations, Consistency criterion, Characteristic equations, Eigen values, Eigen vectors and properties, Cayley Hamilton theorem (Statement only)

Unit-3 Differential Equations – 1

Definition and examples, Order and Degree, Solutions of first order first degree differential equations, Variable separable, Equations reducible to variable separable, Homogeneous equations, non homogeneous equations

Unit -4 Differential Equations – 2

Exact differential equations, non exact equations, linear differential equations – Bernoulli's differential equations

Unit 5 Number Theory

Divisibility, Division Algorithm, Greatest Common Divisor, Euclid's algorithm to find the G.C.D. of two non-zero integers, Prime and Composite numbers, Unique Factorization theorem, Division of a given number, Euler's Ø Function

Text Books:

1. Vasishta A R : "Matrices", Krishna PrakashanMandir
2. Frank Ayres J R : "Matrices",Schaum series, TMH.

Reference Books

1. Frank Ayres J R : "Differential Equations", Schaum series, TMH.
2. S. Narayana & T. K ManicavachogamPillay : " Differential Equations" , SV Publishers
3. Remedial Mathematics, P. Seshagiri Rao
4. Apostol T M : "Introduction to Analytic Number Theory", Narosa Publishing House
5. Herstein I N : "Modern Algebra".

BC109- TECHNICAL COMMUNICATION SKILLS LAB (BUSINESS ENGLISH COMMUNICATION)

Course Description and Objective*:*

To introduce students to the specific use of language for the purposes of Business Communication which would be an essential prerequisite for success in the areas of writing and speech. The teaching efforts in this course will be directed towards making students develop their business and general writing abilities using the fundamental principles that apply to the correct use of the English language free of grammatical and other related errors

Course Outcomes:

By observing the rules of grammar, vocabulary and composition that are learnt during the course, students are made

- to appreciate the intelligent and innovative use of rules
- able to generate creative output in tune with the demands of industry and the corporate world
- The course improves their power of comprehension and the ability to express themselves with rigor through writing and speech.

UNIT-1:

Text : GLOBAL ISSUES

(Child Labour – Food Crisis – Genetic Modification – E-waste – Assistive Technology)

Grammar : Articles – Prepositions-

Vocabulary : Root–Prefixes-Suffixes - Synonyms – Antonyms

Composition : Paragraph Writing (Descriptive & Narrative) , Letter Writing (Formal - Application - Business)

UNIT-2:

Text : MEDIA MATTERS

(History of Media – Language and Media – Milestones in Media – Manipulation by Media – Entertainment Media - Interviews)

Grammar : Time and Tense (Present-Past-Future; Helping Verbs; Modals)

Vocabulary : Use of Adjectives

Composition : E-mail - Report-Writing – Writing Advertisements

UNIT-3:

Text : LESSONS FROM THE PAST

(Importance of History – Differing perspectives – Modern Corporatism – Lessons from the Past)

Grammar : Subject-Verb Agreement - If Conditional

Vocabulary : Idioms & Phrases – One-word Substitutes

Composition : Summarizing and Note-making

UNIT-4:

Text : TRAVEL AND TOURSIM

(Advantages and disadvantages of Travel – Tourism – Atithidevobhava – Tourism in India)

Grammar : Sentence Transformation (Degrees, Voice, Speech & Synthesis)

Vocabulary : Phrasal Verbs

Composition : Letter Writing (Formal - Application - Business)

Practice : Situational Conversations – Role-Plays

(Introducing; Greeting; Enquiring; Informing; Requesting; Inviting -Emotions; Directions; Descriptions; Agreements; Refusals; Suggestions)

UNIT-5:

Text : GETTING JOB-READY

(SWOT-Analysis – Companies and Ways of Powering Growth – Preparing for Interviews)

Grammar : Common Errors

Vocabulary : Connectives – Discourse Markers

Composition : Profile - Curriculum Vitae – Problem Solving (Case Studies)

Practice : Group Discussions

Textbook(s):

1. Mindscapes - Orient Black Swan, 2012.

Reference Book(s):

1. V. R. Narayana Swamy, “Strengthen Your Writing”, 1st edition, Orient Longman, 2003.
2. Thomas Elliott Berry, “The Most Common Mistakes in English Usage”, 1st edition, Tata McGraw Hill, 2004.
3. T. Balasubramanyam, A Textbook of English Phonetics for Indian Students, Macmillan Ltd., 2000.
4. Sasikumar.V and P.V. Dhamija,. Spoken English: A Self-Learning Guide to Conversation Practice, 34th Reprint, Tata McGraw Hill, New Delhi, 1993.
5. Margaret M Maison, “Examine your English”, 1st edition, Orient Longman, 1999.
6. Meenakshi Raman and Prakash Singh, “Business Communication”, 2nd edition, Oxford University Press, 2012

BC111- OFFICE AUTOMATION LAB

Course Description and Objective*:*

0ffice tools course would enable the students in crafting professional word documents, excel spread sheets, power point presentations using the Microsoft suite of office tools.To familiarize the students in preparation of documents and presentations with office automation tools.

Course Outcomes:

By learning the course, the students will be able

- to perform documentation
- to perform accounting operations
- to perform presentation skills

Word

Word Orientation : The instructor needs to give an overview of Microsoft word & Importance of MS Word as word Processor, Details of the four tasks and features that would be covered Using word – Accessing, overview of toolbars, saving files, Using help and resources, rulers, format painter.

Task 1 : Using word to create project certificate. Features to be covered:-Formatting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colors, Inserting Header and Footer, Using Date and Time option in Word.

Task 2 : Creating project abstract Features to be covered:-Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check , Track Changes.

Task 3 : Creating a Newsletter : Features to be covered:- Table of Content, Newspaper columns, Images from files and clipart, Drawing toolbar and Word Art, Formatting Images, Textboxes and Paragraphs

Task 4 : Creating a Feedback form - Features to be covered- Forms, Text Fields, Inserting objects, Mail Merge in Word.

Excel

Excel Orientation :The instructor needs to tell the importance of MS Excel as a Spreadsheet tool, give the details of the four tasks and features that would be covered Excel – Accessing, overview of toolbars, saving excel files, Using help and resources

{Comdex Information Technology course tool kit Vikas }

Task1: Creating a Scheduler - Features to be covered: Gridlines, Format Cells, Summation, auto fill, Formatting Text

Task 2 : Calculations - Features to be covered:- Cell Referencing, Formulae in excel – average, std.deviation, Charts, Renaming and Inserting worksheets, Hyper linking, Count function, LOOKUP/VLOOKUP

Task 3 : Performance Analysis - Features to be covered:- Split cells, freeze panes, group and outline, Sorting, Boolean and logical operators, Conditional formatting

Task 4 : Cricket Score Card - Features to be covered:-Pivot Tables, Interactive Buttons, Importing Data, Data Protection, Data Validation

MS Power Point

Task1 : Students will be working on basic power point utilities and tools which help them create basic power point presentation. Topic covered includes :- PPT Orientation, Slide Layouts, Inserting Text, Word Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows

Task 2 : This session helps students in making their presentations interactive. Topics covered includes : Hyperlinks, Inserting –Images, Clip Art, Audio, Video, Objects, Tables and Charts

Task 3 : Concentrating on the in and out of Microsoft power point. Helps them learn best practices in designing and preparing power point presentation. Topics covered includes :- Master Layouts (slide, template, and notes), Types of views (basic, presentation, slide slotter, notes etc), Inserting – Background, textures, Design Templates, Hidden slides.Auto content wizard, Slide Transition, Custom Animation, Auto Rehearsing

Task 4 : Power point test would be conducted. Students will be given model power point presentation which needs to be replicated (exactly how it's asked).

Text Book(s) :

1. Comdex Information Technology course tool kit Vikas Gupta, WILEY Dreamtech
2. The Complete Computer upgrade and repair book,3rd edition Cheryl A Schmidt, WILEY Dreamtech
3. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.

4.PC Hardware and A + Handbook – Kate J. Chase PHI

BC113- COMPUTER PROGRAMMING LAB

Course Outcomes:

A comprehensive problem solving skills through C language is offered to enable the students to write diversified solutions using this language.

l.a) Write a C program to find the sum of individual digits of a positive integer.

b) A Fibonacci Sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.

c) Write a C program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.

2.Write a C program to find whether :

a) The given number is Armstrong or not.
b) The given number is Strong number or not.
c) The given number is Perfect number.

3. a) Write a C program to calculate the following Sum:

$Sum=1-x^2/2! +x^4/4!-x^6/6!+x^8/8!-x^{10}/10!$

b) Write a C program toe find the roots of a quadratic equation.

4.a) Write C programs that use both recursive and non-recursive functions

i) To find the factorial of a given integer.
ii) To find the GCD (greatest common divisor) of two given integers.
iii) To solve Towers of Hanoi problem.

5.a) The total distance travelled by vehicle in 't' seconds is given by distance = $ut+1/2at^2$ where 'u' and 'a' are the initial velocity (m/sec.) and acceleration (m/sec^2). Write C program to find the distance travelled at regular intervals of time given the values of 'u' and 'a'. The program should provide the flexibility to the user to select his own time intervals and repeat the calculations for different values of 'u' and 'a'.

b) Write a C program, which takes two integer operands and one operator form the user, performs the operation and then prints the result. (Consider the operators +,-,*, /, % and use Switch Statement)

6.a) Write a C program to find both the larges and smallest number in a list of integers.

b) Write a C program that uses functions to perform the following:

i) Addition of Two Matrices
ii) Multiplication of Two Matrices

7.a) Write a C program that uses functions to perform the following operations:

i) To insert a sub-string in to given main string from a given position.
ii) To delete n Characters from a given position in a given string.

b) Write a C program to determine if the given string is a palindrome or not

8.a) Write a C program that displays the position or index in the string S where the string T begins, or – 1 if S doesn't contain T.

b) Write a C program to count the lines, words and characters in a given text.

9.a) Write a C program to generate Pascal's triangle.

b) Write a C program to construct a pyramid of numbers.

10.Write a C program to read in two numbers, x and n, and then compute the sum of this geometric progression:

$1+x+x^2+x^3+\ldots\ldots\ldots\ldots+x^n$

For example: if n is 3 and x is 5, then the program computes 1+5+25+125.

Print x, n, the sum

Perform error checking. For example, the formula does not make sense for negative exponents – if n is less than 0. Have your program print an error message if n<0, then go back and read in the next pair of numbers of without computing the sum. Are any values of x also illegal ? If so, test for them too.

11.Write a C program that uses functions to perform the following operations:

i) Reading a complex number
ii) Writing a complex number
iii) Addition of two complex numbers
iv) Multiplication of two complex numbers
(Note: represent complex number using a structure.)

12.a) Write a C program which copies one file to another.

b) Write a C program to reverse the first n characters in a file.

(Note: The file name and n are specified on the command line.)

BC102- DATA STRUCTURES

Course Description and Objective:

The main objective of this course is to provide an introduction to basic data structures and manipulation by using C programming language. It enables the students to understand Abstract Data Types. It also enables the students to understand the behavior of data structures (lists, stacks, queues, trees (binary trees and tree traversals, height-balanced trees), graphs, hash tables). It improves his ability to analyze a problem and determine the appropriate data structure for the problem.

Course Outcome:

Having successfully completed this course, the student will be able to:

- Apply C programming techniques such as pointers, dynamic memory allocation, structures to developing solutions for particular problems.
- Design and implement abstract data types such as linked list, stack, queue and tree in C programming language using static or dynamic implementations.
- Evaluate and choose appropriate abstract data types to solve particular problems.

UNIT – 1Concept of Data Structures

Implementation of Data Structures Arrays: One-dimensional array, multidimensional arrays, pointer Arrays, linked lists: Types of linked list, applications of linked lists.

UNIT – 2Stack

Introduction to stack, Representation of a stack, operations on stack, applications of stacks; Queue: Representation of Queues, Operations on Queue, various Queue structures, Applications of Queues.

UNIT-3Trees

Definition and concepts of trees, Representation of Binary tree, types of Binary trees, Tree Traversals operations of Binary search tree, Introduction to AVL trees.

UNIT-4Graph

Terminologies, Representation of Graphs, operations on graphs, Graph traversals, Applications of Graphs, minimum spanning trees.

UNIT-5Sorting Techniques

Insertion sort, selection sort, merge sort, heap sort, searching Techniques : linear search, binary search and hashing.

Text Book(s):

1. DebasisSamanta, "Classic Data Structures", PHI Learning Private Limited, 2nd edition, 2011.

2. E. Horowiz& S. Sahani, "Fundamentals of Data Structures", Galgotia Book Source Pvt. Limited, 3rd edition, 2003.

Reference Book(s):

1. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Second Edition, Pearson Education.

2. SartajSahni, Data Structures, Algorithms and Applications in C++ , Universities Press, Second Edition, 2005

3. Jean Paul Tremblay and Paul G. Sorenson, An Introduction to Data Structures with Applications,Tata Mc-Graw Hill, Second Edition, 26th Reprint 2004

BC104-INTERNET AND WEB TECHNOLOGIES

Course Description and Objective:

This course is intended to teach the basics involved in publishing content on the World Wide Web. This includes the 'language of the Web' – HTML, the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the Web, and a general grounding introduction to more advanced topics such as programming and scripting. This will also expose students to the basic tools and applications used in Web publishing.

Course Outcomes:

- Analyze a web page and identify its elements and attributes.
- Create web pages using XHTML and Cascading Style Sheets.
- Build dynamic web pages using JavaScript (Client side programming).
- Create XML documents and Schemas.

UNIT-1 Networking Protocols and OSI Model

Introduction, Protocols in Computer Communications, the OSI Model, OSI Layer Functions.
Internet Working Concepts, Devices, Internet Basics, History and Architecture: Introduction, Why Internet Working?, Problems in Internet Working, Dealing with Incompatibility Issues, A Virtual Network, Internet Working Devices, Repeaters, Bridges, Routers, Gateways, A Brief History of the Internet, Growth of the Internet.

UNIT-2 WWW, HTTP, TELNET

Introduction, Brief History of WWW, the Basics of WWW and Browsing, Hyper Text Markup Language, Common Gateway Interface, Remote Login.

UNIT-3 JavaScript and AJAX

Introduction, JavaScript, Basic Concepts, Controlling JavaScript Execution, Miscellaneous Features, JavaScript and Form Processing, Pop-up Boxes.
AJAX:
Introduction, How AJAX Works? , Life without AJAX, AJAX Coding, Life with AJAX.

UNIT-4 Introduction to XML

What is XML?, XML versus HTML, Electronic Data Interchange, XML Terminology, Introduction to DTD,Document-Type Declaration,Element-Type Declaration,AttributeDeclaration,Limitations of DTDs, Introduction to Schema, Complex Types, Extensible Stylesheet Language Transformations, Basics of Parsing, JAXP

UNIT-5 Creating Good Web Pages

Introduction, Top Level Navigation, Creating Sample Layouts, Metaphor, Theme, and Storyboard, Screen Resolution,3-Column Layout, Using Frameworks, Using Graphics, Usability for the Handheld Devices, Creating Multilingual Web sites, XHTML and Web Browser Compatibility Issues, Designing the Basic Elements of a Home Page.

TEXT BOOKS:

1. AchyutGodbole,AtulKahate"WebTechnologies:TCP/IP,Web/Java Programming, and Cloud Computing”,ThirdEdition,McGraw Hill Education.

Reference Books:

1. Deitel, Deitel, Goldberg, "Internet & World Wide Web How to Program", Third Edition, Pearson Education, 2006.
2. Raj Kamal, “Internet and Web Technologies”, Tata McGraw-Hill.

BC106- ACCOUNTING AND FINANCIAL MANAGEMENT

Course Description and Objective*:*
This course is intended to provide knowledge on accounting practices to equip students with concepts, process and reporting of financial statements in modern organizations.
Course Outcomes: The student will be able to

- understand the basic concepts of accounting
- analyze and perform Financial Accounting and statements

.

UNIT-2Accounting

Introduction, Double entry system of Accounting and book keeping, Rules of debit & credit and their application, Meaning of terms like debtor, creditor, assets, liabilities, goods, journal, ledger, vouchers, insolvency, invoice/credit verification, etc.,

UNIT-2Accounting Cycle

Systems of Accounting, Process of accounting transactions, Classification of Accounts, Journal-Ledgers, Trial balance.

UNIT-3Final Accounts

Trading - Profit & Loss Account - Balance sheet. – Problems with Simple Adjustments

UNIT-4 Ratio Analysis

Meaning – Advantages and Disadvantages, Types of Ratio's- Liquidity, Solvency, Turnover, Profitability

UNIT-5 Cost Accounting and decision-making

Meaning of key terms, objectives of cost accounting- Elements of cost- Preparation of cost sheet- CVP-Analysis (Break-even point Analysis).

TEXT BOOK(S):

1. R K Sharma and S K Gupta "Accounting Management",
2. Maheshwari, S.N., &Maheshwari, S.K. (2012). *Advanced Accountancy* (10th edi), New Dehli:Jain Book Agency.

1. Jain S.P., &Narang K L. (nd). *Basic Financial Accounting*, *I*, New Dehli:Kalyani publishers.

2. Shukla, M. (nd). *Advanced Accounts*, New Delhi:S Chand Group

3. Radhaswamy, M & Gupta, R.L. (2008). *Advanced Accountancy. 2*, New Delhi:Sultan Chand & Sons.

BC108- MATHEMATICS – II

Course Description and Objective:

Objective of the course is to provide basic knowledge in mathematics which is used in several branches of science and engineering. This will form foundation for further study of computer science.

Course Outcomes: After completion of the course student should able to

- Know about the derivativesof functions of two and several variables partial differential equations and its applications
- Know about Coordinate geometry which is required for computer graphics etc
- Know about Group theory, Group Homomorphisms and graph theory used in computer science applications

Unit-1 Partial Differentiation

Functions of two variables, Partial derivatives, Second and higher order derivatives, Maxima and minima, Simple applications, Jacobian.

Unit -2 Coordinate Geometry

Coordinate System (2 dimensional), Distance between two points, mid point formula, division in a given ratio, Geometrical representation of rectangle, rhombus, parallelogram, Equation of straight line in different forms, equations of parabola, circle, ellipse.

Unit-3 Theory of Groups

Definition of Group, Semigroup, Subgroup, Results on subgroups, Order of an element, Properties, Cyclic groups and related properties, Coset decomposition, Lagrange's theorem and its consequences.

Unit -4 Group Homomorphism and Rings

Normal subgroups and related results, Quotient group, Group homomorphism, Elementary properties, Kernel of homomorphism, Isomorphism and related results, Rings, Examples, Types of Rings, Fields Examples of Fields.

Unit -5 Introduction to Graph Theory

Graph definition, Types of graphs, Subgraph, Handshake theorem, Path, walk, circuit, cycle, Euler cycle, Hamiltonian path etc., Tree, Spanning tree.

Text Books:

- Vasishta A R : "Modern Algebra", Krishna PrakashanMandir
- T. K Manicavachogam : "Algebra", S V Publishers
- Chandrasekhar, Mathematical Foundation for Computer Science (For Graph Theory)
- Remedial Mathematics, P. Seshagiri Rao

BC110- SOFT SKILLS LAB

Course Description and Objective*:*

The Soft Skills Laboratory course is aimed at training undergraduate students and enabling them to acquire employability skills. Designed to impart work related skills, the course will help trainees develop interpersonal communication, leadership and team skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The Soft Skills course will help students

- develop professional and non-personal ways of approaching people and work through the correct use of language and speech in a workplace environment
- the ability to think critically on issues demanding attention
- enhancing self-awareness and a sense of self-worth in the students in order to improve their productivity and performance at the workplace.

UNIT-1

a) Role of language in Personality – How language reflects, impacts personality – Using gender-neutral language in MNCs – being culturally sensitive.

Activity – Appraising each other – Worksheets related to the above

b) Career Planning- job vs. career- goal setting- SWOT analysis- planning and prioritization - four quadrant time management system - time management – self-management – stress-management.

Activity: Setting a SMART goal - SWOT analysis of the self – Writing a Statement of Purpose (SOP).

c) Effective Resume-Writing: structure and presentation - planning and defining the career objective - projecting one's strengths and skill-sets – summarizing - formats and styles - covering letter.

Activity: Resume preparation –writing a covering letter.

UNIT-2

A) Functional English - Formal/informal context – purpose - interpersonal dynamics - ideation –content organization - initiating a conversation –responding appropriately - right body language.

Activity - Role play in different situations, - self-introduction - social background (family, home town etc.,) - role model - my future - likes/dislikes (movies, persons, places, food, music etc.,) - a mini project on functional English.

b) Vocabulary-Building: Etymology of words - word roots - prefixes & suffixes - synonyms & antonyms- collocations - one-word substitutes – analogies - idioms and phrases - contextual guessing of unfamiliar words – task-oriented learning (100 words).

Activity: Flash cards (200 words) – vocabulary exercises with hand-outs.

UNIT-3

a) Group Discussion: Articulation and flow of oral presentation - dynamics of group discussion – intervention – summarizing - voice modulation – content generation – Key Word Approach (KWA) – Social, Political, Economic, Legal and Technical Approach (SPELT) – View Point of Affected Part (VAP) - language relevance - fluency and coherence.

Activity: Mock sessions on four types of GD topics.

b) Facing Interviews: Interview process - understanding employer expectations - pre-interview planning - opening strategies - answering strategies – stress-based interviews - tele-interviews, video interviews- frequently asked questions (FAQs).

Activity: Writing responses to FAQs - mock interviews.

UNIT-4

a) Reading Comprehension: Reading as a skill- techniques for speed reading- skimming-scanning- appreciating stylistics - impediments for speed reading - eye fixation - sub-vocalisation - critical reading - reading based on purpose - reading for information - reading for inference -understanding tone.

Activity: Reading comprehension exercises with texts drawn from subject areas. (Hand-outs)

b) Listening Comprehension: Listening as skill - different types of listening - hidden data of communication - active listening - top-down approach - bottom-up approach.

Activity: Following different accents (Indian, British, American) listening comprehension exercises with audio and video excerpts.

UNIT-5

a) Data Commentary: Deductive & inductive reasoning - data interpretation - tables & charts - bar charts - pie charts - line graphs - ratios & proportions – percentages - coding and decoding - reasoning by analogy - artificial language etc.,

b) Analytical Thinking: Statement and Conclusion - Data Sufficiency - Statement and Argument - Statement and Assumption - Logical Deduction - Logical Problems.

Activity: Exercises with handouts.

BC112- DATA STRUCTURES LAB

Course Description and Objectives:

The course is designed todevelop skills to design and analyze simple linear and non linear data structures. It strengthen the ability to the students to identify and apply the suitable data structure for the given real world problem. It enables them to gain knowledge in practical applications of data structures .

Course Outcomes:

At the end of this lab session, the student will

- Be able to design and analyze the time and space efficiency of the data structure
- Be capable to identity the appropriate data structure for given problem
- Have practical knowledge on the applications of data structures

List of Experiments:

1. Design and Implement List data structure using i) array ii) singly linked list.
2. Design and Implement basic operations on doubly linked list.
3. Design and Implement stack using i) array ii) singly linked list
4. Design and Implement Queue using i) array ii) singly linked list
5. Design and Implement basic operations on Circular Queue
6. Design and Implement basic operations(insertion, deletion, search, findmin and findmax) on Binary Search trees.
7. Implementation of Breadth First Search Techniques.
8. Implementation of Depth First Search Techniques.
9. Implementation of Dijkstra’s Algorithm.
10. Implementation of Kruskal’s Algorithm.
11. Implementation of MergeSort.
12. Implementation of Binary Search using arrays.

References Book(S):

1. Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Prentice Hall of India.
2. E. Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill.
3. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill.
4. Seymour Lipschutz, Data Structures, Schaum's Outlines Series, Tata McGraw-Hill.
5. Ellis Horowitz, SatrajSahni and Susan Anderson-Freed, Fundamentals of Data Structures in C, W. H. Freeman and Company.
6. R. G. Dromey, How to Solve it by Computer, Prentice-Hall of India.

BC114- INTERNET AND WEB TECHNOLOGIES LAB

Course Description and Objective:

This course is intended to teach the basics involved in publishing content on the World Wide Web. This includes the 'language of the Web' – HTML, the fundamentals of how the Internet and the Web function, a basic understanding of graphic production with a specific stress on creating graphics for the Web, and a general grounding introduction to more advanced topics such as programming and scripting. This will also expose students to the basic tools and applications used in Web publishing.

Course Outcomes:

- Analyze a web page and identify its elements and attributes.
- Create web pages using XHTML and Cascading Style Sheets.
- Build dynamic web pages using JavaScript (Client side programming).
- Create XML documents and Schemas.

List of Experiments:

1. Create a table in HTML to the following details

Book Name	Author
Operating Systems	Godbole
Data Communications and Networks	Godbole
Computer Networks	Rajkumar
OOPs	R.Nageswara Rao

2. Create a form by using various attributes of the input tags.
3. Create a web page multiple types of style sheet used in a single page.
4.Write a CGI sample program to send output back to the user.
5.Write a Java Script program by using variables.
6.Write a java script program to multiply two numbers and display the result in separate text box.
7.Write a java script program on Form Validations.
8.Write a AJAX program checking the presence of XMLHttpRequest object.
9.Write a program to create sales report for our books by using AJAX.
10.Create an XML document template to describe the result of students in an examination.The description should include the student's roll number,name,three subject names and marks,totalmarks,percentage and results.
11.Write an XSLT code to only retrieve the book titles and their prices.
12.Design a basic elements of a home page.

BC-201 OBJECT ORIENTED PROGRAMMING THROUGH JAVA

Course Description & Objectives:

On Completion of this course, the student will be able to understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries. Have the ability to write a computer program to solve specified problems. Be able to use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes:

The student is expected to have

- Understanding of OOP concepts and basics of java programming (Console and GUI based)
- The skills to apply OOP and Java programming in problem solving
- Should have the ability to extend his knowledge of Java programming further on his/her own.

UNIT -1 Introduction, Classes and Objects

Creation of Java, Byte code, Java buzzwords, OOP Principles- Encapsulation, Inheritance and Polymorphism, Compiling and running of simple Java program, Data types, Variables, declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting,

UNIT-2 Concepts of classes and objects:

Class fundamentals – Declaring objects, assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, this key word, Garbage collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and Inner classes, Exploring the String class.

UNIT -3 Inheritance, Packages and Interfaces

Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, the Object class. Defining, Creating and Accessing a Package, Understanding CLASSPATH, Importing packages,

UNIT -4Differences between classes and interfaces:

Defining an interface, implementing interface, applying interfaces, Variables in interface and Extending interfaces.

Concepts of Exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and Finally keywords, Built-in exceptions, Creating own exception Sub classes,

UNIT -5 Concepts of Multithreading:

Differences between process and thread, Thread life cycle, creating multiple threads using Thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads, deadlocks, Thread groups.

Applet Class, Applet Architecture, Applet Skeleton - Applet Initialization and Termination, Overriding update(), Simple Applet, Display Methods, Requesting Repainting - A simple banner Applet, Using The Status Window, The HTML APPLET Tag, Passing parameters to Applets.

TEXT BOOK(S)

1. Herbert Schildt, "The Complete Reference Java J2SE", 7th ed., TMH Publishing Company Ltd, New Delhi, 2008.
2. Joe Wiggles worth and Paula McMillan, "Java Programming Advanced Topics", 3rd ed., TMH, 2009.

REFERENCE BOOK(S)

1. Cay Horstmann, "Big Java", 2nd ed., John Wiley and Sons, 2006.

BC203 DATABASE SYSTEMS

Course Description & Objectives:

The objective of the course is to present an introduction to database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a DBMS.

Course Outcomes:

- Upon successful completion of this course, students should be able to:
- Describe the fundamental elements of relational database management systems
- Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- Design ER-models to represent simple database application scenarios
- Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data.
- Improve the database design by normalization.
- Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

UNIT-1 Database Users

Introduction, characteristics of the database approach, actors of database, advantages of database, History of database applications. Database system concepts & architecture: Data models, schemes, instances,. Database languages interfaces database system environment architectures for DBMS. Classification of DBMS systems.

UNIT-2 Data modeling using the ER model

notations , entity types, entity sets, attributes, keys, relationships, roles, constraints, weak entity types, binary and ternary relationships. EER modeling specialization, generalization. Example university EER schema.

UNIT-3 Relational Model

Relational Model & Relational Database constraints. ER-EER to relational mapping.SQL Basics.

UNIT-4 Functional dependencies

normalization, Design guidelines. Definition of FD. Normal forms based on primary keys.

UNIT-5 Disk storage

Introduction secondary storage devices placing records on diskR FID technology. Transaction processing, properties of transaction serializabulity two phase locking – recovery concepts.

TEXT BOOK(s):

RamezElmasri and Shamkant B. Navathe, Fundamentals of Database Systems (5/e), Pearson Education, 2008

REFERENCE BOOK(S):

1. Silberschatz, Korth, “Data base System Concepts”, 4th ed., McGraw hill, 2006.

2. Raghu Ramakrishnan and Johannes Gehrke, Database Management Systems (3/e), McGraw Hill, 2003.

3. Peter Rob and Carlos Coronel, Database Systems- Design, Implementation and Management (7/e), Cengage Learning, 2007.

BC 205 SOFTWARE ENGINEERING

Course Description & Objectives:

This course will be helpful for the student to understand the concept of a software life cycle, the role of process models and how to apply key elements and common methods for elicitation and analysis to produce a set of software requirements. To distinguish between different types and levels of testing (unit, integration, systems, and acceptance).

Course Outcomes:

After completing the course attendees will be able to:

1. appreciate the wider engineering issues that form the background to developing complex, evolving (software-intensive) systems;
2. plan a software engineering process to account for quality issues and non-functional requirements;
3. Employ a selection of concepts and techniques to complete a small-scale analysis and design project.
4. Interact with a client to elicit input, and communicate progress.
5. Employ group working skills - including general organization, planning and time management, and inter-group negotiation, etc.

UNIT-1 Introduction:

Introduction to SE, evolving the rules of flow changing there of se, mythsSoftware process: A layered technology, process framework, CMMI process assessment

UNIT-2Process models

Process models, watesfall incremental models, evolutionary models, unified process models.

UNIT-3 Software Engineering Practice:

SE practice, communication practice, planning practices, modeling practices, construction practice, deployment requirements Engineering. Tasks, initiating it developing use cases. Building analysis model.

UNIT-4 Data Modeling:

Data modeling concepts, 0-0 analysis, scenario based modeling, flow-oriented modeling, class based modeling, types of architecture design concepts, U-I design golden rules.

UNIT-5 Testing Techniques

Testing strategies: test strategies for conventional S/W testing strategies for od s/w, validation testing, system testing, art of debugging testing, tactice – black box while box, basis path testing, control structures testing, blackbox testing BVA out methods.

TEXT BOOKS

Roger S. Pressman “Software Engineering, A practitioner’s Approach”, 6th ed., McGrawHill International Edition, 2008.

REFERENCE BOOKS

2. Shely Cashman Rosenblatt,” Systems Analysis and Design” 1st ed., Thomson Publications, 2006.

BC 207 ORGANIZATIONAL BEHAVIOUR

Objective of the Course:
The course provides a basic knowledge of various dimensions of human behavior. This will form the foundation to study and to understand the behavior of the human beings working in organizations.

UNIT-1 Nature of OB

Nature and scope of OB - contributing disciplines to OB - Environmental and Organizational context of Organizational Behaviour.

UNIT-2 Perception - Process

Individual and Organizational factors that influence perceptional process. Role of perception in managerial activities and organizational processes.

UNIT-3Personality and Attitudes

Personality as continuum – Meaning of Personality – Johari window and Transactional Analysis Nature and Dimension of Attitudes.

UNIT-4 Group Dynamics

The Nature of groups. Kinds of groups – Stages of Group Development – Factors Contributing to Groups Cohesiveness - Meaning & types of stress – Effect of Stress – Strategies of cope with stress

UNIT-5 Conflict Management

Nature of conflict –Dynamics of Conflict –Conflict resolutionmodes – approaches to conflict management – sources of conflict in organization.

Text Books:

1. Luthans, Fred,” Organizational Behaviour”, 10/e, THM, 2007.

2. Robbins, P Stephen, Timotny A judge, “Organization Behaviour”, 12/e, PHI, New Delhi, 2007.

Reference Books:

1. OrganisationBehaviour by Nelson

2. Schermerhorn: OrganisationBehaviour,Wiley, 9/e, 2005.

3. OrganisationalBehaviourbyAswathappa

BC 209 STATISTICAL TECHNIQUES LAB

Course Description & Objectives:

The course provides a basic knowledge of statistics and make the students familiar with the software for statistics. It enables the students learn to solve simple technique which helps them to make analysis and effective decision making.

Course Outcomes:

The student will be able

- to learn basics of statistics
- and familiar with the software for statistics.
- to interpret and analyse data

List of Experiments:

1. Tabulation of data
   i. One way Frequency
   ii. Two way Frequency
2. Construction of Histogram
3. Construction of Pie Chart
4. Construction of Line Chart
5. Construction of Scatter Chart
6. Descriptive Statistics
7. Correlation Analysis
8. Simple Regression Analysis
9. Multiple Regression Analysis
10. Fitting a trend line to an observed data
11. Polynomial Trends
12. Logarithmic, power and exponential trends
13. Moving averages

TEXT BOOK

1.K.V.S Sharma, “Statistics Made Simple Do it yourself on PC” TMH, Second Edition

BC 211 OBJECT ORIENTED PROGRAMMING THROUGH JAVA LAB

Course Description & Objectives:

Write programs using the Java language. Basic topics considered are programs and program structure in general, and Java syntax, data types, flow of control, classes, methods, objects, arrays, exception handling, recursion, and graphical user interfaces (GUIs). Writing and testing applets for potential inclusion in web pages. Understanding how to access enterprise data bases from the application programes.

Course Outcomes:

The student is expected to have hands on experience with the following:

- Basics of java programming, multi-threaded programs and Exception handling
- The skills to apply OOP in Java programming in problem solving
- Use of GUI components (Console and GUI based)

List of topics on which programs have to cover:

1. programs on usage of data types, input and output statemetns.
2. Programs on conditional statements, operators and expressions
3. Programs on Iterative statements
4. Programs on functions and classes
5. Programs on String data type
6. programs on Inheritance concepts, interfaces,packages.
7. pograms on polymorphism concepts
8. programs on Threads concepts
9. Programs on exceptional handling
10. programs on Applet creation and usage.

REFERENCE BOOKS:

1. Dietel&Dietel, Java How to Program, 5th Edition, Pearson Education, 2009.
2. P.J.Deitel and H.M.Deitel, Java for Programmers, Pearson education, PHI, 2008.
3. P.Radha Krishna, Object Oriented Programming through Java, Universities Press, 2010.
4. Bruce Eckel, Thinking in Java, Pearson Education, 2010.
5. S.Malhotra and S.Choudhary, Programming in Java, Oxford Univ. Press, 2009.

BC 213 DATABASE MANAGEMENT SYSTEMS LAB

Course Description & Objectives:

This lab course will enhance database handling, data manipulation and data processing skills in student through SQL & PL/SQL, and helps them gain knowledge in designing forms, Menus and also helps them in developing database applications.

Course Outcomes:

- Install, configure, and interact with a relational database management system;
- Describe, define and apply the major components of the relational database model to database design;
- Learn and apply the Structured Query Language (SQL) for database definition and manipulation;
- Learn and implement the principles and concepts of information integrity, security and confidentiality;

List of experiments:

1. Database Creation- usage of Data types
2. Execute a single line and group functions for a table.
3. Execute DCL and TCL Commands.
4. Create and manipulate various DB objects for a table.
5. Create views, partitions and locks for a particular DB.
6. Writing Triggers
7. Write PL/SQL procedure for an application using exception handling.
8. Write PL/SQL procedure for an application using cursors.
9. Write a DBMS program to prepare reports for an application using functions.
10. Write a PL/SQL block for transaction operations of a typical application using triggers.
11. Procedures and Functions
12. Designing a basic application.

Typical Applications – Banking, Course registration, Electricity Billing, Library Management, Pay roll, Insurance, Inventory etc.

REFERENCE BOOKS:

1) Oracle certified associate Mysql beginner's guide.

2) Oracle certified associate Oracle 10g &11g SQL fundament

BC 202 MULTIMEDIA SYSTEMS

Course Description & Objectives:

Understand the characteristics of multimedia systems and how to address issues. Be aware of the differences among multimedia authoring systems. Be familiar with the software development process as practiced in a multimedia development environment. Be able to design, write, document, debug and evaluate a non trivial multimedia system. Appreciate and understand the legal and ethical issues associated with developing multimedia systems, particularly in regard to use of media clips developed by others.

Course Outcomes:

The student will be able to

- Write action script for a particular problem.
- Design and Draw customized GUI components.
- Apply Transformations on Components.
- To make use of fundamental concepts and formulate best practices
- Apply technical concepts and practices in specialized areas

UNIT –1 Introduction

Global structures Media – Data stain : medium , properties of M.M.S,M.M Information units Sound –Audio : Midi, search .

UNIT –2 Images x Graphs :

Basic computers Components Image process system Image Transition.
Video Animations basic computers Television .Computer based Animation.

UNIT – 3 Data compression:

Doing reg. Some Basic Compression. JPEG.,MPEC,.MPEL,.

UNIT – 4 Middleware system service Architecture

Multimedia Devices Presentation Servers X the user interface.

UNIT – 5 Middleware n system savers Architecture

Multimedia servers over the public network Multimedia confer sting.

Text books:

UNIT – I , II,III :- Multimedia computing, communications Applications. Ralf statement &klarapearson L PE.
UNITS IV, V :- Mult Media systems John.F. koegel .peasion LPE

Reference Books:

1. Multimedia Systems, By John E Koegal, Buford, IIBK.
2. Virtual Reality Systems, John Vince, ACM Press

BC 204 COMPUTER NETWORKS

Objective of the Course:

This course will focus on imparting knowledge about the aspects of data communication and computer network systems with the required basic principles behind them. To provide essential knowledge about the OSI model and TCP/IP model. To create a good foundation covering the physical, data link, network, transport and application layers.

Course Outcomes:

- To understand the communication basics.
- To have the knowledge of different networks.
- To know about different protocols.
- To understand how to find the routes by using different routing algorithms.
- To Understand the basics of Internet.

Unit-1 Introduction

uses of computer Network, Business,Home, Mibileusers, Social Issues. Network Hardware: PAN, LAN, MAN, WAN.

Network Software: Protocol Hierarchies, Design issues, service primitives

Unit-2 Reference Models

OSI, TCP/IP, Comparison, Critique of OSI, Example networks. 3G Moblie phone network, Wireless LAN, RFID, Sensor Network.

Unit-3 Physical layer

Guided Media, The Mobile phone System.

Unit-4 Datalink Layer

Design Issues, framing, elemetary protocols, Simplex, stop and wait, sliding window protocols: 1 bit, GOBACK N, Selective Repeat.

Unit-5 Network Layer

Design Issues, Virtual circuit and Datagram comparision, routing Algorithms : shortest path, flooding, Distance Vector, Congestion control Algorithms: 5 approaches.

TEXT BOOK:

1. Andrew S Tanenbaum, “Computer Networks”, 4th ed., Pearson Education, 2003.

REFERENCE BOOKS:

3. Behrouz A. Forouzan, “Data communications and Networking”, 3rded.,TMH, 2003.
William Stallings, “Data and Computer Communications”, 7th ed., Pearson Education, 2004.

BC 206 Operating Systems.

UNIT-1 Computer System and Operating System Overview:

Overview of computer operating systems, operating systems functions, protection and security, distributed systems, special purpose systems, operating systems structures and systems calls, operating systems generation.

UNIT -2 Process Management –

Process concept- process scheduling, operations, Inter process communication. Multi Thread programming models. Process scheduling criteria and algorithms, and their evaluation.

UNIT -3 Memory Management :

Swapping, contiguous memory allocation, paging, structure of the page table , segmentation

UNIT -4 Principles of deadlock –

system model, deadlock characterization, deadlock prevention, detection and avoidance, recovery form deadlock,

UNIT-5 File system Interface-

the concept of a file, Access Methods, Directory structure, File system mounting, file sharing, protection.

File System implementation- File system structure, file system implementation, directory implementation, allocation methods, free-space management

TEXT BOOKS :

1. Operating System Concepts- Abraham Silberchatz, Peter B. Galvin, Greg Gagne 7th Edition, John Wiley.
2. Operating Systems' – Internal and Design Principles Stallings, Sixth Edition–2005, Pearson education

BC 208 E- COMMERCE

UNIT – I Electronic Commerce Environment and Opportunities:
Background, The Electronic Commerce Environment, Electronic Marketplace Technologies. Modes of Electronic Commerce: Electronic Data Interchange, Migration to Open EDI, Electronic Commerce with www/Internet, Commerce Net Advocacy, web Commerce Going Forward.

UNIT – II Approaches to Safe Electronic Commerce:
Secure Transport Protocols, Secure Transactions, Secure Electronic Payment Protocol (SEPP), Secure Electronic Transaction (SET), Certificates for authentication Security on web Servers and Enterprise Networks. Electronic Cash and Electronic Payment Schemes: Internet Monetary Payment & Security Requirements. Payment and Purchase Order Process, On-line Electronic cash.

UNIT – III Internet/Intranet Security Issues and Solutions:
The need for Computer Security, Specific Intruder Approaches, Security Strategies, Security Tools, Encryption, Enterprise Networking and Access to the Internet, Antivirus Programs, Security Teams.

UNIT – IVMaster Card/Visa Secure Electronic Transaction:
Introduction, Business Requirements, Concepts, payment Processing. E-Mail and Secure E-mail Technologies for Electronic Commerce: Introduction, The Means of Distribution, A model for Message Handling, E-mail working, Multipurpose Internet Mail Extensions, Message Object Security Services, Comparisons of Security Methods, MIME and Related Facilities for EDI over the Internet.

UNIT – V Internet Resources for Commerce:
Introduction, Technologies for web Servers, Internet Tools
Relevant to Commerce, Internet Applications for Commerce, Internet Charges, Internet Access and Architecture, Searching the Internet. Advertising on Internet: Issues and Technologies. Introduction, Advertising on the Web, Marketing creating web site, Electronic Publishing Issues, Approaches and Technologies: EP and web based EP.

Text Books:

1. WebCommerceTechnologyHandbook, byDanielMinoli, EmmaMinoli, McGraw-Hill
2. Frontiers of electronicommerece by Galgotia.

Reference Books:

1. E-Commerce fundamentals and applications Hendry Chan, Raymond Lee, Tharam Dillon, Ellizabeth Chang, John Wiley.
2. E-Commerce, S.Jaiswal – Galgotia.
3. E-Commerce, Efrain Turbon, Jae Lee, David King, H.Michael Chang.

BC 210 MULTIMEDIA SYSTEMS LAB

List of experiments:

1. Study of multimedia I/O devices.
2. Calculator for blind
3. Media player application
4. Design advertisement using flash/macromedia
5. Design a web application using dream viewer and fireworks
6. Create multimedia database for student ID card preparation
7. Study and use of different MPEG file formats.
8. Construction of website using pictures, videos, audio etc with proper layout.
9. Implementation Huffman algorithm for six character long string.
10. Edit the movie clip using adobe premiere.
11. Record a speech and perform compression and decompression.
12. Design a game/application in flash.
13. Convert BMP file to JPG file using any programming language.

REFERENCE BOOKS :

1. Prabhat K. Andheigh, Kiran Thakrar, "Multimedia Systems design', 1 st ed., PHI, 2008.
2. Koegel Buford, "Multimedia Systems", 4th ed., Pearson Eduaction, 2003.

BC 212 Computer networks lab

Course Description & Objectives:
Learn basic concepts of computer networking and acquire practical notions of protocols with the emphasis on TCP/IP.Able to explain, configure, verify, and troubleshoot complex computer networks problem. A lab provides a
practical approach to Ethernet/Internet networking: networks are assembled, and experiments are made to understand the layered architecture and how do some important protocols work.

Course Outcomes:
After completing the course, students will be able to:

- Understand the structure and organization of computer networks including the division into network layers, role of each layer, and relationships between the layers.
- Understand the basic concepts of application layer protocol design including client/server models, peer to peer models, and network naming.
- In depth understanding of transport layer concepts and protocol design; including connection oriented and connection-less models,techniques to provide reliable data delivery and algorithms for congestion control and flow control.
- In depth understanding of network layer concepts and protocol design; including virtual circuit and datagram network designs, datagram forwarding, routing algorithms, and network interconnections.

List of experiments:

1. Study of Network devices in detail
2. Connect the computers in Local Area Network
3. Implementation of Data Link Framing method - Character Count.
4. Implementation of Data link framing method - Bit stuffing
5. Implementation of Error detection method - even and odd parity.
6. Study of Network IP Addressing
7. Study of sockets in detail
8. Working on Network Protocol Analyzer Tool (Ethereal/Wireshark)
9. Working on NMAP Tool for Port scanning.

BC 214 Linux basics and shell programming Lab

Course Objectives:

- To teach students various unix utilities and shell scripting

Week1

Session-1

a)Log into the system

b)Use vi editor to create a file called myfile.txt which contains some text.

c)correct typing errors during creation.

d)Save the file

e)logout of the system

Session-2

a)Log into the system

b)open the file created in session 1

c)Add some text

d)Change some text

e)Delete some text

f)Save the Changes

g)Logout of the system

Week2

a)Log into the system

b)Use the cat command to create a file containing the following data. Call it mytable use tabs to separate the fields.

1425	Ravi	15.65
4320	Ramu	26.27
6830	Sita	36.15
1450	Raju	21.86

c)Use the cat command to display the file, mytable.

d)Use the vi command to correct any errors in the file, mytable.

e)Use the sort command to sort the file mytable according to the first field. Call the sorted file my table (same name)

f)Print the file mytable

g)Use the cut and paste commands to swap fields 2 and 3 of mytable. Call it my table (same name)

h)Print the new file, mytable

i)Logout of the system.

Week3

1) a)Login to the system
b)Use the appropriate command to determine your login shell
c)Use the /etc/passwd file to verify the result of step b.
d)Use the who command and redirect the result to a file called myfile1. Use the more command to see the contents of myfile1.
e)Use the date and who commands in sequence (in one line) such that the output of date will display on the screen and the output of who will be redirected to a file called myfile2. Use the more command to check the contents of myfile2.

2) a)Write a sed command that deletes the first character in each line in a file.
b)Write a sed command that deletes the character before the last character in each line in a file.
c)Write a sed command that swaps the first and second words in each line in a file.

Week4

a)Pipe your /etc/passwd file to awk, and print out the home directory of each user.
b)Develop an interactive grep script that asks for a word and a file name and then tells how many lines contain that word.
c)Repeat
d)Part using awk

Week5

a)Write a shell script that takes a command –line argument and reports on whether it is directory, a file, or something else.
b)Write a shell script that accepts one or more file name as arguments and converts all of them to uppercase, provided they exist in the current directory.
c)Write a shell script that determines the period for which a specified user is working on the system.

Week6

a)Write a shell script that accepts a file name starting and ending line numbers as arguments and displays all the lines between the given line numbers.
b)Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it.

Week7

a)Write a shell script that computes the gross salary of a employee according to the following rules:
i)If basic salary is < 1500 then HRA =10% of the basic and DA =90% of the basic.
ii)If basic salary is >=1500 then HRA =Rs500 and DA=98% of the basic
The basic salary is entered interactively through the key board.

b)Write a shell script that accepts two integers as its arguments and computers the value of first number raised to the power of the second number.

Week8

a)Write an interactive file-handling shell program. Let it offer the user the choice of copying, removing, renaming, or linking files. Once the user has made a choice, have the program ask the user for the necessary information, such as the file name, new name and so on.
b)Write shell script that takes a login name as command – line argument and reports when that person logs in
c)Write a shell script which receives two file names as arguments. It should check whether the two file contents are same or not. If they are same then second file should be deleted.

Week9

a)Write a shell script that displays a list of all the files in the current directory to which the user has read, write and execute permissions.
b)Develop an interactive script that ask for a word and a file name and then tells how many times that word occurred in the file.
c)Write a shell script to perform the following string operations:

i)To extract a sub-string from a given string.
ii)To find the length of a given string.

Week10

Write a C program that takes one or more file or directory names as command line input and reports the following information on the file:

i)File type
ii)Number of links
iii)Read, write and execute permissions
iv)Time of last access

(Note : Use stat/fstat system calls)

Week11

Write C programs that simulate the following unix commands:
a)mv
b)cp
(Use system calls)

Week12

Write a C program that simulates ls Command
(Use system calls / directory API)

TEXT BOOKS

1)Introduction to UNIX & SHELL programming, M.G. Venkatesh Murthy, Pearson Education.
2)Unix concepts and applications, Fourth Edition, Sumitabha Das, TMH.
3)Unix for programmers and users, 3rd edition, Gaham Glass & K. Ables, pearson education.
4)Unix and shell Programming –A text book, B.A. Forouzan& R.F. Giberg, Thomson.
5)Beginning shell scripting, E. Foster – Johnson & other, Wile Y- India.

BC 301 OPEN SOURCE SYSTEMS

Course Description & Objectives

It makes familiar of Open Source technologies like Linux, UNIX, Perl, MySQL, CGI, PHP, and AJAX which are used to develop web programming.

Course Outcomes:

- Students will get knowledge on Apache Web Server that is how to install, how to start server, how to stop, and how to restart and how to create simple static web pages
- Students get information about the differences and similarities between PERL and other programming languages like C, C++, JAVA and MYSQL
- Students can do CGI programs very effectively by these programs students can do database programs by connecting to the MYSQL server through DBI.
- Student can configure PHP files.

UNIT – 1 Introduction & Linux

Open Source Software, Structural Part: Web explained, How it works.
Introduction, Basic UNIX, Apache Web Server.

UNIT – 2 Perl & MySQL

Introduction, Perl Documentation, Syntax Rules, A Quick Introduction to OOP.
Introduction, Database Independent Interface, Table Joins, Loading & Dumping a Database.

UNIT – 3 The Common Gateway Interface

Introduction, Apache Configuration, A First CGI Program, CGI.pm Introduced, CGI.pm HTML Shortcuts, Information received by the CGI Program, Form Widget Methods, CGI Security Considerations.

UNIT - 4 PHP

Introduction, Emdedding PHP into HTML, Configuration, Language Syntax, Built-in PHP Functions, PHP & MySQL

UNIT – 5 PHP5 & AJAX

Procedural Programming versus OOP, Basic Class Definitions, Visibility, Constructors and Destructors, Static Keyword, Class Constants, Assignment versus Cloning
XMLHTTP and XMLHttpRequest, The Interfaces, Working with the Interfaces, Handling the Response, AJAX Libraries: SAJAX , CPAINT , JPSPAN.

TEXT BOOK :

1.James Lee, Brent Ware, "Open Source Web Development with LAMP", 4th ed., Addison Wesley Publishers , 2002.

REFERENCE BOOK :

1. Jason Gerner, Elizabeth Naramore, Morgan Owens, Matt Warden, "Professional LAMP", 1st ed., Wiley Publications, 2006.

BC 303 DATA WAREHOUSE AND DATA MINING

Course Description and Objectives:

This course is about knowing of how to make use of historical data so that high end business decision can be taken for the growth of an organization. The main objective of this course is to designing the intelligent machines which can take risk business decisions behalf of humans using the data mining techniques like classification, clustering, outlier detection, association rule mining.

Course Outcomes:

Students are able to

- Learn the basic concepts of Database Technology Evaluation steps and also understood the need of data mining and its functionalities
- Explore the efficient and effective maintenance of Data Warehouses.
- Apply the data mining functionalities like Clustering, Classification, Association Analysis to real world data.
- Discover interesting patterns and association rules from huge volume of data used to do classifications and predictions.
- Gain knowledge on developing areas like Web Mining, Text Mining, and Spatial Mining.

UNIT-1 Introduction DataWarehousing and Mining

Why Data Mining, What is Data Mining, Kinds of Data, Kinds of Patterns, and Technologies used, Kinds of applications adopted, Major issues in Data Mining.

Basic Concepts, Data Warehouse Modeling, Data Warehouse Design and Usage, Data Warehouse Implementation, Data Generalization by Attribute- Oriented Induction

UNIT-2 About Data &Data Preprocessing

Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity. An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

UNIT-3 Mining Concept

Preliminary Concepts, Data Cube Computation Methods, Processing Advanced Kinds of Queries by Exploring Cube Technology, Multidimensional Data Analysis in Cube Space

Basic Concepts and Methods: Basic Concepts, Frequent Itemset Mining Methods, Which Patterns Are Interesting?—Pattern Evaluation Methods Pattern Mining in Multilevel, Multidimensional Space, Constraint-Based Frequent Pattern Mining

UNIT-4 Classification

Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule-Based Classification, Model Evaluation and Selection, Techniques to Improve Classification Accuracy Bayesian Belief Networks, Classification by Back propagation, Support Vector Machines, Classification Using Frequent Patterns, Lazy Learners, Other Classification Methods

UNIT-5 Cluster Analysis

Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid-Based Methods, Evaluation of Clustering Probabilistic Model-Based Clustering, Clustering High-Dimensional Data

TEXT BOOKS:

1. Jiawei Han Micheline Kamber – “Data Mining Concepts & Techniques”,
Third Edition, Morgan Kaufmann Publishers, 2012.

REFERENCEBOOKS :

1. Pang-Ning Tan, Michael Steinbach, Vipin Kumar, “Introduction to Data Mining”, First Edition,2012.

2. Ralph Kimball, Margy Ross, “The Data Warehouse Toolkit”, first edition John Wiley and Sons Inc., 2002.

BC 305 SOFTWARE TESTING METHODOLOGIES

Objective of the Course :
To describe principles and strategies for generating system test cases. To understand the essential characteristics of tools used for test automation.
Course Outcomes:

- The student will learn Various test processes and continuous quality improvement
- The student will learn about Methods of test generation from requirements
- The student will learn the application of software testing techniques in commercial environments

UNIT-1Introduction
Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs
Flow graphs and Path testing : Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

UNIT-2Transaction Flow Testing
Transaction flows, transaction flow testing techniques. Dataflow testing:-Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.
Domain Testing:-domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

UNIT-3Paths, Path products and Regular expressions
Path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

UNIT-4 Logic Based Testing
Overview, decision tables, path expressions, kv charts, specifications.
State, State Graphs and Transition testing : State graphs, good & bad state graphs, state testing, Testability tips.

UNIT-5 Graph Matrices and Application
Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. Usage of JMeter and Winrunner tools for functional / Regression testing (Ref Text book2).

TEXT BOOKS :
1. Boris Beizer, “Software Testing techniques”, 2nd ed., Dreamtech, 2006.
2. Dr.K.V.K.K.Prasad, “Software Testing Tool”, 1st ed., Dreamtech. 2008.(Unit - 5)
REFERENCES BOOKS :
1. Brian Marick, “The craft of software testing”, 2nd ed., Pearson Education, 2007.
2. Edward Kit, “Software Testing in the RealWorld “, 2nd ed., Pearson Educaton, 2008.

BC 307 EMBEDDED SYSTEMS

Course Description &Objectives :

The course emphasis on Comprehensive treatment of Embedded Hardware and Real Time Operating systems along with case studies in tune with the requirements of Industry. The example-driven approach will put students on a fast track to understanding embedded-system programming and applying what they learn to their projects.

Course Outcomes:

- Describe the differences between the general computing system and the embedded system, also recognize the classification of embedded systems..
- Become aware of the architecture of the processor and its programming aspects (assembly Level)
- Become aware of interrupts, hyper threading and software optimization.
- Design real time embedded systems using the concepts of RTOS.

UNIT-1Introduction to Embedded Systems :

Applications of ES, Embedded Hardware Units and Devices, Embedded Software, Examples of Embedded Systems, Design Metrics in ES, Challenges in ES Design.

UNIT-2Introduction to 8051 :

8051 Micro controller Hardware, Input/Output Ports and Circuits, External Memory, Counter and Timers, Serial data Input/Output, Interrupts.

UNIT-3Data Transfer and Logical Instructions :

Arithmetic Operations, Decimal Arithmetic. Jump and Call Instructions, Further Details on Interrupts.

UNIT-4Introduction to Real Time Operating Systems :

Tasks and Task States, Tasks and Data, Semaphores, and Shared Data; Message Queues, Mailboxes and Pipes, Timer Functions, Events, Memory Management, Interrupt Routines in an RTOS Environment.

UNIT-5Principles Basic Design :

Using a Real-Time Operating System: Embedded Software Development Tools: Host and Target machines, Linker/Locators for Embedded Software, Getting Embedded Software into the Target System

TEXT BOOKS:

1. Raj Kamal, "Embedded Systems", 2nd ed., TMH, 2009. (Unit - I)
2. Kenneth J. Ayala, Thomson, "The 8051 Microcontroller", 3rd ed., 2008. (Unit - II, III)
3. David E. Simon, "An Embedded Software Primer", 1st ed., Pearson Education, 2008 (Unit - IV, V)

REFERENCE BOOKS :

1. Wayne Wolf, "Computers as Components-principles of Embedded Computer system Design", 1st ed.,Elseveir, 2009.
2. Labrosse "Embedding system building blocks", 2nd ed., CMP Publishers, 2007.

BC 309 OPEN SOURCE SYSTEMS LAB

Course Description & Objectives

It makes familiar of Open Source technologies like Linux, UNIX, Perl, MySQL, CGI, PHP, and AJAX which are used to develop web programming.

Course Outcomes:

- Students may get knowledge on Apache Web Server that is how to install, how to start server, how to stop, and how to restart and how to create simple static web pages
- Students get information about the differences and similarities between PERL and other programming languages like C, C++, JAVA and MYSQL
- Students can do CGI programs very effectively by these programs students can do database programs by connecting to the MYSQL server through DBI.
- Student can configure PHP files.
- Student may have information about AJAX.

List of Experiments

1. Basic UNIX and LINUX commands.

2. Write a Perl program to display Hello World.

3. Write a Perl program to inserts, selects, updates, deletes information using MySQL queries through a DBI module.

4. Write a Perl program to inserts, selects, updates, deletes information using MySQL queries through a MySQL module.

5.Write a PHP program on various string handling functions.

6.Write a PHP program to inserts, selects, updates, deletes information using MySQL queries through a MySQL module.

7.Write an AJAX program to create a form.

8.Write an AJAX program to inserts, selects, updates, deletes information using MySQL queries through a MySQL module.

BC 311 DATA WAREHOUSE AND DATA MINING LAB

Course Description & Objectives:

The main objective of this lab is to impart the knowledge on how to implement classical models and algorithms in data warehousing and data mining and to characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering. At the end to compare and contrast different conceptions of data mining.

Course Outcomes:

Students will be able

- To evaluate the different models of OLAP and data preprocessing.
- To enlist various algorithms used in information analysis of Data Mining Techniques.
- To demonstrate the knowledge retrieved through solving problems .

List of Experiments

1. Explore various commands given in PL/SQL in Oracle 8.0
2. Execute multi-dimensional data model using SQL queries.
3. Implement various OLAP operations such as slice, dice, roll up, drill up, pivot etc.
4. Implementation of Text Mining on the data warehouse
5. Explore the correlation-ship analysis between the data set
6. Evaluate attribute relevance analysis on a weather data warehouse
7. Evaluate Information Gain of an attribute in the student database
8. Experiment to predict the class using the Bayesian classification
9. Find out a weight & bias updating using the Back Propagation Neural Network
10. To perform various data mining algorithms on the give data base using WEKA

REFERENCE BOOK:

1.Jiawei Han, Micheline Kamber“ Data Mining: Concepts and Techniques” 3rd edition ,Morgan Kaufmann, 2012
2. Ramesh Sharda, DursunDelen, David King Business Intelligence, 2/E; Efraim Publisher Turban,pearson Education, 2011
3. Berry, Gordon S. Linoff, “Data Mining Techniques: For Marketing, Sales, and Customer Relationship Management”, John Wiley & Sons Inc publishers, 3rd Edition, 2011.

BC 313 PROFESSIONAL COMMUNICATION LABORATORY

Course Description and Objectives:

The Professional Communication course is aimed at improving written communication skills of undergraduate students and preparing them to meet professional challenges in the work spheres. Writing and Personality are not two exclusive spheres of influence and this course will work on the relationship between professional writing and a personality that is able to meet the goals of an organization in creative and innovative ways. The course will expose students to conventions of corporate communication and documentation procedures involved in the day-to-day functioning of the business world.

Learning outcomes:

After going through the course, students will acquire competency to write logical sentences and paragraphs, use appropriate diction, grammar and punctuation. They will be able to compose clear and concise messages and produce business documents for mailing to external recipients or intra-organizational circulation.

UNIT-1 Elements of Technical Writing :

Sentence structure - reducing verbosity - arranging ideas logically – building coherence - paragraph level and document level - topic sentence - cohesive devices – transitionals – paraphrasing – précis-writing.

Mechanics of Writing: Stylistic elements – the rapporteur- the purpose- the reader (audience) -elementary rules of grammar- choice of diction - elementary principles of composition - matters of form – punctuation - conventions of business communication - language and tone - weak links in business correspondence - ethical concerns in business writing

UNIT-2 Parts of the Report:

Writing an abstract - features of a good abstract – approach - compare and contrast - cause and effect.

Types of Technical Reports : Drafting a technical proposal - formal and informal proposals - factual reports, feasibility reports, survey reports – parts of a report - title page – declaration – acknowledgements – table of contents - abstract – introduction – conclusion – citations – references - appendices - oral reports and presentations

UNIT-3 Letter-Writing:

Formal and informal letters - structure of formal letters - expressions of salutations, introductory and concluding paragraphs - different types of letters - sales letter - complaint letter - adjustment letter - letter to the editor - covering letter - claim letter – letter of condolence.

UNIT-4Business Correspondence :

E-mail – nature and scope - e-mail etiquette – Common Errors in composing e-mails – Quotations - Inviting quotations - sending quotations –placing orders Office Communication - agenda - notice - circular

Effective Resume-Writing: Structure and presentation - defining career objective - projecting one's strengths and skill-sets Summarizing - formats and styles - covering letter.

UNIT-5Business Proposals:

Drafting business proposals - calculating profit and loss-averages - ratios and proportions – partnership - simple interest - compound interest - calculating volumes and areas

Course of action - cause and effect- theme detection - making judgments - logical deductions - analyzing arguments – syllogisms - Venn diagrams- 2 matching definitions - verbal reasoning - numerical reasoning - working out justifications.

4. Kirkman, John. Good Style: Writing for science & technology, Routledge Study Guides, second edition.
5. Monippally, Matthukutty. M. 2001. Business Communication Strategies. 11thReprint.Tata McGraw-Hill. New Delhi

BC- 302 information security

Objective of the Course :
This Course focuses towards the introduction of network security using various cryptographic algorithms. Underlying network security applications. It also focuses on the practical applications that have been implemented and are in use to provide e_mail and web security.

UNIT-1 Classical Encryption Techniques :
Symmetric Cipher Model – Substitution Techniques – Transposition Techniques – Rotor Machines – Steganography

UNIT-2 Block Ciphers And Data Encryption Standards:
Block Cipher Principles – Data Encryption Standard – Strength of DES – Differential and Linear Cryptanalysis - Block Cipher Design Principles.- Advanced Encryption Standard – Evaluation Criteria of AES – AES Cipher – More on Symmetric Ciphers – Multiple encryption and Triple DES – Block Cipher Modes of Operation – RC4.

Unit-3 Public-Key Encryption And Hash Funcitons :
Principles of Public –Key Cryptosystems – RSA Algorithm – Key Management – Message Authentication and Hash Functions – Authentication Requirements – Authentication Functions – Message Authentication – Hash Functions – Security of Hash Functions and MACs- Digital Signatures - Authentication Protocols – Digital Signature Standard.

UNIT-4 Network Security Introduction:
Security Trends – Security attacks – Security services – Security Mechanisms – A Model for Network Security Model APPLICATIONS Kerberos – X.509 Authentication Service – Public Key Infrastructure – Pretty Good Privacy – S/MIME- IP Security Overview – IP Security architecture- Authentication Header – Encapsulating Security Payload – Combining Security associations – Key Management

UNIT-5 Web Security:
Secure Socket Layer and Transport Layer Security – Secure Electronic Transaction. SYSTEM SECURITY Intruders – Intrusion Detection – Password Management – Malicious Software - Firewalls – Trusted Systems.

TEXT BOOKS :
1. William Stallings, “Cryptography and Network security”, 4th ed., Pearson Education, 2010.
2. William Stallings “Network Security Essentials Applications and Standards”, 2nd ed.,Pearson Education, 2009.
REFERENCE BOOKS :
1. Eric Malwald, “Fundamentals of Network Security “, 4th ed., Pearson Education, 2010.
2. Charlie Kaufman, “Radis Perlman and Mike Speciner ,Network Security – Private Communication in a Public World”, 1st ed., Pearson Education,2009 .
3. Buchmann, Springer ,”Introduction to Cryptography”, 2nd ed., Pearson Education, 2009.

BC – 304 Big Data analytics

Course description and Objectives: The main objectives of this course is to enable the students with basic data analytic skills like regression analysis, classification techniques, clustering techniques, association rule mining. Further, this course also enables the students how to scale the above algorithms with different data environments like massive amounts of data, streaming data, distributed data and provide hands on experience on real world problems using the above theoretical background.

Course Outcomes:

- Necessary theory background to process analytics.
- Processing analytics on small scale data. ·
- Mining from massive datasets.
- Mining from distributed datasets.

UNIT - 1 Introduction To Big Data :
Introduction to Big Data Platform – Traits of Big data -Challenges of Conventional Systems - Web Data – Evolution Of Analytic Scalability - Analytic Processes and Tools - Analysis vs Reporting - Modern Data Analytic Tools - Statistical Concepts: Sampling Distributions - ReSampling - Statistical Inference - Prediction Error.

UNIT - 2 Data Analysis :
Regression Modeling - Multivariate Analysis - Bayesian Modeling - Inference and Bayesian Networks - Support Vector and Kernel Methods - Analysis of Time Series: Linear Systems Analysis - Nonlinear Dynamics - Rule Induction - Neural Networks: Learning And Generalization - Competitive Learning - Principal Component Analysis and Neural Networks - Fuzzy Logic: Extracting Fuzzy Models from Data - Fuzzy Decision Trees - Stochastic Search Methods.

UNIT - 3 Mining Data Streams :
Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis, Stock Market Predictions.

UNIT – 4 Frequent Item sets and Clustering:
Mining Frequent Itemsets - Market Based Model – Apriori Algorithm – Handling Large Data Sets in Main Memory – Limited Pass Algorithm – Counting Frequent Itemsets in a Stream – Clustering Techniques – Hierarchical – K-Means – Clustering High Dimensional Data – CLIQUE And PROCLUS – Frequent Pattern based Clustering Methods – Clustering in NonEuclidean Space – Clustering for Streams and Parallelism.

UNIT -5 Frameworks And Visualization :
MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques; Systems and Analytics Applications - Analytics using Statistical packagesApproaches to modeling in Analytics – correlation, regression, decision trees, classification, association-Intelligence from unstructured information-Text analytics-Understanding of emerging trends and technologies-Industry challenges and application of Analytics

BC- 306 seminar

BC-308 project

I

YEAR

BACHELOR OF BUSINESS ADMINISTRATION

BBA

COURSE CONTENTS

I SEM & II SEM

17BB101 BUSINESS COMMUNICATION - I

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objectives:

To introduce students to the specific use of language for the purposes of Business Communication which would be an essential pre-requisite for success in the areas of writing and speech. The teaching efforts in this course will be directed towards making students develop their business and general writing abilities using the fundamental principles that apply to the correct use of the English language free of grammatical and other related errors.

Course Outcomes:

By observing the rules of grammar, vocabulary and composition that are learnt during the course, students are made to appreciate the intelligent and innovative use of rules in order to be able to generate creative output in tune with the demands of industry and the corporate world. The course improves their power of comprehension and the ability to express themselves with rigor through writing and speech.

UNIT - I			**10HRS**
•	Text	:	GLOBAL ISSUES (Child Labour – Food Crisis – Genetic Modification – E-waste – Assistive Technology)
•	Grammar	:	Articles – Prepositions
•	Vocabulary	:	Root–Prefixes-Suffixes - Synonyms – Antonyms
•	Composition	:	Paragraph Writing (Descriptive & Narrative) Letter Writing (Formal - Application - Business)
UNIT-II			**10HRS**
•	Text	:	MEDIA MATTERS (History of Media – Language and Media – Milestones in Media – Manipulation by Media – Entertainment Media - Interviews)
•	Grammar	:	Time and Tense (Present-Past-Future; Helping Verbs; Modals)
•	Vocabulary	:	Use of Adjectives
•	Composition	:	E-mail - Report-Writing – Writing Advertisements
UNIT - III			**10HRS**
•	Text	:	LESSONS FROM THE PAST (Importance of History – Differing perspectives – Modern Corporatism – Lessons from the Past)
•	Grammar	:	Subject-Verb Agreement - If Conditional
•	Vocabulary	:	Idioms & Phrases – One-word Substitutes
•	Composition	:	Summarizing and Note-making
UNIT-IV			**10HRS**
•	Text	:	Travel and Tourism (Advantages and disadvantages of Travel – Tourism – Atithi devobhava – Tourism in India)
•	Grammar	:	Sentence Transformation (Degrees, Voice, Speech & Synthesis)
•	Vocabulary	:	Phrasal Verbs
•	Composition	:	Letter Writing (Formal - Application - Business)
•	Practice	:	Situational Conversations – Role-Plays (Introducing; Greeting; Enquiring; Informing; Requesting; Inviting – Emotions; Directions; Descriptions; Agreements; Refusals; Suggestions)
UNIT - V			**10HRS**
•	Text	:	GETTING JOB-READY (SWOT-Analysis – Companies and Ways of Powering Growth – Preparing for Interviews)
•	Grammar	:	Common Errors
•	Vocabulary	:	Connectives – Discourse Markers

- Composition : Profile - Curriculum Vitae – Problem Solving (Case Studies)
- Practice : Group Discussions

Textbook:

1. Mindscapes - Orient Black Swan, 2012.

Reference Books:

1. V. R. Narayana Swamy, “Strengthen Your Writing”, 1st edition, Orient blackswarn, 2005.
2. Thomas Elliott Berry, “The Most Common Mistakes in English Usage”, 1st edition, Tata McGraw Hill, 2004.
3. T. Balasubramanyam, A Textbook of English Phonetics for Indian Students, Macmillan Ltd., 2012.
4. Sasikumar.V and P.V. Dhamija,. Spoken English: A Self-Learning Guide to Conversation Practice, 34th reprint, Tata McGraw Hill, New Delhi, 1995.
5. Margaret M Maison, “Examine your English”, 1st edition, Orient Longman, 1999.

17BB103 BUSINESS MATHEMATICS

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objectives:

The objective of this course is to familiarize the students with mathematical tools useful for decision making. Students will learn set theories, types of matrices, binomial theorem, derivatives of standard function and knowledge of integrals. (Proofs and derivations are excluded).

Course outcomes:

After reading this course student can able to understand

- Set, elements of set, methods of describing a set, types of sets, Venn diagrams, Operations on sets, Algebra of sets, Cartesian product of sets, Set relations and its properties.
- Types of matrices, scalar multiplication of matrix, equality of matrices, addition, subtraction, multiplication of matrices, determinants, Cramer's rule, solution of linear equations, inverse of a matrix, solution of equations by matrix method and rank of a matrix.
- Binomial theorem, position of terms, binomial coefficients and its applications.
- Understand the concept of arithmetic and geometric progressions.
- The derivative and the derivatives of standard functions, additive, multiplicative and quotient rules of derivatives, maxima and minima of a function.

SKILLS:

(These activities are only indicative; the Faculty member can innovate)

- ✓ *Identify the applications of business mathematics for solving managerial problems.*
- ✓ *Take any applications of business problem and solving using matrices.*
- ✓ *List the uses binomial theorem, arithmetic and geometric progression in business.*
- ✓ *Write the various applications of differentiation in business.*

UNIT - I **10HRS**

Set Theory: Definition of Set, Presentation of Sets, Different types of Sets- Null Set, Finite and Infinite Sets, Universal Set, Subset, Power Set etc., Set operations: Laws of algebra of Sets and problems., Cartesian product of sets.

UNIT-II **10HRS**

Matrix Algebra: Introduction operations on matrices**:** Addition, subtraction and multiplication of matrices –adjoint of matrix, inverse of a matrix - solution of simultaneous equations (Cramer's rule and matrix inverse method), rank of matrix

UNIT-III **10HRS**

Binomial Theorem: Statement of the theorem for positive integral index - General term - Middle term - Equidistant terms- Simple properties of binomial coefficient.

UNIT IV 10HRS

Arithmetic and Geometric Progressions: Introduction, Arithmetic progression, sum of a series in A.P. Arithmetic mean, geometric progression, sum of series in G.P. geometric mean.

UNIT-V **10HRS**

Differentiation: Interdiction basic laws of derivatives- product rule – quotient rule - higher order Derivatives - maxima and minima of functions.(Simple algebraic and simple trigonometric functions only)

Text Books:

1. D. C. Sancheti and Kapoor V.K ., Business mathematics, 6th edition, Sultan Chand & sons, New Delhi, 2012.

Reference Books:

1. Business Mathematics, Sancheti. D.C.,6th edition, Sultan Chand,, New Delhi, 1979.
2. Kapoor V.K., Introductory Business Mathematics", 14th revised, New Delhi, Sultan Chand, 2014.

17BB105 FINANCIAL ACCOUNTING

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objectives:

This course is intended to provide knowledge on accounting practices to equip students with concepts, process and reporting of financial statements in modern organizations. Students will learn accounting principles, accounting process, preparation of final accounts for sole trading firms and companies and bank reconciliation statement.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- Understand Accounting concepts, conventions and principles
- Accounting system and process- journal and ledger
- Preparation of final accounts
- Preparation company accounts

SKILLS :

(These activities are only indicative, the Faculty member can innovate)

- ✓ *Contact an NGO and find out their system of accounting.*
- ✓ *Collect information with regard to the practical reasons for charging*
- ✓ *Depreciation and the methods adopted for calculating the same.*
- ✓ *Generate different types of financial and cost related reports using excel and tally.*
- ✓ *Find out the accounting system adopted by a Sole Proprietor*
- ✓ *Differences between Double Entry and Single Entry systems of Book-keeping.*
- ✓ *Analyse the differences between Profit & Loss Account and Income & Expenditure Account/ Receipts & Payments Account.*

UNIT-I **10 Hrs**

Introduction to Accounting: Meaning, Need for Accounting, Objectives of Accounting, Advantages Book-Keeping, , Accounting Terminology, Internal and External users of accounting information, Accounting Cycle, limitations of accounting, Accounting Concepts and Conventions, (GAAP).

UNIT - II 10 Hrs

Accounting systems & process: Double Entry Book-Keeping System, Process of accounting transactions, Classification of Accounts, Journal-Ledger-Trial balance.

UNIT-III **10 Hrs**

Preparation of Final Accounts: Concept of Capital and Revenue**.** Trading - Profit & Loss Account - Balance sheet – Problems with Adjustments.

UNIT - IV **10 Hrs**

Depreciation and inventory management: Meaning, need & importance of depreciation, methods of charging depreciation. Valuation of Inventory – Methods of Inventory Valuation.

UNIT - V **10 Hrs**

Company Accounts: Meaning-Importance-Types of Shares &Debentures- Issue-Forfeiture- Re-Issue-Redemption of Debentures.

Text Book:

1. S.P. Jain, K.L Narang “Financial Accounting”, 3rd Edition, Kalyani Publishers, 2016.
2. Jawahar Lal,Seea Srivastava, “Financial Accounting-Principles And Practices:, 3rd Edition, S. Chand, NewDelhi, 2014.

Reference Books:

1. Jain S.P., & Narang K L. “Basic Financial Accounting*”*, 1st Edition, Kalyani publishers, 2014.
2. Maheshwari, S.N., & Maheshwari, S.K. . “Advanced Accountancy*”*, 10th Edition, Vikas house publication ltd, 2010.
3. Shukla, M. “Advanced Accounts” 19th Edition, S Chand Group, 2016. .
4. Radhaswamy, M & Gupta, R.L. “ Advanced Accountancy*”* 17th Edition*,* Sultan Chand & Sons, 2014.

17BB107 MICRO ECONOMICS

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objective:

This course is designed to make the students familiar with the basic concepts and principles of Business Economics. In addition it develops skills to make decisions related to demand analysis, theory of production, cost analysis and different markets and pricing methods.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- Understand and apply supply and demand analysis to relevant economic issues.
- Apply marginal analysis to the “firm” under different market conditions.
- Understand the causes and consequences of different market structures .
- Apply economic models to examine current economic issues and evaluate policy options for addressing these issues.

SKILLS:

These activities are only indicative, the Faculty member can innovate)

- ✓ *To conduct a survey on the practical application of laws of economics.*
- ✓ *To collect data on sales of consumer durable goods and predict the sales for a later year.*
- ✓ *To find different case studies relating to different market conditions and to do an analysis.*
- ✓ *To find out low demand differentiates between normal and inferior goods.*
- ✓ *To analyze the role of a business economist in the everyday functioning of an organization taking live examples.*

UNIT - I **10 Hrs**

Introduction to Economics: efinition- scarcity, welfare and wealth, scope of economics Nature and Significance of Managerial Economics, Basic Economic concepts, Micro and Macro Economics.

UNIT - II **10 Hrs**

Consumer Demand Analysis - Cardinal and Ordinal Approach: Meaning and types of Demand, Demand determinants, Law of Demand, Elasticity of Demand – Types, Degrees and Measurement of Elasticity. Demand Forecasting-kinds and methods

UNIT - III **10 Hrs**

Production Analysis: Production, production function, iso-quant, iso-cost , least-cost combination of input factors**, MRTS ,** Laws of Production – law of Variable proportions and Laws of Returns of Scale.

UNIT - IV **10 Hrs**

Cost Analysis: Cost Analysis – Types of costs, cost function, cost-output relationship in the short-run and in the long-run. Break-even analysis –schedule, chart and simple problems.

UNIT - V **10 Hrs**

Market Structure: Market, Market structure, Perfect competition – Meaning, Equilibrium of firm and industry under perfect competition, Pricing under imperfect competition – monopoly and monopolistic competition- Methods of pricing.

Books for Reference:

1. D. M. Mithani: Business Economics, , 1st Edition, Himalaya publishing house, 2017
2. Dr. P. N. Reddy & H. R. Appannaiah: Essentials of Business Economics, 1st Edition, Himalaya, 2014
3. H. Craig Petersen & W. Cris Lewis: Managerial Economics, 4th Edition, PHI, 1999
4. Joel Dean: Managerial Economics, , 1st Edition, prentice hall, 1951
5. K. Dewett: Economic Theory, Reprint Edition, S chand, 2006.

17BB109 IT TOOLS FOR BUSINESS

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objective:

The primary objective of this course is to familiarize the student with basic concepts of computers and information technology and their applications to business processes. Students will learn fundamentals of computers, MS office, MS Excel, some important softwares and their application in business decision making.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- Understand the computer fundamentals.
- Computer softwares, internet and its applications.
- MS Office and Excel.
- Computer and IT applications in business decision making.

SKILLS:

These activities are only indicative, the Faculty member can innovate*)*

- ✓ *To conduct a survey on the practical application of laws of economics.*
- ✓ *To collect data on sales of consumer durable goods and predict the sales for a later year.*
- ✓ *To find different case studies relating to different market conditions and to do an analysis.*
- ✓ *To find out low demand differentiates between normal and inferior goods.*
- ✓ *To analyze the role of a business economist in the everyday functioning of an organization taking live examples.*

UNIT - I **10 Hrs**

Computer Fundamentals: Block Structure of a Computer, Characteristics of Computers, Generations of Computers, Classification of Computers, Computer Memory and Mass Storage Devices, Input-Output Devices.

UNIT - II **10 Hrs**

Computer Software: application and system software, programming languages and their classification, assemblers, compilers and interpreters, process of software development, operating systems: functions of operating systems. **Computer Network & Communication**: Network types, network topologies, network communication devices, physical communication media, network protocol (TCP/ IP), internet and its applications:

UNIT - III **10 Hrs**

MS Office- Text processing using word- Functions. MS Excel-Graphs, Basic statistical formulae using MS Excel, MS-Power Point –Creating Effective Presentations.

UNIT - IV **10 Hrs**

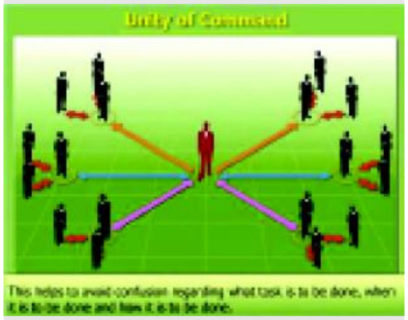
Computers and IT in business applications: Introduction, Business and Computer, E-Mail, E-Commerce, Project management, Computers in personnel Administration, Accounting, Computers in Cost and Budget Control, Marketing, Manufacturing, Materials management, Banking, Insurance And Stock-broking, Purchasing activities.

UNIT - V **10 Hrs**

World Wide Web and Business Community, Internet, E- Mail with TCP/IP.

Suggested Readings / Books:

1. ITL Education Solutions, Introduction to Information Technology, Pearson Education, 2012.
2. Turban, Rainer and Potter, Introduction to information technology, John Wiley and Sons, 2004, 3 edition.
3. Information Technology for Managers, Sudalaimuthu & Hariharan, HPH, 2010.
4. Understanding Computers Today & Tomorrow, D.Monley & CS Parker, Cengage/Thomson, 2014 15th edition.



17BB111 PRINCIPLES AND PRACTICE OF MANAGEMENT

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objectives:

The course is intended to provide knowledge on basic perspectives of management theories and practices. This will form foundation for further study of functional areas of management and provide for understanding how organizations function. In addition should will list out all the functions of any production and

Course Outcomes:

By studying this course, the student will be able to:

- Appraise the management functions in organizations.
- Apply the techniques of management such as, planning, decision making, etc.
- Understand the role of managers in organizations.
- Identify the differences in motivational needs of individuals.
- Apply the leadership styles under different management conditions.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *Present sample organization charts (structure).*
- ✓ *Show a sample template of staffing.*
- ✓ *Graphic representation of Maslow's Theory.*
- ✓ *Chart on Media of Communication.*
- ✓ *Draft Control chart of different industry/business groups.*
- ✓ *Prepare list of corporate strategies that are adopted by Indian Companies to face the challenges of competition.*
- ✓ *Select a successful retail store and give details of factor leading to its success*
- ✓ *Select a failed venture, if any known to you, and bring out reasons for its failure (Note what we learn from these success & failure stories).*
- ✓ *Select a company and prepare a SWOT analysis for the same.*
- ✓ *Mention the characteristics and skills of managers in the 21st century.*
- ✓ *List out some unethical practices prevailing in an organization.*
- ✓ *Undertake a study of some ethical practices followed by an organization.*

UNIT - I **10 Hrs**

Introduction to Management: Management: The Art and Science – Functions of management- Management Levels – Roles of Managers –Evolution of management-Theories of management:Scientific management– Henry Fayol's theory – Weber's Bureaucracy – Human relations approach – Behavioral Science Approach – Systems' View of Management - Management Vs administration .

UNIT - II **10 Hrs**

Planning: Importance – Benefits – Disadvantages – Types of plans – Process of planning – Management By Objectives- Decision – Decision Making – Process and Techniques.

UNIT - III **10 Hrs**

Organizing: Organization: Types, Organization Chart – Basic Types of organization structures– Concepts of Departmentation, Delegation and Decentralization–Staffing: Functions

UNIT - IV **10 Hrs**

Directing – Concept of Directing – Leadership: Types of leaders – Trait, Behavioral and Contingency Approaches to Leadership – Motivation: Maslow's need hierarchy theory – Herzberg's two factor theory – Theory X and Theory Y – Equity theory – Expectancy theory – Communication: Process – Barriers – Formal and informal communication- Effective Communication

UNIT - V **10 Hrs**

Controlling: Need for controlling – Steps involved in controlling – process of controlling – Tools for Control: Balanced Score Card, Financial controls, Total Quality Management

Text Books:

1. Weihrich& Koontz, "Essential of Management", 7th edition, Tata McGraw Hill, 2009.
2. Angelo Kinicki, Brian Williams, "Principles of Management", 6th edition, McGraw Hill, 2010.

Reference Books:

1. James A. F. Stoner, "Management", Thomson, 1st edition, Prentice Hall, 1986.
2. Heinz Weihrich, Harold Koontz, "Management A Global Perspective", 10th edition, TMH, 2004.
3. Stephen P. Robbins Mary Coulter, "Management", 13th edition, PHI, 2017.

17BB113 ENGLISH PROFICIENCY COURSE - I

Hours Per Week :

L	T	P	To	C
-	-	4	4	2

Course Objectives:

To equip the learners with Functional English by experiencing wide range of language usage in different Situations**.** To instill among the learners the significance of developing LSRW skills and to create a scaffolding to the learners to speak in real life situations. To help learners acquire adequate vocabulary which enable them communicate in day to day situations

Course Outcomes:

By the end of 100 hours programme, the learners will be proficient in English and ready to take an Intermediate Level English Proficiency Test by an external certifying agency viz. Preliminary English Test by Cambridge English Language Assessment.

UNIT - I **10 Hrs**

Activity-1	:	Introducing Self
Activity-2	:	Introducing Others
Activity-3	:	Expressing Needs and Necessities

UNIT - II **10 Hrs**

Activity-4	:	Expressing Likes and Dislikes
Activity-5	:	Describing People and Places
Activity-6	:	Describing Things and Processes

UNIT - III **10 Hrs**

Activity-7	:	Describing Special and Temporal Relations
Activity-8	:	Giving Instructions and Directions
Activity-9	:	Talking about Routine or Habits

UNIT - IV **10 Hrs**

Activity-10	:	Narrating Events
Activity-11	:	Commenting on Happenings
Activity-12	:	Making Predictions

UNIT - V **10 Hrs**

Activity-13	:	Retelling and Relating Events
Activity-14	:	Asking for information, Clarification and Confirmation
Activity-15	:	Discussing and Debating

17BB102 BUSINESS COMMUNICATION-II

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objectives:

The purpose of the course is to develop the students' competence and confidence to communicate at an advanced level. Students will learn how to improve LSRW skills and developing strategies for LSRW skills. They also learn business letter writing and correspondence skills.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- Understand the essentials of an effective communication.
- How to improve LSRW skills.
- Understand strategies for developing LSRW skills.
- Understand elements of business letter writing.
- Knowledge of business correspondence and professional correspondence.

SKILLS:

(These activities are only indicative, the Faculty member can innovate*)*

✓ *Findout the barriers of communication by playing story telling games*

✓ *Write a letter to your manager and subordinates*

✓ *write a letter to your supplier about raw material requirement*

✓ *Have a telephone converstion with your clients*

✓ *Write a circular to your department regarding holiday cancellation*

UNIT - I **10 Hrs**

Basics of Communication: Communication Process & Elements, Need of Communication Skills in Management, Channels of Communication, Types of Communication, Barriers to Communication, How to overcome the Barriers, Principles of effective communication.

UNIT - II **10 Hrs**

Language and Communication: Language as a tool of communication, Importance of LSRW skills, Strategies for developing LSRW skills.

UNIT - III **10 Hrs**

Business Letter Writing: Purpose of format of a business letter, Elements of a business letter, Types of business letters, Enquiry, Sales, Quotations, Claims, Adjustment, and other social correspondence.

UNIT - IV **10 Hrs**

Business Correspondence: Reports, Memos, Notice/Circular, Agenda, Minutes, e-mail.

UNIT - V **10 Hrs**

Professional Correspondence: Interview skills, Leadership qualities, Business etiquette, Telephone etiquette, Group Discussion, Group Dynamics, Presentation skills.

Text Books:

1. Success with Grammar & Composition by K.R.Narayana Swamy.
2. Communication Skills for Technical Students by T.M.Farhatullah

Reference Books:

1. Basic Communication Skills for Technology by Andse J.Rutherford. Pearson Education Asia.2000, 2nd edition.
2. Advanced Communication Skills by V.Prasad, Atma Ram.
3. Business Communication by Raymond V. Lesikar, 1995, Mcgrew hill.
4. Writing Remedies by University Press.

17BB104 COST ACCOUNTING

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objectives:

The objective of this subject is to familiarize students with the various concepts and elements of cost. Students will prepare sample cost sheet by using methods of costing, cost reduction and cost control process-methods and techniques.

Course Objectives:

By the end of this course it is expected that the student will be able to:

- Understand cost concepts and elements of cost sheet.
- Methods of costing.
- Cost reduction and cost control process- methods and techniques.
- To prepare cost sheet by using various methods of costing.

SKILLS :

(These activities are only indicative, the Faculty member can innovate)

- ✓ *List out methods of costing adopted by industries located in the region.*
- ✓ *List out materials consumed in any two organizations of your choice.*
- ✓ *Draw a specimen of a bin–card.*
- ✓ *Draw a specimen of stores ledger.*
- ✓ *List out the various expenses of two companies and prepare the cost sheet.*

UNIT - I **10 Hours**

Introduction to Cost Accounting: Introduction – Meaning & Definition of Cost, Cost concepts-Classification of cost, preparation of cost sheet.

UNIT - II **10 Hours**

Methods of Costing: Unit Costing, Job Costing and Contract costing.

UNIT - III **10 Hours**

Process Costing: Meaning, Features, Objectives –Cost Accounting Procedure and its application in Process Industry.

UNIT - IV **10 Hours**

Standard Costing and Variance Analysis: Meaning –Importance of Standard Costing-Variance Analysis-Advantages- Limitations of Standard Costing.

UNIT - V **10 Hours**

Cost Reduction and Cost Control Process: Introduction—Cost reduction and Cost Control Process-Short and long range cost control-cost reduction strategies-Methods and Techniques- Value Engineering Programme.

Text Books:

1. M.N. Arora "Cost Accounting", 12th Edition, Vikas Publication, 2013.

Reference Books:

1. N.K.Prasad "Principles & Practice of cost accounting", 1st Edition, Syndicate pvt ltd, 1979.
2. G. Prasad, K.S.R.K.Prasad "Cost Accounting", 3rd Edition, Jai Bharat, 2009.

17BB106 BUSINESS PSYCHOLOGY

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objective:

The objective of this course is to gain a basic understanding of major topics in Business psychology. Emphasis is placed on what common practice entails and how it affects the individual in the organization. Students will learn elements of motivation, job satisfaction and positive psychology.

Course Outcomes:

The student will:

- Understand fundamentals of business psychology.
- Learn factors influence motivation and job satisfaction.
- Learn performance management process, elements of training and HRD.
- Understand elements of positive psychology.

SKILLS :

(These activities are only indicative, the Faculty member can innovate)

- ✓ *Undertake a study to find out how employee behavior effect from work environment and which factors affecting to employees motivation.*
- ✓ *Analyze the characteristics and components of individuals behavior.*
- ✓ *Perform a study on the determinants of individuals in work place.*
- ✓ *Analyze the organizational culture and climate and stress management of the employees in any industry.*
- ✓ *Conduct a study on the reasons for Unhappy.*

UNIT - I **10 Hrs**

Introduction to Business Psychology: Definitions & Scope Major influences on Business Psychology-Scientific management and human relations schools Hawthorne Experiments.

UNIT - II **10 Hrs**

Individual in Workplace: Motivation and Job satisfaction, stress management. Organizational culture, Leadership.

UNIT - III **10 Hrs**

Work Environment: Psychology and Work Environment; Emerging issues: Place Attachment, Pro-Environmental Behavior, and Ecological Consumerism.

UNIT - IV **10 Hrs**

Neuroscience and Behavior: **Introduction, Autonomic & Neuro - endocrine Systems, the connection between the brain and behavior.**

UNIT - V **10 Hrs**

Positive Psychology: Psychology of well being, happiness and the facts of life, happiness across the life span, gender-marriage and happiness, life above zero-positive psychology revisited.

17BB108 MACRO ECONOMICS

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objective:

To give a broader perspective of the working of Indian economy. Students will learn concepts of national income, sources of revenue and classification of expenditures, LPG policies, WTO, TRIPS, TRIMS and GATT, agrarian structure and Indian economy. They also learn Industrial strategy and its impact on development, causes and measures of poverty.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- Understand concepts of national income, sources of revenue and classification of expenditures.
- LPG policies, WTO, TRIPS, TRIMS and GATT.
- Agrarian structure and Indian economy.
- Industrial strategy and its impact on development.
- Causes and measures of poverty.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *To study how business cycles have impacted the global economy in the past companies.*
- ✓ *To compare the monetary policies of any two economies.*
- ✓ *Do a case study of National income accounting company and underdeveloped economy with a developed area.*
- ✓ *Find out the recent changes introduced in monetary and fiscal policies.*
- ✓ *Prepare a report of Demonetization effect on economy.*
- ✓ *Find statistical trends in unemployment.*
- ✓ *List the difference between states in context of poverty, poverty alleviation programmes, literacy, population etc.*

UNIT - I **10 Hrs**

National Income: Basic Concepts of National Income -Sect oral composition of National Income of India and changes there in Performance on the social front -Union Government- sources of Revenue and classification of expenditures, Fiscal indicators.

UNIT - II **10 Hrs**

LPG Policies: Transition from Centralized Planning to Indicative Planning -LPG policies, Relative roles of state and markets in pre-liberalization and post- liberalization periods -Globalization and its discontents -WTO, TRIPS, TRIMS,GATS.

UNIT - III **10 Hrs**

Agrarian Structure: Agrarian Structure, land Reforms, Farm subsidies, Support prices and Procurement policies, Food Security, Agrarian Crisis and Farmer suicides, WTO and Indian Agriculture .

UNIT - IV **10 Hrs**

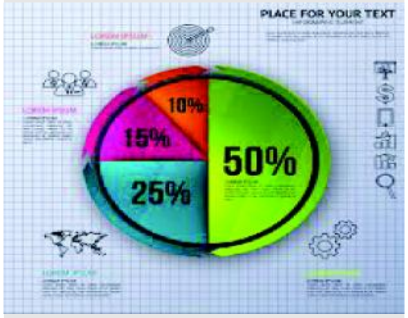
Industrial Strategy: Strategy of Industrialization, Special Economic Zones, FDI Policy-Multi-National Companies and their importance -Rise of Corporate power in India -Privatization and Dis-investment policies -Infrastructure policies.

UNIT-V **10 Hrs**

Alleviation programmes: Measures of Poverty and inequality and trends therein - Anti poverty programmmes - Public Distribution System - Wage employment programmes-Concepts of Social justice and Inclusive growth and their Components.

Reference Books:

1. Dutt and Sundaram, “Indian Economy”, Sultan Chand, Edition 72, 2016.
2. Misra and Puri, “Indian Economy”, Himalaya Publication, Edition 34, 2016.



17BB110 BUSINESS STATISTICS

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objective:

The objective of this course is to provide the basic knowledge of the various statistical techniques useful to managers in their decision-making. Students will learn statistical tools like measures of central tendency, dispersion, Regression and Correlation analysis, sample tests and Hypothesis testing.

Course Outcomes:

The focus is on the use of statistical techniques to describe the data, thereby enabling the student to

- Define statistics, become aware of wide range of applications in statistics, types of data, tabulation of data, construct a histogram, frequency polygon, an give, pie chart,
- Apply various measures of central tendency –mean, median, mode, GM and H.M for grouped and ungrouped data. Apply various measures of variability-range, MD, QD, standard deviation, and to know percentiles, Deciles.
- Understanding the concepts of various measures of dispersion and its applications in business decisions.
- Understand the concepts of probability and its uses for making decisions in business.
- Understand the concepts of discrete and continuous probability distribution.

SKILLS:

*(*These activities are only indicative; the Faculty member can innovate*)*

- ✓ *Collect statistical information's from Magazines, Newspapers, Television, Internet etc.,*
- ✓ *Collect interesting statistical facts from various sources and paste it in your note book.*
- ✓ *Collect a primary data about the mode of transport of your school students. Classify the data and tabulate it.*
- ✓ *From the mark sheets of your class, form the frequency tables, less than and more than cumulative frequency tables.*
- ✓ *Get the previous monthly expenditure of your family and interpret it into bar diagram and pie diagram. Based on the data, propose a budget for the next month and interpreted into bar and pie diagram. Compare the two months expenditure through diagrams*
- ✓ *Measure the heights and weights of your class students. Find the mean, median, mode and compare*
- ✓ *Find the mean marks of your class students in various subjects. Analysis of data by computing standard deviation and coefficient of variation.*
- ✓ *Collect the data from magazines, newspapers, and television, and publications. Present the data in graphs and diagrams.*

UNIT - I **10HRS**

Statistics, Data classification, tabulation and presentation: Meaning of statistics, growth and development of statistics, importance and scope of statistics, Limitations of statistics, Reasons for learning data, Classification of data, organizing data using data array, tabulation of data, graphical presentation of data, types of diagrams, exploratory data analysis.

UNIT - II **10HRS**

Measures of central tendency: Introduction, measures of central tendency, mathematical averages: Simple mean, weighted mean, Geometric mean, harmonic mean, averages of position: median, mode, quartiles, deciles, percentiles, deciles.

UNIT - III **10HRS**

Measures of Dispersion: Introduction, classification of measures of dispersion, distance measures: range, interquartile range, average deviation measures: mean absolute deviation, variance and standard deviation, coefficient of variation.

UNIT - IV **10HRS**

Fundamentals of probability: Introduction. Event types, definition of probability, fundamentals rules of probability, counting rules for determining the number of outcomes, rules of probability and algebra of events, Bayes' theorem.

UNIT - V **10HRS**

Probability distributions: Introduction, discrete probability distribution: binomial probability distribution, Poisson probability distribution, Continuous probability distributions: normal probability distribution.

Text books:

1. J. K. Sharma, Business statistics problems and solutions, 1st edition, Pearson Education, 2011.
2. J. K. Sharma, Business statistics, 4th edition, Vikas publishers, 2014.

Reference books:

1. Gupta, S.P. Statistical Methods,44th edition, Sultan Chand & Sons.2012.
2. G.C.Beri, Business Statistics, 3rd ed., McGraw Hill, Mcgraw hill,2017.

17BB112 GEOGRAPHY AND ENVIRONMENTAL STUDIES

Hours Per Week :

L	T	P	To	C
4	-	-	4	4

Course Objective:

To sensitize the students on the environmental aspects of development and give basic exposure to geography. Students will learn fundamentals of geography, Sources of energy and importance of Bio-Diversity. They also learn environmental issues and their implications.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- Understand fundamentals of geography.
- Learn milestones in India's scientific and technological progress.
- Sources of energy and their importance.
- Importance of Bio-Diversity.
- Environmental issues and their implications.

SKILLS:

(These activities are only indicative, the Faculty member can innovate)

- ✓ *To study how business cycles have impacted the global economy in the past companies.*
- ✓ *To compare the monetary policies of any two economies.*
- ✓ *Do a case study of National income accounting company and underdeveloped economy with a developed area.*
- ✓ *Find out the recent changes introduced in monetary and fiscal policies.*
- ✓ *Prepare a report of Demonetization effect on economy.*
- ✓ *Find statistical trends in unemployment.*
- ✓ *List the difference between states in context of poverty, poverty alleviation programmes, literacy, population etc.*

UNIT - I **10 Hrs**

Geography: Fundamental concepts of Geography-Physical Geography of India – River systems, climate, soils, minerals, geological Strata, climatic regions, natural vegetation, Races and Physical Types of People.

UNIT - II **10 Hrs**

Scientific and Technological Development: Milestones in India's scientific and technological progress in diverse fields – space, Nuclear, IT, Defense, Agriculture and Rural technologies- Prominent scientists of India and their contribution -Recent initiatives to spread scientific temper and S & T practices.

UNIT-III **10 Hrs**

Energy Sources: Sources of Energy-availability and consumption pattern, Energy policy and pricing Issues relating to hydel power (Big Dams), Thermal Plants and Nuclear power Green Energy technologies and their importance.

UNIT-IV **10 Hrs**

Biodiversity: Meaning and importance of Bio-diversity, Sustainable Development-Ecosystems and their management -Bio-Diversity of India, Bio- spheres and Biodiversity hot spots of India Initiatives to preserve bio-diversity.

UNIT - V **10 Hrs**

Environmental issues: Magnitude, causes and consequences of environmental pollution in India - Factors that led to global warming and climate change -Recent international protocols to tackle climate change, Carbon trading and its implications -Concerns of Developing Countries.

Reference Books:

1. Bio & Environmental Geog. Biosphere A Geography of Life
   By Dr. Thomas and K. Siddhartha.
2. Environmental Geology –By Valdiya.1987, TMH

17BB114 ENGLISH PROFICIENCY COURSE - II

Hours Per Week :

L	T	P	To	C
-	-	4	4	2

Course Objective:

To equip the learners with Functional English by experiencing wide range of language usage in different Situations**.** To instill among the learners the significance of developing LSRW skills and to create a scaffolding to the learners to speak in real life situations. To help learners acquire adequate vocabulary which enable them communicate in day to day situations.

Course Outcomes:

By the end of 100 hours programme, the learners will be proficient in English and ready to take an Intermediate Level English Proficiency Test by an external certifying agency viz. Preliminary English Test by Cambridge English Language Assessment.

UNIT - I			**10 Hrs**
Activity-1	:	Making Requests – Accepting/Refusing Requests.	
Activity-2	:	Inviting people – Accepting/Declining Invitations.	
Activity-3	:	Making Complaints – Responding to Complaints.	
UNIT - II			**10 Hrs**
Activity-4	:	Congratulating/Praising.	
Activity-5	:	Expressing Sympathy/condolence.	
Activity-6	:	Offering help Accept/Refuse.	
UNIT - III			**10 Hrs**
Activity-7	:	Conversing over phone.	
Activity-8	:	Advising/Suggesting.	
Activity-9	:	Comparing/Contrasting.	
UNIT - IV			**10 Hrs**
Activity-10	:	Convincing/Persuading.	
Activity-11	:	Negotiating.	
Activity-12	:	Making Decisions.	
UNIT - V			**10 Hrs**
Activity-13	:	Cause and Effect	
Activity-14	:	Stating and Concluding	
Activity-15	:	Drawing Conclusions	

UNIT-I: **- 12 Hrs**

Activity-1 : Making Requests – Accepting/Refusing Requests.

Activity-2 : Inviting people – Accepting/Declining Invitations.

Activity-3 : Making Complaints – Responding to Complaints.

UNIT-II: **- 12 Hrs**

Activity-4 : Congratulating/Praising.

Activity-5 : Expressing Sympathy/condolence.

Activity-6 : Offering help Accept/Refuse.

UNIT-III: **- 12 Hrs**

Activity-7 : Conversing over phone.

Activity-8 : Advising/Suggesting.

Activity-9 : Comparing/Contrasting.

UNIT-IV: **- 12 Hrs**

Activity-10 : Convincing/Persuading.

Activity-11 : Negotiating.

Activity-12 : Making Decisions.

UNIT-V: **- 12 Hrs**

Activity-13 : Cause and Effect

Activity-14 : Stating and Concluding

Activity-15 : Drawing Conclusions

Course Code: BB201

INDIAN ECONOMY

Objective of the Course:

To give a broader perspective of the working of Indian economy. Students will learn concepts of national income, sources of revenue and classification of expenditures, LPG policies, WTO,TRIPS, TRIMS and GATT, agrarian structure and Indian economy. They also learn Industrial strategy and its impact on development, causes and measures of poverty.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand concepts of national income, sources of revenue and classification of expenditures

2. LPG policies, WTO,TRIPS, TRIMS and GATT

3. Agrarian structure and Indian economy

4. Industrial strategy and its impact on development

5. Causes and measures of poverty

UNIT-I: - 12 Hrs

National Income: Basic Concepts of National Income -Sect oral composition of National Income of India and changes there in Performance on the social front -Union Government- sources of Revenue and classification of expenditures, Fiscal indicators

UNIT-II: - 12 Hrs

LPG Policies: Transition from Centralized Planning to Indicative Planning -LPG policies, Relative roles of state and markets in pre-liberalization and post- liberalization periods -Globalisation and its discontents -WTO, TRIPS, TRIMS,GATS

UNIT-III: - 12 Hrs

Agrarian Structure: Agrarian Structure , land Reforms, Farm subsidies, Support prices and Procurement policies, Food Security, Agrarian Crisis and Farmer suicides, WTO and Indian Agriculture

UNIT-IV: - 12 Hrs

Industrial Strategy: Strategy of Industralisation, Special Economic Zones, FDI Policy- Multi-National Companies and their importance -Rise of Corporate power in India -Privatization and Dis-investment policies -Infrastructure policies

UNIT-V: - 12 Hrs

Poverty: Measures of Poverty and inequality and trends therein - Anti poverty programmmes - Public Distribution System - Wage employment programmes - Concepts of Social justice and Inclusive growth and their Components

Reference Books:

1. Dutt and Sundaram, “Indian Economy”, Sultan Chand, 2014.

2. Misra and Puri, “Indian Economy”, Himalaya Publication, 2014.

Course Code: BB203

COST ACCOUNTING

Course Description and Objective:

The objective of this subject is to familiarize students with the various concepts and elements of cost. Students will learn cost concepts and elements of cost sheet, methods of costing, cost reduction and cost control process-methods and techniques.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand cost concepts and elements of cost sheet

2. Methods of costing

3. Cost reduction and cost control process- methods and techniques

UNIT-I **- 15 Hours**

Introduction to Cost Accounting: Introduction – Meaning & Definition of Cost, Cost concepts-Classification of cost-Methods and systems of cost Accounting. Preparation of cost sheet

UNIT-II **- 15 Hours**

Methods of Costing: Unit Costing, Job Costing and Contract costing

UNIT-III **- 12 Hours**

Process Costing: Meaning, Features, Objectives –Cost Accounting Procedure and its application in Process Industry

UNIT-IV **- 10 Hours**

Standard Costing and Variance Analysis: Meaning –Importance of Standard Costing-Variance Analysis-Advantages- Limitations of Standard Costing

UNIT-V **- 15 Hours**

Cost Reduction and Cost Control Process: Introduction—Cost reduction and Cost Control Process-Short and long range cost control-cost reduction strategies-Methods and Techniques- Value Engineering Programme.

Reference Books:

1. Principles & Practice of cost accounting by N.K.Prasad.
2. Cost Accounting Principles and Practice by M.N. Arora.

Course Code: BB205

MANAGEMENT INFORMATION SYSTEMS

Course Description and Objective:

To enable the students to understand management information systems to integrate for the purposes of information requirements, the accounting, financial, and operations management functions of an organization. And how MIS facilitates managerial decision making.

Learning Outcomes:

By the end of this course it is expected that the student will be able to:

1. Understand concepts of MIS

2. Types of MIS and its application in enterprises

3. MIS development and acquisition of information

4. MIS- Software development cycle

5. Research report preparation using MIS

UNIT-I **- 12 Hrs**

Management information systems-What is MIS-Concept of MIS- MIS in business functions- major components and technologies of an information systems infrastructure.

UNIT-II **- 12 Hrs**

MIS-Types of MIS- Application of MIS in enterprises- Information gathering-business blue print-Realization-Configuration-Documentation of business process- Final preparation for implementation of software packages.

UNIT-III **- 12 Hrs**

MIS- development and acquisition of information systems and technologies, assess the value of information systems investments, and formulate a business case for a new information system with estimation of both costs and benefits—to gain business intelligence, support decision making, create competitive advantages, or meet a competitive necessity.

UNIT-IV **- 12 Hrs**

MIS- Software Development Life Cycle (SDLC) -Accounting techniques and reports- Design and analyze business processing by utilizing advanced spreadsheet functionality including formulas, bar graphs, pie charts, and pivot tables.

UNIT-V **- 12 Hrs**

Prepare a research report on a current topic involving an information systems industry, strategy, or technology and synthesize this research with information presented in class.

Text Books:

1. C.S.V.Murthy, 2011, Management Information System, Himalaya Publications.
2. Goyal, D.P. “Management Information Systems”, MC Millan India.

Reference Books:

1. Murdic Rass, e.elagett, “Information System for Management”, Tata McGraw Hill, India.

3. James o’Brien, 2011, Management Information System, Golgotha Publications.
4. Davis and Olson, 2011, Management Information System, Tata Mc GrawHill.

Course Code: BB207

BUSINESS LAW

Course Description and Objective:

The main objective of the course is to make the students know the legal framework for carrying out a business. Issues related to drafting contracts, partnerships, company management & consumer protection laws will be discussed.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Learn essential elements of a valid contract
2. Partnership Act-1932 and Negotiable instrument Act
3. Company law and company management
4. Consumer protection Act and its importance in the present context

UNIT-I **- 10 Hrs**

Contract Law: The Indian Contract Act, 1872 - Nature of contract - Essential elements of valid contract – Performance of contract – Discharge of contracts - Remedies for breach of contract.

UNIT-II **- 10 Hrs**

Partnership Act & NI Act: The Indian Partnership Act–1932: Constitution of partnership - Rights of Partners – Duties of Partners - Dissolution of partnership.

The Negotiable Instruments Act – 1881: Characteristics of Negotiable Instruments – Promissory Note, Bills of Exchange, & Cheque, and their definitions and characteristics – Discharge of Parties.

UNIT-III **- 10 Hrs**

Company Law: The Companies Act, 1956 - Definition & its Characteristics – Company distinguished from partnership – Kinds of companies - Steps and procedure for incorporation of the company – Directors: Appointment, Duties, Powers, Liabilities.

UNIT-IV **- 10 Hrs**

Company Management: Meetings: Kinds of Meetings – Requisites of valid meeting, Proxies - Resolutions - Winding-up of a Company: By Tribunal – Duties of Liquidator - Powers of Liquidator – Voluntary winding up: By Members – By Creditors.

UNIT-V **- 10 Hrs**

Special Acts: The Consumer Protection Act, 1986: Consumer Protection councils – Redressal Machinery – The Air (Prevention and Control of Pollution) Act, 1981 - The Water (Prevention and Control of Pollution) Act, 1974 - The Environment (Protection) Act, 1986.

NOTE: Few case studies be discussed in the class

Text Books:

1. N.D.Kapoor, Mercantile Law, Sultan Chand & Sons, 2006.
2. C.L.Bansal, Business and Corporate Laws, 1/e, Excel Books, 2006.

Reference Books:

1. S.S. Gulshan, Mercantile Law, 2/e, Excel Books, 2004.
2. Akhileshwar Pathak, Legal Aspects of Business, 3/e, Tata McGraw-Hill, 2007.

Course Code: BB209

ORGANIZATIONAL BEHAVIOUR

Course Description and Objective:

The course provides a basic knowledge of various dimensions of human behavior. This will form the foundation to study and to understand the behavior of the human beings working in organizations. Students will learn nature and scope of OB, Perceptual process, important aspects of personality and attitude, group dynamics and effects of stress and issues of conflict management.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand nature and scope of OB
2. Perceptual process
3. Important aspects of personality and attitude
4. Group dynamics and effects of stress
5. Issues of conflict management

UNIT-I - 12 Hrs

Nature of OB: Nature and scope of OB - contributing disciplines to OB - Environmental and Organizational context of Organizational Behaviour.

UNIT-II - 12 Hrs

Perception - Process: Individual and Organizational factors that influence perceptional process. Role of perception in managerial activities and organizational processes.

UNIT-III - 12 Hrs

Personality and Attitudes: Personality as continuum – Meaning of Personality – Johari window and Transactional Analysis Nature and Dimension of Attitudes.

UNIT-IV - 12 Hrs

Group Dynamics: The Nature of groups. Kinds of groups – Stages of Group Development – Factors Contributing to Groups Cohesiveness - Meaning & types of stress – Effect of Stress – Strategies of cope with stress

UNIT-V **- 12 Hrs**

Conflict Management: Nature of conflict – Dynamics of Conflict – Conflict resolution modes – approaches to conflict management – sources of conflict in organization.

Text Books:

1. Luthans, Fred," Organizational Behaviour", 10/e, THM, 2007.
2. Robbins, P Stephen, Timotny A judge, "Organization Behaviour", 12/e, PHI, New Delhi, 2007.

Reference Books:

1. Organisation Behaviour by Nelson
2. Schermerhorn: Organisation Behaviour, Wiley, 9/e, 2005.
3. Organisational Behaviour by Aswathappa

Course Code: BB211

Soft Skills Laboratory

Course Description and Objective:

The Soft Skills Laboratory course is aimed at training undergraduate students and enabling them to acquire employability skills. Designed to impart work related skills, the course will help trainees develop interpersonal communication, leadership and team skills. It will give them the required competence and confidence to handle professional tasks.

Training Methodology:

The training methodology is designed to bring about changes in attitudes through experience-based learning. Activities in simulated environments such as role plays, group discussions, micro-presentations, audio-video clippings, case studies, psychometric tests etc., will provide students insights into their strengths and weaknesses.

Learning Outcome:

The Soft Skills course will help students develop professional and non-personal ways of approaching people and work through the correct use of language and speech in a workplace environment along with the ability to think critically on issues demanding attention. This includes enhancing self-awareness and a sense of self-worth in the students in order to improve their productivity and performance at the workplace.

Course Contents:

UNIT-I: **- 12 Hrs**

a) Role of language in Personality – How language reflects, impacts personality – Using gender-neutral language in MNCs – being culturally sensitive.

Activity – Appraising each other – Worksheets related to the above

b) Career Planning- job vs. career- goal setting- SWOT analysis- planning and prioritization - four quadrant time management system - time management – self-management – stress-management.

Activity: Setting a SMART goal - SWOT analysis of the self – Writing a Statement of Purpose (SOP).

c) Effective Resume-Writing: structure and presentation - planning and defining the career objective - projecting one's strengths and skill-sets – summarizing - formats and styles - covering letter.

Activity: Resume preparation –writing a covering letter.

UNIT-II: - 12 Hrs

A) Functional English - Formal/informal context – purpose - interpersonal dynamics - ideation –content organization - initiating a conversation –responding appropriately - right body language.

Activity - Role play in different situations, - self-introduction - social background (family, home town etc.,) - role model - my future - likes/dislikes (movies, persons, places, food, music etc.,) - a mini project on functional English.

b) Vocabulary-Building: Etymology of words - word roots - prefixes & suffixes - synonyms & antonyms- collocations - one-word substitutes – analogies - idioms and phrases - contextual guessing of unfamiliar words – task-oriented learning (100 words).

Activity: Flash cards (200 words) – vocabulary exercises with hand-outs.

UNIT-III: - 12 Hrs

a) Group Discussion: Articulation and flow of oral presentation - dynamics of group discussion – intervention – summarizing - voice modulation – content generation – Key Word Approach (KWA) – Social, Political, Economic, Legal and Technical Approach (SPELT) – View Point of Affected Part (VAP) - language relevance - fluency and coherence.

Activity: Mock sessions on four types of GD topics.

b) Facing Interviews: Interview process - understanding employer expectations - pre-interview planning - opening strategies - answering strategies – stress-based interviews - tele-interviews, video interviews- frequently asked questions (FAQs).

Activity: Writing responses to FAQs - mock interviews.

UNIT-IV: - 12 Hrs

a) Reading Comprehension: Reading as a skill- techniques for speed reading- skimming- scanning- appreciating stylistics - impediments for speed reading - eye fixation - sub-vocalisation - critical reading - reading based on purpose - reading for information - reading for inference -understanding tone.

Activity: Reading comprehension exercises with texts drawn from subject areas. (Hand-outs)

b) Listening Comprehension: Listening as skill - different types of listening - hidden data of communication - active listening - top-down approach - bottom-up approach.

Activity: Following different accents (Indian, British, American) listening comprehension exercises with audio and video excerpts.

UNIT-V: **- 12 Hrs**

a) Data Commentary: Deductive & inductive reasoning - data interpretation - tables & charts - bar charts - pie charts - line graphs - ratios & proportions – percentages - coding and decoding - reasoning by analogy - artificial language etc.,

b) Analytical Thinking: Statement and Conclusion - Data Sufficiency - Statement and Argument - Statement and Assumption - Logical Deduction - Logical Problems.

Activity: Exercises with handouts.

Course Code: BB202

FINANCIAL MANAGEMENT

Course Description and Objective:

To enable the students understand the fundamental concepts of financial management and various financial decisions of a firm. Students will learn importance of Investment decisions in FM, issues of management of working capital, Financing decisions and Dividend decisions.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand fundamentals of Financial Management
2. Importance of Investment decisions in FM
3. Issues of management of working capital
4. Financing decisions

5. Dividend decisions

UNIT-I **- 12 Hrs**

Financial Management- Meaning, importance, scope and objectives- Conflicts in profit versus value maximization principle- Role of Chief Financial Officer.

Time Value of Money-Compounding and discounting techniques – concepts of annuity and perpetuity.

UNIT-II **- 12 Hrs**

Investment Decisions- Purpose, objective, process- Techniques of decision making: payback period method, accounting rate of return, net present value, internal rate of return, modified internal rate of return, discounted payback period and profitability index.

UNIT-III **- 12 Hrs**

Management of working capital-Working capital policies - Inventory management- Receivables management- Payables management- Management of cash and marketable securities- Financing of working capital.

UNIT-IV **- 12 Hrs**

Financing Decisions- Cost of Capital – weighted average cost of capital and marginal cost of capital - Capital Structure decisions – capital structure patterns, designing optimum capital structure, constraints, various capital structure theories- Business risk and financial risk – operating and financial leverage, trading on equity.

UNIT-V **- 12 Hrs**

Dividend decisions: Forms of dividend, Theories of dividend – Walter model, Gordon model, MM hypothesis, concept of cash and bonus shares.

Text Books:

1. I.M. Pandey, Financial Management.
2. V.K. Bhalla, Financial Management.

Reference Books:

1. Dr. S.N. Maheswari & Dr. C.B. Gupta, Financial Management.
2. Prasanna Chandra, Financial Management & Practice.
3. Preeti Singh, Investment Management Security Analysis and Portfolio Management.

Course Code: BB204

MARKETING MANAGEMENT

Course Description and Objective:

The course aims at making students understand concepts, philosophies, processes and techniques of managing the marketing operations of a firm. Students will learn importance of STP in Marketing management, marketing mix decisions, PLC and New product development process, important aspects of Service marketing.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand fundamentals of marketing

2. Understand importance of STP in Marketing management

3. Marketing mix decisions

4. PLC and New product development process

5. Important aspects of Service marketing

UNIT-I **- 10 Hrs**

Introduction: Definition, Importance and Scope of Marketing, Core marketing concepts, Elements of Marketing - Needs, Wants, Demands, Consumer, Markets and Marketers; Marketing Vs Selling, Consumer Markets and Industrial Markets. Concept of Marketing Management, developing marketing plans and strategies. Marketing Environment, Factors Affecting Marketing Environment, Marketing Information System and Marketing Research and demand forecasting ,Buyer behavior and influencing factors, Buying decision process

UNIT-II **- 10Hrs**

Market Segmentation: Segmenting the Market, Benefits, of Market Segmentations, Market Segmentation Procedure, Basis for Consumer/Industrial Market Segmentation. Market Targeting – Introduction, Procedure. Product Positioning - Introduction, Objectives, Usefulness, Differentiating the Product, Product Positioning Strategy.

UNIT-III **- 10 Hrs**

Marketing: Mix Decisions, Product Decisions, New Product Development-Concept and Necessity for Product Development, Failure of New Products, New Product Planning and Development Process, Product-Mix, Branding and Packaging Decisions, Product Life cycle - Stages and Strategies for Different Stages of PLC.

UNIT-IV **- 14 Hrs**

Pricing, Distribution, and Promotion Decision: Pricing Decisions, Pricing Objectives, Policies Methods of Setting Price, Pricing Strategies, Channels of Distribution for Consumer/ industrial Products, Factors Affecting Channel Distribution, Management of Channels, channel conflicts:. **Marketing Communication:** The communication process, Communication mix, Managing advertising sales promotion, Public relations and Direct Marketing. Sales force Objectives, Sales force structure and size, Sales force Compensation

UNIT-V **- 6 Hrs**

Service Marketing Aspect: A Brief Account of Marketing of Services, Social Marketing, Online Marketing.

Text Books:

1. Rajan Saxena: Marketing Management, 4/e, TMH, 2009.
2. V.S.Ramaswamy , S.Namakumari: Marketing Management, 4/e, Macmillan, 2009

Reference Books:

1. Phillip Kotler: Maketing Management, 11/e, Pearson Publishers, 2011.
2. Stanton William J., Fundamentals of Marketing, McGraw Hill, N. Delhi 10th Ed.
3. Czinkota and Kotabe: Marketing Management, 2/e, Thomson,2007

Course Code: BB206

HUMAN RESOURCE MANAGEMENT

Course Description and Objective:

The objective of the course is to provide basic knowledge of functional areas of Human Resource Management. This course will be a prerequisite for students to take any electives offered in the third and fourth semesters in any subject on HRM stream.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand nature, scope and importance of HRM
2. Elements of job analysis and design
3. Recruitment and selection process
4. Training and development process and methods
5. Performance appraisal methods and compensation

UNIT-I - 10 Hrs

Introduction to HRM: Meaning – nature and scope of HRM – functions – objectives of HRM – challenges of HRM – HR Planning process – HR information system.

UNIT-II - 12 Hrs

Job Analysis and Design: Basic prerequisites – job analysis – job description – job specification and job evaluation – job performance standards – elements of job design: job – restructuring – job rotation – job enlargement and job enrichment.

UNIT-III - 14 Hrs

Recruitment and Selection: The recruitment process – methods of recruiting – challenges of recruitment – the selection process – types of tests – basic features of interviews – types of interviews – designing and conducting the effective interview – induction and placement.

UNIT-IV **- 10 Hrs**

Training & Development: Introduction to training – the training process – training methods – management development – evaluation of training and development.

UNIT-V **- 14 Hrs**

Performance Appraisal and Compensation: The appraisal process, methods – the appraisal interviews – the feedback interview – career planning and development.

Compensation: Objectives of compensation – job evaluation system – benefits and services – safety and health.

Text Books:

1. Aswathappa.K, "Human Resource Management-Text & Cases", TMH, 2/e, 2008.
2. Gary Dessler, "Human Resource Management", PHI, 3/e, 2007.

Reference Books:

1. Mirza S.Saiyadain, "Human Resource Management", TMH, 3/e, 2001.
2. Decenza Robbins, "Human Resource Management", John Willey, 3/e, 1998.
3. Biswajeet Patnayak, "Human Resource Management", PHI, 2/e, 2002.
4. Jon M.Werner & Desmone, "Human Resource Development-Foundation Frame work and Application", Cengage Publishers, 2/e, 2008.

Course Code: BB208

OPERATIONS MANAGEMENT

Course Description and Objective:

The Objective of the course is to enable students to learn the Basics of Operations Management, which will help them in understanding actual business process. Students will learn concepts of production system, factors effecting productivity, issues of purchasing and inventory management.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand basic concepts of production systems
2. Elements of production management
3. Factors effecting productivity
4. Issues of purchasing and inventory management

5. Quality management and TQM

UNIT-I **- 12 Hrs**

Production systems: Systems concept of Production, Types of production Systems, Flow, Shop, Batch, Cellular, flexible Manufacturing. Group Technology. Computer Integrated manufacturing, Mass Production Vs Product variety. Maintainability.

UNIT-II **- 10 Hrs**

Production Management: Production Planning and control activities, Aggregate planning, MRP, MRP II, Simple problems. Supply Chain.

UNIT-III **- 14 Hrs**

Productivity Improvement: Factors affecting productivity and their measurement, Total productivity, tools and techniques for improving productivity. Facilities Layout – Types of layout – Process, product, Cellular, fixed position, mixed; Applicability, advantages and disadvantages. Work Study – Method Study, Micromotion Study, Stop watch Time Study, Work Sampling.

UNIT-IV **- 12 Hrs**

Purchasing and Inventory Management: Purchase function, Procedures. Economic Order quantity, Wilson's Lot size formula, assumptions in the equation, Ordering with lead time, safety stock and its effect on EOQ. Inventory analysis Methods – ABC, VED, XYZ methods – their utility. Inventory Valuation Methods: Periodic and perpetual systems; FIFO, LIFO, Average cost and Weighted Average Cost Methods.

UNIT-V **- 12 Hrs**

Quality Management: Inspection, Quality, Total Quality – Deming, Juran concepts. Quality as Cost and Quality as Profit. Total Quality Management. Statistical Quality Control – Control Charts – exercises. Concept of Quality Assurance. Principles of ISO and BIS. ISO standards and Certification process.

Text Books:

1. R.Paannerselvam, "Production and Operations Management", 2nd ed., PHI 2006.
2. K.Aswathappa, K.Sridhara Bhat, "Production and Operations Management", 2nd ed., HPH, 2010.

Reference Books:

1. S. N. Chary, "Production and Operations Management", 6th ed., TMH 2006.
2. Buffa, "Modern Production Operation Management", 6th ed., Willey 2008.
3. Joseph S Matrinich, "Production and Operations Management", 8th ed., Willey 2008.

Course Code: BB210

BUSINESS ENVIRONMENT

Course Description and Objective:

To familiarize the students with issues influencing business environment. Students also learn dimensions of business environment, policy framework- Industrial and trade policies, regulatory environment, role of regulatory institutions in Indian financial system, business ethics and corporate governance.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand dimensions of business environment
2. Policy framework- Industrial and trade policies
3. Regulatory environment
4. Role of regulatory institutions in Indian financial system
5. Business ethics and corporate governance

UNIT-I - 12 Hrs

Business Environment- Meaning- Different dimensions: Social, Cultural, Political, and Legal Environments and their Importance, Business Cycles and their impact

UNIT-II - 12 Hrs

Policy framework and business environment: Industrial policies, Trade Policies, Monetary and Fiscal policies – Liberalisation, Privatisation and Globalisation and business opportunities – Disinvestment Policies

UNIT-III - 12 Hrs

Regulatory Environment: Clearances and permissions for establishing industry and businesses – Environmental acts, Patents, IPRs, - Pollution and Waste management practices - Government Business Interface- Governance Reforms

UNIT-IV - 12 Hrs

Role of regulatory institutions in Indian financial system – RBI, SEBI, IRDA, AMFI – Prudential and Disclosure norms for accountability- Regulation of Foreign Trade – FDI Policy

UNIT V - 12 Hrs

Business Ethics, Corporate Governance, Corporate Social Responsibility of business enterprises,

Suggested Readings:

1. Dutt and Sundaram , Indian Economy, S. Chand, New Delhi, 2007.
2. K.Aswathappa, Essentials of Business Environment, 9/e Himalaya, 2007.

3. Justin Paul: Business Environment, 1e 2006, TMH
4. Misra and Puri: Indian Economy,, Himalaya, 2007.
5. Shaikh & Saleem - Business Environment (Pearson, 2nd Edition)
6. Francis Cherunilam – Business Environment, Text and Cases (Himalaya Publishing House, 8th Edition).

Course Code: BB212

Professional Communication Laboratory

Course Description and Objective:

The Professional Communication course is aimed at improving written communication skills of undergraduate students and preparing them to meet professional challenges in the work spheres. Writing and Personality are not two exclusive spheres of influence and this course will work on the relationship between professional writing and a personality that is able to meet the goals of an organization in creative and innovative ways. The course will expose students to conventions of corporate communication and documentation procedures involved in the day-to-day functioning of the business world.

Training Methodology:

The methodology is designed to give hands-on practice to students in formal and informal report writing, structure and format of letters as well as other organization related work.

Learning outcomes:

After going through the course, students will acquire competency to write logical sentences and paragraphs, use appropriate diction, grammar and punctuation. They will be able to compose clear and concise messages and produce business documents for mailing to external recipients or intra-organizational circulation.

UNIT-I: - 12 Hrs

- Elements of Technical Writing : Sentence structure - reducing verbosity - arranging ideas logically – building coherence - paragraph level and document level - topic sentence - cohesive devices – transitionals – paraphrasing – précis-writing.
- Mechanics of Writing: Stylistic elements – the rapporteur- the purpose- the reader (audience) - elementary rules of grammar- choice of diction - elementary principles of composition - matters of form – punctuation - conventions of business communication -language and tone - weak links in business correspondence - ethical concerns in business writing

UNIT-II: - 12 Hrs

- Parts of the Report: Writing an abstract - features of a good abstract – approach - compare and contrast - cause and effect.
- Types of Technical Reports : Drafting a technical proposal - formal and informal proposals - factual reports, feasibility reports, survey reports – parts of a report - title page –declaration –

acknowledgements – table of contents - abstract – introduction – conclusion – citations – references - appendices - oral reports and presentations

UNIT-III: **- 12 Hrs**

- Letter-Writing - Formal and informal letters - structure of formal letters - expressions of salutations, introductory and concluding paragraphs - different types of letters - sales letter - complaint letter - adjustment letter - letter to the editor - covering letter - claim letter – letter of condolence.

UNIT-IV: **- 12 Hrs**

- Business Correspondence : E-mail – nature and scope - e-mail etiquette – Common Errors in composing e-mails – Quotations - Inviting quotations - sending quotations –placing orders Office Communication - agenda - notice – circular
- Effective Resume-Writing: Structure and presentation - defining career objective - projecting one's strengths and skill-sets
- Summarizing - formats and styles - covering letter.

UNIT-V: **- 12 Hrs**

- Business Proposals: Drafting business proposals - calculating profit and loss-averages - ratios and proportions – partnership - simple interest - compound interest - calculating volumes and areas
- Course of action - cause and effect- theme detection - making judgments - logical deductions - analyzing arguments – syllogisms - Venn diagrams- 2 matching definitions -verbal reasoning - numerical reasoning - working out justifications.

Reference Books:

1. Strunk , William, Jr.The Elements of Style, Fourth Edition,
2. Rozakis, Laurie, Ph.D, (2003). English Grammar for the Utterly Confused, McGraw-Hill

Course Code: BB301

INDIAN BANKING AND INSURANCE

Course Description and Objective:

acknowledgements – table of contents - abstract – introduction – conclusion – citations – references - appendices - oral reports and presentations

UNIT-III: - 12 Hrs

- Letter-Writing - Formal and informal letters - structure of formal letters - expressions of salutations, introductory and concluding paragraphs - different types of letters - sales letter - complaint letter - adjustment letter - letter to the editor - covering letter - claim letter – letter of condolence.

UNIT-IV: - 12 Hrs

- Business Correspondence : E-mail – nature and scope - e-mail etiquette – Common Errors in composing e-mails – Quotations - Inviting quotations - sending quotations –placing orders Office Communication - agenda - notice – circular
- Effective Resume-Writing: Structure and presentation - defining career objective - projecting one's strengths and skill-sets
- Summarizing - formats and styles - covering letter.

UNIT-V: - 12 Hrs

- Business Proposals: Drafting business proposals - calculating profit and loss-averages - ratios and proportions – partnership - simple interest - compound interest - calculating volumes and areas
- Course of action - cause and effect- theme detection - making judgments - logical deductions - analyzing arguments – syllogisms - Venn diagrams- 2 matching definitions -verbal reasoning - numerical reasoning - working out justifications.

Reference Books:

1. Strunk , William, Jr.The Elements of Style, Fourth Edition,
2. Rozakis, Laurie, Ph.D, (2003). English Grammar for the Utterly Confused, McGraw-Hill

Course Code: BB301

INDIAN BANKING AND INSURANCE

Course Description and Objective:

To familiarize the students about the Banking operations and the keen competition in the banking. Performance evaluation of Indian banks, loans & advances management in Indian banks. And also to make students understand the importance of insurance and the basic concepts of insurance.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand Indian banking structure and system
2. Performance evaluation of Indian banks
3. Loans & advances management in Indian banks
4. Important concepts of insurance and regulatory framework
5. Life insurance and general insurance industry in India

UNIT-I **- 12 Hrs**

Introduction-Indian Financial System-Need for Banking-Structure of Banking in India-Working of Commercial Banks in India-Working of Cooperative Banks in India-Types of Banks-Role Functions of Reserve Bank of India.

UNIT-II **- 12 Hrs**

Evaluation of Performance of Banks in India-Indian Banking & Global Scenario-Major Players in Indian Banking Industry-Regulatory Environment-Retail Banking Segment-Banking Performance Parameters-Growth in the Indian Banking Industry-Operation & Performance of Commercial Banks.

UNIT-III **- 12 Hrs**

Loans & Advances Management-General Rules of Sound Lending-Forms of Lending-Types of loans & Advances-Determining credit worthiness.

UNIT-IV **- 12 Hrs**

Insurance: Overview-Nature of Business Risks-Importance of Insurance-Types of Insurance Principles of Insurance-Regulatory Frame work of Insurance in India.

UNIT-V **- 12 Hrs**

Indian Life Insurance Industry-Evaluation of Life Insurance in India-Types of Insurance Contracts-Classification of Life Insurance-Provisions of Life Insurance Contacts-Insurance Companies in India-Performance of Insurance Sector.

Indian General Insurance Industry: General Insurance-Classification of General Insurance -Main Players of General Insurance-Health Insurance-Types of Insurance-Growth of General Insurance in India.

Reference Books:

4. Narayanan,H. (2008). Indian Insurance – A Profile (2nd edi). Mumbai:Jaico Publishing House.

5. Kumar, G. (2011). Hand Book of Insurance Laws. Allahabad:Law publishers.

6. Singh, B.N. (2002). New Insurance Law. Allahabad: Universal Law Agency.

Course Code: BB303

BUSINESS ETHICS AND VALUES

Course Description and Objective:

To discuss the theories of ethics and Corporate Governance and explain how they can be applied in various business situations, importance of ethics in conducting business. Corporate social responsibility and ethical dilemmas at work place and corporate governance – Codes and Laws.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand nature and objectives of ethics

2. Importance of ethics in conducting business

3. Ethical organization and its corporate code

4. Ethical issues in marketing

5. Corporate social responsibility and ethical dilemmas at work place

6. Corporate governance – Codes and Laws

UNIT-I **- 12 Hrs**

Ethics- Nature of Ethics - Objectives of Ethics – Need - Business Ethics – Nature of Business Ethics – Relationship between ethics and business - The Utilitarian view – Separatist view – Integrated view of ethics – Stages of Ethical Consciousness.

Importance of Ethics in Business – Ethical theories – Meta ethics – Normative ethical theory –Theory of Justice – Theory of Rights – Ethics of Care – Law and Ethics - Trust and ethics – Suppliers, Customers, Employees Integrative Social Contact Theory – Hyper norms.

UNIT-II **- 15 Hrs**

Ethical Organization and its corporate code – Characteristics of ethical organization - Corporate Moral Excellence – Stakeholders – Corporate Governance – Corporate Code – Implementation of Corporate Code.

Ethical issues in Marketing – Ethics in marketing strategy, Marketing Mix, Marketing Research - Ethical issues in Operations – Role of Operations Manager, Quality Control, Ethical Problems in operations - Ethical issues in Purchase – Role, Purchase Code of Ethics, Global Buyer-Supplier Relations - Ethical Issues in HRM – Principles of Ethical Hiring, Promotion, Equality of OpportUNITy, Ethics in remuneration and retrenchment – down sizing workforce - Ethical Issues in Finance – Ethics in Financial Markets – Investor protection measures – Ethical responsibility towards competitors and business partners.

UNIT-III **- 12 Hrs**

Corporate Social Responsibility – Historical perspective of CSR from Industrial Revolution to Social Activism – Stake Holders – Share Holders – Employees – Management – External Stake Holders – Consumers – Suppliers – Competitors – Creditors – CommUNITy – Corporation as a moral person – Corporate expectations of Society - Current CSR Practices of firms in India.

UNIT-IV **- 10 Hrs**

Ethical Dilemmas at work place –Ethical dilemmas in decision making – power – authority – secrecy – confidentiality – trust and loyalty - Ethical Leadership – Managerial integrity and decision making.

UNIT-V **- 10 Hrs**

Corporate Governance – Codes and Laws – Committees of Corporate Governance –Role and functions of Chairman and Managing Director – Role and functions of Committees – Audit Committee – Remuneration Committee – Nomination Committee – Cadbury committee – OECD committee – KM Birla committee on Corporate Governance.

Text Books:

1. Sadri – Business Ethics Concepts and Cases, TMH, 1998
2. Business Ethics and Corporate Governance – ICFAI Publications.
3. Business Ethics – An Indian Perspective by Francis, TMH 2010.

Reference Books:

1. R.C.Shekar - Ethical Choices in Business.
2. LaRue Tone Hosmer - The Ethics of Management , Universal books.
3. Ethics in Business & Corporate Governance by Mandat, TMH, 2010.

Course Code: BB305

ENTREPRENEURSHIP

Course Description and Objective:

This subject provides an understanding of the role of an entrepreneur, factors influencing entrepreneurship, key areas of development, financial assistance by the institutions to the small and medium entrepreneurs.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand characteristics of entrepreneurs and their role in economic development
2. Factors effecting entrepreneurship development and growth
3. Developing a business plan
4. Role of small & medium enterprises and government policy
5. Financing small & medium enterprises

UNIT-I **- 12 Hrs**

Entrepreneurship: Concept, Traits, Characteristics, Functions, Types of Entrepreneurs – Role of Entrepreneurship in Economic Development.

UNIT-II **- 12 Hrs**

Entrepreneurship Development: Factors Affecting Entrepreneurial Growth – Motivation for entrepreneurship, Entrepreneurship Development Programs – Objectives, Components & Achievements, Social Entrepreneurship.

UNIT-III **- 12 Hrs**

Development a Business Plan: Project Planning – Business Plan – Meaning & Importance, Steps in writing Business Plan, Preparing Feasibility studies – Technical Feasibility, Financial, Economic & Market Feasibility. Meaning & Types of Intellectual Property Rights & Implications of their infringements – (Patents, Trademarks & Copyrights).

UNIT-IV **- 12 Hrs**

Role of Small & Medium Enterprises: Meaning & Role, Contribution of GDP & Employment. Problems & Prospects of SMEs. Government policy for SMEs – Protection, Promotion & Diversification.

UNIT-V **- 12 Hrs**

Financing of Small & Medium Enterprises: Capital Structure, Sources of Finance, Break Even Analysis, Financial Assistance to SMEs, Latest Government Schemes relating to grants & subsidies to SMEs.

Text Books:

1. S. Khanka “Entrepreneurial Development” S. Chand & Co. Ltd. Ram Nagar New Delhi, Latest Edition 1999.
2. Hisrich R D and Peters M P., “Entrepreneurship” 6th Edition Tata McGraw – Hill, 2007.
3. Rabindra N. Kanungo “Entrepreneurship and innovation”, Sage Publications, New Delhi, Latest Edition 1998.
4. EDII “A Hand Book for New Entrepreneurs, Entrepreneurship Development Institution of India, Ahmadabad, latest Edition.
5. Prasama Chandra, Projects – Planning, Analysis, Selection, Implementation and Reviews, Tata McGraw – Hill, Latest Edition.

Course Code: BB307

OPERATIONS RESEARCH

Course Description and Objective:

The objective of the course is to introduce some of the tools that facilitate better understanding about the operations in a quantitative form and help them in taking right decision about the business through mathematical approach.

Learning outcomes

After reading this chapter student can able to understand

1. Identify situations in which linear programming techniques can be applied, guidelines on linear programming model formulation, solve an LP problem by the graphical method, interpret the solution of an LP mode, understand the meaning of the word Simplex and logic of using simplex method, converting an LP problem into its standard form by adding slack, surplus, and/or artificial variables, recognize the special cases such as degeneracy, ,multiple optimal solutions, unbounded and infeasible solutions. Formulate the dual LP problem and understand the relationship between primal and dual solutions.

2. Recognize and formulate a transportation problem, drive initial feasible solutions using several methods, optimal solution by using MODI method, handle the problem of degenerate and unbalanced transportation problem. Understand the features of Assignment problem, formulate an assignment problem as a square matrix, apply the Hungarian method to solve an assignment problem, make appropriate changes to solve unbalanced assignment problem, profit maximization assignment problem, and solve a travelling salesmen problem.

3. Understand how optimal strategies, are formulated in conflict and competitive environment, principles of two-person zero-sum games, use dominance rules to reduce the size of a game payoff matrix and compute value of the game, apply minimaxand maximin principle to compute the value of the game where there is a saddle point, make distinction between pure and mixed strategies.

4. Understand the steps of decision making process, make decision under various decision-making environments, determine the expected monetary value, expected opportunity loss, and construct decision trees for making decisions.

UNIT-I **- 12 Hrs**

Linear Programming: Introduction to Linear programming – formulation of LPP – solution of LPP - Using Graphical Methods, the Simplex Method; Justification, interpretation of Significance of All Elements In the Simplex Tableau, the Simplex Solution to A Minimizing Problem - Two-Phase and Big-M method - Definition of the Dual Problem, Primal, Dual Relationships.

UNIT-II **- 12 Hrs**

Transportation, Assignment Problems: Definition and Application of the Transportation Model, Solution of the Transportation Problem, the Assignment Model, and Travelling Salesman Problem.

UNIT-III **- 12 Hrs**

Game Theory: Introduction – Two Person Zero-Sum Games, Pure Strategies, Games with Saddle Point, Mixed strategies, Rules of Dominance, Solution Methods of Games without Saddle point – Algebraic, matrix and arithmetic methods, Graphical Solution of 2 x n and m x 2 games.

UNIT-IV - 12 Hrs

P.E.R.T. & C.P.M.: Definitions, various terms used in networking, Drawing networks – identifying critical path – probability of completing the project within given time.

UNIT-V - 12 Hrs

Decision Theory: Steps In the Decision Making, the Different environments, In which Decisions Are Made, Criteria For Decision Making Under Uncertainty, Decision Making Under conditions of Risk - Decision Trees, Graphic Displays of the Decision Making Process, Decision Making With an Active Opponent.

Text Books:

1. J.K.Sharma, "Operations Research: Theory & Applications", Macmillan India, 2007.
2. S.D.Sharma, "Operations Research", 11th ed., Kendarnath, Ramanath & Co.

Reference Books:

1. Barry Render, Ralph M.Stair,Jr. Michael E.Hanna, "Quantitative Analysis for Management", 9/e, PHI Pvt. Ltd , New Delhi, 2007.
2. Hamdy, A.Taha, "Operations Research: An Introduction", Prentice-Hall of India, New Delhi, 2007.
3. Harvey M. Wagner, "Principles Of Operations Research", PHI, New Delhi, 2003.
4. Pannerselvam.R, "Operations Research", 2nd ed., PHI.
5. Operations Research, Kranthi Swaroop, P.K.Gupta and Manmohan, 4th ed., Sultan & Sons.

Course Code: BB309

STRATEGIC MANAGEMENT

Course Description and Objective:

To develop an understanding of strategic management concepts and techniques. Students will learn strategy formulation and various types of strategies, strategy implementation issues and strategy evaluation process.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand basic concepts of strategic management
2. Internal and external environment analysis to formulate strategies
3. Strategic analysis and choice- BCG, GE matrix and port folio analysis
4. Strategy formulation and various types of strategies

5. Strategy implementation issues
6. Strategy evaluation process

UNIT-I **- 10 Hrs**

Introduction to Strategic Management: Concept of Strategy; Mintzberg's 5Ps of Strategy; Strategic Decision Making; Strategic Management Process; Strategic Intent ,Concept of Stretch, Leverage and fit; Vision &Mission, Goals and Objectives; Need for Balanced Scorecard Strategists and their roles.

UNIT-II **- 10 Hrs**

Strategic purpose, environment and resource analysis: External Environmental analysis; industry analysis; competitive analysis: porter's five forces model; internal analysis; SWOT Analysis; the value chain analysis; core competence and competitive advantage

UNIT-III **- 10 Hrs**

Strategy formulation: Strategic Analysis and Choice- Port folio analysis: BCG, GE, Directional Policy and Hofer's Matrices; corporate strategy , mergers and acquisitions, business strategy, global strategy

UNIT-IV **- 10 Hrs**

Strategy Implementation: Strategy implementation issues; Resource Allocation; Structural Considerations and Organisational Design; Strategic Leadership and Corporate Culture; Managing change; Functional and Operational Strategies; Plans and Policies

UNIT-V **- 10 Hrs**

Strategy Evaluation: Importance and Nature of Strategic Evaluation; Strategic and Operational Control; Evaluation Process for Operational Control; Evaluation Techniques for Strategic and Operational Control.

NOTE: One case study be discussed – per unit – in the class

Text Books:

1. Azar kazmi "Business Policy and Strategic Management", TMH, New Delhi, 2008.

INDUSTRIAL LAWS

Course Description and Objective:

To provide an over view of the Legal Framework of HR Functions in India and to enable learners to effectively handle the Industrial Relations in the organizations. Students also learn salient features of Industrial Disputes Act- 1947, The Factories act- 1948, Laws of wages and payment of bonus, Labour welfare laws.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand theories of trade union movement –Nature and causes of grievances
2. Salient features of Industrial Disputes Act- 1947
3. The Factories act- 1948
4. Laws of wages and payment of bonus
5. Labour welfare laws

UNIT-I - 10 Hrs

Trade Unions and Grievance Handling: Theories of Trade Union Movement – Trade Unions in India– Union recognition - Trade Unions Act, 1926 - Grievances and Discipline Handling: Managing Employee Grievance – The Nature and Causes of Grievance - The Grievance Procedure.

UNIT-II - 10 Hrs

The Industrial Disputes Act, 1947: Salient Features towards settlement of disputes- Unfair Labour Practices – Guiding Framework for Sound Labour–Management Relations.

UNIT-III - 10 Hrs

The Factories Act, 1948: Approval, licensing and registration of factories- Inspectors.- Powers of Inspectors- Health – Safety – Penalties and Procedures.

UNIT-IV - 10 Hrs

Laws on Wages: Minimum Wages Act, 1948 - Payment of wages Act, 1936 -The Payment of Bonus Act, 1965

UNIT-V **- 10 Hrs**

Labour Welfare Laws: The Workmen's Compensation Act, 1923 - The Employees State Insurance Act, 1948 - The Employees Provident Fund and Miscellaneous Provisions Act – 1952.

NOTE: Few case studies be discussed in the class

Course Code: BB304

MANAGEMENT ACCOUNTING

Course Description and Objective:

To impart basic knowledge of Management Accounting. Students will learn Marginal costing, its advantages and limitations, Budgetary control and its limitations, analysis and interpretation of financial statements for decision making, ratio analysis for decision making.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand essentials of Management Accounting
2. Marginal costing, its advantages and limitations
3. Budgetary control and its limitations
4. Analysis and interpretation of financial statements for decision making
5. Ratio analysis for decision making

UNIT-I **- 12 Hrs**

Management Accounting: Need, Essentials of Management Accounting, Importance, Objectives, Scope, Functions, Advantages, Limitations, Distinction between Financial Accounting and Management Accounting, Distinction between Cost Accounting and Management Accounting.

UNIT-II **- 12 Hrs**

Marginal Costing: Meaning and Definition of Marginal cost and Marginal Costing, Contribution, Profit Volume Ratio, Advantages and limitations of Marginal Costing.

UNIT-III **- 12 Hrs**

Budget and Budgetary Control: Meaning of Budget and Budgetary Control- Budget and Budgetary Control, Objective of Budget and Budgetary Control, Limitations of Budget and Budgetary Control, Types of budgets

UNIT-IV **- 12 Hrs**

Analysis and Interpretation of Financial Statements: Methods of Analysis-Comparative Statements Common Size Statement

UNIT-V **- 12 Hrs**

Ratio Analysis for decision-making: Meaning and importance of Ratio analysis-Types of Ratios-Liquidity-Solvency-Profitability and Turnover

Recommended Books:

1. R. N. Anthony, G. A. Walsh:: Management Accounting.
2. M. Y. Khan,. K. P. Jain:: Management Accounting.
3. M. Pandey::Management Accounting (Vikas).
4. J. Betty: Management Accounting.
5. Sr. K. Paul: Management Accounting.
6. S. N. Maheshwari:: Principles of Management Accounting.
7. R. K. Sharma and Shashi K. Gupta: Management Accounting.
8. Richard M. Lynch and Robert Williamson: Accounting for Management Planning and Control.
9. Horngren: Introduction to Management Accounting (Pearson).

Course Code: BB306

TAXATION

Course Description and Objective:

To acquaint students with proper knowledge about direct and indirect taxes in India. Students learn Classification of income under different heads, salient features of Central Excise Tax, types of customs duties and importance of sales tax and service tax.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand concepts and importance of direct and indirect taxes
2. Classification of income under different heads
3. Salient features of Central Excise Tax
4. Types of customs duties
5. Importance of sales tax and service tax

UNIT-I - 12 Hrs

Overview of Direct and Indirect taxes: Importance of direct and indirect taxes, Types of direct and indirect taxes, Differences between direct and Indirect Taxes.

UNIT-II - 12 Hrs

Head of Income – Computation of Income from Salaries – Income from House Property – Profits and Gains of Business or Profession – Capital Gains and Income from Other Sources.

UNIT-III - 12 Hrs

Central Excise – Importance of the Central Excise Law- Goods, Excisable goods, Manufacture and manufacturer, Classification, Valuation.

UNIT-IV - 12 Hrs

Customs Duties-Basic concepts of customs law- Types of custom duties. Import and Export Procedures, Export Promotion Schemes. EOU- Duty Drawback- Special Economic Zones.

UNIT-V - 12 Hrs

Service Tax - Importance of Service Tax- Service Provider and Service Receiver- Registration procedure- Records to be maintained-Classification of taxable services- Valuation of taxable services.

Sales Tax /VAT – Need and importance – classification of goods – sales tax/vat – returns and forms.

Text Books:

1. Bhagawath Prasad, “Direct Taxes Law and Practice”.
2. V.S. Date, “Indirect Taxes”.

1. Sareen, V.K., & Sharma, A. (nd). Indirect Tax Laws, (latest edition), Kalyanipublications.
2. Mehrothra, H.C., (nd). (latest edition), *Indirect Taxes,* Sahityabhavan publi
3. Dinakar, Pagre, “Direct Taxes”.

4. Gowr & Narang, “Income Tax”, 2011-12

Reference Books:

1. Dr.Vinod & K Singharia, “Direct Taxes, Law and Practice”.
2. S.Bhattacharya, “Indian Income Tax Law and Practice”.

Course Code: BB308

INTERNATIONAL BUSINESS

Course Description and Objective:

The purpose of this paper is to enable the students learn nature scope and structure of International Business, and understand the influence of various environmental factors on international business operations and acquainting the students with the structure and policy framework of India’s foreign trade.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand nature and scope of international business and environment
2. Global trading environment
3. Global technology and international operations
4. Salient features of Indian foreign trade policy
5. Export and Import procedures & promotions

UNIT-I **- 12 Hrs**

Introduction to International Business: Importance nature and scope of International business; modes of entry and Theories of International Business; Framework for analyzing international business environment – Political, Economical, Social, Technological, Environmental and Legal environments and their impact on international business decisions.

UNIT-II **- 12 Hrs**

Global Trading Environment: World trade in goods and services – Major trends and developments; World trade and protectionism – Tariff and non-tariff barriers; International Economic Institutions and Agreements – WTO, IMF, World Bank, and other International agreements; Regional Economic Groupings in Practice - Regionalism vs. multilateralism, Structure and functioning of EC and NAFTA; Other Regional economic cooperation’s

UNIT-III **- 7 Hrs**

Global Technology & International Operations: Global Technological Management – Technology and Business; Issues in international technology transfers; Management of International Operations – Location of production; Management of Inventory; Sourcing of Inputs ; International Logistics.

UNIT-IV **- 7 Hrs**

Indian Foreign Trade Policy: India's Foreign Trade – Trends and developments; Commodity composition and direction, India's foreign trade in global context. Recent Foreign Trade Policy – Legal frame work; Special Focus Initiatives.

UNIT-V **- 12 Hrs**

Export and Import Procedures & Promotions: Export and Import Procedures; Import Substitution and Export Promotion Policies – Export Incentives –duty exemption schemes, EPCG, duty draw backs; Role of commercial banks in foreign trade; EXIM Banks; Export credit insurance and ECGC. Infrastructure Support for Export Promotion – EPC; STO; EPZ/SEZ; EOUs; Foreign Investment Policy – Indians Joint ventures abroad, Multilateralism and Bilateralism in India's foreign trade.

NOTE: One case study be discussed – per unit – in the class

Text Books:

1. Aswathappa, 5e, International Business, TMH
2. P.Subba Rao, 3e, International Business, HPH

Reference Books:

1. John Daniels • Lee Radebaugh • Daniel Sullivan, International Business
2. Economic Survey, Govt. of India.
3. Export-import Policy and Other Documents, Govt. Of India.

Course Code: BB310

PROJECT MANAGEMENT

Course Description and Objective:

To enable the students to understand project management practices. Tools & techniques of project management, market and demand estimation, project formulation and preparation, project appraisal-Technical-Economical-Financial-Legal and social appraisal, concepts of Project financing, implementation, monitoring and Control of Projects.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

1. Understand concept, Tools & techniques of project management
2. Market and demand estimation, Project formulation and preparation
3. Project appraisal- Technical-Economical-Financial-Legal and social appraisal

4. Concepts of Project financing
5. Implementation, Monitoring and Control of Projects

UNIT-I **- 12 Hrs**

Concept of Project Management: Concept - categories - project development cycle- Importance of project management-Tools & techniques of project management.

UNIT-II **- 12 Hrs**

Project Formulation: Identification-formulation and preparation: Market and demand estimation, market survey, demand forecasting assessment of technical aspects of Project

UNIT-III **- 12 Hrs**

Project Appraisal: Technical-Economic-Financial-Legal and Social appraisal of the Industrial Projects-social cost-benefits-sensitivity analysis

UNIT-IV **- 12 Hrs**

Project Financing: Sources of finance-Role of Financial Institutions- Government Schemes

UNIT-V **- 12 Hrs**

Implementation, Monitoring and Control of Projects: Project scheduling, network techniques for resource and cost budgeting and scheduling, project management teams and coordination. Monitoring and post implementation, evaluation of the project

Text Books:

1. Chandra Prasanna-Project : Preparation ,Appraisal, Budgeting and Implementation. (TMH, 5th Ed.)
2. Mohsin M. - Project Planning and Control (Vikas)
3. Goyal BB – Project Management : A Development Perspective (Deep & Deep)
4. Chaudhary, S – Project Management (Tata Mc Graw Hill)
5. Young TL – The Hand Book of Project Management (Kogan Page)

PROJECT WORK

Course Code: BB314

REPORT and VIVA

I

Year

B.Sc.

Semester - I

17HS001	English I
17HS002	English Proficiency and Communication Skills I
17HS003	Environmental Studies
17HS004	Fundamentals of Computer Science I
17HS004A	Fundamentals of Computer Science I Lab
17HS005	Differential Equations
17HS006	Descriptive Statistics and Probability
17HS007	Descriptive Statistics and Probability Lab
17HS008	Computer Fundamentals and Photoshop
17HS009	Computer Fundamentals and Photoshop Lab

Semester - II

17HS011	English II
17HS012	English Proficiency Communication Skills II
17HS013	General Studies I
17HS014	Fundamentals of Computer Science II
17HS015	Geometry
17HS016	Mathematical Expectations and Probability Distributions
17HS017	Mathematical Expectations and Probability Distributions Lab
17HS018	Programming in C
17HS019	Programming in C Lab

17HS001 ENGLISH –I

Course Description and Objectives:

This course aims to develop communications skills and basic language skills. This course includes all genres of literature and grammar components and that will allow learner to improve his/her knowledge in English language.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Understand the skimming and scanning skills in reading. Get the knowledge of affixes in word-formation. Practice précis writing.
2	Appreciate the rhyme and rhythm in poem. Learn relative clauses and practice paragraph writing.
3	Introduced to short story. Get introduction to phonetics. Learns synonyms and antonyms.
4	Study one act play. Learn narrative technique. Learn informal letter writing.
5	Learn different grammar components and can use in language.

Unit – I PROSE

1. A.P. J. Abdul Kalam: The Knowledge Society (from *Ignited Minds*)

2. NgugiWaThiong'o: The Language of African Literature (from *Decolonizing the Mind*)

Unit – II POETRY

1. Robert Frost: The Road Not Taken
2. Nissim Ezekiel: Night of the Scorpion

Unit – III SHORT STORY

1. Mulk Raj Anand : The Lost Child
2. Henry Lawson: The Loaded Dog

Unit – IV ONE - ACT PLAY

William Shakespeare: The Merchant of Venice (Court Scene – Act IV Scene -1)

Unit – V LANGUAGE ACTIVITY

1. Classroom and Laboratory Activities
   i. Single Sentence Answer Questions on Vocabulary (spelling), sound(pronunciation), sense (meaning), and syntax (usage)
2. Classroom Activity
   i. Exercises in Articles and Prepositions
   ii. Exercises in Tenses, Interrogatives and Question tags

17HS002 English Proficiency and Communication Skills I

Course Description and Objectives:

This course has been aimed at basic communication skills in Standard English language. Comprehensively designed syllabus allows learner to get train himself/herself in all four language skills.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Able to talk about their hobbies and likes and dislikes and can introduce oneself in acceptable English.
2	Learner can able to use appropriate vocabulary for real time situations like travelling, jobs etc.,
3	Students able to describe given picture and able speak about how they feel about something or somebody etc.,
4	Students can speak about likes and dislikes and get vocabulary use different degrees of comparison
5	Get different vocabulary of fashion and fabric and able to give brief seminar on given topic

Skills

1. Standard basic communication skills
2. Usage of appropriate vocabulary
3. Self introduction and about likes and dislikes (Speaking)

Unit-1

1. A question of sports (sports and hobbies)
2. I'm a friendly person (people)
3. What's your job (work)

Unit-2

4. Let's go out (entertainment)
5. Wheels and wings (transport)
6. What did you do at school today? (education and history)

Unit-3

7. Around town (towns and buildings)
8. Let's celebrate (special days)
9. How do you feel? (health and fitness)

Unit-4

10. I look forward to hearing from you (letters and emails)
11. Facts and figures (Geography, nationality and numbers)
12. A good read (books)

Unit-5

13. A place of my own (furniture and homes)
14. What's in fashion? (clothes)
15. Risk! (adventures)

Prescribed textbook: Louise Hashemi and Barbara Thomas, "Objective PET", South Asian Edition, Cambridge University Press, 2015.

17HS003 Environmental Studies

OBJECTIVES

- Enlighten awareness of nature and judicious use of natural resources for long term sustenance of life on this planet
- Identify and create solutions that conserve to manage ecosystem and biodiversity for the long term
- Identification of various pollutants in air, water and soil
- Recognize the impacts of climate change, ozone depletion and acid rain and follow the guidelines in all the acts to attain sustainability
- Understand how to react effectively to natural, man-made, and technological disaster

OUTCOMES

After the completion of Environmental Science subject, students able to

- Understand the importance of environment and natural resources.
- Gain the concept on Protection of biodiversity and maintain healthy environment
- Analyze the sources of pollutants and their effects on atmosphere.
- Identify the evidence of Global warming, Ozone depletion and acid rain.
- Develop a basic understanding of Prevention, Mitigation, Preparedness, Response and Recovery.

UNIT I – Introduction to Environmental Studies and Natural Resources

Environmental Studies: Definition Scope and its importance, Multidisciplinary nature of Environmental Studies, Concept of Sustainability and Sustainable development -Natural Resources: Deforestation: causes and impacts due to mining, dam building on environment, forests, biodiversity and tribal population. Water resources: use and over exploitation of surface and ground water, floods, drought, conflicts over water (international and inter-state) Energy resources: renewable and non-renewable energy sources, use of alternate energy sources, growing energy needs, case Studies- Land resources: land degradation, soil erosion and desertification

UNIT II - Ecosystems and Biodiversity

Ecosystem: Concept, Structure and functions of an ecosystem - Energy flow, Food chains, Food webs and ecological succession, Forest, Grassland and Aquatic ecosystems(Ponds, Rivers, Lakes, Streams, Ocean, Estuary). **Biodiversity**: Introduction, Bio-geographical classification Biodiversity at global, National and local levels – India as a Megadiversity- Hot-spots of biodiversity - Threats to biodiversity -Endangered and endemic species of India – Conservation of biodiversity, Ecosystem and biodiversity services: Ecological, economic, ethical, aesthetic and information value

UNIT III – Environmental Pollution

Pollution: Air pollution, Water pollution, Noise pollution, Thermal pollution, Soil pollution Control, Pollution case studies, Nuclear hazards and human health risks, Solid waste Management: control measures of urban and industrial wastes Remote sensing / GIS:

Introduction, definitions, applications of the remote sensing, . Green technology for Sustainable development

UNIT IV – Environmental Policies and Practices

Climate change, Global warming, Acid rain, Ozone layer depletion and impacts on human communities and agriculture. Environmental laws: Wildlife Protection Act – Water (pollution prevention and control) Act - Forest Conservation Act - Air (pollution prevention and control) Act. – Environmental Protection Act, International agreements: Montreal and Kyoto protocols and Convention on Biological Diversity, Nature reserves, tribal populations and rights, and human wild life conflicts in Indian context, EIA: Introduction, definition of E.I.A and E.I.S – scope and objectives – Importance of E.I.A in proposed Projects / Industry / Developmental activity.

UNIT V – Human Communities and the Environment

Human population growth: Impacts on environment, human health and welfare -Resettlement and Rehabilitation of project affected persons: Case Studies. -Disaster Management: floods, earthquake, landslides and cyclones -Environmental movements: Chipko movement, Silent valley, Bishnois of Rajasthan-Environmental ethics: Role of Indian and other religions and cultures in environmental conservation: Environmental communication and Public awareness, case studies (C.N.G Vehicles in Delhi)

Field work/Environmental Visit: Visit to a local area to document environmental assets – river/ forest/ grassland / hill /mountain: Visit to a local polluted site - Study of local environment - common plants, insects, birds - Study of simple ecosystems –pond, river, hill slopes etc - Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

1. Anubha Kaushik- CP Kaushik – ‘Perspectives in Environmental Studies’ – V th Edition Current version – 2016
2. Benny Joseph – ‘Environmental studies’- IInd edition - 2015 – Mc Graw Hill Education
3 Text book for Environmental Studies-Erach Bharucha for University Grants Commission

17HS004 FUNDAMENTALS OF COMPUTER SCIENCE-I

Course Description and Objectives:

This course introduces computer science through three of its major fields: hardware systems (physical components, digital logic, and computer architecture), theory and algorithms (Boolean algebra, binary arithmetic, and theory of computation), and software systems (languages, compilers, computer graphics, operating systems, and computer networks.) Programming assignments are used as means to introduce and reinforce fundamental computing concepts, as well as computer programming skills that are useful beyond this course. The course provides elements now essential to understand and effectively interact with the information technology infrastructure of today's world.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Demonstrate the use of mathematical software and solve simple mathematical problems.
2	Explain the needs of hardware and software required for a computation task.
3	State typical provisions of cyber law that govern the proper usage of Internet and computing resources.
4	Explain the working of important application software and their use to perform any engineering activity.
5	Demonstrate the use of Operating system commands and shell script.

UNIT - 1

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors

UNIT - 2

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and Database management systems.

UNIT - 4

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and Other internet applications.

UNIT - 5

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

TEXT BOOK:

1. Peter Norton, "Introduction to Computers", 7th edition, Tata-McGrawHill, 2010.

REFERENCEBOOKS:

1. ITL Education Solution Limited, "Introduction to Computer Science", 2nd edition, Pearson Education, 2011.
2. Eric Maiwald, "Fundamentals of Network Security", 3rd edition, Tata-McGrawHill, 2004.

Student Activity:

- Prepare a report on various generations of computers and its peripherals.
- Disassembling and assembling of a personal computer system.
- Install the Linux operating system and other software required in a personal computer system.
- Connect the system to an Ethernet and configure the same.
- Prepare an MS Word Document.
- Prepare a spread sheet with various mathematical operations, charts and sorting etc.
- Make a report on power point presentation for the given topic.

17HS004A FUNDAMENTALS OF COMPUTER SCIENCE-I LAB

LIST OF EXPERIMENTS

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools

   a. Text formatting and table.

   b. Mathematical equations.

   c. Watermarking using Analysis tool.

   d. Calculate student mark details.

   e. Create four types of charts.

   f. Import external data, sort & filter using Power Point tool.

   g. Create text and images with effects.

   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

17HS005 DIFFERENTIAL EQUATIONS

Course Description and Objectives:

The main purpose of the course is to introduce students to the theory and methods of ordinary and partial differential equations. Students should be able to implement the methods taught in the course to work associated problems, including proving results of suitable accessibility. This course is designed to prepare students to solve problems arising from many applications such as mathematical models of physical or engineering processes.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Explore some of the basic theory of linear ODEs, recognize basic types of linear ODEs
2	Recognize ODEs, PDEs and system of considered equation concepts that are encountered in the real world, understand.
3	Defining different sets of generalized coordinates for a given mechanical system and the use of canonical transformations.
4	Identify the physical situations formulate mathematical models using pdes.
5	Students are introduced to modern concepts and methodologies.

Skills:

- ✓ Extract information from equations to interpret the reality.
- ✓ Extract information from partial differential equations to interpret the reality.
- ✓ Know the various types of methods and their limitations

UNIT – I (12 Hours), Differential Equations of first order and first degree :
Linear Differential Equations; Differential Equations Reducible to Linear Form; Exact Differential Equations; Integrating Factors; Change of Variables.

UNIT – II (12 Hours), Orthogonal Trajectories.
Differential Equations of first order but not of the first degree :
Equations solvable for p; Equations solvable for y; Equations solvable for x; Equations that do not contain. x (or y); Equations of the first degree in x and y – Clairaut's Equation.

UNIT – III (12 Hours), Higher order linear differential equations-I :
Solution of homogeneous linear differential equations of order n with constant coefficients; Solution of the non-homogeneous linear differential equations with constant coefficients by means of polynomial operators.
General Solution of f(D)y=0
General Solution of f(D)y=Q when Q is a function of x.

$\frac{1}{f(D)}$ is Expressed as partial fractions.

P.I. of f(D)y = Q when Q= be^{ax}

P.I. of f(D)y = Q when Q is b sin ax or b cos ax.

UNIT – IV (12 Hours), Higher order linear differential equations-II :

Solution of the non-homogeneous linear differential equations with constant coefficients.

P.I. of f(D)y = Q when Q= bx^k

P.I. of f(D)y = Q when Q= $e^{ax}V$

P.I. of f(D)y = Q when Q= xV

P.I. of f(D)y = Q when Q= x^mV

UNIT –V (12 Hours), Higher order linear differential equations-III :

Method of variation of parameters; Linear differential Equations with non-constant coefficients; The Cauchy-Euler Equation.

Reference Books:

1. Differential Equations and Their Applications by Zafar Ahsan, Prentice-Hall of India Learning Pvt. Ltd. New Delhi, Second edition.
2. A text book of mathematics for BA/BSc Vol 1 by N. Krishna Murthy & others, S. Chand & Co., New Delhi.
3. Ordinary and Partial Differential Equations Raisinghania, S. Chand & Co., New Delhi.
4. Differential Equations with applications and programs – S. Balachandra Rao & HR Anuradha, Universities press.

Suggested Activities:

Seminar/ Quiz/ Assignments/ Project on Application of Differential Equations in Real life

17HS006 Descriptive Statistics and Probability

COURSE DESCRIPTION AND OBJECTIVES

It provides the foundation to the students on elementary topics of Statistics and prepares them to describe the given data. The students try to know and measure the chance of happening different events and their occurrence numerically. Students understand how probability has been distributed to the different events and standard notions of probability distributions.

COURSE OUTCOMES

COs	Outcomes
1	Understand how to describe the data with available measures
2	Learn how to present the data with a suitable diagram
3	Apply probability in real time situations and identify randomness in experiments
4	Differentiate between types of random variables and its distributions
5	Study the standard distributions and its properties

SKILLS

- ✓ Describe the given data using different measures in statistics
- ✓ Draw suitable graph for the given data
- ✓ Able to quantify the chance of happening events
- ✓ Fit an appropriate probability distribution for a given data

Unit-I

Introduction to Statistics: Concepts of Primary and Secondary data. Methods of collection and editing of primary data, Secondary data. Designing a questionnaire and a schedule. Measures of Central Tendency - Mean, Median, Mode,Geometric Mean and Harmonic Mean.

Unit-II

Measures of dispersion: Range, Quartile Deviation, Mean Deviation and Standard Deviation. Descriptive Statistics -Central and Non-Central moments and their interrelationship. Sheppard's correction for moments. Skewness and kurtosis.

Unit-III

Introduction to Probability: Basic Concepts of Probability, random experiments, trial, outcome, sample space, event, mutually exclusive and exhaustive events, equally likely and favourable outcomes. Mathematical, Statistical, axiomatic definitions of probability. Conditional Probability and independence of events,

Unit-IV

Probability theorems:Addition and multiplication theorems of probability for 2 and for n events. Boole's inequality and Baye's theorems and problems based on Baye's theorem.

Unit-V

Random variable: Definition of random variable, discrete and continuous random variables, functions of random variable. Probability mass function. Probability density function, Distribution function and its properties. Bivariate random variable - meaning, joint, marginal and conditional Distributions, independence of random variables.

Text Books:

1. V.K.Kapoor and S.C.Gupta: Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi.
2. BA/BSc I year statistics - descriptive statistics, probability distribution - Telugu Academy - Dr M.Jaganmohan Rao,Dr N.Srinivasa Rao, Dr P.Tirupathi Rao, Smt.D.Vijayalakshmi.
3. K.V.S. Sarma: Statistics Made Simple: Do it yourself on PC. PHI

Reference books:

1. Willam Feller: Introduction to Probability theory and its applications. Volume –I, Wiley
2. Goon AM, Gupta MK, Das Gupta B : Fundamentals of Statistics , Vol-I, the World Press Pvt.Ltd., Kolakota.
3. Hoel P.G: Introduction to mathematical statistics, Asia Publishing house.
4. M. JaganMohan Rao and Papa Rao: A Text book of Statistics Paper-I.
5. Sanjay Arora and Bansi Lal: New Mathematical Statistics: Satya Prakashan , New Delhi
6. Hogg Tanis Rao: Probability and Statistical Inference. 7th edition. Pearson.

17HS007 Descriptive Statistics and Probability LAB

Conduct the following using excel for 1 to 4

1. Computation of mean, median and mode.
2. Computation of quartile deviation.
3. Computation of mean deviation
4. Computation of Standard deviation.
5. Non-central moments and central moments, Sheppard corrections & Skewness based on moments and Kurtosis

17HS008 Computer Fundamentals & Photoshop

Course Description and Objectives:

To explore basic knowledge on computers and Photoshop's beauty from the practical to the painterly artistic and to understand how Photoshop will help you create your own successful images

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Bridge the fundamental concepts of computers with the present level of knowledge of the students.
2	Familiarise operating systems, programming languages, peripheral devices, networking, multimedia and internet
3	Understand binary, hexadecimal and octal number systems and their arithmetic.
4	Understand how logic circuits and Boolean algebra forms as the basics of digital computer.
5	Demonstrate the building up of Sequential and combinational logic from basic gates.

UNIT-I:

Introduction to computers, characteristics and limitations of computer, Block diagram of computer, types of computers, uses of computers, computer generations. Number systems: binary, hexa and octal numbering system

UNIT-II:

Input and output devices: Keyboard and mouse, inputting data in other ways, Types of Software: system software, Application software, commercial, open source, domain and free ware software, Memories: primary, secondary and cache memory. Windows basics: desktop, start menu, icons.

Unit –III

Introduction to Adobe photoshop, Getting started with photoshop, creating and saving a document in photoshop ,page layout and back ground, photoshop program window-title bar,menu bar,option bar,image window, image title bar, status bar, ruler, palettes, tool box, screen modes,saving files,reverting files,closing files.

Unit –IV

Images: working with images, image size and resolution ,image editing,colour modes and adjustments , Zooming & Panning an Image,, , Rulers, Guides & Grids- Cropping & Straightening an Image, image backgrounds ,making selections.

Working with tool box: working with pen tool, save and load selection-working with erasers-working with text and brushes-Colour manipulations: colour modes- Levels – Curves - Seeing

Colour accurately - Patch tool – Cropping-Reading your palettes - Dust and scratches- Advanced Retouching- smoothing skin

Unit-V

Layers: Working with layers- layer styles- opacity-adjustment layers

Filters: The filter menu, Working with filters- Editing your photo shoot, presentation –how to create adds ,artstic filter,blur filter,brush store filter,distort filters,noice filters,pixelate filters,light effects,difference clouds,sharpen filters,printing.

Reference Books:

1. Fundamentals of Computers by Reema Thareja from Oxford University Press
2. Adobe Photoshop Class Room in a Book by Adobe Creative Team.
3.Photoshop: Beginner's Guide for Photoshop - Digital Photography, Photo Editing, Color Grading & Graphic...19 February 2016 by David Maxwell

Student Activity:

1. **Design a poster for technical paper presentation.**
2. **Create a digital scrap book.**

17HS009 Computer Fundamentals & Photoshop Lab

1. Create your Visiting card
2. Create Cover page for any text book
3. Create a Paper add for advertising of any commercial agency
4. Design a Passport photo
5. Create a Pamphlet for any program to be conducted by an organixation
6. Create Broacher for you college
7. Create Titles for any forthcoming film
8. Custom shapes creation
9. Create a Web template for your college
10. Convert color photo to black and white photo
11. Enhance and reduce the given Image size
12. Background changes
13. Design Box package cover
14. Design Texture and patterns
15. Filter effects & Eraser effects

17HS011 ENGLISH -II

Course Description and Objectives:

This course aims to improve language skills and basic communication skills. This course includes all genres of literature and grammar components and that will allow learner to improve his/her knowledge in language.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Learner can understand the skimming and scanning skills in reading. Get the knowledge of different word-formation in styles. Write précis writing.
2	Appreciate the rhyme and rhythm in poems. Learn different aspects of social evils.
3	Introduced to short story. Learns synonyms and antonyms.
4	Study one act play. Learn narrative technique and practice writing.
5	Learn different grammar component and use phonetics for pronunciation.

Skills

- ✓ Skimming and scanning skills in reading
- ✓ Usage of acceptable functional English

Unit – I PROSE

1. J. B.S Haldane: The Scientific Point of View
2. A.G. Gardiner : On Shaking Hands

Unit – II POETRY

1. John Keats: Ode to Autumn
2. KishwarNaheed : I am not that Woman (from *An Anthology of Commonwealth Poetry* edited by C.D. Narasimhaiah)

Unit –III SHORT STORY

1. Ruskin Bond : The Boy Who Broke the Bank
2. R. K. Narayan : Half a Rupee Worth

Unit – IV ONE ACT PLAY

Anton Chekhov: The Proposal

Unit – V LANGUAGE ACTIVITY

1. Classroom and Laboratory Activities
    i. Transformation of Sentences (Voice, Speech and Degrees)
    ii. Dialogue Practice (Oral)
    iii. Listening Comprehension

2. Classroom Activity
    i. Guided Composition
    ii. Dialogue Writing
    iii. Reading Comprehension

17HS012 English Proficiency Communication Skill II

Course Description and Objectives:

This course has been aimed at practicing communication skills in Standard English language. Inculcate the basics of functional language. Comprehensively designed syllabus allows learner to get train himself/herself in all four language skills.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Able to talk about making plans, hobbies and films.
2	Learner can able to use appropriate vocabulary for real time situations families and relations.
3	Students able to describe given picture and able speak about how they feel etc.,
4	Students can speak about unexpected events happened and friendship and friends.
5	Get different vocabulary of shopping, travelling and food and restaurant.

Skills

1. advanced communication skills
2. using appropriate vocabulary related to different fields of work
3. team presentation (speaking)

Unit-1

16. Free Time (making plans)
17. Next week's episodes (predictions)
18. Shooting a film (films)

Unit-2

19. Happy families (family life)
20. So you think you have got a talent? (Music)
21. Keep in touch! (communicating)

Unit-3

22. Strange but true? (the unexpected)
23. Best friends? (friendship)
24. I've got an idea (inventions)

Unit-4

25. Shop till you drop (shopping)

26. Persuading people (advertising and persuasion)
27. Travellers' tales (travel experiences)

Unit-5

28. What would you do? (celebrities)
29. What's on the menu? (Food and restaurants)
30. Blue for a boy and pink for a girl (boys and girls)

Prescribed textbook:

Louise Hashemi and Barbara Thomas, "Objective PET", South Asian Edition, Cambridge University Press, 2015

17HS013 General Studies I :: Polity and Governance of India

Course Description &objectives:
This course introduces basic understanding of Indian polity and constitution. The course objective is to make students to understand the functioning of government at the centre and state level besides local self government as outlined in the constitution and gives basic knowledge about the fundamental rights & duties of a citizen besides gives the knowledge about Elections and Democracy at work.

Course Outcomes:
Applies the constitution and its principles to the day to day happenings.
Inculcates the respect for the constitution and rights of others besides safeguarding one's own rights.
Analyzes functioning of executive, legislative and Judiciary.
Compares the Indian constitution with other countries

Unit -I : Overview of Indian constitution
Making of Indian constitution
Salient features
Preamble
Significant Provisions; Amendments; Basic structure

Unit – II: working of the Indian Constitution
Features of Indian Federal system
Centre-State relations- Legislative, executive, financial
Issues and concerns – coalition governments ; Administrative Reforms

Unit - III: Structure of the Government
Union Government
State Government
Local Government
VFSTR UNIVERSITY
MINORS 15

Unit – IV: Powers and Functions of Constitutional, Statutory and Non statutory bodies
Constitutional - Election Commission, UPSC, Finance Commission, CAG etc.,
Statutory - NHRC, CVC, etc.,
Non statutory – Planning Commission, National Development Council etc.,

Unit – V: Political Dynamics
Representation of Peoples' Act
Political Parties
Pressure Groups
Elections, Electoral Reforms
Transparency, Accountability and Right to Information

TEXT BOOKS:
1. D.D. Basu—Indian Constitution
2. Subhash C. Kashyap : Our Parliament, Publication Division

References:
1. P.M. Bakshi—Indian Constitution
2. Laxmikanth, Indian Polity

17HS014 FUNDAMENTAL OF COMPUTER SCIENCE-II (COMPUTER Organization)

Course Description and Objectives:

This course introduces computer science through three of its major fields: hardware systems (physical components, digital logic, and computer architecture), theory and algorithms (Boolean algebra, binary arithmetic, and theory of computation), and software systems (languages, compilers, computer graphics, operating systems, and computer networks.) Programming assignments are used as means to introduce and reinforce fundamental computing concepts, as well as computer programming skills that are useful beyond this course. The course provides elements now essential to understand and effectively interact with the information technology infrastructure of today's world.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Demonstrate the use of mathematical software and solve simple mathematical problems.
2	Understand the use of topics like number systems, Boolean algebra, logic gates.
3	Use of Register Transfer Language, Computer Arithmetic
4	Understand the Basic Computer Organization and Design.
5	understand and analyze the functions and organizations of modern digital computers.

UNIT - 1

NUMBER SYSTEMS AND BOOLEAN ALGEBRA: Number system - Binary numbers, Number base conversions, Octal and hexadecimal numbers, Complements of numbers, Signed binary numbers, Binary codes, Binary logic. Boolean Algebra - Basic definitions, Basic theorems and properties of Boolean algebra.

UNIT - 2 LOGIC GATES AND GATE-LEVEL MINIMIZATION: Boolean functions, Canonical and standard forms, Digital logic gates, The map method, Four - variable k-map, Product-of-sums simplification, Don'tcare conditions, NAND and NOR implementation, Other two-level implementations, Exclusive-or function.

UNIT - 3

INTRODUCTION &RTL: Organization and architecture, Block diagram of digital computer, Structure and function. Register Transfer language – Register Transfer Bus and memory transfers.

UNIT - 4

COMPUTER ARITHMETIC: Arithmetic micro operations, Logic micro Operations, Shift micro operations and Arithmetic logic shift unit. Addition and subtraction, Multiplication Algorithms and Division Algorithms, Floating point representation and its operations.

UNIT - 5

BASIC COMPUTER ORGANIZATION AND DESIGN: Instruction codes, Computer Registers, Computer instructions, Instruction cycle, Memory–Reference Instructions, Register Reference instructions, Input-Output and Interrupt, Stack organization, Instruction formats, Addressing modes, Data Transfer and manipulation, Program control, Reduced Instruction set computer.

TEXT BOOKS:

1. M.Moris Mano, “Computer Systems Architecture”, 3rd edition, Pearson/Prentice Hall India, 2007.
2. M Morris Mano and Michael D. Ciletti, “ Digital Design”, 5th edition, Pearson Education, Inc, 2013.

REFERENCE BOOKS:

1. H Taub and D Schilling, “Digital Integrated Electronics”, 2nd edition, TataMcGraw-Hill, 2004
2. William Stallings, “Computer Organization and Architecture”, 7th edition, Pearson/Prentice Hall India , 2007.

17HS015 GEOMETRY

Course Description and Objectives:

The student should be made to understand the fundamental concepts of Solid geometry. Acquire the skill of analysis and evaluate the different angles and dimensions of the shapes.

Course Outcomes:

Upon completion of the course, the student will be able to achieve the following outcomes:

COs	Course Outcomes
1	Learn about the equation of plane and its angle, angle of projections.
2	Understand the significance of line along with the plane and determine its different conditions.
3	Learn the basic conditions of sphere and its intersection along with the line, plane contact and conjunctions.
4	Understand the convergence of spheres, basic on cones and generation of cones at different conditions.
5	Learning the different concepts of cones and cylinders with its different shapes and conditions and properties of its angles.

Skills:

- ✓ Study on different aspects of geometrical positions.
- ✓ Evaluate the properties of the many shapes in geometry.
- ✓ Understanding the convergence of axis.

UNIT – I (12 hrs) : The Plane :

Equation of plane in terms of its intercepts on the axis, Equations of the plane through the given points, Length of the perpendicular from a given point to a given plane, Bisectors of angles between two planes, Combined equation of two planes, Orthogonal projection on a plane.

UNIT – II (12 hrs) : The Line :

Equation of a line; Angle between a line and a plane; The condition that a given line may lie in a given plane; The condition that two given lines are coplanar; Number of arbitrary constants in the equations of straight line; Sets of conditions which determine a line; The shortest distance between two lines; The length and equations of the line of shortest distance between two straight lines; Length of the perpendicular from a given point to a given line;

UNIT – III (12 hrs) : Sphere :

Definition and equation of the sphere; Equation of the sphere through four given points; Plane sections of a sphere; Intersection of two spheres; Equation of a circle; Sphere through a given circle; Intersection of a sphere and a line; Power of a point; Tangent plane; Plane of contact; Polar plane; Pole of a Plane; Conjugate points; Conjugate planes;

UNIT – IV (12 hrs) : Sphere &Cones :

Angle of intersection of two spheres; Conditions for two spheres to be orthogonal; Radical plane; Coaxial system of spheres; Simplified from of the equation of two spheres.

Definitions of a cone; vertex; guiding curve; generators; Equation of the cone with a given vertex and guiding curve; Enveloping cone of a sphere; Equations of cones with vertex at origin are homogenous; Condition that the general equation of the second degree should represent a cone; Condition that a cone may have three mutually perpendicular generators;

UNIT – V (12 hrs) Cones & Cylinders :

Intersection of a line and a quadric cone; Tangent lines and tangent plane at a point; Condition that a plane may touch a cone; Reciprocal cones; Intersection of two cones with a common vertex; Right circular cone; Equation of the right circular cone with a given vertex; axis and semi-vertical angle.

Definition of a cylinder; Equation to the cylinder whose generators intersect a given conic and are parallel to a given line; Enveloping cylinder of a sphere; The right circular cylinder; Equation of the right circular cylinder with a given axis and radius.

Reference Books:

1. Analytical Solid Geometry by Shanti Narayan and P.K. Mittal, S. Chand & Co., 7th Edition.
2. A text book of Mathematics for BA/B.Sc Vol 1, by V Krishna Murthy & Others, S. Chand & Co., New Delhi.
3. A text Book of Analytical Geometry of Three Dimensions, by P.K. Jain and Khaleel Ahmed, Wiley Eastern Ltd., 1999.
4. Co-ordinate Geometry of two and three dimensions by P. Balasubrahmanyam, K.Y. Subrahmanyam,
G.R. Venkataraman, Tata-McGra-Hill Publishers Company Ltd., New Delhi.

Suggested Activities:

Seminar/ Quiz/ Assignments/ Project on Application of Solid Geometry in Engineering

17HS016 Mathematical Expectation and Probability Distributions

COURSE DESCRIPTION AND OBJECTIVES

Learn and be able to apply the properties of mathematical expectation and how it will be used to find the characteristics of the given data. To learn different alternative ways of obtaining the characteristics of data and to find the characteristics of the standard distributions in discrete and continuous random variables

COURSE OUTCOMES

After the completion of the course, the student will be able to achieve the following outcomes:

COs	Outcomes
1	Able to apply mathematical expectation in real time situations
2	Obtain Population constants for different distributions
3	Apply different methods to find the population constants for a given data
4	Can find the characteristics of the standard populations
5	Compare the different alternative methods in finding the characteristics

SKILLS

- ✓ Choose appropriate method to find the characteristics of the data
- ✓ Apply an appropriate method for industrial applications
- ✓ Fit appropriate probability distribution to the given data

Unit-I

Mathematical expectation : Mathematical expectation(ME) of a random variable and function of a random variable. Moments and covariance using mathematical expectation with examples. Addition and Multiplication theorems on expectation. Definitions of M.G.F, C.G.F, P.G.F, C.F its properties. Chebyshev and Cauchy - Schwartz inequalities.

Unit -II

Discrete Distributions : Binomial and Poisson distributions, their definitions, 1st to 4 central moments, M.G.F, C.F, C.G.F, P.G.F, mean, variance, additive property if exists. Possion approximation to Binomial distribution.

Unit - III

Negative Binomial, geometric, hyper geometric distributions - Definitions, means, variances, M.G.F, C.F, C.G.F, P.G.F, reproductive property if exists. Binomial approximation to Hyper Geometric Distribution, Poisson approximation to Negative binomial distribution.

Unit – IV

Continuous Distributions : Rectangular, Exponential, Gamma, Beta Distributions of two kinds. Other properties such as mean , variance,M.G.F, C.G.F, C.F, reproductive property.

Unit – V

Normal Distribution: Definition, Importance, Properties, M.G.F, additive properties, Interrelation between Normal and Binomial, Normal &Poisson distribution. Cauchy Distribution .

Text Books:

1. V.K.Kapoor and S.C.Gupta: Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi.
2. BA/BSc I year statistics - descriptive statistics, probability distribution - Telugu Academy - Dr.M.Jaganmohan Rao,Dr N.Srinivasa Rao, Dr P.Tirupathi Rao, Smt.D.Vijayalakshmi
3. K.V.S. Sarma: Statistics Made Simple: Do it yourself on PC. PHI.

Reference books:

1. Willam Feller : Introduction to Probability theory and its applications. Volume –I, Wiley
2. Goon AM, Gupta MK, Das Gupta B : Fundamentals of Statistics , Vol-I, the World Press Pvt.Ltd., Kolakota.
3. Hoel P.G: Introduction to mathematical statistics, Asia Publishing house.
4. M. JaganMohan Rao and Papa Rao: A Text book of Statistics Paper-I.
5. Sanjay Arora and Bansi Lal: New Mathematical Statistics: Satya Prakashan , New Delhi
6. Hogg Tanis Rao: Probability and Statistical Inference. 7th edition Pearson.

17HS017 Mathematical Expectation and Probability Distributions Lab

Conduct the following

1. Fitting of Binomial Distribution – Recurrence relation method.

2. Fitting of Poisson Distribution - Recurrence relation method.

3. Fitting of Negative Binomial Distribution.

4. Fitting of Geometric Distribution.

5. Fitting of Normal Distribution - Areas methods.

6. Fitting of Normal Distribution - Ordinates methods.

MS-Excel methods for the above Serial Numbers 1 and 2

17HS018 PROGRAMMING IN C

Course Objectives
1. Learn how to solve common types of computing problems.
2. Learn data types and control structures of C
3. Learn to map problems to programming features of C.
4. Learn to write good portable C programs.

Course Outcomes
Upon successful completion of the course, a student will be able to:
1. Appreciate and understand the working of a digital computer
2. Analyze a given problem and develop an algorithm to solve the problem
3. Improve upon a solution to a problem
4. Use the 'C' language constructs in the right way
5. Design, develop and test programs written in 'C'

UNIT I

Introduction to Algorithms and Programming Languages: Algorithm – Key features of Algorithms – Some more Algorithms – Flow Charts – Pseudo code – Programming Languages – Generation of Programming Languages – Structured Programming Language- Design and Implementation of Correct, Efficient and Maintainable Programs.

Introduction to C: Introduction – Structure of C Program –Writing the first C Program – File used in C Program – Compiling and Executing C Programs – Using Comments – Keywords – Identifiers – Basic Data Types in C – Variables – Constants – I/O Statements in C- Operators in C- Programming Examples – Type Conversion and Type Casting

UNIT II

Decision Control and Looping Statements: Introduction to Decision Control Statements – Conditional Branching Statements – Iterative Statements – Nested Loops – Break and Continue Statement – Goto Statement

Functions: Introduction – using functions – Function declaration/ prototype – Function definition – function call – return statement – Passing parameters – Scope of variables – Storage Classes –Recursive functions – Type of recursion – Towers of Hanoi – Recursion vs Iteration

UNIT III

Arrays: Introduction – Declaration of Arrays – Accessing elements of the Array – Storing Values in Array – Calculating the length of the Array – Operations on Array – one dimensional array for inter-function communication – Two dimensional Arrays –Operations on Two Dimensional Arrays - Two Dimensional Arrays for inter-function communication – Multidimensional Arrays – Sparse Matrices

Strings: Introduction –Suppressive Input – String Taxonomy – String Operations – Miscellaneous String and Character functions

UNIT IV

Pointers: Understanding Computer Memory – Introduction to Pointers – declaring Pointer Variables – Pointer Expressions and Pointer Arithmetic – Null Pointers – Generic Pointers - Passing Arguments to Functions using Pointer – Pointer and Arrays – Passing Array to Function – Difference between Array Name and Pointer – Pointers and Strings – Array of pointers – Pointer and 2D Arrays – Pointer and 3D Arrays – Function Pointers – Array 0f Function Pointer – Pointers to Pointers – Memory Allocation in C Programs – Memory Usage – Dynamic Memory Allocation – Drawbacks of Pointers

Structure, Union, and Enumerated Data Types: Introduction – Nested Structures – Arrays of Structures – Structures and Functions – Self referential Structures – Union – Arrays of Unions Variables – Unions inside Structures – Enumerated Data Types

UNIT V

Files: Introduction to Files – Using Files in C – Reading Data from Files – Writing Data from Files – Detecting the End-of-file – Error Handling during File Operations – Accepting Command Line Arguments – Functions for Selecting a Record Randomly - Remove() – Renaming a File – Creating a Temporary File

REFERENCE BOOKS

1. Introduction to C programming by REEMA THAREJA from OXFORD UNIVERSITY PRESS
2. E Balagurusamy: ―COMPUTING FUNDAMENTALS & C PROGRAMMING – Tata McGraw-Hill, Second Reprint 2008, ISBN 978-0-07-066909-3.
3. Ashok N Kamthane: Programming with ANSI and Turbo C, Pearson Edition Publ, 2002.
4. Henry Mullish & Huubert L.Cooper: The Spirit of C An Introduction to modern Programming, Jaico Pub. House,1996.

Student Activity:

1. Write a program for preparing the attendance particulars of students of your college at the end of semester according to following guidelines
   a. Above 75 % promoted
   b. Above 65% condoned
   c. Below 65% detained
2. Write a program for creating timetable or your class taking work load of faculty into consideration.

17HS019 PROGRAMMING IN C LAB

1. Find out the given number is perfect number or not using c program.
2. Write a C program to check whether the given number is Armstrong or not.
3. Write a C program to find the sum of individual digits of a positive integer.
4. A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to print the Fibonacci series
5. Write a C program to generate the first n terms of the Fibonacci sequence.
6. Write a C program to generate all the prime numbers between 1 and n, where n is a value supplied by the user.
7. Write a C program to find both the largest and smallest number in a list of integers.
8. Write a C program that uses functions to perform the following:
    a. Addition of Two Matrices
    b. Multiplication of Two Matrices
9. Write a program to perform various string operations
10. Write C program that implements searching of given item in a given list
11. Write a C program to sort a given list of integers in ascending order
