3.1- COURSES IN ALL PROGRAMMES

(2017-18)

Index

S.No	Programme Name	Page numbers
1	B.Tech-Biotechnology	3-148
2	B.Tech-Chemical Engineering	149-281
3	B.Tech-Civil Engineering	282-421
4	B.Tech-Computer Science and Engineering	422-587
5	B.Tech-Electronics and Communication Engineering	588-709
6	B.Tech-Electrical and Electronics Engineering	710-855
7	B.Tech-Information Technology	856-967
8	B.Tech-Mechanical Engineering	968-1105
9	B.Tech-Automobile Engineering	1106-1241
10	B.Tech-Textile Technology	1242-1387
11	B.Tech-Agriculture Engineering	1388-1526
12	B.Tech-Bioinformatics	1527-1677
13	B.Tech-Food Technology	1678-1830
14	B.Tech-Biomedical Engineering	1831-1922
15	B.Tech-Petroleum Engineering	1923-2222
16	M.Tech-Biotechnology	2223-2270
17	M.Tech-Computer Science and Engineering	2271-2318
18	M.Tech-Embedded Systems	2319-2377
19	M.Tech-Machine Design	2378-2423
20	M.Tech-Power Electronics and Drives	2424-2446
21	M.Tech-Very Large Scale Integration (VLSI)	2447-2497
22	M.Tech-Food Processing Technology	2498-2559
23	M.Tech-Structural Engineering	2560-2620
24	M.Tech-Farm Machinery	2621-2664
25	Master of Business Administration	2665-2742
26	Master of Computer Applications	2743-2832
27	All Ph.D Programs	2833-3032
28	Bachelor of Computer Applications	3033-3084
29	Bachelor of Business Administration	3085-3150
30	B.Sc. (Mathematics, Statistics and Computer Science)	3151-3178

I

YEAR

B.Tech.

BIOTECHNOLOGY

I SEMESTER

- 16HS101 - Basic Mathematics - I
- 16HS102 - Engineering Physics
- 16HS105 - Technical English Communication
- 16CS101 - Basics of Computers and Internet
- 16CS102 - Computer Programming
- 16EE101 - Basics of Engineering Products
- 16HS104 - English Proficiency and Communication Skills
- 16HS110 - Engineering Physics Laboratory

II SEMESTER

- 16HS106 - Basic Mathematics - II
- 16HS107 - Engineering Chemistry
- 16ME101 - Engineering Graphics
- 16EE102 - Basics of Electrical and Electronics Engg.
- 16HS111 - Engineering Chemistry Laboratory
- 16HS109 - Environmental Science and Technology
- 16BT102 - Bioproducts and Bioentrepreneurship
- 16ME103 - Workshop Practice

COURSE CONTENTS

I SEM AND II SEM

16HS101 BASIC MATHEMATICS - I

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

In this course the fundamental concepts of mathematics are introduced. A treatise of Matlab is also introduced in the practical session.

The objective of the course is to impart knowlege on progressions, partial fractions and binomial theorem. This course also deals with elementary concepts in geometry, trigonometry, differential and integral calculus. Numerical methods are also introduced for finding approximate solutions of algebraic equations. Besides, interpolation techniques and MATLAB environment are emphasized.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understanding progression, partial fractions, binomial theorem, trigonometry and geometry.

CO2: Evaluate limits, test the continuity and differentiability of functions.

CO3: Evaluate integrals of functions.

CO4: Apply numerical methods and interpolation techniques to find functional values.

CO5: Apply software tools to obtain and verify the solutions.

SKILLS:

- ✓ *Compute sum of terms of given progression.*
- ✓ *Differentiate the given function.*
- ✓ *Evaluate the integral of given function.*
- ✓ *Interpret interpolation techniques to estimate the functional values.*

UNIT - 1 **L-9, T-3**

MATHEMATICAL PRELIMINARIES: Progressions, partial fractions and binomial theorem.

UNIT - 2 **L-9, T-3**

TRIGONOMETRY AND GEOMETRY: Coordinate system, straight line, trigonometric functions and trigonometric identities.

UNIT - 3 **L-9, T-3**

DIFFERENTIAL CALCULUS : Limits, continuity and differentiability.

UNIT - 4 **L-9, T-3**

INTEGRAL CALCULUS: Concepts of integration - rules, integration by parts, integration by partial fractions and integration by inspection (standard forms).

UNIT - 5 **L-9, T-3**

NUMERICAL METHODS: Bisection method, Newton-Raphson method, finite differences, forward and backward difference tables, interpolation by Lagrange's method, Newton's forward and backward methods, Gauss forward and backward methods.

ACTIVITIES:

- *Compute the derivative and compare with Matlab output.*
- *Evaluate the integral and compare with Matlab output.*
- *Interpet the given data and estimate the functional values at a given point.*

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Introduction to MATLAB environment.

Basic mathematical operations using MATLAB.

1. Solving simple expressions.
2. Trigonometric function values.
3. Limits.
4. Continuity.
5. Symbolic differentiation-1.
6. Symbolic differentiation-2.
7. Symbolic integration-1.
8. Symbolic integration-2.
9. Real roots of functions.
10. Newton-Raphson method.
11. Interpolation.

TEXT BOOKS:

1. C. W. Evans, “Engineering Mathematics, A Programmed Approach”, Stanley Thornes (Special Indian Edition) 2011.
2. P. S. Rao, “A text book of Remedial Mathematics”, 1st edition, Parma Med Press, Hyderabad, 2008.

REFERENCE BOOKS:

1. A.Jeffrey, “Mathematics for Engineers and Scientists”, 6th edition, (Special Indian Edition),CRC Press, 2013.
2. R. Pratap, “Getting started with MATLAB”, Oxford University Publication, 2009.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as lasers, optical fibres, photonics, nano and funcational materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Recognize the relevant applications of Ultrasonic waves by the grasp over their production and properties.

CO2: Analyze the characteristics of Laser for suitable applications in the field of industry, medicine and communication and to foster the knowledge on optical fibers to realize fiber optic communication and fiber optic sensors.

CO3: Apply the principles of quantum mechanics to learn the dynamics of free electrons in metals.

CO4: Evaluate efficiency of Solar cell and to understand the functioning of Photonic devices.

CO5: Demonstrate the knowledgeon fabrication and applications ofNano-materialsand latest advanced materials.

SKILLS:

- ✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*
- ✓ *Study the wavelengths of light sources and lasers.*
- ✓ *Estimate the efficiency of a given solar cell.*
- ✓ *Learn about the type of the optical fibre and their ability to propagate light waves from its numerical aperture.*
- ✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS : Introduction – production of ultrasonic waves, piezoelectric method, properties of ultrasonic waves, types of ultrasonic waves, determination of velocity of ultrasonic waves in solids and liquids; SONAR - medical applications.
NDT: Introduction- types, visual inspection and liquid penetrate testing; Ultrasonic testing systems; X - ray radiography.

UNIT - 2 **L-9**

LASERS : Characteristics of laser light – spontaneous and stimulated emission of radiation, He-Ne laser, CO_2 laser, semiconductor laser and applications.
HOLOGRAPHY: Holography and applications.
FIBER OPTICS : Principle of optical fibre – acceptance angle, numerical aperture, types of fibres, dispersion and attenuation in optical fibres, optical fibre communication system and fibre optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS : Introduction- matter waves, Schroedinger's time independent wave equation, physical significance of the wave function, particle in one dimensional potential well and tunneling phenomenon.
FREE ELECTRON THEORY OF METALS : Introduction – classical free electron theory, electrical conductivity of metal, quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature
PARTICLE ACCELERATORS: Introduction- cyclotron, synchrocyclotron, betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, photovoltaic effect, solar cells, efficiency of solar cell and solar thermal energy conversion systems.
PHOTONICS: LED, LCD, photo conducting materials, photo detectors, photonic crystals, non- linear optical behaviour of materials and applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, fabrication of nano materials, ball milling, sol-gel, physical and chemical properties of nano materials and applications.
FUNCTIONAL MATERIALS: Smart materials, shape memory alloys, chromic materials (thermo, photo and electro), metallic glasses, advanced ceramics, composites, fiber reinforced plastics/ metals and biomaterials.

TEXT BOOKS:

1. V. Rajendran, "Engineering Physics", 7th edition, TMH Publications, 2014
2. D.K. Bhattacharya and P. Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu and P.G. Kshirsagar, "Engineering Physics", 1st edition, S. Chand and Company Ltd, 1992.
3. S.P. Sukhatme, "Solar Energy", 2nd edition, TMH Publication, 2005.
4. Dr. Arumugam, "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimate acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluate thermal conductivity of materials.*
- *Measure temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The teaching efforts in this course will be directed towards making students develop their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand and apply the rules of grammar to speak in technical context.

CO2: Strengthen reading and listening comprehension skills to follow academic discussions in the engineering context.

CO3: Develop appropriate vocabulary for carrying out academic writing tasks.

CO4: Attain adequate proficiency to participate in the classroom discussions and make simple presentations.

CO5: Understand and apply the mechanics of writing to produce simple texts for academic purpose.

SKILLS:

- ✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*
- ✓ *Apply different sub skills like top down, bottoms up approachs to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*
- ✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*
- ✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*
- ✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **Environmental consciousness**

  (Climate change, green cover, pollution, renewable vs. non renewable energy sources (from energy unit)
- Grammar : Articles, prepositions, sentence types and construction
- Vocabulary : Root, prefixes and suffixes
- Composition : Paragraph writing (descriptive and narrative)
- Laboratory Practice : Introduction to phonetics (Organs of speech- consonants, vowels and diphthongs; Syllable, stress and intonation)

UNIT - 2 **L-9**

- Text : **Emerging technologies**
  (Solar power, cloud computing, nanotechnology, wind energy (to be covered from energy unit)
- Grammar : Time and tense (Present, past and future; Helping verbs; Modals)
- Vocabulary : Synonyms and antonyms
- Composition : Letter writing (Informal)
- Laboratory Practice : Grammar practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **Travel and tourism**
  (Advantages and disadvantages of travel, tourism, *atithi devo bhava*- Tourism in India)
- Grammar : Subject-Verb agreement and sentence construction
- Vocabulary : Idioms and Phrases

  Composition : Letter writing (Formal)
- Laboratory Practice : Situational conversations – Role plays (Introducing, greeting, enquiring, informing, requesting and inviting)

UNIT - 4 **L-9**

- Text : **Engineering Ethics**
  (Challenger disaster, biotechnology, genetic engineering, protection from natural calamities, how pertinent is the nuclear option? An environment of energy (from energy unit)) Avoiding sexist language (Gender sensitization)
- Grammar : Sentence transformation (Degrees, voice, speech and synthesis)
- Vocabulary : Phrasal verbs

  Composition : Note-making on Nandan Nilekani's "In search of our energy solutions" (from energy unit) Summarizing on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational conversations – Role plays (Emotions, directions, descriptions, agreements, refusals and suggestions).

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Complete graded grammar exercises in Rosetta Stone.*
- *Complete graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watch TED videos and making notes.*
- *Watch TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Prepare brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and group discussion.*

UNIT - 5 **L-9**

- Text : **Media matters:** (History of media, language and media, milestones in media, manipulation by media, thousands march against nuclear power in Tokyo (from energy unit), entertainment media and interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail, short message service (SMS), writing advertisements, reporting; Social Media- blogging, facebook, twitter (acceptable and non acceptable content)
- Laboratory Practice : Group discussions (topics from energy unit) – Dumping of nuclear wastes, exploration of eco-friendly energy options, lifting of subsidies on petrol, diesel, LPG etc)

TEXT BOOK:

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes and components associated with computers and internet. Students will get exposure to building blocks of computers, operating systems, application software, networking, internet, world wide web, security, maintenance, information systems and the application development processes.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Demonstrate the disassembling and assembling of a personal computer system.

CO2: Install the operating system and other software required in a personal computer system.

CO3: Analyze and visualize the data using various operations in Excel.

CO4: Identify the various threats to users and data.

CO5: Understand the concept of cyber security

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and their peripherals.*
- *Disassemble and assemble of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an ethernet and configure the same.*
- *Prepare an MS word document.*
- *Prepare a spread sheet with various mathematical operations, charts, sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L- 10**

COMPUTING SYSTEMS : Introduction to computer, computers for individuals, importance of computers, parts of computer system, memory devices, input and out devices, types of monitors, types of printers, number systems, bits and bytes, text codes and types of processors.

UNIT - 2 **L- 10**

OPERATING SYSTEMS : Types of operating systems, user interfaces, PC operating systems, network operating systems, types of software, programming languages, compiler and interpreter, program control flow and algorithm.

UNIT - 3 **L- 08**

NETWORKS AND DATABASES : Networking basics, uses of network, types of networks, network hardware, introduction to data bases and database management systems.

UNIT - 4 **L- 8**

INTERNET AND WWW : Internet's services, world wide web, browser setups, using search engine, email and other internet applications.

UNIT - 5 **L- 9**

CYBER SECURITY : The need of computer security, basic security concepts, threats of users, online spying tools, threats to data, cybercrime and protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours: 30

1. Demonstrate the personal computer peripherals and get a report on each peripheral.
2. Demonstrate the personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate network interface card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java development kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort and filter using powerpoint tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. P. Norton, "Introduction to Computers", 7th edition, Tata-McGraw Hill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, "Introduction to Computer Science", 2nd edition, Pearson Education, 2011.
2. E. Maiwald, "Fundamentals of Network Security", 3rd edition, Tata-McGraw Hill, 2004.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files and the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understanding of how to write simple, but complete C programs.

CO2: Identification of suitable data types for operands and design of expressions having right precedence.

CO3: Application of decision making and iterative features of C Programming language effectively.

CO4: Design and development of problem specific data structures and accessing methods to build large modular programs.

CO5: Development of C programs that is understandable, debuggable, maintainable and more likely to work correctly in the first attempt.

SKILLS:

- ✓ *Identify suitable data types for an application.*
- ✓ *Apply control statements for decision making problems.*
- ✓ *Use multidimension array for matrix application.*
- ✓ *Design a program to calculate average of a class.*
- ✓ *Analyze the difference between static and dynamic memory allocation.*

UNIT - 1 **L-9, T-3**

INTRODUCTION TO C PROGRAMMING : Structure of C program- comments, processor statement, function header statement, variable declaration statement and executable statement; C character set - constants, identifiers, operators, punctuations, keywords, modifiers, identifiers, variables, c scopes, basic data types, type qualifiers, storage classes, reading and writing characters and formatted I/O.

UNIT - 2 **L-9, T-3**

OPERATORS AND CONTROL STATEMENTS : Operators- assignment, arithmetic, relational, logical, bitwise, ternary, address, indirection, size of, dot, arrow and parentheses operators; Expressions precedence of operators and associative rules; Control statements- category of statements, selection, iteration, jump, label, expression and block.

UNIT - 3 **L-9, T-3**

FUNCTIONS AND ARRAYS : Function- declaration, prototype, definition, calling by value and call by address, standard library functions and recursive functions; Array- declaration, initialization, reading, writing, accessing and passing as a parameter to functions, 2D-arrays and multidimensional arrays.

UNIT - 4 **L-9, T-3**

STRINGS AND POINTERS : Strings- declaration, string library functions, array of strings and command line arguments; Pointers- declaration, initializing pointers, multiple indirection, relationship between arrays and pointers; Scaling up- array of arrays, array of pointers, pointer to a pointer, pointer to an array; pointer to functions and dynamic memory allocation functions.

UNIT - 5 **L-9, T-3**

STRUCTURES AND FILES : Structures - declaration, initialization and accessing, array of structures and passing structures to functions, structure pointers, arrays and structures within structures, unions, bit-fields, types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- choose programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours: 30

1. Compute the factors of a number.
2. Compute the average of ‘n’ numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.

ACTIVITIES:

- o *Implement matrix operations.*
- o *Implement malloc and calloc functions.*
- o *Copy the content of one file into the other.*
- o *Implement string manipulations functions.*

7. Swap two values useing call by value and call by reference.
8. Using structure of arrays.
9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0’s and 1’s as input and the array should consist of all 0’s first and then 1’s.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student’s information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

TEXT BOOK:

1. A. Mittal, “Programming in C - A Practical Approach”, Pearson Education, India, 2015

REFERENCE BOOKS:

1. R. Thareja, “Introduction to C Programming”, 2nd edition, Oxford University Press India, 2015.
2. C. H. Schildt, “The Complete Reference”, 4th edition, Tata McGraw-Hill, 2000.
3. E. Balagurusamy, “Programming in ANSI C”, 4th edition, Tata McGraw-Hill, 2008.

16EE101 BASICS OF ENGINEERING PRODUCTS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Describe the working principle of Refrigeration and Air conditioning systems.

CO2: Gain awareness on choosing appropriate construction materials.

CO3: Operate and maintenance of basic electrical engineering appliances.

CO4: Analyze the different lighting sources and its features.

SKILLS:

- ✓ *Identify UPS requirements for a given load.*
- ✓ *Provide a lighting scheme for specific working environment.*
- ✓ *Design a composition of hHeating element for a particular application.*
- ✓ *Troubleshoot issues relating to immersion heater and induction heater.*
- ✓ *Provide an earthing for domestic outlet.*
- ✓ *Select, configure and maintain a few engineering appliances such as TV, radio, telephone, mobile phone, wifi router, micro oven, PA system, etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassemble and Assemble of Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design Electric Wiring system for a prototype house.*
- *Design UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L-9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of air-conditioner and refrigerator- components, assembly and disassembly, working principle of centrifugal and reciprocating pumps; Types, parts and applications, working principle of screw jack and its components; Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L-10**

BRICKS : General, qualities and classification of bricks; Tests for bricks; Size and weight of bricks; Timber- definition, qualities of good timber, decay of timber and advantages of timber in construction.

CEMENTS : Types and composition of cement, setting of cement, tests for physical properties of cement, and different grades of cement.

AGGREGATES : Classification of aggregates, source, size and shape of aggregates; Tests for aggregates.

STEEL: Types of steel, physical properties and mechanical properties of steel. Simple layout design, paints, tiles, fittings, ventilation, furniture and green house aspects.

UNIT - 3 **L-8**

ELECTRIC ENERGY SYSTEMS : Overview of power system structure; Conventional and non conventional generations - types of turbines, generators, substations, towers, earthing procedure, protection schemes, single phase and three phase systems.

Methods of electrical wiring systems - wiring procedure and calculations; Wiring methods.

Uninterruptible power supply (UPS)- components in UPS, its functionality and calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT : Light energy, evolution of light sources, working of incandescent, fluorescent, MV, SV and LED lamps, comparison and applications.

HEAT : Heat energy, modes of heat transfer, resistance and induction heating, comparison and applications.

MOTOR : Electric motors, classification, construction and working principles of motors used in domestic applications, mixer grinder, ceiling and exhaust fan, hair dryer, washing machine, water pump, air coolers, vacuum cleaner, computer cooling motor and electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, radio, remote control, telephone, microwave oven, cell phone, PA system, induction stove, wifi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box.
13. Ceiling Fan and Mixer.
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

1. M.S.Shetty, "Concrete Technology", 1st edition, S.Chand and Co, 2005.
2. S. C. Rangwala, "Engineering Materials", 36th edition., Charotar Publishing House, Anad, 2009.
3. Govindasamy, A. Ramesh et al, "Electrical engineering - Electrical machines and Appliances Theory, 1st edition, Tamilnadu Textbook Corporation, 2010.

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Course Description and Objectives:

To equip students with functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. Students will strengthen their comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Can understand routine information and factual articles in the news papers and understand general instructions, notifications, announcements, monologues and conversations. (Understand)

CO2: Use functional English to speak and express themselves in everyday social contexts. (Apply & Create)

CO3: Applying sentence structures and word collocations to produce simple and accurate sentences and create short compositions.

CO4: Analyse complex reading and listening materials and draw inferences to evaluate the intentions of the writers and speakers.

CO5: Creating concise and precise communication by analysing the relevance of the context and applying suitable formats.

SKILLS:

- ✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*
- ✓ *Read and extract information from different texts & draw inferences by understanding elements like tone and transitional words.*
- ✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*
- ✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

Functions : Introducing self/others; Expressing needs/feelings/opinions (SWOT Analysis)

Skill Focus:

Reading - Understanding factual information

Writing - Word order and sentence formation

Listening - Decoding for meaning following elements of stress, intonation and accent

Speaking - Articulating syllables clearly, speaking fluently with correct pronunciation

Vocabulary - Discerning to use right word for the given context

Grammar - Spellings, use of nouns, adjectives, verbs, prepositions in the sentence structure

Practice: Objective PET Units 1 - 6

UNIT - 2 **P-6**

Functions : Defining and describing people, places, things and process.

Skill Focus:

Reading - Inferences from sentences and short messages – true/false

Writing - Rewording, sentence transformation and convincing

Listening - Understanding the short messages and conversations

Speaking - Role plays and short conversations

Vocabulary / Grammar – Use of adjectives/adverbs, comparatives and superlatives

Practice : Objective PET Units 7 – 12

UNIT - 3 **P-6**

Functions : Describing spatial and temporal relations; Giving directions/ instructions

Skill Focus :

Reading - Reading between the lines, inferences, true/false

Writing - Developing hints - Writing short messages/paragraphs

Listening - Searching for factual information - Gap filling

Speaking - Snap talks, JAM and elocution

Vocabulary / Grammar - Prepositions, phrasal verbs; PET word list

Practice: Objective PET Units 13 - 18

UNIT - 4 **P-6**

Functions : Narrating, predicting, negotiating and planning

Skill Focus:

Reading - Reading for evaluation and appreciation, comprehension

Writing - Letters – e-mails – 7 C's

Listening - Following long conversations/interviews

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

Speaking - Discussions, debate and descriptions

Vocabulary / Grammar - Modals, conditionals and verb forms (time and tense)

Practice: Objective PET Units 19 – 24

UNIT - 5 **P-6**

Functions: Requesting, denying, suggesting and persuading

Skill Focus:

Reading - Understanding factual information

Writing - Short stories and explanatory paragraphs

Listening - Inferences from long speeches/conversations

Speaking - Announcements and presentations

Vocabulary / Grammar - Punctuation and cloze tests

Practice: Objective PET Units 25 – 30

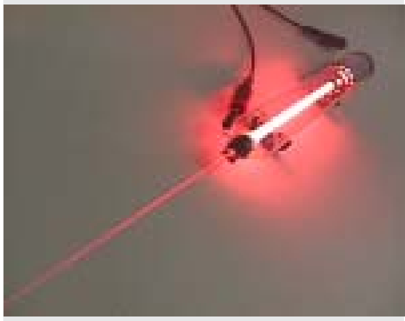
TEXT BOOK:

1. L. Hashemi and B. Thomas, “Objective PET”, Student’s Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.

2. A. Capel and R. Nixon, “Introduction to PET”, Oxford University Press.



16HS110 ENGINEERING PHYSICS LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Course Description and Objectives:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the following experiments.The students have to perform at least 10 experiments from the list of experiments.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Realize the concept of resonance by conducting the experiments of AC sonometer and Melde'sexperiment.

CO2: Acquire the knowledge on magnetic field theory and thermal conductivity by conducting experiments,

CO3: Understand Magnetic field along the axis of a circular coil and thermal conductivity of bad conductor through experiments.

CO4: Understand the concepts of light by conducting the experiments of determination of wavelength,

CO5: Understand the numerical aperture of an optical fibre and also from V–I characteristics of Solar celland LED.

LIST OF EXPERIMENTS

1. Determination of velocity of ultrasonic waves in liquids.
2. Melde's experiment - transverse and longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect.

REFERENCE BOOKS :

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics Laboratory Manual – Department of Physics, VFSTR University, 2016.

16HS106 BASIC MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

This course offers basic concepts on matrices, system of equations, differential equations of first and higher order. Further, numerical methods to solve differential equations are introduced.

The objective of the course is to provide the knowledge on the properties of matrices and solving system of equations using matrices. It is also aimed to offer various methods (analytical as well as numerical) to solve first and second order ordinary differential equations.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understanding the algebra of matrices, rank of matrix.

CO2: Apply various methods to solve system of linear equations.

CO3: Solve ordinary differential equationsof first and second order.

CO4: Apply numerical methods to solve integrals and ordinary differential equations.

CO5: Use software tools to obtain and verify the solutions.

SKILLS:

✓ *Compare the inverse of matrix.*

✓ *Solve given system of linear equations.*

✓ *Solve given differential equations.*

UNIT - 1 **L-9, T-3**

MATRICES: Definition, types of matrices, algebra of matrices, determinant, minor, cofactor, adjoint, and inverse of a matrix; Elementary row operations, inverse by row operations, rank, determination of rank using Echelon form and normal form.

UNIT - 2 **L-9, T-3**

SYSTEM OF EQUATIONS: System of linear equations, consistency of system of equations, solution by Cramer's rule, matrix inversion method, Gauss-Jordan method and Gauss elimination method.

UNIT - 3 **L-9, T-3**

FIRST ORDER ORDINARY DIFFERENTIAL: Introduction, variable separable, linear equations, Bernoulli equation, homogenous equations and non-homogenous equations.

UNIT - 4 **L-9, T-3**

SECOND ORDER ORDINARY DIFFERENTIAL EQUATIONS : Linear differential equations of second order with constant coefficients with RHS of type e^{ax}, $\sin ax$, $\cos ax$, x^n.

UNIT - 5 **L-9, T-3**

NUMERICAL METHODS - II: Numerical integration by trapezoidal rule and Simpson's rules; Numerical solutions to Differential equations - Euler's method and Runga-Kutte method.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Matrix algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's rule).
5. System of equations (Matrix inversion method).
6. Solutions of first order ODE.
7. Trapezoidal rule.
8. Simpson's one-third rule.
9. Simpson's three-eight rule.
10. Euler's method.
11. RK Method.

Text BOOKS :

1. H. K. Dass and Er. R. Verma, "Higher Engineering Mathematics", S. Chand and Co., 3rd edition, 2014.
2. B. S. Grawel, "Engineering Mathematics", Khanna Publishers, 44th edition, 2014.

Reference BookS :

1. K. S. Rao, "Numerical Methods", 3rd edition, PHI Publishers, 2007.
2. R. Pratap, "Getting started with MatLab", Oxford University Publication, 2009.

ACTIVITIES:

- *Compute the inverse of matrix and compare with MATLAB output.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Solve given differential equations and compare with MATLAB output.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Analyze the quality of the water and design a suitable water purification mechanism.

CO2: Apply the principle of electrochemistry for designing various batteries and fuel cells.

CO3: Analyze various factors effecting corrosion and apply proper corrosion control and prevention methods.

CO4: Familiarize the preparation, properties and applications of various polymers.

CO5: Apply the electromagnetic radiation to the spectroscopic methods for the analysis of engineering materials.

SKILLS:

- ✓ *Analyse the total hardness of water sample.*
- ✓ *Understand the basic principles involved in various batteries.*
- ✓ *Understand the mechanisms of corrosion and various controlling methods.*
- ✓ *Synthesize various polymers.*
- ✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY : Introduction, WHO, BIS standards of water; Hardness of water-determination of hardness by EDTA (numerical problems), disadvantages of hard water, scales and sludges, caustic embrittlement, boiler corrosion, priming and foaming; Softening methods - zeolite process, ion exchange process; Desalination of brackish water- reverse osmosis and electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential; Electrochemical series; Nernst equation; Reference electrodes - Calomel and standard hydrogen electrode, ion selective electrode and glass electrode; Determination of pH by pH meter, primary cell and secondary cell (lead-acid storage cell and lithium ion battery); Fuel cell - hydrogen oxygen and methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION : Introduction, dry corrosion, wet corrosion and mechanisms of wet corrosion; Bimetallic corrosion - concentration cell corrosion; Factors influencing the rate of corrosion; Corrosion control methods - cathodic protection, electroplating, electrolessplating and corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction; Types of polymerization - preparation, properties and applications of polyethylene, PVC, teflon, bakelite, urea, formaldehyde and silicones; Rubber – vulcanization; Synthetic rubbers - buna-S, buna-N and neoprene; Introduction to conducting polymers - poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV - Visible Spectroscopy, Beer - Lambert's law, qualitative and quantitative analysis; Block diagram of UV-Visible spectrophotometer; IR Spectroscopy - types of vibrations and block diagram of IR spectrophotometer.

TEXT BOOKS :

1. P.C Jain and M. Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. S. Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and M. Chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.
2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and DeMerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. G. Raj and C. Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.
5. J.D. Bares, M.Thomas, B. S. Sankar, J.Mendham and R.C Denney, "Vogel's Text book of Qualitative Chemical Analysis", 6th edition, Pearson Publications, 2009.
6. Dr.S. Rattan, "Experiments in Applied Chemistry", S.K. Kataria and Sons Publications, 2008.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in 2D and 3D format.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Communicate the ideas and thoughts to other in the form of pictures.

CO2: Develop the drawing skills while drawing engineering objects

CO3: Implement the concept of quadrant system in drawing practice.

CO4: Construct different engineering objects using drawing tools.

CO5: Sketch simple objects and their pictorial views using Auto CAD.

SKILLS:

- ✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*
- ✓ *Draw geometrical objects like polygons, solids of different types.*
- ✓ *Visualize the objects in real time situations.*
- ✓ *Develop 3D views (isometric views).*

UNIT - 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Introduction to engineering drawing- types of lines, lettering, dimensioning, construction of polygon and conics (ellipse, parabola and hyperbola by general method) and ellipse by oblong method.

UNIT - 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection-planes of projections, projections of points, projection of straight lines; Inclined to one plane and both the planes; Projections of planes; Simple planes; Planes inclined to one reference planes.

UNIT - 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, pyramids, cylinders, cones and solid axis inclined to one plane.

UNIT - 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects; Isometric view of prisms; Pyramids; Cone and cylinder; Simple orthographic views into isometric views through AutoCAD.

UNIT - 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS :

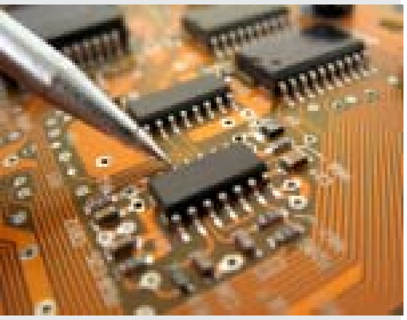
1. N.D.Bhatt, "Engineering Drawing", 53rd edition, Charotar Publication, 2014.
2. B.Agrawal and C.M.Agrawal, "Engineering Drawing" , 2nd edition, Tata McGraw Hill, 2014.

REFERENCE BOOKS :

1. J. Hole, "Engineering Drawing", 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, "Engineering drawing", 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both DC and AC machines. It also deals with the basic electronic components like P-N junction Diode, Zener diode, transistor and their characteristics.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Analyse the resistive circuits and solution of resistive circuits with independent sources.

CO2: Solve the AC (single and three phases) and DC circuits using different methods.

CO3: Familiarize the concepts of electro magnetism and it's applications.

CO4: Explain the types of electrical equipment, machines and its applications.

CO5: Acquire the knowledge about the characteristics and working principles of semiconductor diodes, Bipolar Junction Transistor.

SKILLS:

✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*

✓ *Develop a simple loop generator.*

✓ *Design a voltage regulator using Zener diode.*

✓ *Design a half wave rectifier using PN junction diode.*

✓ *Design a full wave rectifier using PN junction diodes.*

UNIT - 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit Concepts; Concepts of network- active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, R, L and C as linear elements; Ohm's Law; Kirchhoff's Laws; Application to simple series, parallel circuits, mesh and nodal analysis of simple resistive circuits (simple numerical problems).

UNIT - 2 **L-9**

FUNDAMENTALS OF AC CIRCUITS: Generation of AC voltage - frequency, average value, RMS value, form factor, peak factor for sinusoidal only; Phasor representation of alternating quantities; Analysis of simple series and parallel AC circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (elementary treatment only).

UNIT - 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of magneto motive force, reluctance, flux and flux density, concept of self Inductance and mutual Inductance, coefficient of coupling (only elementary treatment and simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, constructional features, EMF equation (simple numerical problems).

UNIT - 4 **L-9**

DC MACHINES: Constructional details of a DC machine, DC generator, principle of operation; EMF equation, types of DC generators (simple numerical problems).

DC motor- principle of operation, torque equation, types of DC motors (simple numerical problems)

AC MACHINES: Principle of operation of three phase induction motors, slip ring and squirrel cage motors, torque equation, constructional details of synchronous machine.

UNIT - 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory; Intrinsic and extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics; Half and full wave rectifiers; Zener diode and its characteristics; Voltage regulator; Bi polar junction transistor, operation, types and applications.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.
6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.

ACTIVITIES:

- *Decode the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of half wave rectifier without filter.
10. Implementation of full wave rectifier without filter.

TEXT BOOKS:

1. V.K. Mehta, “Principles of Electrical Engineering and Electronics”, 3rd edition, S. Chand Publications, New Delhi, 2010.
2. D.P. Kothari, “Basic Electrical and Electronics Engineering”, 1st edition, TMH, New Delhi, 2014.

REFERENCE BOOKS:

1. Millman and Halkias, “Integrated Electronics”, McGraw Hill, 1979.
2. A.K. Thereja and B.L. Thereja, “Electrical Technology”, Vol– II, S. Chand Publications, 2007.
3. U. Bakshi and A. Bakshi, “Basic Electrical Engineering”, 1st edition, Technical Publications, Pune, 2005.

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Course Description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Analyse the quality of the water by volumetric methods.

CO2: Apply the principle of electrochemistry to determine the relative strength of oxidizing/ reducing agents for the sample analysis.

CO3: Analyse various factors effecting the rate of corrosion by using weight loss method

CO4: Synthesize and analyse various polymers useful for engineering applications.

CO5: Apply instrumentation methods for chemical analysis.

LIST OF EXPERIMENTS

1. Determination of total alkalinity of water.
2. Estimation of total hardness of water.
3. Find the percentage of available chlorine in bleaching powder.
4. Estimation of Fe (II) by dichrometry method.
5. Preparation of phenol - formaldehyde resin.
6. Synthesis of urea- formaldehyde resin.
7. Estimation of concentration of acid by pH metry.
8. Determination of strength of acid by conductometry.
9. Measurement of Mn^{+7} by colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-visible spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS :

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.S. Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Volume I, Pearson Publications, 2009.
2. Dr. S. Rattan, “Experiments in Applied Chemistry”, S.K. Kataria and Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Course Description and Objectives:

Environmental science and technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Observation and integration of diverse information from variable sources outside of the classroom and helps students to think critically, creatively, resourcefully, and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness

CO2: Collaborating across diverse disciplines and practices to identify and create solutions that conserve and help manage biodiversity for the long term

CO3: Analyze the sources of pollutants and their effects on atmosphere and Adapting eco-friendly technologies and maintain hygienic conditions

CO4: Identify the evidence of Global warming, Ozone depletion and acid rain

CO5: Recognize safe receiving storing and handling of raw and prepared food and maintain hygienic conditions.

SKILLS:

- ✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*
- ✓ *Gain perspectives to adrress the challenges, improvise and devise solutions.*
- ✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*
- ✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*
- ✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT - 1 **L-6**

NATURAL RESOURCES : Environmental Studies- definition, scope and its importance; Need for public awareness, natural resources, forest resources and deforestation; Water resources - properties and conflicts; Mineral resources - extraction and impacts; Food resources - modern agriculture methods, fertilizer-pesticide problems, water logging and salinity; Energy resources - renewable and non-renewable energy resources, harness technology, solar energy technologies; Land resources - land degradation, soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY : Ecosystem - concept, structure and functions of an ecosystem; Food chains, food webs, ecological pyramids, energy flow, energy regulation and succession; Biogeochemical cycles; Aquatic ecosystems; Biodiversity - introduction, bio-geographical classification, values of biodiversity, biodiversity at global, national and local levels, hot-spots of biodiversity, threats to biodiversity, endangered and endemic species of India and conservation of biodiversity.

UNIT - 3 **L -6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY : Solid waste management - causes, effects and control measures of municipal and industrial wastes; Pollution - air, water, thermal, soil and noise pollutions; Role of an individual in prevention of pollution; Remote sensing / GIS - introduction, definitions, applications of the remote sensing; Innovative practices-objectives, innovative practices in agriculture, forest-community and bio-villages; Green technology for sustainable development, life cycle assessment and its concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA : Sustainable development, water conservation, cloud seeding, rainwater harvesting methods, watershed management, global warming, acid rain, ozone layer depletion; Environmental legislation; wildlife protection act, water act, forest conservation act, air act, environmental protection act; Environmental impact assssment (EIA) - introduction, definition of EIA and EIS, scope and objectives, importance of EIA in proposed projects/industry/developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION : Food sanitation **-** food and drugs act, food preservations, milk sanitation, tests for milk, pasteurization of the milk; Water, air, soil and food borne diseases; Maintenance of sanitary and hygienic conditions; Role of youth in the development; Promoting activities -youth as initiators and activities; Field work/environmental visit - visit to a local area to document environmental assets river/ forest/grassland/hill/mountain; Study of local environment - common plants, insects, birds; Study of simple ecosystems - pond, river, hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

1. A. Kaushik and C.P. Kaushik, “Perspectives in Environmental Studies”, 5th edition, 2016.
2. B. Joseph, “Environmental studies”, 2nd edition, McGraw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, “A Text book of Environmental Studies”, HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, “A Text book of environmental science and Technology”, B S Publications, 2008.
3. Dr. K. Mukkanti, “A Text book of Environmental Studies”, S.Chand and Company Ltd, 2009.
4. EHILRS and ST, “Text book of Municipal and Rural Sanitation”, M.S Hill, 1998.
5. C. S. Rao, “Environmental Pollution Control Engineering”, New Age International Ltd, 2001.

7. K. Joseph and R.Nagendram, “Essentials of environmental studies”, Pearson Education Pt Ltd, Delhi, 2007. Education Pt Ltd, Delhi, 2007.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*

16BT102 BIOPRODUCTS AND BIOENTREPRENEURSHIP

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

The course offers knowledge on various bio-products and their marketing. The objective of the course is to create awareness on a wide array of biologically derived products. In addition, it also encourages students to explore entrepreneurship in the arena of bioproducts.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the importance of wide range Bio-products from renewable biological resources.

CO2: Apply the knowledge for development of new Bio-products for food, nutraceuticals, and pharmaceuticals.

CO3: Develop new methods for the production of Bio-products.

CO4: Analyze and perceive green entrepreneurship and awareness on start-ups.

CO5: Design small scale industry setup.

SKILLS:

- ✓ *Evaluate the scope for bioentrepreneurship.*
- ✓ *Recycle and reuse biowaste.*
- ✓ *Design small scale industry setup.*
- ✓ *Analyze bioproducts market trend.*

UNIT - 1 **L-9, T-3**

INTRODUCTION TO BIOPRODUCTS: Definition of bioproducts; Categories of bioproducts; Importance of bioproducts; Bioproducts industry - strategies and action plans, global trends and current situation; Bioproducts used for decoration; Biofertilisers; Examples of clonal propagation of plants; Socio-economic and environmental impact of bioproducts.

UNIT - 2 **L-9, T-3**

ENERGY RELATED BIOPRODUCTS: Liquid fuels - ethanol and biodiesel; Carbon neutrality; Conversion mechanisms; Solid biomass for combustion to generate heat and power; Gaseous fuel such as biogas; Renewable energy opportunities for Indian entrepreneurs.

UNIT - 3 **L-9, T-3**

BIOMATERIALS: Bioplastics from plant oils and sugars; Biofoams and biorubber from plant oils and latex; Biocomposites manufactured from agricultural (e.g., hemp, flax, kenaf) and forestry; Biofibres.

UNIT - 4 **L-9, T-3**

BIOCHEMICALS: Industrial - basic and specific chemicals, resins, lubricants and solvents; Pharmaceuticals - examples of monoclonal therapeutic antibodies, interleukins, enzymes (therapeutic and detergent), hormones and vaccines; Antibiotics; Omega 3 fatty acids; Biocosmetics - soaps, body creams and lotions; Biorepellents - case study; Trichoderma.

UNIT - 5 **L-9, T-3**

ENTREPRENEURSHIP RELATED TO BIOPRODUCTS: Entrepreneurship ecosystem and bioeconomy; Perception and analysis of green entrepreneurship ecosystem by its stakeholders; Green entrepreneurship - case studies; Bioproducts manufacturers and suppliers in India.

TEXT BOOKS :

1. N.T. Dunford, "Food and industrial bioproducts and bioprocessing", Wiley-Blackwell publishers, 2012.
2. J.C. Philp and K.C. Pavanan, "Perspectives- bio-based production in a bioeconomy", Asian Biotechnology and Development Review, Vol. 15, No.2, pp 81-88, 2012.

Reference Books :

1. J. W. Lee, "Advanced Biofuels and Bioproducts", Springer New York, 2013.
2. C. T. Hou and J.F. Shaw, "Biocatalysis and Bioenergy", Wiley publishers, 2008.

ACTIVITIES:

- *Models on renewable energy- biomass, biofuels, biogas.*
- *Prepare vermicompost.*
- *Case studies on green entrepreneurship.*

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Course Description and Objectives:

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.

CO2: Fabrication of wooden joints and understanding joining of metals.

CO3: Make metal joints and sheet metal work.

CO4: Understand various advance machine tools and its components; make metal tools like knives, needles, swords, arrows etc.

CO5: Develop methodology as per specifications of the product.

SKILLS:

- ✓ *Prepare wooden and metal furniture.*
- ✓ *Electrical wiring and power supply in residences.*
- ✓ *Make funnels, trays, locker, steel almirahs, etc.*
- ✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims, etc.*
- ✓ *CNC machines and various machining operations and processes.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin Smithy and Black Smithy.
4. House Wiring.
5. Foundry and Welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS :

1. S.K. Hazra Choudhury, "Elements of workshop Technology", 11^{th} edition, Media Promoters, 1997.
2. Gopal, T.V., Kumar, T., and Murali, G., "A first course on workshop practice: Theory, Practice and Work Book", Suma Publications, Chennai, 2005.
3. Venkatachalapathy, V. S., "First year Engineering Workshop Practice", Ramalinga Publications, Madurai, 1999.

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

II

YEAR

BIOTECHNOLOGY

B.Tech.

I SEMESTER

16HS202	-	Probability and Statistics
16MS201	-	Management Science
16BT201	-	Biochemistry
16BT202	-	Cell Biology
16BT203	-	Microbiology
16BT204	-	Process Engineering Principles
	-	Employability and Life Skills Elective

II SEMESTER

16BT205	-	Genetics
16BT206	-	Heat and Mass Transfer
16BT207	-	Instrumental Methods of Biological Analysis
16BT208	-	Molecular Biology
16EL102	-	Soft Skills Laboratory
	-	Department Elective
	-	Department / Open Elective
	-	Employability and Life Skills Elective

COURSE CONTENTS

I SEM AND II SEM

16HS202 PROBABILITY AND STATISTICS

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course deals with descriptive statistics, correlation, regression, and their applications, probability, theoritical distributions and testing of hypothesis. The objective of this course is to enable the student to understand and apply statitical techniques, curve fitting, correlation and regression, probability and also to make the student familiar with discrete, continuous distributions and testing of hypothesis.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Determine values of various measures of central Tendencies.

CO2: Learning the concept of curve fitting process and apply it in correlation and regression.

CO3: Apply the concept of random variable in probability theory.

CO4: Learning and apply various probability distributions and their properties to a given situation.

CO5: Analyze a given hypothesis for acceptance or rejection.

UNIT - 1 **L-12**

DESCRIPTIVE STATISTICS: Basic definitions, frequencies, graphical representation, histogram, Ogive curves; Measures of central tendency - arithmetic mean, median, mode, mean deviation and standard deviation; Symmetry and skewness, Karl Pearson's coefficient of skewness.

UNIT - 2 **L-12**

CURVE FITTING, CORRELATION AND REGRESSION: Least squares method, curve fitting (straight line and parabola only), covariance, correlation, types, Pearson's coefficient of correlation, rank correlation, Spearman's rank correlation, regression and regression lines.

UNIT - 3 **L-12**

PROBABILITY: Introduction, definition (classical and axiomatic approach), addition theorem, conditional probability, multiplication theorem, total probability, Bayes theorem.

UNIT - 4 **L-12**

DISTRIBUTIONS: Random variables, discrete and continuous variables, introduction to distributions.

BINOMIAL DISTRIBUTION: Definition, mean and standard deviation, recurrence relation, applications, fitting of binomial distribution.

POISSON DISTRIBUTION: Definition, mean and standard deviation, recurrence relation, Poisson distribution is an approximation of binomial distribution, applications, fitting of Poisson distribution.

NORMAL DISTRIBUTION: Definition, normal curve, mean and standard deviation, median, mode, normal distribution applications.

UNIT - 5 **L-12**

TESTING OF HYPOTHESIS: Population and sampling, parameters and statistics, types of sampling; Test of hypothesis and test of significance - null hypothesis, errors, level of significance, confidence limits, testing large samples, sample distribution of proportion**,** t-distribution for small sample, difference between means of small sample; Chi square test for goodness of fit, chi-square test for test of independence.

TEXT BOOKS:

1. Miller and Freund, "Probability and Statistics for Engineers", 8th edition, Pearson publishers, 2013.
2. H. K. Dass and Er. R. Verma, "Higher Engineering Mathematics", S. Chand and Co., 3rd revised edition, 2014.

REFERENCE BOOK:

1. S.C. Gupta and V.K. Kapoor, "Fundamentals of Mathematical Statistics", S.Chand and Co., New Delhi, 2005.

16MS201 MANAGEMENT SCIENCE

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course offers the framework for improving managerial skills and leadership qualities. The objective of the course is to provide skills related to making decisions, organization structure, production operations, marketing, human resource management, product management and other management strategies.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the economic principles and nature and scope of Managerial Economics and its role of economic environment in managerial decision making.

CO2: Estimate future demand for the product using survey and stastical methods.

CO3: Examine the factors affecting the demand for the product.

CO4: Differentiate long-run and short-run production function.

CO5: Interpret companies financial position using Break-Even-Analysis and cost output Relationship.

CO6: Design Competitive strategies like pricing, product differentiation etc. and marketing according to the market structure.

SKILLS :

- ✓ *Improve productivity and marketing through production, sales and time management techniques.*
- ✓ *Create better ambience in the shop floor using better interpersonal relationship.*
- ✓ *Conduct / organise meetings, seminars and conferences in a professional manner.*
- ✓ *Effective managment of human resources.*

ACTIVITIES:

- *Identify various operational functions of management using case studies.*
- *Analyze and improve marketing strategies.*
- *Estimate human resources requirement and understand the interpersonal relationships in industries.*

UNIT - 1 **L-9**

INTRODUCTION TO MANAGEMENT: Concepts of management and organization; Nature, importance and functions of management; Systems approach to management; Taylor's scientific management theory, Fayol's principles of management, Mayo's Hawthorne experiments, Maslow's Theory of human needs, Douglas McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation, leadership styles; Social responsibilities of management.

UNIT - 2 **L-9**

OPERATIONS MANAGEMENT: Principles and types of plant layout; Methods of production (job, batch and mass production); Work study - basic procedure involved in method study and work measurement.

UNIT - 3 **L-9**

MATERIALS MANAGEMENT AND STATISTICAL QUALITY CONTROL: Objectives, need for inventory control, EOQ, ABC analysis, purchase procedure, stores management and stores records; Statistical quality control - control charts for variables and attributes (simple problems), acceptance sampling.

UNIT - 4 **L-9**

HUMAN RESOURCES MANAGEMENT (HRM): Concepts of HRM, basic functions of HR manager; Manpower planning, recruitment, selection, training and development, placement, wage and salary, administration, promotion, transfer, separation, performance appraisal, grievance handling and welfare administration, job evaluation and merit rating.

UNIT - 5 **L-9**

MARKETING MANAGEMENT: Evolution of marketing, functions of marketing selling Vs marketing; 4 Ps of marketing – product mix, product life cycle, place mix, channels of distribution; Price mix – pricing methods, promotion mix and tools of promotions.

TEXT BOOKS :

1. P. V. Kumar, N. A. Rao and A. Chnalill, "Introduction to Management Science", Cengage Learning India, 2012.
2. Stoner, Freeman and Gilbert, "Management", 6th edition, Pearson Education, New Delhi, 2004.

REFERENCE BOOKS :

1. K. Philip and K. K. Lane, "Marketing Mangement" 12th edition, PHI, 2005.
2. Koontz and Weihrich, "Essentials of Management", 6th edition, TMH, 2005.

16BT201 BIOCHEMISTRY

Source: www.medipharmlab.com/

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides various chemical processes associated with living cell machinery. In addition, it offers a clear-cut idea about various molecular mechanisms, metabolic pathways and biochemical processes regulating the production of energy for the functioning of cells. The objective of this course is to familiarize students on the complex structures of biomolecules, their synthesis, interaction and metabolism.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the structure and functions of biomolecules.

CO2: Interpret biochemical pathways for carbohydrates and their bioenergetics.

CO3: Classify structures of amino acids, protein and their metabolism.

CO4: Evaluate the role of fatty acid synthesis and their metabolism.

CO5: Depict the intermediary metabolism of biomolecules.

CO6: Carry out qualitative and quantitate analysis of macromolecules.

SKILLS:

- ✓ *Identify biomolecules by colorimetric and biochemical assays.*
- ✓ *Quantify macromolecules using UV-VIS Spectrophotometer.*
- ✓ *Proficiency in paper, thin layer and gel chromatographic techniques.*
- ✓ *Operation of HPLC.*

ACTIVITIES:

- *Analyze bio-molecules in food samples.*
- *Estimate macromolecules in biological fluids.*
- *Model exercises on building structures of macromolecules.*

UNIT - 1 **L-9**

CARBOHYDRATES: Structure and properties of mono-, di-, oligo- and polysaccharides, complex carbohydrates; Confirmation of pyranose and furanose ring, glycosidic bond; Structure and function of glycogen, starch, dextran, cellulose, glycoproteins, glycosaminoglycans and lectins.

UNIT - 2 **L-9**

BIOENERGETICS AND METABOLISM OF CARBOHYDRATE: Aerobic and anaerobic respiration-glycolysis, glucogenesis, glycogenolysis and gluconeogenesis; Entner–Doudoroff (ED) pathway; Pentose phosphate shunt and TCA cycle.

UNIT - 3 **L-9**

METABOLISM OF AMINO ACIDS: Amino acids - classifications, physico-chemical properties; Protein structure, folding and function; Nitrogen cycle; Nitrogen balance; Reductive amination; Transamination and urea cycle; Synthesis of amino acids - glutamate pathway, serine pathway and shikimate pathway.

UNIT - 4 **L-9**

LIPIDS AND THEIR METABOLISM: Classification, structure and roles of fatty acids; Synthesis and breakdown of fatty acid; Synthesis and metabolism of triglycerides; Cholesterol structure and function; Lipoproteins - classification and function.

UNIT - 5 **L-9**

NUCLEIC ACIDS AND INTERMEDIARY METABOLISM: Structure and properties of purines, pyrimidines, nucleosides and nucleotides; Biosynthesis and degradation of nucleic acids; Interconnection of pathways and metabolic regulation.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Preparation of buffers and pH measurement.
2. Qualitative and quantitative tests for carbohydrates by 3,5-dinitro salicylic acid (DNS) method.
3. Qualitative and quantitative tests for amino acids.
4. Protein estimation by Biuret / Lowry / Bradford methods.
5. Separation of different macromolecules by paper and thin layer chromatography.
6. Extraction of lipids through solvents.
7. Analysis of cholesterol by Zak method.
8. Estimation of RNA by orcinol methods.
9. Separation of proteins by electrophoresis.

TEXT BOOKS:

1. A.L. Lehninger, O.L. Nelson and M.M. Cox , "Principles of Biochemistry", 3rd edition, CBS Publications, 2005.
2. J.L. Jain , "Fundamentals of Biochemistry ", 7th edition, S. Chand Publishers, 2009.

REFERENCE BOOKS:

1. L. Stryer, J.M. Berg and J.L. Tymockzo, "Biochemistry", 5th edition, WH Freemen and Co., 2002.

2.K. Mathews, K.E. Van Holde, K. G. A. Hern, "Biochemistry", 3rd edition, Pearson education, 2005.

3. K. Wilson and J. Walker, “Techniques of Practical Biochemistry", 5th edition, Cambridge University Press, 2000.

16BT202 CELL BIOLOGY

Hours Per Week :

L	T	P	C
3	-	2	4

Source:
Prof. S.Krupanidhi, HoD, BT, VU

Course Description and Objectives:

This course provides an understanding of various cell organelles, their functions and inter-organellar interactions. The objective of the course is to impart knowledge on complexity involved in cell signaling and cell cycle. In addition, laboratory experiments are designed to familiarize students with the functioning of cell and its organelles.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the basic structure of cell and their organelles.

CO2: Analyze various stages of cell cycle to regulate cell cycle and cancer.

CO3: Apply the knowledge in *in-vitro* fertilization.

CO4: Evaluate cell to cell communication.

CO5: Demonstrate various stages of embryo development.

SKILLS:

- ✓ *Differentiate various blood cells for hematological profile.*
- ✓ *Identify various stages of cell division and differentiation.*
- ✓ *Handle fluorescence microscope.*

ACTIVITIES:

- o *Demonstrate various stages of chick embryo development.*
- o *Culture different cell lines.*
- o *Assess cell viability.*
- o *Identify individual cell organelles by staining.*

UNIT - 1 **L-9**

STRUCTURE OF CELLS: Structure of prokaryotic and eukaryotic cells; Overview of organelles-mitochondria, chloroplasts, endoplasmic reticulum, golgi complex, nucleus; Cytoskeletal proteins - contractile proteins - actin, myosin and nebulin.

UNIT - 2 **L-9**

TRANSPORT ACROSS CELL MEMBRANES: Organization of plasma membrane; Passive and active transport; Na-K pump; Ca^{2+} ATPase pump; Lysosomal and vacuolar membrane; ATP dependent proton pumps - cotransport, symport, anti-port, ion-gated and ligand gated channels; Endocytosis and exocytosis.

UNIT - 3 **L-9**

REGULATION OF CELL CYCLE AND CANCER: Cell division- mitosis and meiosis; Cell cycle and regulation; Cancer- types, development and causes; Mutagenesis - tumor suppressor genes and oncogenes.

UNIT - 4 **L-9**

CELL SIGNALING: Intracellular signaling; types of signal receptors; signal transduction by hormones - steroid/peptide hormones; secondary messengers - cAMP, cGMP, protein kinases; G Proteins - receptor mediated tyrosine kinases.

UNIT - 5 **L-9**

GAMETE BIOLOGY: Heterogamy in eukaryotes; Leydig cells- morphology and differentiation; Spermatogenesis; Semen formation; Sperm bank; Artificial insemination; *in vitro* fertilization; Stages of development - zygote, blastula, gastrula and neurula.

LABORATORY EXPERIMENTS

List of Experiments Total Hours-30

1. Media Preparation for *in vitro* animal cell culture and propagation.
2. Microscopic analysis of cells and cell organelles.
3. In vitro primary cell culture and maintenance.
4. Quantitative assessment of cell attachment to different surfaces.
5. Trypsinization of cells from cell culture plates.
6. Cell Counting by Haemocytometer.
7. Passaging of cells for further culturing of cells *in vitro*.
8. Differential cell count by staining to differentiate between cell types.
9. Smear preparation for microscopy and immunohistochemistry.

TEXT BOOKS :

2. E.D.P. De Robertis and E.M.F. De Robertis, "Cell and Molecular Biology", 8th edition, B.I. Waverly Pvt. Ltd., New Delhi, 2006.
3. G.M. Cooper, "The Cell-A Molecular Approach", 3rd edition, Sinauer Publications, 2004.

REFERENCE BOOKS :

1. G. Karp, "Cell and Molecular Biology", 5th edition, Wiley Publishers, 2008.
2. B. Alberts, et al., "Molecular Biology of the Cell", 4th edition, Garland Science Publishers, 2002.

16BT203 MICROBIOLOGY

Hours Per Week :

L	T	P	C
3	-	2	4

Source: www.medipharmlab.com

Course Description and Objectives:

This course provides the classification of microorganisms, culturing methods and their control. The objective of this course is to impart knowledge on scope and relevance of microbes and microscopic examination. In addition, the course also imparts knowledge on microbial genetics and genetically modified microbes suitable for industries.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Ability to understand different characteristic features of microorganisms.

CO2: Maintain sterile conditions by applying knowledge of physical and chemical sterilization techniques.

CO3: Classify the microorganisms by using staining and 16S rDNA analysis.

CO4: Design media for isolation and cultivation of microorganisms.

CO5: Analyze the infectious diseases caused by pathogenic bacteria, viruses and parasites.

SKILLS:

✓ *Handle different microscopes.*

✓ *Isolate microbes.*

✓ *Differentiate between microbial species.*

✓ *Aseptic maintenance of lab and hood.*

✓ *Maintain stock cultures.*

ACTIVITIES:

- *Isolate microbes from different sources – air, soil and water.*
- *Identify pathogens from local hospitals and dairy farms.*
- *Purify different strains of bacteria and fungi.*
- *Carryout sterilization processes.*

UNIT - 1 **L-9**

INTRODUCTION TO MICROBIOLOGY: Discovery of microorganisms; Theory of spontaneous generation, Germ theory of diseases; Major contribution and events in the field of Microbiology; Scope and relevance of microbiology; Microscopy-types; Fixation of microorganisms; Principle dyes, principles of different staining techniques- simple staining, differential staining, spore staining, flagellar staining, acid fast and capsular staining.

UNIT - 2 **L-9**

MAJOR GROUPS OF MICROORGANISMS: Diversity classification proposed by Woese et al; Three Domains of life; Classification systems- phylogenetic, phenetic, genetic; Taxonomic ranks; Major characteristics used in taxonomy; Molecular approaches to microbial taxonomy.

UNIT - 3 **L-9**

NUTRITION FOR MICROORGANISMS: Nutritional classes of microbes, Macro and micronutrients, their sources and physiological functions of nutrients, growth factors and their functions in metabolism; aerobic and anaerobic metabolism; growth curve and kinetics.

CULTIVATION OF MICROORGANISMS: Culture media-synthetic and complex media; solidifying agents; types of media - selective, differential and enrichment media; Pure culture methods - spread plate, pour plate and streak plate; special techniques for cultivation of anaerobes.

UNIT - 4 **L-9**

MICROBIAL DISEASES AND HOST PATHOGEN INTERACTION: Classification of infectious diseases; Emerging infectious diseases; Molecular basis of pathogenicity and identification methods; Human diseases caused by viruses, bacteria and fungi.

UNIT - 5 **L- 09**

STERILIZATION AND CONTROL OF MICROORGANISMS: Sterilization processes- autoclaves, UV radiations, filter sterilization, disinfection; Physical agents - moist and dry heat; Chemical agents - characteristics and mode of action of antimicrobial agents; Classes of disinfectants - phenol, phenolics, alcohol, halogens (chlorine, chloramines, bromine, iodine, tinctures of iodine, iodophores), surfactants (soaps and detergents), alkylating agents (formaldehyde, glutaraldehyde, 3-propiolactone and ethylene oxide), heavy metals (mercury, silver and copper containing compounds); Evaluation of effectiveness of antimicrobial agents.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Sterilization techniques in microbiology: wet method, dry method and filter sterilization methods.
2. Study of Microscopes- dark field, bright field, phase contrast and fluorescence microscopy.
3. Microscopical identification of bacterial cells in permanent fixed slides.
4. Preparation of nutrient broth and agar for culturing *E. coli*.
5. Different inoculation methods of microorganisms in culture media.
6. Isolation of pure culture by streak plate and pour plate technique.
7. Gram staining of bacteria and observation under microscope.
8. Hanging drop method to observe bacterial motility.
9. Biochemical tests.

16BT204 PROCESS ENGINEERING PRINCIPLES

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course offers the basic engineering principles and calculations used in bioprocess engineering. This will offer them a clear-cut idea about basic concepts of fluid flow and its applications in biotech industries. The main objective of the course is to familiarize students about the basic unit operations, fluid mechanics, fluid measuring devices, size reduction machinary and estimation of average particle size.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the application of engineering principles in Biotech industry.

CO2: Solve material and energy balance problems by using the principles of chemical reaction stoichiometry

CO3: Determine energy losses for fluid flowing through solid boundaries.

CO4: Evaluate the design parameters of packed beds and settling operations.

CO5: Investigate various fluid transport machinery, valves and fittings.

SKILLS:

- ✓ *Determine types of fluid flow.*
- ✓ *Estimate pressure drop and frictional losses in pipe flow.*
- ✓ *Estimate average particle size.*

UNIT - 1 **L-9, T-3**

BASIC CONCEPTS AND CALCULATIONS: Application of engineering principles in biotech Industries; Introduction to unit operations and unit processes; Units and dimensions, basic quantities and derived units; Conversion of units; Chemical reaction, stoichiometry, conversion, yield; Analysis of degrees of freedom; Material and energy balances for physical and chemical processes, recycle, bypass, purge calculations, excess air and theoretical oxygen requirement.

UNIT - 2 **L-9, T-3**

FLUID STATICS AND DYNAMICS: Nature of fluids, hydrostatic equilibrium, barometric equation, manometers; Newton's law of viscosity; Concept of Newtonian and Non - Newtonian fluids; Different types of Non-Newtonian fluids with examples in bioprocesses; Reynolds number, flow in boundary layers, boundary layer formation and separation.

UNIT - 3 **L-9, T-3**

FLUID MECHANICS: Bernoulli's equation and its application; Calculation of power required for pumping fluids; Examples from bioprocesses systems; Flow through pipes; Laminar and turbulent flow characterization by Reynolds number; Average velocity pressure drop due to skin friction and foam friction, friction factor chart; Hagen- Poiseuille equation.

UNIT - 4 **L-9, T-3**

FLOW PAST IMMERSED BODIES: Definition of drag and drag coefficient; Introduction of packed beds; Friction in flow through beds of solids, derivation of friction factor equations and pressure drop expressions; Motion of particles through fluids, terminal velocity.

UNIT - 5 **L-9, T-3**

FLUID TRANSPORTATION MACHINERY: Different types of pumps; Calculation of pump horse power; Flow measuring devices- orifice meter, venturi meter and rotameter; Size reduction unit operations, calculation of average particle size, efficiency of size reduction and screening; Different types of valves used in bioprocess industries.

TEXT BOOKS :

1. P. M.Doran, "Bio-Process Engineering Principles", 1st edition, Academic Press, 2007.
2. W.L. McCabe, J.C. Smith and P. Harriot, "Unit Operations of Chemical Engineering", 7th edition, McGraw Hill Publications, 2005.

REFERENCE BOOKS :

1. D.G.Rao, "Introduction to Biochemical Engineering", 1st edition, Tata McGraw Hill Publications, 2005.
2. S. K. Ghosal, S. K. Sanyal and S. Dutta, "Introduction to Chemical Engineering", 1st edition, Tata McGraw Hill Publications, 2007.

ACTIVITIES:

- *Verify Bernoulli's theorem.*
- *Estimate centrifugal pump efficiency.*
- *Measure fluid velocity in a pipe.*
- *Estimate pressure drop in fluidized bed reactor.*

Source:
www.sparticl.org

16BT205 GENETICS

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

The course introduces basic principles of Mendelian laws of Genetics and organization of genetic material. It also describes fine structure and function of chromosomes. The objective of this course is to provide insight into Laws of inheritance, chromosomes, genetic aberrations, genetic linkage and extra-chromosomal inheritance.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Accomplish the genetic basis of heredity by linkage mapping.

CO2: Attain knowledge on organization and packing of chromosome and its functions.

CO3: Enable to understand the structure of DNA, mutations and cloning strategy.

CO4: Enable to understand the detail structure of Phages and its mechanism of infection.

CO5: Comprehend the basics of population genetics and epigenetics.

SKILLS:

- ✓ *Solve genetics problems related to Mendelian Laws of inheritance.*
- ✓ *Disease mapping by pedigree.*
- ✓ *Karyotype human chromosome.*
- ✓ *Map chromosome.*

UNIT - 1 **L-9, T-3**

PHYSICAL BASIS OF HEREDITY: Historical perspectives of genetics; Mendelian laws/Basic laws of inheritance- monohybrid, dihybrid and trihybrid cross; Modification of Mendel's ratios due to gene interactions; Multiple alleles and lethality; Multiple factors of inheritance; The concept of linkage, crossing over and recombination; Two point, three-point test crosses and gene mapping; Probability in Mendelian inheritance.

UNIT - 2 **L-9, T-3**

GENETIC MATERIAL AND ITS ORGANIZATION: Identification of the genetic material; Classical experiments- Hershey-Chase, Avery–MacLeod–McCarty and Meselson-Stahl. Packing and organization of genetic material in prokaryotes and eukaryotes; Chromosome morphology, classification and karyotyping; Special chromosomes.

UNIT - 3 **L-9, T-3**

BACTERIAL GENETICS AND EXTRA CHROMOSOMAL INHERITANCE: Conjugation, transformation and transduction; Phages and their life cycles; Retroviruses; Introduction to extra chromosomal inheritance with examples; Petite phenotypes in yeast; Uniparental inheritance in algae.

UNIT - 4 **L-9, T-3**

GENE STRUCTURE AND MUTATIONS: Spontaneous and induced mutations; Selection of mutants-Ames test; Chromosomal aberrations; Fine structure of genes in prokaryotes and eukaryotes; Genetic control of development in Drosophila.

UNIT - 5 **L-9, T-3**

CONCEPTS OF HUMAN GENETICS (SEX DETERMINATION, LINKAGE AND DOMINANCE): Introduction - population genetics, eugenics and euthenics; Mechanisms of sex determination and differentiation; Sex influenced dominance; Sex linked inheritance and sex limited gene expression; Molecular basis of genetic diseases and applications.

TEXT BOOKS:

1. P.K. Gupta, "Genetics", 3rd edition, Rastogi Publications, 2005.
2. E. J. Gardner, M.J. Simmons and D. P. Snustad, "Principles of Genetics", 8th edition, Wiley India, 2007.

REFERENCE BOOKS:

1. M.W. Strickberger, "Genetics", 3rd edition, Prentice Hall of India Publications, 2006.
2. W. H. Elliott and D.C. Ellioit, "Biochemistry and Molecular Biology", 3rd edition, Oxford University Press, 2007.

ACTIVITIES:

- *Examine Mendelian Laws using pea plant by applying Punnett squares.*
- *Design Ames test to understand mutation.*
- *Solve the crossover problems using Drosophila as an example.*
- *Conduct conjugation experiment using E. coli model.*

Source:
http://www.engineersindia.com

16BT206 HEAT AND MASS TRANSFER

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

The course provides the basics of major heat and mass transfer operations. The objective of this course is to impart knowledge on design of heat and mass transfer equipments . In addition, it also imparts knowledge on optimization of the cost of heat transfer operations used in bioprocess industries.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the basic modes of heat and mass transfer.

CO2: Apply principles of heat and mass transfer to predict transfer coefficients

CO3: Analyze working of various heat transfer equipment

CO4: Design heat and mass transfer equipment.

CO5: Evaluate no. of stages required for given mass transfer problem.

SKILLS:

✓ *Design heat exchangers.*

✓ *Estimate heat and mass transfer coefficients.*

✓ *Estimate Log Mean Temperature Difference (LMTD) in heat exchangers.*

UNIT - 1 **L-9**

MODES OF HEAT TRANSFER: Modes of heat transfer; Fourier's law, thermal conductivity, steady state conduction in plane wall and composite walls; Heat flow in cylinder and spheres, countercurrent and parallel current flows; Energy balances, rate of heat transfer, overall heat transfer coefficient, logarithmic mean temperature difference, individual heat transfer coefficients, and fouling factors.

UNIT - 2 **L-9**

HEAT TRANSFER TO FLUIDS WITHOUT PHASE CHANGE AND WITH PHASE CHANGE: Thermal boundary layer, heat transfer by forced convection in laminar flow and turbulent flow; Natural convection to air from vertical and horizontal planes, heat transfer from condensing vapors and heat transfer to boiling liquids.

UNIT - 3 **L-9**

DESIGN OF HEAT TRANSFER EQUIPMENTS: General design of heat exchange equipment, heat exchangers, condensers, boilers and calandrias; Liquid characteristics, types of evaporators, performance of tubular evaporators, enthalpy balances for single effect evaporator.

UNIT - 4 **L-9**

DIFFUSION AND MASS TRANSFER: Mass transfer operations, molecular diffusion in fluids, binary solutions, Fick's law of diffusion, equation of continuity, steady state equimolar counter current diffusion, Stefan's estimation of diffusivity in gases and liquids, application of molecular diffusion, theories of mass transfer.

UNIT - 5 **L-9**

MASS TRANSFER OPERATIONS: Introduction, counter and cocurrent isothermal absorption and stripping of single component, operating lines, minimum flow rate, determination of number of transfer units and height of continuous absorber, determination of number of plates; Steam distillation, flash vaporization and differential distillation for binary and multi component mixtures.

ACTIVITIES:

- *Handle sterilizers.*
- *Estimate heat transfer area for condensers, evaporators and boilers.*
- *Control temperature in bio-reactors.*

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Verification of Bernoulli's equation for variable cross sectional pipe.
2. Determination of coefficient of discharge for Venturi meter.
3. Estimation of coefficient of discharge for Orifice meter.
4. Determination of pressure drop for fluidized bed reactor.
5. Determination of various characteristic curves of single stage centrifugal pump.
6. Determination of minor losses for flow through pipes.
7. Calculation of heat transfer coefficient through natural convection.
8. Calculation of heat transfer coefficient through forced convection.
9. Assessment of LMTD and rate of heat transfer for double pipe heat exchanger in cocurrent and counter current pattern.

TEXT BOOKS:

1. A. Suryanarayana, "Mass Transfer Operations", 1st edition, New - Age, International, 2006.
2. McCabe, W.L. Smith J.C. and Harriot P., "Unit Operations of Chemical Engineering", 7th edition, McGraw Hill, 2004.

REFERENCE BOOKS:

1. D. Q. Kern, "Process Heat Transfer", McGraw-Hill, 2001.
2. C. J. King, "Separation Processes", 2nd edition, McGraw Hill, 2014.

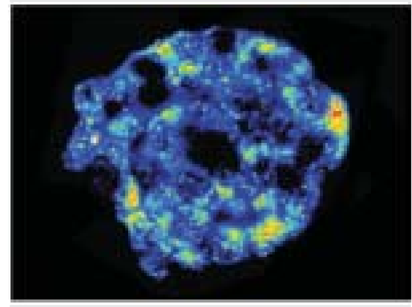
16BT207 INSTRUMENTAL METHODS OF BIOLOGICAL ANALYSIS

Hours Per Week :

L	T	P	C
3	-	2	4



Source:
http://cdn.phys.org

Course Description and Objectives:

The course provides an understanding of principles and functions of various scientific instruments used for analysis of biological molecules. The objective of this course is to impart technical knowledge on applications, advantages and limitations of the various analytical and separation tools and techniques.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Understand the basic principles of different bio analytical methods.

CO2: Analyze error, repeatability, precision and accuracy of instruments.

CO3: Understand the advantages and limitations of various analytical techniques.

CO4: Knowledge about techniques related to centrifugation and electrophoresis.

CO5: Separate biomolecules using membrane and chromatographic techniques.

SKILLS:

- ✓ *Skilled handling of microscope.*
- ✓ *Handling of UV Visible spectrophotometer.*
- ✓ *Chromatography techniques.*
- ✓ *Experience in working with data sets.*

ACTIVITIES:

- *Qualitative and quantitative analysis of biomolecules.*
- *Purify biomolecules from plants.*
- *Disrupt differnt cells using sonicator.*
- *Compare different analytical methods to estimate enzymes.*

I UNIT **L- 09**

INTRODUCTION TO IMA AND MICROSCOPY: Types of analytical methods; Instruments used for analysis; Uncertainties in instrumental measurements - sensitivity and detection limit for instruments; Microscopy- bright field, dark field, fluorescent, phase contrast, confocal microscopy, SEM and TEM; Flow cytometry.

II UNIT **L- 09**

UV-VISIBLE AND IR SPECTROSCOPY: General principles; Types of spectra and their biochemical applications; Basic laws of light absorption; Electromagnetic radiation, Beer-Lambert's Law and apparent deviations; UV-Visible spectrophotometer and Infra-Red spectroscopy.

III UNIT **L- 09**

NMR AND X-RAY SPECTROSCOPY: NMR- chemical shift, spin-spin coupling, applications of proton NMR, quantitative analysis and qualitative analysis, application of NMR in biology; Principle mode of operation and applications of X-ray spectroscopy.

IV UNIT **L- 09**

CENTRIFUGATION AND ELECTROPHORESIS: Centrifugation-introduction, types of centrifuge rotors, RPM-RCF, ultra centrifugation, velocity sedimentation, density gradient centrifugation; Electrophoresis - principles, types (disc, isoelectric focusing, immuno-electrophoresis, isotachophoresis) and supporting materials-paper, starch, agarose and polyacrylamide.

V UNIT **L- 09**

SEPARATION EQUIPMENTS - PRINCIPLES AND OPERATIONS: HPLC, gas chromatography, ion-exchange chromatography, gel - filtration chromatography, affinity chromatography, membrane separations, ultra filtration and reverse osmosis.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Verification of Lambert -Beers Law by UV -VIS spectrophotometer.
2. Estimation of reducing sugars (Benedict's method).
3. Estimation of proteins and nucleic acids by U.V. method.
4. Separation of different macromolecules by HPLC.
5. Estimation of vitamin B by turbidometry method.
6. Estimation of turbidity by U.V. method.
7. Estimation of chlorophyll by colorimetric method.
8. Determination of lambda max.
9. Calibration of pH meter.

16BT208 MOLECULAR BIOLOGY

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course describes the structure, synthesis and processing of nucleic acids and protein synthesis in prokaryotes and eukaryotes. The objective of this course is to impart the concepts of genetic materials, central dogma, mutations and DNA repair.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Appreciate the structure of genetic materials.

CO2: Interpret the concepts of central dogma of life.

CO3: Analyze biochemical synthesis and molecular processes that occur during cell growth.

CO4: Apply concepts of genetic code in recombinant technology.

CO5: Create the bacterial mutants using physical or chemical mutagens.

SKILLS:

- ✓ *Determining purine-pyrimidine complementation.*
- ✓ *Handling of micro-pipette.*
- ✓ *Setting up chemical reactions in micro-volumes.*
- ✓ *Handling reagents, enzymes and biochemicals related to molecular biology.*

UNIT - 1 **L-9**

STRUCTURE OF DNA AND RNA: Discovery-structure of DNA; B, A and Z models; Denaturation and melting curves; m-RNA, r-RNA, t-RNA structures.

UNIT - 2 **L-9**

DNA REPLICATION: Models of DNA replication: semi-conservative model, mitochondrial (D-loop), viral DNA (Rolling circle); Single stranded- DNA phages (M13, phi-174); Mechanism of DNA replication in *E.coli* (bi- directional); Inhibitors of DNA replication; Enzymes involved in replication; Eukaryotic telomeres.

UNIT - 3 **L-9**

RNA BIOSYNTHESIS AND POST TRANSCRIPTIONAL PROCESSING: Transcription apparatus; Mechanism of transcription in prokaryotes and eukaryotes; RNA polymerases and proteins involved in transcription; Inhibitors of transcription; Post transcriptional processing of mRNA.

UNIT - 4 **L-9**

PROTEIN BIOSYNTHESIS IN PROKARYOTES AND EUKARYOTES: The genetic code and Wobble Hypothesis; Protein synthesis in prokaryotes and eukaryotes; Differences between prokaryotic and eukaryotic protein synthesis; Post translation modifications; Inhibitors of protein synthesis.

UNIT - 5 **L-9**

MUTAGENESIS: Types of mutagens and their actions; Types of mutations- spontaneous, induced and lethal; Characteristics of mutations and applications; Site- directed mutagenesis and reverse genetics; DNA damage and repair mechanisms; Nucleotide excision repair mechanisms; Mismatch repair mechanism and base excision repair mechanism.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Isolation of genomic DNA from plants.
2. Isolation of genomic DNA from animals.
3. Isolation of genomic DNA from bacteria.
4. Quantification of DNA by UV Spectrophotometer.
5. Isolation of RNA.
6. Quantification of RNA by UV Spectrophotometer.
7. Agarose gel electrophoresis to visualize and quantify DNA isolated from bacteria, plants or animals.
8. SDS-PAGE technique for separation of proteins.
9. Staining of PAGE gels with Coomassie brilliant blue.
10. Staining of PAGE gels with silver nitrate.

TEXT BOOKS :

1. D. Freifelder, "Molecular Biology", 2nd Edition, Narosa Publishing Home 1987.
2. Channarayappa, "Molecular Biotechnology: Principles and Practices", 1st Edition, Universities Press, 2006.
3. M.R.Green and J. Sambrook. "Molecular Cloning: A Laboratory Manual", 4th Edition, Cold Spring Harbor Lab. 2013.

REFERENCE BOOKS:

1. H.Lodish, A. Berk, S.L. Zipursky, P. Matsudaira, D. Baltimore and J. Darnell, "Molecular Cell Biology", 6th edition, W.H. Freeman & Company, 2007.
2. J.E. Krebs, E.S. Goldstein, S.T. Kilpatrick, "Lewin's Genes XI", 11st Edition, 2015.

ACTIVITIES:

- *Model the double-helix of DNA using ball and stick kit.*
- *Identify complements, palindromes, loops and bends.*
- *Predict DNA complexity by gel electrophoresis.*
- *Amplify gene using PCR.*

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, preparing resumé, group discussion and interview skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

Upon completion of the course, the student will be able to

CO1: Develop formal communication skills in a work place.

CO2: Acquire team skill by working in group activities, Present them confidently in job interviews.

CO3: Equip them with suitable language and speech patterns in a workplace.

CO4: Enhance the ability of critical & lateral thinking while addressing the issues at any situation.

CO5: Understand the usage of language at all the circumstances and can enhance his professionalism.

SKILLS:

- ✓ *Communicate and understand the difference between soft skills and hard skills.*
- ✓ *Professionalism and employability skills.*
- ✓ *Plan career by drawing their SWOT, setting the goal, learn the importance of time and stress management.*
- ✓ *Vocabulary, situational english, group discussion, reading comprehension and listening comprehension which are essential for all competitive examinations.*
- ✓ *Prepare resumé and learn how to face interview.*
- ✓ *Gender sensitive language, good manners, emotional intelligence and essential skills.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - the process of communication, levels of communication, flow of communication, choice of diction and style with reference to setting (formal, semi-formal or informal); communication networks, barriers to communication, miscommunication, noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, need for soft skills, professionalism, employability skills.

C) CAREER PLANNING:

Job vs. career, goal setting, SWOT analysis, planning and prioritization, four quadrant time management system, self-management, stress-management.

ACTIVITY: Johari Window for SWOT analysis; Setting a SMART goal using the provided grid; Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, roots, prefixes & suffixes, synonyms and antonyms, collocations, one-word substitutes, analogies, idioms and phrases, contextual guessing of unfamiliar words, task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student) – vocabulary exercises with hand-outs; Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, role plays (including small talk), self introduction, opening and closing a telephonic conversation, making an appointment, making a query, offering/ passing on information, communicating with superiors, expressing agreement/objection, opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, dynamics of group discussion, intervention, summarizing and conclusion, voice modulation, content generation, key word approach (KWA), social, political, economic, legal and technical approach (SPELT), view point of affected part (VAP), language relevance, fluency and coherence.

ACTIVITY: Viewing a recorded video of GD and Mock sessions on different types of GD topics- controversial, knowledge, case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, defining career objective, projecting one's strengths and skill-sets, summarizing, formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, preparing the resume, writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, understanding employer expectations, pre-interview planning, opening strategies, impressive self-introduction, answering strategies, other critical aspects such as body language, grooming, other types of interviews such as stress-based interviews, tele-interviews, video interviews, frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey time management matrix.*
- *Stress management techniques.*
- *Vocabulary flash cards.*
- *Situational dialogues.*
- *Group discussion.*
- *Resumé preparation.*
- *Mock interview.*
- *Reading comprehension activities.*
- *Listening comprehension activity by watching the american accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, techniques for speed reading, understanding the tone, skimming and scanning, appreciating stylistics, impediments for speed reading, eye fixation, sub-vocalization, critical reading, reading based on purpose, reading for information, reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas (handouts); Newspaper activity with students divided into 4 groups; Each group looks at critical component of communication such as listening, speaking, reading and writing enabling them to be better communicators as well as be more aware about the current affairs, which help in group discussion.

B) LISTENING COMPREHENSION: Listening as a skill, different types of listening, active and passive listening, top-down approach, bottom-up approach, understanding the non verbal cues of communication; intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British and American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, cultural sensitivity, social awareness, emotional intelligence, good manners, self-grooming, positive body language, accepting and handling responsibility, assertiveness, problem solving, negotiating skills, networking and creating a good first impression.

Seven essential skills for a team player; attentive listening, intelligent questioning, gently persuading, respecting other's views, assisting others, sharing and participating actively.

ACTIVITY: Johari window, games and case studies.

III Year - B.Tech

SYLLABUS

I SEM & II SEM

III Year B.Tech. Biotechnology I - Semester	**L**	**T**	**P**	**To**	**C**
	4	-	-	4	4

BT 301 MOLECULAR BIOLOGY

Course Description & Objective:

To acquaint the student about the structure, synthesis and processing of nucleic acids and protein synthesis in prokaryotes and eukaryotes. Also to make the students aware about the classification and types of mutations and how they effect the gene and its expression and how DNA will repair the damage.

Course Outcomes:

1. To provide an in-depth knowledge of the core principles of biological and/or medicinal processes to manipulate genes.
2. Imparts an understanding of biochemical synthesis and molecular processes that occur during cell growth.
3. Able to describe and explain processes that leads to the determination of characteristics of living organisms
4. Gives an insight into the most significant molecular and cell-based methods used in biotech industries.

UNIT I : Structure of DNA and RNA:

Detailed structure of DNA, variation from Watson & Crick model, Z - DNA, A & B DNA, Denaturation & melting curves, m-RNA, r-RNA, t-RNA structures.

UNIT II : DNA Replication:

Models of DNA replication: semi conservative model, Mitochondrial (D-loop), Viral DNA (Rolling circle), Single stranded- DNA phages (M13, ϕ174), Mechanism of DNA replication in E.coli (bi- directional), step by step process, Inhibitors of DNA Replication. Enzymes involved in replication, Eukaryotic telomeres and its replication.

UNIT III : RNA Biosynthesis and Post transcriptional processing:

Ribosomes,Transcription apparatus, Mechanism of transcription in prokaryotes and eukaryotes, RNA polymerases and proteins involved in transcription, Inhibitors of transcription, Post transcriptional processing of RNA ‘s t-RNA, r-RNA, m- RNA splicing..

UNIT IV: Protein Biosynthesis in Prokaryotes and Eukaryotes:

The genetic code and Wobble Hypothesis, Protein synthesis in Prokaryotes and Eukaryotes, Differences between prokaryotic and eukaryotic protein synthesis, Post translation modifications. Inhibitors of protein synthesis.

UNIT V : Mutagenesis:

Types of mutagens and their actions, Types of mutations-spontaneous, induced, lethal, characters of mutations and applications, Site - directed mutagenesis and reverse genetics. DNA damage and repair mechanisms.

TEXT BOOKS:

1. David Friefeldur - Molecular Biology, 2nd Ed., Norasa Publishing Home 1987.

L	T	P	To	C
4	-	-	4	4

BT 303 BIOCHEMICAL REACTION ENGINEERING

Course Description & Objectives:

Develop familiarity with chemical reaction kinatics, D e v e l o p familiarity with types of reactions,Giving basic concepts of reactor design. Making familiarity with reactor operation.

Course Outcomes:

Students will be able to

1. Familiar with types of reactions & chemical reaction kinetics.
2. Familiar with reactor design.
3. Acquire skills with various modes of reactor operations.
4. Analyze concepts of elemental and electron balances, yield and maintenance coefficients.
5. Understand about the structured and unstructured models.
6. Learn growth and inhibition models.
7. Understand concepts of RTD & scale-up.

UNIT I : Fundamentals of reaction engineering:

Concept of order, molecularity of a reaction, searching a mechanism for a reaction, evaluation of rate constants, temperature using Arrhenius equation. Irreversible unimolecular type first order reactions, irreversible bimolecular type second order reactions, Interpretation of batch reactor data.

UNIT II : Microbial growth kinetics

Stoichiometry of cell growth and product formation - elemental and available electron balances, degrees of reduction, maintenance coefficient. Kinetics of microbial growth: Monods model, inhibitory growth kinetics- substrate inhibition models, product inhibiton models, Logistic models, Mixied growh kinetics, Product production kinetics.

UNIT III : Bioreactor Design & Analysis:

Definition of bioreactor, Concepts of reactors based on flow characteristics, design of ideal reactors using material and energy balance. Performace equation for batch, continuous (chemostat &

turbidostat) and fed batch bioreactor. Multiple stage chemostat, recycle flow in chemostat, Design of plug flow reactors, comparison of productivity in plug flow and single stage single flow chemostat.

UNIT IV: Multiple Reactions:

Parallel series, *series – parallel reactions,* calculation of yield and selectivity, role of thermodynamic parameters, Design principles- non isothermal reactions and pressure effects.

UNIT V: Non- Ideal Reactors & Reactor Applications:

Concepts of residence time distribution, micro mixing and macro mixing, Reasons for non-ideality, concept of macro using – RTD analysis (E-C-F functions), diagnosing the ills of non-ideal bioreactors. Design and analysis of fed-batch and airlift bioreactors. Application in animal cell culture. Basic concept of scale-up, non - dimensional analysis.

III Year B.Tech. Biotechnology I - Semester

L	T	P	To	C
4	-	-	4	4

BT 305 GENETIC ENGINEERING

Course Description & Objectives:

The course is oriented at making the student understand about the process of gene expression and its regulation. Also to give awareness about different vectors used for gene transfer, enzymes, cloning methods, expression and detection of clones, molecular methods and markers and applications of r-DNA technology.

Course Outcomes:

Students gain knowledge on

1. Gene expression and regulation
2. Structure and organization of different vectors used in gene transfer
3. Enzymes used in gene manipulation
4. Cloning methods, expression and detection of clones
5. Molecular techniques, markers and applications of r-DNA technology

UNIT I : Gene Regulation in Prokaryotes and Eukaryotes:

Prokaryotes - Lactose, Arabinose and Tryptophan operons, Repressors and activators, Sigma switch in Bacillus subtilis., Eukaryotes - Gene regulation, Promoters, enhancer elements, Gene rearrangement , gene amplification.

UNIT II : Plasmids, Transposons / Vectors for Gene Transfers:

Plasmids: Definition, types, Identification, classification and purifications and transfer of Plasmids. Host restriction in transfer; Transposable elements: Definition, detection of transposition in bacteria, types of bacterial transposons, mechanisms of transposition and excision, applications of transposons, retrotransposons; enzymes involved in genetic engineering, different types of cloning vectors (Plasmid – pUC 19, l-phage, cosmid, M13, BAC,YAC & YEP).

UNIT III : Expression and Detection of clones :

Cloning strategies, sequencing, DNA fingerprinting; Blot analysis - Southern, Northern Western blot; dot and slot blot; PCR- Principles, designing of primers, methodology, Types of PCR, RT - PCR, multiplex PCR, identification of PCR product, application of PCR technology.

UNIT IV : Molecular Techniques :

Purification of genomic DNA from living cells, Manipulation of purified DNA; Introduction of DNA into living cells - methods of Gene transfer, DNA methylation, DNA hybridization, DNA sequencing, DNA fingerprinting; Blot analysis - Southern, Northern & Western blot; dot and slot blot; PCR- Principles, designing of primers, methodology, Types of PCR, RT - PCR, multiplex PCR, identification of PCR product, application of PCR technology.

UNIT V : Molecular Markers and Applications of r-DNA Technology:

Molecular markers: RFLP, RAPD, AFLP, Restriction mapping, 16s r-RNA typing, gene chip and microarray; applications in disease profile; Gene cloning in medicine (Insulin, Blood clotting factor VIII), High level expression of proteins in different host systems (E. coli, yeast, Insect, mammalian cells), Introduction to Gene therapy (Ex vivo & In vivo), case study of ADA as an example., Advantages and limitations of Gene therapy and novel technologies.

L	T	P	To	C
4	-	-	4	4

MS 310 MANAGERIAL ECONOMICS

Course description and Objectives:

To make the students familiar with Economic, Accounting & Financial concepts used to help the managers in taking Business Decisions.

Course Outcomes:

1. Student will be able to undesrastand the basic concepts of managerial economics
2. They will gain adequate knowledge in cost analysis
3. They will acquire sufficient skills to interpret pricing and profit management
4. They will be able to perform various ratio analyse

UNIT – I : Introduction to Managerial Economics :

Nature & Scope relation of Managerial Economics with the functional areas of business organization. Role of Managerial Economist

Demand Analysis: Types of Demand, Demand determination, Demand elasticities, Demand forecasting, Survey & Statistical methods.

UNIT – II : Production and Cost Analysis production function:

Marginal rate of technical substitution, iso-quants and iso-costs, production function with one/two variables, cobb-douglas production function, Factor productivities and returns to scale.

Cost Analysis: Cost concepts, cost determinants, cost output relationship in the short and long run.

UNIT – III : Pricing and Profit Management:

Features and types of different competitive situations – Perfect competition, monopoly, monopolistic and oligopoly, pricing methods in practice.

UNIT – IV : Profit Management:

Nature and theories of profit. Cost – Volume – Profit Analysis.

UNIT – V

Ratio Analysis – Introduction to ratios, Advantages and disadvantages of ratio analysis, Types of ratios – liquidity, solvency, turnover and profitability ratios.

TEXT BOOKS:

1. Gupta, "Managerial Economics" TMH, 1/e, 2005.
2. M.E. Thukaram, "Accounting for Managers" TMH, 2/e, 2006.

III Year B.Tech. Biotechnology	I - Semester	L	T	P	To	C
		4	-	-	4	4

BT 307 PLANT BIOTECHNOLOGY (ELECTIVE - I)

Course Description & Objectives:

The Course is designed to provide concepts and industrial applications in the field of agricultural biotechnology. Production of high yielding,disease resistant crop varieties by using plant transformation technology. Concepts of Plant Molecular farming and production of plantibodies from Genetically modified organisms. To enable students to participate in R&D projects, develop laboratory and research skills.

Course Outcomes:

The students will develop fundamental knowledge in Plant Biotechnology and its application in laboratory and industry settings.

The students will:

1. Acquaint with principles, technical requirement, scientific and commercial applications in Plant Biotechnology,
2. Become familiar with sterile techniques, media preparation, DNA extraction methods, gene isolation and sequence analysis,
3. A knowledge of *Agrobacterium* and its development as a transformation vector & critically assess various plant genetic modification strategies
4. Knowledge of how plants can be transformed with respect to pest resistance, herbicide tolerance,
5. Support methodologies in plant tissue/cell culture to plant improvement, understanding how breeding strategies can be targeted to crops
6. Become motivated to set goals towards pursuing graduate school and higher level positions, such as lab manager and key scientist in plant biotechnological research institutes and industries.

UNIT I : INTRODUCTION TO TISSUE CULTURE & APPLICATIONS:

Introduction to cell and tissue culture; Tissue culture media (composition, preparation); Initiation and maintenance of callus and cell suspension culture, organogenesis; Protoplast isolation culture and fusion;Production of haploids, Somaclonal variations,Germplasm conservation (Cryopreservation); Hardening & Field transformation of cultured Plants; Bioreactors systems and models for mass cultivation of plant cells.

UNIT II: PLANT TRANSFORMATION TECHNOLOGY:

Agrobacterium mediated gene transfer; Agrobacterium based vectors, viral vectors and their application. Direct gene transfer methods; chemical methods, electroporation, microinjection, particle bombardment.

UNIT III:PLANT GENETIC ENGINEERING FOR PRODUCTIVITY AND PERFORMANCE (BIOTIC STRESS & ABIOTIC STRESS):

Herbicide resistance, Insect resistance, Disease resistance, virus resistance,. Abiotic stress tolerance ;(Drought, temperature, salt).

UNIT IVII MOLECULAR FARMING & INDUSTRIAL PRODUCTS:

Application of Plant biotechnology for the production of quality oil, Industrial enzymes, Therapeutic Proteins ,Antigens (edible vaccine) and plantibodies.

UNIT V: METABOLIC ENGINEERING:

Concepts of Production of secondary metabolites from plant; Metabolic engineering for plant primary metabolites and secondary metabolites.

TEXT BOOKS:

1. H.S. Chawla, A Text Book of “Plant Biotechnology”, 2nd ed., Oxford & IBH, New Delhi, 2002.

		4	-	-	4	4

BT 309 PLANT METABOLISM (ELECTIVE - I)

Course Description & Objectives:

The course is intended for students in the plant sciences. All topics are taught in the context of plant biology. Successful completion of this course will provide students with fundamental knowledge of biochemistry and specific knowledge of compounds and biochemical pathways that occur in plants.

Course Outcomes:

1. Students will learn the structure, function and biosynthetic pathways of essential biochemical molecules including their key chemical and physical properties.
2. Students will learn how membranes form and function and how the building blocks of membranes are made
3. Students will learn amino acid structures and relate their chemical properties to the synthesis and function of proteins, enzymes and other metabolites.
4. Students will learn about the rich diversity of secondary compounds and metabolism in plants and how such compounds contribute to human health.

Unit –I: Structure and biochemical aspects of specialized plant cell organelles Cell plate, primary and secondary cell walls, plasmodesmata, importance of vacuoles, characteristics of meristematic cells Cell division - Mitosis, Meiosis, extension, differentiation and their controls. Water relations of plants - role of water, absorption, adsorption, conduction and transpiration, guttation water balance and stress.

Unit-II Photosynthesis :

Structure of organelles involved in Photosynthesis of plants and bacteria. Electron transfer in chloroplasts of plants difference from mitochondria. photophosphorylation and reduction of CO_2; differences in C_3,C_4 & CAM Photosystems (PS I & PS II) light receptors and light harvesting ferrodoxin, Plastocyanin plasto quirone, carotenoids; Hill reaction, plants.Nitrogen assimilation and Biological nitrogen fixation.

Unit-III: Plant Hormones :

Growth regulating substances and their mode of action. Role of auxins, gibberelic acid, abscisic acid, cytokinins and brassinosteriods in the regulatory cell extension, germination, growth and development. Signal transduction and gene expression Secondary metabolism-Special features of secondary plant metabolism formation and functions of phenolic acids, tannins lignins, flavonoid pigments, surface waxes, cutin and suberin - the plant protective wats, terpenes Mineral metabolism - role of different minerals absorption and translocation of inorganic and organic substances.

Unit-IV: Photomorphogenesis :

Physiology of flowering & Vernalization Responding to light: Photomorphogenesis: Phytochrome, Phytochrome in dark grown seeding, Physiological effects of Phytochrome, Phytochrome in green plants, Phytochrome under natural conditions, mechanism of Phytochrome action. Temperature and Plant Development: Temperature in the Plant environment, Influence of temperature on growth and plant distribution, and development.

Unit-V: Photoperiodism and Rhythmic Phenomena :

Photoperodism; the Biological Clock,Genetic approaches to photoperiodism, and rhythms; Photoperiodism in nature. Biochemistry of fruit ripening, senescence and abscission; Seed Germination and Dormancy Defence system in plants (ethylene, Jasmonic acid and Salicylic acid), Pathogenesis Related (PR) Proteins.

BT 311 PLANT PHYSIOLOGY (ELECTIVE - I)

Course Description & Objectives :

To make the student to understand about the uptake of water, absorption of minerals and different transport mechanisms in plants. To acquaint the student with biochemical processes like photosynthesis, respiration, nitrogen fixation; biosynthesis of secondary metabolites and strategies to improve their production. To gain knowledge on growth, differentiation, morphogenesis, development, mineral nutrition, plant movements and plant hormones; effect of different stresses on plant growth and development and responses of plants to stress.

Course Outcomes :

1. Absorption of water and minerals; transport mechanisms
2. Biochemical processes like photosynthesis, respiration, nitrogen fixation and biosynthesis of secondary metabolites
3. Growth, differentiation, morphogenesis, development, plant hormones, plant movements, photoperiodism
4. Effect of different types of stresses and response of plants to stresses.

Unit - I: Water Potential :

Plants and water, Diffusion, bulk flow, chemical and water potential; osmosis, transpiration, Ascent of Sap, mineral nutrition, absorption of mineral salts, nature of membranes, solute absorption, passive and active transport, ATPase pumps, proton pumps, carriers and channels, transport in phloem.

Unit - II: Plant Biochemistry :

Photosynthesis – chloroplasts, Emerson effect, Photosystem I and II, Electron transport, Calvin cycle,c4 pathway, photorespiration, CO_2 fixation, factors affecting photosynthesis; Respiration - Respiratory Quotient, glycolysis, fermentation, Krebs cycle, electron transport system and their energitics, Pentose phosphate pathway, factors affecting respiration; Nitrogen cycle, fixation, assimilation of nitrates and ammonium.

Unit-III : Plant secondary metabolites :

Definition of stress , stressful environments, water stress – drought, cold and salt; chilling injury, high temperature stress, oxidative stress, Mechanisms of plant response to water and related stresses, plant defense systems. Introduction; Classification, structure, function and biosynthesis of secondary metabolites ; important pathways of biosynthesis - phenyl propanoid pathway; Mevalonate pathway and acetate 6mevalonate pathway. Strategies and approaches for the over production of plant secondary metabolites – plant cell suspension cultures, hairy root cultures, metabolic engineering, bioreactors.

Unit-IV : Plant growth, Development and Regulation :

Growth, patterns of growth and development, growth kinetics, morphogenesis, principles of differentiation, dormancy, germination, flowering and senescence. Concepts of hormones and their action, Biosynthesis and physiological significance of auxins, cytokinins, gibberellins, abscisic acid, ethylene; Basic principles of plant movements-nastic movements, tropisms, photomorphogesis, photoperiodism

Unit- V : Stress Physiology :

Definition of stress , stressful environments, water stress – drought, cold and salt; chilling injury, high temperature stress, oxidative stress, Mechanisms of plant response to water and related stresses, plant defense systems.

TEXT BOOKS:

1. Plant Physiology , Frank B. Salisbury and Cleon W. Ross 2004, 4th Edition, Thomson Asia Pte Ltd., Singapour

BT313 BIOCHEMICAL REACTION ENGINEERING LAB

Course Description & Objectives:

Provides practical knowledge of different chemical reactors used in chemical engineering industries.

Course Outcomes:

1. Able to determine the kinetics of a given reaction in different types of reactors
2. Would be familiar with the working models of various types of reactors
3. Able to Characterize lab reactors through residence time distributions (measured or model based).
4. Gain knowledge on effects combined reactors on kinetics of the reaction.

List of Experiments:

1. Kinetic Studies in C.S.T.R
2. Kinetic Studies in P.F.R
3. Kinetic Studies in Combined Reactor
4. Kinetic Studies in Batch Reactor
5. Adiabatic Batch Reactor
6. R.T.D Studies in C.S.T.R
7. R T D Studies in C.S.T.R's in Series
8. R.T.D Studies in Plug Flow Reactor
9. R.T.D Studies in Combined Reactor.

TEXT BOOKS:

1. Octave Levenspiel - Chemical Reaction Engineering , 3rd Ed. John Wiely & Sons,1999.

BT 329 CELL & TISSUE CULTURE LABORATORY

Course Description & Objectives:

To introduce the advanced laboratory skills that reinforce basic principles and techniques learned in introductory biology, chemistry of various cells and tissue systems. The enhancement of general and advanced laboratory experiences, facilitates that further for future independent research. To provide research outcomes that develops critical thinking and analytical skills. towards the changing trends in technology and the modern aspects of biochemical and molecular biology questions asked in plant biology and allied areas.

Course Outcomes:

1. The laboratory teaching of this course will provide students an opportunity to get hands on training with some of the most basic, yet widely utilized techniques in micropropagation etc.
2. Become familiar with sterile techniques, media preparation, methodologies in plant tissue/cell culture, effect of PGH on plant tissues etc.

List of Experiments:

1. Introduction to Cells, plant tissues
2. Observation of Algal & Fungal cultures,Mitotic & Meiotic Cells
3. Preparation of different Media for plant cell/tissue culture
4. Surface sterilization
5. Raising of Aseptic Seedlings
6. Callus induction
7. Organogenesis

8. Effect of Auxins on root induction

9. Effect of Cytokinins on shoot induction

10. Protoplast isolation & culture

11. Hardening & Field transformation of cultured Plants

12. Agrobacterium mediated gene transfer, selection of transformants, reporter gene (GUS) assays.

TEXT BOOKS:

1. C.C.Giri &ArchanaGiri, Plant Biotechnology Practical Manual, 2007.

2. Bhojwani, S.S. and Rajdan, Plant Tissue Culture: Theory and Practice.,Elsevier Publishers, Amsterdam, 2004.

BT 331 BIOLOGICAL DATABASE LABORATORY

Course Description & Objectives:

The data pertaining to Biology is diverse and numerous. Hence a few data banks with details on genes, proteins, ligands, SNP etc.... are being maintained by Governmental and non-governmental agencies for the percolation of information. These data bases are to be practiced in the lab.

Course Outcomes:

1. Students will be able to retrieve data from online databases
2. They will understand the significance of biological databases
3. They will be able to submit annotated data to the databases
4. They will understand the importance of accession IDs
5. They will be able to utilize various tools in databases for research works in future.

Explaining and mining of the following Data Banks

a) NCBI
b) DDBJ
c) UCSC GENOME BROWSER
d) Biogrid (India)
e) Protein Data Bank
f) EMBL-EBI
g) HLA / IMGT data base
h) SNP database

BT 302 ANIMAL BIOTECHNOLOGY (ELECTIVE-II)

Course Description & Objectives:

The course provides an overview of current developments in different areas of animal biotechnology. It imparts in vitro reproductive techniques for sperm, ovum and embryo manipulation.It helps in ellucidating structural, functional and comparative genomics of farm animals and its application for livestock improvement.The course comprehends the application of immunological techniques in biotechnology and appreciates the principles of animal cell culture and its application.

Course Outcomes:

At the end the students will demonstrate the ability in / to

1. Development of primary cultures
2. Development of established cell culture.
3. Assess the effect of factors and their role in cell functions.
4. Develop awareness in interlinking of different fields for the development of biological organs.

UNIT- I: Animal cell culture techniques and media :

Cell culture techniques including primary and secondary culture, cell lines, suspension culture, organ culture etc. Different type of cell culture media, growth supplements, serum free media, balanced salt solution, culture of different tissues and its applications. Behavior of cells in culture conditions, division, growth pattern and metabolism, estimation of cell number and cell viability, MTT assay. Quantification of cells by trypan blue dye exclusion method.

UNIT-II: Development and maintenance of Cell Lines

Development of cell lines, characterization and maintenance of cell lines, stem cells, cryopreservation, common cell culture contaminants. Cryopreservation of primary cell cultures and cell lines. Effect of viruses on cultured mammalian cells. Cloning of domestic animals. Conservation of endangered species.

UNIT-III: Immunodiagnostics :

Somatic cell hybridization, hybridoma technology, commercial production of antibodies using monoclonal antibodies, screening of hybrids for production of monoclonal antibodies. Application of antibodies in chemiluminescence and fluorescence assay used, antibody based nucleic acid probes and their applications in ELISA.

UNIT-IV : Reproductive Technology

Assisted reproductive biotechnology in man and animal, introduction to embryo biotechnology, endocrine therapeutics. methodology of super ovulation, *in vitro* fertilization, embryo culture and micromanipulation, preparation of sperm for IVF. Different methods of gene transfer and their limitations, sperm mediated gene transfer, embryo splitting, production of transgenic livestock by nuclear transfer and its application, regulatory issues.

Unit-V : Animal Genomics

Characterization of animal genomes, SNP, STR, QTL, RFLP, RAPD, genetic basis for disease resistance, transgenic animal production and application in expression of therapeutic proteins. Nucleic acid based methods for identification of animal species, detection of meat adulteration using DNA based methods, identification of wild animal species using DNA based methods. Brief introduction on Software tools for molecular phylogeny.

TEXT BOOKS:

BT 304 THERMODYNAMICS FOR BIOTECHNOLOGISTS

Course Description & Objectives:

Develop familiarity with thermal energy concept..To estimate properties of chemical compounds and biomass.Develop familiarity with heat of reactions.Develop familiarity with phase and chemical equilibria.

Course Outcomes

1. Understand the terminology associated with engineering thermodynamics.
2. Reiterate the first and second laws of thermodynamics, and understand the practical implications of these laws in engineering design.
3. Understand the concepts of heat, work and energy conversion, and can calculate heat and work quantities for industrial processes.
4. Calculate the properties of ideal and real mixtures based on thermodynamic principles.
5. Explain the underlying principles of phase equilibrium in two-component and multi-component systems.
6. Apply mass, energy and entropy balances to flow processes.

UNIT - I : The first law and other basic concepts:

The scope of thermodynamics. The first law of thermodynamics, thermodynamic state and state functions, enthalpy, steady-state steady flow process, equilibrium, phase rule, reversible process, constant - V and constant - P processes, heat capacity. Calculation of Work, energy and property changes in reversible processes.

UNIT - II : Behavior of Fluids :

The PVT behavior of pure substances, virial equations, ideal gas, applications of the virial equations, second virial coefficients from potential functions. Thermodynamics of flow processes; principles of conservation of mass and energy for flow systems.

UNIT - III : Second Law of Thermodynamics :

Statements of the second law, thermodynamic temperature scales Entropy, Entropy changes of an ideal gas, third law of thermodynamics, entropy from the microscopic view point.

UNIT - IV : Thermodynamic Properties of Fluids & Solution Thermodynamics :

Estimation of thermodynamic properties using equations of state; Maxwell relationships and their applications; Calculation of flow processes based on actual property changes, Partial molar properties, concepts of chemical potential and fugacity, Ideal non ideal solutions, Gibbs Duhem equation; Excess properties of mixtures; Activity Coefficient.

UNIT - V : Phase Equilibria & Chemical Reaction Equilibria :

Criteria for phase equilibrium; Vapor-liquid equilibrium calculations for binary mixtures, Liquid – Liquid equilibrium and Solid-liquid equilibrium, Equilibrium criteria for homogeneous chemical reactions; Evaluation of equilibrium constant and effect of pressure and temperature on equilibrium constant; Calculation of equilibrium conversions and yields for single and multiple chemical reactions.

TEXT BOOKS:

		4	-	-	4	4

BT 306 BIOPROCESS ENGINEERING

Course Description & Objectives:

This course helps to familiarize various aspects of bioreactors, to understand the media requirements and working conditions for profitable run of bioprocess industries.

Course Outcomes

1. The student understands about biological and kinetic concepts underlying bioprocesses engineering.
2. The student able to learn procedures for the design and control of industrial scale fermentation and biological waste treatment processes
3. The student will be able to apply different biotechnological methods used in the recombinant protein production, in fermentation processes and in protein purification.
4. The student will be able to analyze the research results and to present them both in written and oral form.
5. The student will be able to prepare a research plan for practical laboratory training research project in bioprocess field.

UNIT - I : Introduction to Bioprocesses & Media Design :

An overview of traditional and modern applications of biotechnology industry, outline of an integrated bioprocess and the various (upstream and down stream) unit operations involved in bioprocesses, generalized process flow sheets. Medium requirements for fermentation processes, carbon, nitrogen, minerals, vitamins and other complex nutrients, oxygen requirements, medium formulation for optimal growth and product formation, examples of simple and complex media, design and usage of various commercial media for industrial fermentations.

UNIT - II : Metabolic Stoichiometry & Energetics :

Stoichiometry of Cell growth and product formation, elemental balances, degrees of reduction of substrate and biomass, available electron balances, yield coefficients of biomass and product formation, maintenance coefficients. Energetic analysis of microbial growth and product formation, oxygen consumption and heat evolution in aerobic cultures, thermodynamic efficiency of growth.

UNIT - III : Kinetics of Microbial Growth & Product Formation :

Phases of cell growth in batch cultures, Simple unstructured kinetic models for microbial growth, Monod model, Growth of filamentous organisms. Growth associated (primary) and non - growth associated (secondary)

UNIT - IV :Transport process in bioreactors :

Mixing equipments, flow patters in agitated tanks, radial and axial flow impellers, mechansim of mixing, power requirement for ungassed and gassed mixing, scale-up of mixing system, improvement of mixing in fermenters and effect of shear in bioreactors. Oxygen transfer in fermenters, measuring dissolved oxygen concentratins, parameters affecting dissolved oxygen concentrations, measurement of K_La and scale up of oxygen transfer in larger bioreactors.

UNIT - V : Sterilization Kinetics :

Thermal death kinetics of microorganisms, batch and continuous heat sterilization of liquid media, filter sterilization of liquid media, air sterilization and design of depth filters, design of sterilization equipment - batch and continuous.

TEXT BOOKS :

1. M.L.Shuler and F. Kargi “Bioprocess Engineering”, 2nd ed., Prentice Hall of India, 2008.

BT 308 ENZYME TECHNOLOGY

Course Description & Objectives:

To acquaint the student with classification of enzymes, mechanism of action, isolation methods, kinetics and applications. Also about immobilization techniques and bioreactor designing.

Course Outcomes:

After completing this course, the student should be able to:

1. Describe various classes of enzymes, concept of active site and energetics of enzyme substrate complex.
2. Gain the knowledge on key structural and energetic factors which give rise to increased enzyme stability important for industrial application.
3. Summarize current processes involved in industrial enzyme production and purification from plants, animals and microorganisms.
4. Understand the selection and optimization of industrial enzymes using genetic and biochemical techniques,
5. Understand the different immobilization methods and analyze the bioconversions in immobilized reactors.

UNIT I: Introduction to Enzymes :

Classification of enzymes, Applications of Enzymes, Principles of catalysis – collision theory, transition state theory, role of entropy in catalysis, Comparison of chemical and enzyme catalysis. Stability, deactivation & catalytic activities. Mechanisms of enzyme action, Concept of active site and energetics of enzyme substrate complex formation, Specificity of enzyme reaction.

UNIT II: Isolation of Enzymes :

Extraction and Purification of Crude Enzyme extracts from plant, animal and microbial sources. Methods of characterization of enzymes and different characteristics, Development of enzymatic assays.

UNIT III: Kinetics of Enzyme Action :

Kinetics of single substrate reactions; Estimation of Michaelis – Menten parameters, Importance of K_M, Multisubstrate reaction mechanisms and kinetics, Turnover number. Types of Inhibition- kinetic models, Substrate and Product Inhibition, Allosteric regulation of enzymes, Deactivation kinetics.

UNIT IV : Enzyme Immobilization

Physical and Chemical techniques for enzyme Immobilization - adsorption. matrix entrapment, encapsulation, cross-linking, covalent binding – examples, Advantages and disadvantages of different Immobilization techniques, Overview of applications of immobilized enzyme systems.

UNIT V : Immobilized Enzyme Reactors

Design of Immobilized Enzyme Reactors-Packedbed, Fluidizedbed Membrane reactors, Bioconversion calculations in free-enzyme CSTRs and immobilized enzyme reactors. Stability, Deactivation & Catalytic activities.

TEXT BOOKS:

1. Trevor palmer - Enzymes, First edition, East west Press, 2004.

III Year B.Tech. Biotechnology	II - Semester	L	T	P	To	C
		4	-	-	4	4

BT 310 BIOETHICS, SAFETY AND IPR

Course Description and Objectives:

This course helps to adhere to the ethical practices appropriate to the discipline at all times and to adopt safeworking practices relevant to the bioindustries & field of research :

Course outcomes:

1. Students will gain awareness about Intellectual Property Rights (IPRs) to take measure for the protecting their ideas
2. They will able to devise business strategies by taking account of IPRs
3. They will be able to assists in technology upgradation and enhancing competitiveness.
4. They will acquire adequate knowledge in the use of genetically modified organisms and its effect on human health
5. They will gain more insights into the regulatory affairs.

UNIT I: Engineering Ethics & Bioethics :

Senses of "Engineering Ethics"' - variety of moral issued - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy – Models of Professional Roles - theories about right action - Self-interest - customs and religion - uses of ethical theories. Introduction to Bioethics. Social and ethical issues in Biotechnology Definition of Biosafety. Biosafety for human health and environment. Social and ethical issues. Use of genetically modified organisms and their release in to the environment. Special procedures for r-DNA based products, Transgenic plants and Animals.

UNIT II : Regulatory Affairs :

Regulation, national and international guidelines of Biosafety, r-DNA guidelines, Regulatory requirements for drugs and Biologics GLP and GMP.

UNIT III : Intellectual Property Rights :

Intellectual property rights and protection, patents and methods of application of patents, Trade Secrets copyrights, Trade Marks, legal implications, farmer's rights, plant breeder's rights. International and National conventions on biotechnology and related areas, WTO guidelines.

UNIT IV : Safety, Responsibilities and Rights:

Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk – the three mile island and case studies. Collegiality and loyalty - respect for authority - collective bargaining - confidentiality - conflicts of interest - occupational crime - professional rights - employee rights.

UNIT V : Global Issues :

Multinational corporations - Environmental ethics - computer ethics - weapons development and bioterrorisms - engineers as managers-consulting engineers - engineers as expert witnesses and advisors - moral leadership-sample code of Ethics.

TEXT BOOKS:

1. Mike Martin and Roland Schinzinger, "Ethics in Engineering", McGraw-Hill, New York 1996.

III Year B.Tech. Biotechnology	II - Semester	L	T	P	To	C
		4	-	-	4	4

BT 312 STEM CELL BIOLOGY(ELECTIVE - II)

Course Description & Objectives:

This course is an examination of the goals, practices, and accomplishments of contemporary stem cell biology. It impart in students an understanding about embryonic and adult stem cell culture; their role in drug discovery.

Course Outcomes:

At the end the students will demonstrate the ability

1. Establishment of embryonic & adult stem cells culture.
2. Assess the role of stem cells in drug discovery.
3. Develop awareness in interlinking of genetic engineering in the field of stem cell biology

UNIT I : STEM CELL BASICS :

Unique properties of stem cells – embryonic stem cells - adult stem cells – umbilical cord stem cells – similarities and differences between embryonic and adult stem cells. Properties of stem cells – pluripotency – totipotency.

UNIT II : EMBRYONIC STEMCELLS :

In vitro fertilization –culturing of embryos-isolation of human embryonic stem cells – blastocyst – inner cell mass – growing ES cells in lab – laboratory tests to identify ES cells – stimulation ES cells for differentiation – properties of ES cells.

UNIT III : ADULT STEM CELLS :

Somatic stem cells – test for identification of adult stem cells – adult stem cell differentiation – trans differentiation – plasticity – different types of adult stem cells.

UNIT IV : STEM CELL IN DRUG DISCOVERY AND TISSUE ENGIEERING :

Target identification – Manipulating differentiation pathways – stem cell therapy Vs cell protection - stem cell in cellular assays for screening – stem cell based drug discovery, drug screening and toxicology.

UNIT V: GENETIC ENGINEERING AND THERAPEUTIC APPLICATION OF STEM CELLS :

Gene therapy – genetically engineered stem cells – stem cells and Animal cloning – transgenic animals and stem cells – Therapeutic applications – Parkinson disease - Neurological disorder – limb amputation – heart disease - spinal cord injuries – diabetes –burns - HLA typing- Alzheimer's disease –tissue engineering application – production of complete organ - kidney – eyes - heart – brain.

TEXT BOOKS :

1. Embryonic Stem cells by Kursad and Turksen. 2002.Humana Press.
2. Stem cell and future of regenerative medicine . By committee on the Biological and Biomedical applications of Stem cell Research.2002.National Academic press

BT 330 ANIMAL CELL SCIENCE & TECHNOLOGY (ELECTIVE - II)

Course Description & Objectives:

This course intends to impart in students an understanding of the primary cell culture and methods that convert them to long term established cultures. They will also be exposed to all the factors which could impact cell culture and equipment requirements for propagation. Awareness is generated about recent advances in the area of stem cell technology, organ culture, tissue engineering etc.,

Course Outcomes:

1. Students will demonstrate the ability to develop primary established cell culture.
2. They could assess the effect of factors and their role in cell functions.
3. They will develop awareness in interlinking of different fields for the development of biological organs.
4. They will have indepth knowlege on engineering of Animal Cells and their applications

UNIT-I BASICS OF ANIMAL CELL AND ITS CULTURING :

Structure and organization of an animal cell, Types of animal cell culture - cell culture, organ/tissue culture, organotypic culture and histotypic culture, Equipments and materials needed for animal cell culture technology.

UNIT-II ANIMAL CELL CULTURE MEDIUM AND ITS COMPONENTS AND THEIR SIGNIFICANCE:

Introduction to the balanced salt solutions and growth medium, Brief discussion on the chemical, physical and metabolic functions of different constituents of culture medium, Role of carbon-di-oxide and role of serum and its supplements in maintaining cells in culture medium, Serum and protein free defined media and their application.

UNIT-III BASIC TECHNIQUES OF MAMMALIAN CELL CULTURE *IN VITRO:*

Primary and established cell lines, Biology and characterization of the cultured cells, measuring parameters of growth. Maintenance of cell culture, Cell separation, Cell transformation, Cell synchronization, Measurement of viability and cytotoxicity, Apoptosis - characteristic features and molecular mechanisms, Measurement of cell death.

UNIT-IV ENGINEERING ANIMAL CELLS:

Somatic cell genetics, Cell culture based vaccines, Genetic engineering of mammalian cells in culture, Scaling up of animal cell culture, Stem cell cultures - embryonic and adult stem cells and their applications.

UNIT-V APPLICATIONS OF ANIMAL CELL CULTURE:

Three dimensional culture and tissue engineering, Applications of animal cell culture technology (heterologous, Primary culture/CEF culturing, Protein Expression).

TEXT BOOKS:

1. Culture of Animal Cells, Fl. Ian Froshney. Wiley-Liss.

2. Animal Cell Culture - Practical Approach, Ed. John R.W. Masters, OXFORD,

BT 332 MOLECULAR BIOLOGY AND GENETIC ENGINEERING LABORATORY

Course Description & Objectives:

To familiarize students with Molecular Biology and Genetic Engineering Techniques like isolation of DNA agarose gel electrophoresis; PAGE, silver staining, blotting techniques, restriction enzyme digestion, ligation, restriction mapping, cloning of DNA & Transformation.

Course Outcomes:

The course is oriented at providing insights into

1. Isolation of genomic DNA from tissues
2. Amplifying DNA by PCR
3. Quantification of Nucleic acids by PCR
4. In-depth knowledge of various experiments to execute projects independently

List of Experiments:

1. Isolation of Plant, Bacterial Genomic DNA and Plasmid DNA.
2. Agarose Gel Electrophoresis.
3. Molecular Weight Determination DNA
4. Restriction digestion.
5. Restriction mapping and ligation.
6. Blotting Techniques – Northern/Western blots
7. Cloning of DNA into plasmid vector.
8. Expression of Beta – galactosidase assay.

TEXT BOOKS:

1. Ausubel etal, Current Protocols in Molecular Biology, Green Publishing associates, 1988.
2. Arati Nigam & Archana Ayyagari, Lab Manual in Biochemistry, Immunology and Biotechnology, 1 st ed., 2007.

BT 334 BIOPROCESS ENGINEERING LABORATORY

Course Description & Objectives:

To learn - microbial process fundamentals, enzyme catalysis. Bioreactor design and analysis.

Course Outcomes :

1. The student understands about biological and kinetic concepts underlying bioprocesses engineering.
2. The student able to learn procedures for the design and control of industrial scale fermentation and biological waste treatment processes

LIST OF EXPERIMENTS:

1. Kinetics of growth in batch cultivation- estimation of Monod kinetic parameters
2. Temperature effect on growth-estimation of energy of activation and Arrhenius Constant for microorganisms.
3. Development of enzyme assays and quantification of enzyme activity and specific activity
4. Enzyme kinetics
5. Effect of pH and temperature on enzyme activity
6. Techniques of enzyme immobilization - matrix entrapment, ionic and cross linking.

TEXT BOOKS:

BT 401 BIOINFORMATICS

Course Description & Objectives:

To equip students with computational skills and to help them use computational methods to study, organise, analyse and interpret biological information at molecular, genetic and genomics levels.

Course Outcomes :

This course contributes to the development of the following program learning outcomes

1. Will demonstrate an advanced understanding of biological sciences by articulating the methods of science, explaining why current biological knowledge is both contestable and testable through further inquiry, and explaining the role and relevance of biotechnology in society.
2. Will have an understanding of recent developments in a specialized area of biotechnology
3. Advanced skills to critically analyze and solve problems in biotechnology.
4. Will demonstrate cognitive skills in mastery of advanced theoretical knowledge in biotechnology and apply this knowledge to solve complex problems in existing and new areas.
5. Will be able to query biological data, interpret and model biological information and apply this to the solution of biological problems in any arena involving molecular data.

UNIT I: Introduction to Bioinformatics :

Basics of Bioinformatics, Elementary commands and protocols, ftp, telnet, http,html. Scope of Bioinformatics.

UNIT II: Sequencing Alignment & Dynamic Programming

Heuristic Alignment algorithms. Global sequence alignments - Neddleman - Wunsch Algorithm, Smith - Waterman Algorithm - Local sequence alignments (Amino acid substitution Matrices (PAM, BLOSUM).

UNIT III: Biological Databases & Their Use

Introduction to Biological databases, Organization and management of databases. Searching and retrieval of information from the World Wide Web. Structure databases - PDB (Protein Data Bank), Molecular Modeling Databases (MMDB). Primary Databases NCBI,EMBL, DDBJ,Introduction to Secondary Databases Organization and management of databases Swissprot, PIR,KEGG,Introduction to BioChemical databases-organization and Management of databases. KEGG, EXPASY,BRENDA, WIT.

UNIT IV: Evolutionary Trees & Phylogeny

Ultrasonic trees – parsimony – Ultrametric problem – Perfect phylogeny – Phylogenetic alignment – connection between multiple alignment and tree construction.

UNIT V: Applications of Bioinformatics

DNA Mapping and sequencing –Map alignment – Large scale sequencing and alignment – Shotgun – DNA sequencing – Sequence assembly – Gene predictions – Molecular predictions with DNA strings.

TEXT BOOKS:

BT 403 IMMUNOLOGY

Course Description & Objectives:

The course enables students to acquire knowledge and understanding of theoretical concepts of Immunology.It also helps in acquiring skills and provides competence in specialized immunological techniques in the diagnosis and management of health related disorders. It also imparts knowledge and understanding of research methods employing immunological techniques for application in biomedical and clinical research.

Course Outcomes:

The learning outcomes are the following:

1. The immune system of the vertebrate host will be comprehensively known
2. The blood cells and their defense roles will be familiar
3. The transplantation techniques and principles involved will be known
4. The techniques to asses immune surveillance help students to undertake clinical immunology as a profession.

UNIT I: Immune system and immune responses:

Cells and organs of immune system; innate and acquired immunity, types of immune responses, theory of clonal selection. Development, maturation, activation and differentiation of T-cells and B-cells; antigen presenting cells, major histocompatibility complex, antigen processing and presentation; regulation of T-cell and B-cell responses. TCR and its diversity.

UNIT II: Antigen and antibodies:

Ntigens: Chemical and molecular nature; haptens;adjuvants;Antibodies: structure and functions of antibodies; genetic control of Ab production. Isotype, allotypes, Idiotypes; antigen-antibody reactions and their significance in diagnosis; monoclonal and polyclonal antibody production: principles and applications, Immunotoxic chimeric antibodies and abzymes.

UNIT III: Infection and Immunity:

Injury and inflammation; immune responses to infections: immunity to viruses, bacteria, fungi and parasites, cytokines, complement; immunosuppression, tolerance, allergy and hypersensitivity, AIDS and Immunodeficiencies, resistance and immunization, vaccines.

UNIT IV: Transplantation and Tumor Immunology:

Transplantation: genetics of transplantation; laws of transplantation; Graft rejection evidence and mechanisms of graft rejection,prevention of graft rejection, tumor immunology. Autoimmunity, Autoimmune disorders and diagnosis.

UNIT V: Immuno-Techniques:

Immunoelectrophoresis, SDS-PAGE, HB electrophoresis, ELISA, RIA, non-isotopic methods for detection of ntigens,chemiluminescence assay, immunohistochemistry, purification techniques of antigens and antibodies. Flowcytometer, PCR, RTPCR, application of recombinant DNA technology for the study of the immune system, Immunotherapy with genetically engineered antibodies.

TEXT BOOKS:

1. Kuby Immunology, 5th Edition . Richard A Goldsby, Thomas J Kindt Barbara A Osborne . W H Freeman and Company.

2. Tizard, Immunology., 4th Edition.

REFERENCE BOOKS :

1. Nandini Shetty-Immunology Introductory Text Book.

2. Fundamentals of Immunology-William Paul

3. Cooper E.L General Immunology.

4. Roitt. Essential Immunology, Vaccines conventional, subunit and recombinant, antidiotypic vaccine, Blackwell Scientific publications, Oxford,1991.

IV Year B.Tech. Biotechnology	I - Semester	L	T	P	To	C
		4	-	-	4	4

BT 405 DOWNSTREAM PROCESSING

Course Description & Objectives:

To make the student regarding role and importance of downstream processing in biotechnology and its problems associated with product purification. Also about the different separation, purification and new emerging methods and technologies for product recovery.

Course Outcomes:

1. Imparts an understanding of principles of major unit operations used in downstream processing of biopharmaceuticals (e.g., homogenization, centrifugation, chromatography, and ultra filtration).
2. Gives an insight focuses on designing processes for the recovery and subsequent purification of a target therapeutic protein.
3. Able to perform basic scale-up calculations for downstream unit operations
4. Able to describe and explain about process of recombinant proteins purification.

UNIT I: Role Of Downstream Processing In Biotechnology:

Role and importance of downstream processing in biotechnological processes. Problems and requirements of bioproduct purification. Economics of downstream processing in Biotechnology, characteristics of biological mixtures, process design criteria for various classes of bioproducts.

UNIT II: Physical Separation Methods:

Separation of intracellular, extra-cellular, heat and photosensitive materials. Cell disruption: chemical, mechanical and enzymaticm e t h - ods Physicochemical basis of separation; Physical separation processes: solid and liquid system, flocculation, centrifugation,precipitation, filtration, settling.

UNIT III: Product Recovery Methods:

Extraction, liquid-liquid extraction, aqueous two-phase extraction, absorption, adsorption and leaching. Membrane-based separations (micro, ultrafiltration, reverse osmosis,dialysis), theory, design and configuration of membrane separation equipment applications.

UNIT IV: Product Purification:

Chromatographic techniques- Paper, TLC, Adsorption, Ion exchange, Gel filtration, affinity chromatographic separation processes, GC, HPLC, FPLC, Chromato focusing electrophoretic separations. Elecrtrophoresis of proteins and nucleic acids, 1D-2D Gels, Types of Electrophoretic techniques (Capillary and Pulse field).

UNIT V: Product Finishing and Emerging Technologies:

Crystallization and drying. Pervaporation, super liquid extraction foam based separation case study with examples for processing of Two Industrial Products (Citric acid / Penicillin and Low volume high value product like recombinant proteins).

TEXT BOOKS:

1. BIOTOL.' Series - Product Recovery in Bioprocess Technology, 1st edition, Butterworth Publications, 2004.
2. B. Sivasankar - Bioseparations Principles and Techniques, 1st edition, PHI Publications, 2009.

IV Year B.Tech. Biotechnology	I - Semester	L	T	P	To	C
		4	-	-	4	4

BT 407 BIOPHYSICS (ELECTIVE - III)

Course Description & Objectives:

The course helps in understanding physical principles that governs the resulting structures. It helps in familiarizing with different types of spectroscopy and analyzing various types of structures.It enables to determine higher order structures of proteins, nucleic acids and carbohydrates and provided understanding of transport mechanism of organisms.

Course Outcomes:

Students will be able to

1. Understand basic principles of physics, biology and chemistry that will govern cell structures.
2. Get familiarized with working principle of different spectroscopy.
3. Analyze various types of structures.
4. Determine higher order structures of proteins, nucleic acids and carbohydrates.
5. Understand various transport mechanisms of organisms.
6. Compare different types of transport systems across membranes.

UNIT-I : Basic thermodynamics Ligand binding and co-operativity in biological systems, kinetics, diffusion and sedimentation.

UNIT-II : Principles and biological applications of UV-Vis, fluorescence, vibrational and circular dichroism spectroscopy. Mass spectrometry and basics of one- and two-dimensional NMR spectroscopy with applications to peptide and protein structure determination.

UNIT-III : Crystal morphology and symmetry :

Symmetry elements and symmetry operations, point groups, lattice space groups. Production and properties of X-rays, diffraction of X-rays by crystals, Laue equations, Bragg'sLaw, Fourier transformation and structure factor, reciprocal lattice, experimental techniques, rotating crystals and moving film methods. Basic ideas of structure determination, Patterson and Fourier methods, chemical crystallography, structures of organic, inorganic compounds and minerals, powder diffraction.

UNIT-IV : Basic ideas on structure and conformation of simple molecules structural features of proteins, nucleic acids and carbohydrates, aspects of biomolecular forces .Higher order structural organisation of proteins and nucleic acid.

UNIT-V : Membrane Biology : Lipid structure and their organization, comparison of different membrane models, diffusion and permeability, different types of transport systems across membranes, liposome and its applications

BT 409 BIOSENSORS AND BIOELECTRONICS (ELECTIVE-III)

Course Description & Objectives:

This course helps to understand the use of biomolecues as recogni tion elements for detection of a particular analyte and the use of biological elements such as proteins in place of silicon chips.

Course Outcomes:

Upon undergoing this course students are expected to:

1. Extend principles of engineering to the development of bio-analytical devices and the design of sensors
2. Understand the basic configuration and distinction among biosensor systems
3. Explore and extend the technical limits of biosensor performance.
4. Overview of current developments in biosensors and bioelectronics.

UNIT I: INTRODUCTION:

Biosensors- Advantages and limitations, various components of biosensors Biocatalysis based biosensors, Bioaf finity based biosensors & Microorganisms based biosensors, Biologically active material and analyte. Types of membranes used in biosensor constructions.

UNIT II: TRANSDUCERS IN BIOSENSORS:

Various types of transducers; principles and applications - Calorimet- ric, Optical, Potentiometric / Amperometric, Conductometric / Resistom etric, Piezoelectric, Sem iconductor, Impedim etric, Chemiluminiscenebased Biosensors.

UNIT III: APPLICATION AND USES OF BIOSENSORS:

Biosensors in clinical chemistry, medicine and health care, biosensorsfor veterinary, agriculture and food Low cost - biosensor for industrial processes for online monitoring; biosensors for environmental monitoring. Application of enzymes in analysis; design of enzyme electrodes and their application as biosensors in industry, healthcare, food and environment.

UNIT IV: BIOELECTRONICS :

Potential advantages & Developments towards a biomolecular computer, development of molecular arrays as memory stores; molecular wires and switches; mechanisms of unit assembly.

UNIT V: DESIGN FOR A BIOMOLECULAR PHOTONIC COMPUTER:

Assembly of photonic biomolecular memory store; Information processing; commercial prospects for biomolecular computing systems.

TEXT BOOKS:

1. Brian R Eggins - Biosensors an Introduction , First edition, John Wiley & Sons Publishers, 1996.

L	T	P	To	C
4	-	-	4	4

BT 411 NANO BIOTECHNOLOGY (ELECTIVE-III)

Course Description & Objectives:

This course combines physical laws, chemical procedures and biological principles on the nano-scale and enrich the students with important applications in a range of fields like medical diagnosis, drug delivery, detection of bio-macromolecules in complicated biochemical systems etc.

Course Outcomes:

1. This course will give a general description about Nanomaterials based on their dimensionality.
2. It gives the information about importance of reduction in materials dimensionality, and its relationship with materials properties.
3. This course will give a general description about Nanomaterials based on their dimensionality.
4. Imparts an understanding of approaches for Nanomaterial fabrication & Nanotechnology tools.
5. Imparts an understanding of approaches for Nanomaterial fabrication & Nanotechnology tools.
6. Gives an insight into the use of Nanotechnology in biomedical, microelectronics and optical applications.

Unit I : Introduction:

Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concepts.

Unit II : Nano Particles :

Introduction, Types of Nanoparticles. Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip-pen Nanolithography, Soft Lithography, PDMS Molding, Nano wires and Nanotubes.

Unit III : Applications - I :

Nanobiosensor and Nanofluids. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for *in vivo* drug delivery- Future nanomachine.

Unit IV : Applications- II :

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules. Nanosurgical devices.

Unit V : Ethical Issues in Nanotechnology :

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With special Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts. Nanotechnology and Future Socio-economic Challenges.

TEXT BOOKS:

1. Christof M. Niemeyer, Chad A. Mirkin - Nanobiotechnology: Concepts, Applications and Perspectives. 1st Ed. Wiley-VCH, 2006.
2. Jian-Qin Liu, Katsunori Shimohara - Biomolecular Computation by Nanobiotechnology, 1st Ed., Artech House, 2007.

IV Year B.Tech. Biotechnology I - Semester

L	T	P	To	C
4	-	-	4	4

BT 413 ENVIRONMENTAL BIOTECHNOLOGY (Elective-III)

Course Description & Objectives:

The main objective of this course is to impart students an understanding of pollution of environment by air, water and soil responsible for degradation of natural resources and degradation of biodiversity. The course also provides a fundamental knowledge of biological methods used in safeguarding the environment by waste treatment, energy production from waste and biological methods for minimum pollution formation.

Course Outcomes:

Upon completion of the course, the student will:

1. Be able to conceptually differentiate old biotechnology from modern biotechnology.
2. Become aware of the importance of conserving soil microorganisms in order to maintain the ecological balance
3. Acquire thorough understanding about the various waste water treatment systems.
4. Be able to design and develop small scale waste water management systems
5. Be able to utilize the potential of microorganisms for bioremediation and biodegradation.

UNIT I : INTRODUCTION :

Origin and Definition of old and new biotechnology, Biotechnology a multidisciplinary growing tree, scope and importance of Biotechnology in India. Environmental Pollution-soil, water air, oil and heavy metal pollution, Types and causes and its effects on environment. Microbial flora of soils.

UNIT II: BIOGEOCHEMICAL ROLE OF SOIL MICROORGANISMS :

Microbial flora of soil–Interactions among soil microorganisms–Nitrogencycle–Carboncycle ulfurcycle–Phosphorouscycle

UNIT III : BIOMASS :

Types and composition of biomass, waste as renewable source of energy, methods of energy production, energy and fuel using microorganisms, conversion of methane to synthetic gas, cellulose as a source of energy, conservation of energy.

UNIT IV: INDUSTRIAL WASTE WATER MANAGEMENT :

Aerobic and anaerobic waste water treatment, sewage disposal and treatment – physical and biological treatment, effluent treatment – primary and secondary treatment. Biological nitrogen and phosphate removal waste water treatment in diary, distillery, tannery, sugar and industry pulp.

UNIT V : BIOREMEDIATION AND BIODEGRADATION :

Pseudomonas for bioremediation, types and reactions of bioremediation, biodegradation of hydrocarbons and pesticides, microbes in leaching of metals – leaching of copper and uranium, Control of air pollution, control devices for gaseous pollutants, volatile organic pollutants.

TEXT BOOKS :

IV Year B.Tech. Biotechnology	I - Semester	L	T	P	To	C
		4	-	-	4	4

BT 415 BIOPHARMACEUTICAL TECHNOLOGY (ELECTIVE-IV)

Course Description & Objectives:

To give awareness to the student about history, sources of drugs, pharmocodynamics, pharmacokinetics and drug manufacturing. It also deals with production and applications of biopharmaceuticals and drug delivery systems.

***Course* Outcomes:**

Student gains knowledge on

1. History and sources of drugs, different dosage forms and routes of drug administration.
2. Pharmacodynamic and pharmacokinetic mechanisms
3. GMP, Manufacturing facilities, sources, production procedures, analysis and formulation of drugs and Biopharmaceuticals
4. Production and medical applications of therapeutic proteins like interferons, interleukins, insulin, erythropoietin, hGH etc.,
5. Biomaterials and different drug delivery systems.

UNIT I : Introduction to Pharmaceuticals:

History & Definition of Drugs. Sources of Drugs - Plant, Animals, Microbes and Minerals, Different dosage forms, Routes of drug administration.

UNIT II : Pharmacodynamics and Pharmacokinetics:

Physico-Chemical Principles, Pharmacodynamics- Mechanism of drug action, Drug receptors, and Physiological receptors: structural and functional families. Pharmacokinetics - Drug absorption, Factors that affect the absorption of drugs, Distribution of drugs, Biotransformation of drugs, Bioavailability of drugs.

UNIT III : Drug manufacturing processes:

Good manufacturing practices, Manufacturing facilities, Sources of Biopharmaceuticals, Production & analysis of Biopharmaceuticals. Recent advances in the manufacture of drugs using r-DNA technology.

UNIT IV : Production and Applications of Biopharmaceuticals:

Production of Therapeutic Proteins, Hormones, Cytokines - Interferon's, Interleukins I & II, Tumor Necrosis Factor (TNF); Nucleic acids. Role of Biopharmaceuticals in treatment of various health disorders

UNIT V : Drug Delivery Systems, Biomaterials & their Applications:

Controlled and sustained delivery of drugs. Biomaterial for the sustained drug delivery. Liposome mediated drug delivery. Drug delivery methods for therapeutic proteins.

TEXT BOOKS:

1. Leon Lachman, H.A. Lieberman & J.L.Kanig, Theory & Practice of Industrial Pharmacy, 3rd ed. Varghese Publishg House, Bombay, 1987.

IV Year B.Tech. Biotechnology	I - Semester	L	T	P	To	C
		4	-	-	4	4

BT 417 CANCER BIOLOGY
(ELECTIVE-IV)

Course Description & Objectives:

To acquaint students with the biological principles of cancer as well as the human dimensions of the disease and its therapies. To introduce the students to important and current concepts in Cancer Biology and Cancer Genetics and the lectures are organized into broad thematic groups dealing with Cell - Autonomous Mechanisms, Non Cell-Autonomous Mechanisms Organ Systems and Therapeutic Approaches.

Course Outcomes

Student acquires knowledge on

1. Causes of cancer at molecular level like cell cycle regulation and mutations
2. Different forms of cancer, diet and cancer
3. Physical and chemical carcinogenesis
4. Molecular cell biology of cancer like signal targets of cancer, oncogenes, tumor suppressor genes, growth factors and receptors etc.,
5. Invasion and metastasis of cancer

UNIT- I : Fundamentals of Cancer Biology :

Regulation of cell cycle, mutations that cause changes in signal molecules, effects on receptor, signal switches, tumour suppressor genes, modulation of cell cycle in cancer,different forms of cancers, diet and cancer.

UNIT- II : Principles of Carcinogenesis :

Natural History of carcinogensis, Theory of carcinogenesis, Chemical carcinogenesis, targets of chemical carcinogenesis.metabolism of carcinogenesis.principles of physical carcinogenesis, x-ray radiation-mechanisms of radiation carcinogenesis.

UNIT- III : Principles of Molecular Cell Biology of Cancer :

Signal targets and cancer, activation of kinases; Oncogenes, identification of oncogenes, retroviruses and oncogenes, detection of oncogenes. Oncogenes / proto oncogene activity. Growth Factor and Growth Factor receptors that are Oncogenes.Growth factors related to transformation.

UNIT-IV : Principles of Cancer Metastasis :

Clinical significances of invasion, heterogeneity of metastatic phenotype, metastatic cascade,Basement membrane disruption three - step theory of invasion, proteinases and tumour cell invasion

UNIT-V : Detection & Cancer Therapy :

Cancer screening, early and advanced detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer.Different forms of therapy, chemotherapy, radiation therapy, Use of signal targets towards therapy of cancer; Gene therapy. Immuno therapy: advantages and limitations.

IV Year B.Tech. Biotechnology	I - Semester	L	T	P	To	C
		4	-	-	4	4

BT 419 FERMENTATION TECHNOLOGY (ELECTIVE-IV)

Course Description & Objectives :

This course helps to familiarize important aspects of fermentation technology like media, process optimization, inoculum levels, solid state fermentation and bioprocess considerations for animal and plant cell cultivation

Course Outcomes:

1. After completing this course, students will be able to verbally describe the most common equipment, materials and methods rel ated to biotechnological processes, microbial growth and cultivation and sterilization.
2. Understand the difference in bioprocess of various reactors and develops the processes for bioproducts.
3. Student can design the medium requirements for bioprocess of plant cells, animal cells and microorganisms.
4. Be Able to apply different mathematical formulas for biocatalysis and for the bioreactor performance and use those to plan and analyze bioprocesses.
5. The student will also be able to produce, analyze and interpret data from bioprocesses.

UNIT - I : Fermentation Process:

General requirements of fermentation processes, Basic design and construction of fermentor and ancillaries, Main parameters to be monitored and controlled in fermentation processes; An overview of aerobic and anaerobic fermentation processes and their application in the biotechnology industry, solid-substrate, slurry fermentation and its applications, whole cell immobilization, behaviour of microbes in different reactors (air lift, fluidized, batch, continuous and fed batch condition).

Unit - II: Fermentation inputs:

Nutrient requirement for fermentation process, carbon, nitrogen source, macro and micronutrients, renewable energy sources (carbon and nitrogen), C/N ratio, development of inocula for microbial, plant and animal cell cultivations, supply of air/nitrogen for aerobic and anaerobic process

UNIT - III : Bioproces optimization :

Conventional optimization process (one variable at a time approach), need for statistical experimental desing, screening techniques-Plackett Burman design, response surface methodology-Box-Benken desing, central composite desing and self directing optimization

UNIT - IV : Solid state fermentation :

Introduction to solid state fermentation (SSF), comparison of SSF with submerged fermentation, applications in industry, growth kinetics in SSF, Heat and Mass transfer problems in SSF, SSF bioreactors, Scale up of SSF.

UNIT - V: Plant and animal cell cultivation :

Plant and animal cells compared to microbial cultivation, Bioreactor considerations for plant cell-suspension culture, immobilazation culture and organized tissues. Methods used for cultivation of animal cells, Bioreactor conideration for animal cell culture-suspension culture, anchorage dependent cultivation. Imporant industrial products from plant and animal cell cultivation.

BT 421 IMMUNOLOGY LABORATORY

Course Description & Objectives :

This laboratory course is designed to help students become familiar with and proficient in the performance of principles and protocols in cellular immunology immunochemistry and clinical serology.

Course Outcomes:

1. The cellular components of immune system would make students to think of adoptive immunity which constitutes the basic principle of vaccination.
2. The student will be aware of chemical diagnostics and its significance
3. The student will be able to acquire the functioning of ELISA

List of Experiments :

1. Isolation of lymphocytes from the mouse spleen and thymus
2. Examination of mouse lymph nodes.
3. Identification and enumeration of mouse and human leukocytes
4. Complement fixation test
5. Hemagglutination test
6. Ouchterlony double immunodiffusion
7. Immunoelectrophoresis
8. ELISA
9. Preparation of antigen and adjuvant emulsion
10. Immunization of mouse
11. Harvesting of polyclonal antibodies

Text Book :

1. Immunology: A laboratory manual Editor: Richard L Myers, Publisher: Brown (William C)

IV Year B.Tech. Biotechnology I - Semester

L	T	P	To	C
-	-	3	3	2

BT423 DOWNSTREAM PROCESSING LABORATORY

Course Description & Objectives:

To aquaint the student to learn about various cell disruption techniques and product recovery methods.

Course Outcomes:

1. Students will acquire adequate knowledge in physical separation techniques
2. They will be able to purify protein using precipitation methods
3. They will understand the basic practical principles of various chromatographical techniques.
4. The will be able to perform various unit operations in downstream processing.

List of Experiments:

1. Solid separation methods-filtration, sedimentation, centrifugation,
2. Protein precipitation methods
3. Dialysis
4. Ion-exchange chromatography
5. Gel filtration chromatography
6. Aqueous Two-phase extraction,
7. HPLC
8. Product preservative methods
9. Adsorption process in batch and continuous mode

TEXT BOOKS:

BT 425 BIOINFORMATICS LABORATORY

Course Description & Objectives:

To gain practical knowledge in retrieving biological information and analysing them & to use bioinformatics tools to solve biological problems.

Course Outcomes:

1. Students will be able to explore biological database.
2. The software tools adopted in the practical exercies make students to analye the biological data.
3. They will be be able toutilize various tolls embedded in public databases
4. They will be able to perform annotation of unknown query sequences
5. They will acquire adequate skills to perform proetin-ligand interactions and molecular simulation.

List of Experiments:

1. To retrieve Nucleotide and protein sequences from Biological Databases like NCBI, SwissProt
2. To retrieve structure data for query protein from PDB
3. To retrieve Pathways from Pathway Databases (KEGG, BRENDA, METACYC, ECOCYC
4. To retrieve Biological Information from Pub Med of NCBI
5. To retrieve Open reading frame of given query nucleotide sequence by Gene prediction methods .
6. Analysis of protein sequence using Expasy.
7. Sequence similarity searching of nucleotide sequences
8. Sequence similarity searching of protein sequences
9. Docking Studies.

TEXT BOOKS:

1. Andreas D. Baxevanis, B.F. Francis Ouellette, Bioinformatics A Practical Guide to the analysis of Genes and Proteins, 3 rd edition, Wiley-Intersicence Publications, 2005.

		4	-	-	4	4

MS 402 PRINCIPLES AND PRACTICE OF MANAGEMENT

Course Description & Objectives:

The main object of the course is to explain about concepts, principles and practice of management.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

1. Understand what is management and evolution of management thought
2. Importance of planning and decision making in organizations
3. Process of organizing and delegation of authority
4. Theories of motivation and leadership styles
5. Coordination and control process in the organizations

UNIT - I : Management :

Overview: Definition, nature, purpose and scope of management - Functions and Roles of a manager - an overview of planning, organizing and controlling - Is managing a science or art? Ethics in managing and social responsibility of managers - Evolution of management thought. Contributions made by Taylor, Fayol, Weber, Elton Mayo, Maslow, Herzberg, and McGergor. Various approaches to Management - Decision Theory approach. Systems Approach: Key concepts in systems - Closed system versus open system. Subsystems, System Boundary. McKinsey's 7-S Approach needs - Leadership:

UNIT – II : Planning & Decision Making:

Types of plans, steps in planning, and process of planning.Nature of objectives, setting objectives. Concept and process of Managing by Objectives.Nature and purpose of strategies and policies. Strategic planning process. SWOT analysis,Portfolio matrix, premising and forecasting. Decision Making: Meaning, Importance and steps in Decision Making - Traditional approaches to decision-making - Decision making under certainty, programmed decisions – Introduction to decision-making under uncertainty,non-programmed decisions, decision tree- group-aided decisions; Brain storming – Creativity, creative problem solving.

UNIT – III Organizing :

Concept of organization, process of organizing, bases of Departmentation,Authority & power - concept & distinction. Various types of organization structures -Delegation - concept of delegation; elements of delegation - authority, responsibility, accountability. Reasons for failure of delegation & how to make delegation effective.Decentralization - concept, reasons for decentralization and types (or methods) of decentralization. Span ofManagement - concept, early ideas on span of management.

UNIT – IV Directing :

Motivation and Motivators: Concept, Theories of Motivation: Hierarchy of Needs, Motivation-Hygiene Expectancy, Equity, Reinforcement, McClelland's needs - Leadership: Meaning, Definition, Ingredients of Leadership – Trait Approaches of Leadership – Leadership Behavior and Styles – Contingency Approaches to Leadership – Communication: Meaning, Process, and Importance in Functions of Organization – Barriers in Communication – Effective Communication

UNIT – V Coordination and Control :

Concept and importance of coordination; factors which make coordination difficult; techniques or methods to ensure effective coordination. Control: Concept, planning-control relationship, process of control - setting objectives, establishing standards, measuring performance, correcting deviations. Human response to control. Dimensions or Types of Control: Feed forward control, Concurrent Control (Real TimeInformation & Control), Feedback Control - Techniques of Control: Brief review of Traditional and Modern Techniques of Control.

BT 402 REGULATORY AFFAIRS & CLINICAL TRAILS (ELECTIVE-V)

Course Description & Objectives :

To make the student learn about rules, regulations and guidelines for clinical trails and how they are applicable in different countries. Also to acquaint with medical ethics, IVF, audit types, audit processing, and preparation, packaging, labeling and approval of investigational products and quality management.

Course Out Comes :

Student will be familiar with

1. Rules, regulations and guidelines for clinical trails and their applicability in different countries.
2. Medical ethics, IVF, audit types and audit processing,
3. Preparation, packaging, labeling and approval of investigational products
4. Quality management

UNIT I : Regulations of Clinical Research:

ICH-GCP guidelines, Licensing authorities -roles and responsibilities of FDA, EU Clinical Trial Directive, Data Protection Act , Declaration of Helsinki 2000 amendment and codes of practice, Regulations relating to electronic signatures, drug preparation and packaging, EMEA, European directives and MRECs,Ethics committees – history and structure.

UNIT II : Medical Ethics and Auditing:

Ethics in all aspects of health care, Historical cases, Negligence, informed consent, mental competence Up – to – date cases: cloning, human embryos and IVF, Shared responsibilities for decisions and the understanding of risk: INDIAN / USA / EU Ethics approval system – Overview and Recent developments: Regulations in clinical research, The purpose of audits, Types of audits, Preparing for audits, In company, On site, The audit process, Typical audit finding.

UNIT III : Clinical Research and Clinical Trails:

History and purpose of GCP development, Roles and responsibilities in clinical research according to ICH GCP-Sponser Monitor Investigator Audit, IRB/IEC Investigational brochure Essential documentation. The INDIAN / USA / EU Directives on GCP in Clinical Trials - Purpose, How will the introduction affect clinical research, Extracts from the guidance documents; Possible sanctions for non- compliance - Legal and regulatory, Commercial and Professional.

UNIT IV: Regulatory Affairs and Product Approval:

History of regulatory affairs, Main concepts QSE, Sources of information, Regulatory affairs for studies in human subjects and required data. Current and future European ,US perspectives,requirements and procedures. Regulatory submissions for new products, Requirements for gaining approval, US perspective, Regulating control over marketing and sales of medical products, Regulations, Codes of practice, Promotional materials. Inputs of Indian guidelines & Indian perspectives.

UNIT V : Latest Developments and issues in Clinical Research:

Latest developments in ICH, Confidentiality issues, Medicines for human use (clinical trials) regulations 2003 and other relevant issues.

Related Web resources:

1. Code of Federal Regulation by USFDA - Download

IV Year B.Tech. Biotechnology	II - Semester	L	T	P	To	C
		4	-	-	4	4

BT 404 PROTEOMICS AND GENOMICS (ELECTIVE - V)

Course Description & Objectives :

To acquaint the student with genome organization, gene identification, expression and applications of genomics analysis. Also about proteomics, analysis and its applications.

Course Outcomes:

1. Be able to explore various genomes sequenced
2. Be able to gain adequate knowledge on various tools available annotation of genomes
3. Be able to utilize the principle of two- dimensional gel electrophoresis for analysis of various proteins
4. Be able to utilize the principle of mass spectrometry and micro array for analysis of proteins.

UNIT I: Introduction to Genomics and Proteomics:

Introduction – Organization and structure of genomes, Genome size, Sequence complexity, Introns and Exons, Genome structure in viruses and prokaryotes, Isolation of Chromosomes, chromosome micro dissection, Retrofitting. Introduction to Proteomics – The Proteome, Mining proteomes, Bridging Genomics and Proteomics. Proteomics and the new biology.

UNIT II: Gene Identification and Expression:

Genome annotation, traditional routes of gene identification, detecting open-reading Frames, software programs for finding genes, Identifying the function of a new gene, gene ontology, overview of comparative and genomics, Protein structural genomics, determining gene function by sequence comparison and through conserved protein structure Global expression profiling – Introduction, traditional approaches to expression profiling, Analysis of RNA expression, applications of genome analysis and genomics.

UNIT III: Analysis of Proteomes I:

Analysis of proteomes - Two-dimensional polyacrylamide gel electrophoresis, Sample Preparation, Solubilization, Reduction, Resolution, Reproducibility of 2-DE- Detecting proteins in polyacrylamide gels, Image analysis of 2-DE gels.

UNIT IV: Analysis of Proteomes II:

Mass spectrometry based methods for protein identification- De novo sequencing using mass spectrometric data- Correlative mass spectrometric based identification strategies, 2-DE gel electrophoresis coupled with mass spectrometry, Micro array techniques- Types of micorarrays, Designing a microarray experiment, Microarray Technology in Treating Disease.

UNIT V: Applications of Genomics and Proteomics Analysis:

Analysis of Genomes – Human, Mouse, *Plasmodium falsiparum,Saccharomyces cerevisiae, Mycobacterium tuberculosis*. Application of proteome analysis- drug development and toxicology, Pharmaceutical Applications, Proteomics in drug Discovery in human, phage antibodies as tools, Glycobiology and Proteomics in plant genetics and breeding.

BT 406 INDUSTRIAL PROCESS CONTROL (ELECTIVE - V)

Course Description & Objectives :

The course is aimed at Choosing the control strategy for a process, distinguishing between feed forward and feedback control strategies. It also enables to choose the appropriate control action (P,PI,PD,PID) for a particular process.It helps in developing the Block diagram from process identification, analyzing the stability of a dynamic system. It provides insights in knowing the main types of Instruments and their working principles along with understanding of the working principle of different types of control loops.

Course Outcomes:

Students will be able to

1. Understand process dynamics and control.
2. Develop the block diagram for process identification.
3. Analyze the stability of dynamic system.
4. Know main types of instruments and their working principle.
5. Understand working principle of different types of control loops.
6. Choose appropriate control for a particular process.
7. Understand various types of multiloop control systems.

UNIT I: Process dynamics : Introduction to process dynamics and control. Response of First Or- der Systems. Physical examples of first order systems. Response of first order systems in series, Higher order systems

UNIT II: Process controllers :

Block digram of chemical reactor control, Servo & Regulator opera- tions. flow, level, temperature and pressure control, Basic control actions- characteristics of two position, two position control of single capacitance process, single speed floating control. P, P+D, P+I and P+I+D control modes.

UNIT III: Controller settings:

Optimum Controller Settings- Ziegler - Nichols tuning technique, Cohen-Coon settings, determination of optimum settings for mathematically described process using time response and frequency response. Evaluation criteria, 1/4th decay ratio, IAE. ISE, ITAE.

UNIT IV: Multiloop Control System :

Feed forward control - Feed back control, Ratio control - Cascade control - Split range control -Multivariable control and examples from distillation column and Boiler system.

UNIT V: Bioprocess Instrumentation:

Introduction to process instrumentation, pH probes, DO probes, introduction to biosensors, online glucose sensors and biomass sensors. umps, pneumatic, hydraulic and electronic controllers. Pneum atic, electric nd hydraulic actuators. control v alv es- characteristics of control valves-alve body-Globe, butterfly, diaphragm valves.

TEXT BOOKS:

IV Year B.Tech. Biotechnology   II - Semester

L	T	P	To	C
4	-	-	4	4

BT 408 COMPUTATIONAL MOLECULAR BIOLOGY (ELECTIVE-VI)

Course Description & Objectives :

It helps the student to be familiar with the various Bioinformatics tools. Helps in Predicting the 3 Dimensional structure of proteins (without wet lab) giving information about function of protein and hence It gives knowledge about finding the function of gene and identifying disease causing genes by comparative genomics.

Course Outcomes:

1. Be able to perform nucleic acid sequence analysis
2. Be able to identify motifs in biological sequences
3. Gain adequate knowledge about various secondary structures of RNA and also about discrete models of lattice proteins
4. Be able to predict structure of proteins by alignment based methods
5. Be able to use various available tools to annotate eukaryotic and prokaryotic genomes.

UNIT I : Introduction to Computational Biology :

Introduction, Biomolecular sequence analysis – Nucleic acid sequences, Motifs – localization and extraction, Protein sequence analysis and prediction of secondary structural features.

UNIT II : Discrete Models of Biopolymers:

Discretized structure models – Lattice proteins, contact graphs. Combinatorial considerations – secondary structure graphs. Random graph models of sequence structure maps, RNA secondary structures.

UNIT III : Protein Structure Folding & Prediction and DNA- Protein Interaction:

Overview of protein structure, Protein folding invitro and invivo, Theoretical models of folding, Insilico folding, Protein structure prediction - Alignment based methods. DNAProtein Interaction – Target prediction, sequence based methods, Structure based method, Ab inito method.

UNIT IV : Computational Genomics:

Sequences and contigs, Sequence data description, Advanced Sequence data description,Genome annotation- Eukaryotic and Prokaryotic genome annotation tools. Computer simulated functions.

UNIT V : Computation in Comparative Genomics:

Introduction, Evolutionary basis, Tools for comparative genomics – data selection, Alignment, Visualization .

TEXT BOOKS:

1. Andrezej K Konopka and James C. Crabbe, Compact Handbook - Computational Biology, Marcel Dekker, USA, 2004.

L	T	P	To	C
4	-	-	4	4

BT 410 BIOSTATISTICS (ELECTIVE-VI)

Course Description & Objectives:

The course enables the students to make themselves aware of various concepts of sampling. The course provides adequate knowledge about multivariate as well as non parametric statistical methods. It helps in acquiring basic concepts regarding markov chain models

Course Outcomes:

Upon completion of the course, the student will:

1. Be able to design an experiment statistically
2. Be able to perform various multivariate statistical methods for the interpretation of multi dimensional data
3. Be familiar with the cases for which non-parametric test can be applied
4. Dtilize the concept of markov chain models in biological sequence analysis

UNIT - I: SAMPLING THEORY AND TESTS OF SIGNIFICANCE

Sampling Concepts: Methods of sampling – simple random sampling, stratified and systematic sampling (description only) - Concept of sampling distributions and standard error – tests of hypothesis critical region, two types of errors – level of significance - Student's t test for single mean, two sample mean, paired t test - z test for single mean, two sample mean, single proportion and two sample proportion.

UNIT - II: CHI SQUARE TEST AND DESIGN OF EXPERIMENT

Chi square test of goodness of fit and independence of attributes, Completely randomized Design, Randomized Block Design, Latin Square Design and their analysis of Variance.

UNIT - III: MULTIVARIATE ANALYSIS

Multiple regression analysis, Principal Component analysis, Canonical Correlation analysis, Factor Analysis,Descriminant Analysis, Cluster nalysis (No derivations, theory only).

UNIT-IV: NON PARAMETRIC TESTS

Sign test, Wilcoxon signed rank test, One sample Run Test, Median test, Kruskal Wallis H test, Kolmogorov Smirnov test, Mann Whitney U test.

UNIT-V: MARKOV CHAIN MODELS

Definition, Classification, Markov Chain,Transition Probability Matrix, chapman Kolmogrov theorem, Classification of states and chains, Poisson Process, Postulates, Properties. Hidden Markov Models Basic Algorithms, Viterbi Algorithm, Estimation, Forward and Backward Algorithm, Applications - Multiple Sequence Alignment, Pfam and Gene finding.

4	-	-	4	4

BT 412 PLANT DESIGN AND ECONOMICS (ELECTIVE- VI)

Course Description & Objectives:

Perform economic evaluation of chemical processes and chemical projects, Become familiar with professional and forma for representing engineering results.

Course Outcomes:

1. Understand concepts of process design and project management
2. Synthesize feasible and optimum flow-sheet
3. Estimation of capital investment, total product costs, and profitability. 4. Optimum design of equipments based on economics and process considerations.
5. Estimation of alternative investments and optimum profitability analysis.

UNIT I : Process Design and Cash Flow:

Introduction – Process design development, design, Cost and asset accounting, Cash flow for industrial operations, Factors effecting investment, Production cost.

UNIT II : Capital Estimation and Interest:

Estimation of capital investments, Cost indices, Cost factors, Interest and investment cost, types of interest nominal and effective interest rates.

UNIT III : Annuities and Taxes:

Continuous interest, Present worth and discount annuities, Interest on investment, source of capital taxes and types of taxes, Insurance – Types of insurances, Self insurance.

UNIT IV : Depreciations:

Depreciation. Types of depreciation, Services life, Salvage value,Present Value, Methods for determining depreciation, group depreciation.

UNIT V : Profitability Analysis:

Profitability, Alternative investments and replacements, Profitability standards, discounted cash flow, Capitalized cost payout period, Alternative investments, Optimum design, Design strategy, Optimum condition, Optimum production rates, fluid dynamics.

16HS103 ENGINEERING MATHEMATICS - I

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	30	10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- recognise and solve different types of first order ordinary differential equations.
- find the complementary functions and particular integral of second and higher order ordinary differential equations with constant coefficients.
- apply the knowledge of ordinary differential equations in some instances.
- solve ordinary differential equations, with initial conditions, numerically.
- find the local maxima/minima of given function of two variables.
- eliminate arbitrary constants/functions from given relations to form partial differential equations.
- solve linear and non-linear partial differential equations of standard types.
- classify second order partial differential equations and solve them.

SKILLS:

✓ *Solve given differential equation by suitable method.*

✓ *Compute numerical solutions of differential equation by apt method.*

✓ *Compute maxima/minima of given function.*

✓ *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with MATLAB output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*
- *Estimation of acoustic impedance of a given material.*

UNIT - 1 **L- 9, T-3**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, Homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9, T-3**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form - e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9, T-3**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9, T-3**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation - Partial derivatives, Partial derivatives of higher order; Homogeneous function, Euler's theorem, Total differential coefficient, Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L- 9, T-3**

PARTIAL DIFFERENTIAL EQUATIONS: Formation of partial differential equations, Linear (Lagrange) equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method, Second order linear equations with constant coefficients only, Classifications, Rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Basic mathematical operations using MATLAB.
2. Solving simple expressions.
3. Limits.
4. Continuity.
5. Symbolic differentiation.
6. Symbolic integration.
7. Plotting of curves.
8. Plotting of surfaces.
9. Maxima & minima of functions of one variable.
10. Maxima & minima of functions of two variable.

11. Solving first order O.D.E.

12. Euler's Method and R-K Method.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	10	-	10

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibers, Photonics, Nano and functional materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to:

- understand the applications of ultrasonics and to calculate the velocity of ultrasonic waves in liquids.
- acquire basic knowledge in Non-destructive techniques.
- understand basic concepts of laser and optical fiber which help in designing and developing new devices in emerging fields.
- grasp the basics of quantum mechanics.
- understand the fabrication of solar devices.
- use nano science and technology for innovative and compact design.
- demonstrate synthesis, properties and applications of nanomaterials and functional materials.

SKILLS:

✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*

✓ *Study the wavelengths of light sources and lasers.*

✓ *Estimate the efficiency of a given solar cell.*

✓ *Learn about the type of the optical fiber and its ability to propagate light waves from its numerical aperture.*

✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves - Piezoelectric method; Properties of ultrasonic waves, Types of ultrasonic waves, Determination of velocity of ultrasonic waves in solids and liquids, SONAR - Medical applications.

NON-DESTRUCTIVE TESTING: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of laser light, Spontaneous and Stimulated emission of radiation, He-Ne laser, CO_2 laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and applications.

FIBER OPTICS: Principle of optical fiber, Acceptance angle, Numerical aperture, Types of fibers, Dispersion and attenuation in optical fibers, Optical fiber communication system, Fiber optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non- linear optical behaviour of materials, Applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, Fabrication of nano materials - Ball milling - Sol-Gel method; Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics/metals, Biomaterials.

TEXT BOOKS:

1. V.Rajendran, "Engineering Physics", 7th edition, McGraw Hill Education (India) Pvt.Ltd., 2014.
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd., 1992.
3. Sukhatme S.P., "Solar Energy", 2nd edition, TMH publication, 2005.
4. Dr. Arumugam "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find the height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measure the temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	10	15	5	6	4	5

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The objective of this course is to direct the students towards developing their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to:

- acquire an understanding of the rules of grammar.
- strengthen their reading and listening comprehension skills to follow the academic discourse in the engineering classroom.
- have a command of basic vocabulary related to different subject areas.
- have a grasp on the mechanics of writing and express their ideas through construction of simple texts.
- attain language proficiency to participate in the classroom discussions.

SKILLS:

- ✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*
- ✓ *Apply different sub skills like top down, bottom up approaches to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*
- ✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*
- ✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*
- ✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **ENVIRONMENTAL CONSCIOUSNESS**
  (Climate Change, Green Cover, Pollution, Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles, Prepositions, Sentence types and construction
- Vocabulary : Root, Prefixes, Suffixes
- Composition : Paragraph writing (Descriptive and narrative)
- Laboratory Practice : Introduction to phonetics
  (Organs of Speech, Consonants, Vowels and Diphthongs, Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **EMERGING TECHNOLOGIES**
  (Solar power, Cloud computing, Nanotechnology, Wind energy (to be covered from Energy unit))
- Grammar : Time and tense (Present-past-future; Helping verbs, Modals)
- Vocabulary : Synonyms, Antonyms
- Composition : Letter writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **TRAVEL AND TOURISM**
  (Advantages and disadvantages of travel-tourism, Atithi devo bhava, Tourism in India)
- Grammar : Subject-Verb agreement, Sentence construction
- Vocabulary : Idioms and phrases
- Composition : Letter writing (Formal)
- Laboratory Practice : Situational conversations – Role - Plays
  (Introducing, Greeting, Enquiring, Informing, Requesting, Inviting)

UNIT - 4 **L-9**

- Text : **ENGINEERING ETHICS**
  (Challenger disaster, Biotechnology, Genetic engineering, Protection from natural calamities, How pertinent is the nuclear option? An environment of energy (from Energy Unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence transformation (Degrees, Voice, Speech and Synthesis)
- Vocabulary : Phrasal verbs

Composition : Note-making, Text, Nandan Nilekani's In Search of Our Energy Solutions (from Energy Unit)
Summarizing, Text on "Flight from conversation" (New York Times)

- Laboratory Practice : Situational conversations, Role-Plays (Emotions, Directions, Descriptions, Agreements, Refusals, Suggestions)

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

UNIT - 5 **L-9**

- Text : **MEDIA MATTERS**

  (History of media, Language and media, Milestones in media, Manipulation by Media, Thousands march against nuclear power in Tokyo (from Energy Unit), Entertainment media, Interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail – Short message service (SMS), Writing advertisements, Reporting; Social media - Blogging, Facebook, Twitter (acceptable and non acceptable content)
- Laboratory

  Practice : Group discussions – (Topics from Energy Unit), Dumping of nuclear wastes, Exploration of eco-friendly energy options, Lifting of subsidies on petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to:

- understand the terms and concepts of Computer Science and Information Technology (hardware, software, networking, security, Internet/Web, and Technologies).
- use the products and services of computers.
- use Internet/Web services as a resource for developing shared applications.
- install different operating systems and application software.

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L-10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L-10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L-8**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and database management systems.

UNIT - 4 **L-8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and other internet applications.

UNIT - 5 **L-9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours-30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.

6. Demonstrate the following experiments using Office automation tools.
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using Analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort & filter using Power Point tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, “Introduction to Computers”, 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, “Introduction to Computer Science”, 2nd edition, Pearson Education, 2011.
2. Eric Maiwald, “Fundamentals of Network Security”, 3rd edition, Tata-McGrawHill, 2004.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
48	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- understand the basic terminology used in computer programming to write, compile & debug programs in 'C' language.
- use different data types to design programs involving decisions, loops and functions.
- understand the allocation and Usage of dynamic memory.
- understand the usage of files & structures.

SKILLS:

✓ *Identify suitable data types for an application.*

✓ *Apply control statements for decision making problems.*

✓ *Use multidimension array for matrix application.*

✓ *Design a program to calculate average of a class.*

✓ *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L- 10, T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L-9, T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L-9, T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L-9, T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L-8, T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

ACTIVITIES:

- *Implement matrix operations.*
- *Implement malloc and calloc functions.*
- *Copy the content of one file into the other.*
- *Implement string manipulations functions.*

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours-30

1. Compute the factors of a number.
2. Compute the average of ‘n’ numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.

7. Swap two values useing call by value and call by reference.
8. Using structure of arrays.
9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

TEXT BOOK:

1. Ajay Mittal, "Programming in C - A practical Approach", 1^{st} edition, Pearson Education, India, 2015.

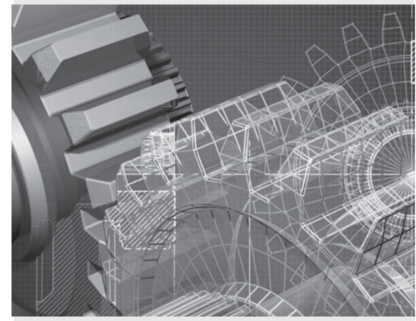
2. Herbert Schildt, C, "The Complete Reference", 4^{th} edition, Tata McGraw-Hill, 2000.
3. E. Balagurusamy, "Programming in ANSI C", 4^{th} edition, Tata McGraw- Hill, 2008.

16EE101 BASICS OF ENGINEERING PRODUCTS



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- gain knowledge and hands-on experience on various engineering products.
- install, operate, maintain and troubleshoot basic mechanical, electrical and electronic appliances.
- understand the concept of conservation of energy.
- gain awareness on choosing appropriate construction materials.

SKILLS:

✓ *Identify UPS requirements for a given load.*

✓ *Provide a Lighting scheme for specific working environment.*

✓ *Design a composition of Heating element for a particular application.*

✓ *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

✓ *Provide an earthing for Domestic Outlet.*

✓ *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembe and Assembe the Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design the Electric Wiring system for a prototype house.*
- *Design the UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L-9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air - Conditioner and Refrigerator, Components, Assembly and disassembly; Working principle of Centrifugal and Reciprocating pumps - Types, Parts and applications, Working principle of Screw jack and its components, Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L-10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks,

Timber - Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of

cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel, Simple layout design, Paints, Tiles, fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L-8**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems, Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods, Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and applications.

MOTOR: Electric Motors, Classification, Construction and working principles of motors used in Domestic applications, Mixer grinder, Ceiling and exhaust fan, Hair dryer, Washing machine, Water pump, Air coolers, Vacum cleaner, Computer cooling motor, Electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, Radio, Remote control, Telephone, Microwave oven, Cell phone, PA system, Induction stove, WiFi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps

4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box
13. Ceiling Fan and Mixer
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Total Hours :

L	T	P
0	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. The objective of this course is to strengthen the comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to:

- use functional English to speak and express themselves in different social contexts
- write simple letters, narratives, factual reports and descriptive passages for both academic and non-academic purposes in English.
- gain proficiency to undergo Preliminary English Test (PET), an Intermediate Level English Certification Test administered by Cambridge English Language Assessment, UK.

SKILLS:

✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*

✓ *Read and extract information from different texts and draw inferences by understanding elements like tone and transitional words.*

✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*

✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/Others, Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, Intonation and accent

Speaking – Articulating syllables clearly, Speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, Use of Nouns, Adjectives, Verbs, Prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things and Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages, True or False

Writing – Rewording, Sentence transformation, Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, Short conversations

Vocabulary / Grammar – Use of Adjectives/Adverbs, Comparatives and Superlatives

PRACTICE: Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations, Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines, Inferences, True/False

Writing – Developing hints, Writing short messages/paragraphs

Listening – Searching for factual information, Gap filling

Speaking – Snap Talks, JAM, Elocution

Vocabulary / Grammar – Prepositions, Phrasal Verbs, PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating, Predicting, Negotiating, Planning

SKILL FOCUS:

Reading – Reading for evaluation and appreciation, Comprehension

Writing – Letters, e-mails, 7 C's

Listening – Following long conversations / Interviews

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

Speaking – Discussions, Debate, Descriptions

Vocabulary / Grammar – Modals, Conditionals, Verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

UNIT - 5 **P-6**

FUNCTIONS: Requesting, Denying, Suggesting, Persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements, Presentations

Vocabulary / Grammar - Punctuation, Cloze tests

PRACTICE: Objective PET Units 25 – 30

TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, “Objective PET”, Student’s Book with Answers, 2^{nd} edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.

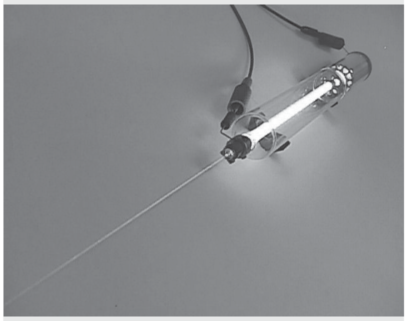
16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course objectives and Description:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the experiments.The students have to perform at least ten from the list of experiments.

Course Outcomes:

The student will be able to:

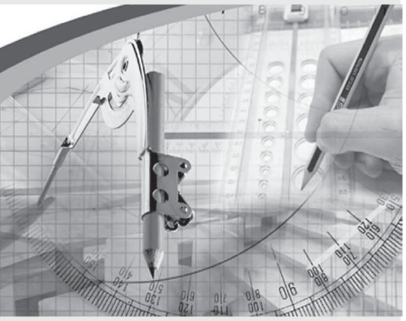
- realize the concept of resonance by conducting the experiments of AC sonometer and Melde's experiment.
- acquire the knowledge on magnetic field theory and thermal conductivity by conducting experiments, field along the axis of a circular coil and thermal conductivity of bad conductor
- understand the concepts of light by conducting the experiments of determination of wave length, numerical aperture of an optical fibre and also from V–I characteristics of Solar cell and LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Determination of Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – Efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect - Determination of Seebeck coefficient of a thermo couple.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.



16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- carry out the basic operations of matrix algebra.
- use row operations to reduce a matrix to echelon form, normal form.
- determine consistency of a system linear equations.
- compute eigen values and eigen vectors.
- evaluate double integrals and triple integrals.
- evaluate double integrals in polar coordinates.
- utilize Cartesian and polar coordinates to find area.
- understand the concept of gradient, divergance and curl.
- apply vector integral theorems in finding surface and volume integrals.

SKILLS:

✓ *Appreciate various methods to find the rank of a matrix.*

✓ *Solve given system of linear equations.*

✓ *Compute Eigen values and Eigen vectors of a matrix.*

✓ *Compute the power of a matrix by suitable method.*

✓ *Evaluate Multiple integrals.*

✓ *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9, T-3**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from, Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L-9, T-3**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, Properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, Diagonalisation of a matrix.

UNIT - 3 **L-9, T-3**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in polar coordinates, Change of order of integration, Change of variables, Applications to area in cartesian coordinates and polar coordinates, Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L-9, T-3**

VECTOR DIFFERENTIATION: Vector function, Differentiation, Scalar and vector point function, Gradient, Normal, Divergence, Directional derivative, Curl, Vector identities.

UNIT - 5 **L-9, T-3**

VECTOR INTEGRATION: Line integral, Surface integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Matrix Algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc).
13. Interpolation.

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS:

1. Srimanta Pal and Subodh C. Bhunia, "Engineering Mathematics", Oxford Publications, 2015.
2. B. V. Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.

4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with MATLAB output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with MATLAB output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to:

- understand the limitations of using hard water for domestic and industrial purposes.
- choose and apply suitable methods to soften the hard water for industrial and domestic applications.
- understand electrochemistry and its importance for applications such as fuel cells, modern lithium ion batteries etc.
- understand the types of corrosion and their implications followed by their control and prevention methods.
- familiarize the preparation, properties and applications of various polymers.

SKILLS:

- ✓ *Analyse the total hardness of water sample.*
- ✓ *Understand the basic principles involved in various batteries.*
- ✓ *Understand the mechanisms of corrosion and various controlling methods.*
- ✓ *Synthesize various polymers.*
- ✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water, Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water, Scales and sludges, Caustic embrittlement, Boiler corrosion, Priming and foaming, Softening methods - Zeolite process, Ion Exchange process; Desalination of brackish water - Reverse osmosis, Electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential, Electrochemical series, Nernst equation, Reference electrodes, Calomel and standard hydrogen electrode, Ion selective electrode, Glass electrode, Determination of pH using glass electrode; Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cells - Hydrogen oxygen, Methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion, Mechanisms of wet corrosion, Bimetallic corrosion, Concentration cell corrosion, Factors influencing the rate of corrosion; Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction, Types of polymerization - Preparation, Properties and applications of polyethylene, PVC, Teflon, Bakelite, Urea formaldehyde, Silicones; Rubber, Vulcanization, Synthetic rubbers - Buna-S, Buna-N, Neoprene; Introduction to conducting polymers; Poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV-Visible spectroscopy - Beer, Lambert's law, Qualitative and quantitative analysis, Block diagram of UV-Visible spectrophotometer, IR spectroscopy - Types of vibrations, Block diagram of IR spectrophotometer.

TEXT BOOKS:

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and Mridula chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.
2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Total Hours :

L	T	P
15		45

WA/RA	SSH/HSH	CS	SA	S	BS
6	15	-	5	-	-

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to:

- sketch engineering objects in the freehand mode.
- create geometric construction with hand tools.
- create dimensions of objects.
- prepare plan and elevation of any pictorial view.
- draw freehand lettering.
- make isometric sketches using graphics.
- draw orthographic multi-view sketches using graphics.

SKILLS:

✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*

✓ *Draw geometrical objects like polygons, solids of different types.*

✓ *Visualize the objects in real time situations.*

✓ *Develop 3D views (isometric views).*

UNIT - 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Types of lines, Lettering, Dimensioning, Construction of polygon and conics (Ellipse, Parabola and Hyperbola by general method), Ellipse by oblong method.

UNIT - 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection, Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes, Projections of planes, Simple planes, Planes inclined to one reference planes.

UNIT - 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT - 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder, Simple orthographic views into isometric views through AutoCAD.

UNIT - 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS:

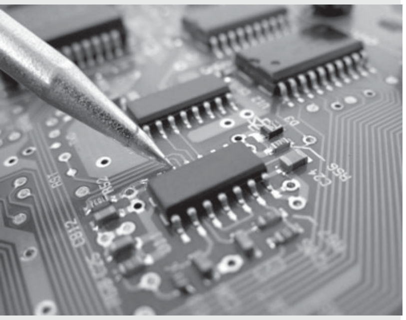
1. N.D.Bhatt, “Engineering Drawing”, 53rd edition, Charotar Publication, 2014.
2. Basant Agrawal , C.M.Agrawal “Engineering Drawing” , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS:

1. J. hole, “Engineering Drawing”, 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, “Engineering drawing”, 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	5

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- understand the notation and usage of components in electric circuits.
- analyze AC (single and three phase) and DC, AC circuits using different methods and laws.
- operate various electrical machines.
- understand the concepts of semiconductor devices and their operation.

SKILLS:

- ✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*
- ✓ *Develop a simple loop generator.*
- ✓ *Design a voltage regulator using Zener diode.*
- ✓ *Design a half wave rectifier using PN junction diode.*
- ✓ *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit concepts, Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements, Ohm's Law, Kirchhoff's Laws - Application to simple series, Parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only, Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator, Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems), D.C. Motor, Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours-30

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.
6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

TEXT BOOKS:

1. V.K.Mehta, "Principles of Electrical Engineering and Electronics", 3rd edition, S. Chand Publications, New Delhi, 2010.

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to:

- analyse the total hardness present in water samples.
- determine the total alkalinity of water used in industries.
- acquire the knowledge on polymers used as insulators.
- familiarize advanced techniques in chemical analysis using conductometer and pH meter.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS:

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I, 2009.
2. Dr.Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
30	-	-	10	20	4	-	4	-

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

The student will be able to:

- observe and integrate the diverse information from sources outside the classroom.
- think critically, creatively, resourcefully and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness.
- adapt eco-friendly technologies in order to maintain hygienic conditions.
- understand the human activities that are detrimental to environment.
- collaborate across diverse disciplines to identify and create solutions that conserve and help maintain biodiversity in the long term.
- discuss the issues involved in the generation of renewable energy resources.

SKILLS:

✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*

✓ *Gain perspectives to adrress the challenges, improvise and devise solutions.*

✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*

✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*

✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT - 1 **L-6**

NATURAL RESOURCES: Environmental studies - Definition scope and its importance, Need for public awareness; Natural resources - Forest resources, Deforestation, Water resources, Properties and conflicts, Mineral resources, Extraction and impacts, Food resources, Modern agriculture methods, Fertilizer pesticide problems, Water logging, Salinity, Energy resources, Renewable and non-renewable energy resources, Harness technology, Solar energy technologies, Land resources, Land degradation, Soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY: Ecosystem - Concept, Structure and functions of an ecosystem, Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems; Biodiversity - Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT - 3 **L-6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY: Solid waste management - Causes, Effects and control measures of municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and noise pollutions, Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, definitions, Applications of the remote sensing; Innovative practices - Objectives, Innovative practices in agriculture and forest community, Bio-villages; Green technology for sustainable development; Life cycle assessment and its concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA: Sustainable development, Water conservation, Cloud seeding, Rainwater harvesting methods watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental legislation - Wildlife protection act, Water act, Forest conservation act, Air act, Environmental protection act; Environmental Impact Assssment (EIA) - Introduction, Definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed projects / industry / developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION: Food sanitation - Food and drugs Act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water, Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions; Role of youth in the development, Promoting activities, Youth as initiators, Field work/environmental visit - Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment, Common plants, Insects, Birds; Study of simple ecosystems - Pond, River, Hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

1. Anubha Kaushik and CP Kaushik, “Perspectives in Environmental Studies”, 5th edition, 2016
2. Benny Joseph, “Environmental studies”, 2nd edition, McGraw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, “A Text book of Environmental Studies”, HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, “A Text book of environmental science and Technology”, B S Publications, 2008.
3. Dr. K. Mukkanti, “A Text book of Environmental Studies”, S.CHAND and Company Ltd, 2009.
4. EHILRS and ST, “Text book of Municipal and Rural Sanitation”, M.S Hill, 1998.
5. C. S. Rao, Wiley Eastern Ltd, “Environmental Pollution Control Engineering”, New Age International Ltd, 2001.
6. Dr. M. Anji Reddy, “Introduction to Remote Sensing”, B S Publications, 2004.
7. Kurian Joseph and R.Nagendram, “Essentials of environmental studies”, Pearson Education Pt Ltd, Delhi, 2007.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management- 3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	20	-	-

Course Description and Objectives :

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes :

The student will be able to:

- identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.
- fabrication of wooden joints and understand joining of metals.
- make metal joints and sheet metal work.
- make metal tools like knives, needles, swords, arrows etc.

SKILLS:

- ✓ *Prepare wooden and metal furniture.*
- ✓ *Electrical wiring and power supply in residences.*
- ✓ *Make funnels, trays, locker, steel almirahs etc.*
- ✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*
- ✓ *CNC machines and various machining operations and processes.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin smithy and Black smithy.
4. House wiring.
5. Foundry and welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS:

1. S.K. Hazra Choudhury, “Elements of workshop Technology”, 11th edition, Media Promoters, 1997.
2. Gopal, T.V., Kumar, T., and Murali, G., “A first course on workshop practice: Theory, Practice and Work Book”, Suma Publications, Chennai, 2005.
3. Venkatachalapathy, V. S, “First year Engineering Workshop Practice”, Ramalinga Publications, Madurai, 1999.

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

16CH101 BASICS OF CHEMICAL ENGINEERING

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
7	45	3	10	-	-

Course Description and Objectives:

This course deals with the fundamentals of chemical engineering and methods to solve practical problems. The objective of the course is to make the students learn about various unit operations in chemical process industries.

Course Outcomes:

The student will be able to:

- have an insight into the fundamentals of Momentum transfer, Heat transfer, Mass transfer etc.
- familiarize with the typical chemical engineering terminology that they will come across in their future courses.

SKILLS:

✓ *Choose a type of extraction for given chemical process.*

✓ *Differentiate various heat exchangers.*

UNIT - I **L-9**

INTRODUCTION : Introduction, Unit operations, Unit processes, Basic laws, Useful mathematical methods, Units and dimensions, Conversion factors, Dimensional analysis.

UNIT - II **L-9**

PHYSICO-CHEMICAL CALCULATIONS : Energy, Equivalent mass (weight), Electrochemical processes, Hardness of water, Humidity and saturation.

MATERIAL AND ENERGY BALANCES : Material balance, Energy balance.

UNIT - III **L-9**

FLOW OF FLUIDS : Introduction, Nature of a fluid, Viscosity, Flow field, Flow of a fluid past a solid surface, Conservation of mass, Conservation of energy, Friction losses in laminar flow through a circular tube, Friction losses in turbulent flow, Pressure drop in flow through porous media, Fluidization, Cavitation, Water hammer, Pumping of fluids.

UNIT - IV **L-9**

HEAT TRANSFER : Conduction, Convection, Radiation, Flow arrangements in heat exchangers, Variation of fluid temperatures in heat exchangers, Heat transfer equipment, Evaporation.

CHEMICAL KINETICS : Introduction, Thermodynamics review, Determination of rate equation, Effect of temperature on reaction rate, Catalysis, Reactors.

UNIT - V **L-9**

MASS TRANSFER : Diffusion, Interphase mass transfer, Absorption, Vapor-liquid equilibrium, Relative volatility, Distillation, Reflux, Calculation of number of theoretical stages by McCabe-Thiele method. Liquid liquid extraction, Single stage equilibrium extraction, Multistage extraction process, Drying, Adsorption.

TEXT BOOK:

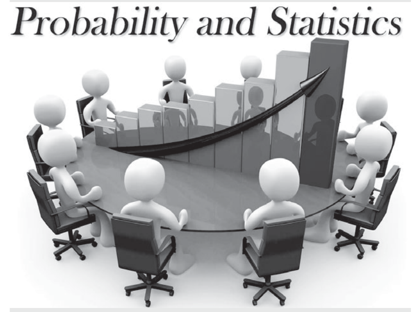
16HS202 PROBABILITY AND STATISTICS



Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	35	-	10	2	-

Course Description and Objectives:

This course deals with descriptive statistics, correlation and regression and their applications, probability, theoritical distributions and testing of hypothesis.

The objective of this course is to enable the student to understand and apply statitical techniques, curve fitting, correlation and regression, probability and also to make the student familiar with discrete, continuous distributions and testing of hypothesis.

Course Outcomes:

The student will be able to:

- distinguish between quantitative and categorical data and represent the data in graphical and tabular forms.
- calculate and interpret measures for the centre and spread of a data set.
- decide how and when to use the normal model.
- calculate and interpret correlation coefficient and regression lines.
- understand the rules of probability and apply them.
- compute probabilities using theoritical distributions.
- test hypothesis for population parameters.

UNIT - 1 **L-9**

STATISTICS : Basic definitions, Frequencies, Graphical representation, Histogram, Ogive curves, Measures of central tendency, Arithmetic mean, Median, Mode, Mean deviation, Standard deviation, Symmetry and skewness, Karl Pearson's coefficient of skewness.

UNIT - 2 **L-9**

CURVE FITTING, CORRELATION & REGRESSION : Least squares method, Curve fitting (straight line and parabola only). Covariance, Correlation, Types, Pearson's coefficient of correlation, Rank correlation, Spearman's rank correlation. Regression, Regression lines.

UNIT - 3 **L-8**

PROBABILITY : Introduction, Definition (classical and axiomatic approach), Addition theorem, Conditional probability, Multiplication theorem, Total probability, Bayes theorem.

UNIT - 4 **L-8**

DISTRIBUTIONS: Random variables, Discrete and continuous variables, Introduction to distributions.

BINOMIAL DISTRIBUTION : Definition, Mean and Standard deviation, Recurrence relation, Applications, Fitting of binomial distribution.

POISSON DISTRIBUTION : Definition, Mean and standard deviation, Recurrence relation, Poisson Distribution is an approximation of Binomial distribution, Applications, Fitting of Poisson distribution.

NORMAL DISTRIBUTION : Definition, Normal curve, Mean and standard deviation, Median, Mode, Normal distribution applications.

UNIT - 5 **L-12**

SAMPLING METHODS : Population and sampling, Parameters and statistics, Types of sampling. Test of hypothesis and test of significance: Null hypothesis, Errors, Level of significance, Confidence Limits, Testing large samples, Sample distribution of proportion, T-distribution for small sample, difference between means of small sample, Chi square test for goodness of fit, Chi square test for test of independence.

TEXTBOOKS:

2. H. K. Dass & Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd revised edition, S. Chand and Company, 2014.

REFERENCE BOOK:

1. S.C. Gupta and V.K. Kapoor, "Fundamentals of Mathematical Statistics", Sultan Chand and Company, New Delhi, 2005.

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	30	-	-	-	-	-	-

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, Preparing Resume, Group Discussion, and Interview Skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to:

- equip with requisite professional and inter-personal skills.
- possess the ability to think critically on issues for informed decision making and know how to communicate effectively, through choice of appropriate language and speech, while dealing with others at the workplace.
- identify and introspect on individual strengths and weaknesses, will emerge with improved levels of self-awareness and self-worth, for greater efficacy at workplace.

SKILLS:

✓ *Communicate and understand the difference between soft skills and hard skills.*

✓ *Learn professionalism and Employability skills.*

✓ *Plan Career by drawing their SWOT, Setting the Goal, learn the importance of Time and Stress Management.*

✓ *Learn Vocabulary, Situational English, Group Discussion, Reading Comprehension and Listening Comprehension which are essential for all competitive examinations.*

✓ *Prepare Resume and learn how to face interview.*

✓ *Learn Gender sensitive language, Good manners, emotional intelligence and essential skills.*

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 1 **P-8**

A) COMMUNICATION : Need for effective communication - The process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal); Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, Employability skills.

C) CAREER PLANNING: Job vs career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY : Johari Window for SWOT analysis, Setting a SMART goal using the provided grid, Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes and suffixes, Synonyms and antonyms, Collocations, One-word substitutes, Analogies, Idioms and phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student), Vocabulary exercises with hand-outs, Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH : Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION : Articulation and flow of oral presentation, Dynamics of group discussion, Intervention,Summarizing and conclusion, Voice modulation, Content generation, Key word approach (KWA), Social, Political, Economic, Legal and technical approach (SPELT), View point of affected part (VAP), Language relevance, Fluency and coherence.

ACTIVITY : Viewing a recorded video of GD and Mock sessions on different types of GD topics - Controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING : Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY : Appraising some samples of good and bad resumes, Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS : Interview process, Understanding employer expectations, Pre-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele-interviews, Video interviews, Frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **P-4**

A) READING COMPREHENSION : Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITY : Reading comprehension exercises with texts drawn from diverse subject areas (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in group discussion.

B) LISTENING COMPREHENSION : Listening as a skill, Different types of listening, Active and passive listening, Top-down approach, Bottom-up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY : Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY : Gender sensitive language in MNCs, Cultural sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression, Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other's views, Assisting others, Sharing, Participating actively.

ACTIVITY : Johari Window, Games and case studies.

16CS202 DATA STRUCTURES

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	5	40	-	8	5	-

Course Description and Objectives:

This course is aimed at offering fundamental concepts of data structures and explaining how to implement them. It begins with the basic concepts of data and data structures and introduces the primitive and non-primitive data structures in detail. It forms the basis for understanding various ways of representing data and its usage in different computing applications.

Course Outcomes:

The student will be able to:

- apply advanced C programming techniques such as pointers, dynamic memory allocation, structures to develop solutions for particular problems.
- analyze characteristics of various data structures.
- differentiate between Graphs and Trees.
- understand the importance of sorting and applying it wherever useful.
- understand the usefulness of data structures in solving problems.

SKILLS:

✓ *Identify the required data structures for various applications.*

✓ *Identify the sorting algorithm suitable for a given scenario.*

✓ *Implement array or linked list for a given problem.*

✓ *Analyse Pros & Cons of each of the data structure.*

✓ *Usage of trees and graphs.*

UNIT - 1 **L-9**

SORTING AND SEARCHING: Introduction - Data, Data type, Data structure, Primitive and Non-primitive - Data type, Data structure; Storage structures - Sequential and linked storage representations; Applications of structures, Hashing.

SORTING: Selection sort, Bubble sort, Insertion sort, Quick sort, Merge sort.

SEARCHING: Binary search and linear search.

UNIT - 2 **L-9**

LINKED LISTS: Introduction, Types of linked list - Singly linked list, Doubly linked list, Circular linked List; Operations - Insertion, Deletion, Traverse forward/reverse order; Multi lists, Applications of linked lists.

UNIT - 3 **L- 9**

STACKS AND QUEUES: Stacks - Introduction, Array and linked representations, Implementation and their applications; Queues - Introduction, Array and linked representations, Implementation and their applications, Types - Linear, Circular and doubly ended queues; Applications.

UNIT - 4 **L-9**

TREES: Introduction, Properties, Binary Tree - Introduction, Properties, Array and linked representations; Tree traversals and their Implementation, Expression trees, BST definition and implementation; AVL Trees - Definition and implementation.

UNIT - 5 **L-9**

GRAPHS: Introduction, Properties, Modeling problems as graphs representations - Adjacency matrix, Adjacency list; Traversals - Breath first search and depth first search; Application of graphs.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- understand the importance of structure, abstract data type and their basic usability in different applications through different programminglanguages.
- understand the linked implementation and its uses both in linear and non-linear data structure.
- understand various data structures such as stacks, queues, trees, graphs, etc. to solve various computing problems.
- decide a suitable data structure to solve a real world problem.

LIST OF EXPERIMENTS Total hours-30

1. Selection, Bubble, Insertion, Quick and Merge sorting algorithms.
2. Linear and Binary search algorithms.
3. Single linked list, doubly linked list, and circular linked list.
4. Stack using an array and linked list.
5. Queue using an array and linked list.

ACTIVITIES:

- *Design and Implement a School Management System.*
- *Design and Implement a Social Networking Site.*
- *Implement a project to find out the most common words in the articles.*
- *Design and Implement a Library Book Management System.*
- *Design and Implement a CricBuzz Application.*

6. Tree using an array and linked list.
7. Check if given expression is fully parenthesis or not using stack.
8. Tree traversing techniques.
9. BST using an array and linked list.
10. Graph traversal techniques.

TEXT BOOK:

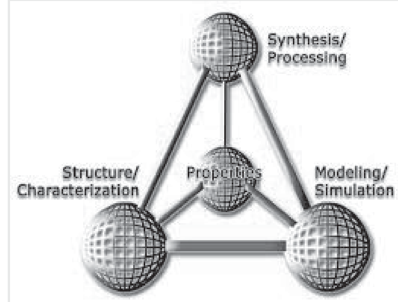
16CH102 MATERIALS SCIENCE AND TECHNOLOGY



Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	8	60	-	10	-	-

Course Description and Objectives:

This course will emphasize the structure-property relationships of engineering materials. The objective of this course is to provide knowledge in basic principles of material science and also to study structure of materials at all length scales.

Course Outcomes:

The student will be able to:

- understand crystal structure of various materials and techniques used for structure determination.
- understand the influence of defects on the properties of materials.
- understand the fundamentals of equilibrium phase diagrams.
- gain knowledge on various fabrication techniques used for manufacturing common engineering materials.

SKILLS:

✓ *Identify the type of material: ceramic, polymer, metal or composite.*

✓ *Select materials with suitable properties for a given application.*

✓ *Predict the type of fracture/failure in a material.*

✓ *Read and draw conclusion from binary phase diagrams.*

✓ *Suggest manufacturing methods for metals, ceramics and polymeric materials.*

✓ *Determine basic mechanical properties of materials using universal testing machine.*

ACTIVITIES:

- *Testing the type of failures.*
- *"Gee Whiz": Wonder presentations.*
- *Analysis of load test results.*
- *Study of micro structures of materials.*
- *Segregation of the given materials.*
- *Identification of phases in the given phase diagram.*

UNIT - I **L-9, T-3**

BONDING IN SOLIDS : Inter atomic forces and potential energy, Types of bonds: Primary and secondary, Variation in bonding character and resulting properties.

CRYSTAL STRUCTURE : Classification of crystal systems–SC, BCC, FCC & HCP crystal structures with examples, Atomic packing factor, Coordination number, Determination of miller indices of planes and directions of cubic and hexagonal crystals, Linear and planar densities, Separation between successive planes, Crystal structure determination: Bragg law, Powder method.

UNIT - 2 **L-10, T-3**

CRYSTAL DEFECTS : Point defects, Dislocations: Edge, Screw and mixed, Burgers vectors, Energy of dislocation, Motion of dislocation, Dislocation density. Grain boundary, Stacking faults and twin boundary.

PHASE DIAGRAMS : Gibb's phase rule and terms involved–Reduced phase rule, Tie line and lever rules, Two component systems–invariant reactions–Eutectic system and Iron-Carbon system.

UNIT - 3 **L-9, T-3**

MATERIALS FABRICATION TECHNIQUES : Fabrication of Metals: Forming operations, Casting, Fabrication of Ceramics: Particulate forming processes, Cementation. Forming techniques of Plastics: Compression, Transfer and injection molding, Extrusion, Blow molding.

MECHANICAL PROPERTIES : Stress-Strain relations of various solids–Elastic, Anelastic, Visco-elastic and plastic deformations in solids, Creep and fatigue, Fracture: Brittle and Ductile, Fracture toughness, Ductile to brittle transitions.

UNIT - 4 **L-8, T-3**

ELECTRICAL & SEMICONDUCTING PROPERTIES : Ohm's Law, Electrical conductivity, Electronic and Ionic conduction, Energy band structures in Solids, Classification of solids based on band models, Electron mobility, Electrical resistivity of metals, Intrinsic semiconduction, Extrinsic Semiconduction, The temperature dependence of carrier concentration, Factors that affect carrier mobility.

UNIT - 5 **L-8, T-3**

DIELECTRIC AND MAGNETIC PROPERTIES : Dielectric behavior, Capacitance, Polarization, Frequency Dependence of dielectric constant, Dielectric strength. Types of magnetism, Ferromagnetism-Domain theory-hystersis behavior, Ferrimagnetism, Soft and hard magnets–application of magnetic materials.

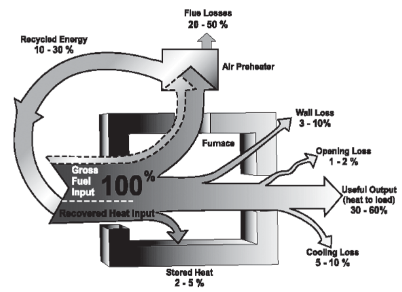
16CH201 CHEMICAL PROCESS CALCULATIONS



Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	50	-	5	5	5

Course Description and Objectives:

This course deals with fundamentals of material and energy balances involved in chemical processes. The objective of this course is to develop basic understanding pertaining to principles of chemical engineering processes and calculations.

Course Outcomes:

The student will be able to:

- use mole concepts and perform calculations involving concentrations.
- apply gas laws to solve problems related to ideal gas mixtures.
- carry out detailed material and energy balance for any chemical plant having different unit operations and unit processes.

SKILLS:

✓ *Material balance calculations for different chemical processes.*

✓ *Energy balance for any chemical plant.*

ACTIVITIES:

- *Mini project on material and energy balance of a chemical process.*
- *Estimation of physical properties.*

UNIT - 1 **L-10, T-2**

STOICHIOMETRIC RELATIONS : Basis of calculations, Methods of expressing composition of mixtures and solutions, Mole fraction and mole percent, Density and specific gravity, Baume and API gravity scales.

BEHAVIOR OF IDEAL GASES : Kinetic theory of gases, Application of ideal gas law, Gaseous mixtures, Gases in chemical reactions, Gas densities and specific gravities.

UNIT - 2 **L-9, T-2**

VAPOR PRESSURE : Liquefaction and liquid state, Vaporization, Boiling point, Effect of temperature on vapor pressure, Antonie equation, Vapor pressure plots, Vapor pressure of immiscible liquids and ideal solutions, Raoult's law, Non-volatile solutes, Basics of humidification.

UNIT - 3 **L-9, T-3**

MATERIAL BALANCE : Materials balance without reaction, Materials balance with reaction–recycle, purge, bypass.

UNIT - 4 **L-8, T-4**

THERMO PHYSICS : Energy, Energy balances, Heat capacity of gases, Liquid and mixture solutions, Kopp's rule, Latent heats, Heat of fusion and heat of vaporization, Trouton's rule, Kistyakowsky equation for non-polar liquids, Enthalpy and its evaluations.

UNIT - 5 **L-9, T-4**

THERMO CHEMISTRY : Calculation and applications of heat of reaction, Combustion and formation, Kirchoff's equation, Calculation of theoretical and actual flame temperatures, Combustion calculations.

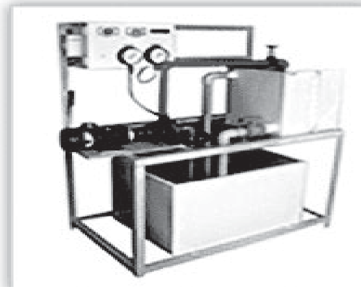
16CH202 MOMENTUM TRANSFER



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	20	45	-	5	5	5

Course Description and Objectives:

This course deals with fundamentals of fluid flow and its application to chemical process industries including pipe flow, fluid machinery. The objective of this course is to familiarize students with basic concepts of fluid statics, fluid dynamics, compressible and incompressible fluids, fluidization, transportation and metering of fluids.

Course Outcomes:

The student will be able to:

- understand basic principles of fluid mechanics.
- analyze fluid flow problems with the application of the momentum and energy equations.
- analyze pipe flows as well as fluid machinery.

SKILLS:

✓ *Application of fluid mechanics concepts to solve real life problems.*

✓ *Estimate* physical properties of fluids in motion and at rest.

✓ *Measurement of flowing fluids.*

✓ *Selection of pumps for engineering applications.*

ACTIVITIES:

- *Calibration of rotameter.*
- *Separation of immiscible liquids using decanter.*
- *Calibration of manometer.*
- *Design of Venturi meter.*
- *Design of Orifice meter.*

UNIT - 1 **L-10**

DEFINITIONS AND PRINCIPLES : Unit operations, Unit systems, Dimensional analysis, Basic concepts. Fluid Statics: Nature of fluids, Hydrostatic equilibrium, Manometers.

FLUID FLOW PHENOMENA : Laminar flow, Shear stress, Viscosity, Turbulence, Eddy viscosity, Flow in boundary layers.

UNIT - 2 **L-9**

BASIC EQUATIONS OF FLUID FLOW : Mass balance, Mass velocity, Momentum balance, Bernoulli equation, Mechanical energy balance equation, Correction factors, Pump work.

UNIT - 3 **L-9**

FLOW OF INCOMPRESSIBLE FLUIDS : Shear stress distribution in pipes, Relation between skin friction parameters, Laminar flow in pipes, Hagen-poiseuille equation, Laminar flow of non-Newtonian liquids, Velocity distribution for turbulent flow, Friction factor chart.

FLOW OF COMPRESSIBLE FLUIDS : Mach number, Basic equations.

UNIT - 4 **L-8**

FLOW PAST IMMERSED BODIES : Drag, Drag Coefficient, Stagnation point, Friction in flow through beds of solids, Motion of particles through fluids, Terminal velocity, Motion of spherical particles. Fluidization: Conditions for fluidization, Minimum fluidization velocity.

UNIT - 5 **L-9**

TRANSPORTATION AND METERING OF FLUIDS : Pipes, Fittings, Valves, Joints, Pumps, Developed head and Power requirement in pumps, Suction lift and cavitation, Positive displacement pumps, Centrifugal pumps, Measurement of flowing fluids: Classification of measuring devices, Venturi meter, Orifice meter, Rotameter.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total Hours-30

1. Identification of laminar and turbulent flows.
2. Verification of Bernoulli's Equation.
3. Measurement of flowing fluid using Venturi meter.
4. Measurement of flowing fluid using Orifice meter.
5. Determination of friction loss in fluid flow through pipes.
6. Determination of friction loss in fluid flow through fittings.
7. Determination of pressure drop in packed bed.
8. Determination of pressure drop in fluidized bed.
9. Determination of characteristics of centrifugal pump.
10. Determination of characteristics of reciprocating pump.

TEXT BOOKS:

16CH203 PROCESS INSTRUMENTATION

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	48	-	-	5	5

Course Description and Objectives:

The course provides insight into instruments that are used to measure physical properties in chemical process industries. The objective of this course is to familiarize student with the working principles of standard measurement devices used in engineering applications.

Course Outcomes:

The Student will be able to:

- discuss principles involved in the measurement and control of industrial processes.
- understand instruments and devices used for designing process control systems.

SKILLS:

✓ *Temperature measurement with electrical systems.*

✓ *Flow measurement with different devices.*

✓ *Select a suitable measurement device for a given application.*

UNIT - 1 **L-9, T-2**

QUALITIES OF MEASUREMENT : Elements of Instruments, Static and dynamic characteristics, Response of first order instruments.

TEMPERATURE MEASUREMENTS : Expansion thermometer- Thermoelectric temperature measurements.

UNIT - 2 **L-10, T-3**

TEMPERATURE MEASUREMENT : Resistance and radiation, Thermal coefficients of resistance, Industrial resistance thermometer bulbs and circuits, Radiation, Photoelectric and optical pyrometers.

COMPOSITION ANALYSIS : Spectroscopic analysis, Chromatography (GC, HPLC, GCMS/LCMS), Color measurement spectrometers.

UNIT - 3 **L-9, T-4**

MEASUREMENT OF PRESSURE AND VACUUM : Liquid column manometers, Gauge pressure and vacuum measurement, Indicating elements for pressure gauges, Measurement of absolute pressure, Corrosive liquids, Static accuracy and response of pressure gauges.

UNIT - 4 **L-8, T-3**

MEASUREMENT OF HEAD AND LEVEL : Head, Density and specific gravity measurement, Direct measurement of liquid level, Pressure measurement in open vessels measurement of interface level, Density measurement.

UNIT- 5 **L-9, T-3**

FLOW METERING : Head Flow and area flow meters, Open channel meters, Viscosity measurements, Quantity meters, Flow of dry materials. Recording, Indicating and signaling Instruments. PI Diagrams, Control center.

TEXT BOOKS :

1. Donald P. Eckman, "Industrial Instrumentation", 1st edition, Wiley Eastern, 2004.
2. Patranabis, "Principles of Industrial Instrumentation", 2nd edition, Tata McGraw-Hill, 2007.

REFERENCE BOOKS :

1. D.M.Considine, "Hand Book of Instrumentation", 2nd edition, McGraw-Hill, 1957.
2. Norman Anderson, "Instrumentation for Process Measurement and Control", 3rd edition, CRC Press, 1997.

ACTIVITIES:

- *Calibration of spectro photometer.*
- *Measurement of flow rate in open channels.*
- *Calibration of head and flow meters.*

16EL103 PROFESSIONAL COMMUNICATION LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P
-	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

The Professional Communication Laboratory course is aimed at improving professional communication skills (LSRW – Listening, Speaking, Reading and Writing) of undergraduate students and preparing them for their profession as engineers and managers. This course will help students to understand professional communication and personality as two interlinked spheres of influence, and provide them with exposure to conventions of corporate communication involved in the functioning of the business world.

Course Outcomes:

The student will be able to:

- be equipped to clear industry recognized certification such as BEC Vantage by the University of Cambridge.
- equip them to stand out both in the professional setting as well as for further pursuits in the academic world.
- since this certification looks at LSRW (Listening, Speaking, Reading and Writing) components in great detail, we hope to equip students to confidently and successfully attempt all the 4 critical components.

SKILLS:

- ✓ *Understand and use grammar rules in writing; sentences, paragraphs, paraphrasing.*
- ✓ *Write business emails, memos, letters, reports and proposals.*
- ✓ *Comprehend business articles, and documents.*
- ✓ *Use expressions in Professional context, and acquire presentation skills like one minute talk and pair discussion in professional context.*
- ✓ *Familiarize and comprehend British accent by listening to recorded speeches and discussions.*

UNIT - 1 **P-6**

BUSINESS ENGLISH VOCABULARY: Glossary of most commonly used words (formal and informal usage), Elements of technical writing - Sentence structure, Reducing verbosity, Arranging ideas logically, Building coherence, Paragraph level and document level, Topic sentence, Cohesive devices, Transitional words, Paraphrasing and précis-writing; Mechanics of writing - Stylistic elements, The rapporteur, The purpose, The reader's viewpoint (audience), Elementary rules of grammar, Choice of diction, Elementary principles of composition, Matters of form, Punctuation, Conventions of business communication, Language and professional tone, Weak links in business correspondence, Ethical concerns in business writing, Code of conduct (not sending illegal, Offensive, Disparaging personal remarks or comments) in written business communication.

UNIT - 2 **P-6**

BUSINESS CORRESPONDENCE: E-mail - Nature and scope, E-mail etiquette, Clear call for action, Common errors in composing e-mails, Office communication such as meeting agenda and minutes of the meeting, Notice, Circular and memo; Letter-Writing - Formal and informal letters, Structure of formal letters, Expressions of salutations, Different types of letters [Such as sales letter, Complaint letter, Response to the complaint letter (dispute resolution), Letter of permission, Letter of enquiring, claim letter, Letter of apology etc], Introductory and concluding paragraphs and clear call for action.

PROFESSIONAL PROPOSAL/REPORT: Differentiating proposals and reports, Drafting formal business proposals, Types of reports such as factual reports, Feasibility reports and survey reports, Parts ofa report (Such as title page, Declaration, Acknowledgements, Table of contents, Abstract, Introduction, Findings, Conclusion and recommendations, Citations, References and appendices).

UNIT - 3 **P-6**

SPEAKING: Speaking in business context, Assertiveness, Politeness, Making requests, Queries and questions, Negotiations, Asking for information, Offering suggestions, Conflict resolution, Contacting clients, Initiating, Addressing delegates (in public), Features of a good power point presentation (making the PPT), Delivering the presentation effectively, Telephone etiquettes, Delivering seminar/proposal/report effectively, Team meeting etiquettes (face to face and conference call), Making effective one minute presentations.

UNIT - 4 **P-6**

READING: Reading and comprehending business documents, Learning business register, Regularizing the habit of reading business news, Suitable vocabulary, Skimming and scanning text for effective and speedy reading and dealing with ideas from different sectors of corporate world in different business contexts.

UNIT - 5 **P-6**

LISTENING: Specific information in business context, Listening to telephonic conversations/messages and understanding the correct intended meaning, Understanding the questions asked in interviews or in professional settings, Summarizing speaker's opinion or suggestion, Enable active listening.

TEXT BOOKS:

1. Guy Brook Hart, "Cambridge English Business Bench Mark: Upper Intermediate", 2nd edition: CUP, 2014.

2. Cambridge: BEC VANTAGE: Practice Tests, CUP, 2002.

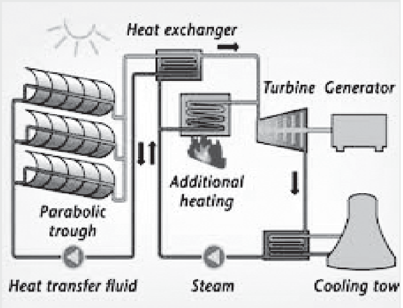
ONLINE REFERENCES:

1. http://www.cambridgeenglish.org/exams/business-certificates/business vantage/preparation/

2. https://www.youtube.com/watch?v=qxFtn9pGaTI.

ACTIVITIES:

- *Basic grammar practice, Framing paragraphs on topics allocated.*
- *Paraphrase an article or a video in your own words Finding topic sentences in newspaper articles.*
- *Find out new words from a professional viewpoint Understanding the meaning and its usage.*
- *Peruse samples of well prepared proposals and reports.*
- *Draft different proposals/reports on topics assigned.*
- *Watch videos/ listening to audios of business presentations.*
- *Classroom activities of team and individual presentations.*
- *Use PPTs, mock exercises for BEC speaking.*
- *Present (speaking) the written components completed in Unit 1.*
- *Hand-outs; matching the statements with texts.*
- *Find the missing appropriate sentence in the text from multiple choice, multiple choices.*
- *Use right vocabulary as per the given context and editing a paragraph.*



16CH204 CHEMICAL ENGINEERING THERMODYNAMICS-I

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
25	50	-	-	5	5

Course Description and Objectives:

This course deals with first, second and third laws of thermodynamics, volumetric properties, refrigeration and liquefaction processes. The objective of this course is to provide understanding in the theory and applications of classical thermodynamics, thermodynamic properties and equations of state.

Course Outcomes:

The student will be able to :

- apply fundamental concepts of thermodynamics to engineering applications.
- estimate thermodynamic properties of substances in gas and liquid states.
- determine thermodynamic efficiency of various energy related processes.

SKILLS:

✓ *Estimation of thermodynamic properties.*

✓ *Determination of heat engine and pump efficiency.*

✓ *Identification of reversible and irreversible processes.*

✓ *Selection of refrigeration process and refrigerant.*

UNIT- 1 **L-9, T-3**

BASIC CONCEPTS : The scope of thermodynamics, Dimensions and units, Measures of amount or size, Force, Temperature, Pressure, Work, Energy, Heat, Zeroth law.

UNIT - 2 **L-9, T-3**

FIRST LAW OF THERMODYNAMICS : Joule's experiment, Internal energy, Statement of first law, Energy balance for closed system, Thermodynamic state and state functions, Equilibrium, Phase rule, Reversible processes, Constant-v and constant-p processes, Enthalpy, Heat capacity.

UNIT - 3 **L-9, T-3**

VOLUMETRIC PROPERTIES OF PURE FLUIDS : PVT behaviour of pure substances, Virial equations of state, Ideal gas, Applications of the virial equations, Cubic equations of state.

UNIT - 4 **L-9, T-3**

THE SECOND LAW OF THERMODYNAMICS : Statements of the second law, Heat engines, Thermodynamic temperature scales, Entropy, Mathematical statement of the second law, Third law of thermodynamics (statement).

UNIT - 5 **L-9, T-3**

REFRIGERATION AND LIQUEFACTION : Carnot refrigerator, Vapor compression cycle, Choice of refrigerant, Absorption refrigeration, Liquefaction processes.

Production of Power from Heat: Steam power plant, Rankine cycle, Otto engine, Diesel engine.

TEXT BOOKS:

1. J.M.Smith, H.C,Vanness and M.M.Abbot, "Introduction to Chemical Engineering Thermodynamics", 6th edition, McGraw-Hill, 2005.

2. Y.V.C.Rao, "Chemical Engineering Thermodynamics", 1st edition, Universities Press, 2004.

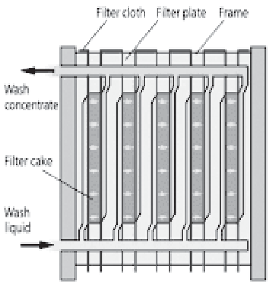
REFERENCE BOOKS:

1. Dodge B.F., "Chemical Engineering Thermodynamics", 1st edition, McGraw-Hill, 1944.

2. Kyle B.G., "Chemical and Process Thermodynamics", 1st edition, Prentice Hall of India,1999.

ACTIVITIES:

- *Calibration of thermometer.*
- *Conversion of work into heat using Joule's experiment.*
- *Expansion of gas using Joule-Thomson effect.*



16CH205 MECHANICAL UNIT OPERATIONS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	30	-	-	5	5

Course Description and Objectives:

This course provides knowledge in the basics of unit operations employed in chemical process industries. The objective of this course is to familiarize student on the principles and practices involved in transporting, separating and storing of solids and associated unit operations.

Course Outcomes:

The student will be able to :

- understand and apply the basic methods of characterization of particles and bulk solids.
- carry size reduction and separation of solid materials.
- explain applications of unit operations and their operational principles.

SKILLS:

✓ *Perform cumulative and differential particle size analysis.*

✓ *Identify the suitable mixer required for mixing cohesive and non cohesive solids.*

✓ *Recognize the required specifications of the size reduction equipment for a given feed.*

✓ *Identify the filtration equipment required for a specific application.*

✓ *Compare the efficiency of separation equipment.*

UNIT - 1 **L-9**

PROPERTIES AND CHARACTERIZATION OF SOLIDS : Properties of particulate masses, Characterization of solid-particles, Particle Shape, Particle size, Mixed particle sizes and size analysis, Screen analysis, Standard screen series, Properties of particulate masses, Pressures in masses of particles, Storage of solids, Pressures in bins and silos, Flow out of bins.

UNIT - 2 **L-9**

MIXING AND CONVEYING OF SOLIDS : Mixing of solids, Types of mixers, Mixers for cohesive solids, Criteria of mixing effectiveness - mixing index ,Mixers for free flowing solids, Mixing index in blending granular solids, Mixing index at zero time, Rate of mixing, Conveying of solids-Belt conveyor, Screw conveyor, Pneumatic conveyor, Bucket elevator.

UNIT - 3 **L-9**

PRINCIPLES OF COMMINUTION : Criteria for comminution, Characteristics of comminuted products, Energy and power requirements in comminution, Empirical relationships, Size reduction equipment-Crushers, Grinders, Ultrafine Grinders, Cutting machines.

PARTICLE SIZE ANALYSIS : Screening, Screening equipment, Screen effectiveness.

UNIT - 4 **L-9**

FILTRATION : Introduction to filtration, Types of filters–pressure filters, Vacuum filters, Centrifugal filters, Filter media, filter aids, Principles of cake filtration, Pressure drop through filter cake, Continuous filtration, Principles of centrifugal filtration, Clarifying filters, Liquid clarification, Cross flow filtration.

UNIT - 5 **L-9**

PARTICLE SEPARATION TECHNIQUES : Separations based on motion of particles through fluids, Gravity settling processes, Gravity classifiers, Sorting classifiers, Clarifiers and thickeners, Flocculation, Batch sedimentation, Clarifier and thickener design, Centrifugal settling processes, Electrostatic precipitators, Cyclones and hydro clones.

ACTIVITIES:

- *To compare the working of different types of crushers.*
- *To find the optimum time of sieving.*
- *To compare the working of leaf filter and plate and frame filter press.*

LABORATORY EXPERIMENTS

Total hours: 30

LIST OF EXPERIMENTS

1. Determination of particle size using screen analysis.
2. Finding the effectiveness of a screen.
3. Verification of size reduction laws using jaw crusher.
4. Verification of size reduction laws using ball mill.
5. Verification of size reduction laws and finding efficiency using roll crusher.
6. Determination of compressibility coefficient using sedimentation process.
7. Determination of filter medium resistance and cake resistance using plate and frame filter press.
8. Determination of percent recovery of coal from coal-sand mixture using froth flotation cell.
9. Determination of the efficiency of leaf filter.
10. Determination of the efficiency of cyclone separator.

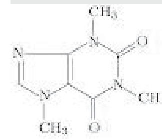
TEXT BOOKS:

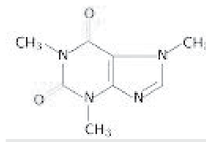
1. Mc Cabe, W. L., Smith J.C. and Peter Harriot, “Unit Operations of Chemical Engineering”, 7th edition, McGraw-Hill, 2005.
2. Foust et.al, “Principles of Unit Operations” 2nd edition, Wiley, New York, 2004.

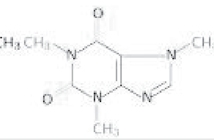
REFERENCE BOOK:

1. Perry R.H, and Green, D.W. “Chemical Engineer’s Hand book”, 8th edition, McGraw-Hill, New York, 2007.

16CH206 ORGANIC CHEMISTRY







Hours Per Week :

L	T	P	C
3	1	2	4

Total Hours :

L	T	P
45	12	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course offers fundamental concepts and preparation of most organic compounds and pharmaceuticals and also reaction mechanism and stereo chemical aspects. The objective of this course is to familarise the student about the reaction mechanisms involved in organic synthesis.

Course Outcomes:

The student will be able to :

- write reaction mechanism.
- understand different named reactions.
- know characteristics and properties of various functional groups.
- understand stereochemical aspects.
- know medicinal aspects of heterocyclic chemistry.
- estimate retrosynthetic stratergy.

SKILLS:

✓ *Identify the purity of solid and liquid compounds.*

✓ *Detection of unknown functional group present in the given organic compound.*

✓ *Identify pharmaceutical intermediates.*

✓ *Preparation of organic compounds.*

ACTIVITIES:

- *Perform preliminary tests.*
- *Identification of extra elements present in organic compounds.*
- *Properties of various functional groups.*
- *Medicinally important reactions.*
- *Concentrate organic liquids obtained from plant extracts.*
- *Fractional distillation / column purification of plants extracts.*

UNIT - 1 **L-9, T-2**

(A) **REACTION INTERMEDIATES** : Bond fissions, Carbanions, carbonium ions, Free radicals, Nitrenes, Carbenes, Benzyne, Nucleophiles and electrophiles.

(B) **POLAR EFFECTS :** Inductive effect, Resonance, Hyper conjugation, Electromeric effect, Mesomeric effect.

UNIT - 2 **L-9, T-3**

(A) **TYPES OF ORGANIC REACTIONS** : Electrophilic reactions: Friedal - Craft's reactions, Fries Rearrrangement, Reimer - Tiemann reaction, Nucleophilic reactions: Aldol condensation, Cannizaro reaction.

(B) **FREE RADICAL REACTIONS :** Halogenation of alkane, Addition of HBr to alkene in presence of peroxide, Anti-Markovnikov's rule.

UNIT - 3 **L-9, T-2**

PREPARATIONS AND REACTIONS : Preparations and reactions of alcohols, Phenols, Carboxylic acids, Aldehydes, Ketones, Amines.

UNIT - 4 **L-9, T-3**

STEREO CHEMISTRY : Stereo isomerism, Optical isomerism, Symmetry, Optical Rotation, Chirality,

Lactic acid, Tartaric acid, Enantiomers, Diastereomers, R and S nomenclature, Racemic mixture and resolution methods. Geometrical Isomerism, E and Z nomenclature.

UNIT - 5 **L-9, T-2**

HETEROCYCLIC COMPOUNDS : Preparation and reactions of 1) Furan 2) Thiophene 3) Pyrrole 4) Pyridine.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

I. **Criteria of purity of solid and liquid compounds**

a. Determination of Melting point

b. Determination of Boiling point

II. ***Detection of extra elements in organic compounds***

c. Nitrogen

d. Sulphur

e. Halogens

III. Identification of an unknown substance from the following organic compounds

f. Acids

g. Alcohols

h. Aldehydes

i. Amides

j. Amines

k. Carbohydrates

l. Esters

m. Ketones

n. Nitro Group

o. Phenols

IV. Preparations

a. Asprin

b. Preparation of DA Adduct

TEXT BOOK :

16CH207 PROCESS HEAT TRANSFER

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
25	50	-	5	5	5

Course Description and Objectives:

This course deals with the phenomena of heat transfer and methodologies applied for solving a wide variety of practical engineering problems. The objective of this course is to provide theoretical and practical knowledge in various modes of heat transfer and its application for designing of process equipments.

Course Outcomes:

The student will be able to :

- understand the basic laws of heat transfer.
- account for the consequence of heat transfer in thermal analyses of engineering systems.
- analyze problems involving steady state heat conduction in simple geometries.
- obtain numerical solutions for conduction and radiation heat transfer problems.
- understand the fundamentals of convective heat transfer process.
- evaluate heat transfer coefficients for natural and forced convection.
- understand the basic mechanism behind boiling and condensation processes.
- analyze heat exchanger performance by using the method of log mean temperature difference.
- calculate radiation heat transfer between black and gray surfaces.

SKILLS:

✓ *Estimate the rate of heat flow through a wall, cylinder or sphere*

✓ *Calculate the insulation thickness for a specified heat loss target.*

✓ *Determine heat transfer coefficient in simple geometries for forced and natural convection.*

✓ *Estimate area of heat exchanger required for specified conditions.*

✓ *Design of heat exchanger.*

✓ *Determine the emissivity of a given body.*

UNIT - 1 **L-9**

HEAT TRANSFER AND ITS APPLICATIONS : Nature of heat flow, Conduction, Convection, Radiation Heat transfer by conduction: Fourier's law of conduction, Thermal conductivity, Steady state conduction, Compound resistances in series, Heat flow through cylinder, Principles of heat flow in fluids: Heat exchange equipment, Counter current & parallel current flows, Energy balances, Rate of heat transfer, LMTD, Individual heat transfer coefficients, Overall heat transfer coefficient.

UNIT - 2 **L-9**

HEAT TRANSFER TO FLUIDS WITHOUT PHASE CHANGE : Regimes of heat transfer, Thermal boundary layer, Heat transfer by forced convection in laminar flow, Heat transfer by forced convection in turbulent flow, Analogy between transfer of momentum and heat, Reynolds analogy, Colburn analogy, Interpretation of dimensionless groups. Natural Convection: Dimensional analysis, Natural convection to vertical shapes and horizontal planes**.**

UNIT - 3 **L-9**

HEAT TRANSFER TO FLUIDS WITH PHASE CHANGE : Drop wise and film type condensation, Coefficients for film type condensation, Practical use of nusselt equations, Condensation of super heated vapors,Pool boiling of saturated liquid, Maximum flux and critical temperature drop.

UNIT - 4 **L-9**

RADIATION HEAT TRANSFER : Fundamental facts concerning radiation, Emission of radiation, Black body radiation, Laws of black body radiation, Absorption of radiation by opaque solids, Radiation between surfaces, Non black surfaces.

UNIT - 5 **L-9**

HEAT EXCHANGE EQUIPMENT : General design of heat exchange equipment, Heat exchangers, Condensers, Boilers. Evaporation: Liquid characteristics, Types of evaporators, Performance of tubular evaporators, Multiple effect evaporators.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Estimation of natural convection heat transfer coefficient.
2. Determination of overall resistance in composite wall.
3. Estimation of emissivity of a test plate.
4. Verification of Stefan-Boltzmann's law of radiation.
5. Determination of heat transfer coefficients of double pipe heat exchanger.
6. Estimation of heat transfer coefficient in forced convection.
7. Determination of thermal conductivity of liquid sample.
8. Determination of thermal conductivity of solid sample.
9. Determination of critical heat flux points of nichrome wire.
10. Determination of overall heat transfer coefficient of a given coil.

ACTIVITIES:

- *Mix the heat.*
- *Feel the heat.*
- *Identification of heat exchangers.*
- *Fabrication of double pipe heat exchanger.*
- *Connecting shell and tube heat exchanger setup.*

CH 301 PROCESS HEAT TRANSFER

Course Description & Objectives:

Study about heat transfer mechanisms conduction, convection, radiation and various equipments used in chemical industries

To understand the fundamentals of heat transfer mechanisms and their applications in various heat transfer equipment in process industries.

Course Outcomes:

1. *Understand and use empirical equations to solve forced and natural convection heat-transfer problems;*
2. *Analyze the heat transfer processes involved in boiling and condensation;*
3. *Perform basic calculations of common heat exchangers to determine relevant design parameters.*

UNIT I – Heat Transfer and its Applications

Heat Transfer and Its Applications: Nature of heat flow, Conduction, Convection, Radiation, Heat Transfer by Conduction: Fourier's law of conduction, Thermal conductivity, Steady state conduction, Compound resistances in series, Heat flow through cylinder, Unsteady state conduction, Semi-infinite solid. Principles of heat flow in fluids: Heat exchange equipment, Counter current & parallel current flows, Energy balances, Rate of heat transfer, LMTD, Individual heat transfer coefficients, Over all heat transfer coefficient, Fouling factors, Effective coefficients for unsteady state heat transfer.

UNIT II - Heat Transfer to Fluids Without Phase Change

Regimes of heat transfer, Thermal boundary layer, Heat transfer by forced convection in laminar flow, Heat transfer by forced convection in turbulent flow, Analogy between transfer of momentum and heat, Reynolds analogy, Colburn analogy, Heat transfer in transition region, Transfer to liquid metals, Interpretation of dimensionless groups. Natural Convection: Dimensional analysis, Natural convection to vertical shapes and horizontal planes.

UNIT III - Heat Transfer to Fluids With Phase Change

Drop wise and film type condensation, Coefficients for film type condensation, Practical use of nusselt equations, Condensation of super heated vapors, Effect of non condensable gases on rate of condensation, Heat transfer to boiling liquids, Pool boiling of saturated liquid, Maximum Flux and critical temperature drop, Minimum flux and film boiling.

UNIT IV - Radiation Heat Transfer

Fundamental facts concerning radiation, Emission of radiation, Black body radiation, Laws of black body radiation, Absorption of radiation by opaque solids, Radiation between surfaces, Non black surfaces, Radiation to semitransparent materials, Combined heat transfer by conduction-convection and radiation.

UNIT V - Heat Exchange Equipment

General design of heat exchange equipment, Heat exchangers, Condensers, Boilers, Calandrias, Extended surface equipment.

Evaporation: Liquid characteristics, Types of evaporators, Performance of tubular evaporators, Enthalpy balances for single effect evaporator, Multiple effect evaporators.

CH 303 MASS TRANSFER OPERATIONS-I

Course Description & Objectives:

The course deals about various mass transfer operations like Absorption, Stripping, Humidification, etc.

It includes the design of various equipments like Absorber, Humidifier, etc.

Course Outcomes:

The student will be able to recognize the various modes of mass transfer like Determination of mass transfer rates using

1. *Fick's Law*
2. *Estimation of diffusion coefficients*
3. *Solving of unsteady state diffusion problems*

UNIT I - Diffusion and Mass Transfer

Mass transfer operations, molecular diffusion in fluids, Binary solutions, Fick's Law, equation of continuity, Steady state equimolar counter current diffusion; Stefan's diffusion estimation of diffusivity n gases and liquids, application of molecular diffusion, theories of mass ransfer, diffusion in fluids, Reynolds analogy, heat and mass transfer coefficients in laminar and turbulent flow, diffusion through solids.

UNIT II - Interphase Mass Transfer

Concept of equilibrium, diffusion between phases, material balances in steady state, co – current and counter current stage processes, Sparged vessels mechanically agitated vessels for liquid gas (single phase), Venturi scrubbers, Sieve tray design for absorption tray tower vs. packed tower, Stage efficiencies and point efficiencies.

UNIT III - Absorption and Stripping

Introduction, Counter and co – current isothermal absorption and stripping of single component, operating lines, minimum flow rate, Determination of number of transfer units and height of continuous absorber, determination of no. of plates, absorption factor, Kremser - Brown equations.

UNIT IV - Humidification

Introduction, Vapor – pressure curve, definitions, psychometric charts, Enthalpy of vapor – gas mixtures, humidification and de humidification, operating lines and design of packed humidifiers, cooling towers, spray chambers.

UNIT V - Drying

Introduction, Definitions of various moisture contents, drying conditions, Rate of Batch drying under constant drying conditions, mechanism of batch drying, Drying time, through circulation drying, batch and continuous drying, equipment design of continuous counter current dryer.

CH305 CHEMICAL REACTION ENGINEERING - I

Course Description & Objectives:

Chemical Reaction Engineering is the heart of a Chemical Process Industry, especially the kinetics i.e. the rate at which chemical reactions occur. This subject enables the students to learn about the different types of reactions underlying a chemical process and thereby design chemical reactors.

Course Outcomes:

1. *On having completed the course, the student will be in a position to design reactor, with some additional inputs.*

2. *The homogeneous reactions & hence the reactors are fairly easy to design. But, with increasing complexity like in multiple rxns & heterogeneous rxno.*
3. *The student has to exercise some caution in designing the reactors.*
4. *The reactor history coupled with personal experience and sound judgment are necessary.*

UNIT I - Reaction Kinetics

Rate equation, Elementary, Non Elementary Reactions and their mechanisms, Theories of reaction rate and temperature dependency, Searching for mechanism.

UNIT II - Interpretation of Batch Reactor Data

Constant volume batch reactor, varying volume batch reactor, analysis of batch reactor, temperature and reaction rate the search for a rate equation.

UNIT III - Ideal Reactors

Ideal batch reactors, steady state mixed flow reactors, steady state plug flow reactors. Size comparison of single reactors, Case studies & problems.

UNIT IV - Multiple Reactions

Parallel reactions, Series reactions, Series – parallel reactions, Maximizing the productivity of desired reactant. An alternative approach to using fractional conversion; Net reaction rates and stoichiometry.

UNIT V - Temperature and Pressure Effects

Single reactions, Heat of reactions from thermodynamics, Heat of reaction and temperature, equilibrium constant from thermodynamics, Conversion, Graphical Design procedure.

CH325 PROCESS DYNAMICS & CONTROL

Course Description & Objectives:

Study of dynamic behavior of chemical processes and techniques of conventional process control, Mathematical modeling and analysis of open loop and closed loop process, frequency domain analysis and stability Provide a conceptual and methodological framework for describing a process and its control system.

Course Outcomes:

. 1. Develop mathematical models of chemical processes by writing unsteady-state mass and energy balances.

2. Ability to design controllers.

UNIT I - First Order System

Introduction to process dynamics and control, Response of first order systems, Physical examples of first order systems, Response of first order systems in series, Higher order systems, Second order systems and transportation lag.

UNIT II - Control System

Controllers and final control elements, Block diagram of a chemical reactor, Control Systems, Closed loop transfer functions, Transient response of simple control systems.

UNIT III - Stability Criteria

Stability, Routh array Root locus, Application of Root locus to control systems.

UNIT IV - Frequency Response Analysis

Introduction to frequency response, control systems design by frequency response, Bode diagrams.

UNIT V - Advanced Control Strategies

Advanced control strategies, Cascade control, Feed Forward control ratio control, Smith predictor, Dead time compensation, Internal mode control. Controller tuning, Process Identification, Different types of control valves like linear, on – off etc.

CH327 ENERGY ENGINEERING (ELECTIVE - I)

Course Description & Objectives:

The course programme focuses on understanding the sources of energy and their contributions to the energy and power needs of the nation and the world.

Course Outcomes:

The student will be able to

1. Understand the present and future enery demands of the energy resources,

2. Know about various energy auditing and energy conservation methods.

3. Obtain in detail knowledge about the stem distribution and utilization.

4. Know about various renewable energy resources.

UNIT I - Sources of Energy and Types of Fuels

Energy resources present and future, Energy demands with reference to India. Coal: - Origin, occurrence reserves, petrography, rank, classification, analysis, testing, storage, carbonization liquefaction, gasification.

UNIT II - Liquid Fuels: Petroleum

Origin, occurrence, Reserves, Composition, classification, fractionation, reforming cracking, petroleum products, specification for petroleum natural gas, coke oven gas, producer gas, water gas, LPG.

UNIT III - Energy Auditing

Short term, medium term, long term schemes, energy conversion energy index, energy cost, representation of energy consumption, Energy auditing.

UNIT IV - Steam Plant

Run time cycle, boiler plant, steam cost, steam distribution and utilization, combined heat and power cycles. Energy from biomass, gas purification solar energy, wind energy, energy storage, waste heat recovery.

UNIT V- Energy Conservation:

Energy conservation methods in process industries, practical applications and theoretical analysis.

CH329 INDUSTRIAL SAFETY & HAZARD MANAGEMENT (ELECTIVE - I)

Course Description & Objectives:

To provide comprehensive knowledge of safety and hazards aspects in industries and the management of hazards. To build in safety competency of the participants in the Quantifying risk, Design for Safety, Investigating accident.

Course Outcomes:

1. *This course will enable the student to identify and understand safety hazards in a business or industrial setting.*
2. *The principles learned in this course will allow the student to use current safety theory and guidelines in making the workplace safer for workers.*
3. *The intention is for the student to be able to: Identify basic safety hazards.*
4. *Demonstrate the ability to document and record incidents and accidents in the workplace, Identify basic methods of hazard control.*

UNIT I - Safety

Safety programs, engineering ethics, accident and loss statistics, acceptable risk, public perception.

UNIT II - Toxicology

How Toxicants enter biological organisms & are eliminated from biological organisms, government regulations, Industrial Hygiene: identification, evaluation, control.

UNIT III - Fires and Explosions

The fire triangle, distinction between fires and explosions, Definitions, flammability characteristics of liquids and vapors, ignition energy, auto ignition, auto oxidation, adiabatic compression, explosions.

UNIT IV - Introduction to Relief's

Relief concepts, definitions, location of relief's, relief types, relief systems, conventional spring operated reliefs in liquid service and vapor or gas service, rupture disc relief's in liquid service and vapor or gas service.

UNIT V - Hazard's Identification

Process hazards checklists, hazards and operability studies, safety reviews.

CH331 DESIGN OF ANALYSIS & EXPERIMENTS (ELECTIVE - I)

Course Description & Objectives:

Understand the important role of experimentation in new product design, manufacturing process development, process improvement and analyze the results from such investigations to obtain conclusions

Course Outcomes:

1. *Describe how to design experiments, carry them out, and analyze the data they yield.*

2. *Understand the process of designing an experiment including factorial and fractional factorial designs.*

3. *Examine how a factorial design allows cost reduction, increases efficiency of experimentation, and reveals the essential nature of a process.*

UNIT I - Introduction

Modeling and study of systems in Chemical Engineering leading to systems of algebraic, ordinary differential and partial equations (both linear and non-linear systems). Methods of solution of systems of linear algebraic equations, linear homogeneous ordinary differential equations and linear non-homogeneous ordinary differential equations observed in systems of interest to chemical engineers.

UNIT II - Differential Equations

Methods of solution of linear and non-linear finite difference equations, solution of differential – difference equations, numerical solution to partial differential equations by relaxation method, finite – difference method, introduction to finite element method and application to problems of interest in chemical engineering.

UNIT III - Basic Statistical Concepts

Probability distributions, sampling and sampling distributions; Inferences about the differences in Means.

Randomized Designs**:** Hypothesis Testing – t-test, use of P-values; Confidence intervals, Inferences about the difference in means, paired comparison designs, inferences about the variances of normal distributions F-test.

UNIT IV - Analysis of Variance

One-way and two way Analysis. Analysis of fixed effects model – Decomposition of the total sum of squares, statistical analysis.

Factorial Experiments: Definitions, Interpretation of main effects and interactions, design with factors at two levels – Calculation of effects and Analysis of variance – Model adequacy testing, Estimating model parameters Analysis of 2K factional design in detail.

UNIT V - Regression Models

Linear Regression Models, Estimation of parameters, Multiple regression, Hypothesis Testing in multiple regression, confidence intervals in multiple regression.

Response Surface Methodology: Introduction, Method of Steepest Ascent, Analysis of a second order response. Experimental designs for fitting response surfaces Composite Designs. Introduction to other experimental design: Mixture experiments, Evolutionary Operation, Robust Design (Taguchi Methods).

CH333 PROCESS HEAT TRANSFER LAB

Course Description & Objectives:

To understand the fundamentals of heat transfer mechanisms and their applications in various heat transfer equipment in process industries.

Course Outcomes:

The course will provide a sound practical knowledge of the three main heat transfer phenomena namely conduction, convection and radiation.

List of Experiments

1. Determination of heat transfer coefficient by Natural Convection.
2. Determination of overall resistance in Composite Wall.
3. Determination of heat transfer coefficient through Pin Fin.
4. Emissivity Measurement.
5. Determination of heat transfer coefficient of Shell and Tube Heat Exchanger.
6. Determination of Thermal Conductivity of Metal Rod.
7. Determination of heat transfer coefficient of Vertical Condenser.
8. Determination of heat transfer coefficients of Agitated Vessel.
9. Determination of heat transfer coefficients of Double Pipe Heat Exchanger.
10. Determination of Thermal Conductivity of Liquids.
11. Determination of performance of Single Effect Evaporator.
12. Determination of heat transfer coefficient of Horizontal tube lossing heat by Forced Convection.
13. Determination of Stefan Boltzmann Constant.
14. Determination of Critical Heat Flux points of Nichrome Wire.

III Year B.Tech. Chemical Engg. I - Semester

L	T	P	To	C
-	-	3	3	2

CH335 CHEMICAL TECHNOLOGY LAB

Course Description & Objectives:

To study process technologies of various organic and inorganic process industries.

This course covers manufacture of various chemicals, cement, rubber, soaps, detergent, paper and ceramics.

Course Outcomes:

1. Ability to understand the manufacturing of various inorganic and organic chemicals
2. Ability to estimate melting / boiling points, preparation, analysis of different chemical compounds.

List of Experiments

1. Estimation of Glucose
2. Estimation of Sucrose
3. Iodine value of oil
4. Saponification value of oil
5. Acid value of oil
6. Preparation of Acetanilide
7. Preparation of Aspirin (Acetyl Salicylic acid)
8. Preparation of Azodye (Phenyl Azo – 2 – Naphthol)
9. Preparation of Nitrobenzene from benzene
10. Preparation of M – Dinitro Benzene from Nitro Benzene
11. Preparation of Urea formaldehyde resin
12. Preparation of Phenol formaldehyde resin
13. Determination of Alkalinity of water
14. Determination of Percentage purity of lime stone

III Year B.Tech. Chemical Engg. I - Semester

L	T	P	To	C
-	-	3	3	2

CH337 PROCESS DYNAMICS & CONTROL LAB

Course Description & Objectives:

Study of dynamic behavior of chemical processes, various controllers and techniques of conventional process control.

Course Outcomes:

To provides a sound practical knowledge of different control systems, controllers, and control valves that are used in industries.

List of Experiments:

1. Dynamics of 1st Order Systems [Thermometer].
2. Dynamics of Interacting System for Step Input.
3. Dynamics of Non Interacting System for Step Input
4. Response of Interacting System for Pulse Input.
5. Response of Non-Interacting System for Pulse Input.
6. Response of Single Tank for Step Input
7. Response of Single Tank for Pulse Input
8. Response of Manometer (2nd Order System)
9. Response of Control Values
10. Response of 1st Order System using Mat Lab
11. Response of 2nd Order System using Mat Lab
12. Temperature Control Trainer
13. Cascade Control Trainer
14. Response of “P” Controller using Mat Lab.

III Year B.Tech. Chemical Engg. II - Semester

L	T	P	To	C
4	0	-	4	4

MS310 MANAGERIAL ECONOMICS

Course Description & Objectives:

This course provides students with the knowledge, tools and techniques to make effective economic decisions under conditions of risk and uncertainly.

Course Outcomes:

Students will be able to:

1. *Apply the economic way of thinking to individual decisions and business decisions*
2. *Understand how prices get determined in markets, how market participants benefit in the form of consumer surplus and producer surplus, and what are the consequences of government intervention*
3. *Understand the roles of managers in firms*
4. *Understand the internal and external decisions to be made by managers*
5. *Design competition strategies, including pricing, product differentiation, research & development, and marketing, according to the natures of products and the structures of the markets*
6. *Analyse real-world business problems with a systematic theoretical framework.*

UNIT I - Nature & Scope of Managerial Economics

Basic tools and techniques of Business Economics, Macro Economic Environment and Managerial decisions.

UNIT II – Demand Analysis

Demand Analysis: Types of Demand, Demand determination Concept of Elasticity and measurement, Demand forecasting, Survey & Statistical methods.

UNIT III – Theory of Production

Production function, Marginal rate of technical substitution, Iso-quants and Iso-costs, production function with one/two variable factors,Law of Variable Proportions, and Returns to Scale, internal and external economies.

UNIT IV – Cost Analysis

Cost concepts, cost determinants, cost output relationship in the short and long run, Break-Even analysis.

UNIT V - Features and types of different competitive situations

Perfect competition, Monopoly, Monopolistic competition and Oligopoly, pricing methods in practice.

Text Books:

1. Gupta: Managerial Economics, 1/e TMH, 2005
2. A.R.Arya Sri, Managerial Economics and Financial Analysis, TMH, 2/e, 2010

4	0	-	4	4

CH302 MASS TRANSFER OPERATIONS-II

Course Description & Objectives:

The Course deals about various separation techniques and mass transfer operations like Distillation, Extraction, adsorption, etc.

It includes the design of various equipments like Distillation, adsorber, extractor etc.

Course Outcomes:

The student will be able to recognize the various Principles like design of operating line equation, design of Distillation units, Tower sizing, design of single and multi stage cross current, co-current, counter current extractors, design of adsorption and leaching equipments.

UNIT I - Distillation

Introduction, Fields of application, VLE for miscible liquids, immiscible liquids, steam distillation, VLE phase diagrams, tie lines, mixture rules, Flash vaporization and differential distillation for binary and multicomponent mixtures, Batch distillation with reflux.

UNIT II - Mc – Cabe and Ponchon - Savarit Methods

Continuous fractionation of binary mixtures, Mc – Cabe Thiele method, Ponchon – Savarit method determination of no of ideal plates for binary mixtures, optimum reflux ratio, plate efficiencies, condenser and reboiler duties, principles of
azeotropic and extractive distillation, open steam system.

UNIT III – Liquid-Liquid Extraction

Fields of application of ternary liquid systems, triangular and solvent free coordinate systems, Choice of solvent and selectivity, extraction with insoluble and partially soluble systems,Single and multi stage cross and counter current extraction with reflux, continuous contact extraction (packed beds) equipment for liquid – liquid extraction.

UNIT IV - Leaching

Introduction, Fields of application, Preparation of solid for leaching, types of leaching, Leaching equilibria, Constant under flow conditions, Single and multistage leaching calculations, equipment for leaching operation.

UNIT V - Adsorption and Ion – Exchange

Principles and applications, types of adsorption, use of adsorbents, Adsorption equilibria, adsorption isotherms for vapor and dilute solutions, Design of steady state moving bed adsorber for one component, Un steady state adsorption, Break through curve, fixed bed adsorber and ion exchange.

CH304 CHEMICAL REACTIONS ENGINEERING – II

Course Description & Objectives:

This covers the degree of nonideality contribution in reactors, which affects the conversion levels. Also, here hetroganeous systems to an extent are taken into account coupled with catalysis.

Course Outcomes:

1. *On having completed the course, the student will be in a position to design reactor, with some additional inputs.*
2. *The homogeneous reactions & hence the reactors are fairly easy to design. But, with increasing complexity like in multiple rxns, & heterogeneous rxno.*
3. *The student has to exercise some caution in designing the reactors.*
4. *The reactor history coupled with personal experience and sound judgment are necessary.*

UNIT I - Non Ideal Flow

E curve, the age distribution of fluid, the RTD studies, conversion in non ideal flow reactors, dispersion model Axial dispersion, correlations of axial dispersion, problems.

UNIT II - Tanks in Series Model

Pulse response experiments and the RTD, Chemical conversion, Convertion model in laminar flow reactors, Earliness of mixing, Segregation and RTD: Self mixing of a single fluid.

UNIT III - Fluid - Particle Reactions: Kinetics - The Rate Equation

Fluid particle reactions: Kinetics - selection of a model, shrinking core model for spherical particles of unchanging size, rate of reaction for shrinking spherical particles, determination of rate controlling step.

UNIT IV - Heterogeneous Reactions

Introduction**:** Solid catalyzed reactions - pore diffusion resistance combined with surface kinetics, porous catalyst particles, performance equations for reactors containing porous catalyst particles.

UNIT V - Deactivating Catalysts

Mechanism of catalyst deactivation, the rate and performance equations.

CH306 CHEMICAL ENGINEERING THERMODYNAMICS – II

Course Description & Objectives:

To understand the theory and applications of classical thermodynamics, thermodynamic properties, equations of state, methods used to describe and predict phase equilibria, vapor-Liquid equilibria, Chemical reaction equilibria.

Course Outcomes:

1. *State the thermodynamic equations and explain them for solving actual thermodynamic problems.*

2. *Apply the thermodynamic principles for the chemical process design as well as industrial application.*

3. *Analyse and calculate thermodynamic properties for a given system or process at specified conditions using appropriate thermodynamic approaches.*

4. *Use the Vapor Liquid Equilibrium relations to solve the process separation problems.*

5. *Evaluate the chemical reaction equilibria for the equilibrium conversion/composition calculations.*

UNIT I - Heat Effects

Sensible heat effects, Latent heats of pure substances, standard heat of Reaction, standard heat of formation, standard heat of combustion, Temperature dependence of ÄH^0.

UNIT II - Solution Thermodynamics -Theory

Fundamental property relation, The chemical potential and phase equilibria, Partial properties, Ideal gas mixtures, fugacity and fugacity coefficient: pure species, fugacity and fugacity coefficient: species in solution .

UNIT III - Vapor / Liquid Equilibrium

The nature of equilibrium, Phase rule, Duhem's theorem, VLE: Qualitative behaviour, Simple models for VLE, VLE by modified raoult's law.

UNIT IV - Phase Equilibria

Equilibrium and stability, Liquid – Liquid equilibrium, Vapor liquid liquid equilibrium, solid – liquid equilibrium, Solid Vapor equilibrium, equilibrium adsorption of gases on solids.

UNIT V - Chemical Reaction Equilibria

The reaction coordinate, Application of equilibrium criteria to chemical reactions, the Standard Gibbs- energy change and the equilibrium constant, effect of temperature on equilibrium constant, Evaluation of equilibrium constants, Relation of equilibrium constants to composition.

CH308 MEMBRANE TECHNOLOGY (ELECTIVE – II)

Course Description & Objectives:

The course will describe in details membrane separation technology and wide range of applications including water treatment and desalination.

The objective of the course is to give the students the technical background on membrane technology and to provide wide level of understanding that will allow them to design, using appropriate combinations of unit processes and water treatment plant. The practical component will provide the students with a range of laboratory skills together with an understanding of the need for rigorous experimental design of membrane modules for water treatment plant.

Course Outcomes:

Students will be able to

1. *Apply various transport models for the calculation of membrane fluxes and the extent of separation for various membrane systems.*
2. *Identify the types of experimental data needed for the calculation of membrane parameters.*

3. *Select a membrane process and design components to carry out a specific separation.*
4. *Be familiar with the relevant literature.*
5. *Have an introduction to advancement of membrane techniques to solve environmental problems.*

UNIT I – Introduction to Membrane Processes

Separation process, Introduction to membrane processes, definition of a membrane, classification of membrane processes.

Preparation of Synthetic Membranes: Types of Membrane materials, preparation of Synthetic membranes, phase inversion membranes, preparation technique for immersion precipitation, preparation technique for composite membranes.

UNIT II - Characterization of Membranes

Introduction, membrane characterization, characterization of porous membranes, characterization of non-porous membranes.

Transport in Membranes: introduction, driving forces, non equilibrium thermodynamics, transport through porous, non-porous, and ion exchange membranes.

UNIT III - Membrane Processes

Pressure driven membrane processes: Introduction, microfiltration, membranes for microfiltration, industrial applications, ultrafiltration, membranes for ultrafiltration, industrial applications, reverse Osmosis and nanofiltration: membranes for reverse osmosis and nanofiltration, industrial applications, Electrically Driven Processes: Introduction, electrodialysis, Process parameters, membranes for electrodialysis, applications, Membrane electrolysis, Bioploar membranes, Fuel Cells.

UNIT IV- Concentration Driven Membrane Processes

Gas separation, gas separation in porous and non porous membranes, membranes for gas separation, applications, pervaporation, membranes for pervaporation, applications, dialysis: membranes for dialysis, applications, liquid membranes: aspects, liquid membrane development, choice of the organic solvent and carrier, applications, introduction to membrane reactors.

UNIT V - Polarization Phenomenon and Fouling

Introduction to concentration polarization, turbulence promoters, pressure drop, gel layer model, osmotic pressure model, boundary layer resistance model, concentration

polarization in diffusive membrane separations and electro dialysis, membrane fouling, methods to reduce fouling, compaction.

Module and Process Design: Introduction, plate and frame module, spiral wound module, tubular module, capillary module, hollow fiber module, comparison of module configurations.

CH310 MATHEMATICAL METHODS FOR CHEMICAL ENGINEERING (ELECTIVE – II)

Course Description & Objectives:

The course deals about various mathematical differential equations. It discuss about the vector analysis and heat transfer with various bodies.

Course Outcomes:

Mathematical tools are indispensable to process modeling, analysis, engineering design and research. The theme of the course is to introduce a spectrum of widely used mathematical methods in chemical engineering useful to solve problems commonly encountered.

UNIT I - Introduction

Mathematical formulations of the physical problem, formulation of differential equations, application of the law of conservation of mass and energy, flow systems, rate equations.

UNIT II - Partial Differential Equations

Formulation of partial differential equations, differentiation formulae change from Cartesian to cylindrical and spherical , differentiation of implicit functions, directional derivatives, maxima and minima, one dimensional heat conduction problems.

UNIT III - Vector Analysis

Vectors, scalars, vector field, vector differential operators, line integral, mass transfer in binary gas mixture, equation of motion.

UNIT IV - Heat Transfer in Finite and Infinite Slab Thicknesses

Solutions of PDEs heat transfer in a flowing fluid, heat conduction in a slab, temperature distribution in rectangular parallel pipe, heat conduction in a slab of infinite thickness.

UNIT V - Steady State and Unsteady State Heat Transfer

Solutions of PDEs by Laplace transforms, one dimensional un steady state heat conduction, Un steady state operations of packed bed.

CH312 BIOCHEMICAL ENGINEERING (ELECTIVE – II)

Course Description & Objectives:

This course focuses on the interaction of Chemical engineering, biochemistry, microbiology.

To enhance skills in the areas of biochemical processes, to provide the fundamental background of biological systems.

Course Outcomes:

1. *The course will help the students to understand and apply the principles of biochemical engineering in the analysis and design of industrial biochemical processes.*
2. *Understanding of biological basics and bio processing.*
3. *Understanding the difference between bioprocesses and chemical processes.*

4. *Students will be able to understand the kinetics of growth, depth& metabolism.*

UNIT I - Introduction to Microbiology

Introduction to Microbiology: Bio physics, and cell doctrine, the structure of cell, Important Cell Types RNA, DNA building blocks.

UNIT II - Kinetics of Enzyme Catalyzed Reactions

Kinetics of enzyme catalyzed reactions, The enzyme substrate complex, Enzyme action, Kinetics with one and two substrates, Michaelis – Menten equation, Estimation of MM parameters. Line weavers burk plot.

UNIT III - Enzyme Immobilization

Enzyme inhibitions, immobilized enzyme technology, Utilization of co – factors, biosynthesis, transport across cell membrane, Introduction to metabolic path way and end products of metabolism.

UNIT IV- Microbial Growth Kinetics

Microbial growth, Monod growth kinetics, Substrate and product inhibition, yield coefficients for bio mass and products, continuous culture for stirred tank fermenter design and analysis of biological reactors.

UNIT V- Fermentation Technology

Production of antibiotics, pencilin, citric acid, bakers yeast, ethanol, Anaerobic fermentation production of biogas, aeration and agitation in bio reactors.

CH314 CHEMICAL REACTION ENGINEERING LAB

Course Description & Objectives:

Here, a bimoelcular, second order homogeneous reaction is considered for which rate constant k is found through various systems. Also, the degree of Non-Ideality is studied by finding the R.T.D's.

Course Outcomes:

Provides a practical knowledge to students of the different chemical reactors used in chemical engineering industries.

List of Experiments:

1. Kinetic Studies in C.S.T.R
2. Kinetic Studies in P.F.R
3. Kinetic Studies in Combined Reactor
4. Kinetic Studies in MFR's in Series
5. Kinetic Studies in Batch Reactor Equimolar Feed
6. Kinetic Studies in Batch Reactor Non - Equimolar Feed
7. Isothermal Batch Reactor
8. Adiabatic Batch Reactor
9. R.T.D Studies in C.S.T.R
10. R T D Studies in C.S.T.R's in Series
11. R.T.D Studies in Plug Flow Reactor
12. R.T.D Studies in Combined Reactor
13. R.T.D Studies in Fluidized Bed Reactor
14. R.T.D Studies in Packed Bed Reactor

CH334 MASS TRANSFER OPERATIONS LAB

Course Description & Objectives:

The Course discuss about the various experiments like Distillation, Extraction, Diffusion, etc

It includes the estimation of various parameters like Temperature, Pressure and concentration.

Course Outcomes:

1. *Provides to students the knowledge of various mass transfer operations used in industries.*
2. *Provides to students able to design equipments.*

List of experiments:

1. Verification of Rayleigh's equation using batch distillation
2. Determination of steam distillation temperature and vaporisation efficiency
3. Gas Diffusivity
4. Liquid-Liquid Diffusivity
5. Tray Drier
6. Surface Evaporation
7. Determination of solubility characteristics of given ternary system
8. Estimation of Liquid - Liquid extraction and determination of plait point
9. Estimation of solid liquid extraction and leaching efficiency
10. Determination of VLE data for a binary mixture
11. Adsorption Stuidies of ternary mixture
12. HETP (Hight Equivalent to Theoretical Plate)

CH 401 CHEMICAL ENGINEERING PLANT DESIGN AND ECONOMICS

Course Description & Objectives:

This course introduces the student to the basic concepts of process design development ,general design considerations, Estimation of capital investments , Interest and investment cost, Taxes, Insurance & Depreciation, Profitability & Optimum Design.

Course Outcomes:

The student will be able to

1. Compare projects using the methods of net present value, discounted cash flow and equivalent minimum investment period

2. Develop a plant capital cost estimate based on published data,

3. Determine the impact of taxation, depreciation and investment incentives on the economic viability of a project.

4.know the procedures involved in optimum designing

UNIT I- Introduction to Process Design

Introduction – Process design development, design considerations, Cost and asset accounting.

UNIT II- Estimation of Capital Investment

Cash flow for industrial operations, Factors effecting Investment, Total product cost, Estimation of capital investments, Cost indices, Cost factors.

UNIT III- Interest and Investment Costs

Interest and investment cost, types of interest, nominal and effective interest rates, Continuous interest, Present worth and discount annuities, Interest on investment.

UNIT IV - Taxes, Insurance & Depreciation

Source of capital taxes and types of taxes ,Insurance – Types of insurances, Self insurance, Depreciation-Types of depreciation, Service life, Salvage value, Present Value, Methods for determining depreciation, group depreciation.

UNIT V - Profitability & Optimum Design

Profitability, Alternative investments and replacements, Profitability standards, discounted cash flow, Capitalized cost payout period, Alternative investments, Optimum design, Design strategy, Optimum conditions, Optimum production rates.

TEXT BOOK:

1. K.D. Timmerhaus & M.S. Peters, "Plant Design and Economics for " Chemical Engg.", 3rd ed., McGraw Hill, 1981.

4	0	-	4	4

CH403 CHEMICAL PROCESS EQUIPMENT DESIGN

Course Description & Objectives:

This course teaches the student about selection and design of chemical process equipments. To learn about the design procedures of process equipment used in chemical process plants.

Course Outcomes:

1. *Able to design heat transfer equipment and mass transfer equipmet.*
2. *Able to design cooling and heating systems of chemical reactors.*
3. *Able to use software tools for the analysis of process equipment.*

UNIT I - Design of Shell and Tube Heat Exchangers

1-2 heat exchanger, arrangements for increased heat recovery, and calculations for process conditions. Design calculations of a double-pipe heat exchanger: Double pipe exchangers in series-parallel arrangement.

UNIT II - Pressure Vessels

Introduction, vessels subjected to internal pressure &combined loading, stresses induced in vessels, optimum proportions of a vessel, optimum vessel size. problems.

UNIT III - Design Of Dryers

Design of Dryers: Design of rotary dryer, tray dryer and spray dryer.

Design of Packed Towers for Absorption: Flow of liquid over packing's, limiting gas velocities, Pressure-drop calculations, design of packed towers using absorption coefficients, design of packed tower using transfer-unit method.

UNIT IV - Design Of Sieve Tray Tower For Distillation

Introduction, sieve tray, tower diameter, plate spacing, entrainment, flooding, weepage, tray layout, hydraulic parameters.

UNIT V – Cooling Towers

Cooling Tower Practice: Mechanism, types, rating duty and physical size of cooling towers, Cooling tower components, construction material, practical aspects of tower selection

Cooling Tower Design Calculations: Heat transfer calculations, selection of tower size for a given duty, corrections for altitude, use of charts for calculation of cooling tower duties.

CH405 PROCESS MODELING AND SIMULATION

Course Description & objectives:
To make the students understand physical systems in chemical engineering and to develop their mathematical models and solutions for these models. The students will also learn to use the commercial process simulators.

Course Outcomes:
1. *Understand the important physical phenomena from the problem statement.*
2. *Develop model equations for the given system.*
3. *Demonstrate the model solving ability for various processes/unit operations.*
4. *Demonstrate the ability to use a process simulation.*

UNIT I - Fundamentals
Mathematical models for chemical engineering systems, fundamentals, introduction to fundamental laws, examples of mathematical models of chemical engineering systems, constant volume CSTRS, two heated tanks.

UNIT II - Examples
Gas phase pressurized CSTR, non-isothermal CSTR, single component vaporizer, batch reactor, reactor with mass transfer, ideal binary distillation column, batch distillation with holdup.

UNIT III - Iterative Methods
Bisection, false position, Newton –Raphson, successive approximation method, comparison of iterative methods.
Solution of Linear Simultaneous Algebraic Equations: Computation of Eigen values and Eigen vectors, Gauss elimination method, Gauss-Jordan and Gauss-Seidel's method.

UNIT IV - Numerical Integration

Trapezoidal and Simpson's rules. Numerical Solution of Differential Equations**:** Euler method, Runge-Kutta fourth order method, Milne predictor corrector method.

Interpolation**:** Lagrange interpolation, forward difference, backward difference and central difference interpolation methods, least square approximation of functions.

UNIT V - Computer Simulation Examples

Gravity flow tank, three CSTRs in series, binary distillation column, batch reactor, Non-isothermal CSTR, VLE dew point, bubble point calculations, countercurrent heat exchanger.

CH407 INDUSTRIAL POLLUTION CONTROL ENGINEERING

Course Description & Objectives:

This course is designed to learn a variety of chemical, physical, biological treatment processes related to industrial pollution control. This course is to make pollution profiles of the industries, categorization, control methodologies and technologies, system design, ethic concepts and solving of the engineering problems on industrial systems.

***Course Outcomes**:*

1. *Understanding of air/water pollution regulations and their scientific basis.*
2. *Apply knowledge for the protection and improvement of the environment.*
3. *Ability to monitor and design the air and water pollution control systems.*
4. *Ability to select and use suitable waste treatment technique.*

UNIT I

Types of emissions from chemical industries and effects of environment, environment legislation, Type of pollution, sources of wastewater, Effluent guidelines and standards,

UNIT II

Characterization of effluent streams, oxygen demands and their determination (BOD, COD, and TOC), Oxygen sag curve, BOD curve mathematical, controlling of BOD curve, self purification of running streams, sources and characteristics of pollutants in fertilizer, paper and pulp industry.

UNIT III

General methods of control and removal of sulfur dioxide, oxides of nitrogen and organic vapors from gaseous effluent, treatment of liquid and gaseous effluent in fertilizer industry.

UNIT IV

Air pollution sampling and measurement: Types of pollutant and sampling and measurement, ambient air sampling: collection of gaseous air pollutants, collection of particulate air pollutants. Stack sampling: sampling system, particulate sampling, and gaseous sampling. Analysis of air pollutants: Sulphur dioxide, nitrogen oxides, carbon monoxide, oxidants and Ozone, hydrocarbons, particulate matter.

UNIT V

Air pollution control methods and equipments: Source collection methods: raw material changes, process changes, and equipment modification. Cleaning of gaseous equipments particulate emission control: collection efficiency, control equipment like gravitational settling chambers, Cyclone separators, fabric filters, scrubbers, packed beds and plate columns, venturi scrubbers, their design aspects. Control of gaseous emissions: absorption by liquids, absorption equipments, adsorption by solids.

CH409 TRANSPORT PHENOMENA

Course Description & Objectives:

The course deals about various transport processes like Momentum Transfer, Heat Transfer and Mass Transfer. It includes the dynamics of fluid behavior and their turbulence nature.

Course Outcomes:

Students have an understanding and appreciation for the implications of the science of transport phenomena on society as a whole, and recognize connections between transport phenomena and other areas of study.

UNIT I - Transport Properties

Introduction: Transport Properties, Estimation of transport properties, pressure, Temperature, Concentration dependence, Newton’s Law of viscosity.

UNIT II - Momentum Balance

Boundary conditions, Flow problems flat plate, Circular pipe, Annulus, Creeping flow.

UNIT III - Energy Balance

Boundary conditions, Fourier's law of conduction, Composite wall, Extended Fin surface, Viscous heat source, Chemical heat source, Electric heat source.

UNIT IV - Mass Balance

Boundary conditions, diffusion through a stagnant gas film, homogeneous, heterogeneous reactions, falling liquid film, chemical reaction inside a porous catalyst.

UNIT V - Flow Problems

Equation of change for isothermal, Non isothermal systems, use of equation of change to solve flow problems, introduction to turbulent flow.

TEXT BOOK:

CH411 PETRO CHEMICAL ENGINEERING (ELECTIVE-III)

Course Description & Objectives:

Studying this subject the students will learn about the extraction and production of oil and gas to meet energy needs, as well as refining of crude oil for a wide spectrum of useful products, such as petrochemicals, Chemicals, Plastics.

Course Outcomes:

1. *Introduction with the petroleum refinery worldwide.*
2. *Develop knowledge of different refining processes.*
3. *To find the suitable refining technology for maximizing the gasoline yield.*
4. *Students will be well-veresed with some aspects of Petrochemical Technology in detail.*

UNIT I - Sources of Petroleum

Origin and formation of petroleum, Reserves and deposits of world, Indian Petroleum industry.

UNIT II - Fractionation of Petroleum

Dehydration and desalting of crudes, heating of crude pipe still heaters, Distillation of petroleum, blending of gasoline.

UNIT III - Thermal and Catalytic Processes

Cracking, Catalytic cracking, catalytic reforming, Naphtha cracking, Coking, Hydrogenation processes, Alkylation processes, Isomerisation processes.

UNIT IV - Petrochemical Technology

Chemicals from ethane, Ethylene and acetylene: ethanol, acetaldehyde and acetic acid, Vinyl acetate, butyraldehyde, 2 - Ethyl hexanol and ethylene oxide, Ethylene Glycols, Acrilonitrile, Polyesters, Ethanolamines, ethylene dichloride.

UNIT V - Chemicals Form Butanes, Butenes, Pentanes And Pentenes

Butadiene, butane epoxides and butanolamines, butanol, butyl acetate, methyl ethyl ketone, isoprene, amyl alcohol.

TEXT BOOKS

1. B.K.Bhaskara Rao, "Modern petroleum refining processes" 4th edition, Oxford and IBH Publication, 2002.

CH413 PROCESS INTENSIFICATION (ELECTIVE-III)

Course Description & Objectives:

The course discuss about process intensification, Flow patterns and Reactor types and operation It covers the areas like sono chemistry, crystallization and extraction process.

Course Outcomes:

This Is The course to Provide A Practical Working Guide To Understanding And Developing Successful PI Solutions That Deliver Savings And Efficiencies. It Will Appeal To Engineers Working With Leading-Edge Process Technologies And Those Involved Research

UNIT – I Introduction

Definition of process intensification; Benefits and drawbacks; Techniques for PI application – passive and active techniques.

UNIT – II Flow Patterns

Mixing, flow patterns, heat transfer: Scales of mixing; Flow patterns in reactors, Mixing in stirred tanks, Scale up of mixing; Mixing in intensified equipment;

UNIT – III Mixers & Reactors

Heat transfer. High intensity inline reactors: Static mixers; Ejectors; Tee mixers; Impinging jets; Rotor stator mixers; Principles of operation; Applications; Performance envelopes.

UNIT – IV Reactor Types and Operation

Combined chemical reactor heat exchangers and reactor separators. Spinning disc reactors; Rotating packed bed; Oscillatory flow reactor;

UNIT – V Sono Chemistry and Crystallization

Compact heat exchangers Enhanced fields: Sono-chemistry; Microwaves; Electrostatic fields. Intensified separation: Higee; Compact separation; Crystallization and extraction.

TEXT BOOKS

1. Stankiewicz, A. and Moulin, (Eds.), “Engineering: the Chemical Process Plants.

CH415 OPTIMIZATION OF CHEMICAL PROCESSES (ELECTIVE-IV)

Course Description & Objectives:

To study optimization algorithms, provide modeling skills to describe and formulate optimization problems, solve several types of optimization problems arising in process systems engineering.

This course covers organization of problems, basic concepts, single and multivariable optimization, linear programming and optimization of chemical processes.

Course Outcomes:

1. *Identify different types of optimization problems.*
2. *Understanding of different optimization technique.*
3. *Ability to solve various single and multivariable optimization problems.*
4. *Ability to solve problems by using least square analysis.*

UNIT I - Nature and Organization of Optimization Problems

What optimization is all about, Why optimize, scope and hierarchy of optimization, examples of applications of optimization, the essential features of optimization problems, general procedure for solving optimization problems.

Fitting Models to Data**:** Classification of models, how to build a model, fitting functions to empirical data, the method of least squares, factorial experimental designs, fitting a model to data subject to constraints.

UNIT II - Basic Concepts of Optimization

Continuity of functions, unimodal versus multimodel functions. Convex and Concave functions, Convex region, Necessary and sufficient conditions for an extremum of an unconstrained function.

Optimization of Unconstrained Functions One-Dimensional Search: Numerical methods for optimizing a function of one variable, scanning and bracketing procedures, Newton's, Quasi-Newton's and Secant methods of uni-dimensional search, Region elimination methods, polynomial approximation methods.

UNIT III - Unconstrained Multivariable Optimization

Direct methods: Random search, grid search, uni-variate search, simplex method, conjugate search, Powell's methods. Indirect methods- first order: Gradient method, conjugate method. Indirect methods - second order: Newton's method, movement in the search direction, termination, summary of Newton's method, relation between conjugate gradient methods and Quasi-Newton method.

UNIT IV - Linear Programming and Applications

Basic concepts in linear programming, Degenerate LP's – graphical solution, natural occurrence of linear constraints, the simplex method of solving linear programming problems, standard LP form, obtaining a first feasible solution, the revised simplex method, sensitivity analysis, duality in linear programming, the Karmarkar algorithm, LP applications.

UNIT V - Optimization of Unit Operations

Recovery of waste heat, shell & tube heat exchangers, evaporator design, liquid liquid extraction process, optimal design of staged distillation column, Optimal pipe diameter, optimal residence time for maximum yield in an ideal isothermal batch reactor, chemostat, optimization of thermal cracker using liner programming.

CH417 POLYMER TECHNOLOGY (ELECTIVE-IV)

Course Description & Objectives:

Expose the students to the various methods of fabricating commercially useful polymer products of plastics, rubbers (elastomers), fibres such as extrusion, compression molding, injection and blow molding. To provide fundamental knowledge of the polymers and their chemical, physical and mechanical behavior. Emphasis on the processing techniques, along with the production of polymers.

Course Outcome:

The course aims to offer a sound base in the knowledge of various polymers and plastics used in industries, their properties etc.

UNIT I - Introduction and Fundamentals

Definitions and concepts of plastics and polymers, Comer, Co – monomer, Mesomer, Co – polymer, functionality, Visco – elasticity classification of polymers Methods determining molecular weights of polymers: Based on colligative properties, Sedimentation equilibrium method. Gel chromatography. Natural polymers: rubber, shellac, rosin, cellulose, and lignin's, Proteins.

UNIT II - Chemistry of Polymerization

Concepts of addition polymerization condensation polymerization and Co – polymerization, glass transitation temperature of polymers, Degradation of polymers of following types: Mechanical, Hydrolytic thermal, back bone effects.

UNIT III - Methods of Polymerization

Mass, solution, emulsion, suspension Role of following additives for polymers: Initiators, catalyst inhibitors, solvents, fillers, reinforcing agents, stabilizers plasticizers, lubricants, blowing agents, coupling agents, flame retardants photo – degradents.

UNIT IV - Methods of Manufacture, Properties, Uses of Following Addition Compounds

Polyethylene (LDPE & HDPE), Polypropylene, PVC and its copolymers, acetals, PTFE, Condensation compounds: polyester – PMMA, PET, Alkyd, Epoxy resins, Polyurethanes, Silicons, PF, UF, MF resins.

UNIT V - Description of Following Processing Methods

With principles involved and equipment used mixing and compounding, extrusion, calendring, laminating, moulding – compression, transfer, injection and blow moulding.

CH419 COLLOIDAL & INTERFACIAL SCIENCE (ELECTIVE-IV)

Course Description & Objectives:

Fundamental principles of colloid and interface science involved in disperse systems, surfactants and their solution properties.

To understand the science and technology of colloids and interfacial phenomena and processes often appeared in high value added products and modern technologies.

Course Outcomes:

Mathematical tools are indispensable to process modeling, analysis, engineering design and research. The objective of the course is to introduce a spectrum of widely used mathematical methods in chemical engineering useful to solve problems commonly encountered.

UNIT I - Basic Concepts of Colloids and Interfaces

Introduction, Examples of Interfacial Phenomena, Solid-Fluid Interfaces, Colloids.

Properties of Colloid Dispersions: Introduction, Sedimentation under Gravity, Sedimentation in a Centrifugal Field, Brownian Motion, Osmotic pressure, Optical properties, Electrical Properties, Rheological Properties of Colloid Dispersions.

UNIT II - Surfactants and their Properties

Introduction, Surfactants and their Properties, Emulsions and Microemulsions, foams.

Surface and Interfacial Tension: Introduction, Surface tension, Interfacial Tension, Contact Angle and Wetting, Shape of the Surfaces and interfaces.

UNIT III - Surface and Interfacial Tension

Measurement of Surface and Interfacial Tension, Measurement of Contact Angle; Intermolecular and Surface Forces: Introduction, Vanderwalls Forces.

Intermolecular and Surface Forces: Electrostatic double layer force, The DLVO theory, Non-DLVO forces.

UNIT IV - Adsorption at Interfaces

Introduction, The Gibbs Dividing surface, Gibbs Adsorption Equation, Langmuir and Frumkin Adsorption Isotherms, Surface Equation of state(EOS), Effect of Salt on Adsorption of Surfactants.

UNIT V - Adsorption at Interfaces

Adsorption Isotherms incorporating the Electrostatic Effects, Calculation of Free energy of Adsorption, Adsorption of inorganic salts at interfaces, Dynamics of Adsorption of Surfactants at the interfaces, Adsorption at Solid-Fluid interfaces.

CH421 CHEMICAL PROCESS EQUIPMENT DESIGN LAB

Course Description & Objectives:

This course teaches the student about selection and design of chemical process equipments. To learn about the design procedures of process equipment used in chemical process plants.

Course Outcomes:

The course will offer students a broad based understanding of the chemical process equipment design & drawing which is the starting point to establish a new chemical industry.

List of Experiments

1. Drawing of Flow Sheets Symbols
2. Drawing of Instrumentation Symbols
3. Drawing of Instrumentation Diagrams
4. Mechanical Aspects of Chemical equipment design and drawing of double pipe heat exchanger.
5. Mechanical Aspects of Chemical equipment design and drawing of 1-2 shell and tube heat exchanger.
6. Mechanical Aspects of Chemical equipment design and drawing of 2-4 shell and tube heat exchanger.
7. Mechanical Aspects of Chemical equipment design and drawing of Feed forward evaporator.
8. Drawing of distillation column by using Mc - Cabe Thiele method
9. Drawing of distillation column by using Ponchon - Savarit method
10. Design of Adsorption Column
11. Design of Absorption Tower
12. Design of Batch Reactor
13. Design of CSTR.

IV Year B.Tech. Chemical Engg. I - Semester

L	T	P	To	C
-	-	3	3	2

CH423 CHEMICAL PROCESS SIMULATION LAB

Course Description & Objectives:

The course will offer students a broad based understanding of the chemical process equipment design & drawing which is the starting point to establish a new chemical industry.

Course Outcomes:

1. The course provides a sound practical knowledge about chemical process modeling, Simulation.

2. Students will be able to design of various chemical engineering equipments.

3. Students will be able to gaining experience in simulation packages.

List of Experiments

1. Simulation of gravity flow tank system
2. Simulation of three constant holdup CSTRs in series
3. Simulation of three variable holdup CSTRs in series
4. Bubble point calculations
5. Dew point calculations
6. Simulation of double pipe heat exchanger
7. Simulation of interacting two tank liquid level systems
8. Simulation of non – interacting two tank liquid level system
9. Simulation of non isothermal CSTR
10. Simulation of binary distillation column
11. Simulation of isothermal batch reactor
12. Simulation of cone shaped tank

-	-	3	3	2

CH449 INDUSTRIAL POLLUTION CONTROL ENGINEERING LAB

Course Description & Objectives:

To determine the oxygen levels, Biological oxygen demand, chemical oxygen demand in municipal ground sewage and industrial effluent waters.

To determine the dissolved suspended solids fixed and volatile solids in the give sample of water.

To determine the optimum amount of coagulant and alums required for municipal sewage and industrial affluent water.

Course Outcomes:

The course will enable students to interpret the process of Industrial pollution control through consideration of appropriate experiments, to gain enough knowledge to handle equipments besides kindling their interest towards carrying out R & D activities.

List of Experiments

1. Water Analysis
2. Neutralization of acids by titration
3. Neutralization of bases by titration
4. Absorption of color
5. Adsorption of phenol
6. Adsorption of gaseous pollutants
7. Toxic metal analysis
8. Filtration of suspended solids
9. Flocculation
10. Settling, particulate matter collection

IV Year B.Tech. Chemical Engg. II- Semester

L	T	P	To	C
4	0	-	4	4

CH402 TECHNOLOGY OF PHARMACEUTICALS AND FINE CHEMICALS (ELECTIVE-V)

Course Description & Objectives:

This course focuses on preparation, properties, manufacturing and testing of various Pharmaceuticals and fine chemicals

Course Outcomes:

The student will be able to

1. *Explore the design, development, manufacture, and evaluation of traditional and novel drug delivery systems*
2. *Emphasize practical solutions and applications to theoretical and research-based problems.*
3. *Know the manufacturing and testing procedures of various pharmaceuticals and fine chemicals.*
4. *Acquire knowledge in tablet making, coating and sterilization.*

UNIT I - Introduction to Pharmaceuticals

A brief outline of grades of chemicals, sources of impurities in chemicals, principles (without going into details of individual chemicals) of limit test for arsenic, lead, iron, chloride and sulfate in Pharmaceuticals. Outlines of Preparation, properties, uses and testing of the following Pharmaceuticals - sulfacetamide, paracetamol, riboflavin, nicotinamide.

UNIT II - Preparation & Properties

Outlines of Preparation, properties, uses and testing of the following fine chemicals - Methyl orange, fluorescence, procaine hydrochloride, paramino salicylic acid, isonicatinic acid hydrazide. Manufacture with flowsheets, properties uses and testing of the following Pharmaceuticals – aspirin, penicillin, calcium gluconate,

UNIT III - Manufacturing & Testing

Manufacturing procedures with flowsheets, properties, uses and testing of the following - ferric ammonium citrate, pthallic anhydride and phenol flourobenzene process and benzene sulfate process, other processes in outline only.

UNIT IV-Tablet Making and Coating

Tablet making and coating, granulation equipments, Preparation of capsules, extraction of crude drugs.

UNIT V - Sterilization

Sterilization: introduction, risk factor, methods of sterilization, heat (dry and moist), heating with bactericide, filtration, gaseous sterilization and radiation sterilization, suitable example to be discussed.

CH404 MINERAL PROCESS ENGINEERING (ELECTIVE-V)

Course Description & Objectives:

To provide a possibility to understand mineral processes for ores, industrial minerals, recycling products and mineral fuels (coal and peat).

Course Outcomes:

1. *Analyze and interpret raw field data in order to design structures in fractured rock masses using various methods (mapping surface and underground exposures; drilling, i.e. manual core logging and geophysical logging, etc.).*
2. *Design basic surface and underground structures in rock for mining and heavy civil applications (i.e. slope, underground openings, tunnels, stopes, shafts, etc).*
3. *Assess the life cycle of a mineral project from exploration to decommissioning and final closure.*
4. *Apply basic understanding of soil mechanics in order to discern whether a design problem requires more comprehensive understanding.*
5. *Determine the economic feasibility of a rock engineering design.*
6. *Determine environmental factors that impact on a rock engineering design.*
7. *Assess social, cultural, political and legal impact of a rock engineering design.*

UNIT I - Characterization & Properties of the important minerals

Names, compositions and properties of the important minerals of common metals like iron, copper, lead, zinc, tin, chromium, aluminum, manganese, gold, silver, uranium, thorium, titanium, zirconium etc.

UNIT II - Cut off, average and concentrate grades of each ore

Similar information about industrial minerals like calcite, silimanite, phosphate, granite, dolomite, magnesite, Ilmenite, rutile, zircon, garnet, monazite, pyrite, quartz, feldspar etc.

UNIT III -Beneficiation circuits for hematite and magnetite iron ores

Dry and wet processes – their scopes and limitations. Pulp densities at different stages of wet operations. Estimation of water requirements and pumping loads.

UNIT IV - Beneficiation circuits for lead, zinc and copper ores

Optimization of the grinding process for liberation of the minerals and minimization of slime loss. Scope and limitations of regrinding circuits.

UNIT V - Concentration, concentrate up gradation and separation processes for beach sand minerals

Effects of repeated cleaner operations on grades and recoveries. Overview of the beneficiation circuits of ores of gold, tin, manganese and other metals Overview of the beneficiation of lime stone, graphite and other industrial minerals

CH 406 FOOD PROCESSING TECHNOLOGY (ELECTIVE-V)

Course Description & Objectives:

To impart knowledge to the students about food processing and various unit operations involved in it, packaging, storing and preservation, food poisoning, food related hazards and safety, and transportation.

Course Outcomes:

1. *Outline the process of red and white meat slaughter, explain meat structure and inspect meat quality parameters*
2. *Process manufactured meat products to produce variety of animal food products.*
3. *Identify the areas of concern in the processing of meat products, in relation to process control, undesirable microbes and export*
4. *Explain the requirements for meat export and chemical and physiological structure of meat.*
5. *Demonstrate processing techniques used to produce a variety of milk products.*

UNIT I - Fundamentals of Food Process Engineering

Application of Quantitative methods of Material & Energy Balances in Food Engineering Practices. Constituents of Food, Quality and Nutritive aspects, Food Adulterations, Deteriorative factors and Control

UNIT II - Fluid Flow, Thermal Process Calculations

Refrigeration, Evaporation and Dehydration operations in Food Processing

UNIT III - Fundamentals of Food Canning Technology

Heat Sterilization of Canned food , Containers – metal, Glass and Flexible packaging . Canning Procedures for Fruits, Vegetables, Meat, Poultry, marine Products.

UNIT IV - Food Preservation

Preservation by Heat and Cold, Dehydration, Concentration, Drying, Irradiation, Microwave heating, Sterilization and Pasteurization, Fermentation and Pickling, Packaging Methods.

UNIT V- Food Products

Cereal Grains, Pulses, Vegetables, Fruits, Spices, Fats and Oils, Bakery, Confectionary and Chocolate Products, Soft and Alcoholic Beverages, Dairy Products , Meat , Poultry and Fish Products.

TEXT BOOKS

CH 408 NANO TECHNOLOGY (ELECTIVE-VI)

Course Description & Objectives:

The course deals about various types of nano materials and their importance. It includes the study of Nanotechnology,nano science, nano products,etc.

Course Outcomes:

1. *Understand and apply basic concepts of nanotechnology and nanoscience.*

2. *Understand the different nano-materials along with their characterization.*
3. *Understand the applications of nanomaterials in Chemical Engineering*

UNIT I - Supramolecular Chemistry

Definition and examples of the main intermolecular forces used in supramolecular chemistry. Self-assembly processes in organic systems. Main supramolecular structures.

UNIT II - Physical Chemistry of Nanomaterials.

Students will be exposed to the very basics of nanomaterials; A series of nanomaterials that exhibit unique properties will be introduced.

UNIT III - Methods of Synthesis of Nanometerials.

Equipment and processes needed to fabricate nanodevices and structures such as bio-chips, power devices, and opto-electronic structures. Bottom-up (building from molecular level) and top-down (breakdown of microcrystalline materials) approaches.

UNIT IV - Biologically-Inspired Nanotechnology

Basic biological concepts and principles that may lead to the development of technologies for nanoengineering systems. molecular nanoscale engineered devices, nanoscale biotechnologies, nano products.

UNIT V - Instrumentation for Nanoscale Characterization

Instrumentation SEM, TEM, XRD, FTIR for characterization of properties .Llimits of each technique.

TEXT BOOKS

CH410 COMPUTER APPLICATIONS IN CHEMICAL ENGINEERING (ELECTIVE – VI)

Course Outcomes:

1. *Understanding of fundamental mathematics and to solve problems of algebraic and differential equations, simultaneous equation, partial differential equations*
2. *Ability to convert problem solving strategies to procedural algorithms and to write program structures*
3. *Ability to solve engineering problems using computational techniques*
4. *Ability to assess reasonableness of solutions, and elect appropriate levels of solution sophistication*

UNIT I - Introduction

Review on programming languages, basic, FORTRAN, Review on operation system Commands, Numerical solution of first order differential equations with initial conditions, Euler's Method, Runge kutta method.

UNIT II - Spread Sheets

Application in density, molecular weight, mole and percentage compositions, empirical and molecular formula calculations, heat of mixing, gas laws, vapor pressure, chemical kinetics calculations.

UNIT III - Spread Sheets (Data Analysis)

Application in data processing, statistical analysis of data, regression analysis of variance, interpolations, graphical representations, design and development of single data bases on chemical and physical properties of substances.

UNIT IV - Numerical Methods

Roots of algebraic and transcendental equations, iterations methods, regulafalsi method, Newton – raphson method, roots of simultaneous and solution set of transcendental and algebraic equations, development of equations for heat transfer, fluid mechanics and reaction Engineering problems.

UNIT V - Mathematical Programming

Linear programming, transportation, assignment, dynamic programming in chemical engineering, formulation and solution through PC based programmes.

CH 412 FLUIDIZATION ENGINEERING (ELECTIVE – VI)

***Course Description & Objectives**:*

Studying this subject the students will learn about the extraction and production of oil and gas to meet energy needs, as well as refining of crude oil for a wide spectrum of useful products, such as petrochemicals, Chemicals, Plastics.

Course Outcomes:

1. *Ability to estimate pressure drop, bubble size, TDH, voidage, heat and mass transfer rates for the fluidized beds*
2. *Ability to write model equations for fluidized beds*
3. *Ability to design gas-solid fluidized bed reactors*

UNIT I - Phenomenon of fluidization

Fluidization regimes; Types of fluidization operations; Typical industrial applications of fluidized beds. Gross behaviour of fluidized beds.

UNIT II - Minimum fluidization velocity

Distributor and bubble formation; Bed voidage; Transport disengaging height (TDH); Bulk viscosity, fluidity and power consumption. Bubble behaviour and models of bubbling beds.

UNIT III - Flow Pattern

Gas and solid in fluidized bed and freeboard region. Heat and mass transfer in fluidized bed. Entrainment and elutriation from fluidizeded.

.

UNIT IV - Residence time distribution and size distribution of solids in fluidized bed. Circulating fluidized bed; Pneumatic transport of solids.

UNIT V - Design

Fluidized bed for physical operations, catalytic reactions and non-catalytic reactions.

16HS103 ENGINEERING MATHEMATICS - I

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- recognise and solve different types of first order ordinary differential equations.
- find the complementary functions and particular integral of second and higher order ordinary differential equations with constant coefficients.
- apply the knowledge of ordinary differential equations in some instances.
- solve ordinary differential equations, with initial conditions, numerically.
- find the local maxima/minima of given function of two variables.
- eliminate arbitrary constants/functions from given relations to form partial differential equations.
- solve linear and non-linear partial differential equations of standard types.
- classify second order partial differential equations and solve them.

SKILLS:

✓ *Solve given differential equation by suitable method.*

✓ *Compute numerical solutions of differential equation by apt method.*

✓ *Compute maxima/minima of given function.*

✓ *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with MATLAB output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*
- *Estimation of acoustic impedance of a given material.*

UNIT - 1 **L- 9, T-3**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, Homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9, T-3**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form - e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9, T-3**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9, T-3**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation - Partial derivatives, Partial derivatives of higher order; Homogeneous function, Euler's theorem, Total differential coefficient, Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L- 9, T-3**

PARTIAL DIFFERENTIAL EQUATIONS: Formation of partial differential equations, Linear (Lagrange) equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method, Second order linear equations with constant coefficients only, Classifications, Rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Basic mathematical operations using MATLAB.
2. Solving simple expressions.
3. Limits.
4. Continuity.
5. Symbolic differentiation.
6. Symbolic integration.
7. Plotting of curves.
8. Plotting of surfaces.
9. Maxima & minima of functions of one variable.
10. Maxima & minima of functions of two variable.
11. Solving first order O.D.E.
12. Euler's Method and R-K Method.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	10	-	10

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibers, Photonics, Nano and functional materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to:

- understand the applications of ultrasonics and to calculate the velocity of ultrasonic waves in liquids.
- acquire basic knowledge in Non-destructive techniques.
- understand basic concepts of laser and optical fiber which help in designing and developing new devices in emerging fields.
- grasp the basics of quantum mechanics.
- understand the fabrication of solar devices.
- use nano science and technology for innovative and compact design.
- demonstrate synthesis, properties and applications of nanomaterials and functional materials.

SKILLS:

- ✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*
- ✓ *Study the wavelengths of light sources and lasers.*
- ✓ *Estimate the efficiency of a given solar cell.*
- ✓ *Learn about the type of the optical fiber and its ability to propagate light waves from its numerical aperture.*
- ✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves - Piezoelectric method; Properties of ultrasonic waves, Types of ultrasonic waves, Determination of velocity of ultrasonic waves in solids and liquids, SONAR - Medical applications.

NON-DESTRUCTIVE TESTING: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of laser light, Spontaneous and Stimulated emission of radiation, He-Ne laser, CO_2 laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and applications.

FIBER OPTICS: Principle of optical fiber, Acceptance angle, Numerical aperture, Types of fibers, Dispersion and attenuation in optical fibers, Optical fiber communication system, Fiber optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non-linear optical behaviour of materials, Applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, Fabrication of nano materials - Ball milling - Sol-Gel method; Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics/metals, Biomaterials.

TEXT BOOKS:

1. V.Rajendran, "Engineering Physics", 7th edition, McGraw Hill Education (India) Pvt.Ltd., 2014.
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd., 1992.
3. Sukhatme S.P., "Solar Energy", 2nd edition, TMH publication, 2005.
4. Dr. Arumugam "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find the height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measure the temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	15	5	6	4	5

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The objective of this course is to direct the students towards developing their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to:

- acquire an understanding of the rules of grammar.
- strengthen their reading and listening comprehension skills to follow the academic discourse in the engineering classroom.
- have a command of basic vocabulary related to different subject areas.
- have a grasp on the mechanics of writing and express their ideas through construction of simple texts.
- attain language proficiency to participate in the classroom discussions.

SKILLS:

✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*

✓ *Apply different sub skills like top down, bottom up approaches to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*

✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*

✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*

✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **ENVIRONMENTAL CONSCIOUSNESS**
  (Climate Change, Green Cover, Pollution, Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles, Prepositions, Sentence types and construction
- Vocabulary : Root, Prefixes, Suffixes
- Composition : Paragraph writing (Descriptive and narrative)
- Laboratory Practice : Introduction to phonetics
  (Organs of Speech, Consonants, Vowels and Diphthongs, Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **EMERGING TECHNOLOGIES**
  (Solar power, Cloud computing, Nanotechnology, Wind energy (to be covered from Energy unit))
- Grammar : Time and tense (Present-past-future; Helping verbs, Modals)
- Vocabulary : Synonyms, Antonyms
- Composition : Letter writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **TRAVEL AND TOURISM**
  (Advantages and disadvantages of travel-tourism, Atithi devo bhava, Tourism in India)
- Grammar : Subject-Verb agreement, Sentence construction
- Vocabulary : Idioms and phrases
- Composition : Letter writing (Formal)
- Laboratory Practice : Situational conversations – Role - Plays
  (Introducing, Greeting, Enquiring, Informing, Requesting, Inviting)

UNIT - 4 **L-9**

- Text : **ENGINEERING ETHICS**
  (Challenger disaster, Biotechnology, Genetic engineering, Protection from natural calamities, How pertinent is the nuclear option? An environment of energy (from Energy Unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence transformation (Degrees, Voice, Speech and Synthesis)
- Vocabulary : Phrasal verbs
- Composition : Note-making, Text, Nandan Nilekani's In Search of Our Energy Solutions (from Energy Unit)
  Summarizing, Text on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational conversations, Role-Plays (Emotions, Directions, Descriptions, Agreements, Refusals, Suggestions)

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

UNIT - 5 **L-9**

- Text : **MEDIA MATTERS**
  (History of media, Language and media, Milestones in media, Manipulation by Media, Thousands march against nuclear power in Tokyo (from Energy Unit), Entertainment media, Interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail – Short message service (SMS), Writing advertisements, Reporting; Social media - Blogging, Facebook, Twitter (acceptable and non acceptable content)
- Laboratory Practice : Group discussions – (Topics from Energy Unit), Dumping of nuclear wastes, Exploration of eco-friendly energy options, Lifting of subsidies on petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	5	40	-	8	5	-

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to:

- understand the terms and concepts of Computer Science and Information Technology (hardware, software, networking, security, Internet/Web, and Technologies).
- use the products and services of computers.
- use Internet/Web services as a resource for developing shared applications.
- install different operating systems and application software.

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L-10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L-10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L-8**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and database management systems.

UNIT - 4 **L-8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and other internet applications.

UNIT - 5 **L-9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours-30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools.
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using Analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort & filter using Power Point tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, “Introduction to Computers”, 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, “Introduction to Computer Science”, 2nd edition, Pearson Education, 2011.
2. Eric Maiwald, “Fundamentals of Network Security”, 3rd edition, Tata-McGrawHill, 2004.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
48	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- understand the basic terminology used in computer programming to write, compile & debug programs in 'C' language.
- use different data types to design programs involving decisions, loops and functions.
- understand the allocation and Usage of dynamic memory.
- understand the usage of files & structures.

SKILLS:

✓ *Identify suitable data types for an application.*

✓ *Apply control statements for decision making problems.*

✓ *Use multidimension array for matrix application.*

✓ *Design a program to calculate average of a class.*

✓ *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L- 10, T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L- 9, T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L- 9, T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L- 9, T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L- 8, T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours-30

1. Compute the factors of a number.
2. Compute the average of ‘n’ numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.

ACTIVITIES:

- *Implement matrix operations.*
- *Implement malloc and calloc functions.*
- *Copy the content of one file into the other.*
- *Implement string manipulations functions.*

8. Using structure of arrays.
9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

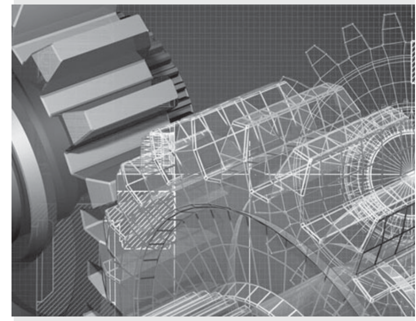
TEXT BOOK:

1. Ajay Mittal, "Programming in C - A practical Approach", 1^{st} edition, Pearson Education, India, 2015.

REFERENCE BOOKS:

1. Reema Thareja, "Introduction to C Programming", 2^{nd} edition, Oxford University Press India, 2015.
2. Herbert Schildt, C, "The Complete Reference", 4^{th} edition, Tata McGraw-Hill, 2000.
3. E. Balagurusamy, "Programming in ANSI C", 4^{th} edition, Tata McGraw- Hill, 2008.

16EE101 BASICS OF ENGINEERING PRODUCTS



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- gain knowledge and hands-on experience on various engineering products.
- install, operate, maintain and troubleshoot basic mechanical, electrical and electronic appliances.
- understand the concept of conservation of energy.
- gain awareness on choosing appropriate construction materials.

SKILLS:

✓ *Identify UPS requirements for a given load.*

✓ *Provide a Lighting scheme for specific working environment.*

✓ *Design a composition of Heating element for a particular application.*

✓ *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

✓ *Provide an earthing for Domestic Outlet.*

✓ *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembe and Assembe the Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design the Electric Wiring system for a prototype house.*
- *Design the UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L- 9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air - Conditioner and Refrigerator, Components, Assembly and disassembly; Working principle of Centrifugal and Reciprocating pumps - Types, Parts and applications, Working principle of Screw jack and its components, Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L- 10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks, Timber - Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel, Simple layout design, Paints, Tiles, fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L-8**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems, Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods, Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and applications.

MOTOR: Electric Motors, Classification, Construction and working principles of motors used in Domestic applications, Mixer grinder, Ceiling and exhaust fan, Hair dryer, Washing machine, Water pump, Air coolers, Vacum cleaner, Computer cooling motor, Electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, Radio, Remote control, Telephone, Microwave oven, Cell phone, PA system, Induction stove, WiFi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box
13. Ceiling Fan and Mixer
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Total Hours :

L	T	P
0	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. The objective of this course is to strengthen the comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to:

- use functional English to speak and express themselves in different social contexts
- write simple letters, narratives, factual reports and descriptive passages for both academic and non-academic purposes in English.
- gain proficiency to undergo Preliminary English Test (PET), an Intermediate Level English Certification Test administered by Cambridge English Language Assessment, UK.

SKILLS:

✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*

✓ *Read and extract information from different texts and draw inferences by understanding elements like tone and transitional words.*

✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*

✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/Others, Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, Intonation and accent

Speaking – Articulating syllables clearly, Speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, Use of Nouns, Adjectives, Verbs, Prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things and Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages, True or False

Writing – Rewording, Sentence transformation, Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, Short conversations

Vocabulary / Grammar – Use of Adjectives/Adverbs, Comparatives and Superlatives

PRACTICE: Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations, Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines, Inferences, True/False

Writing – Developing hints, Writing short messages/paragraphs

Listening – Searching for factual information, Gap filling

Speaking – Snap Talks, JAM, Elocution

Vocabulary / Grammar – Prepositions, Phrasal Verbs, PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating, Predicting, Negotiating, Planning

SKILL FOCUS:

Reading – Reading for evaluation and appreciation, Comprehension

Writing – Letters, e-mails, 7 C's

Listening – Following long conversations / Interviews

Speaking – Discussions, Debate, Descriptions

Vocabulary / Grammar – Modals, Conditionals, Verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

UNIT - 5 **P-6**

FUNCTIONS: Requesting, Denying, Suggesting, Persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements, Presentations

Vocabulary / Grammar - Punctuation, Cloze tests

PRACTICE: Objective PET Units 25 – 30

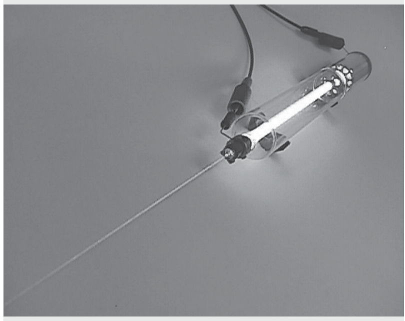
TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, "Objective PET", Student's Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.
2. Annette Capel and Rosemary Nixon, "Introduction to PET", Oxford University Press.

16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course Description and Objectives:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the experiments.The students have to perform at least ten from the list of experiments.

Course Outcomes:

The student will be able to:

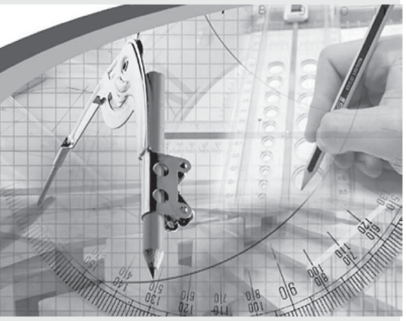
- realize the concept of resonance by conducting the experiments of AC sonometer and Melde's experiment.
- acquire the knowledge on magnetic field theory and thermal conductivity by conducting experiments, field along the axis of a circular coil and thermal conductivity of bad conductor
- understand the concepts of light by conducting the experiments of determination of wave length, numerical aperture of an optical fibre and also from V–I characteristics of Solar cell and LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Determination of Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – Efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect - Determination of Seebeck coefficient of a thermo couple.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.



16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- carry out the basic operations of matrix algebra.
- use row operations to reduce a matrix to echelon form, normal form.
- determine consistency of a system linear equations.
- compute eigen values and eigen vectors.
- evaluate double integrals and triple integrals.
- evaluate double integrals in polar coordinates.
- utilize Cartesian and polar coordinates to find area.
- understand the concept of gradient, divergance and curl.
- apply vector integral theorems in finding surface and volume integrals.

SKILLS:

- ✓ *Appreciate various methods to find the rank of a matrix.*
- ✓ *Solve given system of linear equations.*
- ✓ *Compute Eigen values and Eigen vectors of a matrix.*
- ✓ *Compute the power of a matrix by suitable method.*
- ✓ *Evaluate Multiple integrals.*
- ✓ *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L- 9, T-3**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from, Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L- 9, T-3**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, Properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, Diagonalisation of a matrix.

UNIT - 3 **L- 9, T-3**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in polar coordinates, Change of order of integration, Change of variables, Applications to area in cartesian coordinates and polar coordinates, Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L- 9, T-3**

VECTOR DIFFERENTIATION: Vector function, Differentiation, Scalar and vector point function, Gradient, Normal, Divergence, Directional derivative, Curl, Vector identities.

UNIT - 5 **L- 9, T-3**

VECTOR INTEGRATION: Line integral, Surface integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Matrix Algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc).
13. Interpolation.

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS:

1. Srimanta Pal and Subodh C. Bhunia, "Engineering Mathematics", Oxford Publications, 2015.
2. B. V. Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.
3. R K Jain and S R K Iyengar, "Advanced Engineering Mathematics", 2nd edition, Narosa Publishing House, 2007.
4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with MATLAB output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with MATLAB output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to:

- understand the limitations of using hard water for domestic and industrial purposes.
- choose and apply suitable methods to soften the hard water for industrial and domestic applications.
- understand electrochemistry and its importance for applications such as fuel cells, modern lithium ion batteries etc.
- understand the types of corrosion and their implications followed by their control and prevention methods.
- familiarize the preparation, properties and applications of various polymers.

SKILLS:

- ✓ *Analyse the total hardness of water sample.*
- ✓ *Understand the basic principles involved in various batteries.*
- ✓ *Understand the mechanisms of corrosion and various controlling methods.*
- ✓ *Synthesize various polymers.*
- ✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water, Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water, Scales and sludges, Caustic embrittlement, Boiler corrosion, Priming and foaming, Softening methods - Zeolite process, Ion Exchange process; Desalination of brackish water - Reverse osmosis, Electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential, Electrochemical series, Nernst equation, Reference electrodes, Calomel and standard hydrogen electrode, Ion selective electrode, Glass electrode, Determination of pH using glass electrode; Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cells - Hydrogen oxygen, Methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion, Mechanisms of wet corrosion, Bimetallic corrosion, Concentration cell corrosion, Factors influencing the rate of corrosion; Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction, Types of polymerization - Preparation, Properties and applications of polyethylene, PVC, Teflon, Bakelite, Urea formaldehyde, Silicones; Rubber, Vulcanization, Synthetic rubbers - Buna-S, Buna-N, Neoprene; Introduction to conducting polymers; Poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV-Visible spectroscopy - Beer, Lambert's law, Qualitative and quantitative analysis, Block diagram of UV-Visible spectrophotometer, IR spectroscopy - Types of vibrations, Block diagram of IR spectrophotometer.

TEXT BOOKS:

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.

1. K.S. Maheswaramma and Mridula chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.

2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.

3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.

4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Total Hours :

L	T	P
15	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
6	15	-	5	-	-

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to:

- sketch engineering objects in the freehand mode.
- create geometric construction with hand tools.
- create dimensions of objects.
- prepare plan and elevation of any pictorial view.
- draw freehand lettering.
- make isometric sketches using graphics.
- draw orthographic multi-view sketches using graphics.

SKILLS:

✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*

✓ *Draw geometrical objects like polygons, solids of different types.*

✓ *Visualize the objects in real time situations.*

✓ *Develop 3D views (isometric views).*

UNIT - 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Types of lines, Lettering, Dimensioning, Construction of polygon and conics (Ellipse, Parabola and Hyperbola by general method), Ellipse by oblong method.

UNIT - 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection, Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes, Projections of planes, Simple planes, Planes inclined to one reference planes.

UNIT - 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT - 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder, Simple orthographic views into isometric views through AutoCAD.

UNIT - 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS:

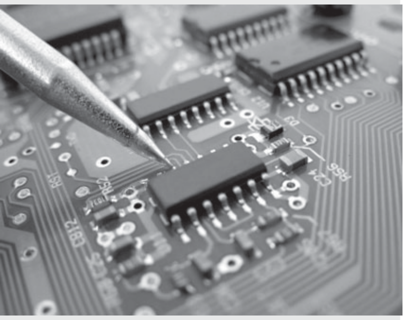
1. N.D.Bhatt, "Engineering Drawing", 53rd edition, Charotar Publication, 2014.
2. Basant Agrawal , C.M.Agrawal "Engineering Drawing" , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS:

1. J. hole, "Engineering Drawing", 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, "Engineering drawing", 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	5

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- understand the notation and usage of components in electric circuits.
- analyze AC (single and three phase) and DC, AC circuits using different methods and laws.
- operate various electrical machines.
- understand the concepts of semiconductor devices and their operation.

SKILLS:

- ✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*
- ✓ *Develop a simple loop generator.*
- ✓ *Design a voltage regulator using Zener diode.*
- ✓ *Design a half wave rectifier using PN junction diode.*
- ✓ *Design a full wave rectifier using PN junction diodes.*

UNIT - 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit concepts, Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements, Ohm's Law, Kirchhoff's Laws - Application to simple series, Parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT - 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only, Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT - 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT - 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator, Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems), D.C. Motor, Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT - 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours-30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

5. Measurement of Power in single phase resistive load circuit.
6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

TEXT BOOKS:

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to:

- analyse the total hardness present in water samples.
- determine the total alkalinity of water used in industries.
- acquire the knowledge on polymers used as insulators.
- familiarize advanced techniques in chemical analysis using conductometer and pH meter.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS:

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I, 2009.
2. Dr.Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	20	4	-	4	-

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

The student will be able to:

- observe and integrate the diverse information from sources outside the classroom.
- think critically, creatively, resourcefully and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness.
- adapt eco-friendly technologies in order to maintain hygienic conditions.
- understand the human activities that are detrimental to environment.
- collaborate across diverse disciplines to identify and create solutions that conserve and help maintain biodiversity in the long term.
- discuss the issues involved in the generation of renewable energy resources.

SKILLS:

✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*

✓ *Gain perspectives to adrress the challenges, improvise and devise solutions.*

✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*

✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*

✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT - 1 **L-6**

NATURAL RESOURCES: Environmental studies - Definition scope and its importance, Need for public awareness; Natural resources - Forest resources, Deforestation, Water resources, Properties and conflicts, Mineral resources, Extraction and impacts, Food resources, Modern agriculture methods, Fertilizer pesticide problems, Water logging, Salinity, Energy resources, Renewable and non-renewable energy resources, Harness technology, Solar energy technologies, Land resources, Land degradation, Soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY: Ecosystem - Concept, Structure and functions of an ecosystem, Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems; Biodiversity - Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT - 3 **L-6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY: Solid waste management - Causes, Effects and control measures of municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and noise pollutions, Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, definitions, Applications of the remote sensing; Innovative practices - Objectives, Innovative practices in agriculture and forest community, Bio-villages; Green technology for sustainable development; Life cycle assessment and its concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA: Sustainable development, Water conservation, Cloud seeding, Rainwater harvesting methods watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental legislation - Wildlife protection act, Water act, Forest conservation act, Air act, Environmental protection act; Environmental Impact Asssssment (EIA) - Introduction, Definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed projects / industry / developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION: Food sanitation - Food and drugs Act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water, Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions; Role of youth in the development, Promoting activities, Youth as initiators, Field work/environmental visit - Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment, Common plants, Insects, Birds; Study of simple ecosystems - Pond, River, Hill slopes etc., Visit to industries/ water treatment plants/effluent treatment plants.

TEXT BOOKS:

1. Anubha Kaushik and CP Kaushik, “Perspectives in Environmental Studies”, 5th edition, 2016
2. Benny Joseph, “Environmental studies”, 2nd edition, McGraw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, “A Text book of Environmental Studies”, HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, “A Text book of environmental science and Technology”, B S Publications, 2008.
3. Dr. K. Mukkanti, “A Text book of Environmental Studies”, S.CHAND and Company Ltd, 2009.

5. C. S. Rao, Wiley Eastern Ltd, “Environmental Pollution Control Engineering”, New Age International Ltd, 2001.
6. Dr. M. Anji Reddy, “Introduction to Remote Sensing”, B S Publications, 2004.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*

16ME102 ENGINEERING MECHANICS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	30	-	5	-	5

Course Description and Objectives:

Engineering Mechanics applies principles of mechanics to solve common engineering problems. The goal of this course is to expose students to problems in mechanics as applied to real-world scenarios.

The course uses the Laws of Mechanics to predict forces in machines and structures. This course is prerequisite for courses like Mechanics of Machines, Stress Analysis, Design of Mechanical Systems and others.

Course Outcomes:

The student will be able to:

- use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- apply basic knowledge of mathematics and physics to solve real-world problems such as dams, bridges, fly overs, buildings, large structures etc.,

SKILLS:

✓ Solving classical mechanics problems involving system of forces

✓ In-depth understanding of rigid bodies.

✓ Applying principles of centre of gravity and moment of inertia

UNIT-1 **L-10, T-3**

GENERAL PRINCIPLES: Introduction to engineering mechanics; idealization in mechanic's basic concepts; vectors and scalar quantity; laws of mechanics.

Force system and resultant: Concept of force; representation of force; system of forces; resolution of forces using rectangular components.

Moments and couples: Introduction; moment of force; varignon's theorem; resultant of parallel forces; couple and moment of couple; characteristic of couple.

UNIT -2 **L-8, T-3**

EQUILIBRIUM OF BODIES: Conditions of equilibrium for a coplanar force system and coplanar non parallel non concurrent force system; principle of equilibrium (two ; three ; force principle) ; Lami's theorem

Truss: Introduction; classification of truss; fundamental of truss; analysis of truss (method of joints and method of section)

UNIT-3 **L-10, T-3**

FRICTION: Introduction ; classification of friction ; coefficient of friction ; laws of friction ; angle of friction ; angle of repose ; cone of friction ; ladder friction ; wedge friction

UNIT-4 **L-10, T-3**

CENTROID: Introduction; centroid of lines; centroid of surfaces; determine of centroid of simple figures; centroid of composite figures; centroid of a parabolic spandrel

Center of Gravity: Introduction; center of gravity; location of center of gravity - right circular cone and solid hemisphere; center of mass; theorem of Pappus.

UNIT-5 **L-10, T-3**

MOMENT OF INERTIA: Moment of inertia of plane areas ; polar moment of an area ; radius of gyration of area; parallel axis theorem ;perpendicular axis theorem; moment of inertia of composite areas. Mass moment of inertia; introduction; radius of gyration of mass; mass moment of inertia of rod; rectangular plate ; right circular cylinder ; circular ring ; circular plate.

3. http://ocw.mit.edu/courses/civil-and-environmental-engineering/1-050-engineering-mechanics-i-fall-2007/index.htm

ACTIVITIES:

- *Analysis of forces acting on a structure*
- *Model preparation of simple bridges*
- *Compare different types of frictions acting on the body*
- *Locate centre of gravity and moment of intertia of plain figures*
- *Determine mass moment of intertia of simple solid bodies.*

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	20	-	-

Course Description and Objectives :

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes :

The student will be able to:

- identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.
- fabrication of wooden joints and understand joining of metals.
- make metal joints and sheet metal work.
- make metal tools like knives, needles, swords, arrows etc.

SKILLS:

✓ *Prepare wooden and metal furniture.*

✓ *Electrical wiring and power supply in residences.*

✓ *Make funnels, trays, locker, steel almirahs etc.*

✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*

✓ *CNC machines and various machining operations and processes.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin smithy and Black smithy.
4. House wiring.
5. Foundry and welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS:

1. S.K. Hazra Choudhury, “Elements of workshop Technology”, 11th edition, Media Promoters, 1997.
2. Gopal, T.V., Kumar, T., and Murali, G., “A first course on workshop practice: Theory, Practice and Work Book”, Suma Publications, Chennai, 2005.
3. Venkatachalapathy, V. S, “First year Engineering Workshop Practice”, Ramalinga Publications, Madurai, 1999.

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

16HS202 PROBABILITY AND STATISTICS

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

CS	WA/RA	SSH	SA	S	BS
-	10	45	-	-	-

Course Description and Objectives:

This course deals with descriptive statistics, correlation, regression, and their applications, probability, theoritical distributions and testing of hypothesis. The objective of this course is to enable the student to understand and apply statistical techniques, curve fitting, correlation and regression, probability and also to make the student familiar with discrete, continuous distributions and testing of hypothesis.

Course Outcomes:

The student will be able to:

- distinguish between quantitative and categorical data and represent the data in graphical and tabular forms.
- calculate and interpret measures for the centre and spread of a data set.
- decide how and when to use the normal model.
- calculate and interpret correlation coefficient and regression lines.
- understand the rules of probability and apply them.
- compute probabilities using theoritical distributions.
- test hypothesis for population parameters.

UNIT - 1 **L-12**

DESCRIPTIVE STATISTICS: Basic Definitions, Frequencies, Graphical Representation, Histogram, Ogive curves, Measures of Central tendency, Arithmetic mean, Median, Mode, mean deviation, standard deviation, Symmetry and Skewness, Karl Pearson's Coefficient of skewness.

UNIT - 2 **L-12**

CURVE FITTING, CORRELATION AND REGRESSION: Least squares method, curve fitting (straight line and parabola only), Covariance, Correlation, Types, Pearson's Coefficient of correlation, Rank correlation, Spearman's rank correlation.Regression, Regression lines.

UNIT - 3 **L-12**

PROBABILITY: Introduction, Definition (Classical and Axiomatic approach), Addition theorem, Conditional probability, Multiplication theorem, Total probability, Bayes theorem.

UNIT - 4 **L-12**

DISTRIBUTIONS: Random variables, Discrete and Continuous variables, Introduction to Distributions.

BINOMIAL DISTRIBUTION: Definition, Mean and Standard deviation, Recurrence relation, Applications, Fitting of binomial distribution.

POISSON DISTRIBUTION: Definition, Mean and Standard deviation, Recurrence relation, Poisson Distribution is an approximation of Binomial distribution, Applications, Fitting of Poisson distribution.

NORMAL DISTRIBUTION: Definition, Normal curve, Mean and Standard deviation, Median, Mode, Normal Distribution applications.

UNIT - 5 **L-12**

TESTING OF HYPOTHESIS: Population and sampling, Parameters and Statistics, Types of sampling, Test of hypothesis and test of significance, Null hypothesis, Errors, Level of significance, Confidence Limits, Testing large samples, Sample distribution of proportion, t-distribution for small sample, difference between means of small sample, Chi square test for goodness of fit, Chi-square test for test of independence.

TEXT BOOKS:

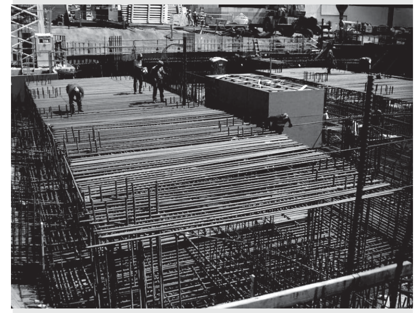
16CE201 BUILDING MATERIALS AND CONCRETE TECHNOLOGY



Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	20	48	6	12	3	5

Course Description and Objectives:

This course provides an understanding of various engineering properties of building materials like stones, bricks, lime, timber, steel and paints. The objective of this course is to provide basic knowledge about properties and testing of various building materials used in civil constructions.

Course Outcomes:

The student will be able to:

- understand the properties of all construction materials including bricks, lime, timber etc.
- understand the properties of ingredients of concrete.
- analyse behavior of concrete in its fresh and hardened state.
- analyse concrete design mix.

SKILLS:

✓ *Identify different composition of building materials*

✓ *Make concrete mix proportions for different grades*

✓ *Test concrete cube to calculate characteristic compressive strength.*

✓ *Test fresh concrete to understand creep and shrinkage.*

✓ *Analyse engineering properties of special concretes such as green concrete, light weight concrete, fiber reinforced concrete etc.*

ACTIVITIES:

- *Calculate the water cement ratio of a concrete for a specified grade.*
- *Prepare different grades of concrete.*
- *Test concrete cube of M20 and M30 grade and find out their characteristic compressive strength using UTM.*
- *Prepare special concrete mixes like green concrete, pervious concrete and test their engineering properties.*
- *Calculate the strength of concrete at age of 7days and 28 days of curing.*

UNIT - 1 **L-9, T-3**

BUILDING MATERIALS:

STONES: Qualities of a good building stones, Common building stones of India.

BRICKS: General, Composition of good brick earth, Harmful ingredients in brick earth, Manufacturing of bricks by clamp burning and kiln (Hoffman's kiln only) burning, Qualities of good bricks, Tests for bricks, Classification of bricks, Size and weight of bricks.

LIME: General, Definitions, Sources of lime, Constituents of limestones, Classification of limes, Properties of fat lime and hydraulic lime, Manufacture of lime.

TIMBER: Definition, Structure of a tree, Qualities of good timber, Decay of timber, Seasoning of timber, Preservation of timber, Advantages of timber construction.

UNIT - 2 **L-9, T-3**

CEMENT AND AGGREGATES: CEMENTS: Portland cement, Chemical composition, Hydration, Setting of cement, Structure of hydrated cement, Tests on physical properties, Different grades of cement.

AGGREGATES: Classification, Source, Size and shape, Texture and influence of texture on strength, Specific gravity of aggregates, Moisture in aggregates, Bulking of fine aggregate, Methods used for determination of moisture content of aggregates, Grading of aggregates, Sieve analysis, Standard grading curve, Grading limits of fine aggregates as per BIS.

UNIT - 3 **L-9, T-3**

FRESH CONCRETE AND ADMIXTURES: Workability, Factors affecting workability, Measurement ofworkability by different tests, Setting times of concrete, Effect of time and temperature on workability, Segregation and bleeding, Mixing and vibration of concrete, Methods of curing, Quality of mixing water.

ADMIXTURES: General, Plasticizers and super plasticizer, Dosage, Mixing procedure, Equipment, Effect of super plasticizers on the properties of hardened concrete, Retarders, accelerators, Air-entraining admixtures, Factors affecting amount of air-entrainment, Effect of air-entrainment on the properties of concrete, Fly ash, Effect of fly ash on fresh and hardened concrete, High volume fly ash concrete, Silica fume, Available forms, Effect of silica fume on compressive strength of concrete, Construction chemicals for curing, Construction chemicals for water proofing.

HARDENED CONCRETE: General, Water-cement ratio, Gel/space ratio, Gain of strength with age, Maturity concept of concrete, Effect of maximum size of aggregate on strength.

TESTING OF HARDENED CONCRETE: Compression tests, Factors affecting strength, Flexure test, Splitting tests, Non-destructive testing methods, Codal provisions for NDT.

UNIT - 4 **L-9, T-3**

ELASTICITY, CREEP & SHRINKAGE: Modulus of elasticity, Dynamic modulus of elasticity, Poisson's ratio, Creep of concrete, Factors influencing creep, Relation between creep and time, Nature of creep, Effects of creep, Shrinkage, Types of shrinkage.

DURABILITY OF CONCRETE: Factors contributing to cracks in concrete, Sulphate attack and methodsof controlling sulphate attack, Chloride attack, Corrosion of steel and its control.

UNIT - 5 **L-9, T-3**

MIX DESIGN: Factors in the choice of mix proportions, Quality Control of concrete, Statistical methods, Acceptance criteria, proportioning of concrete mixes by various methods, BIS method of mix design.

SPECIAL CONCRETES: Light weight aggregates, Light weight aggregate concrete, Fiber reinforced concrete, Different types of fibers, Factors affecting properties of F.R.C, High performance concrete, Self-Compacting Concrete and High Performance Concrete.

TEXT BOOKS:

1. M. S. Shetty, "Concrete Technology", 1st edition, S.Chand and Co publications, 2005.

3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	20	48	6	12	3	5

Course Description and objectives:

This course deals with the basic concepts of fluid flow, basic equations of continuity, energy and momentum. In addition, the course offers knowledge on various flow measuring devices. The objective of this course is to provide knowledge on basic properties of fluid in static and kinematic state and study of laminar and turbulent flow through pipes.

Course Outcomes:

The student will be able to:

- gain insights into properties of fluids like viscosity, density, specific weight etc,.
- understand basic definitions related to fluids and fluid mechanics.
- measure pressure in fluid-flowing pipes and vessels.
- handle different kinds of pressure measuring instruments.
- apply continuity equation and energy equations in flow measurements.

SKILLS:

✓ *Differentiate between Newtonian and Non Newtonian fluids*

✓ *Determine fluid pressure using different types of gauges*

✓ *Determine hydrostatic forces on a body immersed in a fluid*

✓ *Use flow measuring devices like pitot tube*

ACTIVITIES:

- *Measure weight and volume to calculate specific weight, mass density and specific gravity of various fluids like water, petrol, oil etc.*
- *Measure pressure at different points of a tank containing two or three immiscible liquids using a simple manometer.*
- *Prepare a model of hydraulic lift to demonstrate the concept of Pascal's law.*
- *Measure the depth of immersion of a floating object using the buoyancy principle.*

UNIT - 1 **L-9**

FLUIDS: Definition, Ideal fluids, Real fluids, Newtonian and non-Newtonian fluids.

PROPERTIES OF FLUIDS: Units of measurement, Mass density, Specific weight, Specific volume, Specific gravity, Viscosity, Surface tension and Capillarity, Compressibility and Elasticity.

MEASUREMENT OF PRESSURE: Pressure at a point in a static fluid, Pressure variation in an incompressible static fluid, Atmospheric pressure, Gauge pressure, Vacuum pressure, Absolute pressure, Manometers, Bourdon pressure gauge.

UNIT - 2 **L-9**

HYDROSTATIC FORCES: Forces acting on immersed plane surfaces, Center of pressure, Forces on curved surfaces.

BUOYANCY: Conditions of equilibrium for floating bodies, Meta-center and meta-centric height, Experimental and analytical determination of meta-centric height.

UNIT - 3 **L-9**

FLUID KINEMATICS: Types of Flows, Steady and unsteady flows, Uniform and non-uniform flows, Stream lines, path lines, Stream tubes, Principles of conservation of mass, Equation of continuity, Acceleration of fluid particles, local and convective, Rotational and irrotational motions, Free and forced vortex, Velocity potential and stream function, Flow net.

FLUID DYNAMICS: Euler's equations of motion and integration of Euler's equations, Bernoulli's equation for incompressible fluids.

UNIT - 4 **L-9**

FLOW MEASURING DEVICES: Pitot tube, Venturimeter, Orifice meter, Orifices and mouth pieces, Time of emptying of tanks by orifices, Sharp edged rectangular, Triangular and trapezoidal notches, Francis formula, Velocity of approach, End contractions, Cippoletti Weir.

MOMENTUM EQUATION AND ITS APPLICATION: Development of momentum equation by control volume concept, Momentum correction factor, Applications, Forces on pipe bend.

UNIT - 5 **L-9**

ANALYSIS OF PIPE FLOW: Darcy's equation, Minor losses, Pipes in series, Pipes in parallel, Total energy line and hydraulic gradient line, Hydraulic power transmission through a pipe, Siphon, Water hammer.

LAMINAR FLOW: Reynolds experiment, Characteristics of laminar flow, Steady laminar flow through a circular pipe (Hazen poiseuilles equation).

TURBULENT FLOW IN PIPES: Characteristics of turbulent flow, Prandtl's mixing length theory, Hydro dynamically smooth and rough boundaries, Velocity distribution, Friction factor for pipe flow, Variation of friction factor with Reynolds number, Moody's chart.

LABORATORY EXPERIMENTS

LIST OF EXPERMENTS Total hours: 30

1. Calibration of Venturimeter.
2. Calibration of Orifice meter.
3. Friction factor for a given pipe line.
4. Head loss due to sudden contraction in a pipeline
5. Verification of Bernoulli's equation
6. Coefficient of discharge of Mouthpiece
7. Coefficient of discharge of Orifice
8. Discharge by V-Notch
9. Discharge by Rectangular – Notch

16CE203 SOLID MECHANICS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	-	20	46	6	12	3	5

Course Description and Objectives:

The course deals with various engineering properties of solid materials and calculation of internal stresses and strains produced in the material. The objective of this course is to determine shear force and bending moment in beams and columns and also to impart students the knowledge to understand the behavior of metal rods, cables and thin cylinders under the action of applied loads.

Course Outcomes:

The student will be able to:

- calculate internal stresses and strains to know mechanical behavior of solid material under the externally applied loads and forces.
- find out of shear forces and bending moments of structural components like beams, columns, and slabs, for different load cases.
- calculate the developed internal stresses in beams under flexural actions.
- calculate torsional forces developed in components with circular cross sections.
- analyse thin cylinders filled with fluid at an internal pressure.

SKILLS:

✓ *Determine shear force and bending moment at a given section of a beam.*

✓ *Determine principal stresses and principal strains.*

✓ *Determine shear stress and bending stresses in all types of beams.*

✓ *Calculate biaxial stresses on an inclined plane.*

✓ *Analyse stability of columns by applying* Euler's and Rankine's formula.

UNIT - 1 **L-9, T-3**

SIMPLE STRESSES AND STRAINS: Elasticity and plasticity, Types of stresses and strains, Hook's law, Stress, Strain diagram for mild steel, Working stress, Factor of safety, Lateral strain, Poisson's ratio and volumetric strain, Elastic moduli and the relationship between them, Bars of varying section, Composite bars, Temperature stresses.

UNIT - 2 **L-9, T-3**

PRINCIPAL STRESSES AND STRAINS: Introduction, Stresses on an inclined section of a bar under axial loading, Compound stresses, Normal and tangential stresses on an inclined plane for biaxial stresses, Two perpendicular normal stresses accompanied by a state of simple shear, Mohr's circle of stresses, Principal stresses and strains, Analytical and graphical solutions. Introduction to Failure Theories.

THIN CYLINDRICAL SHELLS: Introduction, Hoop and Longitudinal stresses and strains, Thin spherical shell stresses.

UNIT - 3 **L-9, T-3**

SHEAR FORCE AND BENDING MOMENT: Definition of beam, Types of beams, Concept of shear force and bending moment, S.F and B.M diagrams for cantilever, Simply supported and overhanging beams subjected to point loads, Uniformly distributed load, Uniformly varying loads and combination of these loads, Point of contra flexure, Relation between S.F, B.M and rate of loading at a section of a beam.

SHEAR STRESSES: Derivation of formula, Shear stress distribution across various beam sections like rectangular, Circular, triangular, I, T, angle sections.

UNIT - 4 **L-9, T-3**

FLEXURAL STRESSES: Theory of simple bending, Assumptions, Derivation of bending equation: M/I = f/y = E/R, Neutral axis, Determination bending stresses, section modulus of rectangular and circular sections (Solid and Hollow), I, T, Angle and Channel sections, Design of simple beam sections.

TORSION: Introduction, Torsion equation, Shear stress distribution for circular solid and hollow shafts, Stepped shafts, Shafts fixed at both the ends.

UNIT - 5 **L-9, T-3**

DIRECT AND BENDING STRESSES: Stresses under the combined action of direct loading and B.M, core of a section, Determination of stresses in the case of dams, Conditions for stability.

COLUMNS AND STRUTS: Introduction-types of columns, Euler's formula, Equivalent length-end conditions, Rankine's formula, Slenderness ratio.

TEXT BOOKS:

1. S. S. Bhavikatti, "Strength of Materials", 3rd edition, Vikas Publishing House, 2008.
2. S. Ramamrutham, "Strength of Materials", 7th edition, DhanpatRai Publishing House, 2011.

REFERENCE BOOKS:

1. L. N. Srinath, "Advanced Mechanics of Solids", 3rd edition, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2009.
2. S. Timshenko, "Strength of Materials", 3rd edition, Tata McGraw Hill Publishing Company Ltd., New Delhi, 2004.
3. Vazirani and Ratwani, "Analysis of Structures", 17th edition, Khanna Publishers, 2007.
4. Sadhu Singh, "Strength of Materials", 8th edition, Khanna Publishers, 2003.

ACTIVITIES:

- *Analyze stress strain variation in MS bar under tension, draw stress strain curve and find out Young's modulus for the tested specimen.*
- *Draw Mohr's circles for all possible combinations of biaxial stresses on an inclined plane and find out principal stresses .*
- *Calculate all possible forces acting on an simply supported beam in U-Block and draw bending moment and shear force diagrams along the span.*
- *Find out torsional rigidity of circular shaft by conducting laboratory test.*
- *Find out slenderness ratio for all columns in the class room and analyze them using Rankine's formula.*

16CE204 SURVEYING-I

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	20	48	6	12	3	2

Course Description and Objectives:

This course provides knowledge on various equipments for land surveying, such as chains, tapes, compass, theodolites and plane tables along with their accessories. The objective of this course is to impart knowledge of various surveying instruments to find out horizontal and vertical measurments.

Course Outcomes:

The student will be able to:

- measure all the land details including horizontal distances, elevations, and areas with chain, compass, and levelling instruments.
- find horizontal and vertical angles to simplify the calculations involved in height and distance measurements of inaccessible points.
- utilise Compasses and Theodolites to construct closed and open traverses for finding out land areas in large scales.

SKILLS:

✓ *Draw a contour map by taking levels using auto level.*

✓ *Create a longitudinal profile of a road.*

✓ *Create a transverse profile of a road.*

✓ *Map an area using chain survey.*

✓ *Map an area using compass survey.*

UNI T- 1 **L-9**

SURVEYING AND MEASUREMENTS: Surveying, History, Definition, Classification, Principles of surveying, Plan and map, Measurements, Basic Measurements and methods, Scale, Scales used for Maps and plans.

CHAIN SURVEYING: (Linear Measurements**)** Different methods, Ranging out, Chaining a line on a flat ground, Chaining on an uneven or a sloping ground, Chain and Tape corrections, Degree of accuracy, Principles of chain surveying, Basic definitions, Well, Conditioned Triangle, Instruments used in chain survey, Field book, Field work, Offsets, Cross Staff survey, Obstacles in chain survey.

UNIT - 2 **L-9**

COMPASS SURVEYING: COMPASS: Types, Bearings and Angles, Prismatic compass, Magnetic Dip and Declination, Local attraction, Compass traversing, Fieldwork, Plotting of a compass traverse, Errors in Compass surveying, Limits of accuracy.

UNIT - 3 **L-9**

SIMPLE LEVELLING: Basic definitions, Curvature and Refraction, Different methods of levelling, Classification of direct levelling methods, Levels, Dumpy level, Tilting level, Auto level, Sensitivity of a level tube, Levelling staff, Level field book, Profile levelling, Cross sectioning, Reciprocal levelling, Sources of errors in levelling, Degree of Precision.

CONTOURING: Methods of representing Relief, Contouring, Contour interval, Characteristics of contours; Methods of locating contours, Direct and indirect methods contouring, Interpolation and sketching of contours, Location of a contour gradient, Ceylon Ghat Tracer, Uses of contour maps, Indian Pattern Tangent Clinometers.

UNIT - 4 **L-9**

VERNIERTHEODOLITE: Basic definitions, Fundamental lines and desired relations, Temporary adjustments, Measurement of a horizontal angle, Repetition and reiteration methods of horizontal angle measurement, Measurement of vertical angle, Sources of errors in Theodolite survey.

UNIT - 5 **L-9**

PLANE TABLE SURVEYING: Plane table and its accessories, Setting up, Plane tabling methods, Resection by trial and error method, Three point problem, Errors in plane tabling.

ERRORS IN SURVEYING: Accuracy, Precision, Sources of errors, Types of errors and their propagation, Measures of precision, Weights of measurements, Degree of accuracy.

ACTIVITIES:

- *Transfer Benchmark from near-by established control points.*
- *Take details of an area using prismatic compass.*
- *Map a large area by using plane table after doing resection using two and three point problem methods.*
- *Create a contour map using auto-level by shifting the instrument.*

ACTIVITIES:

- *Transfer Benchmark from near-by established control points.*
- *Take details of an area using prismatic compass.*
- *Map a large area by using plane table after doing resection using two and three point problem methods.*
- *Create a contour map using auto-level by shifting the instrument.*

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Chain & Compass Survey

1. Chaining of a line using Chain / Tape and Recording of details along the chain line.
2. Measurement of area – Cross staff survey.
3. Traversing by compass and graphical adjustment.
4. Determination of distance between two inaccessible points.

Simple Levelling

5. Measurement of elevation difference between two points using any levelling Instrument
6. Elevation difference between two points by reciprocal levelling method.
7. Profile levelling – plotting of profile.
8. Contouring of a small area by method of blocks using plane table survey
9. Determination of the distance between two inaccessible points.
10. Plotting of a building by plane table traversing
11. Resection by trial and error method by using theodolite
12. Measurement of horizontal and vertical angles.
13. Determination of distance between two inaccessible points.

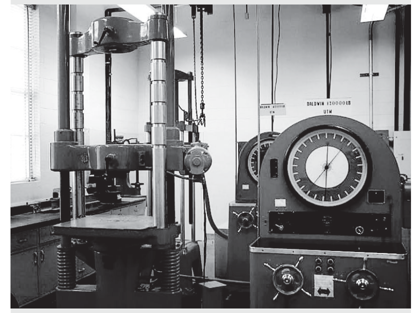
TEXT BOOKS:

1. B. C. Punmia, “Surveying” Vol.1 and 2,15th edition, Laxmi publishers, 2005.
2. Dr. K. R. Arora, “Surveying” Vol. 1, 10th edition, Standard Book House, 2008.

REFERENCE BOOKS:

1. A. M. Chandra, “Plane Surveying”, 2nd edition, New Age International (P) Ltd.2006.
2. Arthur Bannister and Stanly Reymond, “Surveying”, 7th edition, Prentice Hall and Reymand Baker Addison - Wesly, 1998.

16CE205 MATERIAL TESTING LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
20	48	6	12	3	5

Course Description and Objectives:

The course provides methods to evaluate the mechanical and physical properties of steel, wood and cement by conducting various experiments. The objective is to give students hands on experience in testing of engineering material and analysis of experimental results.

Course Outcomes:

The student will be able to:

- find the Young Modulus, torsional strength, hardness and tensile strength of given specimens
- determine impact value and crushing value of coarse aggregates
- calculate the compressive strength of concrete cubes and bricks
- find the physical properties of given coarse aggregate, fine aggregate and cement samples

SKILLS:

✓ *Test the tensile strength of steel.*

✓ *Test the cement quality.*

✓ *Determine the strength of concrete cube.*

✓ *Find out workability of concrete.*

Note: A minimum of nine (09No) shall be done and recorded.

ACTIVITIES:

- *Study of characteristics of HYSD bars*
- *Testing of initial and final setting time of cement.*
- Finding the impact resistance of the given materials.
- Compressive strength of Cement.

1. To study the stress-strain characteristics of HYSD bars by UTM.
2. To find young's modulus of the given material (steel or wood) by conducting bending test on simply supported beam.
3. To find modulus of rigidity by conducting torsion test on solid circular shaft.
4. To find the hardness of the given material by Brinnel's or Vickers hardness tester.
5. To find impact resistance of the given material by conducting Charpy test on Impact testing machine.
6. To determine the ultimate shear strength of steel rod in single and double shear.
7. To determine the modulus of rigidity of the spring.
8. Normal consistency and Initial setting and final setting time of cement
9. Fineness of cement.
10. Compressive strength of Cement.
11. Slump cone test to determine workability of concrete.

16HS301 PROFESSIONAL ETHICS

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
5	30	-	5	-	2

Course Description and Objectives:

This course offers insight into workplace rights of people, their safety concerns and more importantly the ethics that are to be followed by professionals and corporates. The objective of the course is to bring in awareness among the students about human values, social responsibility and the ethics to be followed by engineering professionals.

Course Outcomes:

The student will be able to:

- understand professional responsibilities and ethics in the workplace.
- have knowledge of contemporary issues related to personal and professional interactions at the workplace.
- understand the impact of engineering solutions in global and societal context.

SKILLS:

✓ *Analyze the issues faced by society and business world related to safe technologies/ practices, employee rights, resource sharing and allocation, team work, organizational dynamics, legislations related to business and technology, discrimination.*

✓ *Appreciate the need for workplace etiquette and proper code of conduct.*

✓ *Construct and evaluate arguments during decision making by considering viewpoints of all the stakeholders.*

✓ *Analyze one's own beliefs and values during interpersonal and intra-organizational conflicts.*

✓ *Detect inconsistencies and common errors in reasoning during discussions and practices.*

ACTIVITIES:

- *Discuss a typical case study on workers strike and analyze the conflict of interest among different stakeholders.*
- *Reading and analyzing a prisoner's narrative of police abuse in custody.*
- *Watching and discussing a video report on mishaps such as space shuttle mishap.*
- *Analyze and comment on disasters such as Chernobyl, Bhopal etc.*
- *Analyzing the HR policies documents of a typical company on issues such as working hours, employee security and health care.*

UNIT - 1 **L-6**

HUMAN VALUES : Morals, Values and Ethics, Integrity, Work Ethic, Service Learning, Civic Virtue – Respect for Others – Living Peacefully – Caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality.

UNIT - 2 **L-6**

ENGINEERING ETHICS & **ENGINEERING AS SOCIAL EXPERIMENTATION :** Engineering Ethics - Variety of moral issues – types of inquiry moral dilemmas – moral autonomy – The problems of Many Hands – Kohlburg's theory – Gilligan's theory Impediments to Responsible Action; Engineering as social experimentation - Codes of ethics - A balanced outlook on law - The challenger case study.

UNIT - 3 **L-6**

ENGINEER'S RESPONSIBILITY FOR SAFETY : Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis – Reducing Risk – The Government Regulator's Approach to Risk - Chernobyl Case Studies and Bhopal.

UNIT - 4 **L-6**

WORKPLACE RIGHTS AND RESPONSIBILITIES & WORK ENVIRONMENT : Workplace Rights and Responsibilities - Engineers and Managers, Organizational complaint procedures, Government agencies, Resolving Employee concerns, Limits on acceptable behaviour in large corporation; Work Environment - Ethical and legal considerations, Organizational responses to offensive behaviour and harassment, Ethics in a Global Context.

UNIT - 5 **L-6**

GLOBAL ISSUES : Multinational Corporations; Business Ethics; Environmental Ethics; Computer Ethics; Role in Technological Development; Weapons Development; Engineers as Managers; Consulting Engineers; Engineers as Expert Witnesses and Advisors; Honesty; Moral Leadership; Sample code of conduct.

TEXT BOOK:

1. Mike Martin and Roland Schinzinger, "Ethics in Engineering", McGraw Hill, New York, 2005.

REFERENCE BOOKS:

1. Prof. (Col) P S Bajaj and Dr. Raj Agrawal, "Business Ethics – An Indian Perspective", Biztantra, New Delhi, 2004.
2. Charles E Harris, Michael S. Protchard and Michael J Rabins, "Engineering Ethics – Concepts and Cases", Wadsworth Thompson Learning, United States, 2000.

16CE206 BUILDING CONSTRUCTION AND PLANNING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	20	35	4	10	2	-

Course Description and Objectives:

This course deals with construction processes of building components such as foundation, walls, beams and columns. This course also covers planning of construction and principles of planning. The objective of this course is to provide knowledge of planning and construction of residential, industrial and public buildings.

Course outcomes:

The Students will be able to:

- understand different properties of brick and stone masonry.
- understand different types of foundations and their specifications.
- plan and construct residential and commercial buildings.
- understand building bye laws.

SKILLS:

- ✓ *Find out engineering properties of brick and stone.*
- ✓ *Identify suitable type of foundation for given site conditions.*
- ✓ *Design stair cases.*
- ✓ *Design scaffolding and formwork.*
- ✓ *Apply byelaws for construction of a new project.*

ACTIVITIES:

- Construct a wall using English bond. and Flemish bond.
- Prepare a model of scaffolding.
- Make a plan of 2BHK house.
- Make a plan of U Block of Vignan's University.
- Prepare a model of various Blocks of Vignan's University.

UNIT - 1 **L-9**

STONE AND BRICK MASONRY: Technical terms, Types of bonds in brickwork and their suitability, Classification of stone masonry, Walls, Classification of walls, Floors, Technical terms, Types of ground floors, Roofs, Technical terms, Classification of roofs, Steel sloping roofs, Roof covering materials, Types of flat roofs.

UNIT - 2 **L-9**

FOUNDATIONS: Shallow foundations, Spread, combined strap and mat footings, Deep foundations, pile foundations, cofferdam, caissons (Basic description only).

FINISHINGS (BASIC DESCRIPTION ONLY): Plastering and pointing, White washing and distempering, Painting, Constituents of paint, Types of paints, Painting of new/old Wood, Varnish.

STAIRCASES: Technical terms, Types of staircases, Design considerations.

DAMPNESS AND DAMP PROOFING: Causes of dampness, Methods of preventing dampness, Damp proofing materials, Methods of providing DPC under different situations.

SCAFFOLDING & FORM WORK: Types of scaffolding, Types of formwork, Centering.

UNIT - 3 **L-9**

PRINCIPLES OF PLANNING: An Approach to planning , Principles of Planning, Aspect, prospect, Privacy, Roominess, Furniture requirements, Grouping, Circulation, Orientation, Flexibility, Sanitation, Lighting, Ventilation, Elegance and economy, Climatic considerations, Flow diagram and line plan, Space for equipment for air–conditioning, Space for machinery etc.

UNIT - 4 **L-9**

BUILDING RULES AND BYE–LAWS: Zoning regulations, Regulations regarding layouts or sub divisions, Building regulations, Rules for special type of buildings, Calculation of plinth, Floor and carpet area, Floor space index.

BUILDING ELEMENTS: Conventional signs, Guidelines for staircase planning, Guidelines for selecting doors and windows, Terms used in the construction of door and window, Specifications for the drawing of door and window.

UNIT - 5 **L-9**

RESIDENTIAL BUILDINGS: Minimum standards for various parts of buildings, Requirements of different rooms and their grouping, characteristics of various types of residential buildings.

PUBLIC BUILDINGS: Planning of educational institutions, Hospitals, Dispensaries, Office buildings, Banks, Industrial buildings, Hotels and motels, Buildings for recreation.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Conventional signs.
2. Plan, section and elevation of doors and windows.
3. English and Flemish bonds King-post and Queen-post trusses.
4. Plan, Section and Elevation of a single storied residential building.
5. Generating Plan, Section and elevation of a two storied residential building.
6. Generating plan, Section and elevation of a post-office/Bank.
7. Learning basic commands of CAD software.
8. Drawing the line diagram of basic building components like door, window by CAD software.
9. Drawing plan, section and elevation of a single storied residential building by CAD software.

TEXT BOOKS:

1. B. C. Punmia, "Building construction", 11th edition, Laxmi Publications, New Delhi, 2008.
2. N. Kumaraswamy, "Building Planning and Drawing", 2nd edition, Charotar Publishing House, 2007.

REFERENCE BOOKS:

1. M. G. Shah, C. M. Kale and S. Y. Patki, "Building Drawing", 4th edition, Tata McGraw-Hill, New Delhi, 2002.
2. McKay, "Building Construction", Vol. I, II, III and IV, 4th edition, Orient Long Man, 2004.

16CE207 ENVIRONMENTAL ENGINEERING - I

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	48	6	12	3	5

Course Description and Objectives:

This course offers fundamental concepts on various types of water sources, estimation of quantity requirements of water, treatment of water to the desired degree. It also includes design concepts of various water treatment methods. The objective of this course is to provide knowledge about sedimentation, filtration and disinfection methods in water treatment process. It also provides basic understanding of various appurtenances in the water distribution system.

Course Outcomes:

The students will be able to:

- estimate water requirements for a given city.
- analyze characteristics of water and wastewater.
- estimate the quantity of wastewater generated from different uses
- design components of water supply systems.

SKILLS:

✓ *Evaluate the contamination level of water bodies.*

✓ *Design a filter medium.*

✓ *Design of Water softening models.*

✓ *Prepare, review, and update environmental investigation and recommendation reports.*

✓ *Design a water distribution system for a given city.*

UNIT - 1 **L-9, T-3**

INTRODUCTION TO WATER SUPPLY ENGINEERING: Need for protected water supplies, Objectives of water supply systems, Role of environmental engineers.

QUANTITY OF WATER: Estimating requirements, Design period, Per capita consumption, Factors affecting per capita consumption, Fire demand, Fluctuations in demand, Prediction of population.

UNIT - 2 **L-9, T-3**

SOURCES & INTAKE WORKS: Classification of sources of water supply, Choice of source, Suitability with regard to quality and quantity, Lake, River, Reservoir and canal intakes.

TRANSPORTATION AND PUMPING OF WATER: Types of conduits, Capacity and design, Materials for pipes, Laying and Jointing of pipes, Testing of pipe line, Classification of pumps, Efficiency and choice of pumps.

UNIT - 3 **L-9, T-3**

QUALITY OF WATER: Impurities in water, Routine water analysis, Physical, Chemical and bacteriological tests, BIS Standards for drinking water, Water borne diseases.

Purification of Water: Methods of purification of water, Sequence of treatment.

PLAIN SEDIMENTATION AND COAGULATION: Theory of sedimentation, Stoke's law, Sedimentation tanks, Design aspects, Principle of coagulation, Chemicals used for coagulation, Units of coagulation plant, Optimum dose of coagulant.

UNIT - 4 **L-9, T-3**

FILTRATION OF WATER: Theory of filtration, Filter materials, Slow and and rapid sand filters, Construction operation and design, Under drainage system design in rapid sand filters, Troubles in rapid sand filters, Pressure filters.

DISINFECTION OF WATER: Different methods of disinfection, Chlorination, Types of chlorination.

OTHER TREATMENT METHODS: Water softening, Methods of removing temporary hardness, Methods of removing permanent hardness, Removal of color, Odour and taste from water, De-fluoridation, Reverse osmosis.

UNIT - 5 **L-9, T-3**

DISTRIBUTION SYSTEM: General requirements, Classification, Methods of supply, Available pressure in the distribution system, Layouts of distribution networks, Distribution reservoirs, Functions, Types, Capacity of balancing tank, Analysis of distribution system, Methods of analysis, Design of Pipe network

PIPE APPURTENANCES: Appurtenances in the distribution system, Service connection, Sluice valves, Check valve, Air valve, Drain valve, Hydrants, Meters.

TEXT BOOKS:

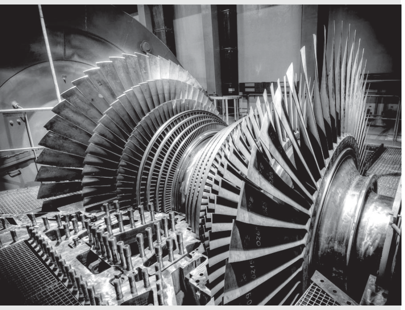
1. B. C. Punmia, "Environmental Engineering", Vol.1, 2nd edition, Laxmi Publishers, 2009.
2. S. K. Garg, "Environmental Engineering", Vol.1, 10th edition, Khanna Publishers, Delhi, 2005.

REFERENCE BOOKS:

1. S. Peavy and Rowe, "Environmental Engineering", 7th edition, Tata Mc Graw-Hill, New York, 2013.
2. E. W. Steel and Terrance J, "Water Supply and Sewerage", 6th edition, Tata Mc Graw-Hill, Singapore, 2001.

ACTIVITIES:

- Estimate water requirement for Guntur city.
- Study the suitability of sources of water around campus.
- Visit a water purification plant and make a report covering all water purification methods involved.
- Design layouts of distribution networks suitable for a city.



16CE208 HYDRAULICS AND HYDRAULIC MACHINES

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
6	40	5	15	3	-

Course Description and Objectives:

The course deals with basic concepts of flow in open channel and working principles of different types of turbines and pumps. The objective of this course is to provide knowledge regarding uniform and non-uniform flows in open channels, impact of jet, study of different types of turbines and working of centrifugal and reciprocating pumps.

Course Outcomes:

The students will be able to:

- understand and analyse uniform, gradually and rapidly varied flows in an open channel.
- prepare and analyse models using concepts of similitude.
- understand working principles of turbines and pumps and their analysis and design.

SKILLS:

✓ *Study different flow conditions in open channels*

✓ *Analyse critical and sub-critical flow in open channel*

✓ *Analyse gradually and rapidly varied flow in open channel*

✓ *Study impact of jet on blades of turbines*

✓ *Determine performance characteristics of different types of pumps*

UNIT - 1 **L-9**

DIMENSIONAL ANALYSIS AND SIMILITUDE: Dynamical similarity and dimensional homogenity model experiment, Geometric, Kinematic and Dynamic similarity, Reynold's, Froude, Weber, Euler and Mach numbers, Distorted and undistorted models, Principle of dimensional analysis Rayleigh method, Buckingham theorem, Applications of dimensional analysis to pipe Friction problems, Resistance to motion of partially and fully submerged bodies.

UNIT - 2 **L-9**

OPEN CHANNEL FLOW:

UNIFORM FLOW: Introduction, Classification of flows, Types of channels, Chezy, Manning's, Bazin, Kutter's Equations, Hydraulically efficient channel sections, Rectangular, Trapezoidal and circular channels, Velocity distribution, Energy and momentum correction factors, Pressure distribution.

NON-UNIFORM FLOW: Concept of specific energy, Specific energy curves, Critical flow, Critical flow in a rectangular channel, Critical slope, Different slope conditions, Channel transitions, Reduction in width of channels, Hump, Momentum principle applied to open channel flow, Specific force, Specific force curve.

UNIT - 3 **L-9**

OPEN CHANNEL FLOW:

GRADUALLY VARIED FLOW: Dynamic equation, Surface Profiles, Computation of surface profiles by single step and multi step methods, Examples of various types of water surface profiles, Control section.

RAPIDLY VARIED FLOW: Hydraulic jump, Elements and characteristics of hydraulic jump, Types of hydraulic jumps, Sequent depths, energy loss in a hydraulic jump.

UNIT - 4 **L-9**

IMPACT OF FREE JETS: Impact of a jet on a flat or a curved vane, Moving and stationary vane, Flow over radial vanes.

TURBINES: Classification, Efficiencies, Pelton wheel turbine, Francis turbine and Kaplan turbine, Governing of Pelton turbines, Draft-tube, Specific and unit quantities, Characteristic curves, Selection of turbines, Model tests.

UNIT - 5 **L-9**

CENTRIFUGAL PUMP: Components, Working principle, Manometric efficiency, Work done, Minimum starting speed, Pumps connected in series and parallel, Priming, Net positive suction head, Specific speed, Characteristic curves, Model testing.

RECIPROCATING PUMPS: Working principle, Single acting and double acting, Discharge slip, Work done, Indicator diagram, Air vessels.

ACTIVITIES:

- *Prepare a model to demonstrate geometric similarity.*
- *Design a channel section for uniform flow.*
- *Prepare a model of Hydraulic Jump.*
- *Design a model of Pelton turbine.*
- *Design a model of centrifugal pump*.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Impact of jets on Vanes.
2. Pelton wheel performance test.
3. Francis turbine performance test.
4. Multi stage centrifugal pump performance test.
5. Reciprocating pump performance test.

16CE209 STRUCTURAL ANALYSIS- I

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	30	6	10	3	5

Course Description and Objectives:

This course offers fundamental concepts to analyse all structural components for different load conditions. It gives a detailed idea about different methods involved in calculating the deformations in a structure. The objective is to make students understand the influence of loads and forces on a determinate structures. In addition to that, provide knowledge about strain energy concepts for analyzing determinate and indeterminate structures.

Course Outcomes:

The students will be able to:

- understand the classification of structures.
- understand the deflection profile of a beam.
- calculate the strain energy due to Flexure and Axial loading.
- analyze the structures using conventional methods and strain energy concepts.
- estimate the influence and effect of force on any parameter chosen.
- analyze the determinate and indeterminate structures.

SKILLS:

✓ *Classify different types of structures based on degrees of freedom.*

✓ *Identify the deflection profile of structures subjected to several types of loadings.*

✓ *Analyze the behavior of structures subjected to moving loads.*

✓ *Analyze pin jointed frames for dead and live loads.*

✓ *Analyze steel beams and columns.*

ACTIVITIES:

- *Classify the structures with the help of live examples.*
- *Choose a live example and analyze bridge member under moving load.*
- *Analyze a fixed beam considering the loading conditions in your classroom.*
- *Discuss in detail about several methods and processes adopted for analyzing determinate structures.*
- *Discuss in detail about several methods and processes adopted for analyzing determinate structures.*

UNIT - 1 **L-9, T-3**

DEFLECTION OF BEAMS: Introduction to structural analysis, Classification of structures, Deflection equation for elastic curve of a beam, Deflection and slope for cantilever beam and simply supported beams using double integration method, Macaulay's method, Area moment method.

UNIT - 2 **L-9, T-3**

ENERGY METHODS : Displacements of determinate structures using energy methods, Maxwell's reciprocal theorem, Maxwell-Betti's generalized reciprocal theorem, Castigliano's theorems, Application of Castigliano's theorem for calculating deflection of beams, Frames and trusses, Virtual work method for deflections.

UNIT - 3 **L-9, T-3**

PROPPED CANTILEVER: Analysis of propped cantilever by method of consistent deformation.

FIXED BEAMS: Fixed end moments for a fixed beam of uniform section for different types of loading, Effect of sinking of supports, Effect of rotation of a support, bending moment diagram for fixed beams.

CLAPEYRON'S THEOREM OF THREE MOMENTS: Analysis of continuous beam by Clapeyron's theorem of three moments.

UNIT - 4 **L-9, T-3**

STRAIN ENERGY METHOD: Strain energy method for analysis of continuous beams and rigid joined plane frames up to second degree redundancy.

REDUNDANT PIN JOINTED FRAMES: Analysis of pin jointed frames up to second degree redundancy, Forces in indeterminate pin jointed frames due to temperature variation and lack of fit.

UNIT - 5 **L-9, T-3**

INFLUENCE LINES FOR STATICALLY DETERMINATE STRUCTURES: Moving loads and influence lines, Influence lines for beam reactions, Influence lines for shear force, Influence lines for bending moment, Calculation of maximum shear force and bending moment at a section for rolling loads, Calculation of absolute maximum bending moment, Influence lines for simple trusses.

16CE210 SURVEYING - II

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	48	6	12	3	5

Course Description and Objectives:

This course offers an introduction to surveying equipments like Theodolite, Tacheometer, Total Station etc. in order to ascertain the ground profile by creating contour maps. In addition it offers methods to calculate areas and volumes of earth to be excavated for various structures like roads, canals, buildings, etc. The main objective the course is to introduce the students to survey methods employed in different construction projects. Another objective of this subject is to introduce the triangulation methodology which is used for surveying larger areas such as countries, finding out the curvature of the Earth, etc.

Course Outcomes:

The Students will be able to:

- understand the way an EDM and a Total Station works.
- understand various methods used calculate areas and volumes.
- employ tacheometry and trigonometric levelling based on site conditions.

SKILLS:

✓ *Create a contour map by using total station.*

✓ *Find out 2D and 3D surface areas of ground.*

✓ *Mark out the foundation for a building.*

✓ *Design the levels and stake out the centre line of a road or a rail or a canal.*

✓ *Use a tachometer and theodolite for finding out elevations and distances.*

ACTIVITIES:

- *Create a digital contour map using a total station survey results.*
- *Design the levels of a road such that the haul is minimum.*
- *Execute a simple curve on the ground.*
- *Find out the levels of a hilly region using tachometry and creating a contour map.*
- *Find out the levels using trigonometric leveling.*

UNIT - 1 **L-9**

ELECTORNIC DISTANCE MEASUREMENTS: Basic concepts, Classification of Electronic Radiation, Basic principle of Electronic Distance Measurement, Computing the distance from the phase differences, Electronic Total Station, Types, Measurement, Recording, Traversing, Data retrieval, Instrumental errors in EDM.

UNIT - 2 **L-9**

AREAS: INTRODUCTION: Simpson's rule, Boundaries with offsets at irregular intervals, Meridian distance methods, Coordinate method, Planimeter, Area of zero circle.

VOLUMES: Area of cross sections, Two level section only, Trapezoidal rule, Prismoidal formula, Volume from spot levels, Volume from contour plan, Capacity of a reservoir.

SETTING OUT WORKS: Control station, Horizontal control, Reference grid, Vertical control, Positioning of a structure, Setting out a foundation, Setting out with a theodolite, Grade stakes, Setting out a sewer, Setting out a culvert.

UNIT - 3 **L-9**

THEODOLITE TRAVERSE: Selection of traverse stations, Traversing fast needle method, Sources of errors in theodolite traversing, Field checks in traversing, Traverse Computations, Gale's traverse table, Methods of adjustments, Omitted measurements.

TACHEOMETRIC SURVEYING: Advantages of tacheometric surveying, Basic systems of tacheometric measurements, Determination of constants K and C, Inclined sight with staff vertical, Inclined sight with staff normal to the line of sight.

UNIT - 4 **L-9**

TRIANGULATION: Principles of triangulation, Uses of triangulation survey, Classification of triangulation, Signals and towers, Satellite station, Base line & Extension of the base line.

TRIGONOMETRIC LEVELING: Introduction, Determination of level of top of object, Base accessible, Base inaccessible, Axis signal correction, Difference in elevation by single observation and reciprocal observations.

UNIT - 5 **L-9**

CIRCULAR CURVES: Basic definitions, Designation of a curve, Relationship between radius and degree of curve, Elements of a simple circular curve, Location of the tangent points, Selection of peg interval, Methods of setting out simple curves, Problems in setting out curves.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Total Station

1. Study of instrument, determination of distances, directions and elevations.
2. Determination of boundaries of a field and computation of area.
3. Determination of heights of objects.

Setting out simple curves and works using

4. Tape and theodolite.
5. Total Station.
6. Setting out foundations for a Building.

Survey Camp is to be conducted for a minimum period of seven days Using Total Station to train in one of the following areas:

7. Preparation of a contour Plan/ Map.
8. Earth work computations for a high way / canal projects.
9. Marking of a sewer line/ water supply line.
10. Or any other type of construction work.

1. A. M. Chandra, "Plane Surveying", 2nd edition, New Age International (P) Ltd. 2006.
2. Arthur Bannister and Stanly Reymond, "Surveying", 10th edition, Prentice Hall and Reymand Baker Addison - Wesly, 2002.

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P
-	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, preparing resumé, group discussion and interview skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to :

- think critically on issues for informed decision making and know how to communicate effectively through choice of appropriate language and speech, while dealing with others at the workplace.
- identify and introspect on individual strengths and weaknesses.
- improve levels of self-awareness and self-worth for greater efficacy at workplace.

SKILLS:

- ✓ *Communicate and understand the difference between soft skills and hard skills.*
- ✓ *Professionalism and employability skills.*
- ✓ *Plan career by drawing their SWOT, setting the goal, learn the importance of time and stress management.*
- ✓ *Vocabulary, situational english, group discussion, reading comprehension and listening comprehension which are essential for all competitive examinations.*
- ✓ *Prepare resumé and learn how to face interview.*
- ✓ *Gender sensitive language, good manners, emotional intelligence and essential skills.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - The process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal); Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, Employability skills.

C) CAREER PLANNING: Job vs career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY: Johari Window for SWOT analysis, Setting a SMART goal using the provided grid, Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes and suffixes, Synonyms and antonyms, Collocations, One-word substitutes, Analogies, Idioms and phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student), Vocabulary exercises with hand-outs, Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, Dynamics of group discussion, Intervention,Summarizing and conclusion, Voice modulation, Content generation, Key word approach (KWA), Social, Political, Economic, Legal and technical approach (SPELT), View point of affected part (VAP), Language relevance, Fluency and coherence.

ACTIVITY: Viewing a recorded video of GD and Mock sessions on different types of GD topics - Controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, Understanding employer expectations, Pre-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele-interviews, Video interviews, Frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in group discussion.

B) LISTENING COMPREHENSION: Listening as a skill, Different types of listening, Active and passive listening, Top-down approach, Bottom-up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, Cultural sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression, Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other's views, Assisting others, Sharing, Participating actively.

ACTIVITY: Johari Window, Games and case studies.

CE317 DESIGN OF REINFORCED CONCRETE STRUCTURES

Course Description and Objective:

To understand the loads coming onto the structure, methods of design and codes of practices used. To understand the analysis of singly reinforced, doubly reinforced, flanged sections by working stress and limit state methods. To understand the design for shear, development length, deflection and cracking.

Course Outcomes:

- *Design the Reinforced Concrete beams using limit state and working stress methods*
- *Design Reinforced Concrete slabs*
- *Design the Reinforced Concrete Columns and footings*
- *Design structures for serviceability*

UNIT - I

Methods of Design of Concrete Structures: Concept of working stress method and limit state method- advantages of limit state method -design codes and specifications of limit state philosophy as per current IS code

Limit State Design of Beams: Singly and doubly reinforced rectangular and flanged beams

UNIT – II

Limit State Design for Shear, Torsion, Bond and Anchorage: Behavior of RC beams in shear and torsion-shear and torsion reinforcement-limit state design of R C members for combined bending shear and torsion- use of design aids.

UNIT – III

Limit State Design of Slabs: Analysis and design of one way , two way and continuous slabs –boundary conditions and corner effects.

UNIT – IV

Limit State Design of Columns: Types of columns-analysis and design of short columns for uni-axial and bi-axial bending-design of long columns-use of design aids.

Limit State Design of Footings: Design of wall footing-design of axially and eccentrically loaded rectangular footing-design of combined rectangular footing for two columns only.

UNIT – V

Working Stress Method: Assumptions; Permissible stresses in concrete and steel; Balanced design; Transformed area method; Analysis and design for flexure of singly reinforced, doubly reinforced sections.

Limit State Design For Serviceability: Design of members for serviceability requirements of deflection and cracking.

CE319 STRUCTURAL ANALYSIS – II

Course Description and Objective:

At the end of the course, the student is able to analyze continuous beams and multi-storey frames by various methods like slope deflection, moment distribution and Kani's method.

Course Outcomes:

- *Analyze multistoried structures.*
- *Analyze three hinged arches and two hinged arches*

UNIT – I

Slope Deflection Method: Slope - deflection equations; Principles of the method; Applications of the method to the analysis of continuous beams and portal frames (Single bay, single storey with vertical legs without side sway).

UNIT – II

Moment Distribution Method: Principles of the method; Application of the method to analysis of continuous beams and portal frames (Single bay, single storey with vertical legs only) without and with side sway.

UNIT – III

Multi Storey Frames (Approximate Methods): Portal method and cantilever method for lateral loads.

UNIT – IV

Kani's Method: Principles of the method; Application to continuous beams and portal frames (single bay, single storey with vertical legs only) without and with side-sway

UNIT – V

Three-Hinged Arches: Introduction; Eddy's theorem for bending moment; parabolic arch; circular arch; Horizontal thrust; arch supported at different levels.

Two-Hinged Arches: Introduction; Horizontal thrust;circular and parabolic arches carrying concentrated load & uniformly distributed load; Effect of change in temperature .Introduction to fixed arches.

CE 321 GEOTECHNICAL ENGINEERING- I

Course Description and Objective:

This subject is meant to understand the significance of the basic principles of the soil mechanics and their applications and also to go through the basic definitions, simple tests, plasticity characteristics, flow of water through soil, permeability and seepage effective stress principle and shear strength of soil.

Course Outcomes:

- Characterize and classify soils
- Identify shear strength parameters for field conditions
- Compute and analyze the consolidation settlements

UNIT - I

Introduction: Soil formation and soil types; Regional soil deposits of India, Phase diagrams; Simple definitions; some important relationships.

Index Properties: Grain size distribution; Mechanical analysis – Sieve analysis, Stoke's law, hydrometer Analysis; Atterberg Limits; Significance of other Soil Aggregate properties

UNIT - II

Soil Classification: Introduction, Particle size classification as per IS code; Unified soil classification system; Indian standard soil classification system.

Permeability: Capillary rise; Darcy's law and its Validity; Determination of coefficient of permeability - constant and variable head methods, indirect methods, Factors affecting permeability; Permeability of stratified soil deposits.

UNIT - III

Seepage Through Soils: Total, neutral and effective stresses; seepage forces and quicksand condition; Flownets- Characteristics and Uses.

Stress Distribution in Soils: Introduction; Boussinesq's equation; vertical stress distribution diagrams; vertical stress beneath loaded areas; Newmark's influence chart; approximate stress distribution methods for loaded areas; Westergaard's equation.

UNIT - IV

Compaction of Soils: Introduction; Laboratory tests; Factors affecting compaction; Effects of compaction on soil properties. Compaction in the field; Compaction specifications and field control.

Compressibility of Soil and Consolidation: Introduction; Compressibility; Time-rate of consolidation; Consolidation test; Computation of settlement; extrapolation of field consolidation curve; Settlement analysis.

UNIT - V

Shear Strength of Soils: Introduction; Stress at a point- Mohr Circle of stress; Mohr–coulomb Failure Criterion; Measurement of Shear Strength; Shear strength of Clayey soils; Shear Strength of Sands; Drainage conditions and Strength parameters.

CE323 ENVIRONMENTAL ENGINEERING – I

Course Description and Objective:

Water is a basic need of the society and pure form of water is not available on the earth now a days. Identification of source, estimation of quantity required, treatment of water to the desired degree and conveyance of water to the community are the essential features of water supply. At the end of the course the student is expected to familiarize with the water supply.

Course Outcomes:

- *Analyze characteristics of water and wastewater*
- *Estimate the quantity of drinking water and domestic wastewater generated*
- *Design components of water supply systems*

UNIT – I

Introduction to Water Supply Engineering: Need for protected water supplies, Objectives of water supply systems, Role of Environmental Engineers.

Quantity of Water: Estimating requirements, Design period, Per capita consumption, Factors affecting per capita consumption, Fire demand, Fluctuations in demand, Prediction of population.

UNIT - II

Sources & Intake Works: Classification of sources of water supply, Choice of source, Suitability with regard to quality and quantity, Lake, river, reservoir and canal intakes.

Transportation and Pumping of Water: Types of conduits, Capacity and design, Materials for pipes, Laying and Jointing of pipes, Testing of pipe line, Classification of pumps, Efficiency and choice of pumps.

UNIT – III

Quality of Water: Impurities in water, Routine water analysis, physical, chemical and bacteriological tests, BIS Standards for drinking water, Water borne diseases.

Purification of Water: Methods of purification of water, Sequence of treatment.

Plain Sedimentation and Coagulation: Theory of sedimentation, Stoke's law, Sedimentation tanks, Design aspects, Principle of coagulation, Chemicals used for coagulation, Units of coagulation plant, Optimum dose of coagulant.

UNIT – IV

Filtration of Water: Theory of filtration, Filter materials, Slow sand and rapid sand filters, Construction operation and design, Under drainage system design in rapid sand filters, Troubles in rapid sand filters, Pressure filters.

Disinfection of Water: Different methods of disinfection, Chlorination, Types of chlorination.

Other Treatment Methods: Water softening, Methods of removing temporary hardness, Methods of removing permanent hardness, Removal of color, odour and taste from water, De-fluoridation, Reverse osmosis.

UNIT – V

Distribution System: General requirements, Classification, Methods of supply, Available pressure in the distribution system, Layouts of distribution networks, Distribution reservoirs, Functions, Types, Capacity of balancing tank, Analysis of distribution system, Methods of analysis, Design of Pipe network

Pipe Appurtenances: Appurtenances in the distribution system, Service connection, Sluice valves, Check valve, Air valve, Drain valve, Hydrants, Meters.

CE325 WATER RESOURCES ENGINEERING – I

(Dept. Elective-I)

Course Description and Objective:

By the end of the course, the student should be able to estimate the quantity of water available, irrigation requirement and design of irrigation canals & diversion head works.

Course Outcomes:

- *Estimation of rainfall,Plan an Irrigation System*
- *Design irrigation canals and canal network*
- *Plan and design diversion head work*

UNIT – I

Hydrology : Hydrologic cycle; Precipitation types; Rain gauges; Computation of average rain fall over a basin; Run off; Factors affecting run off; Computation of run-off; Estimation of maximum rate of run-off.

Hydrographs : Hydrograph analysis; Unit hydrograph; S-hydrograph; Application of the unit hydrograph to the construction of a flood hydrograph resulting from rainfall of unit duration; Application of unit hydrograph to construction of a flood hydrograph resulting from two or more periods of rainfall; Construction of unit hydrograph of different unit duration from a unit hydrograph of some given unit duration.

UNIT – II

Ground Water - Introduction to Irrigation : Introduction;Aquifer; Aquicludes; Aquifuge; Specific yield; Specific retention; Divisions of sub–surface water; Water table; Types of aquifers; Well hydraulics; Steady radial flow to a well– Dupuit's theory for confined and unconfined aquifers; Yield of an open well– Constant level pumping test, Recuperation test.

Introduction to Irrigation : Definition; Necessity; Scope of irrigation science; Benefits of irrigation; Ill-effects of irrigation; Types of irrigation.

Methods of Irrigation : Methods of applying water to crops; Uncontrolled or wild flooding; Free flooding; Contour laterals; Border strip method; Check flooding; Basin flooding; Zig zag method; Furrow method; Contour Famring; Sub-surface irrigation; Sprinkler irrigation; Drip irrigation.

UNIT – III

Water Requirement of Crops : Functions of irrigation water; Classes and availability of soil water; Saturation capacity; Field capacity; Wilting point; Available moisture and readily available moisture; Moisture equivalent; Soil – moisture deficiency; Limiting soil moisture conditions; Depth and frequency of irrigation; Duty and Delta; Base period; Relation between Duty and Delta; Factors affecting duty; Methods of improving duty; Gross command area; Culturable command area; Culturable cultivated and uncultivated area; Kor depth and Kor period; Consumptive use of water (Evapo – Transpiration); Irrigation efficiencies – Water conveyance efficiency, Water application efficiency, Water distribution efficiency and Consumptive use efficiency; Determination of irrigation requirements of crops; Assessment of irrigation water.

UNIT – IV

Irrigation Channels - SILT Theories & Design Procedure : Classification; Canal alignment; Cross–section of an irrigation channel; Balancing depth; Borrow pit; Spoil bank; Land width; Silt theories–Kennedy's theory, Lacey's regime theory; Kennedy's method of channel design; Silt supporting capacity according to Kennedy's theory; Use of Garret's diagram in channel design; Lacey's theory applied to channel design; Use of Lacey's regime diagrams; Comparison of Kennedy's theory and Lacey's theory; Sediment transport.

Water Logging : Water logging; Effects of water logging; Causes of water logging; Remedial measures; Losses in canal; Land drainage; Tile drains; Lining of irrigation channels – necessity, advantages and disadvantages.

UNIT – V

Diversion Head Works : Component parts of a Diversion Head work; Types of weirs; Causes of failure of weirs and their remedies; Design of weirs– Bligh's creep theory, Lane's weighted creep theory and Khosla's theory; Silt control at head works;

Canal Outlets and Regulation Works : Types of outlets; Non– modular outlets; Semi-module outlets; Rigid modules; Canal falls; Necessity and location of falls; Development of falls; Classification of falls; Canal regulators; Off-take alignment; Head regulators and cross-regulators; Canal escape.

CE327 OPERATION RESEARCH

(Dept. Elective-I)

Course Description and Objective:

To make the students aware about the solutions to the problems in management for efficient utilization and optimum allocation of resources

Course Outcomes:

- *Identify and develop operational research models from the verbal description of the real system.*
- *Understand the mathematical tools that are needed to solve optimisation problems.*
- *Use mathematical software to solve the proposed models. Develop a report that describes the model and the solving technique*
- *analyse the results and propose recommendations in language understandable to the decision-making processes in Management Engineering*

UNIT – I

Introduction: History and development of operation research, Applications, modeling in operation research, operation research models and their applications.

Linear Programming-I: Introduction, requirements of LP problem, basic assumptions, Formulation of problem, Graphical solution,

UNIT – II

Linear Programming-II: Introduction, Principle of Simplex Method, procedure for maximization and minimization, Two-phase simplex method, Duality concept

UNIT – III

Transportation Model: Mathematical formulation, methods to obtain initial basic feasible solution, North West Corner method, Vogel's Approximation method, conditions for testing optimality, MODI method for testing optimality solution of balanced and unbalanced problems, Degeneracy and its resolution.

UNIT – IV

Project Management: Introduction, critical path method (CPM), Programme evaluation and review technique (PERT), distinction between PERT and CPM

UNIT – V

Dynamic Programming: Introduction, Bellman's Principle of optimality, shortest route (stage coach) problem, maximization problem

TEXT BOOKS:

1. Hamdy Taha, "Operations Research – An Introduction", 8th ed., PHI, 2007.

CE329 CONSTRUCTION TECHNIQUES, EQUIPMENT AND PRACTICES

(Dept. Elective-I)

Course Description and Objective:

The main objective of this course is to make the student aware of the various construction techniques, practices and the equipment needed for different types of construction activities. At the end of this course the student shall have a reasonable knowledge about the various construction procedures for sub to super structure and also the equipment needed for construction of various types of structures from foundation to super structure.

Course Outcomes:

- Cycle Times
- Production Rates
- Equipment Knowledge
- Dirt Work Estimations

UNIT I

CONCRETE TECHNOLOGY : Cements – Grade of cements - manufacture of cement – concrete chemicals and Applications –Mix design concept – mix design as per BIS & ACI methods – manufacturing of concrete –Batching – mixing – transporting – placing – compaction of concrete – curing and finishing. Testing of fresh and hardened concrete – quality of concrete - Non – destructive testing.

UNIT II

CONSTRUCTION PRACTICES: Specifications, details and sequence of activities and construction co-ordination – Site Clearance – Marking – Earthwork - masonry – stone masonry – Bond in masonry - concrete hollow block masonry – flooring – damp proof courses – construction joints – movement and expansion joints – pre cast pavements – Building foundations – basements – temporary shed –centering and shuttering – slip forms – scaffoldings – de-shuttering forms – Fabrication and erection of steel trusses – frames – braced domes – laying brick –– weather and water proof –roof finishes – acoustic and fire protection.

UNIT III

SUB STRUCTURE CONSTRUCTION: Techniques of Box jacking – Pipe Jacking -under water construction of diaphragm walls and basement-Tunneling techniques – Piling techniques - well and caisson - sinking cofferdam -cable anchoring and grouting-driving diaphragm walls, sheet piles - shoring for deep cutting -well points -Dewatering and stand by Plant equipment for underground open excavation.

UNIT IV

SUPER STRUCTURE CONSTRUCTION: Launching girders, bridge decks, off shore platforms – special forms for shells - techniques for heavy decks – in-situ pre-stressing in high rise structures, Material handling - erecting light weight components on tall structures - Support structure for heavy Equipment and conveyors -Erection of articulated structures, braced domes and space decks.

UNIT V

CONSTRUCTION EQUIPMENT: Selection of equipment for earth work - earth moving operations - types of earthwork equipment - tractors, motor graders, scrapers, front end waders, earth movers – Equipment for foundation and pile driving. Equipment for compaction, batching and mixing and concreting - Equipment for material handling and erection of structures - Equipment for dredging, trenching, tunneling,

CE331 GEOTECHNICAL ENGINEERING LAB

Course Description and Objective:

Determination of various properties of soil like water content, permeability and to conduct compaction test, shear test, consolidation test etc. on soil.

Course Outcomes:

- *Determine index properties of soils*
- *Classify soils*
- *Determine engineering properties of soils.*

1. Determination of water content by oven drying method.
2. Determination of specific gravity by
   a) Density bottle method b) Pycnometer method.
3. Gradation analysis
   a) Mechanical Sieve analysis b) Hydrometer analysis.
4. Determination of Atterberg limits
5. Determination of free swell index
6. Determination of field unit weight by
   a) Core cutter method. b) Sand replacement method.
7. Determination of permeability by
   a) Constant head permeameter. b) Variable head permeameter.
8. Direct shear test.
9. Vane shear test.
10. Unconfined compression test
11. Standard proctor compaction test
12. Modified proctor compaction test
13. Triaxial shear test.
14. Consolidation test.

B.Tech	III Year	L	T	P	To	C
		-	-	3	3	2

CE333 COMPUTER APPLICATIONS IN CIVIL ENGINEERING

Course Description and Objective:

Students are expected to write and execute programmes to solve the following problems. Programmes shall be in C or C++ language or MS-Office Software's.

Course Outcome:

- *Design of civil engineering elements using softwares like excel and c*

Note: A minimum of twelve (10No) shall be done and recorded

(Write any Four programmes)

1. Design of Reinforced Beam for flexure by limit state method.
2. Design of T- Beam for flexure by limit state method.
3. Design of Reinforced beam for Shear by limit state method.
4. Design of R.C.C. section subjected to Bending moment, Shear force and Torsional moment.
5. Design of simply supported one-way slab.

(Write any THREE programmes)

6. Classification of soil by Indian standard classification system.
7. Stresses due to applied loads both Boussinesq and Westerguard analysis
   a) Concentrated load
   b) Circular loaded area
   c) Rectangular loaded area
8. Determination of permeability coefficient by constant head and falling permeability tests.
9. Determination of index properties of soil.

(Write any THREE programmes)

10. Design of an open channel
12. Analysis of water distribution networks (Hardy cross method).
13. Determination of the height of the building when base is accessible.
14. Determination of included angles from the given bearing and check for local attraction.

B.Tech	**III Year**	**L**	**T**	**P**	**To**	**C**
		-	-	3	3	2

CE335 BUILDING DRAWING USING AUTOCAD

Course Description and Objective:

The Course Description and Objectives is to make the student competence in building drawing by conventional as well as CAD software.

Course Outcomes:

- *Prepare plans*
- *section and elevations of Buildings by using AutoCAD software*

1. Conventional signs
2. Plan, section and elevation of doors and windows
3. English and Flemish bonds King-post and Queen-post trusses
4. Plan, Section and Elevation of a single storied residential building
5. Generating Plan, Section and elevation of a two storied residential building
6. Generating plan, Section and elevation of a post-office/Bank
7. Learning Basic commands of CAD software
8. Drawing the line diagram of basic building components like door, window by CAD software

9.. Drawing plan, section and elevation of a single storied residential building by CAD software

B.Tech	**III Year**	**L**	**T**	**P**	**To**	**C**
		4	-	-	4	4

CE320 DESIGN OF STEEL STRUCTURES

Course Description and Objective:

To design tension and compression members. To design laterally supported and unsupported beams.To understand the behaviour of riveted and welded connections and their design. To draw design details of built-up columns with lacing of battering, grillage foundations.

Course Outcomes:

- *Limit state design of tension members*
- *compression members*
- *Beams,Plate Girder*

UNIT - I

Introduction: Type of steel structures, Methods of Design of Steel Structures, Limit States for Steel Design, Partial Safety factors, Types of loads, Types of Bolts and Bolted Joints, Design of Bolted Connections (Lap and Butt Joint connections), Failure of Bolted Joints.

UNIT – II

Design of Tension Members: Introduction, Types of Tension Members, Net Sectional Area, Effective Net Area, Types of Failures, Design Strength of Tension Members, Slenderness Ratio, Design Procedure, Tension Member Splices, Lug Angles, Gusset Plate.

UNIT – III

Design of Compression Members: Introduction, Effective length, Slenderness Ratio, Types of Sections, Types of Buckling, Classification of Cross Sections, Column Formula, Design Strength, Design of Axially Loaded Compression Members, Design of Built-Up Columns(Latticed Columns) , Design of Laced and Battened Columns, Design of Column Splices, Design of Slab Base and Gusseted Base.

UNIT – IV

Design of Beams: Plastic Moment Carrying Capacity of a Section, Types of Sections, Bending Strength of Laterally Supported Beam, Web Buckling, web Crippling, Design of simple beams based on strength and stiffness as per IS code- Design of built up beams and curtailment of flange plates.

UNIT – V

Design of Bolted Beam Connections: Types of Beam Connections, Design of Framed Connections Using Bolt, Design of Unstiffened and Stiffened Seated Connections, Design of Moment Resistant Connections.

Plate Girder: Elements of Plate Girder, General Considerations, Shear Strength of Web; Proportion of Web and flanges, Stiffeners and their connections (using welding); Web splice (using bolts); Design Procedure up to Main Section.

		4	-	-	4	4

CE322 STRUCTURAL ANALYSIS – III

Course Description and Objective:

At the end of the course, the student is able to analyze curved beams, cables and plastic analysis of beams and also it is expected to analyze beams and frames by matrix approach.

Course Outcomes:

- *Analyze cables and curved beams*
- *analyze one dimensional and two dimensional structures using matrix methods of structural analysis*

UNIT – I

Curved Beams: Analysis for internal forces – circular beams supported on equally spaced columns – semicircular beams on three equally spaced supports.

UNIT – II

Plastic Behavior of Structures: Idealized stress - strain curve for mild steel; Ultimate load carrying capacity of members carrying axial forces; Moment - Curvature relationship for flexural members; Evaluation of fully plastic moment; Shape factor; Collapse load factor; Upper and lower bound theorems; Collapse load analysis of simply supported, propped cantilever and fixed beams.

UNIT – III

Cables: Analysis of cables under uniformly distributed and concentrated loads; Shape of the cable under self weight; Effect of temperature changes in suspension cables; Anchor cables.

UNIT – IV

Flexibility Method (Matrix Approach): Flexibility matrix Analysis of continuous beams and rigid jointed plane frames (Single bay, single storey with vertical legs only) by flexibility method with matrix approach.

UNIT – V

Stiffness Method (Matrix Approach): Stiffness matrix; Relationship between flexibility matrix and stiffness matrix. Analysis of continuous beams, rigid jointed plane frames (Single bay, single storey with vertical legs only) by stiffness method with matrix approach.

B.Tech. III YEAR	L	T	P	To	C
	4	-	-	4	4

CE324 GEOTECHNICAL ENGINEERING - II

Course Description and Objective:

The primary objective of this course is to equip the student with the knowledge of how to explore the soil, design the foundations for different conditions and check the stability of structures.

Course Outcomes:

- *Determine the earth pressures on foundations and retaining structures*
- *Analyze shallow and deep foundations*
- *Calculate the bearing capacity of soils and foundation settlements*
- *understand soil exploration methods*

UNIT - I

Sub–Soil Investigation and Sampling: Introduction; Methods of exploration; Methods of Boring; Soil Samples; Soil samples and Sampling; Number and disposition of trial pits and borings; Depth of exploration; Ground water observations; Field tests visà- vis Laboratory tests; Plate load test; Penetrometer tests; Geophysical methods; Borehole logs; Site investigation report;

UNIT – II

Lateral Earth Pressure & Retaining Walls: Introduction; Effect of wall movement on Earth Pressure; Earth Pressure at rest; Rankine's theory of Earth pressure; Coulomb's theory of earth pressure; Culmann's graphical method for active earth pressure; Design considerations for retaining walls.

UNIT – III

Stability of Slopes: Introduction; Infinite slopes and translational slides; Definitions of factor of safety; Finite slopes- forms of slip surface; Total stress and Effective stress methods of analysis; Cu-0 Analysis (Total Stress Analysis) ; C- Analysis- Method of slices; Location of most Critical Circle; Stability of Earth Dam Slopes; Friction Circle Method; Taylor's Stability Number.

UNIT – IV

Shallow Foundations: Concept of foundations; Types of foundations and their applicability; General requirements of foundations; Location and Depth of foundation.

Bearing Capacity of Shallow Foundation: Terminology relating to bearing capacity; Bearing Capacity of Shallow Foundations; Terzaghi's Bearing Capacity theory; Skempton's Bearing Capacity Analysis for Clay soils; IS-Code Recommendations for Bearing Capacity; Influence of water table on bearing capacity.

Settlement Analysis: Settlement of Shallow foundation – types; Methods to reduce differential settlements; Allowable Bearing Pressure; Immediate settlemtent –Terzaghi's Method; Allowable Bearing pressure of Granular Soils based on Standard Penetration Test Value – Terzaghi and IS methods;

UNIT – V

Pile Foundations: Introduction; Uses of Piles; Types of Piles; Cast- in-situ Pile construction; Selection of Pile type; Pile driving; Pile load carrying capacity in compression – Static Pile Load formula, Load tests, Dynamic Pile formulae; Correlations with Penetration test data; Group action of Piles – load carrying capacity and settlement; Negative skin friction.

Well Foundations: Types of wells; Components of well foundation; Shapes of wells; Forces acting on well foundation; Construction and Sinking of wells;

		4	0	-	4	4

CE326 ENVIRONMENTAL ENGINEERING – II

Course Description and Objective:

Water is a basic need of the society and pure form of water is not available on the earth now a days. Identification of source, estimation of quantity required, treatment of water to the desired degree and conveyance of water to the community are the essential features of water supply. At the end of the course the student is expected to familiarize with the water supply and wastewater disposal.

Course Outcomes:

- *determine the sewage characteristics and design various sewage treatment plants*
- *analyze the status of surface water and ground water quality and the remediation technologies*
- *carry out municipal water and wastewater treatment system design and operation*
- *manage hazardous wastes, risk assessment and treatment technologies*
- *apply environmental treatment technologies and design processes.*

UNIT – I

Introduction To Sanitary Engineering: Sanitation; Conservancy and water carriage systems – sewage and storm water estimation – time of concentration – storm water Overflows combined flow characteristics of sewage – cycles of decay – decomposition of sewage, examination of sewage – B.O.D. – C.O.D. Equations, design of sewers - Sewer appurtenances – Man holes, Drop man holes, Lamp holes, Flushing tanks, Inverted syphons; Street inlets; Catch basins

UNIT – II

Primary Treatment of Sewage: Layout and general out line of various units in a waste water treatment plant – primary treatment design of screens – grit chambers – skimming tanks – sedimentation tanks – principles of design

UNIT – III

Secondary Treatment of Sewage: Biological treatment – Trickling filters – Standard and high rate - Activated sludge process; Principle of action; Activated sludge process vs. Trickling filter process; Sewage Disposal: Objects; Methods; Disposal by dilution; Disposal by irrigation; Sewage sickness; Reuse of treated sewage; Ground water recharge.

UNIT – IV

Sludge Treatment and Disposal: Characteristics of sewage sludge - Sludge digestion – factors effecting the sludge digestion – Sludge disposal by drying – sludge thickening - sludge conditioning - methods of dewatering the sludge - methods of sludge disposal.

UNIT – V

Urban Solid Waste Management: Sources of the solid waste - Quantities and characteristics of the solid waste - Classification; Collection and transportation - Recovery and reuse - Treatment methods of the solid waste: composting, incineration, sanitary landfill and pyrolysis.

		4	-	-	4	4

CE328 WATER RESOURCES ENGINEERING – II

(Dept.Elective-II)

Course Description and Objective:

Student is expected to plan and design reservoirs and dams at the end of the course.

Course Outcomes:

- *Selection of Cross drainage work, Analyze gravity and earth dam and spillways*
- *Planning a Reservoir*
- *Fundamentals of Hydropower engineering*

UNIT – I

Stream Gauging : Necessity; Selection of gauging sites; Methods of discharge measurement; Area-Velocity method; Measurement of velocity; Floats – Surface floats, Sub–surface float or Double float, Twin float, Velocity rod or Rod float; Pitot tube; Currentmeter; Measurement of area of flow; Measurement of width - Pivot point method; Measurement of depth – Sounding rod, Echo-sounder.

Cross Drainage Works : Introduction; Types of cross - drainage works; Selection of suitable type of cross - drainage work; Classification of Aqueducts and Syphon Aqueducts; Selection of a suitable type.

UNIT – II

Reservoir Planning: Introduction; Investigations for reservoir planning; Selection of site for a reservoir; Zones of storage in a reservoir; Storage capacity and yield; Mass inflow curve and demand curve; Calculation of reservoir capacity for a specified yield from the mass inflow curve; Determination of safe yield from a reservoir of a given capacity; Reservoir sedimentation; Life of reservoir; Reservoir sediment control; Multipurpose reservoir, flood routing; Methods of flood routing-Graphical Method (Inflow – storage discharge curves method), Trial and error method.

UNIT – III

Dams in General : Introduction; Classification; Gravity dams, Arch dams, Buttress dams, Earth dams and rock fill dams; Physical factors governing selection of type of dam and selection of site for a dam.

Gravity Dams : Introduction; Forces acting on a gravity dam; Modes of failure and criteria for stability requirements; Stability analysis; Elementary profile of a gravity dam; Practical profile of a gravity dam; Limiting height of a gravity dam; High and low gravity dams;Design of gravity dams–single step method; Galleries; Joints; Keys and water seals;

UNIT – IV

Earth Dams: Introduction; Types of earth dams; Causes of failure of earth dams; Criteria for safe design of earth dams; Section of an earth dam; Design to suit available materials; Seepage control measures; Slope protection.

Spillways : Introduction; Types of spillways; Profile of ogee spillway; Energy dissipation below spillways for relative positions of jump height curve and tail water curve; Stilling basins; Indian standards on criteria for design of hydraulic jump type stilling basins with horizontal and slopping aprons; Spillway crest gates-Types and description only.

UNIT – V

Water Power Engineering : Introduction; Hydropower - Advantages & disadvantages; Estimation of hydro-power; Flow duration curve; Power duration curve; Load curve; Load factor; Capacity factor; Utilization factor; Diversity factor; Load duration curve; Firm Power; Secondary power; Types of hydel schemes; Forebay; Intake structures; Penstocks; Surge tank; Tail race; Turbines; Selection of suitable type of turbine.

CE330 ADVANCED REINFORCED CONCRETE DESIGN

(Dept. Elective - II)

Course Description and Objective:

The course is prepared to know the advance procedures to design reinforced concrete structures like Grid floors, raft foundation, water tanks and beams.

Course Outcomes:

- *Design Raft foundation using grid beams*
- *Design underground and elevated water tanks*
- *Design bunkers and silos*

UNIT – I

Grid Floors: Introduction, Analysis and Design of Grid Floors.

Raft Foundation: Introduction**,** Analysis and Design of Raft Foundation using grid beams.

UNIT – II

Underground Circular water tanks: Design of Underground Circular water tanks, Design of elevated INTZ Tanks including staging.

UNIT – III

Flat slabs: Design of flat slabs

UNIT – IV

Bunkers And Silos: Design of rectangular and circular bunkers; design of silos.

UNIT – V

Yield line Theory: Introduction; assumptions; analysis by virtual work method; analysis by equilibrium method; analysis and design of simply supported square, rectangular slabs.

TEXT BOOKS:

1. N.Krishna Raju, “Advanced Reinforced Concrete Design”, 2nd ed., CBS Publishers, 2007.
2. H.J Shah, “Reinforced Concrete”, Volume II, 4th ed., Charotar, 2002.

B.Tech	III Year	L	T	P	To	C
		3	1	-	4	4

CE332 PRESTRESSED CONCRETE

(Dept. Elective - II)

Course Description and Objective:

The primary objective of this course is to equip the student with the knowledge of prestressed concrete designs and its related IS codes practice in the design.

Course Outcomes:

- design a prestressed concrete beam accounting for losses
- design the anchorage zone for post tensioned members
- design composite members
- deflections of prestressed concrete beams
- introduction to design water tanks

UNIT – I

Introduction: Historic development – General principles of prestressing pretensioning and post tensioning – Advantages and limitations of prestressed concrete – Materials – High strength concrete and high tensile steel their characteristics. I.S.Code provisions, Methods and Systems of Prestressing; Pre-tensioning and post tensioning methods – Analysis of post tensioning – Different systems of prestressing like Hoyer System, Magnel System Freyssinet system and Gifford – Udall System.

UNIT – II

Losses of prestress : Loss of prestress in pre-tensioned and post-tensioned members due to various causes like elastic shortage of concrete, shrinkage of concrete, creep of concrete, Relaxation of steel, slip in anchorage bending of member and frictional losses.

UNIT – III

Flexure : Analysis of sections for flexure in accordance with elastic theory-Allowable stresses-Design criteria as per I.S code of practice –Elastic design of Beams (rectangular, I and T sections) for Flexure –Introduction to partial prestressing.

UNIT – IV

Shear, bond, Bearing and Anchorage: Shear in PSC beams –Principal stresses – Conventional elastic design for shear-transfer of prestress in pretensioned member transmission length –Bond stresses-bearing at anchorage –Anchorage zone stresses in post tensioned members-Analysis and design of end blocks by Guyon, Magnel and approximate methods – Anchorage zone reinforcements.

UNIT – V

Composite section: Introduction – Analysis of stress – Differential shrinkage – General designs considerations.

Deflections of prestressed concrete beams: Importance of control of deflections – factors influencing deflections – short term deflections of uncracked member prediction of long term deflections.

TEXT BOOKS :

1. Krishna Raju, “Prestressed Concrete”, 4th ed., Tata McGraw Hill Publications, 2009.
2. N.Rajasekharan, “Prestressed Concrete”, 3rd ed., Narosa Publications, 1999.

		-	-	3	3	2

CE334 COMPUTER AIDED ANALYSIS AND DESIGN OF STRUCTURES LAB

Course Description and Objective:

Students are required to analyze and design the following structures using software package like STAAD Pro.

Course Outcome:

- *Design of structural elements using STAAD Pro softaware*

1. (At least five of the following)

1. Analysis and design of simply supported continuous beam.
2. Analysis and design of fixed end supported continuous beam.
3. Analysis of single storey unsymmetrical portal frame
4. Analysis and design of plane frame subjected to gravity loads and Lateral load (wind load)
5. Analysis and design of plane roof truss
6. Detailing of continuous beam
7. Detailing of isolated footing and R.C.C footing with steel column.

2. (At least four of the following)

1. Design of one-way and two way slabs.
2. Design of Retaining wall.
3. Design of Pile foundation.
4. Detailing of welded column base.

3. (At least one of the following)

1. Analysis and design of two-storied R.C.C.Framed building.
2. Analysis and design of Industrial steel building.

B.Tech	III Year	L	T	P	To	C
		-	-	3	3	2

CE336 ENVIRONMENTAL ENGINEERING LAB

Course Description and Objective:

Students are expected to determine water quality, properties of wastewater and its analysis.

Course Outcomes:

- *Determine physical*
- *chemical and biological characteristics of water and wastewater*
- *Determine optimum dosage of coagulant*
- *Assess the quality of water and wastewater*

Note: A minimum of ten (10 No.) shall be done and recorded

1. Determination of total, suspended and dissolved solids in water / sewage sample.
2. Determination of fixed and volatile solids in water / sewage sample.
3. Determination of Settle able Solids.
4. Determination of turbidity of water / sewage sample.
5. Determination of ---pH value of water / sewage sample.
6. Determination of optimum dose of coagulant.
7. Determination of residual chlorine.
8. Determination of temporary and permanent hardness of water sample.
9. Determination of chloride concentration of water / sewage sample.
10. Determination of acidity of water sample.
11. Determination of alkalinity of water sample.
12. Determination of fluorides in water sample.
13. Determination of Dissolved Oxygen of water / sewage sample.
14. Determination of Biochemical Oxygen Demand (BOD) of waste water.
15. Determination of Chemical Oxygen Demand (COD) of waste water.

CE 425 ESTIMATION & CONSTRUCTION PLANNING

Course Description and Objective:

By the end of the course students will be in a position to estimate quantities of various items of a residential building. He will also be in a position to estimate the earth work required in roads and canals. He will be able to calculate rates of various items of work. He will learn the methods of building valuation and rent fixation.

Course Outcomes:

- *Prepare quantity estimates for buildings*
- *roads, rails and canal works*
- *Calculate the quantity of materials required for civil engineering works as per specifications*
- *Evaluate contracts and tenders in construction practices*

UNIT – I

Procedure of Estimating : Methods of estimating; Main items of work; Deduction for openings; Degree of accuracy; Units of measurement.

Methods of Building Estimates : Individual wall method; Centre line method; Arch masonry calculation; Estimate of steps.

UNIT – II

Estimate of Buildings : Centre line method - Estimate of residential building ;Estimate of a building from line plan.

Estimate of Buildings : Individual Wall Method - Estimate of residential building; Estimate of a building from line plan.

UNIT – III

Estimate of RCC works : Standard hooks and cranks; Estimate of RCC slab; RCC beam; RCC T–beam slab and RCC column with foundation.

Road Estimate : Estimate of earthwork; Estimate of pitching of slopes; Estimate of earthwork of road from longitudinal sections; Estimate of earthwork in hill roads.

Canal Estimate : Earthwork in canals–different cases; Estimate of earthwork in irrigation channels.

UNIT – IV

Specifications : Purpose and method of writing specifications; General specifications. Detailed Specifications for Brick work; R.C.C; Plastering; Mosaic Flooring; R.R.Stone Masonary.

Analysis of Rates : Task or out – turn work; Labour and materials required for different works; Rates of materials and labour; Preparing analysis of rates for the following items of work:

i) Concrete ii) RCC Works iii) Brick work in foundation and super structure iv) Plastering v) CC flooring vi) White washing.

UNIT – V

PWD Accounts and Procedure of Works : Organization of Engineering department; Work charged establishment; Contract; Tender; Tender notice; Tender Schedule; Earnest money; Security money; Measurement book; Administrative approval; Technical sanction; Plinth area; Floor Area; Carpet area; Approximate Estimate; Plinth area estimate; Revised Estimate; Supplementary estimate.

Valuation : Cost; Price & value; Methods of valuation; Out goings; Depreciation; Methods for estimating cost depreciation; Valuation of building.

Miscellaneous Topics : Gross income; Net income; Scrap value; Salvage value; Obsolescence; Annuity; Capitalized value; Years purchase; Life of structures; Sinking fund; Standard rent; Process of fixing standard rent; Mortgage.

CE427 TRANSPORTATION ENGINEERING

Course Description and Objective:

At the end of this course, students are expected to know planning of highways, fixing of the best alignment, design of various Geometric elements, pavement design, and construction of the roads. Also the students are expected to design surface drainage system for pavements.

Course Outcomes:

- *Plan highway networks*
- *Design highway geometrics*
- *Design Intersections and prepare traffic management plans*
- *Design flexible and rigid pavements*
- *understand the principles of construction and maintenance of highways*

UNIT – I

Highway Development and Planning: Brief Introduction; necessity of highway planning; surveys; preparation of master plan; highway planning in India.

Highway alignment: Factors controlling alignment; Engineering surveys, Drawings & reports.

UNIT – II

Highway Geometric Design: Highway cross section elements; Sight distance; Design of horizontal alignment; Design of vertical alignment.

Highway materials: Sub grade soils- CBR tests; Stone aggregates; Bitumen materials; Paving mixes.

UNIT – III

Design of Highway Pavements: Design factors; Design of flexible pavements – IRC method, IRC recommendations; Design of Rigid pavements - Westergard's stress equation for wheel loads and temperatures stress; IRC recommendations.

UNIT – IV

Highway construction and maintenance: Construction of water bound macadam roads; Bituminous pavements and cement concrete pavements; Construction of joints in cement concrete pavements; Maintenance of highways- Water bound macadam roads, Bituminous pavements, Cement concrete pavements,Highway drainage.

UNIT – V

Traffic engineering: Basic Parameters of Traffic-Volume, Speed and Density-Traffic Volume Studies- Data Collection and Presentation-speed studies-Data Collection and Presentation

Design of Traffic Signals –Webster Method –IRC Method.Types of At-Grade Intersections- Channelization: Objectives –Traffic Islands and Design criteria-Types of Grade Separated Intersections.

CE429 ENGINEERING GEOLOGY

Course Description and Objective:

The course is intended to explore the scope of geology in terms of Civil Engineering applications and to explain the geological agents and their role in constantly moulding the surface of the earth.

Course Outcomes:

- *Understand weathering process and mass movement*
- *Distinguish geological formations*
- *Identify geological structures and processes for rock mass quality*
- *Identify subsurface information and groundwater potential sites through geophysical investigations Apply geological principles for mitigation of natural hazards and select sites for dams and tunnels*

UNIT - I

Introduction : Branches of Geology, Importance of geology from Civil Engineering Importance of Physical geology, Petrology and Structural geology.

Physical Geology : Weathering -process with reference to dams, reservoirs and tunnels weathering of common rock like "Granite".

Mineralogy : Definition of mineral, Importance of study of minerals, Different methods of study of minerals. Physical properties of minerals. Role of study of physical properties of minerals in the identification of minerals. Study of physical properties of following common rock forming minerals: Feldsper, Quartz , Flint, Jasper, Olivine , Augite , Hornblende, Muscovite , Biotite , Asbestos, Chlorite , Kyanite, Garnet, Talc, Calcite. Study of other common economic minerals such as Pyrite, Hematite,Magnetite, Chromite, Galena, Pyrolusite, Graphite, Magnesite, and Bauxite.

UNIT - II

Petrology : Definition of rock: Geological classification of rocks into igneous, Sedimentary and metamorphic rocks. Dykes and sills, common tructures and textures of igneous. Sedimentary and metamorphic rocks. Their distinguishing features, Megascopic study of Granite, Dolerite, Basalt, Pegmatite, Laerite, Conglomerate, Sandstone, Shale, Limestone, Gneiss, Schist, Quartzite, Marble.

UNIT – III

Structural Geology: Out crop, strike and dip study of common geological structures associating with the rocks such as folds, faults unconformities, and joints - their important types. Earthquakes, their causes and effects, shield areas and seismic belts. Seismic waves, Richter scale, precautions to be taken for building construction in seismic areas. Landslides, their causes and effect; measures to be taken to prevent their occurrence. Importance of study of ground water, earth quakes and land slides.

UNIT – IV

Geophysical methods: Importance of geophysical studies principles of geophysical study by gravity methods. Magnetic methods, electrical methods. Seismic methods, radio metric methods and geothermal method. special importance of electrical resistivity methods and seismic refraction methods.

UNIT – V

Geology of Dams and Reservoirs: Types of dams and bearing of Geology of site in their selection, Geological Considerations in the selection of a dam site. Analysis of dam failures of the past. Factors Contributing to the success of a reservoir. Geological factors influencing water tightness and life of reservoirs.

Tunnels: Purposes of tunneling, Effects of Tunneling on the ground Role of Geological Considerations in tunneling, over break and lining in tunnels.

CE431 FINITE ELEMENT METHODS IN CIVIL ENGINEERING

(Dept. Elective -III)

Course Description and Objective:

This course deals with the theory and application of the finite element methods for analyzing structural systems and other civil engineering problems. To equip the students with the Finite Element Analysis fundamentals. To enable the students to formulate the design problems into FEA.

Course Outcomes:

- *Develop shape functions and stiffness matrices for spring and bar elements*
- *Develop global stiffness matrices and global load vectors*
- *Apply natural and arial coordinate systems to constant strain triangle and linear strain triangle elements*

UNIT – I

Introduction: A brief history of FEM, Need of the Method, Finite Difference Method, Equilibrium equations, linear strain-displacement relations; linear constitutive relations– Plane stress and plane strain.

UNIT – II

Finite Element formulation technique: Virtual Work and Variational Principle, Galerkin Method, Finite Element Method: Displacement Approach, Stiffness Matrix and Boundary Conditions, Potential energy; Principle of stationary potential energy

UNIT –III

Element Properties: One Dimensional FEM: Stiffness matrix for bar element

- shape functions for one-dimensional elements – one-dimensional problems. Two Dimensional FEM: Different types of elements for plane stress and plane strain analysis – Displacement models – generalized coordinates – shape functions – convergent and compatibility requirements – Geometric invariance – Natural coordinate system – area and volume coordinates.

UNIT – IV

Direct Stiffness method and Solution Technique : Assemblage of elements– Obtaining Global stiffness matrix and Global load vector; Governing equilibrium equation for static problems; Application of boundary conditions; Solution to resulting simultaneous equations using Gauss elimination method.

UNIT – V

Solution to one- and two- dimensional problems: Solution to plane truss, plane-frame, plane-stress and plane-strain problems. Axis-symmetric analysis- Basic principles-Formulation of 4-node isoparamatric axis-symmetric element, Gauss Quadrature, Numerical integration

CE433 GROUND WATER DEVELOPMENT & MANAGEMENT

(Dept. Elective - III)

Course Description and Objective:

The student is expected to have thorough knowledge on occurrence and movement of ground water, analyzing the data of pumping test and artificial recharge of ground water at the end of the course.

Course Outcomes:

- *Evaluate groundwater resources using geophysical methods*
- *Estimate aquifer parameters*
- *Model regional groundwater flow and design water wells*
- *Design water wells*

UNIT – I

Ground Water Occurrence: Ground water hydrologic cycle, origin of ground water, vertical distribution of ground water, zone of aeration and zone of saturation, geologic formation as Aquifers, types of aquifers, porosity, Specific yield and Specific retention.

UNIT – II

Ground Water Movement: Permeability, Darcy's law, storage coefficient. Transmissivity, differential equation governing ground water flow in three dimensions, derivation, ground water flow equation in polar coordinate system. Ground water flow contours their applications.

UNIT – III

Analysis of Pumping Test Data – I: Steady flow groundwater flow towards a well in confined and unconfined aquifers – Dupit's and Theim's equations, Assumptions, Formation constants, yield of an open well.

UNIT – IV

Analysis of Pumping Test Data – II: Unsteady flow towards a well – Non equilibrium equations – Thesis solution – Jocob and Chow's simplifications, Leak aquifers. Surface and Subsurface Investigation: Surface methods of exploration – Electrical resistivity and Seismic refraction methods. Subsurface methods – Geophysical logging and resistivity logging. Aerial Photogrammetry applications along with Case Studies in Subsurface Investigation.

UNIT – V

Artificial Recharge of Ground Water: Concept of artificial recharge – recharge methods, relative merits, Applications of GIS and Remote Sensing in Artificial Recharge of Ground water along with Case studies. Saline Water Intrusion in aquifer: Occurrence of saline water intrusions, Ghyben- Herzberg relation, Shape of interface, control of seawater intrusion.,Groundwater Basin Management: Concepts of conjunction use, Case studies.

CE435 REMOTE SENSING AND GIS APPLICATIONS

(Dept. Elective - III)

Course Description and Objective:

These sensors collect data in the form of images and provide specialized capabilities for manipulating, analyzing, and visualizing those images. Remote sensed imagery is integrated within a GIS. A geographic information system (GIS) is a computer-based tool for mapping and analyzing features and events on earth. GIS manages location based information and provides tools for display and analysis of various statistics, including population characteristics, economic development opportunities, and vegetation types.

Course Outcomes:

- *Retrieve the information content of remotely sensed data*
- *Analyse the energy interactions in the atmosphere and earth surface features*
- *Interpret the images for preparation of thematic maps*
- *Analyze spatial and attribute data for solving spatial problems*

UNIT – I

Basic Principles: Introduction, Electromagnetic waves and their properties, interaction with Earth surface materials, recent developments in Remote sensing, Social and legal implications of Remote Sensing, status of Remote Sensing.

Geographic Information System: Introduction, GIS definition and terminology, GIS categories, components of GIS, fundamental operations of GIS, A theoretical framework for GIS.

UNIT – II

Data Acquisition Platforms & Sensors: Introduction, Characteristics of imaging and remote sensing instruments, satellite remote sensing system – a brief over view, other remote sensing satellites.

Pre-Processing Of Remotely Sensed Data: Introduction, cosmetic operation; Geometric connection and registration, atmospheric correction.

UNIT – III

Digital image processing: Digital image and its characteristics, satellite data formats, Image rectification and restoration, Image Enhancement- Contrast Manipulation, Spatial Feature Manipulation, Multi-image manipulation, Image Classification- Unsupervised and Supervised Classification, Classification Accuracy, Details of digital image processing software packages.

UNIT - IV

GIS Spatial Analysis: Computational Analysis Methods (CAM), Visual Analysis Methods (VAM), Data storage-vector data storage, attribute data storage, overview of the data manipulation and analysis. Integrated analysis of the spatial and attribute data.

UNIT – V

Applications of remote sensing in Natural resources management, Environmental impact assessment and water resources management.

TEXT BOOKS:

CE437 AIR POLLUTION AND CONTROL

(Dept. Elective - IV)

Course Description and Objective:

This course serve to provide the student with an introduction or refresher in the basics of air pollution control. After completing this course, the student should be familiar with the various interrelated aspects of air pollution control, understand the basic terminology, and have a rudimentary understanding of some of the technical aspects of regulating, measuring, and controlling air pollution. The student will find links to the Environmental Protection Agency (EPA) Web site for further research in the air pollution control field.

Course Outcomes:

- *Identify sampling and analysis techniques for air quality assessment*
- *Describe the plume behaviour for atmospheric stability conditions*
- *Apply plume dispersion modelling and assess the concentrations*
- *Design air pollution controlling devices*

UNIT – I

Introduction to air pollution : Air Pollution – Definitions, Scope, Significance and Episodes, Air Pollutants – Classifications – Natural and Artificial – Primary and Secondary, point and Non- Point, Line and Areal Sources of air pollution-stationary and mobile sources.

UNIT – II

Effects of air pollution: Effects of Air pollutants on man, material and vegetation: Global effects of air pollution – Green House effect, Heat Islands, Acid Rains, Ozone Holes etc.

UNIT - III

Air pollution Modeling : Thermodynamics and Kinetics of Air-pollution – Applications in the removal of gases like SOx, NOx, CO, HC etc., air-fuel ratio. Computation and Control of products of combustion.

UNIT – IV

Meteorology of air pollutants : Meteorology and plume Dispersion; properties of atmosphere; Heat, Pressure, Wind forces, Moisture and relative Humidity, Influence of Meteorological phenomena on Air Quality-wind rose diagrams. Lapse Rates, Pressure Systems, Winds and moisture plume behaviour and plume Rise Models; Gaussian Model for Plume Dispersion.

UNIT - V

Control of air pollution : Control of particulates – Control at Sources, Process Changes, Equipment modifications, Design and operation of control. Equipment's – Settling Chambers, Centrifugal separators, filters Dry and Wet scrubbers, Electrostatic precipitators. General Methods of Control of NOx and Sox emissions – In-plant Control Measures, process changes, dry and wet methods of removal and recycling.,Air Quality Management – Monitoring of SPM, SO; NO and CO Emission Standards.

CE439 GROUND IMPROVEMENT TECHNIQUES

(Dept. Elective - IV)

Course Description and Objective:

At the end of course work the student is expected to learn various techniques of insitu ground modification. He is also expected to know other stabilization techniques depending upon the soil characteristics.

Course Outcomes:

- *Identify ground conditions and suggest method of improvement*
- *Design and assess the degree of improvement*
- *understand the principles of soil reinforcement and confinement in engineering constructions*
- *Design reinforced soil structures*

UNIT – I

Ground Improvement in Cohesion less Soil: Need for Ground Improvement, Objectives of Ground Improvement, Different types of problematic soils, and emerging trends in ground Improvement.

Shallow and deep compaction: Requirements, Principles and methods of soil compaction, Shallow compaction and methods. Properties of compacted soil and compaction control, Deep compaction and Vibratory methods, Dynamic compaction.

UNIT - II

Ground Improvement in Cohesive Soil: Drainage and Dewatering: Drainage techniques - Well points - Vacuum and electro osmotic methods,Preloading with and without vertical drains: Compressibility, vertical and radial consolidation, preloading methods. Types of Drains, Design of vertical Drains, Construction techniques,Stone Column: Function Design principles, load carrying capacity, construction techniques, settlement of stone column foundation.

UNIT - III

Geosynthetics & Reinforced Earth: Geosynthetics: Introduction, Types of Geosynthetics, Functions and applications of different Geosynthetics. Geotextiles: Types of Geotextiles, tests for Geotextiles.

Reinforced Earth: Principles, components of reinforced earth, design principles of reinforced earth walls.

UNIT - IV

Soil Stabilization: Mechanical Stabilization: Soil aggregate mixtures, properties and proportioning techniques, soft aggregate stabilization,Cement Stabilization: Mechanism, factors affecting and properties, use of additives, design of soil cement mixtures, construction techniques, Lime and Bituminous Stabilization: Type of admixtures, mechanism, factors affecting, design of mixtures, construction methods.

UNIT - V

Grouting: Types of grouts - Grouting equipment and machinery - Injection methods – Grout Monitoring – Stabilization with Cement, Lime and Chemicals - Stabilization of Expansive Soils.

Foundations in Expansive Soils: Identification of expansive soil; Field conditions that favour swelling; consequences of swelling; Different alternative foundation practices in swelling soils; Construction practice of UR piles in swelling soils.

CE441 RAILWAY AND AIRPORT ENGINEERING

(Dept. Elective - IV)

Course Description and Objective:

In Railway Engineering, the students are taught various components of permanent way, design of geometric elements of railway track and types of stations and yards and signaling and control systems in railways. In Air transportation the growth of air transport, aircraft characteristics, planning of airports, imaginary surfaces, and the design of runways are dealt.

Course Outcomes:

- *Design and analyze the railway track system*
- *Understand the process of execution of railway projects*
- *Carryout the geometrical design of the airport infrastructure*
- *Prepare structural designs of runway*
- *taxiway, and apron-grate area*

UNIT - I

Introduction: Role of railways in transportation; Comparison of railway and highway transportation; Development of railway systems with particular reference to India; Classification of railways.

Railway Track Permanent way: Gauges in Railway track, Railway track cross – section; Coning of wheels.

Rails & Rail Joints: Functions of rails; Requirements of rails; Types of rails sections; Standard rail sections; Length of rails; Rail failures; Wear on rails, Requirements of an ideal joint; Types of rail joints; Welding of rails.

Sleepers: Functions of sleepers; Requirements of sleepers; Classification of Sleepers – Timber sleepers, Metal sleepers & Concrete sleepers; Comparison of different types of sleepers.

UNIT – II

Fish Plates: Fish plates, section of fish plates, failure of fish plates.

Ballast: Functions and requirements of ballast; Types of ballast; Renewal of ballast.

Geometric Design of Track: Necessity; Gradients & Grade Compensation; Elements of horizontal alignment; Super elevation; Cant deficiency and Cant excess; Negative Super elevation; Length of Transition Curve, Length of vertical curve.

UNIT – III

Points And Crossings: Functions of components of turnouts; Crossings.

Stations And Yards: Site selection for railway station; Requirements of railway station; Classifications; Station yards; Level crossings.

Signaling: Objects of signaling; Classification of signals; Controlling- absolute block system. Standards of inter locking.

UNIT – IV

Introduction to Airport Planning: Development of air transportation system with particular reference to India; Air craft components; Air–craft characteristics.

Airport planning and layout: Selection of site; Apron; Hangar; Typical airport layouts; Airport markings; Airport lighting; Drainage systems.

Airport Obstruction: Zoning laws; Classification of obstructions; imaginary surfaces; Approach zone; Turning zone.

UNIT – V

Runway Design: Runway orientation; Basic runway length; Corrections for elevation, temperature and gradient; Runway geometric design.

Specifications for Structural Design of Airport Pavements: Design factors methods for flexible and rigid pavements; LCN system of pavement design.

TEXT BOOKS:

CE443 ENGINEERING GEOLOGY LAB

Course Description and Objective:

To provide hands on experience on identification, methods to find properties of various geographical materials.

Course Outcomes:

- *Identify minerals and rocks*
- *Measure strike and dip of the bedding planes*
- *Interpret geological maps*

1. Physical Properties of Minerals
2. Physical Properties of Rocks
3. Identification of Minerals in Hand Specimen
4. Identification of Rocks in Hand Specimen
5. Identification of Geological features through wooden Models
   a) Structural Geological Diagrams
   b) Petrological Diagrams
   c) Engineering Geological Diagrams
6. Interpretation of Geological Map (10 Nos.)
7. Study of Satellite Imageries
8. Determination of Strike and Dip of formations
9. Electrical Resistivity Method
10. Seismic Hammer Sounding Method
11. Study of Structural Models
12. Study of Tunnel Models
13. Study of Survey of India Topographical Maps

Note : A minimum of Eight (08 Nos) shall be done and recorded

B.Tech	**IV Year**	**L**	**T**	**P**	**To**	**C**
		-	-	3	3	2

CE445 QUANTITY ESTIMATION & PROJECT MANAGEMENT LAB

Course Description and Objective:

Students are required to analyze and design the following structures using software package like MS EXCEL.

Course Outcome:

- *Design and estimate civil engineering exercise using Excel.*

Quantity Surveying

*(At least **SIX** of the following using softwares like MS Excel/ Qty./Road Estimate/ Super Rate analysis etc.)*

1. Quantity estimation of a single storey residential building (different items).
2. Cost estimation of a single storey residential building.
3. Quantity estimation of a B.T.Road (different items).
4. Cost estimation of a B.T.Road.
5. Quantity estimation of a Canal (different items).
6. Cost estimation of a Canal.
7. Find out the labour requirement and preparing the Rate Analysis for different items of work.
   a) C.C
   b) R.C.C
   c) Brick work
   d) Flooring

Project Management

*(Any **THREE** of the following using softwares like MS Project / Primavera etc.)*

1. Preparing the Project management report for a single storey residential building/Road/Canal by using the Bar Chart/Mile stone chart.
2. Preparing the Project management report for a single storey residential building by using the network technique (PERT/CPM).
3. Preparing the Project management report for a B.T.Road by using the network technique (PERT/CPM).

4. Preparing the Project management report for a Canal by using the network technique (PERT/CPM).

Quantity Estimation

*(At least **THREE** of the following by using softwares like MS Excel)*

1. Quantity estimation of RCC roof slab and preparing schedule of bars.
2. Quantity estimation of RCC beam and preparing schedule of bars.
3. Quantity estimation of RCC Column with foundation footing and preparing schedule of bars.
4. Quantity estimation of RCC retaining wall and preparing schedule of bars.

B.Tech	IV Year	L	T	P	To	C
		-	-	3	3	2

CE447 TRANSPORTATION ENGINEERING LABORATORY

Course Description and Objective:

Students are expected to conduct the experiments on Aggregates, Bituminous materials and mixes and also on subgrade soils to find out their properties.

Course Outcome:

- *Characterize the pavement materials*
- *Perform quality control tests on pavements and pavement materials.*

Tests on Aggregates

1. Aggregate Crushing value test.
2. Aggregate impact value test.
3. Los Angeles abrasion test.
4. Deval's attrition value test.
5. Shape test: a) Flakiness index test b) Elongation index test c) Angularity number test. .
6. Specific gravity Test.

Tests on Bituminous Materials

7. Penetration test.
8. Softening point test.
9. Flash and fire point test.
10. Ductility test.
11. Viscosity test.
12. Bitumen Extractions Test.
13. Specific gravity of Bitumen.

Test on Bituminous Mixes

14. Marshall stability test.

Test on Soil Sub-grade

15. California bearing ratio test

B.Tech	**IV Year**	**L**	**T**	**P**	**To**	**C**
		4	-	-	4	4

CE416 DESIGN & DRAWING OF HYDRAULIC STRUCTURES

(Dept. Elective - V)

Course Description and Objective:

At end of the course the student will be in a position to understand the design principles and able to design and draw the hydraulic structures.

Course Outcome:

- *Design of Tank sluice with tower head*
- *Design of surplus weir*
- *Design of canal regulator*

Design and drawing of the following hydraulic structures.

1. Sloping glacis weir.

2. Tank sluice with tower head
3. Type III Syphon aqueduct.
4. Surplus weir.
5. Trapezoidal notch fall.
6. Canal regulator.

Final Examination pattern:

Any two questions of the above six designs may be asked out of which the candidate has to answer one question. The duration of examination will be three hours.

TEXT BOOKS:

1. C.Satyanarayana Murthy, "Design of minor irrigation and canal structures", 3rd ed., Wiley Eastern Ltd., 1998.
2. S.K.Garg, "Irrigation engineering and Hydraulic structures", 4th ed., Standard Book House, 2002.

CE418 EARTHQUAKE RESISTANT DESIGN OF STRUCTURES

(Dept. Elective - V)

Course Description and Objective:

This course integrates information from various engineering and scientific disciplines in order to provide a rational basis for the design of earthquake-resistant structures.

Course Outcomes:

- *apply the basics of Earthquake Engineering*
- *demonstrate the dynamics of structural system under earthquake load*

- *analyze the influence of the structural / geometrical design in building characteristics*

UNIT-I:

Design forces for buildings : Introduction; Equivalent static method; Mode superposition technique; Dynamic inelastic-time history analysis; Advantages and disadvantages of these methods; Determination of lateral forces as per IS1893(Part 1) – Equivalent static method, Model analysis using response spectrum.

UNIT-II

Earthquake resistant design of a long two-storey , two-bay RCC building : Determination of lateral forces on an intermediate plane frame using Equivalent static methods and Model analysis using response spectrum; Analysis of the intermediate frame for various load combinations as per IS1893(Part 1); Identification of design forces and moments in the members; Design and detailing of typical flexural members ,typical column, footing and detailing of a exterior joint as per IS13920.

UNIT-III

Steel Buildings: Behavior of steel; Materials and workmanship; Steel frames – unbraced, braced; Ductile design of frame members; Flexural members; Frame members subjected to axial compression and bending; Connection design and joint behaviour ; Stee Panel zones; Bracing members

UNIT-IV

Seismic protection of structures: Introduction; Considerations for seismic isolation; Basic elements of seismic isolation; seismic-isolation design principle; Feasibility of seismic isolation; Seismicisolation configurations-Seismic dampers - Types of Dampers: Viscous, Friction, Yielding dampers – Seismic vibration control-Seismic Strengthening Measures.

UNIT-V

Ductility considerations in earthquake resistant design of RCC buildings: Introduction; Impact of ductility; Requirements for ductility; Assessment of ductility– Member/element ductility, Structural ductility; Factor affecting ductility; Ductility factors; Ductility considerations as per IS13920.

TEXT BOOKS :

1. Earthquake resistant design of structures by Pankaj Agarwal and Manish Shrikhande, Prentice-Hall of India, 2006.
2. Seismic design of reinforced concrete and masonry buildings by T.Paulay and M.J.N.Priestley, John Wiley & Sons, 1991.

REFERENCE BOOKS:

1. Earthquake resistant design of structures by SK Duggal , Oxford University Press.2007
2. The seismic design handbook, Edited by F.Naeim, Kluwer Academic

CE420 TRAFFIC ENGINEERING

(Dept. Elective - V)

Course Description and Objective:

The course is meant to give a brief account on characteristics of vehicles, traffic analysis and traffic control systems. It also deals with various aspects of traffic management.

Course Outcomes:

- *Conduct traffic studies for estimating traffic flow characteristics*
- *Design of traffic signal*
- *caonduct accident studies*

UNIT - I

Traffic Characteristics: Road user's characteristics **-** general human characteristics, physical, mental and emotional factors, factors affecting reaction time, PIEV theory.

Vehicular characteristics: Characteristics affecting road design-width, height, length and other dimensions. weight, power, speed and braking capacity of a vehicle.

UNIT - II

Traffic Studies : Spot Speed Studies, Volume Studies; Speed and Delay Studies**:** Purpose, causes of delay, methods of conducting speed and delay studies.

Origin and Destination Studies (O & D) : Various methods, collection and interpretation of data, planning and sampling.

Traffic Capacity Studies: Volume, density, basic practical and possible capacities, level of service.

Parking Studies: Methods of parking studies cordon counts, space inventories, parking practices.

UNIT - III

Traffic Operations and Control : Traffic regulations and various means of control - One way streets- advantages and limitations.

Traffic signals: Traffic signals, isolated signals, coordinated signals, simultaneous, alternate, flexible and progressive signal systems. Types of traffic signals, fixed time signals, traffic actuated signals, speed control signals, pedestrian signals, flashing signals, clearance interval and problems on single isolated traffic signal.

UNIT - IV

Street Lighting : Design of street lighting system; Definitions- Luminaire, foot candle, Lumen, utilization and maintenance factors; Different types of light sources used for street lighting; Fundamental factors of night vision.

UNIT - V

Accident Studies : Causes of accidents, accident studies and records, condition and collision diagrams, preventive measures.

Expressways and freeways : problems on mass transportation and remedial measures, brief study of mass transportation available in the country.

TEXT BOOK :

1. L.R. Kadiyali, "Traffic Engineering and Transport Planning", 5th ed., Khanna Publishers, Delhi, 2008.

CE422 ENVIRONMENTAL IMPACT ASSESSMENT

(Dept. Elective - VI)

Course Description and Objective:

The course is designed to know the various environmental aspects like assessment of soil, surface water environment, impact of air pollution, which are essential to consider before establishment of any civil engineering projects at a particular location. It also deals with different legislative acts and environment audits regarding selection of location of the project.

Course Outcomes:

- *Identify the environmental attributes to be considered for the EIA study*
- *Formulate objectives of the EIA studies*
- *Identify the methodology to prepare rapid EIA*
- *Prepare EIA reports and environmental management plans*

UNIT – I

Basic concepts of EIA : Initial Environmental Examination; Elements of EIA; Factors affecting EIA; Impact evaluation and analysis; Preparation of Environmental Base map; Classification of Environmental parameters. EIA Methodologies; Introduction; criteria for the selection of EIA Methodology; EIA Methods: Ad-hoc methods, Matrix methods, Network method, Environmental media quality index method; Overlay methods; Cost/benefit Analysis.

UNIT – II

Impact of Developmental Activities and Land Use : Introduction and Methodology for the assessment of soil and ground water; Delineation of study area; Identification of activities. Procurement of relevant soil quality; Impact prediction; Assessment of Impact significance; Identification and Incorporation of mitigation measures.

UNIT – III

EIA in surface water, Air and Biological Environment : Methodology for the assessment of Impacts on surface water environment; Air pollution sources; Generalized approach for assessment of Air pollution Impact. Assessment of Impact of Development activities on vegetation and wildlife; Environmental Impact of Deforestation; Causes and effects of deforestation.

UNIT - IV

Environmental Audit and Environmental legislation : Objectives of Environmental Audit; Types of Environmental Audit; audit protocol; stages of Environmental Audit; On-site activities; Evaluation of Audit data and preparation of Audit report.

UNIT - V

Post Audit activities; The Environmental Pollution Act, The Water Act; The Air (Prevention and Control of Pollution) Act; Wild life protection Act. Case Studies and preparation of Environmental Impact Assessment statement for various industries.

CE424 BRIDGE ENGINEERING

(Dept. Elective - VI)

Course Description and Objective:

The student is expected to know the various types of a bridge and its related specifications. Is also deals with design considerations of bridge and its substructure and foundation. (Working stress method is to be adopted for all designs)

Course Outcomes:

- *Design the slab culvert, Box culvert*
- *Design the T beam bridge and substructures*
- *Design the Bridge bearings.*

UNIT – I

Introduction & Investigation For Bridges : Components of a Bridge; Classification; Standard Specifications; Need for Investigation; Selection of Bridge Site; Preliminary Data to be Collected; Preliminary Drawings; Determination of Design Discharge; Economical Span; Location of Piers and Abutments; Vertical clearance above HFL; Scour depth; Traffic Projection; Choice of Bridge type; Importance of Proper Investigation.

UNIT – II

Concrete Bridges : Various types of bridges; I. R. C. Specifications for road bridges.

Culverts : Design of R. C. slab culvert.

UNIT – III

T – Beam Bridge : Pigeaud’s method for computation of slab moments; Courbon’s method for computation of moments in girders; Design of simply supported T – beam bridge.

UNIT – IV

Sub Structure For Bridges : Pier and abutment caps; Materials for piers and abutments; Design of pier; Design of abutment; Backfill behind abutment; Approach slab.

UNIT – V

Bearings For Bridges : Importance of bearings; Bearings for slab bridges; Bearings for girder bridges; Expansion bearings; Fixed bearings; Design of elastomeric pad bearing.

Foundations For Bridges : Scour at abutments and piers; Grip length; Types of foundations; Design of well foundation.

TEXT BOOK :

CE426 REPAIR & REHABILITATION OF STRUCTURES

(Dept. Elective - VI)

Course Description and Objective:

The course seeks to recognize the mechanisms of degradation of concrete structures, provide the students with the knowledge of available techniques and their application for

strengthening or upgrading existing structural systems. It also provides how to conduct field monitoring and non-destructive evaluation of concrete structures.

Course Outcomes:

- *Assess strength and materials deficiency in concrete structures*
- *Suggest methods and techniques used in repairing / strengthening existing concrete structures*
- *Apply Non Destructive Testing techniques to field problems*

UNIT-I

Introduction: Deterioration of structures with aging; Need for rehabilitation. Effects due to climat, temperature, chemicals , wear and erosion , design and construction errors , corrosion mechanism , Effects of cover thickness and cracking, Method of corrosion production., corrosion inhibitors , corrosion resistant steels , coatings , cathodic production Distress in concrete /steel structures Types of damages; Sources or causes for damages; effects of damages; Case studies.

UNIT-II

Structural Health Monitoring: An overview of Structural Health Monitoring, Structural Health Monitoring and Smart Materials, Structural Health Monitoring versus Non Destructive Testing, A broad overview of smart materials, Overview of Application potential of SHM.

UNIT-III

Maintenance and Repair Strategies: Definitions: Maintenance, Repair , Rehabilitation, Facets of maintenance , Importance of maintenance , preventive measures on various aspects , assessment procedure for evaluating damaged structure, causes of deterioration – Testing techniques.

UNIT-IV

Materials and Methods of Repair: Special concrete and mortar , Concrete chemicals , special elements for accelerator, strength gain, expansive cement , polymer concrete , sulphur infiltrated concrete , ferro cement, fibre reinforced concrete. Shortcreting; Grouting; Epoxy-cement mortar injection; Crack ceiling.

UNIT-V

Seismic Retrofitting of reinforced concrete buildings: Introduction; Considerations in retrofitting of structures; Source of weakness in RC frame building – Structural damage due to the discontinuous load path; Structural damage due to lack of deformation; Quality of workmanship and materials; Classification of retrofitting techniques; Retrofitting strategies for RC buildings – Structural level (global) retrofits methods; Member level (local) retrofit methods; Comparative analysis of methods of retrofitting.

TEXT BOOKS:

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of Matlab related to above concepts.

Course Outcomes:

The student will be able to:

- recognise and solve different types of first order ordinary differential equations.
- find the complementary functions and particular integral of second and higher order ordinary differential equations with constant coefficients.
- apply the knowledge of ordinary differential equations in some instances.
- solve ordinary differential equations, with initial conditions, numerically.
- find the local maxima/minima of given function of two variables.
- eliminate arbitrary constants/functions from given relations to form partial differential equations.
- solve linear and non-linear partial differential equations of standard types.
- classify second order partial differential equations and solve them.

SKILLS:

ü *Solve given differential equation by suitable method.*

ü *Compute numerical solutions of differential equation by apt method.*

ü *Compute maxima/minima of given function.*

ü *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with Matlab output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*

UNIT - 1 **L- 9**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form : e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation: Partial derivatives, Partial derivatives of higher order, Homogeneous function, Euler's theorem, Total differential coefficient. Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS: Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L- 9**

PARTIAL DIFFERENTIAL EQUATIONS : Formation of Partial Differential Equations, Linear (Lagrange) Equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method.Second order linear equations with constant coefficients only, classifications, rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Basic mathematical operations using MatLab
2. Solving simple expressions
3. Limits
4. Continuity
5. Symbolic differentiation
6. Symbolic integration
7. Plotting of curves
8. Plotting of surfaces
9. Maxima & minima of functions of one variable
10. Maxima & minima of functions of two variable
11. Solving first order O.D.E.
12. Euler's Method and R-K Method

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	-	45	30	10	-	10

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibres, Photonics, Nano and funcational materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to :

- understand the applications of ultrasonics and to calculate the velocity of ultrasonic waves in liquids.
- acquire basic knowledge in Non-destructive techniques.
- understand basic concepts of laser and optical fibre which help in designing and developing new devices in emerging fields.
- grasp the basics of quantum mechanics.
- understand the fabrication of solar devices.
- use nano science and technology for innovative and compact design.
- demonstrate synthesis, properties and applications of nanomaterials and functional materials.

SKILLS:

ü *Determine the velocity of ultrasonics in a given liquid using interferometer.*

ü *Study the wavelengths of light sources and lasers.*

ü *Estimate the efficiency of a given solar cell.*

ü *Learn about the type of the optical fibre and their ability to propagate light waves from its numerical aperture.*

ü *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves, Piezoelectric method, Properties of ultrasonic waves, Types of ultrasonic waves, Determination of Velocity of ultrasonic waves in solids and liquids, SONAR, Medical Applications.

NDT: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray Radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of Laser light, Spontaneous and Stimulated emission of radiation, He-Ne Laser, CO_2 Laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and Applications.

FIBER OPTICS: Principle of optical fibre, Acceptance angle, Numerical Aperture, Types of fibres, Dispersion and Attenuation in optical fibres, Optical fibre communication system, Fibre Optic sensors.

UNIT - 3 **L- 9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and Applications.

UNIT - 4 **L- 9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non-linear optical behaviour of materials, Applications.

UNIT - 5 **L- 9**

NANO MATERIALS: Introduction, Fabrication of nano materials, Ball milling, Sol-Gel, Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics / metals, Biomaterials.

TEXT BOOKS:

1. V.Rajendran, "Engineering Physics", 7th edition, TMH Publications, 2014
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd, 1992.
3. Sukhatme S.P, "Solar Energy", 2nd edition, TMH publication, 2005.
4. Dr. Arumugam "Materials Science", 3rd edition, Anuradha Publications 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Finding height of a room using laser.*
- *Identifying the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measuring temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	15	5	6	4	5

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The teaching efforts in this course will be directed towards making students develop their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to :

- acquire an understanding of the rules of grammar.
- strengthen their reading and listening comprehension skills to follow the academic discourse in the engineering classroom.
- have a command of basic vocabulary related to different subject areas.
- have a grasp on the mechanics of writing and express their ideas through construction of simple texts.
- attain language proficiency to participate in the classroom discussions.

SKILLS:

ü *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*

ü *Apply different sub skills like top down, bottoms up approachs to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*

ü *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*

ü *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*

ü *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **Environmental Consciousness**
  (Climate Change – Green Cover – Pollution - Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles – Prepositions – Sentence Types and Construction
- Vocabulary : Root – Prefixes - Suffixes
- Composition : Paragraph Writing (Descriptive and Narrative)
- Laboratory Practice : Introduction to Phonetics
  (Organs of Speech; Consonants, Vowels & Diphthongs; Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **Emerging Technologies**
  (Solar Power – Cloud Computing – Nanotechnology- Wind energy (to be covered from Energy unit))
- Grammar : Time and Tense (Present-Past-Future; Helping Verbs; Modals)
- Vocabulary : Synonyms – Antonyms
- Composition : Letter Writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **Travel and Tourism**
  (Advantages and Disadvantages of Travel-Tourism – Atithi Devo bhava – Tourism in India)
- Grammar : Subject-Verb Agreement - Sentence Construction
- Vocabulary : Idioms & Phrases
- Composition : Letter Writing (Formal)
- Laboratory Practice : Situational Conversations – Role-Plays
  (Introducing; Greeting; Enquiring; Informing; Requesting; Inviting)

UNIT - 4 **L-9**

- Text : **Engineering Ethics**
  (Challenger Disaster – Biotechnology – Genetic Engineering – Protection from Natural Calamities- How pertinent is the nuclear option? An Environment of Energy (from Energy unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence Transformation (Degrees, Voice, Speech & Synthesis)
- Vocabulary : Phrasal Verbs
  Composition : Note-making – Text - Nandan Nilekani's In search of our energy solutions (from Energy Unit)
  Summarizing, Text on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational Conversations – Role-Plays (Emotions; Directions; Descriptions; Agreements; Refusals; Suggestions)

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD & CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

UNIT - 5 **L-9**

- Text : **Media Matters**
  (History of Media – Language and Media – Milestones in Media – Manipulation by Media – Thousands march against nuclear power in Tokyo (from Energy Unit) - Entertainment Media – Interviews)
- Grammar : Common Errors
- Vocabulary : One-word Substitutes
- Composition : E-mail – Short Message Service (SMS) - Writing Advertisements, Reporting, Social Media: Blogging, Facebook, Twitter (acceptable & non acceptable content)
- Laboratory Practice : Group Discussions – (Topics from Energy unit) – Dumping of nuclear wastes, Exploration of eco-friendly energy options- lifting of subsidies on Petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to :

- understand the terms and concepts of Computer Science and Information Technology (hardware, software, networking, security, Internet/Web, and Technologies).
- use the products and services of computers.
- use Internet/Web services as a resource for developing shared applications.
- install different operating systems and application software.

SKILLS:

ü *Assemble and disassemble the personal computer system.*

ü *Install different desktop operating systems.*

ü *Use the basic text processing, simple data analysis and data presentation tools.*

ü *Configure network parameters.*

ü *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L- 10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L- 10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L- 08**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and Database management systems.

UNIT - 4 **L- 8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and Other internet applications.

UNIT - 5 **L- 9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours: 30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using Analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort & filter using Power Point tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, “Introduction to Computers”, 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- understand the basic terminology used in computer programming to write, compile & debug programs in 'C' language.
- use different data types to design programs involving decisions, loops and functions.
- understand the allocation and Usage of dynamic memory.
- understand the usage of files & structures.

SKILLS:

- ü *Identify suitable data types for an application.*
- ü *Apply control statements for decision making problems.*
- ü *Use multidimension array for matrix application.*
- ü *Design a program to calculate average of a class.*
- ü *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L- 10,T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L- 9,T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L- 9,T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L- 9,T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L- 8,T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours: 30

1. Compute the factors of a number.
2. Compute the average of ‘n’ numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.

ACTIVITIES:

- *Implement matrix operations.*
- *Implement malloc and calloc functions.*
- *Copy the content of one file into the other.*
- *Implement string manipulations functions.*

8. Using structure of arrays.
9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

16EE101 BASICS OF ENGINEERING PRODUCTS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	5	40	-	8	5	-

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- gain knowledge and hands-on experience on various engineering products.
- install, operate, maintain and troubleshoot basic mechanical, electrical and electronic appliances.
- understand the concept of conservation of energy.
- gain awareness on choosing appropriate construction materials.

SKILLS:

ü *Identify UPS requirements for a given load.*

ü *Provide a Lighting scheme for specific working environment.*

ü *Design a composition of Heating element for a particular application.*

ü *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

ü *Provide an earthing for Domestic Outlet.*

ü *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembling and Assembling of Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Providing Earthing for Domestic Outlet.*
- *Designing Electric Wiring system for a prototype house.*
- *Designing UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L- 9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air-conditioner and Refrigerator-components, Assembly and Disassembly, Working principle of Centrifugal and Reciprocating pumps - Types, Parts and Applications; Working principle of Screw jack and its components, Working principle of IC engines - 2 stroke and 4 stroke.

UNIT - 2 **L- 10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks.

Timber: Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel. Simple layout design, Paints, Tiles,fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L- 08**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems.

Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods.

Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and Applications.

MOTOR: Electric Motors, Classification, Construction and Working principles of motors used in Domestic Applications, Mixer Grinder, Ceiling and Exhaust Fan, Hair Dryer, Washing Machine, Water Pump, Air Coolers, Vacum Cleaner, Computer Cooling Motor, Electric Bike.

UNIT - 5 **L- 8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of Television, Radio, Remote Control, Telephone, Microwave Oven, Cell phone, PA system, Induction Stove, WiFi Router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectificatio understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 stroke and 4 stroke engines
3. Reciprocating pumps
4. Power screw jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of cement
7. Toughness value of coarse aggregates
8. Bulking of sand
9. Fan and Immersion heater
10. Solar panel connections to different loads with Battery and without battery
11. Television
12. Radio
13. Remote Control
14. Telephone
15. Fax Machine
16. Mobile phone
17. PA system

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Total Hours :

L	T	P
0	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. Students will strengthen their comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to :

- use functional English to speak and express themselves in different social contexts
- write simple letters, narratives, factual reports and descriptive passages for both academic and non-academic purposes in English.
- gain proficiency to undergo Preliminary English Test (PET), an Intermediate Level English Certification Test administered by Cambridge English Language Assessment, UK.

SKILLS:

ü *Use appropriate words in right order for effective sentence formation, and writing short texts.*

ü *Read and extract information from different texts & draw inferences by understanding elements like tone and transitional words.*

ü *Understand short and long spoken discourses through analysis of elements like stress and intonation.*

ü *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/others; Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, intonation and accent

Speaking – Articulating syllables clearly, speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, use of nouns, adjectives, verbs, prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things, Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages – True or False

Writing – Rewording – Sentence transformation - Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, short conversations

Vocabulary / Grammar – Use of adjectives/adverbs, Comparatives and Superlatives

PRACTICE : Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations; Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines – Inferences – True/False

Writing – Developing hints - Writing short messages/paragraphs

Listening – Searching for factual information - Gap filling

Speaking – Snap talks, JAM, Elocution

Vocabulary / Grammar – Prepositions; Phrasal Verbs; PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating; Predicting; Negotiating; Planning

SKILL FOCUS:

Reading – Reading for evaluation and appreciation - Comprehension

Writing – Letters – e-mails – 7 C's

Listening – Following long conversations / interviews

Speaking – Discussions – Debate - Descriptions

Vocabulary / Grammar – Modals – Conditionals - verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

UNIT - 5 **P-6**

FUNCTIONS: Requesting; Denying; Suggesting; persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements - Presentations

Vocabulary / Grammar – Punctuation – Cloze tests

PRACTICE: Objective PET Units 25 – 30

TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, “Objective PET”, Student’s Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8

16HS110 ENGINEERING PHYSICS LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	30

Course Description and Objectives:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the following experiments.The students have to perform at least 10 experiments from the list of experiments.

Course Outcomes:

Upon successful completion of this course, the student will be able to:

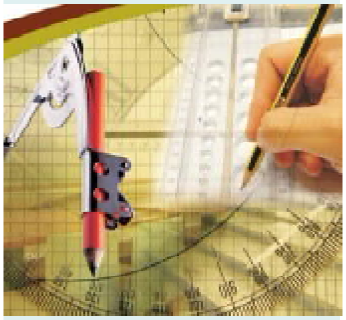
- realize the concept of resonance by conducting the experiments of AC sonometer and Melde's experiment.
- acquire the knowledge on magnetic field theory, thermal conductivity by conducting experiments of field along the axis of a circular coil and thermal conductivity of bad conductor
- understand the concepts of light by conducting the experiments of determination of wave length, numerical aperture of an optical fibre and also from V–I characteristics of Solar cell and LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.



16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration, to make the student to use different mathematical tools of Mat lab related to above concepts.

Course Outcomes:

The student will be able to :

- carry out the basic operations of matrix algebra.
- use row operations to reduce a matrix to echelon form, normal form.
- determine consistency of a system linear equations.
- compute eigen values and eigen vectors.
- evaluate double integrals and triple integrals.
- evaluate double integrals in polar coordinates.
- utilize Cartesian and polar coordinates to find area.
- understand the concept of gradient, divergance and curl.
- apply vector integral theorems in finding surface and volume integrals.

SKILLS:

ü *Appreciate various methods to find the rank of a matrix.*

ü *Solve given system of linear equations.*

ü *Compute Eigen values and Eigen vectors of a matrix.*

ü *Compute the power of a matrix by suitable method.*

ü *Evaluate Multiple integrals.*

ü *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from; Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L- 9**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, diagonalisation of a matrix.

UNIT - 3 **L- 9**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in Polar coordinates, Change of order of integration, Change of variables, Applications to Area in Cartesian coordinates and polar coordinates; Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L- 9**

VECTOR DIFFERENTIATION: Vector Function, Differentiation, Scalar and Vector point function, Gradient, Normal, Divergence, Directional Derivative, Curl, Vector identities.

UNIT - 5 **L- 9**

VECTOR INTEGRATION: Line Integral, Surface Integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Matrix Algebra.
2. Rank of a matrix
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc.).
13. Interpolation.

TEXT BOOKS :

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS :

1. Srimanta Pal and Subodh C. Bhunia, "Engineering Mathematics", Oxford Publications, 2015.
2. B. V. Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.

4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with Matlab output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with Matlab output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with Matlab output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to :

- understand the limitations of using hard water for domestic and industrial purposes.
- choose and apply suitable methods to soften the hard water for industrial and domestic applications.
- understand electrochemistry and its importance for applications such as fuel cells, modern lithium ion batteries etc.
- understand the types of corrosion and their implications followed by their control and prevention methods.
- familiarize the preparation, properties and applications of various polymers.

SKILLS:

ü *Analyse the total hardness of water sample.*

ü *Understand the basic principles involved in various batteries.*

ü *Understand the mechanisms of corrosion and various controlling methods.*

ü *Synthesize various polymers.*

ü *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L- 9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water - Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water-Scales and Sludges - Caustic embrittlement - Boiler Corrosion - Priming and Foaming; Softening Methods - Zeolite process, Ion Exchange process; Desalination of Brackish water-Reverse Osmosis, Electrodialysis.

UNIT - 2 **L- 9**

ELECTRO CHEMISTRY: Electrode Potential, Electrochemical Series, Nernst Equation, Reference Electrodes - Calomel and Standard Hydrogen Electrode, Ion Selective Electrode, Glass Electrode; Determination of pH by pH meter, Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cell - Hydrogen Oxygen, Methanol Oxygen.

UNIT - 3 **L- 9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion - Mechanisms of wet corrosion; Bimetallic corrosion - Concentration cell corrosion; Factors influencing the rate of corrosion, Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L- 9**

POLYMERS: Introduction, Types of Polymerization - Preparation, Properties and applications of Polyethylene, PVC, Teflon, Bakelite, Urea Formaldehyde, Silicones, Rubber – Vulcanization; Synthetic Rubbers - Buna-S, Buna-N, Neoprene; Introduction to Conducting polymers - Poly thiophene.

UNIT - 5 **L- 9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV - Visible Spectroscopy - Beer-Lambert's law - Qualitative and Quantitative Analysis; Block diagram of UV- Visible Spectrophotometer ; IR Spectroscopy - Types of Vibrations - Block diagram of IR Spectrophotometer.

TEXT BOOKS :

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

2. M.R. Senapati, "Advanced Engineering Chemistry" 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.
5. J.D. Bares, M.Thomas, B. Siva Sankar,J.Mendham, R.C Denney, "Vogel's Text book of qualitative Chemical Analysis", 6th edition, Pearson Publications, 2009.
6. Dr.Sunita Rattan, "Experiments in Applied Chemistry" by S.K. Kataria & Sons publications, 2008.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
15		45	6	15	-	5	-	-

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to :

- sketch engineering objects in the freehand mode.
- create geometric construction with hand tools.
- create dimensions of objects.
- prepare plan and elevation of any pictorial view.
- draw freehand lettering.
- make isometric sketches using graphics.
- draw orthographic multi-view sketches using graphics.

SKILLS:

ü *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*

ü *Draw geometrical objects like polygons, solids of different types.*

ü *Visualize the objects in real time situations.*

ü *Develop 3D views (isometric views).*

UNIT – 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Introduction to Engineering Drawing - Types of lines, Lettering, Dimensioning construction of polygon and conics (Ellipse, Parabola and hyperbola by general method), Ellipse by Oblong method.

UNIT – 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection - Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes; Projections of planes - Simple planes, Planes inclined to one reference planes.

UNIT – 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT – 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder; Simple orthographic views into isometric views through AutoCAD.

UNIT – 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS :

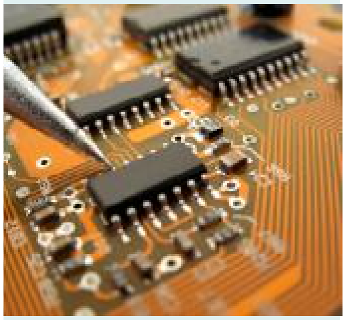
1. N.D.Bhatt, “Engineering Drawing”, 53rd edition., Charotar Publication, 2014.
2. Basant Agrawal , C.M.Agrawal “Engineering Drawing” , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS :

1. J. hole, *“Engineering Drawing”*, 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, *“Engineering drawing”*, 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	5	40	-	8	5	5

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- understand the notation and usage of components in electric circuits.
- analyze AC (single and three phase) and DC. AC circuits using different methods and laws.
- operate various electrical machines.
- understand the concepts of Semiconductor devices and their operation.

SKILLS:

ü *Distinguish between linear and nonlinear elements by looking at VI characteristics.*

ü *Develop a simple loop generator.*

ü *Design a voltage regulator using Zener diode.*

ü *Design a half wave rectifier using PN junction diode.*

ü *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit Concepts - Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements; Ohm's Law, Kirchhoff's Laws - Application to simple series, parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only; Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator - Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems).

D.C. Motor - Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar Junction Transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours: 30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

4. Measurement of Energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.
6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

TEXT BOOKS:

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course Description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to :

- analyse the total hardness present in water samples.
- determine the total alkalinity of water used in industries.
- acquire the knowledge on polymers used as insulators.
- familiarize advanced techniques in chemical analysis using conductometer and pH meter.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS :

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas & B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I 2009.

2. Dr.Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	20	4	-	4	-

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

The student will be able to :

- observe and integrate the diverse information from sources outside the classroom.
- think critically, creatively, resourcefully and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness.
- adapt eco-friendly technologies in order to maintain hygienic conditions.
- understand the human activities that are detrimental to environment.
- collaborate across diverse disciplines to identify and create solutions that conserve and help maintain biodiversity in the long term.
- discuss the issues involved in the generation of renewable energy resources.

SKILLS:

ü *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*

ü *Gain perspectives to adrress the challenges, improvise and devise solutions.*

ü *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*

ü *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*

ü *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT – 1 **L-6**

NATURAL RESOURCES: Environmental Studies - Definition, Scope and its importance; Need for public awareness, Natural resources, Forest resources, Deforestation, Water resources - Properties and conflicts; Mineral resources - Extraction and impacts; Food resources - Modern agriculture methods, Fertilizer-pesticide problems; Water logging, Salinity, Energy resources - Renewable and non-renewable energy resources; Harness technology, Solar energy technologies, Land resources - land degradation, Soil erosion, Role of an individual in conservation of natural resources.

UNIT – 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY : Ecosystem - Concept, Structure and functions of an ecosystem; Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems, Biodiversity - Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT – 3 **L -6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY: Solid waste management - Causes, Effects and control measures of municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and Noise pollutions, Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, Definitions, Applications of the remote sensing; Innovative practices - Objectives, Innovative practices in agriculture and forestry-community; Bio-villages, Green technology for sustainable development, Life cycle assessment and its concept.

UNIT – 4 **L -6**

SOCIAL ISSUES AND EIA: Sustainable development, Water conservation, Cloud seeding, Rainwater harvesting methods Watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental legislation - Wildlife protection act, Water act, Forest conservation act, Air act, Environmental Protection act; Environmental Impact Assssment (EIA) - Introduction, Definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed projects / industry / Developmental activity.

UNIT – 5 **L-6**

ENVIRONMENTAL SANITATION: Food sanitation **-** Food and drugs act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water, Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions, Role of youth in the development, Promoting activities - Youth as initiators and activities; Field work/Environmental visit - Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment - common plants, insects, birds; Study of simple ecosystems - Pond, River, Hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

1. Anubha Kaushik- CP Kaushik, "Perspectives in Environmental Studies", 5th edition, 2016
2. Benny Joseph, "Environmental studies", 2nd edition, Mc Graw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, "A Text book of Environmental Studies", HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, "A Text book of environmental science and Technology", B S Publications, 2008.
3. Dr. K. Mukkanti, "A Text book of Environmental Studies", S.CHAND & Company Ltd, 2009.
4. EHILRS and ST, "Text book of Municipal and Rural Sanitation", M.S Hill, 1998.
5. C. S. Rao, Wiley Eastern Ltd, "Environmental Pollution Control Engineering", New Age International Ltd, 2001.
6. Dr. M. Anji Reddy, "Introduction to Remote Sensing", B S Publications, 2004.
7. Kurian Joseph and R.Nagendram, "Essentials of environmental studies", Pearson

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*

16EC202 ELECTRONIC DEVICES AND CIRCUITS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	48	-	12	3	2

Course Description and Objectives:

This course is aimed at offering fundamental concepts of semiconductor devices and circuits. The objective of the course is to introduce the student to Junction Diode, Transistor, FET and other basic devices that are designed with semiconductor materials. As a first-level course in electronics, it forms the basis for the understanding of advanced electronic courses that are offered in subsequent semesters.

Course Outcomes:

The student will be able to:

- understand semiconductor devices through energy band diagrams.
- analyze characteristics of semiconductor junctions.
- differentiate between bipolar and unipolar conduction.
- understand physics of optical devices.
- understand the usefulness of semiconductor devices in circuit making.
- use these basic circuits to develop various useful applications.

SKILLS:

ü *Identify a Semiconductor Diode for a specific application and power handling capacity.*

ü *Identify the transistor type for a given application (switch/amplifier).*

ü *Recognize the required specifications of the transistor.*

ü *Identify the amplification factor of the given transistor.*

ü *Test the working condition of the transistor.*

UNIT - 1 **L-9**

P-N JUNCTION DIODE: Formation of P-N junction, Energy band diagram of open circuited P-N junction, Operation of forward and reverse biased P-N junction diode, Volt-Ampere characteristics, Temperature dependence on V–I characteristic, Diode resistances and capacitances, Diode equation, Special diodes-Breakdown Mechanisms in a Semi Conductor Diode, Zener diode, V-I characteristics and zener diode as voltage regulator, Tunnel diode, Varactor diode, SCR, LED and photodiode.

UNIT - 2 **L-9**

DIODE APPLICATIONS: The P-N junction diode as a rectifier - Half wave rectifier, Full wave rectifier and bridge rectifier, Harmonic components in a rectifier circuit; Filters - Analysis and comparison of various filters, Inductor filter, Capacitor filter, L- section filter and π-section filter in terms of ripple factor, A simple regulated power supply circuit; Clipping and clamping circuits - Elementary diode clippers and clamping circuits.

UNIT - 3 **L-9**

TRANSISTOR: Bipolar junction transistor (BJT) - Construction, Principle of operation of PNP and NPN transistors, Characteristics of transistor in common emitter, Common base and common collector configurations; Field effect transistor (FET)-Construction, Symbol and principle of operation of JFET, Pinch-off voltage, JFET characteristics, Comparison of BJT and FET; MOSFET - Construction, working and V-I characteristics of enhancement and depletion MOSFET.

UNIT - 4 **L-8**

BJT and FET BIASING: Transistor biasing and thermal stabilization, DC and AC load lines, Operating point, types of BJT biasing, Thermal runaway and thermal stability, Stabilization against variations in V_{BE}, â and I_{co} , Stability factors, Bias compensation using diodes and transistors **,** Biasing of FET.

UNIT - 5 **L-10**

SINGLE STAGE BJT AND FET AMPLIFIERS: Transistor as an amplifier, Two port network representation and h parameter model of a transistor, Exact and approximate analysis of CE small signal low frequency transistor model, Expressions for voltage gain, Current gain, Input impedance and output impedance using h-parameters, Comparison of transistor amplifier configurations in terms of A_i, R_i, A_v, R_o; FET amplifiers - FET small signal model, Analysis of FET amplifiers (CS, CD and CG configurations) at low frequencies, Expressions for voltage gain, Input impedance and output impedance.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

1. Understand the V-I characteristics of P-N junction diode and hence determine the diode forward, reverse currents, static and dynamic resistances.
2. Analyze the V-I characteristics of zener diode under reverse biased condition and observe the application as voltage regulator.
3. Calculate the efficiency and ripple factor of all rectifiers and analyze their performance with and without filter.
4. Understand the input and o/p characteristics of all BJT configurations in active region and determine its current amplification factors.
5. Understand the drain and transfer characteristics of FET and determine its amplification factor.
6. Understand the diode application as a clipper.

ACTIVITIES:

- *Choose a diode for a Cell-phone/ Laptop/Tablet adapter/for various ratings.*
- *Design voltage regulator using zener diode.*
- *Design three types of biasing circuits and determine the stability factors in each case.*
- *Transistor as an amplifier for the given specifications.*
- *Design a wideband amplifier with FET.*

LIST OF EXPERIMENTS Total hours-30

1. P-N Junction diode characteristics.
2. Zener diode characteristics and Zener diode as Voltage regulator.
3. To determine the ripple factor and efficiency of Half wave Rectifier with and without filter.
4. To determine the ripple factor and efficiency of Center tapped Full wave Rectifier with and without filter.
5. To determine the ripple factor and efficiency of Bridge Rectifier with and without filter.
6. Construction of various diode clipping circuits.
7. Transistor CB characteristics (Input and Output).
8. Transistor CE characteristics (Input and Output).
9. Transistor CC characteristics (Input and Output).
10. FET characteristics.

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	45	-	-	-	20	-	-

Course Description and Objectives:

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes:

The student will be able to :

- identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.
- fabrication of wooden joints and understand joining of metals.
- make metal joints and sheet metal work.
- make metal tools like knives, needles, swords, arrows etc.

SKILLS:

ü *Prepare wooden and metal furniture.*

ü *Electrical wiring and power supply in residences.*

ü *Make funnels, trays, locker, steel almirahs etc.*

ü *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*

ü *CNC machines and various machining operations and processes.*

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin Smithy and Black smithy.
4. House wiring.
5. Foundry and Welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS :

1. S.K. Hazra Choudhury, “Elements of workshop Technology”, 11th edition, Media Promoters, 1997.

16HS202 PROBABILITY AND STATISTICS

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P
60	-	-

CS	WA/RA	SSH	SA	S	BS
-	10	45	-	-	-

Course Description and Objectives:

This course deals with descriptive statistics, correlation, regression, and their applications, probability, theoritical distributions and testing of hypothesis. The objective of this course is to enable the student to understand and apply statitical techniques, curve fitting, correlation and regression, probability and also to make the student familiar with discrete, continuous distributions and testing of hypothesis.

Course Outcomes:

The student will be able to:

- distinguish between quantitative and categorical data and represent the data in graphical and tabular forms.
- calculate and interpret measures for the centre and spread of a data set.
- decide how and when to use the normal model.
- calculate and interpret correlation coefficient and regression lines.
- understand the rules of probability and apply them.
- compute probabilities using theoritical distributions.
- test hypothesis for population parameters.

UNIT - 1 **L- 12**

DESCRIPTIVE STATISTICS: Basic Definitions, Frequencies, Graphical Representation, Histogram, Ogive curves, Measures of Central tendency, Arithmetic mean, Median, Mode, Mean deviation, Standard Deviation, Symmetry and Skewness, Karl Pearson's Coefficient of skewness.

UNIT - 2 **L- 12**

CURVE FITTING, CORRELATION AND REGRESSION: Least squares method, Curve fitting (straight line and parabola only),Covariance, Correlation, Types, Pearson's Coefficient of correlation, Rank correlation, Spearman's rank correlation, Regression, Regression lines.

UNIT - 3 **L- 12**

PROBABILITY: Introduction, Definition (Classical and Axiomatic approach), Addition theorem, Conditional probability, Multiplication theorem, Total probability, Bayes theorem.

UNIT - 4 **L- 12**

DISTRIBUTIONS: Random variables, Discrete and Continuous variables, Introduction to Distributions.

BINOMIAL DISTRIBUTION: Definition, Mean and Standard deviation, Recurrence relation, Applications, Fitting of binomial distribution.

POISSON DISTRIBUTION: Definition, Mean and Standard deviation, Recurrence relation, Poisson Distribution is an approximation of Binomial distribution, Applications, Fitting of Poisson distribution.

NORMAL DISTRIBUTION: Definition, Normal curve, Mean and Standard deviation, Median, Mode, Normal Distribution applications.

UNIT - 5 **L- 12**

TESTING OF HYPOTHESIS: Population and Sampling, Parameters and Statistics, Types of sampling, Test of hypothesis and test of significance: Null hypothesis, Errors, Level of significance, Confidence Limits, Testing large samples, Sample distribution of proportion**,** t-distribution for small sample, Difference between means of small sample, Chi square test for goodness of fit, Chi-square test for test of independence.

TEXT BOOKS:

1. Miller and Freund, Probability and Statistics for engineers, 8th edition, Pearson publishers, 2013.
2. H. K. Dass and Er. Rajanish Verma, Higher Engineering Mathematics, S. Chand & Co., Third revised edition, 2014.

REFERENCE BOOK:

16MS201 MANAGEMENT SCIENCE

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	10	20	5	5	-	-

Course Description and Objectives:

This course provides an introduction to the evolution of management along with the framework of managerial functions related to organization structure, production, operations, marketing, human resource management, strategy etc. The objective of the course is to introduce the students and make them well versed with the operational functions of management.

Course Outcomes:

The student will be able to:

- understand the nature, importance and evolution of management.
- identify the significance of Operations Management.
- carry out production operations through work study.
- understand the markets, customers and competition.
- plan and control the HR function.

SKILLS :

ü *Analyze and improve productivity.*

ü *Analyze the customer needs, wants and demand.*

ü *Recognize the need of different types/qualities of Human Resources.*

ü *Analyze the reasons for the evolution of management.*

ü *Analyze the philosophies of different management thinkers.*

ACTIVITIES:

- *Solve a test case to identify the various operational functions of management .*
- *Solve a test case to know the importance of marketing.*
- *Solve a test case to know the importance of human resources.*
- *Solve a test case to know the importance and evolution of management discipline.*

UNIT - 1 **L-9**

INTRODUCTION TO MANAGEMENT: Concepts of management and organization, Nature, Importance and functions of management, Systems approach to management, Taylor's scientific management theory, Fayol's principles of management, Mayo's hawthorne experiments, Maslow's theory of human needs, Douglas McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation, Leadership styles, Social responsibilities of management.

UNIT - 2 **L-9**

OPERATIONS MANAGEMENT: Principles and types of plant layout; Methods of production (Job, Batch and Mass Production), Work study - Basic procedure involved in method study and work measurement

UNIT - 3 **L-9**

MATERIALS MANAGEMENT: Objectives, Need for inventory control, EOQ, ABC analysis, Purchase procedure, Stores management and stores records; Statistical quality control - Control charts for variables and attributes (simple problems), Acceptance sampling

UNIT - 4 **L-9**

HUMAN RESOURCES MANAGEMENT (HRM): Concepts of HRM, Basic functions of HR manager; Manpower planning, Recruitment, Selection, Training and development, Placement, Wage and salary administration, Promotion, Transfer, Separation, Performance appraisal, Grievance handling and welfare administration, Job evaluation and merit rating.

UNIT - 5 **L-9**

MARKETING MANAGEMENT: Evolution of marketing, Functions of marketing selling Vs marketing; 4 P's of marketing, Product mix, Product life cycle, Place mix, Channels of distribution, Price mix, Pricing methods, Promotion mix, Tools of promotions.

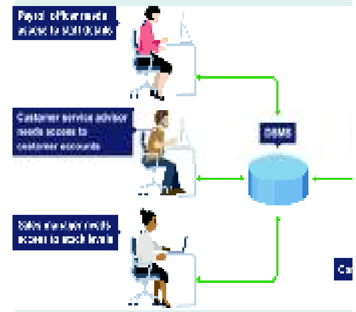
TEXT BOOKS:

1. P. Vijay Kumar, N. Appa Rao, Ashnab and Chnalill, "Introduction to Management Science", 6th edition, Cengage Learning India, 2012.
2. Stoner, Freeman and Gilbert, "Management", 6th edition, Pearson Education, New Delhi, 2004.

REFERENCE BOOKS:

1. Kotler Philip and Keller Kevin Lane, "Marketing Mangement", 12th edition, PHI, 2005.
2. Koontz and Weihrich, "Essentials of Management", 6th edition, TMH, 2005.

16CS201 DATABASE MANAGEMENT SYSTEMS



Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P	CS	WA/RA	SSH	SA	S	BS
45	15	30	5	5	40	8	5	2

Course Description and Objectives:

This course presents an introduction to database management systems with an emphasis on how to organize, maintain and retrieve data efficiently and effectively from a database. It concentrates on requirements gathering and conceptual, logical, physical database design. The objective of the course is to make the student to understand database management concepts such as database design, transaction processing and query optimization.

Course Outcomes:

The student will be able to:

- understand the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- design Entity Relationship(ER) models to represent simple database application scenarios.
- convert the ER-model to relational tables, populate relational database and formulate SQL queries.
- construct simple and complex queries using Structured Query Language (SQL).
- improve the database design by normalization.
- familiarise with basic database storage structures and access techniques.

SKILLS :

ü *Design a conceptual database using ER-Model.*

ü *Convert ER- Model to RDBMS.*

ü *Formulate database queries using* Structured Query Language (SQL).

ü *Build and run DDL and DML commands.*

ü Design and implement normalized databases.

ü Construct B+ Trees.

ACTIVITIES:

- *Design of ER diagram for the development of web applications.*
- *Transformation of ER diagram into a relational schema.*
- *Creation of relations with entity and referential integrity constraints for a given relational schema*
- *Representation of queries using Relational Algebra.*
- *Formulation of queries using SQL.*
- *Design of relational database using normalization techniques.*
- *Development of relational schema for enterprise level web applications.*

UNIT - 1 **L-09,T-03**

INTRODUCTION TO DATABASES: Characteristics of the Database Approach, People who work with databases, Advantages of using the DBMS approach, Data Models, Schemas and Instances, Three-Schema Architecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architectures for DBMSs.

UNIT - 2 **L-09,T-03**

CONCEPTUAL DESIGN AND DATABASE DESIGN: High-Level Conceptual Data Models for Database Design, A Sample Database Application, Entity Types, Entity Sets, Attributes and Keys, Relationship Types, Relationship Sets, Roles and Structural Constraints, Weak Entity Types, Refining the ER Design for the Company Database, ER Diagrams, Naming Conventions and Design Issues, Subclasses, Super classes and Inheritance, Specialization and Generalization, Constraints and Characteristics of Specialization and Generalization Hierarchies, Modeling of UNION Types Using Categories.

UNIT - 3 **L-09,T-03**

RELATIONAL DATA MODEL AND SQL: Relational Database Design Using ER-to-Relational Mapping, Mapping EER Model Constructs to Relations, Relational Model Concepts, Relational Model Constraints and Relational Database Schemas, Update Operations, Transactions and Dealing with Constraint Violations, SQL Data Definition and Data Types, Specifying Constraints in SQL, Basic Retrieval Queries in SQL, INSERT, DELETE and UPDATE Statements in SQL, Complex SQL Retrieval Queries, Specifying Constraints as Assertions and Actions as Triggers, Views (Virtual Tables) in SQL, Relational Algebra.

UNIT - 4 **L-09,T-03**

DATABASE DESIGN THEORY AND NORMALIZATION: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys, General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form, Multivalued Dependency and Fourth Normal Form, Join Dependencies and Fifth Normal Form, Properties of Relational Decompositions.

UNIT - 5 **L-09,T-03**

TRANSACTION PROCESSING, CONCURRENCY CONTROL AND RECOVERY: Transaction and System Concepts, Desirable Properties of Transactions, Two-Phase Locking Techniques, Timestamp Ordering, Recovery Concepts, The ARIES Recovery Algorithm, Recovery in Multi-database Systems, Primary File Organizations, Single level and Multilevel indexes, Dynamic Multilevel Indexes Using B+ Trees.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- understand, analyze, and apply common SQL Statements including DDL, DML and DCL statements to perform different operations.
- apply PL/SQL blocks using Cursors and Triggers.
- design and implement a database for a given problem.

List of experiments Total Hours 30

1. ER Design tool (ex. TOAD)
2. MYSQL RDBMS

3. Table Creation, Constraints, Insert, Select Commands, Update and Delete Commands.
4. Nested Queries and Join Queries.
5. Views.
6. Design and development of database using MYSQL.
7. High level programming language extensions (Control structures, Procedures and Functions).
8. Front end Tools.
9. Forms.
10. Triggers.
11. Menu Design.
12. Reports.

16CS202 DATA STRUCTURES

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

CS	WA/RA	SSH	SA	S	BS
-	5	40	8	5	-

Course Description and Objectives:

This course is aimed at offering fundamental concepts of data structures and explain how to implement them. It begins with the basic concepts of data, data structures and then introduces the primitive and non-primitive data structures in detail. It forms the basis for understanding various ways of representing data and its usage in different computing applications.

Course Outcomes:

The student will be able to:

- apply advanced C programming techniques such as pointers, dynamic memory allocation, structures to develop solutions for particular problems.
- analyze characteristics of various data structures.
- differentiate between Graphs and Trees.
- derive the importance of sorting and applying it wherever useful.
- argue the usefulness of data structures in solving problems.

SKILLS:

- ü *Analyse the data structure required for various applications.*
- ü *Develop the sorting algorithm suitable for a given scenario.*
- ü *Implement array or linked list for a given problem.*
- ü *Describe Pros & Cons of each data structure.*
- ü *Usage of trees and graphs.*

UNIT - 1 **L- 9**

SORTING AND SEARCHING: Introduction - Data, Data type, Data Structure, Primitive and Non-primitive - Data type, Data Structure; Storage structures - Sequential and Linked storage representations; Applications of Structures, Hashing.

SORTING: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort.

SEARCHING: Binary Search and Linear Search.

UNIT - 2 **L- 9**

LINKED LISTS: Introduction, Types of Linked List - Singly Linked List, Doubly Linked List, Circular Linked List; Operations - Insertion, Deletion, Traverse forward/reverse order; Multi lists, Applications of Linked Lists.

UNIT - 3 **L- 9**

STACKS AND QUEUES: Stacks - Introduction, Array and Linked representations, Implementation and their applications; Queues - Introduction, Array and Linked representations, Implementation and their applications, Types - Linear, Circular and Doubly ended queues; Applications.

UNIT - 4 **L- 09**

TREES: Introduction, Properties, Binary Tree - Introduction, Properties, Array and Linked representations; Tree traversals and their Implementation, Expression trees, BST Definition and implementation; AVL Trees - Definition and Implementation.

UNIT - 5 **L-09**

GRAPHS: Introduction, Properties, Modeling problems as graphs representations - Adjacency matrix, Adjacency list; Traversals - Breath first search and Depth first search; Application of graphs.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to :

- understand the importance of structure, abstract data type and their basic usability in different applications through different programminglanguages.
- understand the linked implementation and its uses both in linear and non-linear data structure.
- understand various data structures such as stacks, queues, trees, graphs, etc. to solve various computing problems.
- decide a suitable data structure to solve a real world problem.

LIST OF EXPERIMENTS: Total hours: 30

1. Selection, Bubble, Insertion, Quick and Merge sorting algorithms.
2. Linear and Binary search algorithms.
3. Single linked list, doubly linked list, and circular linked list.
4. Stack using an array and linked list.
5. Queue using an array and linked list.
6. Tree using an array and linked list.
7. Check if given expression is fully parenthesis or not using stack.
8. Tree traversing techniques.
9. BST using an array and linked list.
10. Graph traversal techniques.

ACTIVITIES:

- *Design and Implement a School Management System.*
- *Design and Implement a Social Networking Site.*
- *Implement a project to find out the most common words in the articles.*
- *Design and Implement a Library Book Management System.*
- *Design and Implement a CricBuzz Application.*

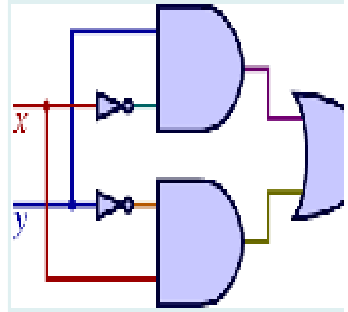
16CS203 DIGITAL LOGIC DESIGN



Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

CS	WA/RS	SSH	SA	S	BS
7	5	40	8	2	2

Course Description and Objectives:

This course introduces the topics such as number systems, analysis and design of combinational and sequential circuits, digital circuit design optimization methods using multiplexers, decoders, registers, counters and programmable logic arrays. The objective of this course is to offer the knowledge and skill of conversions between different number systems, design of logical gates, minimization of switching functions, effective memory utilization and design of synchronous and asynchronous counters.

Course Outcomes:

The student will be able to:

- determine philosophy of number systems and codes.
- minimize switching functions using Boolean algebra, Karnaugh maps and tabular method.
- design combinational and sequential logic circuits using conventional gates.
- gain knowledge of the ROM, RAM, PROM, PLD etc.

SKILLS :

ü *Perform number conversion.*

ü *Synthesize boolean algebra.*

ü *Construct combinational circuits like, decoders, encoders, multiplexers etc.*

ü *Analyze counters, shift registers etc.*

ü *Construction of PLA and PLD.*

ACTIVITIES:

- *Design of logical circuits using universal gates and basic gates.*
- *Reduction of Boolean function using K-maps.*
- *Construction of one stage ALU circuit.*
- *Design of the n-bit decoder and encoder.*
- *Design of combinational circuits using different types of flip-flops.*
- *Design of PLA for the given Boolean expression.*
- *Design of PLD for the given Bolean expression.*
- *Design of different types of counters.*

UNIT - 1 **L-09,T-03**

NUMBER SYSTEMS AND BOOLEAN ALGEBRA: Number system **-** Binary numbers, Number base conversions, Octal and hexadecimal numbers, Complements of numbers, Signed binary numbers, Binary codes, Binary logic. Boolean Algebra **-** Basic definitions, Basic theorems and properties of Boolean algebra.

UNIT - 2 **L-09,T-03**

LOGIC GATES AND GATE-LEVEL MINIMIZATION: Boolean functions, Canonical and standard forms, Digital logic gates, The map method, Four - variable k-map, Product-of-sums simplification, Don't-care conditions, NAND and NOR implementation, Other two-level implementations, Exclusive-or function.

UNIT -3 **L-09,T-03**

COMBINATIONAL LOGIC: Combinational circuits, Analysis and design procedure, Binary adder–subtractor, Decimal adder, Binary multiplier, Magnitude comparator, Decoders, Encoders, Multiplexers, De-mutliplexers.

UNIT - 4 **L-09,T-03**

SEQUENTIAL LOGIC: Sequential circuits, Storage Elements-Latches, Flip-flops, Analysis of clocked sequential circuits, Design procedure, Registers, Counters.

UNIT - 5 **L-09,T-03**

PROGRAMMABLE LOGIC DEVICES: Programmable logic, PLDs, ROM, Types of ROM, Combinational Programmable Devices, Programmable Logic Array, Programmable Read Only Memory.

TEXT BOOK:

1. M Morris Mano and Michael D. Ciletti, " Digital Design", 5th edition, Pearson Education, Inc, 2013.

REFERENCE BOOKS:

1. H Taub and D Schilling, "Digital Integrated Electronics", 2nd edition, TataMc Graw-Hill, 2004.

16CS204 DISCRETE MATHEMATICAL STRUCTURES

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

CS	WA/RA	SSH	SA	S	BS
3	10	40	8	5	2

Course Description and Objectives:

This course deals with the analysis of computational processes using analytical and combinatorial methods such as propositional logic, predicate logic, set theory, relations, functions, recurrence relations and graph theory. The objective of this course is to make the students to familiarize with required mathematical foundations of Computer Science.

Course Outcomes:

The student will be able to:

- use logical notation to define and reason about fundamental mathematical concepts such as sets, relations, functions, recurrence relations and graph theory applications.
- evaluate elementary mathematical arguments, identify erroneous reasoning, combine induction hypotheses and simple induction proofs.
- prove elementary properties of modular arithmetic and explain their applications in Computer Science.

SKILLS:

ü *Design of logical gates using propositions.*

ü *Prove the basic mathematical theorems through direct or indirect proofs.*

ü *Solving various types of problems on sets & relations to understand some basic properties of trees, graphs and related discrete structures.*

ü *Solving a problem in recursive manner and estimation of time complexity.*

ACTIVITIES:

- *Construction of Logical circuits using Truth tables.*
- *Gates minimization using Normal forms.*
- *Finding shortest path in graphs using different algorithms.*
- *Study on Pigeonhole principle.*
- *Finding solutions to non homogeneous linear equations.*
- *Study on different tree traversals.*
- *Checking logical equivalences.*

UNIT - 1 **L- 09**

MATHEMATICAL LOGIC: Propositions, Negation, Disjunction and Conjunction, Well-formed formulas, Truth Tables, Tautology, Implication and Equivalence, Normal forms – DNF, CNF, PDNF, PCNF.

UNIT - 2 **L- 09**

PREDICATES AND QUANTIFIERS: Natural Deduction, Rules of Inference, Methods of proofs, Mathematical Induction.

UNIT - 3 **L- 09**

SET THEORY: Set, Properties, Relation, Properties of Binary Relations, Equivalence, Compatibility and partial ordering relations, Hasse diagram, Lattice and its Properties, Peano postulates, Pigeon hole principles and its application.

UNIT - 4 **L- 09**

RECURRENCE RELATION: Generating Functions, Function of Sequences, Calculating Coefficient of generating function, Recurrence relations, Recurrence relation by substitution and Generating functions, Characteristics, roots solution of Non-homogeneous recurrence relation.

UNIT - 5 **L- 09**

GRAPH THEORY: Introduction, Graphs, Isomorphism and Sub graphs, Multi graphs and Euler circuits, Hamiltonian graphs, Chromatic Numbers, Euler graph, Hamiltonian path, Trees, Tree traversals, Spanning trees, Minimal Spanning Trees.

TEXT BOOKS:

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	30	-	-	-	-	-	-

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, Preparing Resume, Group Discussion, and Interview Skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to:

- formulate mathematical models of physical systems and represent them in block diagrams and signal flow graphs equip with requisite professional and inter-personal skills.
- they will possess the ability to think critically on issues for informed decision making and know how to communicate effectively through choice of appropriate language and speech, while dealing with others at the workplace.
- through identification and introspection on individual strengths and weaknesses.
- students will emerge with improved levels of self-awareness and self-worth, for greater efficacy at workplace.

SKILLS:

ü *Communicate and understand the difference between soft skills and hard skills,*

ü *Learn professionalism and Employability skills.*

ü *Plan Career by drawing their SWOT, Setting the Goal, learn the importance of Time and Stress Management.*

ü *Learn Vocabulary, Situational English, Group Discussion, Reading Comprehension and Listening Comprehension which are essential for all competitive examinations.*

ü *Prepare Resume and learn how to face interview.*

ü *Learn Gender sensitive language, Good manners, emotional intelligence and essential skills.*

ACTIVITIES:

- *Formal and informal communication...*
- *SWOT analysis,*
- *Stephen covey Time Management matrix*
- *Stress Management techniques*
- *Vocabulary flash cards*
- *Situational Dialogues*
- *Group Discussion*
- *Resume preparation*
- *Mock Interview.*
- *Reading comprehension activities*
- *Listening comprehension Activity by watching the American accent video*
- *Emotional intelligence, etiquette quiz*

UNIT - 1 **L-4, P-4**

A) COMMUNICATION: Need for effective communication - the process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal), Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, employability skills

C) CAREER PLANNING: Job vs. career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY: Johari Window for SWOT analysis; Setting a SMART goal using the provided grid, Writing a Statement of Purpose (SOP).

UNIT - 2 **L- 4, P- 4**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes & Suffixes, Synonyms & Antonyms, Collocations, One-word substitutes, Analogies, Idioms and Phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student) – Vocabulary exercises with hand-outs- Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, Dynamics of group discussion, Intervention, Summarizing and conclusion, Voice modulation, Content generation, Key Word Approach (KWA), Social, Political, Economic, Legal and Technical Approach (SPELT), View Point of Affected Part (VAP), Language relevance, Fluency and Coherence.

ACTIVITY: Viewing a recorded video of GD & Mock sessions on different types of GD topics- controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **L- 2, P-2**

A) RESUME-WRITING: Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes,Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, Understanding employer expectations, Pe-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele- interviews, Video interviews, Frequently asked questions (FAQs) including Behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **L-2, P- 2**

A) READING COMPREHENSION: Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas, (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and Writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in Group Discussion.

B) LISTENING COMPREHENSION:

Listening as a skill, Different types of listening, Active and Passive listening, Top-Down approach, Bottom-Up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), Listening comprehension exercises with audio and video excerpts.

UNIT - 5 **L-3, P- 3**

IMPACT OF LANGUAGE ON PERSONALITY:

Gender sensitive language in MNCs, Cultural Sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression.

Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other's views, Assisting others, Sharing, Participating actively.

ACTIVITY: Johari Window, Games and Case studies.

16CS205 COMPUTER ORGANIZATION AND ARCHITECTURE

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

CS	WA/RS	SSH	SA	S	BS
7	5	40	8	2	2

Course Description and Objectives:

This course introduces Register Transfer Language, Computer Arithmetic, Basic Computer Organization and Design, Pipeline processing, Memory and Input Output Organizations. Further it helps to understand and analyze the functions and organizations of modern digital computers. It also offers students learning experience in the design and development of solutions and applications for modern digital computer systems using assembly language. The objective of the course is to enable the students to understand the basic structure and operation of a digital computer and also to know in detail the operation of the arithmetic unit, logical unit, control unit, different ways of communicating with I/O devices and the hierarchical memory system.

Course Outcomes:

The student will be able to:

- demonstrate the understanding of the basic principles of organization and operations of digital computers using assembly language.
- evaluate the technical issues of digital computer systems including arithmetic logic unit, control unit, communication with peripheral devices and interrupt handling.
- develop solutions related to the organization of digital computer systems.
- recognize and identify the developmental nature of technology related to modern digital computers.

SKILLS:

- ü *Writing assembly language programs that make use of various hardware resources.*
- ü *Perform fixed and floating point arithmetic operations.*
- ü *Identifying the types of memories and their uses.*
- ü *Perform data transfer mechanism in digital computer.*

UNIT - 1 **L-9, T-2**

INTRODUCTION &RTL: Organization and architecture, Block diagram of digital computer, Structure and function. Register Transfer language – Register Transfer Bus and memory transfers.

UNIT - 2 **L-9, T-4**

COMPUTER ARITHMETIC: Arithmetic micro operations, Logic micro Operations, Shift micro operations and Arithmetic logic shift unit. Addition and subtraction, Multiplication Algorithms and Division Algorithms, Floating point representation and its operations.

UNIT - 3 **L-9, T-4**

BASIC COMPUTER ORGANIZATION AND DESIGN: Instruction codes, Computer Registers, Computer instructions, Instruction cycle, Memory–Reference Instructions, Register Reference instructions, Input-Output and Interrupt, Stack organization, Instruction formats, Addressing modes, Data Transfer and manipulation, Program control, Reduced Instruction set computer.

UNIT - 4 **L-9, T-3**

PIPELINE PROCESSING & MEMORY ORGANIZATION: Pipeline processing-Parallel processing, Pipelining, Arithmetic pipeline, Instruction pipeline, RISC pipeline. The memory organization - Memory Hierarchy, Main memory, Auxiliary memory, Associative memory, Cache memory, Virtual memory.

UNIT - 5 **L-9, T-2**

INPUT- OUTPUT ORGANIZATION: Peripheral Devices, Input-Output Interface, Asynchronous data transfer, Modes of Transfer, Priority Interrupt Direct memory Access, Input-Output Processor (IOP), Serial communication.

TEXT BOOKS:

1. M.Moris Mano, “Computer Systems Architecture”, 3rd edition, Pearson/Prentice Hall India, 2007.
2. William Stallings, “Computer Organization and Architecture”, 7th edition, Pearson/Prentice Hall India , 2007.

REFERENCE BOOKS:

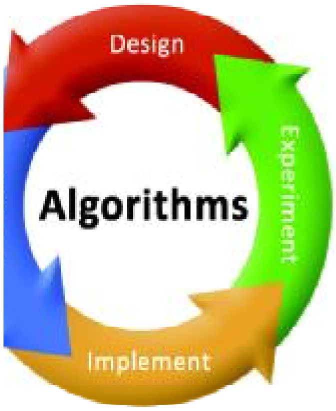
3. David A Patterso and John L Hennessy, “Computer Organization and Design - The Hardware/ Software Interface, ARM edition”, 5th edition, Elsevier, 2009.

ACTIVITIES:

- *development of assembly language programs that levarage the underlying hardware resources efficiently.*



16CS206 DESIGN AND ANALYSIS OF ALGORITHMS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

CS	WA/RS	SSH	SA	S	BS
3	5	40	8	5	2

Course Description and Objectives:

This course offers insight into the time and space complexities of various algorithms, design of algorithms using divide and conquer, greedy, dynamic, branch and bound, and back tracking approches. The objective of this course is to design and analyze the algorithms for their time and space complexities and also to understand problems such as 0/1 knapsack, shortest path, minmum spanning tree, matrix multiplication, graph coloring, n-queens and travelling salesman problem.

Course Outcomes:

The student will be able to:

- argue the correctness of algorithms using inductive proofs and invariants.
- analyze worst case running times of algorithms using asymptotic analysis.
- derive and solve recurrences describing the performance of divide and conquer algorithms.
- design the greedy algorithms and analyze them.
- design dynamic programming algorithms and analyze them.
- analyze major graph algorithms.

SKILLS:

ü *Develop algorithms for solving problems using divide and conquer, greedy, dynamic programming and backtracking techniques.*

ü *Analyze the given algorithm with respect to space and time complexities and compare with other algorithms.*

ü *Application of existing algorithms to solve the real world problems.*

UNIT - 1 **L-09**

INTRODUCTION: Algorithm, Pseudo-code for expressing algorithms, Performance Analysis - Space and Time complexity; Asymptotic Notation - Big oh notation, Omega notation, Theta notation and Little oh notation; Randomized algorithms; Disjoint Sets - Disjoint set operations, Union and find algorithms, Connected components and Biconnected components.

UNIT - 2 **L-09**

DIVIDE AND CONQUER: General method, Applications - Binary search, Quick sort, Merge sort, and Stassen's matrix multiplication, Greedy method; Applications - Job sequencing with deadlines, Knapsack problem, Minimum cost spanning trees and Tree vertex splitting problem, Single Source Shortest Path.

UNIT - 3 **L-09**

DYNAMIC PROGRAMMING: General method, Applications - Multi stage graphs, Optimal binary search trees, Matrix chain multiplication, 0/1 knapsack problem, All pairs shortest path problem, Travelling sales person problem.

UNIT - 4 **L-09**

BACKTRACKING: General method, Applications – n-queen problem, Sum of subsets problem, Graph coloring, Hamiltonian cycles.

UNIT - 5 **L-09**

BRANCH AND BOUND & COMPLETE PROBLEMS: General method, Applications - Traveling sales person problem, 0/1 knapsack problem, LC Branch and Bound solution, FIFO Branch and Bound solution, NP - Hard and NP - Basic concepts, Non deterministic algorithms, NP – Hard and NP Complete classes, Cook's theorem.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- analyze a problem & design the solution for the problem.
- derive solution must be optimum, i.e., time complexity & memory usage of the solution must be very low.
- learn and execute various problem solving mechanisms.

LIST OF EXPERIMENTS

Total Hours: 30

Language: C++

1. Implement the following:
   a) Prim's algorithm.
   b) Kruskal's algorithm.
2. Find optimal order of matrix multiplication using dynamic programming method.
3. Consider the problem of eight queens on an (8x8) chessboard. Two queens are said to attack each other if they are on the same row, column, or diagonal. Implements backtracking algorithm to solve the problem i.e. place eight non-attacking queens on the board.

ACTIVITIES:

- *Analysis of various algorithmic techniques to solve problems.*
- *Implementing robust set of algorithms to solve new problems efficiently.*
- *Design and implementation of solutions using dynamic programming methods.*
- *Design and implementation of various backtracking algorithms to solve the given problem.*
- *Compare the performance of different problem solving strategies for given applications.*

4. Implement the following:

   a. Optimal Binary Search Trees Using Dynamic Programming.

   b. Job Sequencing With Deadlines Using Greedy Approach.

   c. dynamic programming algorithm to solve all pairs shortest path problem.

   d. sum of subsets problem by using backtracking.

   e. 0/1 knapsack problem using Greedy algorithm.

   f. 0/1 knapsack problem using Dynamic programming algorithm.

   g. 0/1 knapsack problem using Branch and Bound.

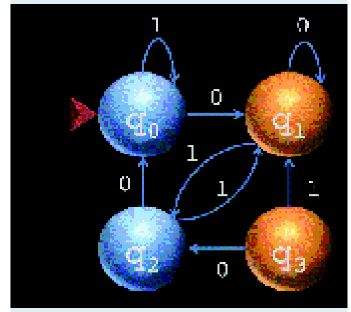
16CS207 FORMAL LANGUAGES AND AUTOMATA THEORY



Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

CS	WA/RA	SSH	SA	S	BS
5	5	40	8	5	5

Course Description and Objectives:

This course focuses on the basic theory of Computer Science and formal methods of computation like automata theory, formal languages, grammars and Turing Machines. The objective of this course is to explore the theoretical foundations of computer science from the perspective of formal languages and classify machines by their power to recognize languages.

Course Outcomes:

The student will be able to:

- understand the basic properties of formal languages and grammars.
- differentiate regular, context-free and recursively enumerable languages.
- make grammars to produce strings from a specific language.
- acquire concepts relating to the theory of computation and computational models including decidability and intractability.

SKILLS:

ü *Design automata, regular expressions and context free grammars for accepting or generating a certain language.*

ü *Describe the language accepted by an automata or generated by a regular expression or a context free grammar.*

ü *Transform between equivalent deterministic and non-deterministic finite automata, and regular expressions.*

ü *Minimize finite automata and grammars of context free languages.*

ACTIVITIES:

- *Conversion of NFA to DFA.*
- *Finding equivalence between finite automata and regular expressions.*
- *Convert regular grammar to finite automata and vice-versa.*
- *Simplification of grammar.*
- *Design a Turing machine for a particular language.*

UNIT - 1 **L-09,T-03**

INTRODUCTION: Alphabets, Strings and Languages, Automata and Grammars, Regular Languages, Deterministic finite Automata (DFA)-Formal Definition, Simplified notation**,** State transition graph, Transition table, Language of DFA; Nondeterministic finite Automata (NFA), NFA with epsilon transition, Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata, Distinguishing one string from other, Myhill-Nerode Theorem, FA with output - Moore and Mealy machine, Equivalence of Moore and Mealy Machine, Applications and Limitation of FA.

UNIT - 2 **L-09,T-03**

REGULAR EXPRESSION (RE): Definition, Operators of regular expression and their precedence, Algebraic laws for Regular expressions, Kleen's Theorem, Regular expression to FA, DFA to Regular expression, Arden Theorem, Non Regular Languages, Pumping Lemma for regular Languages, Application of Pumping Lemma, Closure properties of Regular Languages, Decision properties of Regular Languages.

UNIT - 3 **L-09,T-03**

GRAMMAR FORMALISM: Regular grammars-Right linear and left linear grammars, Equivalence between regular linear grammar and FA; Context Free Grammar, Definition, Examples, Derivation, Derivation trees, Ambiguity in Grammar, Inherent ambiguity, Ambiguous to Unambiguous CFG, Useless symbols, Simplification of CFGs; Normal forms for CFGs - CNF and GNF, Closure properties of CFLs; Decision Properties of CFLs-Emptiness, Finiteness and Membership, Pumping lemma for CFLs.

UNIT - 4 **L-09,T-03**

PUSH DOWN AUTOMATA (PDA): Description and definition, Instantaneous Description, Language of PDA, Acceptance by Final state, Acceptance by empty stack, Deterministic PDA, Equivalence of PDA and CFG, CFG to PDA and PDA to CFG, Two stack PDA.

UNIT - 5 **L-09,T-03**

TURING MACHINES (TM): Basic model, Definition and representation, Instantaneous Description, Language acceptance by TM, Computable functions, Types of Turing machines, Universal TM, Church's Thesis, Recursive and recursively enumerable languages, Halting problem, Introduction to Undecidability, Undecidable problems about TMs, Post correspondence problem (PCP), Modified PCP.

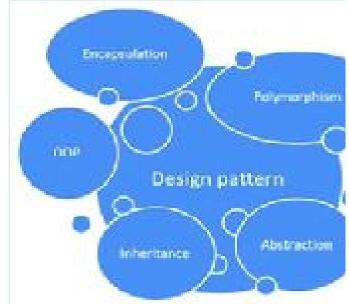
16CS208 OBJECT ORIENTED PROGRAMMING THROUGH JAVA



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

CS	WA/RA	SSH	SA	S	BS
5	5	30	20	5	5

Course Description and objectives:

This course introduces the fundamentals of object-oriented programming concepts such as encapsulation, inheritance, polymorphism, data abstraction etc., and implementation of these concepts using JAVA . It also covers the concepts of AWT and Swings to create GUI based applications. The objective of this course is to enable the students to use the Java SDK environment to develop software applications.

Course Outcomes:

The student will be able to:

- understand OOP concepts and basics of java programming (Console and GUI based).
- apply OOP principles and Java programming to solve real-life problems.
- apply AWT and Swings concepts to develop GUI based applications.

SKILLS :

ü *Create, debug and run Java programs.*

ü *Develop multi threaded applications, remote applets.*

ü *Create web applications.*

ACTIVITIES:

- *Develop placement activity system for VU.*
- *Develop college Enrollment System for VU.*
- *Develop Department Library Management for CSE.*
- *Develop online attendance system for VU.*
- *Develop Student Project Allocation and Management for VU.*
- *Develop Result intimation System for VU.*
- *Design application for automated department timetable generation.*
- *Develop online feedback system for VU.*

UNIT - 1 **L-09**

INTRODUCTION, CLASSES AND OBJECTS: History of Java, Byte code, JVM, Java buzzwords, OOP Principles, Data types, Variables, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Concepts of classes and objects, Introducing methods, Method Overloading, Constructors, Constructor Overloading Usage of static with data and methods, Access control, this key word, Garbage collection, Recursion, String class.

UNIT - 2 **L-09**

INHERITANCE, PACKAGES AND INTERFACES: Inheritance Basics, Types of Inheritance, Member access rules, Usage of super key word, Method overriding, Usage of final, Abstract classes, Differences between abstract classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and Extending interfaces, Defining, Creating and Accessing a Package, Importing packages, Access control in packages.

UNIT - 3 **L-09**

EXCEPTION HANDLING & MULTITHREADING: Concepts of Exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and Finally keywords, Built-in exceptions, Creating User Defined Exception, Concepts of Multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads.

UNIT - 4 **L-09**

WINDOW PROGRAMMING: Applet Class, Applet Architecture, Applet Skeleton, Display Methods, repaint(), A simple banner Applet, Status Window, The HTML APPLET Tag, Passing parameters to Applets.

EVENT DRIVEN PROGRAMMING: Delegation Event Model, Event classes–ActionEvent, Adjustment Event, Component Event, Container Event, Item Event, Key Event and Mouse Event, Event Listeners, Handling mouse and Keyboard events, Adapter classes.

UNIT - 5 **L-09**

AWT & SWINGS: Frame, Font class, Color class and Graphics; AWT Controls - Buttons, Labels, Text fields, Text area, Check boxes, Check box groups, Lists, Choice, Scrollbars, Menus, and Layout Managers; Swings- JApplet, JFrame, Icons and Labels, Text fields, JButton, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS: Total Hours: 30

Write a Java program:

a) that prompts the user for an integer and then prints out all prime numbers up to that. Integer.

b) to check whether a given string is a palindrome or not.

c) to sort a given list of names in ascending order.

d) that reads a line of integers, and then displays each integer, and the sum of all the integers (use StringTokenizer class)

e) to display the number of characters, lines and words in a text file.

f) to create multiple threads

   i) Using Thread class.

   ii) Using Runnable interface.

g) to implement run time polymorphism.

h) to implement the following
   - i) Creation of simple package.
   - ii) Accessing a package.

i) to implement the following
   - i) Handling predefined exceptions.
   - ii) Handling user defined exceptions

j) to implement JAVA APPLETS of the following
   - i) Working with Frames and various controls.
   - ii) Working with Dialogs and Menus.
   - iii) Working with Panel and Layout.
   - iv) Incorporating Graphics.
   - v) Working with colors and fonts

16EL103 PROFESSIONAL COMMUNICATION LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P
-	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

The Professional Communication Laboratory course is aimed at improving professional communication skills (LSRW – Listening, Speaking, Reading and Writing) of undergraduate students and preparing them for their profession as engineers and managers. This course will help students to understand professional communication and personality as two interlinked spheres of influence, and provide them with exposure to conventions of corporate communication involved in the functioning of the business world.

Course Outcomes:

The student will be able to:

- having gone through the course, students would be equipped to clear industry recognized certification such as BEC Vantage by the University of Cambridge.
- this will equip them to stand out both in the professional setting as well as for further pursuits in the academic world.
- since this certification looks at LSRW (Listening, Speaking, Reading and Writing) components in great detail, we hope to equip students to confidently and successfully attempt all the 4 critical components.

SKILLS :

ü *Understand and use grammar rules in writing; sentences, paragraphs, paraphrasing,*

ü *Write business emails, memos, letters, reports and proposals*

ü *Comprehend business articles, and documents*

ü *Use expressions in Professional context, and acquire presentation skills like one minute talk and pair discussion in professional context*

ü *Familiarize and comprehend British accent by listening to recorded speeches and discussions.*

UNIT - 1 **L-3,P-3**

BUSINESS ENGLISH VOCABULARY: Glossary of most commonly used words (formal and informal usage).

ELEMENTS OF TECHNICAL WRITING: Sentence structure, Reducing verbosity, Arranging ideas logically, Building coherence, Paragraph level and document level, Topic sentence, Cohesive devices, Transitional words, Paraphrasing and précis-writing.

MECHANICS OF WRITING: Stylistic elements, The rapporteur, The purpose, The reader's viewpoint (audience), Elementary rules of grammar, Choice of diction, Elementary principles of composition, Matters of form, Punctuation, Conventions of business communication, Language and professional tone, Weak links in business correspondence, Ethical concerns in business writing, Code of conduct (Not sending illegal, Offensive, Disparaging personal remarks or comments), In written business communication.

UNIT - 2 **L-5,P-5**

BUSINESS CORRESPONDENCE: E-mail: Nature and scope, e-mail etiquette, Clear call for action, Common errors in composing e-mails, Office communication such as meeting agenda and minutes of the meeting, Notice, Circular and memo.

LETTER-WRITING: Formal and informal letters, Structure of formal letters, Expressions of salutations, Different types of letters [Such as sales letter, Complaint letter, Response to the complaint letter (dispute resolution), Letter of permission, Letter of enquiring, Claim letter – letter of apology etc], Introductory and concluding paragraphs and clear call for action.

PROFESSIONAL PROPOSAL/REPORT: Differentiating proposals and reports, Drafting formal business proposals, Types of reports such as factual reports, Feasibility reports and survey reports, Parts ofa report (Such as title page, Declaration, Acknowledgements, Table of contents, Abstract, Introduction, Findings, Conclusion and recommendations, Citations, References and appendices).

UNIT - 3 **L-2,P-6**

SPEAKING: Speaking in business context, Assertiveness, Politeness, Making requests, Queries and questions, Negotiations, Asking for information, Offering suggestions, Conflict resolution, Contacting clients, Initiating, Addressing delegates (in public), Features of a good power point presentation (making the PPT), Delivering the presentation effectively, Telephone etiquettes, Delivering seminar/proposal/report effectively, Team meeting etiquettes (face to face and conference call), Making effective one minute presentations.

UNIT - 4 **L-4,P-10**

READING: Reading and comprehending business documents, Learning business register, Regularizing the habit of reading business news, Suitable vocabulary, Skimming and scanning text for effective and speedy reading and dealing with ideas from different sectors of corporate world in different business contexts.

UNIT - 5 **L-2, P-5**

LISTENING: Specific information in business context, Listening to telephonic conversations/ messages and understanding the correct intended meaning, Understanding the questions asked in interviews or in professional settings, Summarizing speaker's opinion or suggestion, Enable active listening.

ACTIVITIES:

- *Basic grammar practice, Framing paragraphs on topics allocated,*
- *Paraphrasing an article or a video in your own words Finding topic sentences in newspaper articles*
- *Finding out new words from a professional viewpoint Understanding the meaning and its usage*
- *Perusing samples of well prepared proposals and reports*
- *Draft different proposals/ reports on topics assigned.*
- *Watching videos/listening to audios of business presentations*
- *Classroom activities of team and individual presentations*
- *Using PPTs, mock exercises for BEC speaking.*

CS234 WEB TECHNOLOGIES

Course Description and Objectives:

On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers. Students will be able to use a variety of strategies and tools to create websites and also integrate with IDE's for fast development of web applications.

Course Outcomes:

- *Students are able to develop a dynamic webpage by the use of java script and DHTML.*
- *Students will be able to write a well formed / valid XML document.*
- *Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.*
- *Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.*
- *Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.*

UNIT I - Tier Architecture & **HTML**

Client/Server Architecture**,** J2EE Multi Tier Architecture. HTML Common tags- Block Level and Inline Elements, Lists, Tables, Images, Forms, Frames; Cascading Style sheets, CSS Properties;

UNIT II - Java Script & XML

Introduction to Java Script, Objects in Java Script, Dynamic HTML with Java Script.

The Need for XML, SGML and XML, Well-Formed XML, Valid XML, Displaying XML, XML Application Languages, Document type definition, XML Schema.

UNIT III - JDBC

Data Base, Database Schema, A Brief Overview Of The JDBC Process, JDBC Driver Types, JDBC Packages, Database Connection, Associating The JDBC-ODBC Bridge With Database, Creating, Inserting, Updating And Deleting Data In Database Tables, Result Set, Metadata.

UNIT IV - Web Servers and Servlets

Tomcat web server, Introduction to Servlets: Servlets, the Advantage of Servlets over "Traditional" CGI, Basic Servlet Structure, Simple Servlet Generating Plain Text, Compiling and Installing the Servlet, Invoking the Servlet, Lifecycle of a Servlet, The Servlet API, Reading Servlet parameters, Reading Initialization parameters, Context Parameters, Handling Http Request & Responses, Using Cookies-Session Tracking, Servlet with JDBC.

UNIT V - JSP

The Problem with Servlet. The Anatomy of a JSP Page, JSP Processing, JSP Application Development: Generating Dynamic Content, Using Scripting Elements, Implicit JSP Objects, Declaring Variables and Methods , Sharing Data Between JSP pages, Users Passing Control and Data between Pages, JSP application design with JDBC, JSP Application Design with MVC.

TEXT BOOKS:

1. Beginning Web Programming-Jon Duckett, WROX, 2008.
2. Core Servlets and Java Server pages Vol. 1: Core Technologies By Marty Hall and Larry Brown Pearson, 2006.

CS313 COMPUTER NETWORKS

Course Description and Objectives:

This course will focus on imparting knowledge about the aspects of data communication and computer network systems with the required basic principles behind them. This course provides essential knowledge about the OSI model and TCP/IP model. It creates a good foundation covering the physical, data link, network, transport, and application layers.

Course Outcomes:

- *To understand the communication basics.*
- *To have the knowledge of different networks.*
- *To know about different protocols.*
- *To understand how to find the routes by using different routing algorithms.*
- *To understand the basics of Internet.*

UNIT I - Introduction

Use of computer networks, network hardware, network software, reference models, example networks.

UNIT II - Physical layer, Data link layer & MAC sublayer

Physical layer, Datalink layer and Medium access control sublayer, Guided Transmission Media.

Design issues, Error detection & correction, Elementary data link protocols, Sliding window protocols.

The channel allocation problem, multiple access protocols.

UNIT III - Network Layer

Design issues, Routing algorithms, Congestion control algorithms, Quality of Service (QOS), Internetworking, the network layer in the Internet.

UNIT IV - Transport layer

The transport service, elements of transport protocols, the internet transport protocols: UDP & TCP

UNIT V - Application Layer

DNS-Domain Name System. The World Wide Web, Multimedia.

CS315 OPERATING SYSTEMS

Course Description and Objectives:

In this course students should understand how the operating system effectively manages system resources.

Course Outcomes:

- *To understand the types of Operating systems and analyze the process scheduling Algorithms and Case study on processing Scheduling.*
- *To understand the resource sharing among the processes in the system.*
- *To understand how to manage the memory during the process execution (Memory Management) and File Management system.*

UNIT I - Introduction

What Operating System do, Operating System structure. Process Concept: Overview, Process scheduling, Operations on process, Inter process communication. Process Scheduling: Scheduling Criteria, Scheduling Algorithms, Multiple-Processor Scheduling, Case Study: Process scheduling in Linux.

UNIT II - Process Synchronization

The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Semaphores, Monitors, Classical problems of synchronization, Case Study : Process Synchronization in Linux.

.

UNIT III - Deadlocks

Deadlock Characterization, Methods of Handling Deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock Detection and Recovery.

UNIT IV - Memory Management

Continuous memory allocation, paging, structure of the page table, segmentation, demand paging, page replacement algorithms.

UNIT V - File System

File Concept, Access Methods, Directory Structure, File System Mounting, File Sharing, Protection, File-System Structure, File System Implementation, Directory Implementation, Allocation Methods, Free Space Management.

Secondary-Storage Structure: Overview of Mass-Storage Structure, Disk Structure, Disk Scheduling, RAID Structure.

TEXT BOOK:

4	-	-	4	4

CS317 COMPILER DESIGN

Course Description & Objectives:

To understand, design and implement a lexical analyzer , parser and code generation schemes. To understand optimization of codes and runtime environments.

Course Outcomes:

On completion of the course the student will:

- *Be able to prove an understanding of a program language structure and its translation to executable code by constructing and demonstrating a compiler for a language defined by a certain grammar.*
- *Prove knowledge of ongoing events when executing programs written in high level language. This is done by explaining and demonstrating these events while running a simple program translated by a personally designed compiler.*
- *Know how to design a compiler for a regular high level language.*

UNIT I - Introduction to Compiling

Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens, data structures in compilation – LEX lexical analyzer generator

UNIT II - Syntax Analysis

Role of the parser –Writing Grammars –Context-Free Grammars – Top Down parsing –Recursive Descent Parsing – Predictive Parsing – Bottom-up parsing – Shift Reduce Parsing – Operator Precedent Parsing – LR Parsers – SLR Parser – Canonical LR Parser – LALR Parser ,YACC – automatic parser generator.

UNIT III - Semantic analysis

Intermediate forms of source Programs – abstract syntax tree, polish notation and three address codes. Attributed grammars, Syntax directed translation, Conversion of popular Programming languages language Constructs into Intermediate code forms, Declarations – Assignment Statements –Boolean Expressions.

UNIT IV - Code optimization and Run Time Environments

Introduction– Principal Sources of Optimization –Optimization of basic Blocks – Introduction to Global Data Flow Analysis - Basic blocks, Flow graphs, data flow equation, global optimization, data flow analysis for structured Programs.

UNIT V - Code Generation

Issues in the design of code generator – The target machine – Next-use Information – A simple Code generator – DAG representation of Basic Blocks – Peephole Optimization.

CS319 OPEN SYSTEMS FOR WEB TECHNOLOGIES (ELECTIVE I)

Course Description & Objective:

It makes familiar of Open Source technologies like LINUX, MySQL, CGI, PHP, Webserver and various tools which are used to develop web programming.

Course Outcomes:

- Students can develop web pages using HTML
- Can write dynamic web pages
- Can write server programs handling database connection
- Can generate responses accordingly

UNIT I - Introduction & Open Source Operating System

Nature of Open sources –Maturity Model- Design Strategy-Support Models-Advantages – Application of Open Sources.

Open Source Operating System: General Overview - Case Study: Linux - Files and Directories - Intermediate File Management - Process Management-Memory Addressing - Process Scheduling - Signals – Virtual File System- Page Cache- Program Execution.

UNIT II - Open Source Database

General Overview- Case Study: MySQL -Introduction – MySQL Basic- Directory Structure-Creating Users and Super Users- Designing a Relational Database-Managing Databases, Tables and Indexes-Operators-functions-Transaction Management

UNIT III - Open Source Programming Languages

General Overview - Case Study: PHP -Introduction – Basics of PHP- functions-Error Handling- Interaction between PHP and MySQL Database using Forms-Using PHP to manipulate and Retrieve Data in MySQL.

UNIT IV -Open Source Web Server

General Overview of Web Server - Case Study: Apache Web server – Working with Web Server – Configuring and using Apache Web services-Case Study Apache Tomcat.

UNIT V - Open Source Tools and Technologies

Open Source IDE-Modeling Tools- Mozilla Firefox- Wikipedia- Eclipse

TEXT BOOKS:

L	T	P	To	C
4	-	-	4	4

CS321 COMPUTER GRAPHICS (ELECTIVE I)

Course Description & Objective:

To provide a comprehensive introduction to computer graphics leading to understand the contemporary terminology andalgorithms of computer graphics.To make the students learn the basic principles of visualization. To give an introduction to 2D and 3D modeling and animation.

Course Outcomes:

- Students will understand the working of various graphics systems along with the algorithms used for these devices for drawing.
- They will have an understanding of 2D graphics and algorithms including: line drawing, polygon filling, clipping, and transformations.
- They will understand the concepts of and techniques used in 3D computer graphics and basic about animation.

UNIT I - Overview of Graphics System

Introduction: Application areas of Computer Graphics, overview of graphics systems, video-display devices, raster-scan systems, random scan systems, graphics monitors and work stations and input devices

Output primitives, Points and lines, line drawing algorithms, mid-point circle and ellipse algorithms. Filled area primitives: Scan line polygon fill algorithm, boundary-fill and flood-fill algorithms.

UNIT II - 2D geometric transformations and viewing

Basic transformation: Translation, scaling, rotation, reflection and shear transformations, matrix representations and homogeneous coordinates, composite transforms, transformations between coordinate systems.

2-D Viewing, The viewing pipeline, viewing coordinate reference frame, window to view-port coordinate transformation, viewing functions, Cohen-Sutherland and Cyrus-beck line clipping algorithms, Sutherland –Hodgeman polygon clipping algorithm.

UNIT III - 3D geometric transformations

3-D Object representation, Polygon surfaces, quadric surfaces, spline representation, Hermite curve, Bezier curve and B-spline curves, Bezier andB-spline surfaces, sweep representations, octrees BSP Trees, 3-D Geometric transformations, Translation, rotation, scaling, reflection and shear transformations, composite transformations, 3-D viewing: Viewing pipeline, viewing coordinates, view volume and general projection transforms and clipping.

UNIT IV - Visible surface detection methods

Visible surface detection methods: Classification, back-face detection, depth-buffer, scan-line, depth sorting, BSP-tree methods, area sub-division and octree methods Illumination Models and Surface rendering Methods: Basic illumination models, polygon rendering methods

UNIT V - Computer animation

Computer animation: Design of animation sequence, general computer animation functions, raster animation, computer animation languages, key frame systems, motion specifications

Text Books:

CS323 PERFORMANCE EVALUATION OF COMPUTER SYSTEMS (ELECTIVE I)

Course Description & Objective :

To impart the fundamental concepts of computer system performance evaluation.

Course Outcomes :

- Design of simulation models that represent the real-life computer systems
- Usage of simulation models as laboratory models for generating artificial history of the computer systems over time
- Design of experiments; and performance evaluation metrics computation and presentation

UNIT I - *Performance Evaluation*

A Systematic Approach to Performance Evaluation; Techniques for Performance Evaluation - Analytical Modelling, Simulation and Measurement; Performance Metrics - Selection and Utility Classification; Performance Requirements Specification; Types of Workloads; Art of Data Presentation; Ratio Games.

UNIT II - Probability Distributions

Key Characteristics of Commonly used Probability Distributions; Stochastic Processes, Markov Processes, Markov Chains and Markov Models.

UNIT III - Queuing Models

Introduction to Queuing Theory, Analysis of a single Queue, Queuing Networks, Operational laws, Mean Value Analysis, Convolution Algorithm and Hierarchical Decomposition of Large Queuing Networks.

Unit IV - Simulation

Introduction, Examples and Concepts in Discrete-Event Simulation; Random-Numbers - Properties and Techniques for Generating; Random-Variate generation techniques; Input Modelling. Simulation Models - Verification and validation;

Unit V - Design of Experiments

Introduction, 2^k Factorial Designs, 2^krFactorial Designs, 2^{k-p} FractionalFactorial Designs and Full Factorial Designs with k Factors.

Text Books

1. Raj Jain, The Art of Computer Systems Performance Analysis,Wiley India Pvt Ltd, Reprint 2010 (for Units I, III and V)

L	T	P	To	C
4	-	-	4	4

CS325 OPERATIONS RESEARCH (ELECTIVE I)

Course Description & Objectives:

Operations Research uses mathematical, analytical and computational techniques to provide quantitative and qualitative information that will improve managerial decision making .This subject will provide students withability to understand and analyze managerial problems in industry so that they are able to use resources (capitals, materials, staffing, and machines) more effectively.

Course Outcomes:

Upon completion of the subject, students will be able to

- Recognize the importance and value of Operations Research and mathematical modeling in solving practical problems in industry;
- Formulate a managerial decision problem into a mathematical model;
- Understand Operations Research models and apply them to real-life problems; use computer tools to solve a mathematical model for a practical problem.

UNIT I - Introduction

Nature & Meaning of OR, Management applications of OR, Characteristics of operations research, Scope of operations research, Role of computers in Operations Research, Computational procedure of simplex method, Two phase method, Big-M Method, Methods to resolve degeneracy, solution of simultaneous equations by simplex method.

UNIT II - Transpotation problem

Introduction, Mathematical formulation of transportation problem, Types of transportation problem, Basic feasible solution by northwest corner method, least cost entry method, vogel's approximation method, U-V Method.

UNIT III

Assignment Problem, introduction, Zero one programming model for assignment problem, Types of assignment problem, Hungarian method, Branch and Bound technique for assignment problem

UNIT IV - Game Theory

Introduction, Characteristics of Game theory,Basic Definitions ,Minimax(Maximin) criterion and optimal strategy, saddle point,optimal strategies and value of the game, solution of games without saddle points, rectangular games with out saddle point, equivalence of rectangular game and linear programming, 2 ×2 games without saddle points, Arithmetic Methods for 2 ×2 games, Principle of dominance to reduce size of the game

Unit V - Network Techniques

Introduction, Shortest path model, Minimum spanning tree problem, Maximum flow problem

Text Books:

1.R.Panneer selvam , “ Operations Research “, Second edition Prentice-Hall of India Private Limited , 2006 by (II, III, V Units)

CS236 WEB TECHNOLOGIES LAB

Course Description & Objective:

To createafullyfunctionalwebsite/web applicationwithMVC architecture.

Course Outcomes:

- *Students are able to develop a dynamic webpage by the use of java script and DHTML.*
- *Students will be able to write a well formed / valid XML document.*
- *Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.*
- *Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.*
- *Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.*

List of Experiments:

Lab Cycle – 1

1. Create an HTML page having Four frames named
   a. Top
   b. Center
   c. Bottom
   d. Left

   The Top frame should contain company logo and title. The bottom frame should contain copy right information. The Left frame should contain various links like Home, Products, Services, Branches, About us, etc. When we click on those links, the contents should come in to Center Frame.
2. Create a HTML document to demonstrate Form Elements that i ncludes Form, input-text, password, radio, checkbox, hidden, button, submit, reset, label, textarea, select, option, file upload.
3. Write a HTML program with at least two <h1>, two images, two buttons and appropriate CSS to display
   a. All <h1> with font-size 12pt, and bold in Verdana font using Inline CSS.
   b. All <img> with border color yellow, thickness 10px using Document Level CSS
   c. All <input type='button'>should change background color to red on mouse over them using External CSS.

4. Design an HTML having a text box and four buttons viz Factorial, Fibonacci, Prime, and Palindrome. When a button is pressed an appropriate javascript function should be called to display
    a. Factorial of that number
    b. Fibonacci series up to that number
    c. Prime numbers up to that number
    d. Is it palindrome or not
5. Write java script programs to demonstrate
    a. Math Object with at least five methods.
    b. String Object with at least five methods.
    c. Array Object with at least five methods.
    d. Date Object with at least five methods.
6. Write a java script program to display message on OnBlur and OnFocus events.
7. Create an XML document where CSEBooks is the root tag,it consists of 5 books named as(book1, book2, book3, book4, book5) whose copies of books are 10 and provide the child tag such as author,title,pages,price for all books.
8. For the above program, provide an associate DTD.
9. Create an XML document where automobiles is the root tag,it consists of 5 vehiclesnamed as (vehicle1,vehicle2,vehicle3, vehicle4, vehicle5) and use attributestype,model,engine no,color,cc.
10. For the above program, provide an associatedSchema.

Lab Cycle – 2

1. Write a java program to connect to a database server using JDBC and insert 10 students information of user choice in to student table.

2. Write a java program to display all records in the student table.

3. Develop a simple Servlet to display Welcome to Servlet.

4. Develop a Servlet to validate user name and passwordwith the data stored in Servlet configuration file. Display authorized user if she/he is authorized else display unauthorized user.

5. Demonstrate Life cycle of Servlet

6. Develop a Servlet to validate user name and password stored in database. Display authorized user is she/he is authorized else display unauthorized user.

7. Write a Servlet program to store student details sent from registration form in to database table.

8. Write JSP Program to store student information sent from registration page into database table.

9. Develop a program to validate username and password that are stored in Database table using JSP.

10. Write appropriate JSP pages to insert, update and delete data in student table in a single application with proper linking of JSP pages and session management.

CS329 COMPUTER NETWORKS LAB

Course Description & Objective:

Learn basic concepts of computer networking and acquire practical notions of protocols with the emphasis on TCP/IP. A lab provides a practical approach to Ethernet/Internet networking: networks are assembled, and experiments are made to understand the layered architecture and how do some important protocols work.

Course Outcomes:

- After completing the course, students will be able to:
- Understand the structure and organization of computer networks; including the division into network layers, role of each layer, and relationships between the layers.
- Understand the basic concepts of application layer protocol design; including client/server models, peer to peer models, and network naming.
- In depth understanding of transport layer concepts and protocol design; including connection oriented and connection-less models, techniques to provide reliable data delivery and algorithms for congestion control and flow control.

List of experiments:

1. Study of Network devices in detail
2. Connect the computers in Local Area Network
3. Implementation of Data Link Framing method - Character Count.
4. Implementation of Data link framing method - Bit stuffing and De stuffing.
5. Implementation of Error detection method - even and odd parity.
6. Implementation of Error detection method - CRC Polynomials.
7. Implementation of Data Link protocols - Unrestricted simplex protocol
8. Implementation of data link protocols - Stop and Wait protocol
9. Implementation of routing algorithms - Dijkstra's algorithm
10. Study of Network IP Addressing
11. Study of sockets in detail
12. Design TCP client and server application to transfer file
13. Design UDP client and server application to transfer file
14. Working on Network Protocol Analyzer Tool (Ethereal/Wireshark)
15. Working on NMAP Tool for Port scanning.

III Year B.Tech. CSE I - Semester

L	T	P	To	C
-	-	3	3	2

CS331 OPERATING SYSTEMS LAB

Course Description & Objective:

To obtain the familiarity of Operating Systems tasks, simulation programs were designed using UNIX system calls.

Course Outcomes:

Student obtain practical exposure on

- Basic commands in UNIX
- Process scheduling algorithms simulation
- Inter Process Communication
- Memory management simulation

List of Programs

1. Write programs using the following system calls of UNIX operating system:
   fork, exec, getpid, exit, wait, close.
2. Write programs using the I/O System calls of UNIX operating system. (open, read, write, etc)
3. Write C programs to simulate UNIX commands like ls, grep, cp
4. Obtain the list of processes, their CPU burst times and arrival times through the keyboard. Display/print the Gantt chart for FCFS and SJF. For each of the scheduling policies, compute and print the average waiting time and average turnaround time.
5. Obtain the list of processes, their CPU burst times and arrival times through the keyboard. Display/print the Gantt chart for Priority and Round robin. For each of the scheduling policies, compute and print the average waiting time and average turnaround time.
6. Develop Application using Inter-Process-Communication (Using shared memory, pipes or message queues).
7. Implement the Producer-Consumer problem using semaphores (Using UNIX system calls)
8. Implement some Memory management schemes like Paging and Segmentation.

9. Implement some Memory management schemes like FIRST FIT, BEST FIT & WORST FIT.
10. Implement any file allocation techniques (Contiguous, Linked or Indexed)

CS322 OBJECT ORIENTED ANALYSIS & DESIGN

Course Description & Objective:

This course explains how a software design may be represented as a set of interacting objects that manage their own state and operations. It describes the activities in the object - oriented design process and introduces various models that can be used to describe an object-oriented design.

Course Outcomes:

- To understand the fundamental principles of Object Oriented programming.
- To master key principles in Object Oriented analysis, design, and development.
- Be familiar with the application of the Unified Modelling Language (UML) towards analysis and design.
- To know common patterns in Object Oriented design and implement them.
- To be familiar with alternative development processes.
-

UNIT I - Introduction to UML

Importance of Modeling, Principles of Modeling, Object Oriented Modeling, Conceptual model of the UML, Architecture, Software Development Life Cycle.

UNIT II - Basic Structural Modeling

Classes, Relationships, Common Mechanisms, and Diagrams.

Basic Behavioral Modeling, Use cases, Use case Diagrams, Interactions, Interaction Diagrams, Activity Diagrams.

UNIT III - Class & Object Diagrams

Terms, Concepts, Modeling Techniques for Class & Object Diagrams.

UNIT IV - Advanced Structural Modeling

Advanced Classes, Advanced Relationships, Interfaces, Types and Roles, Packages.

Advanced Behavioral Modeling, Events and Signals, State Machines, Processes and Threads, Time and Space, State Chart Diagrams.

UNIT V - Architectural Modeling

Component, Deployment, Component Diagrams and Deployment Diagrams.

TEXT BOOK:

CS324 MIDDLEWARE TECHNOLOGIES

Course Description & Objective:

The main objective of this course is to get on awareness of a the various technologies which can help in the implementation of the various live project

Course Outcome:

Upon completion of the subject, students will be able to:

- Understand the basic structure of distributed systems;
- Understand the motivation of using middleware;
- Understand the basic concepts underlying the ASP.net and C#.net;
- Learn to make judgment in choosing a suitable middleware for application problems;
- Understand the basic concepts of Web Services and EJB.

UNIT I- Emergence of Middleware

Introduction,Objects, Web Services,Middleware Elements,Vendor Architecture,interoperability,Middleware in distributed applications, Types of Middleware,RMI, JDBC,Client/Server CORBA Style.

UNIT II - ASP.NET

Introduction,Lifecycle,ServerControls,Basic Controls,Directives,Validators, Database Access,ADO.Net,File Uploading, Data Sources, Data Binding,Custom Controls,Security,Data Caching,Multithreading, Deployment.

UNIT III - Fundamentals of C#& .NET platform

Comprehensive .NET Assemblies.OOPs with C#,Attributes, Reflection, Properties,Indexers ,Delegates ,Events,Collections, Generics, Anonymous Methods, Unsafe Codes and Multithreading

UNIT IV - Web Services

Introduction,Architecture, Components,Security,XML Web Service Standards,Creating Web Services,Extending Web Services, Messaging Protocol,describing,discovering,securing

UNIT V - EJB

Java Bean Component Model,EJB Architecture,Session Bean,Java Message Service,Message Driven Bean,Entity Bean

CS326 MICROPROCESSORS AND INTERFACING

Course Description &objectives :

This course introduces basic architecture and operation of microprocessor and microcontroller to the student. The course objective is to study the architecture and addressing modes of 8086/8051 and to know the importance of different peripheral devices.

Course Outcomes:

Upon successful completion of this course, students should be able to:

- Impart knowledge on the architecture and software aspects of microprocessor 8086
- Write assembly language program in 8086 for various application.
- Create the memory and IO interfacing techniques with 8086 and 8051
- Give an overview on the architecture and basic concepts of microcontroller

UNIT I - Introduction to microprocessors

Evaluation of microprocessors, 8086 microprocessor, architecture, register model, physical address generation, instruction set classification, addressing modes, I/O addressing. Assembly language programs for arithmetic operations, logical operations, CALL-RET operations, Intra and inter segment calls, sorting and string operations. Interrupts of 8086, Interrupt vector table, explanation of interrupts.

UNIT II - Hardware features of 8086

Pin diagram of 8086, multiplexed ADD/DATA and ADD/STATUS buses, control bus, minimum and maximum modes, Memory READ/WRITE and I/O READ/WRITE machine cycles, machine cycle with WAIT states. Physical Memory organization & memory interfacing to 8086.

UNIT – III

I/O Interfacing - I, 8255-PPI: Architecture, Modes of operation and Interfacing to 8086, A/D and D/A converter interfacing. 8259 - PIC: Architecture, working.

UNIT IV - I/O Interfacing - II

Direct Memory Access (DMA): Architecture, Working, Serial Data Communication **:** Fundamentals of Serial Data Communication, 8251 USART, Architecture, working.

UNIT V - Introduction to Microcontroller

Differences between microprocessor and microcontrollers, 8051 architecture,Internal & External memory organization, Pin diagram, addressing modes, Instruction set and assembly language programming.

TEXT BOOKS :

4	-	-	4	4

CS328 MOBILE COMPUTING

Course Description & Objective:

Introducing the mobile and wireless data communication to the student. Describing the main characteristics of WLAN, Blue tooth, mobile IP. Illustrating how the data is routed using mobile IP, using Home Agent & Foreign Agent. Describing the current areas of emerging interest in wireless and mobile computing.

Course outcomes:

- Able to understand how communication is established when mobile node is moved from one location to another location.
- Able to think and develop new mobile applications.
- Able to develop new ad hoc network applications and/or algorithms/ protocols.
- Able to understand & develop any existing or new protocol related to mobile environment

UNIT I - Introduction

Wireless Communication Fundamentals Introduction, Wireless transmission, Frequencies for radio transmission, Signals, Antennas, Signal Propagation, Multiplexing, Modulations, Spread spectrum, Medium Access Control - SDMA, FDMA, TDMA, CDMA, Cellular Systems.

UNIT II - GSM

Mobile Telecommunications Systems Introduction to 1G,2G,3G systems, GSM – System Architecture, Protocols, Connection Establishment, Frequency Allocation, Routing, Handover, Security, GPRS,UMTS.

UNIT III - Categories of Wireless Networks

Wireless Local Area Networks Infrared Vs. Radio LANs, IEEE 802.11 Standards, Architecture, Physical Layer, MAC Layer, versions of 802.11, Blue Tooth - Introduction, Networking, Pico net, Scatter net, Protocol Architecture and Layers.

UNIT IV - Routing in Wireless Networks

Network Layer Mobile IP, Dynamic Host Configuration Protocol, Routing, Destination Sequence Distance Vector Routing, Dynamic Source Routing, Ad hoc On Demand Distance Vector Routing, Mobile Adhoc Networks, Wireless Sensor Networks - MAC protocols, Routing protocols, Applications of sensor networks.

UNIT V - Protocols and Tools

Transport and Application Layers TCP over Wireless Networks, Indirect TCP, Snooping TCP, Mobile TCP, Fast Retransmit / Fast Recovery, Transmission/ Timeout Freezing, Selective Retransmission, Transaction Oriented TCP, Wireless Application Protocol –WAP Architecture, Wireless Datagram Protocol, Warless Transport Layer Protocol, Wireless Transaction Protocol, Wireless Security Protocol, Wireless Markup Language,WML Script, Wireless Application Environment.

CS330 NETWORK PROGRAMMING (ELECTIVE II)

Course Description & Objective:

The main objectives of this course is to provide hands on experience on the usage of the multiprocessing systems like UNIX for basic communication needs among processes and further, how the basic communication between two computers can be enabled using socket programming.

Course Outcomes:

- demonstrate advanced knowledge of networking
- make use of various solutions to perform inter-process communications
- demonstrate knowledge of protocols and languages used in Web and multimedia delivery
- demonstrate advanced knowledge of programming for network communications
- describe major technologies used in network communications

UNIT I - Introduction to Network Programming

OSI model, Unix standards, TCP and UDP & TCP connection establishment and Format, Buffer sizes and limitation, standard internet services.

Inter Process Communication: Pipes, FIFOs

UNIT II - Elementary Sockets

Address structures, value – result arguments, Byte ordering and manipulation function and related functions.

Elementary TCP sockets – Socket, connect, bind, listen, accept, fork and exec function, concurrent servers. Close function and related function.

UNIT III - TCP client server

Introduction, TCP Echo server functions, Normal startup, terminate and signal handling server process termination.

UNIT IV - I/O Multiplexing and socket options

I/O Models, select function, Batch input, shutdown function, poll function, TCP Echo server. Socket Options getsockopt and setsockopt functions. Socket states, Generic socket option.

UNIT V - UDP sockets

Introduction UDP Echo server function, lost datagram.
Elementary name and Address conversions,DNS-Resource Records, Resolver and name servers.

III Year B.Tech. CSE II - Semester	L	T	P	To	C
	4	-	-	4	4

CS332 ARTIFICIAL INTELLIGENCE (ELECTIVE II)

Course Description & Objectives:

Provide knowledge of ideas and techniques underlying the design of intelligent computer systems. Develop problem solving skills in students. Provide knowledge of the tools and applications of AI. Lay the foundation for research areas like Natural language Processing(NLP) and Machine learning(ML).

Course Outcomes:

- Basic knowledge of AI principles, techniques, Expert Systems
- Applications of basic AI techniques for problem solving.
- Knowledge representation and new knowledge deduction in intelligent systems.
- A brief idea of NLP, and Machine learning techniques.

UNIT I - Intelligent Systems

Introduction- What is AI? Examples of AI systems, Brief history of AI. Intelligent Agent- Agents and environments, The concept of rationality, The nature of environments, Structure of agents, stimulus-response agents (simple reflex agents), Model based agents, Goal based agents, Utility based agents, Learning agents.

UNIT II - Problem Solving

Searching, Solving problems by searching, A* algorithm, AO* algorithm, Heuristic functions, Hill climbing. Searching game trees (Adversarial search): Games, Optimal decisions in games, Minimax procedure, Alpha-beta pruning.

UNIT III - Knowledge Representation

Propositional logic, Logical agents, reasoning patterns in propositional logic, Inference in propositional logic i.e. Resolution, Forward chaining, Backward chaining. First order logic, Reasoning patterns in First order logic, Inference in First order logic i.e. Resolution, Forward chaining, Backward chaining.

UNIT IV - Planning

The planning problem, planning with state space search, partial order planning, planning graphs, planning with propositional logic, analysis with planning approaches.

UNIT V - Learning

Forms of learning, Inductive learning, Learning Decision Trees, Ensemble Learning, Why learning works. Natural Language Processing(NLP): Introduction, Understanding, Perception, Machine learning.

Text Book:

1. Stuart Russell, Peter Norvig, “Artificial Intelligence”, Second Edition, Pearson Education, 2003.

III Year B.Tech. CSE II - Semester

L	T	P	To	C
4	-	-	4	4

CS334 PRINCIPLES OF PROGRAMMING LANGUAGES (ELECTIVE II)

Course Description & Objective:

After the completion of this course Student should be able to understand how to design a new Programming Language. Know the differences between Structured and unstructured programming constructs.

Course Outcomes:

On completion of the course the student will:

- Understand the concepts in programming languages
- The way of using those constructs in different programming languages.
- Familiar with the design of a new programming language.

UNIT I - Syntax and Semantic

Reasons for studying concepts of programming languages, Programming domains, Language Evaluation Criteria, Von Neuman Architecture, Language categories, Implementation Methods, Programming environments, General Problem of describing Syntax – Language. Recognizers and Language Generators, Formal methods of describing syntax – BNF, EBNF , Attribute grammars, Dynamic Semantics – Axiomatic , Operational and Denotational semantics.

UNIT II - Variables and Data Types

Names, Variables, Concept of binding, Type checking, Strong typing, Type compatibility, Named constants, Variable initialization, Data types – Primitive, Character, User defined, Array, Associative Arrays, Record, Union, Pointer and Reference types, Design and implementation uses related to these data types.

UNIT III - Expressions and Statements

Arithmetic, Relational and Boolean expressions, Short circuit evaluation, Mixed mode assignment, Assignment Statements, Statement-Level Control structures – Introduction, Selection and Iteration statements, Unconditional branching, Guarded commands.

UNIT IV - Language Features

Fundamentals of sub-programs, Static and Dynamic, Scope and lifetime of variable, Design issues of subprograms, Local referencing environments, Parameter passing methods, Overloaded sub-programs, Generic sub-programs, Parameters that are sub-program names, Design issues for functions, User defined overloaded operators, Co routines.

UNIT V - Concurrency and Exception Handling

Subprogram level concurrency, Introduction to Exception Handling, Exception Handling in Ada, C++ and Java, Functional Programming languages-Haskell, LISP

TEXT BOOKS :

1. Robert .W. Sebesta,"Concepts of Programming Languages", 8th ed., Pearson Education, 2009.

	4	-	-	4	4

CS336 SIMULATION AND MODELING (ELECTIVE II)

Course Description and Objectives:

The objective of this course is to teach students methods for modeling of systems using discrete event simulation. Emphasis of the course will be on modeling and on the use of simulation software. The students are expected to understand the importance of simulation in IT sector, manufacturing, telecommunication, and service industries etc. By the end of the course students will be able to formulate simulation model for a given problem, implement the model in software and perform simulation analysis of the system.

Course outcomes:

1. Students will be enable to understand the types of system models.
2. Students will be able to generate random variables and random numbers.
3. Students can verify and validate simulation models.

UNIT I - Introduction to Simulation

static physical models,dynamic physical models,static mathematical models,dynamic mathematical models,principles used in modeling.
System studies, a corporate model:Environment segment,production segment,management segment. Types of system study.

UNIT II - Mathematical and Statistical Models

Probability concepts, Queuing Models, Methods for generating random variables and Validation of random numbers.

UNIT III - Language for simulation

Input modeling:data collection,identifying the distribution with data,parameter estimation,goodness of fit test,fitting a non stationary Poisson process,selecting input models with out data,multivariate and time series input models.

Verification and validation of simulation models, model building,verification and validation ,verification of simulation models,calibration and validation of models.

UNIT IV - Experiments

Experiments-Simulation of different systems, Analysis, validation and verification of input and output simulated data, study of alternate techniques.

UNIT V - Case Study

Manufacturing and material handling simulation,goals and performance measures,issues in manufacturing and material handling simulations,case studies of the simulation of manufacturing and material handling systems. Manufacturing example, a job shop analysis,simualtion of computer systems:simulation tools,model input,high level computer system simulation,memory simulation.

-	-	3	3	2

CS338 OBJECT ORIENTED ANALYSIS AND DESIGN LAB

Course Description & Objective:

The analysis, design, coding, documentation, database design of mini project which will be carried out in 4th year can be done in object-oriented approach using UML and by using appropriate software which supportsUML.

Course Outcomes:

After completing this course the student must demonstrate the knowledge and ability to:

- Show the importance of systems analysis and design in solving complex problems.
- Show how the object-oriented approach differs from the traditional approach to systems analysis and design.
- Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, statechart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation.
- Recognize the difference between various object relationships: inheritance, association, whole-part, and dependency relationships.
- Show the role and function of each UML model in developing object-oriented software.

Mini-Project - I :

A Point-of-Sale (POS) System :A POS system is a computerized application used to record sales andhandle payments; it is typically used in a retail store, it includes hardware components such as a computerand bar code scanner, and software to run the system. It interfaces to various service applications, such asa third-party tax calculator and inventory control. These systems must be relatively fault tolerant; that is,even if remote services are temporarily unavailable they must still be of capturing sales and handling at leastcash payments. A POS system must support multiple and varied client-side terminals and interfaces such asbrowser, PDAs, touch-screens.

Mini-Project - II :

Online Bookshop Example : Following the model of amazon.com or bn.com, design and implement anonline bookstore.

Mini-Project - III :

A Simulated Company : Simulate a small manufacturing company. The resulting application will enable the user to take out a loan, purchase a machine, and over a series of monthly production runs, follow theperformance of their company.

Mini-Project - IV :

A Multi-Threaded Airport Simulation : Simulate the operations in an airport. Your application shouldsupport multiple aircrafts using several runways and gates avoiding collisions/conflicts.

Landing: an aircraft uses the runway, lands, and then taxis over to the terminal. Take-Off: an aircraft taxiesto the runway and then takes off.

Mini-Project - V :

An Automated Community Portal : Business in the 21st Century is above all BUSY. Distractions areeverywhere. The current crop of “enterprise intranet portals” is often high noise and low value, despite thelarge capital expenditures it takes to stand them up. Email takes up 30 - 70% of an employee’s time. Chatand Instant Messaging are either in the enterprise or just around the corner. Meanwhile, management istasked with unforeseen and unfunded leadership and change-agent roles as well as leadership developmentand succession management. What is needed is a simplified, repeatable process that enhancescommunications within an enterprise, while allowing management and peers to self-select future leaders andeasily recognize high performance team members in a dynamic way. Additionally, the system shouldfunction as a general-purpose content management, business intelligence and peer-review application.Glasscode’s goal is to build that system. The software is released under a proprietary license, and will havethe following features: Remote, unattended moderation of discussions However, it will have powerfuldiscovery and business intelligence features, and be infinitely extendable, owing to a powerful API andadherence to Java platform standards. Encourages peer review and indicates for management potentialleaders, strong team players and reinforces enterprise and team goals seamlessly and with zeroadministration.

Mini-Project - VI :

A Content Management System : The goal is to enable non-technical end users to easily publish, access,and share information over the web, while giving administrators and managers complete control over thepresentation, style, security, and permissions.

Features:

- Robust Permissions System
- Templates for easy custom site designs
- Total control over the content
- Search engine friendly URL's
- Role based publishing system
- Versioning control
- Visitor profiling

Mini-Project - VII :

An Auction Application : Several commerce models exist and are the basis for a number of companies like eBay.com, pricellne.com etc. Design and implement an auction application that provides auctioningservices. It should clearly model the various auctioneers, the bidding process, auctioning etc.

Mini-Project - VIII :

A Notes and File Management System : In the course of one's student years and professional career oneproduces a 1 lot of personal notes, documents. All these documents are usually kept 1 on papers orindividual files on the computer. Either way the bulk of the information is often erased corrupted andeventually lost. The goal of this 1 project is to build a distributed software application that addresses this "|problem. The system will provide an interface to create, organize and manage I personal notes through theInternet for multiple users. The system will also allow users to collaborate by assigning permissions formultiple users to view and edit notes.

Mini-Project - IX :

Library Management System(LMS): The goal is to enable students and librarians to easily access and manage the library and run it smoothly. Each physical library item - book, tape cassette, CD, DVD, etc. could have its own item number. To support it, the items may be barcoded. The purpose of barcoding is to provide a unique and scannable identifier that links the barcoded physical item to the electronic record in the catalog.

Barcode must be physically attached to the item, and barcode number is entered into the corresponding field in the electronic item record. Barcodes on library items could be replaced by RFID tags. The RFID tag can contain item's identifier, title, material type, etc. It is read by an RFID reader, without the need to open a book cover or CD/DVD case to scan it with barcode reader.

Mini-Project - X

Hospital Management System: Simulate to show and explain hospital structure, staff, and relationships with patients, and patient treatment terminology

CS340 MOBILE COMPUTING LAB

Course Description & Objective:

After performing the below experiments, the students can simulate various network topologies with different routing algorithms and they can analyze how each routing algorithm is performing its job. The students will also be able to design, develop and deploy mobile applications in different different platforms.

1) Installing NS2 or NS3.
2) Create a TCL Script for the following network.

   N2 —— 1MB, 10ms, DropTail —— N1

   Create FTP traffic over TCP. Find out the throughput using GREP command.
3) Create a TCL Script for the following network.

   N2 —— 1MB, 10ms, DropTail —— N1

   Create CBR traffic over UDP. Find out the throughput using GREP command.
4) Simulate the Distance Vector Routing Algorithm and Analyze the performance metrics such as throughput, packet drop rate etc
5) Simulate the Link State Routing Algorithm and Analyze the performance metrics such as throughput, packet drop rate etc
6) Develop a simple mobile application for swapping images by using either Android or IBM Worklight.
7) Develop a mobile calculator application that performs addition, subtraction, multiplication, division, modulus operations on mobile by using either Android or IBM Worklight.
8) Design and develop a mobile application to validate user name and password by using either Android or IBM worklight.
9) Design and develop a College Information system by using either Android or IBM worklight.

10) Simulate the mobile chatting application by using either Android or IBM Worklight.

CS342 MINI PROJECT

Course Description & Objective:

The main objective of this course is that the student has to employ all the skills acquired so far to develop a working model or software or project. Student has to take up a live project or come up with a new idea or propose an alternative solution to an existing problem that is related to computer science. Student has to develop a software solution to the problem identified or proposed.

Course Outcome:

- Student should know all the phases of SDLC
- How requirements are gathered
- How gathered requirements are analyzed.
- Proposing an design model for the requirements
- Writing the appropriate modules using any of the programming languages
- Testing the developed software

Mini project and its report shall be evaluated along with labs at the end of the semester. Mini project shall be submitted in report form and should be presented before the committee, which shall evaluate for 50 Marks. The committee consists of an external examiner, HOD, supervisor of the mini project and a senior faculty member of the department. There shall be 50 internal marks for mini project and its evaluation on continuous basis.

CS425 DATA WAREHOUSING & DATA MINING

Course Description & Objective:

This course is about knowing of how to make use of historical data so that high end business decision can be taken for the growth of an organization. The main objective of this course is to designing the intelligent machines which can take risk business decisions behalf of humans using the datamining techniques like classification, clustering, outlier detection, association rule mining.

Course Outcomes:

Students are able to

- Learn the basic concepts of Database Technology Evaluation steps and also understood the need of data mining and its functionalities
- Explore the efficient and effective maintenance of Data Warehouses.
- Apply the data mining functionalities like Clustering, Classification, Association Analysis to real world data.
- Discover interesting patterns and association rules from huge volume of data used to do classifications and predictions.
- Gain knowledge on developing areas like Web Mining, Text Mining, and Spatial Mining.

UNIT I - Introduction Data Warehousing and Mining

Why Data Mining, What is Data Mining, Kinds of Data, Kinds of Patterns, and Technologies used, Kinds of applications adopted, Major issues in Data Mining.

Data Warehousing and Online Analytical Processing, Basic Concepts, Data Warehouse Modeling, Data Warehouse Design and Usage, Data Warehouse Implementation, Data Generalization by Attribute-Oriented Induction

UNIT II - About Data & Data Preprocessing

Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity Data Preprocessing, An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

UNIT III - Mining Concepts

Preliminary Concepts, Data Cube Computation Methods, Processing Advanced Kinds of Queries by Exploring Cube Technology, Multidimensional Data Analysis in Cube Space

Mining Frequent Patterns, Associations, and Correlations, Basic Concepts and Methods: Basic Concepts, Frequent Itemset Mining Methods, Which Patterns Are Interesting?—Pattern Evaluation Methods

Advanced Pattern Mining, Pattern Mining in Multilevel, Multidimensional Space, Constraint-Based Frequent Pattern Mining

UNIT IV - Classification

Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule-Based Classification, Model Evaluation and Selection, Techniques to Improve Classification Accuracy

Advanced Classification, Bayesian Belief Networks, Classification by Back propagation, Support Vector Machines, Classification Using Frequent Patterns, Lazy Learners, Other Classification Methods

UNIT V - Cluster Analysis

Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid-Based Methods, Evaluation of Clustering

Advanced Cluster Analysis, Probabilistic Model-Based Clustering, Clustering High-Dimensional Data

TEXT BOOK:

1. Jiawei Han Micheline Kamber – “Data Mining Concepts & Techniques”, Third Edition, Morgan Kaufmann Publishers, 2012.

CS427 CRYPTOGRAPHY AND NETWORK SECURITY

Course Description & Objective:

This Course focuses towards the introduction of network security using various cryptographic algorithms and understanding network security applications. It also focuses on the practical applications that have been implemented and are in use to provide email and web security.

Course Outcomes:

On successful completion of this course, the students

- Will have knowledge and understanding of: Classical encryption techniques, Block ciphers and the Data Encryption Standard, Basics of finite fields, Advanced Encryption Standard, Contemporary symmetric ciphers, Confidentiality using symmetric encryption, Basics of number theory, Key management, Public key cryptosystems, Message authentication, Hash functions and algorithms, Digital signatures and authentication protocols, Network security practice, Applications, E-Mail, IP and web security, System security, Intruders, Malicious software, Firewalls.
- Will develop their skills in: the programming of symmetric and/or asymmetric ciphers and their use in the networks.
- Will learn protocols used in Web Security and Transport layer Security

UNIT I - Network Security Introduction

Security attacks – Security services – Security Mechanisms – A Model for Network Security Model Classical Encryption Techniques – Symmetric Cipher Model – Substitution Techniques – Transposition Techniques – Rotor Machines – Steganography

UNIT II - Block Ciphers and Data Encryption Standard

Block Cipher Principles – Data Encryption Standard – Strength of DES – Differential and Linear Cryptanalysis - Block Cipher Design Principles.-

Advanced Encryption Standard – Evaluation Criteria of AES – AES Cipher – More on Symmetric Ciphers – Multiple encryption and Triple DES – Block Cipher Modes of Operation – RC4.

UNIT III - Public-Key Encryption and Hash Functions

Principles of Public –Key Cryptosystems – RSA Algorithm – Key Management – Message Authentication and Hash Functions – Authentication Requirements – Authentication Functions – Message Authentication – Hash Functions – Security of Hash Functions and MACs- Digital Signatures - Authentication Protocols – Digital Signature Standard.

UNIT IV - Network Security Applications

Kerberos – X.509 Authentication Service – Public Key Infrastructure – Pretty Good Privacy – S/MIME- IP Security Overview – IP Security architecture-Authentication Header – Encapsulating Security Payload – Combining Security associations – Key Management

UNIT V - Web Security

Secure Socket Layer and Transport Layer Security – Secure Electronic Transaction. SYSTEM SECURITY Intruders – Intrusion Detection – Password Management – Malicious Software - Firewalls – Trusted Systems.

CS429 DISTRIBUTED COMPONENT OBJECT TECHNOLOGIES (J2EE/.NET)

Course Description & Objective:

To understand the development of enterprise applications using 'java 2 Platform, enterprise Edition (J2EE) and .NET'.ADO.NET provides consistent access to data sources such as Microsoft SQL Server, as well as data sources exposed through OLE DB and XML.

Course Outcomes:

After completing this course a student is capable of:

- Gain knowledge on J2EE architecture
- Distributive systems introduction
- EJB implementation
- ASP.net introduction
- Developing web controls

UNIT I - Introduction To J2EE

J2EE Overview, Why J2EE?,J2EE Architecture,The Birth Of J2EE,Distributive Systems,The Tier,J2EE Multitier Architecture,Client Tier Architecture, Web Tier Implementation,EJB Tier Implementation,Enterprise Information Systems Tier Implementation,Myths Of Using Inheritance,Maintainable Classes.

UNIT II - JDBC and Embedded SQL

Model Programs,Tables,Indexing,Inserting Data Into Tables,Selecting Data From A Table,Metadata,Updating Tables,Deleting Data From A Table,Joining Tables,CalculatingData,Grouping And Bordering Data,Subqueries,View. Struts Framework:What Is Struts?,Struts Architecture.

UNIT III - Introduction to ASP and ASP.Net Server Controls

Introduction to asp, net FrameWork,asp.net, visual studio 2005-the Document window –views in the Document Window, the Tag Navigator, Page tabs, code change Status Notifications, Error Notifications and Assistance, the tool box, Solution Explorer, Server Explorer, Properties Window, Asp.net server Controls and Client- Side Scripts: Asp.Net Server Controls- Types of server Controls

Building With Server Controls. working with Server Control Event, Applying Styles to Server Controls –Examining the Controls Common properties.Html Server Controls- Html Control Base Class.

UNIT IV - Web Server Controls

Label Server Control, Leteral Server Control, Text Box Server Controlfocus(), AutoPostBack, Auto Complete Type,. Button Server Control- Causes Validation Property ,command Name Property, Asp.net Web Server Controls Bulleted List Server Controls, File Upload Server Control-Uploading Files Using the File Upload Control, Giving Asp.net Proper Permissions to Upload Files

UNIT V - Data Binding in ASP.NET

Data Source Controls - Sql Data Source Control, Xml Data Source Control, Object Data Source Control Site Map Data Source Control,. Configuring Data Source Control Caching, Storing Connection Information, Using Bound List Controls with Data Source Controls, GridView Editing, inserting, and Updating, and Deleting Data Using DetailsView, FormView, AD Rotator. Menu.

CS431 CLOUD COMPUTING (ELECTIVE III)

Course Description & Objective:

Cloud computing has evolved as a very important computing model, which enables information, software, and shared resources to be provisioned over the network as services in an on-demand manner. This course provides an insight into what is cloud computing and the various services cloudis capable.

Course Outcomes:

- Understanding the key dimensions of the challenge of Cloud Computing
- Assessment of the economics , financial, and technological implications for selecting cloud computing for own organization
- Assessing the financial, technological, and organizational capacity of employer's for actively initiating and installing cloud-based applications.
- Assessment of own organizations' needs for capacity building and training in cloud computing-related IT areas

UNIT I - Systems Modeling, Clustering and Virtualization

Distributed System Models and EnablingTechnologies, Computer Clusters for Scalable Parallel Computing, Virtual Machines and Virtualizationof Clusters and Data centers.

UNIT II - Foundations

Introduction to Cloud Computing, Migrating into a Cloud, Enriching the Integration as aService' Paradigm for the Cloud Era, The Enterprise Cloud Computing Paradigm.

UNIT III - Infrastructure as a Service (IAAS)

Virtualmachines provisioning and Migration services, On the Management of Virtual machines for CloudInfrastructures, Enhancing Cloud Computing Environments using a cluster as a Service, SecureDistributed Data Storage in Cloud Computing.Aneka, Comet Cloud, T-Systems,

Workflow Engine for Clouds, Understanding Scientific Applicationsfor Cloud Environments.

UNIT IV - Monitoring, Management and Applications

An Architecture for Federated Cloud Computing, SLAManagement in Cloud Computing, Performance Prediction for HPC on Clouds, Best Practices inArchitecting Cloud Applications in the AWS cloud, Building Content Delivery networks using Clouds,Resource Cloud Mashups.

UNIT V - Governance and Case Studies

Organizational Readiness and Change management in the Cloud age, Data Security in the Cloud, Legal Issues in Cloud computing, Achieving Production Readinessfor Cloud Services.

TEXT BOOKS:

1. Cloud Computing: Principles and Paradigms by Rajkumar Buyya, James Broberg and AndrzejM. Goscinski, Wiley, 2011.
2. Distributed and Cloud Computing, Kai Hwang, Geoffery C.Fox, Jack J.Dongarra, Elsevier,2012.

CS433 EMBEDDED SYSTEMS (ELECTIVE III)

Course Description & Objective:

Emphasis on Comprehensive treatment of Embedded Hardware and Real Time Operating systems along with case studies in tune with the requirements of Industry. The example-driven approach will put students on a fast track to understanding embedded-system programming and applying what they learn to their projects.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- Understand what is a embedded system and microcontroller.
- Understand different components of a microcontroller and their interactions.
- Become familiar with programming environment used to develop embedded systems
- Understand key concepts of embedded systems like I/O, timers, interrupts, interaction with peripheral devices

UNIT I - Introduction to Embedded Systems

Definition, Applications of ES, Examples of Embedded Systems, Embedded Hardware Units and Devices, Embedded Software, Design Metrics in ES, Challenges in ES Design.

UNIT II - Architecture of 8051

8051 Micro Controller Hardware, Input/Output Ports and Circuits, External Memory, Counter and Timers, Serial data Input/Output, Interrupts.

UNIT III - Programming Model of 8051

Data Transfer and Logical Instructions , Arithmetic Operations, Decimal Arithmetic, Jump and Call Instructions, Further Details on Interrupts.

UNIT IV - Real Time Operating Systems

Introduction, Tasks and Task States, Tasks and Data, Reentrancy, Semaphores and Shared Data, Basic Design Principles, Inter Process Communication: Message Queues, Mailboxes and Pipes.

UNIT V - Embedded Software Development

Timer Functions, Events, Memory Management, Interrupt Routines in an RTOS Environment, Host and Target Machines, Linker/Locator for Embedded Software, getting Embedded Software into the Target System.

TEXT BOOKS:

1. Raj Kamal, "Embedded Systems", 2nd ed., TMH, 2009.
2. Kenneth J. Ayala, Thomson, "The 8051 Microcontroller", 3rd ed., 2008.

4	-	-	4	4

CS435 SOFTWARE TESTING METHODOLOGIES (ELECTIVE III)

Course Description & Objective:

Software testing is a subject where the student will learn and apply basic skills needed to create and automate the test plan of a software project.It aims to describe principles and strategies for generating system test cases and to understand the essential characteristics of tools used for test automation.

Course Outcomes:

Students who have completed this course would have learned

- *Various test processes and continuous quality improvement*
- *Types of errors and fault models*
- *Methods of test generation from requirements*
- *Behavior modeling using UML: Finite state machines (FSM)*
- *Test adequacy assessment using: control flow, data flow, and program mutations*

UNIT I - Introduction

Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs Flow graphs and Path testing: Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

UNIT II - Transaction Flow & Domain Testing

Transaction flows, transaction flow testing techniques. Dataflow testing:- Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.

Domain Testing, domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

UNIT III - Path products and expressions

Path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

UNIT IV - Logic Based Testing

Overview, decision tables, path expressions, kv charts, specifications.
State, State Graphs and Transition testing, State graphs, good & bad state graphs, state testing, Testability tips.

UNIT V - Graph Matrices and Application

Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. Usage of JMeter and Winrunner tools for functional / Regression testing (Ref Text book2).

TEXT BOOKS:

1. Boris Beizer, "Software Testing Techniques", 2nd ed., Dreamtech, 2006.
2. Dr.K.V.K.K.Prasad, "Software Testing Tools", 1st ed., Dreamtech. 2008. (Unit - 5)

CS437 FUNDAMENTALS OF IMAGE PROCESSING (ELECTIVE III)

Course Description & Objective:

To introduce to students the analytical tools and methods, which are currently used in digital image processing as applied to image information for human viewing. Students will learn to apply these tools in the laboratory in image restoration, enhancement, compression and segmentation.

Course Outcomes:

- Understand image formation and the role human visual system plays in perception of gray and color image data.
- Get broad exposure to and understanding of various applications of image processing in industry, medicine and defences.
- Learn the signal processing algorithms and techniques in image enhancement and image restoration.
- Acquire an appreciation for the image processing issues and techniques and be able to a IV Year IV Yearpply these techniques to real world problems.
- Be able to conduct independent study and analysis of image processing problems and techniques.

UNIT I - Digital Image Fundamentals

Fundamental steps in Digital Image Processing, Components of an Image Processing systems, Elements of visual perception, Image sensing and acquisition, Image sampling and quantization, basic relationship between pixels, basic geometric transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform.

UNIT II - Image Enhancement

Spatial Domain methods, Basic grey level transformation, Histogram equalization, Image subtraction, Image averaging, Spatial filtering: Smoothing, sharpening filters, Laplacian filters, Frequency domain filters: Smoothing, Sharpening filters, Homomorphic filtering.

UNIT II - Image Restoration

Model of Image Degradation/restoration process, Noise models, Inverse filtering, Least mean square filtering, Constrained least square filtering, Blind image restoration, Pseudo inverse, Singular value decomposition.

UNIT IV - Image Segmentation

Edge detection, Edge linking via Hough transform – Thresholding - Region based segmentation – Region growing – Region splitting and merging – Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed segmentation algorithm.

UNIT V - Image Compression

Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, Vector Quantization, Transform coding, JPEG standard, MPEG.

CS439SOFTWARE PROJECT MANAGEMENT (ELECTIVE IV)

Course Description & Objective:

Students will be introduced to the following aspects of project management related to managing small software development and To describe activities of SPM highlights and train in the planning and implementation of project management. It brings a specific project to complete on time and on budget.

Course Outcomes:

- identify and describe the impact different project contexts will have upon all aspects of a software development project, including an understanding of the role professional ethics plays in the conduct of successful software development
- identify and describe the key phases of project management and the key skills associated with each
- determine an appropriate project management approach through an evaluation of the business context and project scope and knowledge of agile and traditional project management approaches
- demonstrate through application, knowledge of the key project management skills, such as product and work break-down structure, schedule; governance including progress reporting, risk and quality management
- as part of a small team research and produce a concise piece of writing suitable for presentation to senior management demonstrate an ability to present their ideas both formally and informally to a group of their peers.

UNIT I - Software Management & Software Economics

The waterfall model, conventional software Management performance. Evolution of Software Economics : Software Economics, pragmatic software cost estimation.

Improving Software Economics , Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections.

UNIT II - The old way and the new & Life Cycle Phases

The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

Life cycle phases : Engineering and production stages, inception, Elaboration, construction, transition phases.

UNIT III - Artifacts of the process

The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts.

Model based software architectures : A Management perspective and technical perspective.

UNIT IV - Project Organization and Planning

Work breakdown structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning.

Project Organizations and Responsibilities, Line-of-Business Organizations, Project Organizations, evolution of Organizations.

Process Automation : Automation Building blocks, The Project Environment.

UNIT V - Project Control and Process instrumentation

The seven core Metrics, Management indicators, quality indicators, life cycle expectations, pragmatic Software Metrics, Metrics automation.

Future Software Project Management, Modern Project Profiles, Next generation Software economics, modern process transitions.

CS441 BUSINESS INTELLIGENCE (ELECTIVE IV)

Course Description & Objective:

The study of Web technologies course is fundamental to Computer Science and Engineering. This course enables students to understand web page site planning, management and maintenance. The main objective behind introduction of this course is also to develop web sites which are secure and dynamic in nature and writing scripts which get executed on server as well.

Course outcomes:

On successful completion of this course students should be able to obtain:

- Understand the principles of business intelligence
- Understand the data warehousing principles
- Understand reporting and visualisation techniques
- Understand data mining techniques

UNIT I - Introduction to Business Intelligence

Introduction to digital data and its types – structured, semistructuredand unstructured, Introduction to OLTP and OLAP (MOLAP, ROLAP, HOLAP), BI Definitions &Concepts, BI Framework, Data Warehousing concepts and its role in BI, BI Infrastructure Components – BIProcess, BI Technology, BI Roles & Responsibilities, Business Applications of BI, BI best practices.

UNIT II - Basics of Data Integration

Concepts of data integration, needs and advantages of using data integration,introduction to common data integration approaches, Meta data - types and sources.

UNIT III - Extraction Transformation Loading

Introduction to data quality, data profiling conceptsand applications, introduction to ETL using Pentaho data Integration (formerly Kettle).

UNIT IV - Multi-Dimensional Data Modeling

Introduction to data and dimension modeling,multidimensional data model, ER Modeling vs multi dimensional modeling, concepts of dimensions, facts,cubes, attribute, hierarchies, star and snowflake schema, introduction to business metrics and KPIs, creatingcubes using Microsoft Excel.

UNIT V - Basics of Enterprise Reporting

A typical enterprise, Malcolm Baldrige - quality performance framework,balanced scorecard, enterprise dashboard, balanced scorecard vs. enterprise dashboard, enterprisereporting using MS Access / MS Excel, best practices in the design of enterprise dashboards

CS443 BIG DATA ANALYTICS (ELECTIVE IV)

Course Description & Objectives:

The main objectives of this course is to enable the students with basic data analytic skills like regression analysis, classification techniques, clustering techniques, association rule mining. Further, this course also enables the students how to scale the above algorithms with different data environments like massive amount of data, streaming data, distributed data and provides hands on experience on real world problems using above theoretical background.

Course Outcomes

- Necessary theory background for processing analytics.
- Processing analytics on small scale data.
- Mining from massive datasets.
- Mining from distributed datasets.

UNIT I - Introduction To Big Data

Introduction to BigData Platform – Traits of Big data -Challenges of Conventional Systems - Web Data – Evolution Of Analytic Scalability - Analytic Processes and Tools - Analysis vs Reporting - - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error.

UNIT II - Data Analysis

Regression Modeling - Multivariate Analysis - Bayesian Modeling - Inference - Support Vector and Kernel Methods - Analysis of Time Series: Linear Systems Analysis - Nonlinear Dynamics - Rule Induction - Neural Networks: Learning

UNIT III - Advanced Learning and treaming

Generalization - Competitive Learning - Principal Component Analysis and Neural Networks - Fuzzy Logic: Extracting Fuzzy Models from Data – Fuzzy c-Means- Stochastic Search Methods. Introduction to Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams

UNIT IV - Frequent Itemsets And Clustering

Mining Frequent Itemsets - Market Based Model – Apriori Algorithm, FP-Growth, Dynamic Item set Algorithm – Clustering Techniques – Hierarchical – K-Means, K-medoid, CURE- Clustering High Dimensional Data – CLIQUE– Clustering in Non-Euclidean Space – Clustering for Streams and Parallelism.

UNIT V - Frameworks And Visualization

MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques; Systems and Analytics Applications.

CS445 INTERNET OF THINGS (ELECTIVE IV)

Course Description & Objectives:

Explore the interconnection and integration of the physical world and the cyber space. Able to Design & Develop IOT Devices.

Course Outcomes:

- Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks
- Able to understand building blocks of Internet of Things and characteristics.

UNIT I - Introduction & Concepts

Introduction to Internet of Things, Physical Design of IOT, Logical Design of IOT, IOT Enabling Technologies, IOT Levels.

UNIT II - Domain Specific IOTs

Home Automation, Cities, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health & Life Style.

UNIT III - M2M & System Management with NETCONF-YANG

M2M, Difference between IOT and M2M, SDN and NFV for IOT, Software defined Networking, Network Function Virtualization, Need for IOT Systems Management, Simple Network Management Protocol, Limitations of SNMP, Network Operator Requirements, NETCONF, YANG, IOT Systems management with NETCONF-YANG.

UNIT IV - Developing Internet of Things & Logical Design using Python

Introduction, IOT Design Methodology, Installing Python, Python Data Types & Data Structures, Control Flow, Functions, Modules, Packages, File Handling, Date/ Time Operations, Classes, Python Packages

UNIT IV - IOT Physical Devices & Endpoints

What is an IOT Device, Exemplary Device, Board, Linux on Raspberry Pi, Interfaces, and Programming & IOT Devices.

MS310 MANAGERIAL ECONOMICS (ELECTIVE IV)

Course Description and Objective:

To make the student familiar with the basic concepts and principles of Business Economics. The course aims to develop student's capacity to analyze the economic environment in which business entities operate and understand how managerial decisions can vary under different constraints that each economic environment places on a manager's pursuit of it's goals, focusing on analyzing the functioning of markets and the economic behavior of firms and other economic agents.

Learning Outcomes

By the end of this course it is expected that the student will be able to:

- Understand nature and scope of managerial economics and its application in managerial decision making
- Demand determinants, elasticity of demand and demand forecasting methods for marketing planning.
- Theory of production, law of variable proportions and returns to scale
- Cost analysis and cost output relationship
- Types of markets and price determination

UNIT I - Nature & Scope of Managerial Economics

Basic tools and techniques of Business Economics, Macro Economic Environment and Managerial decisions.

UNIT II - Demand Analysis

Types of Demand, Demand determination Concept of Elasticity and measurement, Demand forecasting, Survey & Statistical methods.

UNIT III - Theory of Production

Production function, Marginal rate of technical substitution, Iso-quants and Iso-costs, production function with one/two variable factors,Law of Variable Proportions, and Returns to Scale, internal and external economies.

UNIT IV - Cost Analysis

Cost concepts, cost determinants, cost output relationship in the short and long run, Break-Even analysis.

UNIT V - Markets and price determination

Features and types of different competitive situations – Perfect competition, Monopoly, Monopolistic competition and Oligopoly, pricing methods in practice.

CS447 DATA WAREHOUSING AND DATA MINING LAB

Course Description & Objectives:

The main objective of this lab is to impart the knowledge on how to implement classical models and algorithms in data warehousing and data mining and to characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering. At the end to compare and contrast different conceptions of data mining.

Course Outcomes:

Students can able

- To evaluate the different models of OLAP and data preprocessing.
- To enlist various algorithms used in information analysis of Data Mining Techniques.
- To demonstrate the knowledge retrieved through solving problems

List of Experiments

1. Explore various commands given in PL/SQL in Oracle 8.0
2. Execute multi-dimensional data model using SQL queries.
3. Implement various OLAP operations such as slice, dice, roll up, drill up, pivot etc.
4. Implementation of Text Mining on the data warehouse
5. Explore the correlation-ship analysis between the data set
6. Evaluate attribute relevance analysis on a weather data warehouse
7. Evaluate Information Gain of an attribute in the student database
8. Experiment to predict the class using the Bayesian classification
9. Find out a weight & bias updating using the Back Propagation Neural Network
10. To perform various data mining algorithms on the give data base using WEKA

CS449 CRYPTOGRAPHY AND NETWORK SECURITY LAB

Course Description & Objective:

After the success full completion of this course the student is enable towards learning and overcome security attacks in future.

Course Outcomes:

- Understand computer security principles and discuss ethical issues for theft of information. Identify threat models and common computer network security goals
- Explain various encryption algorithms, hashing functions, one-way authentication and public key cryptology
- Analyze firewalls, DOS attacks and defense types. Dramatize example scenarios in DNS and IPSec applications

Programming:

1. Write program for Ceaser cipher encryption and decryption
2. Write program for Mono alphabetic cipher encryption and decryption
3. Implementation of Play Fair cipher
4. Implementation of Vigenere cipher (Polyalphabetic substitution)
5. Implementation of Hill cipher
6. Implementation of Rail Fence cipher
7. Implementation of S-DES algorithm for data encryption
8. Implement RSA asymmetric (public key and private key)-Encryption
9. Implement Euclidean and Extended Euclidean algorithm for calculating the GCD
10. Working with PGP

Text Books:

1. Cryptography and Network security by William Stallings, Pearson Education, Fourth Edition

2. Network Security Essentials (Applications and Standards) by William Stallings Pearson Education, Second Edition

Reference Books:

1. Fundamentals of Network Security by Eric Malwald (Dreamtech press)

2. Network Security – Private Communication in a Public World by Charlie Kaufman, Radis Perlman and Mike Speciner,Pearson Education

3. Introduction to Cryptography Buchmann, Springer

4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

5. C Programming with problem solving, J.A. Jones & K. Harrow, Dreamtech Press.

CS451 DISTRIBUTED COMPONENT OBJECT TECHNOLOGIES LAB

Course Description & Objective:

To understand the development of enterprise applications using ‘java 2 Platform, enterprise Edition (J2EE) and .NET’.ADO.NET provides consistent access to data sources such as Microsoft SQL Server, as well as data sources exposed through OLE DB and XML.

Course Outcomes:

After completing this course a student is capable of:

- Gain knowledge on J2EE architecture
- Distributive systems introduction
- EJB implementation
- ASP.net introduction
- Developing web controls

PART-1

1. Create a database ‘VIGNAN’ and three tables with specific constraints.
2. Insert the information in all the three tables using JDBC application.
3. Update and delete the specific information of any one table by specifying the condition by using ‘where’ clause.
4. List the entire content of any one table.
5. Create an HTML file named insertEmployee.html and then create a servlet EmployeeServlet.java to insert employee information into ‘Employee’ table.
6. Create an HTML file named employee.html and a servlet named GetServlet1.java. With the help of employee.html, we send the ‘ID’ of an employee to the GetServlet1 program.
7. Then, we use it to retrieve his/her information from ‘Employee’ table and display it on to the browser.
8. Create an HTML file AddCookies.html which contains four text boxes

. When user enters the values in these text boxes and press the submit button, the values will be sent to AddCookies.java servlet and get saved in cookies.

9. Create an HTML form login.html that accepts the username and password and submits to login.java servlet. Verify credentials and on success, set the username in the HTTP Session and show a “Welcome <username>” message. (Use the request.getSession().setAttribute() method)
10. Design a registrationform.jsp page with all user registration information and after filling all the details, transfer all the filled information to registrationsuccess.jsp page.(use Implicit objects)
11. Create connection.jsp which contains database connection settings and include this file in registrationsuccess.jsp page to save ‘registration’ details into registration table.
12. Design a StudentBean class with getter/setters for the Student details like firstname,lastname and age; Access the above bean class in JSP. You can use <jsp:getProperty/> action to access get methods and <jsp:setProperty/> action to access set methods
13. Write a program to accept citizen name,address& age in struts.If age is greate than 18 then allow the person for voting
14. Demonstrate a program in struts that uses Action Class
15. Demonstrate a database application in struts.

PART-2

1. Create a Project using Visual Studio to display “Hello World” message on the browser screen.
2. Design a registration page using ASP.NET form controls.
3. Demonstrate the use of HTML Server controls using ASP.NET.
4. Demonstrate the use of Server Controls in ASP.NET.
5. Create a Data Source for SQL Database Server in Visual Studio.
6. Create a dropdown server control using ASP.NET and bind the data source created earlier to this control.
7. Create a Grid View for the table that was created using SQL Server and write appropriate code for handling updations to that table through grid view.

CS420 MOBILE AD-HOC NETWORKS (ELECTIVE V)

CCourse description and objectives:

This course is introduced to learn the fundamental concepts and design issues of Ad Hoc Wireless Networks, architectures and protocols of Ad Hoc Wireless Networks. To Study state of art research developments in Ad Hoc Wireless Networking.

Course Outcomes

- Students will be able to describe the unique issues in ad-hoc wireless networks.
- Students will be able to describe current technology trends for the implementation and deployment of ad hoc wireless networks..
- Students will be able to discuss the challenges in designing MAC, routing and transport protocols for ad hoc wireless networks.
- Students will be able to discuss the issues in designing Security Protocols for ad hoc wireless networks.
- Students will be able to discuss about the issues in QoS solutions and Energy Management Schemes in ad hoc Wireless Networks.

UNIT I - Introduction to Ad-hoc netowrks

Introduction to ad-hoc networks – definition, characteristics features, applications. Characteristics of wireless channel, ad hoc mobility models: - indoor and outdoor models.

UNIT II - Medium Access Protocols

MAC Protocols: design issues, goals and classification. Contention based protocols- with reservation, scheduling algorithms, protocols using directional antennas.

IEEE standards: 802.11a, 802.11b, 802.11g, 802.15. HIPERLAN.

UNIT III: Network Protocols

Routing Protocols: Design issues, goals and classification. Proactive Vs reactive routing, unicast routing algorithms, Multicast routing algorithms, hybrid routing algorithm, energy aware routing algorithm, hierarchical routing, QoS aware routing.

UNIT IV - End-End Delivery and Security

Transport layer: Issues in designing- Transport layer classification, ad hoc transport protocols. Security issues in adhoc networks: issues and challenges, network security attacks, secure routing protocols.

UNIT V - Cross Layer Design

Cross layer Design: Need for cross layer design, cross layer optimization, parameter optimization techniques, cross layer cautionary perspective. Integration of ad hoc with Mobile IP networks.

TEXT BOOKS:

CS422 E-COMMERCE (ELECTIVE V)

Course Description & Objectives:

The advent of e-commerce has posed many new issues in the development of business information systems, including Accounting Information Systems.The purpose of this course is to introduce e-commerce, its impacts keys issues in the development of web-based business information systems and applications.

Course Outcomes:

- Comprehend the underlying economic mechanisms and driving forces of E-Commerce.
- Understand the critical building blocks of E-Commerce and different types of prevailing business models employed by leading industrial leaders.
- Appraise the opportunities and potential to apply and synthesize a variety of E-Commerce concepts and solutions to create business value for organizations, customers, and business partners.
- Formulate E-Commerce strategies that lever firms' core competencies, facilitate organizational transformation, and foster innovation.

UNIT I - Introduction

Electronic Commerce-Frame work, anatomy of E-Commerce applications, E-Commerce Consumer applications, E-Commerce organization applications. Consumer Oriented Electronic commerce - Mercantile Process models.

UNIT II - Electronic payment systems

Digital Token-Based, Smart Cards, Credit Cards, Risks in Electronic Payment systems.Inter Organizational Commerce - EDI, EDI Implementation, Value added networks.

UNIT III - Intra Organizational Commerce

work Flow, Automation Customization and internal Commerce, Supply chain Management.

UNIT IV - Corporate Digital Library

Document Library, digital Document types, corporate Data Warehouses. Advertising and Marketing - Information based marketing, Advertising on Internet, on-line marketing process, market research.

UNIT V - Consumer Search and Resource Discovery

Information search and Retrieval, Commerce Catalogues, Information Filtering. Multimedia - key multimedia concepts, Digital Video and electronic Commerce, Desktop video processing, Desktop video conferencing.

CS424 PATTERN RECOGNITIION (ELECTIVE V)

Course Description & Objectives:

This course will introduce the fundamentals of pattern recognition. First, we will focus on Introduction, decision and distance functions. Next, we will focus on probability and statistical decision making. Later concentrated on decision making and feature selection. It also covered the syntactic pattern recognition.

Course Outcomes:

Upon successful completion of the course, students will

- Understand the vision technology in conjunction with real world applications.
- Learn the principles and commonly used paradigms and techniques of computer vision.
- Be able to identify the limitations of vision systems.
- Be able to demonstrate successful applications to process and analyze images, and to make automatic decisions based on extracted feature information.

UNIT I - Introduction to Decision and Distance Functions

Basic concepts, Applications, Fundamental problems in pattern Recognition system design, Design concepts and methodologies, Examples of Automatic Pattern recognition systems, Simple pattern recognition model Linear and generalized decision functions, Pattern space and weight space, Geometrical properties, implementations of decision functions, Minimum-distance pattern classifications.

UNIT II - Probability & Statistical Decision Making

Probability of events, Random variables, Joint distributions and densities, Movements of random variables, Estimation of parameter from samples. **G -** Introduction, Baye's theorem, Multiple features, Conditionally independent features, Decision boundaries, Unequal cost of error, estimation of error rates, the leaving-one-out-techniques, characteristic curves, estimating the composition of populations. Baye's classifier for normal patterns.

UNIT III - Non Parametric Decision Making

Introduction, histogram, kernel and window estimation, nearest neighbour classification techniques. Adaptive decision boundaries, adaptive discriminant functions, Minimum squared error discriminant functions, choosing a decision making techniques.

Clustering and Partitioning - Hierarchical Clustering: Introduction, agglomerative clustering algorithm, the single-linkage, complete-linkage and average-linkage algorithm. Ward's method Partition clustering-Forg's algorithm, K-means's algorithm, Isodata algorithm.

UNIT IV - PATTERN PREPROCESSING AND FEATURE SELECTION

Introduction, distance measures, clustering transformation and feature ordering, clustering in feature selection through entropy minimization, features selection through orthogonal expansion, binary feature selection.

UNIT V - SYNTACTIC PATTERN RECOGNITION

Introduction, concepts from formal language theory, formulation of syntactic pattern recognition problem, syntactic pattern description, recognition grammars, automata as pattern recognizers, Application of pattern recognition techniques in bio-metric, facial recognition, IRIS scon, Finger prints, etc.,

CS426 HUMAN COMPUTER INTERACTION (ELECTIVE V)

Course Description & Objectives:

The student will learn how interaction with computers takes place at user interface, which comprises both hardware and software. To facilitate communication between students of psychology, design, and computer science on user interface development projects. To facilitate communication between students of psychology, design, and computer science on user interface development projects.

Course Outcomes

- The student will learn, The importance of User Interface and interaction with computers using a Graphical User Interface and Keyboard and function keys along with video drivers
- To provide the future user interface designer with concepts and strategies for making design decisions.
- To expose the future user interface designer to tools, techniques, and ideas for interface design.
- To introduce the student to the literature of human-computer interaction.

UNIT I - Introduction

Importance of user Interface - definition, importance of good design. Benefits of good design. A brief history of Screen design, The graphical user interface - popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user - Interface popularity, characteristics- Principles of user interface.

UNIT II - Design process

Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, and understanding business junctions.

UNIT III - Screen Designing

Design goals - Screen planning and purpose, organizing screen elements, ordering of screen data and content - screen navigation and flow - Visually pleasing composition - amount of information - focus and emphasis - presentation information simply and meaningfully – information Screen Designing:- Design goals - Screen planning and purpose, organizing screen elements, ordering of screen data and content - screen navigation and flow - Visually pleasing composition - amount of information - focus and emphasis - presentation information simply and meaningfully - information retrieval on web - statistical graphics - Technological consideration in interface design.

UNIT IV - Windows

New and Navigation schemes selection of window, selection of devices based and screen based controls. Components - text and messages, Icons and increases - Multimedia, colors, uses problems, choosing colors.

UNIT V - Software tools

Specification methods, interface - Building Tools. Interaction Devices - Keyboard and function keys - pointing devices - speech recognition digitization and generation - image and video displays - drivers.

CS428 NEURAL NETWORKS (ELECTIVE VI)

Course Description & Objective

Understand the role of neural networks in engineering, artificial intelligence, and cognitive modeling. Provide knowledge of supervised learning in neural networks. ? Provide knowledge of computation and dynamical systems using neural networks. ? Provide knowledge of reinforcement learning using neural networks.

Course outcomes

- The role of neural networks in engineering, artificial intelligence, and cognitive modeling.
- Have an understanding of the concepts and techniques of neural networks through the study of the most important neural network models.
- Have a knowledge of sufficient theoretical background to be able to reason about the behavior of neural networks.
- To be able to evaluate whether neural networks are appropriate to a particular application.

UNIT – I Introduction to Artificial Neural Networks

Introduction, Artificial Neural Networks, Historical Development of Neural Networks, Biological Neural Networks, Comparison Between them and the Computer, Comparison Between Artificial and Biological Neural Network Basic Building Blocks of Artificial Neural Networks, Artificial Neural Network (ANN) terminologies.

UNIT – II Fundamental Models of Artificial Neural Networks

McCulloch-Pitts Neuron Model, Learning Rules, Hebbian Learning Rule Perceptron Learning Rule, Delta Learning Rule (Widrow-Hoff Rule or Least Mean Square(LMS) Rule, Competitive Learning Rule, Out Star Learning, Boltzmann Based Learning, Hebb Net. Perceptron Networks : Introduction, Single Layer Perceptron, Brief Introduction to Multilayer Perceptron Networks. Adaline and Madaline Networks : Introduction, Adaline, Madaline.

UNIT – III Associative Memory Networks

Introduction, Algorithms for Pattern Association, Hetero Associative Memory, Neural Networks, Auto Associative Memory Network, Bi-directional Associative Memory.

UNIT- IV Feedback & Feed Forward Networks

Feedback Networks : Introduction, Discrete Hopfiled Net, Continuous Hopfiled Net, Relation between BAM and Hopfiled Nets. Feed Forward Networks : Introduction, Back Propagation Network (BPN), Radial Basis Function Network (RBFN).

UNIT – V Self Organizing Neural Architectures

Self Organizing Feature Map: Introduction, Methods Used for Determining the Winner, Kohonen Self Organizing Feature Maps, Learning Vector Quantization (LVQ), Max Net, Maxican Hat, Hamming Net. Applications of Neural Networks: Applications in Bioinformatics, Knowledge extraction, Image processing, forecasting, Medical domain.

CS430 BIO METRICS (ELECTIVE V)

Course Description & Objectives:

In this course students should understand how biometrics provides authentication, identification and security.

Course Outcomes:

- To understand the state-of-the-art in biometric technologies
- To survey the currently available biometric systems
- To learn and implement some of the biometrics authentication

UNIT I Introduction

Biometric Systems, Biometric Functionalities, Biometric System Errors, The Design Cycle of Biometric Systems, Applications of Biometric Systems.

UNIT II - Finger Print Recognition

Introduction, Friction Ridge Pattern, Fingerprint Acquisition, Feature Extraction, Matching, Fingerprint Indexing, Fingerprint Synthesis, Palmprint.

UNIT III - Face Recognition

Introduction, Image Acquisition, Face Detection, Feature Extraction and Matching, Advanced Topics: Handling Pose, Illumination and Expression variation, Homogenous Face Recognition, Face Modeling.

UNIT IV - Iris Recognition

Introduction, Design of Iris Recognition System, Iris Segmentation, Iris Normalization, Iris Encoding and Matching, Iris Quality, Performance Evaluation.

UNIT V Multi-Biometrics

Introduction, Sources of Multiple Evidence, Acquisition and Processing Architecture, Fusion Levels.

CS432 GENETIC ALGORITHMS (ELECTIVE VI)

Course Description & Objectives:

To explore applications & algorithms with Genetics and to understand optimization techniques of Genetic Algorithms

Course Outcomes:

- Able to develop classifier systems with Genetic Algorithms
- Able to optimize the coding and understand functions of Genetic Algorithms

UNIT I - Introduction to Genetic Algorithms

What are Genetic Algorithms, Traditional Optimization and Search Methods, Goals of Optimization, Difference methods Genetic Algorithms & Traditional Methods, Simple Genetic Algorithm.

UNIT II - Mathematical Foundations

Fundamental Theorem, Schema Processing, Two armed & K armed Bandit Problem, Building Blocks Hypothesis, Minimal Deceptive Problem

UNIT III - Implementation of Genetic Algorithm

Data Structures, Reproduction, Crossover and Mutation, Fitness Scaling, Coding, Mapped and Fixed Point Coding, Discretization, Constraints, De Jong and Function Optimization, Improvements & Application of Genetic Algorithms.

UNIT IV - Advanced Operators & Techniques

Dominance, Diploidy, Inversion and Re ordering Techniques, Niche and Speciation, Multi objective Optimization, Knowledge based Techniques, Genetic Algorithms & Parallel Processors.

UNIT V - Introduction to Genetics Based Machine Learning

Classifier, Rule and Message System, Simple classifier system and Applications of Genetics based Machine Learning.

CS434 MULTIMEDIA SYSTEMS (ELECTIVE VI)

Course Description & Objectives:

Understand the characteristics of multimedia systems and how to address issues Be aware of the differences among multimedia authoring systems. Be familiar with the software development process as practiced in a multimedia development environment Be able to design, write, document, debug and evaluate a non trivial multimedia system. Appreciate and understand the legal and ethical issues associated with developing multimedia systems, particularly in regard to use of media clips developed by others.

Course Outcomes:

- Write action script for a particular problem.
- Design and Draw customized GUI components.
- Apply Transformations on Components.
- To make use of fundamental concepts and formulate best practices

UNIT I - Introduction

Introduction to Multimedia, Media and Data Streams, Sound/Audio, Images and Graphics, Video and Animation.

UNIT II - Comporession Techniques

Data Compression, Optical Storage Media; Computer Technology, Multimedia Operating Systems.

UNIT III - Networking

Networking Systems, Multimedia Communication Systems; Database Systems.

UNIT IV - Multimedia Architecture

Multimedia Architecture; Multimedia Documents, Hypertext and MHEG.

UNIT V - Application Development

User Interfaces, Synchronization, Abstractions for Programming; Multimedia Application Development; Virtual Reality; Future Directions.

Text Books:

1. Ralf Steinmetz, Klara Nahrstedt "Multimedia: Computing Communications & Applications" Pearson Education (2004)
2. Parekh Ranjan "Principles of Multimedia" Tata McGraw-Hill (2007)

COURSE CONTENTS

I SEM & II SEM

16HS103 ENGINEERING MATHEMATICS - I

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Recognise and solve different types of first and 2^{nd} order ordinary differential equations.

CO2: Understand the process of evaluation ODE numerically.

CO3: Illustrate the Application of partial differentiation.

CO4: Classify and solve the linear and non-linear partial differential equations.

CO5: Apply software tools to obtain and verify the solutions.

SKILLS:

- ✓ *Solve given differential equation by suitable method.*
- ✓ *Compute numerical solutions of differential equation by apt method.*
- ✓ *Compute maxima/minima of given function.*
- ✓ *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with MATLAB output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*
- *Estimation of acoustic impedance of a given material.*

UNIT - 1 **L- 9, T-3**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, Homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9, T-3**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form - e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9, T-3**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9, T-3**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation - Partial derivatives, Partial derivatives of higher order; Homogeneous function, Euler's theorem, Total differential coefficient, Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L- 9, T-3**

PARTIAL DIFFERENTIAL EQUATIONS: Formation of partial differential equations, Linear (Lagrange) equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method, Second order linear equations with constant coefficients only, Classifications, Rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Basic mathematical operations using MATLAB.
2. Solving simple expressions.
3. Limits.
4. Continuity.
5. Symbolic differentiation.
6. Symbolic integration.
7. Plotting of curves.
8. Plotting of surfaces.
9. Maxima & minima of functions of one variable.
10. Maxima & minima of functions of two variable.
11. Solving first order O.D.E.
12. Euler's Method and R-K Method.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibers, Photonics, Nano and functional materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Recognize the relevant applications of Ultrasonic waves by the grasp over their production and properties.

CO2: Analyze the characteristics of Laser for suitable applications in the field of industry, medicine and communication and to foster the knowledge on optical fibers to realize fiber optic communication and fiber optic sensors.

CO3: Apply the principles of quantum mechanics to learn the dynamics of free electrons in metals.

CO4: Evaluate efficiency of Solar cell and to understand the functioning of Photonic devices.

CO5: Demonstrate the knowledge on fabrication and applications of Nano-materials and latest advanced materials.

SKILLS:

- ✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*
- ✓ *Study the wavelengths of light sources and lasers.*
- ✓ *Estimate the efficiency of a given solar cell.*
- ✓ *Learn about the type of the optical fiber and its ability to propagate light waves from its numerical aperture.*
- ✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves - Piezoelectric method; Properties of ultrasonic waves, Types of ultrasonic waves, Determination of velocity of ultrasonic waves in solids and liquids, SONAR - Medical applications.

NON-DESTRUCTIVE TESTING: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of laser light, Spontaneous and Stimulated emission of radiation, He-Ne laser, CO_2 laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and applications.

FIBER OPTICS: Principle of optical fiber, Acceptance angle, Numerical aperture, Types of fibers, Dispersion and attenuation in optical fibers, Optical fiber communication system, Fiber optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non- linear optical behaviour of materials, Applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, Fabrication of nano materials - Ball milling - Sol-Gel method; Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics/metals, Biomaterials.

TEXT BOOKS:

1. V.Rajendran, "Engineering Physics", 7th edition, McGraw Hill Education (India) Pvt.Ltd., 2014.
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd., 1992.
3. Sukhatme S.P., "Solar Energy", 2nd edition, TMH publication, 2005.
4. Dr. Arumugam "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find the height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measure the temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The objective of this course is to direct the students towards developing their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand and apply the rules of grammar to speak in technical context.

CO2: Strengthen reading and listening comprehension skills to follow academic discussions in the engineering context.

CO3: Develop appropriate vocabulary for carrying out academic writing tasks.

CO4: Attain adequate proficiency to participate in the classroom discussions and make simple presentations.

CO5: Understand and apply the mechanics of writing to produce simple texts for academic purpose.

SKILLS:

- ✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*
- ✓ *Apply different sub skills like top down, bottom up approaches to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*
- ✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*
- ✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*
- ✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **ENVIRONMENTAL CONSCIOUSNESS**
  (Climate Change, Green Cover, Pollution, Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles, Prepositions, Sentence types and construction
- Vocabulary : Root, Prefixes, Suffixes
- Composition : Paragraph writing (Descriptive and narrative)
- Laboratory Practice : Introduction to phonetics
  (Organs of Speech, Consonants, Vowels and Diphthongs, Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **EMERGING TECHNOLOGIES**
  (Solar power, Cloud computing, Nanotechnology, Wind energy (to be covered from Energy unit))
- Grammar : Time and tense (Present-past-future; Helping verbs, Modals)
- Vocabulary : Synonyms, Antonyms
- Composition : Letter writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **TRAVEL AND TOURISM**
  (Advantages and disadvantages of travel-tourism, Atithi devo bhava, Tourism in India)
- Grammar : Subject-Verb agreement, Sentence construction
- Vocabulary : Idioms and phrases
- Composition : Letter writing (Formal)
- Laboratory Practice : Situational conversations – Role - Plays
  (Introducing, Greeting, Enquiring, Informing, Requesting, Inviting)

UNIT - 4 **L-9**

- Text : **ENGINEERING ETHICS**
  (Challenger disaster, Biotechnology, Genetic engineering, Protection from natural calamities, How pertinent is the nuclear option? An environment of energy (from Energy Unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence transformation (Degrees, Voice, Speech and Synthesis)
- Vocabulary : Phrasal verbs

  Composition : Note-making, Text, Nandan Nilekani's In Search of Our Energy Solutions (from Energy Unit)
  Summarizing, Text on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational conversations, Role-Plays (Emotions, Directions, Descriptions, Agreements, Refusals, Suggestions)

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

UNIT - 5 **L-9**

- Text : **MEDIA MATTERS**
  (History of media, Language and media, Milestones in media, Manipulation by Media, Thousands march against nuclear power in Tokyo (from Energy Unit), Entertainment media, Interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail – Short message service (SMS), Writing advertisements, Reporting; Social media - Blogging, Facebook, Twitter (acceptable and non acceptable content)
- Laboratory Practice : Group discussions – (Topics from Energy Unit), Dumping of nuclear wastes, Exploration of eco-friendly energy options, Lifting of subsidies on petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Demonstrate the disassembling and assembling of a personal computer system.

CO2: Install the operating system and other software required in a personal computer system.

CO3: Analyze and visualize the data using various operations in Excel.

CO4: Identify the various threats to users and data.

CO5: Understand the concept of cyber security.

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L-10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L-10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L-8**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and database management systems.

UNIT - 4 **L-8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and other internet applications.

UNIT - 5 **L-9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours-30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools.
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using Analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort & filter using Power Point tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, “Introduction to Computers”, 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, “Introduction to Computer Science”, 2nd edition, Pearson Education, 2011.
2. Eric Maiwald, “Fundamentals of Network Security”, 3rd edition, Tata-McGrawHill, 2004.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understanding of how to write simple, but complete C programs.

CO2: Identification of suitable data types for operands and design of expressions having right precedence.

CO3: Application of decision making and iterative features of C Programming language effectively.

CO4: Design and development of problem specific data structures and accessing methods to build large modular programs.

CO5: Development of C programs that are understandable, debuggable, maintainable and more likely to work correctly in the first attempt.

SKILLS:

- ✓ *Identify suitable data types for an application.*
- ✓ *Apply control statements for decision making problems.*
- ✓ *Use multidimension array for matrix application.*
- ✓ *Design a program to calculate average of a class.*
- ✓ *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L- 10,T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L- 9,T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L- 9,T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L- 9,T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L- 8,T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours-30

1. Compute the factors of a number.
2. Compute the average of 'n' numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.
8. Using structure of arrays.

ACTIVITIES:

- o *Implement matrix operations.*
- o *Implement malloc and calloc functions.*
- o *Copy the content of one file into the other.*
- o *Implement string manipulations functions.*

9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

TEXT BOOK:

1. Ajay Mittal, "Programming in C - A practical Approach", 1^{st} edition, Pearson Education, India, 2015.

REFERENCE BOOKS:

1. Reema Thareja, "Introduction to C Programming", 2^{nd} edition, Oxford University Press India, 2015.
2. Herbert Schildt, C, "The Complete Reference", 4^{th} edition, Tata McGraw-Hill, 2000.
3. E. Balagurusamy, "Programming in ANSI C", 4^{th} edition, Tata McGraw- Hill, 2008.

16EE101 BASICS OF ENGINEERING PRODUCTS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Describe the working principle of Refrigeration and Air conditioning systems.

CO2: Gain awareness on choosing appropriate construction materials.

CO3: Operate and maintenance of basic electrical engineering appliances.

CO4: Analyze the different lighting sources and it's features.

CO5: Understand working of the basic electronics engineering appliances.

SKILLS:

- ✓ *Identify UPS requirements for a given load.*
- ✓ *Provide a Lighting scheme for specific working environment.*
- ✓ *Design a composition of Heating element for a particular application.*
- ✓ *Trouble shoot issues relating to Immersion Heater and Induction Heater.*
- ✓ *Provide an earthing for Domestic Outlet.*
- ✓ *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembe and Assembe the Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design the Electric Wiring system for a prototype house.*
- *Design the UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L- 9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air - Conditioner and Refrigerator, Components, Assembly and disassembly; Working principle of Centrifugal and Reciprocating pumps - Types, Parts and applications, Working principle of Screw jack and its components, Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L- 10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks, Timber - Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel, Simple layout design, Paints, Tiles, fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L-08**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems, Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods, Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and applications.

MOTOR: Electric Motors, Classification, Construction and working principles of motors used in Domestic applications, Mixer grinder, Ceiling and exhaust fan, Hair dryer, Washing machine, Water pump, Air coolers, Vacum cleaner, Computer cooling motor, Electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, Radio, Remote control, Telephone, Microwave oven, Cell phone, PA system, Induction stove, WiFi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box
13. Ceiling Fan and Mixer
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

1. M.S.Shetty, "Concrete Technology", 1st edition, S.Chand and Co, 2005.
2. S. C. Rangwala, "Engineering Materials", 36th edition, Charotar Publishing House, Anad, 2009.

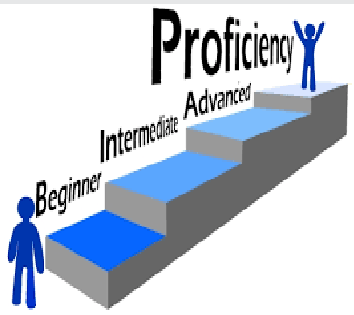
4. Janakaraj, A Sumathi et al, "Electrical engineering - Electrical machines and Appliances Theory", 1 st edition, Tamilnadu text book corporation, 2011.
5. Marshall Brain, "How Stuff Works", 1 st edition, John Wiley&Sons, 2001.
6. Pravin Kumar, "Basic Mechanical Engineering", 1 st edition, Pearson Publishers, 2013.



16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. The objective of this course is to strengthen the comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Can understand routine information and factual articles in the news papers and understand general instructions, notifications, announcements, monologues and conversations. (Understand)

CO2: Use functional English to speak and express themselves in everyday social contexts. (Apply & Create)

CO3: Applying sentence structures and word collocations to produce simple and accurate sentences and create short compositions.

CO4: Analyse complex reading and listening materials and draw inferences to evaluate the intentions of the writers and speakers.

CO5: Creating concise and precise communication by analysing the relevance of the context and applying suitable formats.

SKIL LS:

- ✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*
- ✓ *Read and extract information from different texts and draw inferences by understanding elements like tone and transitional words.*
- ✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*
- ✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/Others, Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, Intonation and accent

Speaking – Articulating syllables clearly, Speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, Use of Nouns, Adjectives, Verbs, Prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things and Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages, True or False

Writing – Rewording, Sentence transformation, Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, Short conversations

Vocabulary / Grammar – Use of Adjectives/Adverbs, Comparatives and Superlatives

PRACTICE: Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations, Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines, Inferences, True/False

Writing – Developing hints, Writing short messages/paragraphs

Listening – Searching for factual information, Gap filling

Speaking – Snap Talks, JAM, Elocution

Vocabulary / Grammar – Prepositions, Phrasal Verbs, PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating, Predicting, Negotiating, Planning

SKILL FOCUS:

Reading – Reading for evaluation and appreciation, Comprehension

Writing – Letters, e-mails, 7 C's

Listening – Following long conversations / Interviews

Speaking – Discussions, Debate, Descriptions

Vocabulary / Grammar – Modals, Conditionals, Verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

UNIT - 5 **P-6**

FUNCTIONS: Requesting, Denying, Suggesting, Persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements, Presentations

Vocabulary / Grammar - Punctuation, Cloze tests

PRACTICE: Objective PET Units 25 – 30

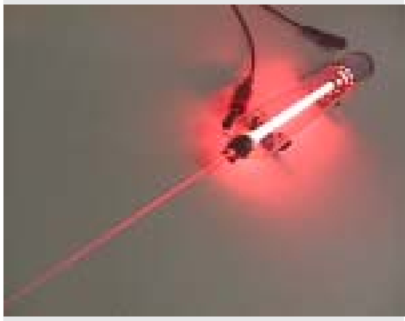
TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, "Objective PET", Student's Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.
2. Annette Capel and Rosemary Nixon, "Introduction to PET", Oxford University Press.

16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Course objectives and Description:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the experiments.The students have to perform at least ten from the list of experiments.

Course Outcomes:

The student will be able to:

CO1: Realize the concept of resonance by conducting the experiments of AC sonometer and Melde'sexperiment.

CO2: Acquire the knowledge on magnetic field theory and thermal conductivity by conducting experiments,

CO3: Understand Magnetic field along the axis of a circular coil and thermal conductivity of bad conductor through experiments.

CO4: Understand the concepts of light by conducting the experiments of determination of wavelength,

CO5: Understand the numerical aperture of an optical fibre and also from V–I characteristics of Solar celland LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Determination of Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – Efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect - Determination of Seebeck coefficient of a thermo couple.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.

16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Determine rank of a matrix and solution of a system of linear equations, Eigen values and Eigen vectors.

CO2: Apply Cayley-Hamilton theorem for finding inverse and power of a matrix.

CO3: Illustrate the use of multiple integrals.

CO4: Understand the concepts of vector differentiation and integration.

CO5: Apply software tools to obtain and verify the solutions.

SKILLS:

- ✓ *Appreciate various methods to find the rank of a matrix.*
- ✓ *Solve given system of linear equations.*
- ✓ *Compute Eigen values and Eigen vectors of a matrix.*
- ✓ *Compute the power of a matrix by suitable method.*
- ✓ *Evaluate Multiple integrals.*
- ✓ *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9,T-3**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from, Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L-9,T-3**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, Properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, Diagonalisation of a matrix.

UNIT - 3 **L-9,T-3**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in polar coordinates, Change of order of integration, Change of variables, Applications to area in cartesian coordinates and polar coordinates, Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L-9,T-3**

VECTOR DIFFERENTIATION: Vector function, Differentiation, Scalar and vector point function, Gradient, Normal, Divergence, Directional derivative, Curl, Vector identities.

UNIT - 5 **L-9,T-3**

VECTOR INTEGRATION: Line integral, Surface integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Matrix Algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc).
13. Interpolation.

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS:

1. Srimanta Pal and Subodh C. Bhunia, "Engineering Mathematics", Oxford Publications, 2015.
2. B. V. Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.
3. R K Jain and S R K Iyengar, "Advanced Engineering Mathematics", 2nd edition, Narosa Publishing House, 2007.
4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with MATLAB output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with MATLAB output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Analyze the quality of the water and design a suitable water purification mechanism.

CO2: Apply the principle of electrochemistry for designing various batteries and fuel cells.

CO3: Analyze various factors effecting corrosion and apply proper corrosion control and prevention methods.

CO4: Familiarize the preparation, properties and applications of various polymers.

CO5: Apply the electromagnetic radiation to the spectroscopic methods for the analysis of engineering materials.

SKILLS:

- ✓ *Analyse the total hardness of water sample.*
- ✓ *Understand the basic principles involved in various batteries.*
- ✓ *Understand the mechanisms of corrosion and various controlling methods.*
- ✓ *Synthesize various polymers.*
- ✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water, Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water, Scales and sludges, Caustic embrittlement, Boiler corrosion, Priming and foaming, Softening methods - Zeolite process, Ion Exchange process; Desalination of brackish water - Reverse osmosis, Electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential, Electrochemical series, Nernst equation, Reference electrodes, Calomel and standard hydrogen electrode, Ion selective electrode, Glass electrode, Determination of pH using glass electrode; Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cells - Hydrogen oxygen, Methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion, Mechanisms of wet corrosion, Bimetallic corrosion, Concentration cell corrosion, Factors influencing the rate of corrosion; Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction, Types of polymerization - Preparation, Properties and applications of polyethylene, PVC, Teflon, Bakelite, Urea formaldehyde, Silicones; Rubber, Vulcanization, Synthetic rubbers - Buna-S, Buna-N, Neoprene; Introduction to conducting polymers; Poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV-Visible spectroscopy - Beer, Lambert's law, Qualitative and quantitative analysis, Block diagram of UV-Visible spectrophotometer, IR spectroscopy - Types of vibrations, Block diagram of IR spectrophotometer.

TEXT BOOKS:

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and Mridula chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.
2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Communicate the ideas and thoughts to other in the form of pictures.

CO2: Develop the drawing skills while drawing engineering objects.

CO3: Implement the concept of quadrant system in drawing practice.

CO4: Construct different engineering objects using drawing tools.

CO5: Sketch simple objects and their pictorial views using AutoCAD.

SKILLS:

- ✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*
- ✓ *Draw geometrical objects like polygons, solids of different types.*
- ✓ *Visualize the objects in real time situations.*
- ✓ *Develop 3D views (isometric views).*

UNIT – 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Types of lines, Lettering, Dimensioning, Construction of polygon and conics (Ellipse, Parabola and Hyperbola by general method), Ellipse by oblong method.

UNIT – 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection, Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes, Projections of planes, Simple planes, Planes inclined to one reference planes.

UNIT – 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT – 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder, Simple orthographic views into isometric views through AutoCAD.

UNIT – 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS:

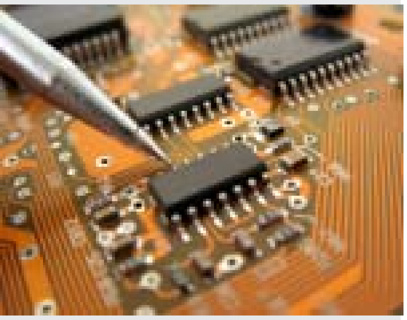
1. N.D.Bhatt, "Engineering Drawing", 53rd edition, Charotar Publication, 2014.
2. Basant Agrawal, C.M.Agrawal "Engineering Drawing" , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS:

1. J. hole, "Engineering Drawing", 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, "Engineering drawing", 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Analyze the resistive circuits and solution of resistive circuits with independent sources.

CO2: Solve the AC (single and three phase) and DC circuits using different methods.

CO3: Familiarize the concepts of electro magnetism and it's applications.

CO4: Explain the types of electrical equipment, machines and its applications.

CO5: Acquire the knowledge about the characteristics and working principles of semiconductor diodes, Bipolar Junction Transistor

SKILLS:

- ✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*
- ✓ *Develop a simple loop generator.*
- ✓ *Design a voltage regulator using Zener diode.*
- ✓ *Design a half wave rectifier using PN junction diode.*
- ✓ *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit concepts, Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements, Ohm's Law, Kirchhoff's Laws - Application to simple series, Parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only, Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator, Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems), D.C. Motor, Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours-30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.

ACTIVITIES:

- o *Decoding the value of resistors.*
- o *Design and fabricate a simple loop permanent magnet generator.*
- o *Design and fabricate a simple air cored transformer.*
- o *Fabricate full and half wave rectifiers using PN junction diodes.*
- o *Fabricate a voltage regulator using Zener diode.*

6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

TEXT BOOKS:

1. V.K.Mehta, “Principles of Electrical Engineering and Electronics”, 3rd edition, S. Chand Publications, New Delhi, 2010.
2. D.P Kothari, “Basic Electrical and Electronics Engineering”, 1st edition., TMH, New Delhi, 2014.

REFERENCE BOOKS:

1. Millman & Halkias, “Integrated Electronics”, McGraw Hill, 1979.
2. A.K. Thereja and B.L. Thereja, “Electrical Technology”, Vol.– II, S Chand Publications, 2007.
3. U.Bakshi & A.Bakshi, “Basic Electrical Engineering”, 1st edition., Technical Publications, Pune, 2005.

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Analyse the quality of the water by volumetric methods.

CO2: Apply the principle of electrochemistry to determine the relative strength of oxidizing/reducing agents for the sample analysis.

CO3: Analyse various factors effecting the rate of corrosion by using weight loss method

CO4: Synthesize and analyse various polymers useful for engineering applications.

CO5: Apply instrumentation methods for chemical analysis.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS:

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I, 2009.

2. Dr.Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Observation and integration of diverse information from variable sources outside of the classroom and helps students to think critically, creatively, resourcefully, and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness.

CO2: Collaborating across diverse disciplines and practices to identify and create solutions that conserve and help manage biodiversity for the long term.

CO3: Analyze the sources of pollutants and their effects on atmosphere and Adapting eco-friendly technologies and maintain hygienic conditions.

CO4: Identify the evidence of Global warming, Ozone depletion and acid rain.

CO5: Recognize safe receiving storing and handling of raw and prepared food and maintain hygienic conditions.

SKILLS:

- ✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*
- ✓ *Gain perspectives to adrress the challenges, improvise and devise solutions.*
- ✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*
- ✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*
- ✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT - 1 **L-6**

NATURAL RESOURCES: Environmental studies - Definition scope and its importance, Need for public awareness; Natural resources - Forest resources, Deforestation, Water resources, Properties and conflicts, Mineral resources, Extraction and impacts, Food resources, Modern agriculture methods, Fertilizer pesticide problems, Water logging, Salinity, Energy resources, Renewable and non-renewable energy resources, Harness technology, Solar energy technologies, Land resources, Land degradation, Soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY: Ecosystem - Concept, Structure and functions of an ecosystem, Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems; Biodiversity - Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT - 3 **L-6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY: Solid waste management - Causes, Effects and control measures of municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and noise pollutions, Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, definitions, Applications of the remote sensing; Innovative practices - Objectives, Innovative practices in agriculture and forest community, Bio-villages; Green technology for sustainable development; Life cycle assessment and its concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA: Sustainable development, Water conservation, Cloud seeding, Rainwater harvesting methods watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental legislation - Wildlife protection act, Water act, Forest conservation act, Air act, Environmental protection act; Environmental Impact Asssssment (EIA) - Introduction, Definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed projects / industry / developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION: Food sanitation - Food and drugs Act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water, Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions; Role of youth in the development, Promoting activities, Youth as initiators, Field work/environmental visit - Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment, Common plants, Insects, Birds; Study of simple ecosystems - Pond, River, Hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

1. Anubha Kaushik and CP Kaushik, "Perspectives in Environmental Studies", 5th edition, 2016
2. Benny Joseph, "Environmental studies", 2nd edition, McGraw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, "A Text book of Environmental Studies", HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, "A Text book of environmental science and Technology", B S Publications, 2008.
3. Dr. K. Mukkanti, "A Text book of Environmental Studies", S.CHAND and Company Ltd, 2009.
4. EHILRS and ST, "Text book of Municipal and Rural Sanitation", M.S Hill, 1998.
5. C. S. Rao, Wiley Eastern Ltd, "Environmental Pollution Control Engineering", New Age International Ltd, 2001.
6. Dr. M. Anji Reddy, "Introduction to Remote Sensing", B S Publications, 2004.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*

16CS202 DATA STRUCTURES

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course is aimed at offering fundamental concepts of data structures and explaining how to implement them. It begins with the basic concepts of data and data structures and introduces the primitive and non-primitive data structures in detail. It forms the basis for understanding various ways of representing data and its usage in different computing applications.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Apply advanced C programming techniques such as pointers, dynamic memoryallocation, structures to develop solutions for particular problems.

CO2: Analyze characteristics of various data structures.

CO3: Differentiate between Graphs and Trees.

CO4: Derive the importance of sorting and applying it wherever useful.

CO5: Argue the usefulness of data structures in solving problems.

SKILLS:

- ✓ *Identify the required data structures for various applications.*
- ✓ *Identify the sorting algorithm suitable for a given scenario.*
- ✓ *Implement array or linked list for a given problem.*
- ✓ *Analyse Pros & Cons of each of the data structure.*
- ✓ *Usage of trees and graphs.*

UNIT - 1 **L-9**

SORTING AND SEARCHING: Introduction - Data, Data type, Data structure, Primitive and Non-primitive - Data type, Data structure; Storage structures - Sequential and linked storage representations; Applications of structures, Hashing.

SORTING: Selection sort, Bubble sort, Insertion sort, Quick sort, Merge sort.

SEARCHING: Binary search and linear search.

UNIT - 2 **L-9**

LINKED LISTS: Introduction, Types of linked list - Singly linked list, Doubly linked list, Circular linked List; Operations - Insertion, Deletion, Traverse forward/reverse order; Multi lists, Applications of linked lists.

UNIT - 3 **L-9**

STACKS AND QUEUES: Stacks - Introduction, Array and linked representations, Implementation and their applications; Queues - Introduction, Array and linked representations, Implementation and their applications, Types - Linear, Circular and doubly ended queues; Applications.

UNIT - 4 **L-9**

TREES: Introduction, Properties, Binary Tree - Introduction, Properties, Array and linked representations; Tree traversals and their Implementation, Expression trees, BST definition and implementation; AVL Trees - Definition and implementation.

UNIT - 5 **L-9**

GRAPHS: Introduction, Properties, Modeling problems as graphs representations - Adjacency matrix, Adjacency list; Traversals - Breath first search and depth first search; Application of graphs.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- understand the importance of structure, abstract data type and their basic usability in different applications through different programminglanguages.
- understand the linked implementation and its uses both in linear and non-linear data structure.
- understand various data structures such as stacks, queues, trees, graphs, etc. to solve various computing problems.
- decide a suitable data structure to solve a real world problem.

LIST OF EXPERIMENTS Total hours-30

1. Selection, Bubble, Insertion, Quick and Merge sorting algorithms.
2. Linear and Binary search algorithms.
3. Single linked list, doubly linked list, and circular linked list.
4. Stack using an array and linked list.
5. Queue using an array and linked list.
6. Tree using an array and linked list.
7. Check if given expression is fully parenthesis or not using stack.
8. Tree traversing techniques.

ACTIVITIES:

- o *Design and Implement a School Management System.*
- o *Design and Implement a Social Networking Site.*
- o *Implement a project to find out the most common words in the articles.*
- o *Design and Implement a Library Book Management System.*
- o *Design and Implement a CricBuzz Application.*

9. BST using an array and linked list.
10. Graph traversal techniques.

TEXT BOOK:

1. ReemaThareja, “Data Structures Using C”, 2nd edition, Oxford University Press, 2014.

REFERENCE BOOKS :

1. Richard F. Gilberg and Bhrouz A. Forouzan, “Data Structures: A Pseudocode Approach with C”, 2nd edition, Cengage Learning, 2004.
2. Jean Paul Tremblay and Paul G. Sorenson, “An Introduction to Data Structures with Applications”, 2nd edition, Tata Mc-Graw Hill, 2004.
3. Mark Allen Weiss, “Data Structures and Algorithm Analysis in C”, 2nd edition, Pearson Education, 2006..

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Course Description and Objectives :

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes :

Upon successful completion of this course, students should be able to:

CO1: Identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy,Blacksmithy and House wiring.

CO2: Understand Fabrication of wooden joints.

CO3: Understand joining of metals.

CO4: Make metal joints and sheet metal work.

CO5: Make metal tools like knives, needles, swords, arrows etc.

SKILLS:

- ✓ *Prepare wooden and metal furniture.*
- ✓ *Electrical wiring and power supply in residences.*
- ✓ *Make funnels, trays, locker, steel almirahs etc.*
- ✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*
- ✓ *CNC machines and various machining operations and processes.*

ACTIVITIES:

- o *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- o *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- o *Trials on electrical circuit connections.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin smithy and Black smithy.
4. House wiring.
5. Foundry and welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS:

1. S.K. Hazra Choudhury, "Elements of workshop Technology", 11th edition, Media Promoters, 1997.

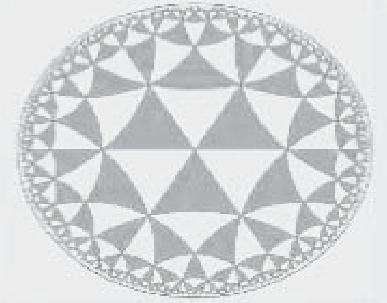
16HS201 COMPLEX VARIABLES AND TRANSFORMATIONS



Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

In this course students will learn complex numbers, complex functions, analytic functions, complex integration and theory of residues. Laplace transformations and Z-transformations will be dealt with including applications. The objective of this course is to offer theory of complex functions, Laplace transformations, their inverses, Z-transformations and their applications.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Apply the concept of Laplace transforms and solve differential equations.

CO2: Apply the concept of Z- transforms and evaluate the difference equations.

CO3: Understanding the concept of Analytical function and to construct the harmonic conjugate of the function.

CO4: Understand the concept of elementary function and evaluate complex integral using Cauchy's theorem and formula.

CO5: Evaluating Integral by using the concept of Residues.

CO6: Applications of Residue Theorem.

UNIT - 1 **L-9,T-3**

LAPLACE TRANSFORMATIONS: Introduction, Properties, Standard transformations, Change of scale property, Shifting properties, Laplace transformation of derivative and integral, Multiplication and division by *t*, Initial and final value theorems, Convolution theorem, Inverse Laplace transformations, Properties, Partial fractions method, Convolution, Applications, Solving ordinary differential equations using Laplace transformations.

UNIT - 2 **L-9,T-3**

Z – TRANSFORMATIONS: Introduction, Definition, Standard Z-transformations, Linear property, Damping rule, Shifting rules, Multiplication and division by *n*, Initial and final value theorems, Inverse Z-transformations, Convolution theorem, Applications to difference equations.

UNIT - 3 **L-9,T-3**

ANALYTICAL FUNCTIONS: Complex numbers, Properties including roots of a complex number, (Brief discussion), Functions of complex variables, Limit and continuity, Differentiability, Analytic functions, Cauchy-Riemann equations (without proof), Cauchy-Riemann equations in polar form (without proof), Orthogonal curve, Harmonic functions, Conjugate harmonic functions, Construction of conjugate harmonic function, Milne Thomson method.

UNIT - 4 **L-9,T-3**

ELEMENTARY FUNCTIONS AND COMPLEX INTEGRATION: Complex trigonometric functions, Hyperbolic functions, Relation between trigonometric and hyperbolic functions, Separation of real and imaginary parts of trigonometric and hyperbolic functions, Logarithmic function, Inverse functions, Line integral, Properties of contour integrals, Cauchy's integral theorem, Cauchy integral formula and its generalization, Evaluation of integrals.

UNIT - 5 **L-9,T-3**

RESIDUES: Convergence of series of complex terms, Power series, Region and radius of convergence, Taylor series, Maclaurin series and laurent series, Singularity, Classification of singularities, Pole at infinity, Zeros of analytic function, Residue of a pole, Residue at infinity, Residue theorem, Method of finding residues, Residue integrals.

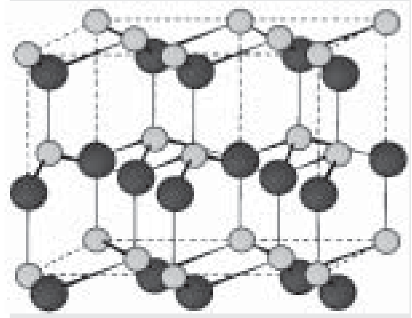
16EC201 MATERIALS FOR ELECTRONICS ENGINEERING



Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course deals with the different materials used for electnoic device fabrication and their properties. The objective of the course is to introduce the students to structure and properties of materials, that are required for the design and construction of solid state devices. In addition, it provides introduction to the interrelations of the structure, properties and processing of materials.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Classification of materials and Understand the crystal structure.

CO2: Understand the fundamentals of the physical, mechanical, thermal and electronic properties of materials.

CO3: Apply all the electronic Properties of the material into the core electronic devices.

CO4: Applications of materials in the development of various electronic devices.

CO5: Apply electric and dielectric properties in the area of electromagnetic waves.

CO6: Understand the fundamentals of optical properties and appl ications of nano materials.

UNIT - 1 **L-9**

BONDING AND CRYSTALLOGRAPHY: Bonding forces and energies, Primary inter-atomic bonds, Secondary bonding or van der waals bonding, Fundamental concepts of crystallography, Unit cells, Metallic crystal structures, Polymorphism and allotropy, Crystal systems, Packing densities, Point coordinates, Crystallographic directions, Crystallographic planes, Linear and planar densities, Close-packed crystal structures.

UNIT - 2 **L-9**

SOLID STATE DIFFUSION AND MECHANICAL PROPERTIES: Introduction to diffusion, Diffusion mechanisms, Steady-state diffusion, Nonsteady-state diffusion, Factors that influence diffusion, Diffusion in semiconducting materials, Materials of importance - Aluminum for integrated circuit interconnects introduction to mechanical properties; Concepts of stress and strain, Stress-strain behavior of materials.

UNIT - 3 **L-9**

ELECTRICAL AND DIELECTRIC PROPERTIES: Introduction, Ohm's Law, Electrical conductivity, Electronic and ionic conduction, Energy band structures in solids, Conduction in terms of band and atomic bonding models, Electron mobility, Electrical resistivity of metals, Electrical characteristics of commercial alloys, Intrinsic semiconduction, Extrinsic semiconduction, The temperature dependence of carrier concentration, Factors that affect carrier mobility, The hall effect, Semiconductor devices, Conduction in Ionic materials, Electrical properties of polymers capacitance, Field vectors and types of polarization, Frequency dependence of the dielectric constant, Dielectric strength, Dielectric materials, Ferroelectricity, Piezoelectricity.

UNIT - 4 **L-9**

MAGNETIC PROPERTIES: Introduction to magnetic properties, Basic concepts, Diamagnetism and paramagnetism, Ferromagnetism, Anti-ferromagnetism and ferrimagnetism, The influence of temperature on magnetic behavior, Domains and hysteresis, Magnetic anisotropy, Soft magnetic materials, Materials of importance - An Iron-silicon alloy that is used in transformer cores, Hard magnetic materials, Magnetic storage, Superconductivity.

UNIT - 5 **L-9**

OPTICAL PROPERTIES: Introduction to optical properties, Electromagnetic radiation, Light interactions with solids, Atomic and electronic interactions, Optical properties of metals, Optical properties of nonmetals, Refraction, Reflection, Absorption, Transmission, Color, Opacity and translucency in iInsulators, Luminescence, Materials of importance - Light-emitting diodes, Photoconductivity, Lasers, Optical fibers in communications, Nano materials.

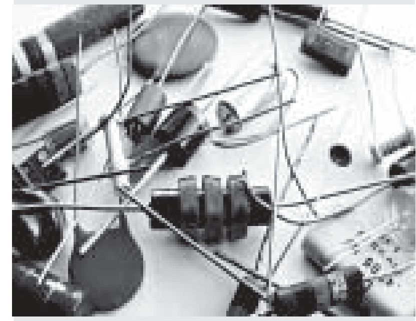
TEXT BOOK:

1. W.D. Callister, "Materials Science and Engineering: an Introduction", 8^{th} edition, Wiley, 2010.

REFERENCE BOOKS:

1. W. F. Smith, "Foundations of Materials Science and Engineering", 5^{th} edition, McGraw Hill, 2015.
2. V. Raghavan, "Materials Science and Engineering", 5^{th} edition, PHI, 2012.

16EC202 ELECTRONIC DEVICES AND CIRCUITS



Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course is aimed at offering fundamental concepts of semiconductor devices and circuits. The objective of the course is to introduce the student to Junction Diode, Transistor, FET and other basic devices that are designed with semiconductor materials. As a first-level course in electronics, it forms the basis for the understanding of advanced electronic courses that are offered in subsequent semesters.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the semiconductor devices with the help of V-I characteristics.

CO2: Investigate the characteristics of Amplifier Circuits employing BJT and FET devices.

CO3: Design half wave and full wave rectifiers with and without filters.

CO4: Analyze the working of BJTs and FETs under various biasing conditions.

CO5: Compare CB, CE, CC configurations of BJT and CG,CD,CS configurations of FET.

CO6: Apply the concepts of basic electronic devices to design various circuits.(Lab &MP)

SKILLS :

- ✓ *Identify a Semiconductor Diode for a specific application and power handling capacity.*
- ✓ *Identify the transistor type for a given application (switch/amplifier).*
- ✓ *Recognize the required specifications of the transistor.*
- ✓ *Identify the amplification factor of the given transistor.*
- ✓ *Test the working condition of the transistor.*

ACTIVITIES:

- *Choose a diode for a Cell-phone/ Laptop/ Tablet adapter/ for various ratings.*
- *Design voltage regulator using zener diode.*
- *Design three types of biasing circuits and determine the stability factors in each case.*
- *Transistor as an amplifier for the given specifications.*
- *Design a wideband amplifier with FET.*

UNIT - 1 **L-9**

P-N JUNCTION DIODE: Formation of P-N junction, Energy band diagram of open circuited P-N junction, Operation of forward and reverse biased P-N junction diode, Volt-Ampere characteristics, Temperature dependence on V–I characteristic, Diode resistances and capacitances, Diode equation, Special diodes-Breakdown Mechanisms in a Semi Conductor Diode, Zener diode, V-I characteristics and zener diode as voltage regulator, Tunnel diode, Varactor diode, SCR, LED and photodiode.

UNIT - 2 **L-9**

DIODE APPLICATIONS: The P-N junction diode as a rectifier - Half wave rectifier, Full wave rectifier and bridge rectifier, Harmonic components in a rectifier circuit; Filters - Analysis and comparison of various filters, Inductor filter, Capacitor filter, L- section filter and ð-section filter in terms of ripple factor, A simple regulated power supply circuit; Clipping and clamping circuits - Elementary diode clippers and clamping circuits.

UNIT - 3 **L-9**

TRANSISTOR: Bipolar junction transistor (BJT) - Construction, Principle of operation of PNP and NPN transistors, Characteristics of transistor in common emitter, Common base and common collector configurations; Field effect transistor (FET)-Construction, Symbol and principle of operation of JFET, Pinch-off voltage, JFET characteristics, Comparison of BJT and FET; MOSFET - Construction, working and V-I characteristics of enhancement and depletion MOSFET.

UNIT - 4 **L-8**

BJT and FET BIASING: Transistor biasing and thermal stabilization, DC and AC load lines, Operating point, types of BJT biasing, Thermal runaway and thermal stability, Stabilization against variations in V_{BE}, â and I_{co} , Stability factors, Bias compensation using diodes and transistors **,** Biasing of FET.

UNIT - 5 **L-10**

SINGLE STAGE BJT AND FET AMPLIFIERS: Transistor as an amplifier, Two port network representation and h parameter model of a transistor, Exact and approximate analysis of CE small signal low frequency transistor model, Expressions for voltage gain, Current gain, Input impedance and output impedance using h-parameters, Comparison of transistor amplifier configurations in terms of A_i, R_i, A_v, R_o; FET amplifiers - FET small signal model, Analysis of FET amplifiers (CS, CD and CG configurations) at low frequencies, Expressions for voltage gain, Input impedance and output impedance.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

1. Understand the V-I characteristics of P-N junction diode and hence determine the diode forward, reverse currents, static and dynamic resistances.
2. Analyze the V-I characteristics of zener diode under reverse biased condition and observe the application as voltage regulator.
3. Calculate the efficiency and ripple factor of all rectifiers and analyze their performance with and without filter.
4. Understand the input and o/p characteristics of all BJT configurations in active region and determine its current amplification factors.
5. Understand the drain and transfer characteristics of FET and determine its amplification factor.
6. Understand the diode application as a clipper.

LIST OF EXPERIMENTS Total hours-30

1. P-N Junction diode characteristics.
2. Zener diode characteristics and Zener diode as Voltage regulator.
3. To determine the ripple factor and efficiency of Half wave Rectifier with and without filter.
4. To determine the ripple factor and efficiency of Center tapped Full wave Rectifier with and without filter.
5. To determine the ripple factor and efficiency of Bridge Rectifier with and without filter.
6. Construction of various diode clipping circuits.
7. Transistor CB characteristics (Input and Output).
8. Transistor CE characteristics (Input and Output).
9. Transistor CC characteristics (Input and Output).
10. FET characteristics.

16EC203 NETWORK THEORY

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course enables the students to learn advanced concepts in circuit analysis which are applicable in solving electronic circuits. The aim of this course to introduce the student to the derivation of transient responses of RC, RL and RLC circuits, steady state response of circuits to sinusoidal excitation in time domain, application of phasors to circuit analysis and introduction to graph theory to analyze circuits.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Apply KVL, KCL, source transformation, star-delta transformation, voltage and current division rules on Electrical networks.

CO2: Investigate series and parallel circuits with AC excitation and resonant circuits.

CO3: Analyze the transient response of RL, RC and RLC circuits for DC and AC excitations.

CO4: Understand the concepts of various network theorems and applying to the linear circuits.

CO5: Analyze the two port network parameters, Interconnect, Represent and analyze two port networks.

CO6: Determine branch currents and voltages using Tieset and cutest.

SKILLS:

- ✓ *Determine currents and voltages of all elements of any electrical system network.*
- ✓ *Analysis of simple house wiring diagram.*
- ✓ *Analysis of simple circuits by using theorems.*
- ✓ *Calculate power, current and voltage in any AC and DC circuits.*
- ✓ *Design of suitable Battery for small applications.*
- ✓ *Application of two- port network parameters to analyze transmission lines and filters.*

UNIT - 1 **L-9, T-3**

INTRODUCTION OF CIRCUIT ELEMENTS: Ideal, Practical and dependent sources and their V-I characteristics, Source transformation, Voltage and current division, V-I characteristics of passive elements and their series / parallel combination, Energy stored in Inductors and capacitors, Kirchhoff's voltage law and Kirchhoff's current law, Mesh and nodal analysis, Star and delta conversions.

UNIT - 2 **L-9, T-3**

SINUSOIDAL STEADY STATE ANALYSIS AND RESONANCE: Instantaneous, Peak, Average ,RMS values, Crest factor and form factor of periodic waveforms, Notation and concept of phasors, Response of R, L, C series and parallel combination circuits to sinusoidal excitation, Calculation of active and reactive powers, Resonance - Series and parallel resonance circuits, concept of bandwidth and Q factor.

UNIT - 3 **L-9, T-3**

NETWORK TRANSIENT ANALYSIS: Transient response of R-L, R-C, R-L-C circuits (Series and parallel combinations) for D.C and sinusoidal excitations, Initial conditions, Time domain and laplace transform methods of solutions.

UNIT - 4 **L-9, T-3**

NETWORK THEOREMS: Superposition theorem, Thevenin's and Norton's theorems, Reciprocity, Compensation, Maximum power transfer theorems, Millman theorem, Application of theorems to DC and AC circuits.

UNIT - 5 **L-9, T-3**

TWO PORT NETWORK PARAMETERS: Introduction to Two port networks, Open circuit impedance and short circuit admittance (Y), Transmission and inverse transmission, Hybrid and inverse hybrid parameters, Relation between parameter sets, Interconnection of two port networks, Graph theory - Definitions, Graph, Tree, Basic tie-set and basic cut set matrices for planar networks, Loop and nodal methods of analysis of networks with independent and dependent voltage and current sources, Duality and dual networks.

TEXT BOOKS:

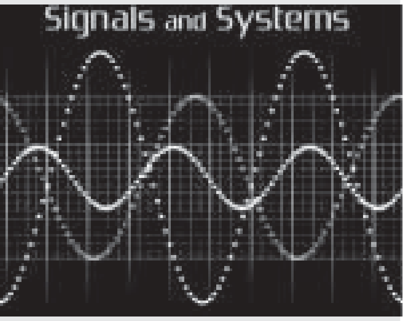
1. William H. Hayt, Jack E. Kemmerly and Steven M. Durbin, "Engineering Circuit Analysis", 7th edition,Tata McGraw-Hill, 2007.
2. A Sudhakar and Shyammohan S Palli, "Circuits & Networks: Analysis and Synthesis", 5th edition Tata McGraw-Hill, 2007.

REFERENCE BOOKS:

1. Syed A. Nasar, "Electric Circuits", Tata McGraw-Hill, Schaum's Series, 1988.
2. Franklin F.Kuo, "Network Analysis and Synthesis", 2nd Edition, John Wiley and Sons, 2003.
3. Mahmood Nahvi and Joseph Edminister, "Electric Circuits", 4th edition, Schaum's Outline series, Tata McGraw-Hill, 2004.

ACTIVITIES:

- *Measure the Resistance of any resistive Electrical Appliance like water heater, incandescent bulb.*
- *Design of small size house wiring system.*
- *Design circuits with suitable load to get maximum power from source.*
- *Determination of RLC values for given resonant frequency connected series/parallel combination.*
- *Design resonant circuit for oscillator and filter applications.*
- *Design of Power bank for mobile charger circuit.*
- *Determination of Voltage and current characteristics of given Black box.*
- *Verify duality for a given Network.*



16EC204 SIGNALS AND SYSTEMS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course deals with varoius signals, systems and their analysis along with their applications. The objective of this course is to enable the student to understand the continous time signals, systems and thier properties, analysis of signals using transforms, to analize and predict the behaviour of linear systems.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand basic signals andanalyze the representation using Fourier series.

CO2: Analyze continuous time signals by using appropriate mathematical tools like Fourier Transform and Laplace Transform.

CO3: Analyze the response of a LTI System to any arbitrary inputs and learn about signal transmission through linear systems.

CO4: Apply the concepts of convolution and correlation for continuous time signals.

CO5: Understand the fundamentals of sampling including the implications of sampling theorem.

CO6: Work in a team to analyze and demonstrate the applications of signals and systems.

SKILLS:

- ✓ *Design and test a stable system.*
- ✓ *Choose the various transforms and their applications in the analysis of signals and systems.*
- ✓ *Apply transformation to real-world problems involving bio-signals such as EEG, ECG and EMG.*
- ✓ *Analyze the abnormalities present in the physiological systems.*
- ✓ *Choose the desired sampling frequency for a given application.*

UNIT - 1 **L-10**

FOURIER SERIES REPRESENTATION OF PERIODIC SIGNALS: Introduction to signals and systems, Basic signals, Classification, Operations, Vectors vs Signals, Orthogonal functions, Representation of signals using orthogonal functions, Mean square error, Representation of fourier series, Continuous time periodic signals, Properties of fourier series, Dirichlet's conditions, Trigonometric fourier series and exponential fourier series, Complex fourier spectrum.

UNIT - 2 **L-10**

FOURIER TRANSFORMS AND LAPLACE TRANSFORMS: Fourier transforms - Deriving fourier transform from fourier series, Fourier transform of arbitrary signal, Fourier transform of standard signals, Fourier transform of periodic signals, Properties of fourier transforms, Fourier transforms involving impulse function and signum function, Introduction to hilbert transform; Laplace transforms- Review of laplace transforms, Partial fraction expansion, Inverse laplace transform, Concept of region of convergence (ROC) for laplace transforms, Constraints on ROC for various classes of signals, Properties of L.T's, Relation between L.T and F.T of a signal, Laplace transform of certain signals using waveform synthesis.

UNIT - 3 **L-9**

LTI SYSTEMS AND ANALYSIS: Classification of systems, Linear time invariant (LTI) system, Impulse response, Step response, Response of a LTI system to arbitrary inputs, Transfer function of LTI system, Filter characteristics of linear systems, Distortion less transmission, Signal bandwidth, System bandwidth, Ideal LPF, HPF, BPF, BRF characteristics, Causality and paley-wiener criterion for physical realization, Relationship between bandwidth and rise time.

UNIT - 4 **L-9**

CONVOLUTION AND CORRELATION OF SIGNALS: Concept of convolution in time domain and frequency domain, Graphical representation of convolution, Convolution property of fourier transforms, Cross correlation and auto correlation of functions, Properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between auto correlation function and power spectral density, Relation between convolution and correlation, Detection of periodic signals in the presence of noise by correlation, Extraction of signal from noise by filtering.

UNIT - 5 **L-7**

SAMPLING: Sampling theorem, Graphical and analytical proof for band limited signals, Impulse sampling, Natural and flat top sampling, Reconstruction of signal from its samples, Effect of under sampling - Aliasing; Introduction to band pass sampling.

ACTIVITIES:

- o *Recording of various signals like Speech, Noise, Audio signals and analysis using Matlab and spectrum analyzer*

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- analyze signals in order to calculate their frequency spectra
- analyze the different types of systems and their properties.

LIST OF EXPERIMENTS Total hours-30

1. Generation and plotting of trigonometric and exponential functions.
2. Standard signal teneration (Impulse, Step, Ramp & Sinc).
3. Operations on signals (Folding, Shifting and Scaling).
4. Periodic and Non-periodic signal generation.
5. Analysis of periodic signals.
6. Analysis of Non-periodic signals.
7. Analysis of transfer function.
8. System analysis by using poles and zeros.
9. Sampling theorem verification.
10. System response.
11. Convolution of continuous time signals.
12. Correlation of continuous time signals.
13. Generation of random signals.

TEXT BOOKS:

1. A.V. Oppenheim, A.S. Willsky and S.H. Nawab, "Signals and Systems", 2nd edition, Prentice Hall of India, 1997.

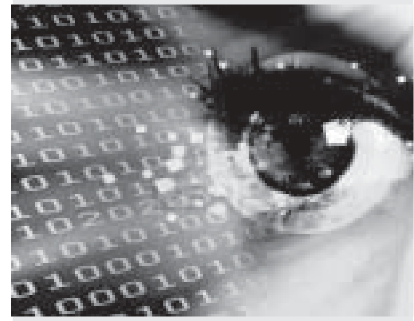
3. John Alan Stuller, "An Introduction to Signals and Systems" Thomson, Indian edition, 2007.
4. H P Hsu, "Signals and Systems", 2nd edition, Tata McGraw-Hill Schaum's Outlines, 1995.
5. Tarun Kumar Rawat, "Signals and Systems", 1st edition, Oxford, 2010.

16EC205 DIGITAL ELECTRONICS



Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

Digital Electronics deals with fundamentals of number systems, Boolean expressions that are used to realize combinational and sequential circuits. Its objective is to minimize the logical expressions using Boolean postulates, to design various combinational and sequential circuits and to provide with sufficient number of applications to demonstrate the techniques and mathematics used.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand number systems and its conversion; simplify Boolean expressions by different methods and implementation using logic gates.

CO2: Apply the Boolean algebra knowledge of mathematics to analyze combinational and sequential digital electronic circuits using K-map and QM technique.

CO3: Design combinational and sequential circuits for the given specifications/constraints.

CO4: Synthesize the state diagram, state table, state equation for Finite state machine.

CO5: Compare the characteristics of logic families for implementing combinational & sequential circuits.

CO6: Demonstrate applications of digital circuits (lab + minor Project)

SKILLS:

✓ *Perform conversions between numbers of different radices.*

✓ *Identify the different gates and their properties.*

✓ *Minimize Boolean expression.*

✓ *Design combinational circuits for a given application.*

✓ *Develop sequential circuits for a given application.*

✓ *Verify the functionality of digital circuits.*

✓ *Design memories for a given specification.*

ACTIVITIES:

- *Choose a Gate for digital circuit.*
- *Design digital circuits using universal gates.*
- *Implement Combinational circuits like adder encoder, decoder.*
- *Design Sequential circuits like flip flops, counters.*
- *Develop Finite state machines like Mealy and Moore machines.*

UNIT - 1 **L-9**

NUMBER SYSTEMS AND BOOLEAN ALGEBRA: Review of number systems- Conversions, Arithmetic operations, Binary codes,Parity code, Hamming code; Fundamental concepts of boolean algebra- Basic theorems and properties, Canonical and standard forms; Logic gates, Algebraic simplification and realization with basic gates and universal gates.

UNIT - 2 **L-9**

MINIMIZATION OF SWITCHING FUNCTIONS: Minimization of switching functions - K-map method, Prime implicants, Don't care combinations, Minimal SOP and POS forms, Tabular method, Prime implicant chart.

UNIT - 3 **L-9**

COMBINATIONAL LOGIC DESIGN: Design using conventional logic gates - Decoder, Encoder, Multiplexer, Demultiplexer, Parity bit generator, code converters (Designing with IC's); Basic PLDs - PAL, PLA, ROM, PROM.

UNIT - 4 **L-10**

SEQUENTIAL LOGIC DESIGN: Classification of sequential circuits, Latches, Flip-Flops - SR, JK, D, T, triggering and Excitation tables; Design of sequential circuits - Shift registers, Counters, FSM, Sequence detectors.

UNIT - 5 **L-8**

LOGIC FAMILIES: Introduction to logic families, CMOS logic, Bipolar logic, Transistor logic, TTL families, CMOS/TTL Interfacing.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to design different:

- digital circuits.
- combinational circuits.
- sequential circuits.
- FSM for completely specified and incompletely specified sequential machines.
- memories.

LIST OF EXPERIMENTS Total hours-30

Design and Implementation of

1 Basic Logic Gates.
2 Adders.
3 Subtractor.
4 Decoder.
5 Encoder.
6 Multiplexer.
7 De-Multiplexer.
8 Parity Circuits.
9 Comparator.
10 Flip Flops.
11 Registers.

12 Shift Registers.

13 Counters.

14 Finite State Machines (FSM).

TEXT BOOKS :

1. Morris Mano, “Digital Logic and Computer Design”, 1st edition, Pearson, 2013.

2. John F walkerly, “Digital Design Principles and Practices”, 3rd edition, PHI/Pearson Education, 2015.

REFERENCE BOOKS :

1. John M. Yarbrough, “Digital Logic Applications and Design”, 1st edition, Thomson Publications, 2010.

2. Fletcher, “An Engineering Approach To Digital Design”, 1st edition, Prentice Hall of India, 2009.

3. R.P.Jain, “Modern Digital Electronics”, 3rd edition, Tata McGraw–Hill, 2010.

16EC206 PROBABILITY THEORY AND STOCHASTIC PROCESSES

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course deals with the quantifying of randomly varying parameters that are prevalent in real life situations. The objective of the course is to enable the student to learn probability theory and random variables, gain knowledge of multiple random variables, conditional expectation, independence of random variables, analysis of random processes and applications in the communication systems.

Course outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understands the basics of probability, sample space, events, statistics and apply them to real life problems.

CO2: Distinguish probability density and distribution functions for single and multiple random variables.

CO3: Calculate the statistical parameters for random variables.

CO4: Analyze the concept of random process along with its parameters.

CO5: Estimate the correlation, covariance and PSD for random processes.

CO6: Analyze the response of linear systems to random inputs.

SKILLS:

- ✓ *Formulate, analyze and validate models applicable to practical problems.*
- ✓ *Use the probability, moment generating functions and characteristic functions.*
- ✓ *Know the multivariate normal law and how to operate jointly with Gaussian random variables.*
- ✓ *Identify the different modes of convergence of sequences of random variables as well as the precise meaning of the laws of large numbers and the central limit theorem.*
- ✓ *Identify probability models based on the theoretical results presented in the course.*

UNIT - 1 **L-9,T-3**

PROBABILITY THEORY AND PROBABILITY STATISTICS: Mean, Median, Mode and Standard deviation, Correlation and regression analysis, Introduction to probability, Joint probability, Conditional probability, Total probability, Bayes' theorem, Bernoulli trails and independent events.

UNIT - 2 **L-9,T-3**

THE RANDOM VARIABLE AND OPERATIONS ON RANDOM VARIABLES: Definition of a random variable, Conditions for a function to be a random variable, Classifications of random variables, Density and distribution functions, Properties of random variables, Binomial, Poisson, Uniform, Gaussian, Exponential, Rayleigh, Conditional distribution, Methods of defining conditioning event, Conditional density and distribution functions, Properties, Operations on Random variables - Introduction, Expected value of a random variable, Function of a random variable, Moments about the origin, Central moments, Variance, Chebychev's inequality, Characteristic function, Moment generating function, Monotonic transformations for a continuous and discrete random variables.

UNIT - 3 **L-8,T-3**

MULTIPLE RANDOM VARIABLES : Vector random variables, Joint distribution function and its properties, Marginal distribution functions, Conditional distribution and density, Statistical independence, Sum of two Random variables, Central limit theorem.

UNIT - 4 **L-8,T-3**

RANDOM PROCESSES: Temporal characteristics, Random process concept, Classification of processes, Distribution and density functions, Concept of stationary and statistical independence, Wide sense stationary, Time averages and ergodicity, Autocorrelation function and its properties, Cross correlation function and its properties, Gaussian random processes, Poisson random process, Relation between power spectral density and autocorrelation.

UNIT - 5 **L-11,T-3**

LINEAR SYSTEMS WITH RANDOM INPUTS: Random signal response of linear systems, System response – Convolution, Mean and Mean square value, Autocorrelation function; Cross-correlation functions of input and output, Spectral characteristics of system response, Power density spectrum of response, Cross-power density spectrums of input and output, Modeling of noise sources - Resistive (thermal) noise source, Arbitrary noise sources, Effective noise temperature, Average noise figures, Average noise figure of cascaded networks.

TEXT BOOKS:

1. Peyton Z. Peebles, "Probability, Random Variables and Random Signal Principles", 4th edition, Tata McGraw-Hill, 2001.
2. Athanasios Papoulis and S. Unnikrishnan Pillai, "Probability, Random Variables and Stochastic Processes", 4th edition, PHI, 2002.

REFERENCE BOOKS:

1. R.P. Singh and S.D. Sapre, "Communication Systems Analog and Digital", 2nd edition, Tata McGraw Hill, 2009.
2. Henry Stark and John W. Woods, "Probability and Random Processes with Application to Signal Processing", 3rd edition, Pearson Education, 2009.
3. S.P. Eugene Xavier, "Statistical Theory of Communication",1st edition, New Age Publications, 2003.
4. George R. Cooper and Clave D. MC Gillem, "Probability Methods of Signal and System analysis" 3rd edition, Oxford, 1999.
5. Y.Mallikarjuna Reddy, "Probability Theory and Stochastic Process" 4th edition, Universities press, 2015.

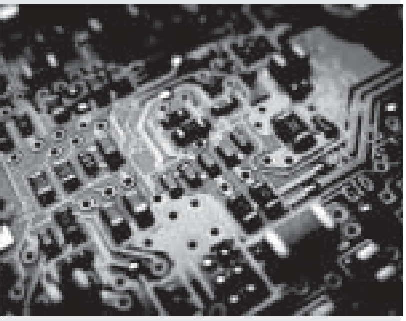
ACTIVITIES:

- *Verify that sum of two random variables is Gaussian.*
- *Write MATLAB code for finding total probability.*
- *Find Expectation, variance and standard deviation with the help of MATLAB for*

  (a) any random data.

  (b) any continuous random variables.

  (c) any discrete random variables.
- *Find Auto Correlation Function and Cross Correlation function for any two random variables.*
- *Plot density and distribution function for any random data.*



16EC207 ELECTRONIC CIRCUIT ANALYSIS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

The course provides an overview of the principles, operations and applications of the analog building blocks like diodes, BJT, FET etc for performing various functions. The objective of the course is to apply this knowledge to do the analysis and design of basic electronic circuits.

Course Outcome:

Upon successful completion of this course, students should be able to:

CO1: Analyze and demonstrate negative feedback amplifier circuits and positive feedback oscillators.

CO2: Understand the working of tuned amplifiers.

CO3: Understand and analyze the different multistage amplifiers.

CO4: Investigate the frequency response of amplifiers.

CO5: Analyze the efficiency of power amplifiers like class-A, B, C, AB.

CO6: Design and verify some common electronic circuits. (Lab and MP)

SKILLS:

- ✓ *Design an amplifier for Public address system.*
- ✓ *Construct an oscillator at audio and Radio frequency applications.*
- ✓ *Design and construct a tuned amplifier in radio receiver.*

UNIT - 1 **L-12**

FEEDBACK AMPLIFIERS AND OSCILLATORS: Concept and types of feedback, Effects of negative feedback, Different topologies with their parameter analysis, Oscillators - Barkhausen's crieterion for oscillations, Frequency of oscillations for Hartley, Colpitts, RC phase shift, Wein bridge and crystal oscillators.

UNIT - 2 **L-10**

MULTI STAGE AMPLIFIERS: Methods of inter stage coupling, N-stage cascaded amplifier, Miller's theorem, Frequency effects, Multistage amplifier analysis - Cascade, Cascode, CE-CC amplifiers, Two stage RC coupled JFET amplifier (CS), High input impedance transistor circuits.

UNIT - 3 **L-8**

FREQUENCY RESPONSE OF AN AMPLIFIER: Transistor at high frequencies, Hybrid-Pi common emitter transistor model, Determination of Hybrid- Pi conductances and capacitances in terms of low frequency h-parameters, Frequency response of BJT amplifiers and FET amplifiers.

UNIT - 4 **L-8**

POWER AMPLIFIERS: Classification of power amplifiers, Operation and efficiency of class A, Class B, Class C and class D amplifiers.

UNIT - 5 **L-7**

TUNED AMPLIFIERS: Concept and types of tuned amplifiers, Single tuned capacitive coupled amplifier, Double tuned amplifier, Stagger tuning, Application of tuned amplifiers, Stability considerations.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the knowledge to the analysis and design of basic circuits.
- identify, formulate and solve hardware engineering problems.
- analyze a circuit and compare its theoretical performance to actual performance.

LIST OF EXPERIMENTS Total hours-30

1. Verify negative feedback effects by using voltage shunt feedback topologies.
2. Design Colpitts Oscillator.
3. Verify the cascading Effects on amplifier.
4. Find the frequency response of CE and CS amplifiers.
5. Find the power efficiency of Class-A, B, AB and C amplifiers.
6. Design Single Tuned Amplifier.

TEXT BOOKS:

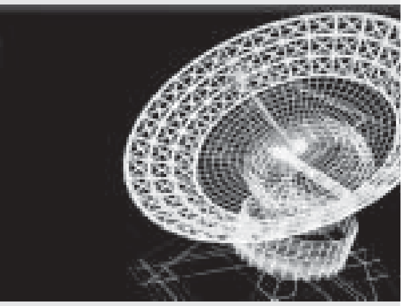
1. J. Millman and C.C. Halkias, "Integrated Electronics", 1st edition, Tata McGraw-Hill, 2009.
2. Donald A. Neaman, "Electronic Circuit Analysis and Design", 3rd edition, Tata McGraw-Hill, 2009.

REFERENCE BOOKS:

1. Robert L. Boylestad and Louis Nashelsky, "Electronic Devices and Circuits Theory", 9th edition, Pearson/Prentice Hall, 2006.
2. Sedra A.S. and K.C. Smith, "Micro Electronic Circuits", 5th edition, Oxford University Press, 2006.
3. M.H. Rashid, "Micro Electronic Circuits: Analysis and Design", 1st edition, Thomson PWS Publ, 1999.

ACTIVITIES:

- *Bandwidth improvement using negative feedback.*
- *Designing 1 Hz frequency oscillator for digital clock.*
- *calculating overall gain in multi stage amplifier.*
- *Design Music Operated Dancing LEDs.*
- *To determine overall bandwidth of multistage amplifiers.*
- *Design Microphone amplifier.*
- *To observe the crossover distortion and its elimination.*
- *Designing Water Tank Overflow alarm circuit using Darlington pair.*
- *Designing Rain Detector and Alarm Circuit using Darlington pair.*
- *Designing 25W audio power amplifier.*



16EC208 ANALOG COMMUNICATIONS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course deals with the fundamentals of analog communications - amplitude modulation and demodulation, frequency modulation and demodulation, phase modulation and demodulation. The objective of this course is to enable the students to understand the basic mathematical concepts of communications in both time domain and frequency domain.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the concepts of modulation, demodulation and learn the basic amplitude modulation techniques.

CO2: Analysis of DSB-SC, SSB-SC and VSB-SC modulation and demodulation techniques.

CO3: Analyze the performance of different types of Angle Modulation Techniques for a given set of parameters.

CO4: Identify the transmitter and receiver types required for a given application.

CO5: Understand the calculation of SNR in different modulation techniques.

CO6: Experiment on different types of Analog communication subsystems using hardware and simulations.

SKILLS:

- ✓ *Identify the need for modulation and choice of modulation.*
- ✓ *Choose the choice of frequency bands of AM/FM/T.V/Mobile/Satellite.*
- ✓ *Select base band signal, carrier and modulated signals in a given application.*
- ✓ *Determine the frequency deviation/guard band for FM receiver.*
- ✓ *Identify the Tx/Rx type required for a given application.*
- ✓ *Select the detector/discriminator required in FM.*
- ✓ *Identify inherent or interference noise and classify.*

UNIT - 1 **L-9**

INTRODUCTION TO COMMUNICATION SYSTEM: Introduction to communication system, Need for modulation, Frequency division multiplexing, Amplitude modulation- Definition, Time domain and frequency domain description, Single tone modulation, Power relations in AM waves; Generation of AM waves - Square law modulator, Switching modulator; Detection of AM waves- Square law detector, Envelope detector.

UNIT - 2 **L-10**

DSB-SC, SSB-SC AND VSB-SC MODULATION AND DETECTION: DSBSC modulation, Time domain and frequency domain description, Generation of DSBSC waves - Balanced modulators, Ring modulator; Detection of DSBSC waves - Coherent detection, COSTAS loop; SSB modulation,Time domain description, Frequency domain description, Generation of SSB Waves -Frequency discrimination method, Phase discrimination method; Demodulation of SSB Waves, VSB modulation, Frequency description, Time domain description, Generation of VSB modulated wave, Envelope detection of a VSB wave plus carrier, Comparison of AM techniques, Applications of different AM systems.

UNIT - 3 **L-10**

ANGLE MODULATION SYSTEMS: Angle modulation - Phase and frequency modulation and their relationships, Phase and frequency deviation, Spectrum envelope of FM signal, Narrow band FM and wide band FM, Transmission bandwidth; Generations of FM waves, Indirect and direct methods, Detection of FM waves - Balanced frequency discriminator, Foster seely discriminator, PLL demodulator.

UNIT - 4 **L-8**

RADIO TRANSMITTERS AND RECEIVERS: Radio transmitters - Classification of radio transmitters, AM transmitters and FM transmitters, Variable reactance type and phase modulated type; Radio receivers - Radio receiver types, TRF receiver, Super heterodyne receivers, FM receivers; Comparison of AM and FM receivers.

UNIT - 5 **L-8**

NOISE: Noise in analog communication system, Noise in DSB and SSB system, Noise in AM system, Noise in angle modulation system, Threshold effect in angle modulation system, Pre-emphasis and de-emphasis.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- identify and describe different analog modulation techniques.
- analyze AM radio transmitter and receiver.
- use AM techniques in MATLAB simulink.

LIST OF EXPERIMENTS Total hours-30

1. Amplitude Modulation and Demodulation.*
2. DSB-SC Modulation and Demodulation.*
3. SSB-SC Modulation and Demodulation.*
4. Frequency Modulation and Demodulation.
5. Pre-Emphasis and De-Emphasis.
6. Verification of Sampling Theorem.

ACTIVITIES:

- o *Choose the modulation scheme for the given Audio signal with minimum bandwidth.*
- o *Choose the modulation scheme for the given voice signal with very good quality.*
- o *Design simple AM modulator using discrete components.*
- o *Design a VCO (NE 566) to generate FM signal for a given application.*
- o *Design the scheme for demonstrating the capturing effect of FM receiver.*

7. Phase Locked Loop.
8. Design of Mixer.
9. AGC Characteristics.
10. Frequency Division Multiplexing.

** To be performed both in hardware and software (Simulink).*

TEXT BOOKS:

1. H Taub, D.L. Schilling and Goutam Saha, “Principles of Communication Systems”, 3rd edition, TMH, 2008.

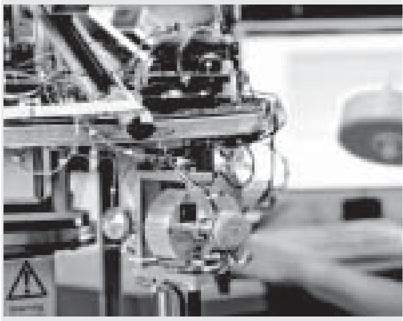
16EC209 LINEAR CONTROL SYSTEMS



Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course enables applications of mathematical modeling of physical systems (electrical, mechanical, chemical, thermal and pneumatic systems) and presents different methods of analysis and design. The aim of this course is to provide the knowledge in various time and frequency domains, tools for analysis and design of linear control systems and compensators.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Calculate the transfer function of different control systems.

CO2: Apply mathematical modeling to the physical systems/electrical systems.

CO3: Understand and analyze the characteristics of feedback systems.

CO4: Analyze the response of the open and closed loop systems with time domain and state space analysis. CO5: Design lag, lead and lead-lag compensators and PID controllers.

CO6: Investigate the stability of a given control system by using RH, Root locus, Bode plot and Nyquist plot.

SKILLS:

- ✓ *Model any physical system (Electrical, Mechanical, Electro-mechanical).*
- ✓ *Determine overall transfer function of a system using block diagram reduction technique and SFG method.*
- ✓ *Analyze first and second order systems in time domain.*
- ✓ *Determine design specifications like rise time, settling time, steady state error.*
- ✓ *Analysis of stability using R-H Criterion.*
- ✓ *Determine open loop gain variation in a stable system using root locus method.*
- ✓ *Stability analysis of any system in the frequency domain.*
- ✓ *Design of lag, lead compensators using R, L and C for any linear time invariant system.*

ACTIVITIES:

- *Realize the Lag, Lead Compensators using R,L and C for any specifications.*
- *Analyze time response of second order system using MATLAB.*
- *Analyze LTI system for stability using MATLAB.*
- *Design PID controller.*

UNIT - 1 **L-11**

INTRODUCTION TO CONTROL SYSTEMS: Introduction, Concept of control systems, Open loop versus closed loop control systems, Different examples of control systems, Classification of control systems, Mathematical Models of Physical Systems, Differential equations, Transfer function and block diagram representation of systems considering electrical systems as examples, Block diagram algebra, Signal flow graph representation, Reduction using Mason's gain formula, Translational and rotational mechanical systems.

UNIT - 2 **L-6**

FEED-BACK CHARACTERISTICS AND CONTROL COMPONENTS: Feedback, Effects of feedback, Control over system dynamics by the use of feedback, Elements of control systems, Transfer function derivation of DC Servo motor, AC servo motor, Synchro transmitter and receiver.

UNIT - 3 **L-9**

TIME RESPONSE ANALYSIS AND STABILITY: Time response analysis, Standard test signals, Time response of first order systems, Characteristic equation of feedback control systems, Transient response of second order systems, Time domain specifications, Steady state response, Steady state errors and error constants, Stability - The concept of stability, Routh stability criterion.

UNIT - 4 **L-10**

RL TECHNIQUE AND FREQUENCY RESPONSE ANALYSIS: Root locus technique - The root locus concept, Construction of root loci; Frequency response analysis - Introduction, Frequency domain specifications, Bode diagrams, Determination of frequency domain specifications from the Bode diagram, Phase margin and gain margin, Stability analysis from Bode plots, Polar plots, Nyquist plots and Nyquist stability criterion.

UNIT - 5 **L-9**

DESIGN AND MODERN CONTROL SYSTEMS: The design problem, Preliminary design considerations, Realization of basic compensators - Lead, Lag and Lead-lag; PID controllers, State space analysis of continuous systems - Concepts of state, State variables and state model, Derivation of state models from block diagrams, Solving the time invariant state equations, State transition matrix, Controllability and observability.

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, preparing resumé, group discussion and interview skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Have the ability to introspect on individual strengths and weaknesses, and emerge as a balanced personality with improved self-awareness and self-worth.

CO2: Be able to prepare a resume and gain the confidence to face an interview.

CO3: Develop interpersonal skills to participate himself/herself effectively in everyday professional and social contexts.

CO4: Be able to implement professionalism into his/her daily activities.

CO5: Adapt gender sensitive language and workplace etiquette in his/her professional life.

SKILLS:

- ✓ *Communicate and understand the difference between soft skills and hard skills.*
- ✓ *Professionalism and employability skills.*
- ✓ *Plan career by drawing their SWOT, setting the goal, learn the importance of time and stress management.*
- ✓ *Vocabulary, situational english, group discussion, reading comprehension and listening comprehension which are essential for all competitive examinations.*
- ✓ *Prepare resumé and learn how to face interview.*
- ✓ *Gender sensitive language, good manners, emotional intelligence and essential skills.*

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - The process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal); Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, Employability skills.

C) CAREER PLANNING: Job vs career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY: Johari Window for SWOT analysis, Setting a SMART goal using the provided grid, Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes and suffixes, Synonyms and antonyms, Collocations, One-word substitutes, Analogies, Idioms and phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student), Vocabulary exercises with hand-outs, Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, Dynamics of group discussion, Intervention,Summarizing and conclusion, Voice modulation, Content generation, Key word approach (KWA), Social, Political, Economic, Legal and technical approach (SPELT), View point of affected part (VAP), Language relevance, Fluency and coherence.

ACTIVITY: Viewing a recorded video of GD and Mock sessions on different types of GD topics - Controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, Understanding employer expectations, Pre-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele-interviews, Video interviews, Frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in group discussion.

B) LISTENING COMPREHENSION: Listening as a skill, Different types of listening, Active and passive listening, Top-down approach, Bottom-up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, Cultural sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression, Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other's views, Assisting others, Sharing, Participating actively.

ACTIVITY: Johari Window, Games and case studies.

EC317 LINEAR IC'S AND APPLICATIONS

Course Description & Objectives:

This subject introduces the theoretical & circuit aspects of Opamp, timer and OTAs, which are the backbone for the basics of linear integrated circuits and to understand the various linear and non-linear applications of opamp.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the characteristics and specifications of operational amplifiers.

CO2: Analyze the applications of the operational amplifiers.

CO3: Design various filters and regulators.

CO4: Understand the operation and applications of phase locked loop and voltage controlled oscillators.

UNIT I - Fundamentals of Linear ICs :

Differential DC amplifier, common mode analysis, differential mode analysis, CMRR, Constant current source in place of RE, design of a differential DC amplifier using bipolar transistors. 741 operational amplifier, ideal and practical characteristics, Inverting and Non-inverting configurations, summing amplifier, difference amplifier.

UNIT II - Application of operational amplifiers :

Opamp as instrumentation amplifier, integrator and lossy integrator, as differentiator and practical differentiator, logarithmic amplifier, astable multivibrator, monostable multivibrator, comparators and Schmitt trigger, RC phase shift and wien bridge oscillators.

UNIT III - Active filters and Regulators :

Application of op-amp as active filter, Butterworth first and second order filters, low pass, high pass, band pass and band reject filters, design of practical filters. 3-terminal regulators, LM723 regulator.

UNIT IV - TIMER & PLL :

Functional diagram of 555 timer, timer as astable and monostable multivibrators, Timer as FSK generator, Voltage Controlled Oscillator (VCO), Phase Lock Loop (PLL), Capture range, Lock range, PLL 565 and applications.

UNIT V - Data converter & Operational Transconductance Amplifier (OTA):

Weighted resistor DAC, R-2R ladder DAC, Inverted R-2R ladder DAC, Parallel comparator ADC, Successive approximation ADC and Dual slope ADC, characteristics of A/D and D/A converters. Basic configuration of an OTA, OTA applications: OTA as Oscillators.

EC319 MICROPROCESSOR AND MICROCONTROLLERS

Course Description & Objectives:

This course introduces basic architecture and operation of microprocessor and microcontroller to the student. The course objective is to study the architecture and addressing modes of 8086/8051 and to know the importance of different peripheral devices and their interfacing to 8086.

Course Outcome:

Upon successful completion of this course, students should be able to:

CO1: Explain the architectures of 8086 microprocessors and 8051 micro controllers.

CO2: Outline hardware features and interfacing of memory with 8086.

CO3: Apply the concept of various communication interfaces to 8086.

CO4: Analyse the inbuilt components of 8051.

UNIT I - Introduction to 8086 microprocessor :

Evolution of microprocessors, 8086 microprocessor, architecture, register model, memory segmentation, physical address generation, addressing modes, instruction set, Interrupts of 8086, Interrupt vector table.

UNIT II - Hardware features of 8086 :

Pin diagram of 8086, multiplexed ADD/DATA and ADD/STATUS buses, control bus, minimum and maximum modes, Memory READ/WRITE and I/O READ/WRITE machine cycles, machine cycle with WAIT states. Physical Memory organization & memory interfacing to 8086.

UNIT III - I/O Interfacing Comparing I/O mapped I/O and memory mapped I/O. 8255 PPI :

Architecture, Modes of operation and Interfacing to 8086. A/D and D/A converter interfacing. 8259 PIC: Architecture, Initialization and operation of 8259, Interfacing of 8259 to 8086. Introduction to Serial Data Communication: Types of serial data transfers & serial data transmission modes. 8251 USART: Architecture, Interfacing of 8251 to 8086.

UNIT IV - Introduction to 8051 Microcontroller :

Comparing microprocessors and microcontrollers, 8051 Micro controller Architecture, Signal Description of 8051, memory organization, Addressing modes of 8051, Instruction set, Assembly language program examples in 8051.

UNIT V - 8051 Microcontroller Hardware :

Parallel Ports in 8051, External Memory interfacing with 8051, 8051 Timers, 8051 Serial ports, 8051 Interrupts. Introduction to ARM7TD

TEXT BOOKS :

EC321 DIGITAL COMMUNICATIONS

Course Description & Objectives:

This course gives students deep knowledge in digital communication systems at the theoretical & practical level. This subject introduces the fundamental concepts of digital communication system, theoretical aspects of digital modulation techniques, source coding and Error-control coding.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Relate the model of digital communication system and its performance.

CO2: Show the performance of digital modulation techniques.

CO3: Explain the concepts of information theory and source coding.

CO4: Apply error control coding techniques for efficient communication.

UNIT I - Introduction to Digital Communications, Sampling & Pulse Analog Modulation :

Introduction to Digital Communications- Elements of digital communication systems, advantages of digital communication systems. Sampling - Process, Types, Sampling Theorem for low frequency and band pass signals. Pulse Analog Modulation-Introduction to Pulse Amplitude Modulation (PAM), Pulse Width Modulation (PWM) and Pulse Position Modulation (PPM), Time Division Multiplexing.

UNIT II - Pulse Digital Modulations :

Pulse Code Modulation - Elements of PCM, Sampling, Quantization Process, Uniform and Non-uniform Quantization (companding), Quantization error, SNR, encoding, Different formats of encoding, T1-system, Differential PCM systems (DPCM). Delta Modulation, draw backs of DM, Adaptive Delta Modulation, comparison of PCM and DM systems.

UNIT III - Digital Modulation Techniques & Optimal Reception of Digital Signal

Digital Modulation Techniques - Introduction, ASK, FSK, PSK, DPSK, QPSK, M-ary ASK, M-ary FSK, M-ary PSK. Optimal Reception of Digital Signal - Base band signal receiver, optimum filter, matched filter.

UNIT IV - Information Theory & Source Coding :

Information Theory - Discrete messages, concept of amount of information and its properties. Average information Entropy and its properties. Information rate, Basics of Channel, Concept of Mutual information and its properties. Source Coding - Introduction, Advantages, Shannon's theorem, Shannon-Fano coding, Huffman coding, efficiency calculations, channel capacity, capacity of a Gaussian channel, bandwidth –S/N trade off.

UNIT V - Error Control Coding :

Linear Block codes- Introduction, Error detection and error correction capabilities of linear block codes, single error correcting hamming codes. Binary cyclic codes- encoding, syndrome calculation, Error detection and Error correction capabilities of cyclic codes, BCH codes. Convolution Codes- Introduction, encoding of convolution codes, Code tree, trellis diagram, decoding using Viterbi algorithm.

EC323 TRANSMISSION LINES AND WAVE GUIDES

Course Description & Objectives

Review of network filters, attenuator, static electric and magnetic fields and applications, Maxwell's equations, transmission lines, propagation and reflection of plane waves, Introduction to guided waves. To become familiar with propagation of signals through lines & Understand signal propagation at Radio frequencies and analyze the Rectangular and circular waveguide

Course outcomes

Upon successful completion of this course, students should be able to:

CO1: Analyze and design the Network filters.

CO2: Understand and analyze the attenuators.

CO3: Understand and analyze the transmission lines.

CO4: Analyze the waveguides.

UNIT I - Network filters and attenuators :

Network function, driving point and transfer impedances and their properties, Poles and zeros of network function. Filter networks, Classification of filters-constant K filters, m-derived filters, band pass filter and band stop filter. Attenuators - T-type attenuator, Pi-type attenuator, lattice attenuator, Bridged T-attenuator, L-type attenuator.

UNIT II - Transmission lines – I :

Introduction, Lumped & Distributed Circuit elements, Transit Time Effect, Transmission line equations, Types of Transmission Lines, Complex Propagation Constant & Characteristic Impedance of Transmission Line, Travelling Waves, Formation of Standing Waves on a Line, Voltage Reflection Co-efficient and its Relation to Load Impedance, Impedance at any Point on the Line, Loss - less and Low - loss Transmission Lines, Voltage Standing

Wave Ratio, Return Loss & Reflection Co-efficient.

UNIT III - Transmission lines – II :

Power Transfer on Transmission Line, Complex Impedance (Z) & Reflection co-efficient planes, Constant Resistance Circles, Constant Reactance Circles, Smith Chart, Constant VSWR Circles, VSWR on the line, Analysis of Transmission Line in terms of Admittances, Admittance Smith chart, Applications of Transmission Lines — Measurement of Unknown Impedance, Transmission Line as a Circuit Element, Transmission Lines as Resonant Circuits, Impedance Matching, Single-Stub Matching Technique, Double-Stub Matching Technique.

UNIT IV - Wave guides -I :

Introduction to Rectangular Waveguides, Solutions of field Equations in Rectangular Co-ordinates, TE_{mn} & TM_{mn} Modes in Rectangular Waveguides, impossibility of TEM waves in Rectangular wave guides, Waveguide Parameters — Cut-off wavelength, Guide wavelength, Free space Wavelength, Phase velocity, Group velocity, Dominant and Degenerated Modes, Power Transmission and Power losses in Rectangular Waveguides.

UNIT V - Wave guides –II :

Introduction to Circular waveguides, solutions of a field equations in cylindrical coordinates, TE_{mn} & TM_{mn} Modes in Circular Waveguides, Waveguide Parameters — Cut-off wavelength, Guide wavelength, Free space Wavelength, Phase velocity, Group velocity, Dominant and Degenerated Modes, Power Transmission and Power losses in Circular Waveguides.

CS315 OPERATING SYSTEMS (Elective-I)

Course Description & Objective:

In this course students should understand how the operating system effectively manages system resources.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: *Understand the fundamental concepts of operating system such as processes and scheduling.*

CO2: *Analyse various synchronisation problems in operating systems.*

CO3: *Understand the deadlock occurrence and avoidance methods in operating system.*

CO4: *Apply the concepts of paging, segmentation and various file management schemes in OS.*

UNIT I - Introduction :

What Operating System do, Operating System structure. Process Concept: Overview, Process scheduling, Operations on process, Inter process communication. Process Scheduling: Scheduling Criteria, Scheduling Algorithms, Multiple-Processor Scheduling, Case Study: Process scheduling in Linux.

UNIT II - Process Synchronization :

The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Semaphores, Monitors, Classical problems of synchronization, Case Study : Process Synchronization in Linux.

UNIT III - Deadlocks :

Deadlock Characterization, Methods of Handling Deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock Detection and Recovery.

UNIT IV - Memory Management :

Continuous memory allocation, paging, structure of the page table, segmentation, demand paging, page replacement algorithms.

UNIT V - File System :

File Concept, Access Methods, Directory Structure, File System Mounting, File Sharing, Protection, File-System Structure, File System Implementation, Directory Implementation, Allocation Methods, Free Space Management.

Secondary-Storage Structure: Overview of Mass-Storage Structure, Disk Structure, Disk Scheduling, RAID Structure.

CS223 OBJECT ORIENTED PROGRAMMING THROUGH JAVA (Elective-I)

Course description and Objectives:

On Completion of this course, the student will be able to understand fundamentals of object- oriented programming in Java, including defining classes, invoking methods, using class libraries. Have the ability to write a computer program to solve specified problems. Be able to use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Apply object oriented concepts on real time scenarios.

CO2: Understand Exception handling and multithreading mechanisms to create efficient software applications.

CO3: Utilize modern tools and AWT framework to create java applications to solve real world problems.

CO4: Design and develop GUI based applications using applets and swings for internet and system based applications.

UNIT I - Introduction, Classes and Objects :

Creation of Java, Importance of Java to Internet, Byte code, Java buzzwords, OOP Principles- Encapsulation, Inheritance and Polymorphism, Data types, Variables, Declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Compiling and running of simple Java program, Concepts of classes and objects Class fundamentals – Declaring objects, Assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, this key word, Garbage

VFSTR UNIVERSITY

collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and Inner classes, Exploring the String class.

UNIT II - Inheritance, Packages and Interfaces :

Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, the Object class. Defining, Creating and Accessing a Package, Understanding CLASSPATH, Importing packages, Differences between classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and Extending interfaces.

UNIT III - Exception Handling, Multithreading :

Concepts of Exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and Finally keywords, Built-in exceptions, Creating own exception Sub classes, Concepts of Multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads, deadlocks, Thread groups.

UNIT IV - Applets & Event Handling & AWT Controls :

Applets: Applet Class, Applet Architecture, Applet Skeleton - Applet Initialization and Termination, Overriding update(), Simple Applet, Display Methods, Requesting Repainting – A simple banner Applet, Using The Status Window, The HTML APPLET Tag, Passing parameters to Applets, Applet Context and show Document. Event Handling & AWT Controls: Event sources, Event classes – ActionEvent, AdjustmentEvent, ComponentEvent, Container Event, Focus Event, InputEvent, ItemEvent, KeyEvent and MouseEvent, Delegation event model, Event Listeners, Handling mouse and Keyboard events, Adapter classes.

UNIT V - AWT & Swing :

AWT: Concepts of components, Container, Panel, Window, Frame, Canvas, Font class, Color class and Graphics. AWT Controls : Buttons, Labels, Text fields, Text area, Check boxes, Check box groups, Lists, Choice, Scrollbars, Menus, Layout Managers - Flow, Border, Grid, Card and Grid bag. Swing: JApplet, JFrame and JComponent, Icons and Labels, Handling threading issues, Text fields, Buttons – The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

EC325 DIGITAL IC APPLICATIONS (Elective-I)

Course Description & Objectives:

Familiarization of Digital Logic families and Design of combinational and sequential circuits using digital ICs.To investigate the static and dynamic characteristics of popular MOS and bipolar logic families, with emphasis on CMOS and TTL technologies.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Analyze the behaviour of CMOS Logic Families.

CO2: Model high level designs with standard ICs.

CO3: Represent the combinational and sequential circuits using digital ICs.

CO4: Understand the different memories, internal structure and timings.

UNIT I-CMOS LOGIC :

Introduction to logic families, CMOS logic, CMOS steady state electrical behavior, CMOS dynamic electrical behavior, CMOS logic families.

UNIT II-BIPOLAR LOGIC AND INTERFACING :

Bipolar logic, Transistor logic, TTL families, CMOS/TTL interfacing, low voltage CMOS logic and interfacing, Emitter coupled logic, Comparison of logic families, Familiarity with standard 74XX and CMOS 40XX series ICs – Specifications..

UNIT III-COMBINATIONAL LOGIC DESIGN :

Decoders, encoders, three state devices, multiplexers and demultiplexers, Code Converters, EX-OR gates and parity circuits,Comparators, adders &subtractors, ALUs, Combinational multipliers.

UNIT IV-SEQUENTIAL LOGIC DESIGN :

Latches and flip -flops, PLDs, counters, shift register, and synchronous design methodology, impediments to synchronous design.

UNIT V-MEMORIES :

ROMs:Internal structure, 2D -decoding commercial types, timing and applications. Static RAM: Internal structure, SRAM timing, standard SRAMS, synchronous SRAMS. Dynamic RAM: Internal structure, timing, synchronous DRAMs. Familiarity with Component Data Sheets – Cypress CY6116, CY7C1006, Specifications.

TEXT BOOKS :

1. Digital Design Principles & Practices John F. Wakerly, PHI/Pearson Education Asia, 3rd Ed., 2005.
2. Digital Fundamentals-Floyd and Jain,Pearson Education,8th Edition,2008.

EC327 IC APPLICATIONS LAB

Course Description and Objectives:

The main aim of this lab is to teach the linear and non-linear applications of operational amplifiers (741). Students are made familiar with theory and applications of 555 timers. Students are made to Design combinational logic circuits using digital ICs.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Analyze and design common electronic circuits using linear ICs.

CO2: Experiment on various types of filters and regulators using operational amplifiers.

PART – A : Linear IC Applications :

1. IC 741 OP AMP Applications – Inverting amplifier, non inverting amplifier and voltage follower.
2. IC 741 OP AMP as adder and subtractor.
3. Opamp as Integrator.
4. Opamp as Differentiator.
5. Active Filters – LPF, HPF (first order).
6. Function Generator using 741 OP AMP.
7. IC 741 opamp as D/A Converter.
8. IC 555 Timer as Astable Multivibrator.
9. IC 555 Timer as Monostable Multivibrator.

PART – B: Digital IC Applications

10. Study of Basic Digital IC's. (Verification of truth table for 7408, 7432, 7486, 7404,7402, 7400).
11. Implementation of Boolean Functions, Adder/ Subtractor circuits using gates.
12. Code converters: Gray to Binary and Binary to Gray.
13. Design and Implementation of JK FF, RS FF, D Flip-flops using gates.
14. Design and Implementation of 4:1 multiplexer .

EC329 MICROPROCESSORS & INTERFACING LAB

Course Description &objectives:

This course introduces the assembly language programming of 8086 and also gives a practical training of interfacing the peripheral devices with the microprocessor. The course objective is to introduce the basic concepts of microprocessor and to develop in students the assembly language programming skills and real time applications of Microprocessors.

Course outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Develop applications based on different processors and controllers.

CO2. Experiment to interface various peripherals to 8051.

I. Microprocessor 8086 :

1. Introduction to Debug/MASM/TASM.
2. Arithmetic operations: Multi-byte Addition, Subtraction, Multiplication, Division.
3. Logical operations: Converting packed BCD to ASCII and ASCII to packed BCD.
4. Finding Arithmetic mean of given numbers.
5. Finding Sum of Squares, Cubes of given numbers.
6. Searching for Minimum, Maximum of given numbers.
7. Sorting given string in Ascending, Descending order.
8. Reading, Displaying of characters.
9. String operations: Moving, Reversing, Comparing, Scanning strings.

II. Interfacing :

1. Programmable Peripheral Interface-8255.
2. Interfacing DAC: to generate Square, Triangular, Ramp, and Staircase waves.
3. Interfacing ADC: to convert analog signal to digital.
4. 8279-Keyboard/ Display interface.
5. Interfacing 8259-Programmable Interrupt Controller.
6. Interfacing a Stepper motor.
7. Interfacing Elevator simulator.
8. Traffic control simulator interface.
9. Serial data transfer using USART-8251 interface

EC331 DIGITAL COMMUNICATIONS LAB

Course Description & Objectives:

This course gives students deep knowledge in digital communication systems at the practical level. This lab focuses the fundamental concepts on TDM, Pulse modulations, digital modulation techniques, source coding techniques and Error-control coding techniques.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Analyze and design different digital modulation and demodulation systems.

CO2: Experiment on different types of digital communication systems using simulations and hardware for a given application / problem statement.

LIST OF EXPERIMENTS

I. Hard Ware

1. Time Division Multiplexing
2. PAM
3. PPM and PWM
4. Pulse Code Modulation
5. Delta Modulation
6. Amplitude Shift Keying
7. Frequency Shift Keying
8. Phase Shift Keying
9. Differential Phase Shift Keying
10. Quadrature Phase Shift Keying

VFSTR UNIVERSITY

II. Soft Ware

(i) MATLAB

1. Implementing Convolutional Encoder/Decoder using MATLAB.
2. Implementing Viterbi Algorithm using MATLAB.

(ii) SIMULINK

1. PAM
2. QAM
3. FSK
4. PSK
5. DPSK
6. QPSK

Any twelve experiments

EE219 LINEAR CONTROL SYSTEMS

Course Description &Objectives:

This course is to explore the modeling of linear dynamic systems via differential equations and transfer functions utilizing input-output representations; analysis of control systems in the time and frequency domains and using transfer function and state-space methods.

Course Outcome:

Upon successful completion of this course, students should be able to:

CO1: Apply mathematical modeling to the physical systems/electrical systems.

CO2: Analyse the response of the open and closed loop systems in time domain.

CO3: Investigate the stability of a given control system by using RH criteria, Root locus, Bode plot and Nyquist plot.

CO4: Understand the lag, lead and lead-lag compensators and PID controllers.

UNIT I - Introduction & Mathematical Models of Physical Systems :

Introduction: Concepts of Control Systems - Open Loop and closed loop control systems and their differences - Different examples of control systems - Clasification of control systems. Mathematical Models of Physical Systems: Differentical equations - transfer functions and block diagram representation of systems considering electrical systems as examples Block diagram algebra -Representation by Signal flow graph - reduction using Mason's gain formula - translational and rotational mechanical systems

UNIT II - Feed-Back Characteristics & Elements of Control Systems :

Feed-Back Characteristics : What is Feedback? Effects of feedback - reduction of parameter variations by use of feedback-Control over system dynamics - by the use of feedback.

Elements of Control Systems : DC Servo motor - AC Servo motor - Synchro transmitter and Receiver.

UNIT III - Time Response Analysis & Concepts of stability :

Time Response Analysis : Standard test signals - Time response of first order systems - Characteristic Equation of Feedback control systems, Transient response of second order systems - Time domain specifications - Steady state response - Steady state errors and error constant

Concepts of stability : The concept of stability, Routh stability criterion

UNIT IV - Root Locus Technique & Frequency Response Analysis :

Root Locus Technique: The root locus concept - construction of root loci Frequency Response Analysis: Introduction, Frequency domain specifications - Bode diagrams - Determination of Frequency domain specifications from the Bode Diagram - Phase margin and Gain margin - Stability Analysis from Bode Plots. Polar Plots, Nyquist Plots and Nyquist stability criterion

UNIT V - Design and Compensation Technique & State Space Analysis of Continuous Systems :

Design and Compensation Technique : Introduction and Preliminary design considerations - Lead, Lag, Lead-lag. PID controller. State Space Analysis of Continuous Systems : Concepts of state, state variables and state model, derivation of state models from block diagrams, Diagonalization - Solving the Time Invariant state Equations - State Transition Matrix.

EC320 VLSI DESIGN

CourseDescription & Objectives:

To introduce students to basic concepts of digital VLSI chip design using the simpler VLSI technology and CMOS devices and manufacturing technology. To Introduce CMOS logic gates and their layout design Combinational (e.g., arithmetic) and sequential circuit.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Explain different models of HDL.

CO2: Outline the fabrication process of different MOS technologies.

CO3: Analyse the operation and Electrical behaviour of MOS transistors.

CO4: Design VLSI circuits and Layouts of MOS circuits using Lambda based design rules and sub-systems using various logic methods.

UNIT I - Hardware Description Language :

The VHDL Hardware Description Language: Design flow, program structure, types and constants,Functions and procedures, libraries and packages.

The VHDL Design Elements: Structural design elements, data flow design elements, behavioral design elements,

UNIT II - Mos Technology :

Introduction : State of art of different technology, Introduction to IC Technology – MOS, PMOS, NMOS, CMOS &BiCMOS technologies-Oxidation, Lithography, Diffusion, Ion implantation, Metallization, Encapsulation processes, N-MOS, C-MOS fabrication.

UNIT III - Basic Electrical Properties :

MOS Transistor, operation, I_{ds}-V_{ds} relationships, MOS transistor parameters: threshold Voltage, gm, gds, figure of merit (w_o); Pass transistor, NMOS Inverter, Various pull ups, CMOS Inverter , Zpu/Zpd with and without pass transistor, Bi-CMOS Inverters.

UNIT IV - VLSI Circuit Design Processes :

VLSI Design Flow, MOS Layers, Stick Diagrams, Layouts and Design Rules for NMOS, CMOS and BICMOS circuits, CMOS inverters and gates. The delay unit, Inverter delays, Driving capacitive loads, Propagation delays, wiring capacitances, Introduction to scaling.

UNIT V - Subsystem Design :

Adders-Carry ripple adder, carry propagate adder, Multipliers-Array Multiplier, Booth encoding,Latches,Flip Flops; Simulation, Synthesis, Design Capture Tools, Design For Testability, Alternate gate circuits-Pseudo-nMOS, Dynamic CMOS, CMOS Domino Logic and Cascaded Voltage Switch Logic (CVSL),Standard cell, Seaofgates, FPGA.

EC322 ANTENNAS AND WAVE PROPAGATION

Course Description & Objectives:

Students will be introduced to antennas, their principle of operation, analysis and their applications. The course provides introduce the student to wave propagation over ground, through troposphere and ionosphere, propagation effects in radio frequencies.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Apply the concepts and properties of Electro-Magnetism to obtain parameters of antennas.

CO2: Analyze the different array techniques to improve directivity.

CO3: Determine the antenna characteristics for various applications.

CO4: Examine the characteristics of radiowaves and their propagation in the atmosphere.

UNIT I - Antenna Fundamentals-I :

Radiation Mechanism-Single wire, 2 wire and dipoles. Current Distribution on a thin wire antenna, Antenna Parameters-Radiation Patterns, Patterns in principal planes, Radiation pattern lobes, Beam Area, ,Beam Efficiency, Beam widths, Radiation Intensity, Radiation density, Directivity, Gain and Resolution, Radiation efficiency, Reciprocity, Input impedance.

UNIT II - Antenna Fundamentals-II :

Isotropic Antenna, Directional Antenna, Omni directional patterns, Radiation Resistance of dipole antenna, Antenna Apertures, Aperture Efficiency, Relation between maximum effective aperture and directivity, Effective height ,Field regions, Antenna polarization, PLF, FRIIS transmission equation.

UNIT III - Antenna Arrays :

Analysis of uniformly spaced arrays with uniform and non-uniform excitation amplitudes, Principle of multiplication of patterns, Effect of earth on vertical patterns, Binomial array, Basic principle of Dolph- Tschebyscheff array.

UNIT IV - Characteristics of Typical Antennas ;

Folded Dipole, Loop antenna, Yagi-Uda array, Helical antenna, Log-periodic antenna, Pyramidal and conical Horn antenna, Parabolic reflector antennas - Paraboloid and Parabolic cylinder, Cassegrain system of reflectors, Basic principles of slot antennas and micro strip antennas, Concept and benefits of smart antennas.

UNIT V - Radio Wave Propagation :

Ground wave Propagation, Earth constants, Space wave Propagation, Effect of curvature of an Ideal Earth, Variations of Field strength with height in space-wave Propagation, Atmospheric effects in space wave Propagation, Radio-Horizon, Duct Propagation, Extended-range Propagation resulting from Tropospehreic Scattering, Ionospheric Propagation, Gyro frequency, Refraction and reflection of Sky Waves by the Ionosphere, Critical Frequency, Skip Distance, Maximum Usable Frequency.

EC324 COMPUTER ARCHITECTURE & ORGANIZATION

Course Description & Objectives:

The course covers the basic principles of computer organization, operation and performance. It also deals with peripheral devices, and memory management. The course discusses the role of pipelining and multiple functional units in processor design..

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: *Understand the basic components and functions of a digital computer.*

CO2: *Apply the concepts of arithmetical, logical and control units for CPU.*

CO3: *Apply the concepts of interfacing of I/O devices and memory with CPU.*

CO4: *Understand the concepts like parallel processing, pipelining and multiprocessors.*

UNIT I - Overview & The Computer System :

Introduction**: -**Organization and architecture. Computer Evaluation**: -** Brief history of computers. A Top-Level View of Computer Function and Interconnection**: –** Computer components, Computer function, Inter connection structure, Bus Inter connection, PCI.

UNIT II - The Central Processing Unit :

Computer Arithmetic**: -** Arithmetic and logic unit, Integer representation, Integer arithmetic, floating point representation & arithmetic. Instruction sets**: -** Machine instruction characteristics, types of operands, types of operations, addressing modes and instruction formats. CPU Structure and Function**: -** Processor organization, register organization, Stack organization and instruction cycle. Control Unit operation**: -** Micro operations, control of the

Processor, Hardwired implementation. Micro programmed control**: -** Basic concepts

UNIT III - Memory :

Internal memory**: -** computer system memory overview, semiconductor main memory, cache memory. External memory**: -** Magnetic disk, RAID, magnetic tapes.

UNIT IV - Input / Output :

External devices, I/O modules, programmed I/O, Interrupt driven I/O, DMA, I/O channels & Processors.

UNIT V - Pipeline, Vector Processing & Multiprocessors :

Pipeline, Vector Processing**: -** Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline, RISC Pipeline Vector Processing, Array Processors. Multiprocessors**:** - Characteristics of Multiprocessors, Interconnection Structures, Interprocessor Arbitration. InterProcessor Communication and Synchronization, Cache Coherence.

TEXT BOOKS:

EC326 OPTICAL COMMUNICTIONS
(Dept. Elective - II)

Course Description & Objectives:

This course illustrates basic optical laws, definitions and optical link design methods and Expound optical sources, detectors and connectors. It is to expose the students to the basics of signal propagation through optical fibers, fiber impairments, components and devices and system design.

Course Outcomes:

Upon successful completion of the course, students will be able to:

CO1: Understand the basic optical communication system, optic theories and materials.

CO2: Understand and apply the optical laws in fundamental propagation mode.

CO3: Analyse the efficiencies of various optical sources, connectors and detectors.

CO4: Evaluate link power budget and rise time budget.

UNIT I - Overview of optical fiber communication :

The general system, advantages of optical fiber communications. Fiber Materials, Optical fiber wave guides- Introduction, Ray theory transmission, Total Internal Reflection, Acceptance angle, Numerical Aperture, Skew rays. Cylindrical fibers- Modes, V_{number}, Mode coupling, Step Index fibers, Graded Index fibers.

UNIT II - Signal Degradation in Optical Fibers :

Signal distortion in optical fibers- Attenuation, Absorption, Scattering and Bending losses, Core and Cladding losses. Information capacity determination, Group delay, Types of Dispersion - Material dispersion, Wave-

guide dispersion, Polarization mode dispersion, Intermodal dispersion. Overall fiber dispersion in Multi mode and Single mode fibers, Pulse broadening.

UNIT III - Optical Fiber Connectors :

Connector types, Single mode fiber connectors, Connector return loss, Fiber Splicing- Splicing techniques, Splicing single mode fibers. Fiber alignment and joint loss-, single mode fiber joints.

UNIT IV - Optical Sources :

LEDs, Structures, Materials, Quantum efficiency, Power, Modulation, Power bandwidth product. Injection Laser Diodes- Modes, Threshold conditions, External quantum efficiency, Laser diode rate equations.

UNIT V - Optical Detectors & System Design :

Optical detectors- Physical principles of PIN and APD, Comparison of Photo detectors. Fundamental receiver operation, Digital signal transmission, error sources, Receiver configuration, Digital receiver performance, Quantum limit, Analog receivers. Optical system design —Considerations, Component choice, Multiplexing. Point-to- point links, System considerations, Link power budget. Rise time budget.

TEXT BOOKS :

EC328 EMBEDDED SYSTEMS (Dept.Elective-II)

Course Description &objectives:

About 99 percent of all computers today are embedded – they are found in cell phones, game consoles, digital cameras, cars, airplanes, medical equipment, home appliances, robots, etcetera. The market for embedded systems is enormous, and the industry's demand for high-skilled experts in these areas is constantly increasing. The course objective is to develop an understanding of the technologies behind the embedded computing systems such as technology capabilities and limitations of the hardware, software components and design methodologies

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the fundamentals of embedded computing system.

CO2: Understand and analyze the fundamental architectural features of 8051 and its on-chip peripherals.

CO3: Apply the concepts of various components in real time operating system.

CO4: Understand the advance processors and protocols to design a given system.

UNIT I - Embedded Computing :

Introduction, Complex Systems and Microprocessor, The Embedded System Design Process, Formalisms for System Design, Design Examples.

UNIT II - The 8051 Architecture :

Introduction, 8051 Micro controller Hardware, Input/Output Ports and Circuits,External Memory, Counter and Timers, Serial data Input/Output, Interrupts. The Assembly Language Programming Process, Programming Tools and Techniques, Programming the 8051.

UNIT III - Applications :

Interfacing with Keyboards, Displays, D/A and A/D Conversions, Multiple Interrupts, Serial Data Communication.

UNIT IV - Introduction to Real – Time Operating Systems :

Tasks and Task States, Tasks and Data, Semaphores, and Shared Data; Message Queues, Mailboxes and Pipes, Timer Functions, Events, Memory Management, Interrupt Routines in an RTOS Environment, Getting Embedded Software into the Target System; Debugging Techniques: Testing on Host Machine, Using Laboratory Tools, An Example System.

UNIT V - Introduction to advanced architectures :

ARM and SHARC, Processor and memory organization and Instruction level parallelism; Networked embedded systems: Bus protocols, I2C bus and CAN bus; Internet- Enabled Systems, Design Example-Elevator Controller.

EC330 ELECTROMAGNETIC INTERFERENCE AND COMPATIBILITY
(Dept.Elective-II)

Course Description &objectives:

The course provides basic information on the different electromagnetic Interference problems occurring in Intersystem and their possible mitigation techniques in Electronic design. The course objective is to understand EMI sources, EMI problems and their solutions at PCB level, and also to understand sub system level design and to measure the emission, immunity level from different systems to couple with the prescribed EMC standards.

Course Outcome:

Upon successful completion of this course, students should be able to:

CO1: Diagnose and solve basic electromagnetic compatibility problems.

CO2: Design electronic systems that function without errors or problems related to electromagnetic compatibility.

CO3: Design the Cable routing & connection and understand the Interconnection Techniques

CO4: Design high speed Printed Circuit board with minimum interference and EMI free system.

UNIT I- EMI/EMC Concepts

Definition of EMI and EMC with examples, Classification of EMI/EMC - CE, RE, CS, RS, Units of Parameters, Sources of EMI, EMI coupling modes - CM and DM, ESD Phenomena and effects, Transient phenomena and suppression.

UNIT II- EMI Measurements

Basic principles of RE, CE, RS and CS measurements, EMI measuring instruments- Antennas, LISN, Feed through capacitor, current probe, EMC analyzer and detection t6echnique open area site, shielded anechoic chamber, TEM cell.

UNIT III - EMC Standards and Regulations

National and Intentional standardizing organizations- FCC, CISPR, ANSI, DOD, IEC, CENEEC, FCC CE and RE standards, CISPR, CE and RE Standards, IEC/EN, CS standards, Frequency assignment - spectrum conversation.

UNIT IV- EMI Control Methods and Fixes

Shielding, Grounding, Bonding, Filtering, EMI gasket, Isolation transformer, opto isolator.

UNIT V- EMC Design and Interconnection Techniques

Cable routing and connection, Component selection and mounting, PCB design- Trace routing, Impedance control, decoupling, Zoning and grounding.

CS 344 Data Structures Laboratory using C++ Laboratory

Course Description & Objectives:

The main objective of this course is to provide an introduction to basic data structures and manipulating them, by using C++ programming language. The evaluation of the data structure needs of particular problems. The design and implementation of C++ programs by using basic data structures.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Develop several ADTs using C++.

CO2: Apply the appropriate data structure for given problem.

List of programs

1. C++ Program to Implement Stack using arrays.

EC332 VLSI DESIGN LAB

Course*Description &*Objective:

*Apply the concepts of basic combinational logic circuits, sequential circuit elements, and programmable logic in the laboratory setting.To develop familiarity and confidence with designing, building and testing digital circuits, including the use of CAD tools.*Behavioral, register- transfer, logic, and physical-level structured VLSI design using CAD tools and hardware description languages

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Synthesize the digital circuits with hardware description language.

CO2: Design and simulate VLSI circuits using MOS transistors at schematic level.

List of Experiments:

E-CAD Programs:

1. HDL Code to realize all the logic gates.
2. Design of 2-to-4 decoder.
3. Design of 8-to-3 encoder (without and with priority).
4. Design of 8-to-1 multiplexer.
5. Design of 4 bit Binary to Gray code converter.
6. Design of Multiplexer/ Demultiplexer.
7. Design of comparator.
8. Design of Full Adder using 3 modeling styles.
9. Design of Full Subtractor using 3 modeling styles.
10. Design of Flip Flops: SR, D, JK,T.
11. Design of 4-bit binary, BCD Counters.

MS310 - MANAGERIAL ECONOMICS

Course Description and Objectives:

To make the student familiar with the basic concepts and principles of Business Economics. The course aims to develop student's capacity to analyze the economic environment in which business entities operate and understand how managerial decisions can vary under different constraints that each economic environment places on a manager's pursuit of it's goals, focusing on analyzing the functioning of markets and the economic behavior of firms and other economic agents.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: To understand the economic principles and nature and scope of Managerial Economics and its role of economic environment in managerial decision making.

CO2: To estimate future demand using forecasting techniques and factors affecting the demand for the product.

CO3: To interpret long-run, short-run production functions and companies financial position using Break-Even-Analysis and cost output Relationship.

CO4: To design Competitive strategies like pricing, product differentiation etc. and marketing according to the market structure.

UNIT I - Nature & Scope of Managerial Economics :

Basic tools and techniques of Business Economics, Macro Economic Environment and Managerial decisions.

UNIT II - Demand Analysis :

Types of Demand, Demand determination Concept of Elasticity and measurement, Demand forecasting, Survey & Statistical methods.

UNIT III - Theory of Production :

Production function, Marginal rate of technical substitution, Iso-quants and Iso-costs, production function with one/two variable factors,Law of Variable Proportions, and Returns to Scale, internal and external economies.

UNIT IV - Cost Analysis :

Cost concepts, cost determinants, cost output relationship in the short and long run, Break-Even analysis.

UNIT V - Markets and price determination :

Features and types of different competitive situations – Perfect competition, Monopoly, Monopolistic competition and Oligopoly, pricing methods in practice.

Text Books :

EC431 DIGITAL SIGNAL PROCESSING

Course Description and Objectives:

This course will introduce the students the fundamental concepts of Discrete Time Signal processing and its algorithms for real time implementation of communication systems. Students will learn the algorithms useful for real time signal processing applications.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the characteristics of discrete time signals and systems.

CO2: Apply the concepts of transform techniques in realizing discrete time signals.

CO3: Analyze discrete time signals using FFT algorithms.

CO4: Design and realization of analog and digital filters for a given specifications.

UNIT I - Introduction to Discrete Signals and Systems :

Introduction: Review of Signals and Systems, linear shift invariant systems, stability, and causality. Linear constant coefficient difference equations: Impulse response, step response, response to arbitrary inputs. Frequency domain representation of discrete time signals and systems: Z-Transform and properties, analysis of linear time invariant systems using Z-domain.

Unit II - Fourier Analysis of Discrete Time Signals :

Frequency Analysis of Discrete Time Signals: Discrete Fourier representation of periodic sequences(DTFT), Properties, Frequency response.Discrete

Fourier Transform: Discrete Fourier transforms, Properties of DFT, linear convolution of sequences using DFT, Computation of DFT.

UNIT III - Fast Fourier Transform :

Fast Fourier Transform: Fast Fourier transforms (FFT) - Radix-2 decimation in time and decimation in frequency FFT Algorithms, Inverse FFT, Radix-4 FFT, Filtering of long data sequences: Overlap save and overlap add methods.

UNIT IV - FIR Filter Design and Realization :

FIR Filter Design & Realization: FIR System function, Characteristics of FIR Digital Filters, frequency response. Design of FIR Digital Filters using Window Techniques, Frequency Sampling technique. Structures of FIR: Direct form structure, cascade form structure, Linear Phase structure, signal flow graphs and transposed structures.

UNIT V - IIR Filter Design and Realization :

IIR Filter Design & Realization: IIR System Function, Analog filter approximations – Butter worth and Chebyshev, Design of IIR Digital filters from analog filters, Analog-to- Digital transformations. Structures of IIR : Direct form I and II, cascade form, parallel form, signal flow graphs and transposed Structures. Comparison of IIR & FIR filters.

EC433-RF AND MICROWAVE ENGINEERING

Course Description & Objectives:

This course will provide all students with the fundamental concepts associated with RF/microwave circuits and components. The course will allow students to become expert in new and evolving areas of microwave engineering including RF.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1. Explain microwave amplifiers and oscillators basic operation, characteristics, parameters, limitations.

CO2: Apply concepts of scattering parameters to various microwave components.

CO3: Analyze microwave linear beam tubes and cross field tubes.

CO4: Determine the various microwave parameters.

UNIT I - RF Amplifier Design & Basic Oscillator, Mixer model :

Introduction to RF concepts. Characteristics of amplifiers, Types of amplifiers, Amplifier power relation & problems, Power gain definitions, derivation and relations & problems, Basic Oscillators, Mixer models

UNIT II - Microwave Components :

Introduction: Microwave Frequencies and Band Designations. Microwave Junctions: E-plane Tee Junction, H-plane Tee Junction, Magic Tee Junction, fields and currents in Microwave Tee junctions, Applications of Magic Tee, Directional couplers, Faraday Rotation In Ferrite Devices- Gyrators, Circulators, Isolators.

UNIT III - Microwave Linear Beam Tubes (O TYPE) :

Limitations of Conventional tubes at Microwave frequencies, Two Cavity Klystron Amplifiers: Velocity modulation process, bunching process, output power and beam loading. Multicavity Klystron amplifiers: Beam current density, output current and output power. Reflex Klystron Oscillator: Velocity modulation, Power output and efficiency.

UNIT IV - Microwave Cross Field Tubes (M TYPE) & Microwave Solid-State Devices :

Magnetron Oscillators- Cylindrical Magnetron, Cross field Amplifiers. Transferred Electron Devices: GUNN-EFFECT Diodes, RWH Theory, Modes of operations.

UNIT V - Microwave Measurements :

Components of Microwave Bench Set-Up, Microwave power measurement, Impedance measurements, Attenuation Measurement, VSWR measurement, Frequency measurement.

TEXT BOOKS :

EC435-ELECTRONIC MEASUREMENTS & INSTRUMENTATION

Course Description & Objectives:

To introduce to the students the operation of various electronic Instruments which are used to measure the basic parameters, oscilloscopes, function generators, wave analyzers and various sensors and transducers

Course outcomes:

Upon successful completion of this course, students should be able to:

CO1: Find the specifications of sensors and instruments using statistical approach.

CO2: Explain AC and DC bridges.

CO3: Summarize various signal generators, spectrum analyzer, sensors and transducers.

CO4: Examine the working principles of various display devices and signal conditioning circuits.

UNIT I - Electro Mechanical instruments and their characteristics: Static characteristics, Dynamic Characteristics, Errors: Gross error, systematic error, Random error, limiting error, Probable error. Electro Mechanical Instruments: Suspension galvanometer, PMMC mechanism, DC Ammeters, DC Volt meters, Ohmmeter, multi range ohmmeter, calibration of DC instruments. AC meters: Electro dynamometer, Rectifier meter, Thermo instruments, Watt hour meter, and power measurement using dynamometers, power factor measurements, and instrument transformers.

UNIT II - AC & DC Bridges & Electronic Instruments :

DC Bridges: Wheat stone bridge, Kelvin's double bridge. AC Bridges: Measurement of inductance: Maxwell's bridge, Anderson bridge.

Measurement of capacitance: Schering Bridge, Hays Bridge, Measurement of frequency: Wien's Bridge, Errors and precautions in using bridges. Electronic Instruments: Amplified DC Meter, True RMS responding Voltmeter, Electronic multimeter, Digital Voltmeter, Q-meter.

UNIT III - Signal Generators & Signal Analysis & Frequency Counter & Time Interval Measurement :

Signal Generator: Sine wave Generator: Sweep Generator, Pulse and Square Wave Generator, Frequency Synthesized Generator, Function Generator. Wave Analyzers: Harmonic Distortion Analyzer, FT spectrum analyzer, applications. Frequency Counter & Time Interval Measurement: Simple Frequency Counter, Time Period measurement, Precision Computing counter using dual counters

UNIT IV - Display Devices & Recorders and Signal Conditioning Devices: Display Devices: CRO Principles and operation and its applications, dual beam, dual trace oscilloscope, LCD, LED, Plasma displays. Recorders: Types of recorders, Strip chart recorders, XY recorders, Magnetic tape recorders. Signal Conditioning Devices: Signal conditioning, the op-amp, protection, filtering

UNIT V - Sensors & Transducers :

Classification of Transducers, strain gauge, photoelectric transducers, capacitive, inductive transducers, LVDT Thermoelectric transducers, load cell, light and proximity sensors, data acquisition systems.

EC437 DATA COMMUNICATIONS AND COMPUTER NETWORKS
(Dept. Elective - III)

Course Description & Objectives:

This course will provide all students with the fundamental concepts associated with Data communications and Networks. The course will allow students to become expert in new and evolving areas of Various Networks, Architectures etc.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the basics of network hardware, software and various network models.

CO2: Analyze the functionalities of physical and data link layer and MAC sub-layer protocols.

CO3: Understand and apply the concepts of routing, congestion control and QoS methods in network layer.

CO4: Understand and apply the transport and application layer protocols.

UNIT I - Introduction:

Introduction to Data Communications, Protocol architecture, OSI & TCP/IP model, ATM, Transmission medium, Data link layer issues, Circuit Switching, Packet Switching.

UNIT II

Error Detection and Correction, CRC, Checksum, Cyclic Codes, Hamming Code, Framing, HDLC, Ethernet Bridges, Multiplexing, Spread Spectrum.

UNIT III

Network Layer: Routing Algorithms, Flooding, Internetworking ,Internet Protocol- IPv4, IPv6, Aloha in Data Networks.

UNIT IV

Transport Protocols: TCP, UDP, TCP Congestion Control, Techniques to improve QoS, Differentiated Services, QoS in Switched Networks.

UNIT V

Application Layer: DNS, WWW, SNMP, E-mail multimedia, Audio & Video Compression, Voice over IP & Multimedia Support – SIP.

EC439 SATELLITE COMMUNICATIONS (Dept. Elective - III)

Course Description & Objectives:

The course covers Fundamentals of satellite communications, its sub-systems, signals and noise associated with satellite communications and transmission concepts. The objective is to introduce the mechanics of satellite, satellite launchers and also study the design issues and operation of satellite systems.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Understand different types of satellite orbits and satellite sub-systems.

CO2: Analyse link budget of a satellite system and satellite links for specified system.

CO3: Understand various multiple access techniques.

CO4: Distinguish different types of satellites based on their location.

UNIT I - Introduction & Orbital Mechanics and Launchers :

Origin of Satellite Communications, Historical Back-ground, Basic Concepts of Satellite Communications, Frequency allocations for Satellite Services, Applications, Future Trends of Satellite Communications.

Orbital Mechanics, Look Angle determination, Orbital perturbations, Orbit determination, launches and launch vehicles, Orbital effects in communication systems performance.

UNIT II - Satellite Subsystems :

Attitude and orbit control system, telemetry, tracking, Command and monitoring, power systems, communication subsystems, Satellite antennas Equipment reliability and Space qualification.

UNIT III - Satellite Link Designing :

Basic transmission theory, system noise temperature and G/T ratio, Design of down links, up link design, Design of satellite links for specified C/N, System design example.

UNIT IV - Multiple Access :

Frequency division multiple access (FDMA) Intermediation, Calculation of C/N. Time division Multiple Access (TDMA) Frame structure, Examples. Satellite Switched TDMA Onboard processing, DAMA, Code Division Multiple access (CDMA), Spread spectrum transmission and reception.

UNIT V - Low Earth Orbit and Geo-Stationary Satellite Systems & Satellite Navigation and the Global Positioning System :

Orbit consideration, coverage and frequency considerations, Delay & Throughput considerations, System considerations, Operational NGSO constellation Designs Radio and Satellite Navigation, GPS Position Location principles, GPS Receivers and codes, Satellite signal acquisition, GPS Navigation Message, GPS signal levels, GPS receiver operation, GPS C/A code accuracy, Differential GPS.

EC441 MICRO ELECTRO MECHANICAL SYSTEMS (Dept. Elective - III)

Course Description & Objectives:

This subject introduces the micro fabrication techniques and applications. It is to the design and manufacturing of MEMS devices or a micro systems. It is to know the major classes, components, and applications of MEMS devices/ systems and to demonstrate an understanding of the fundamental principles behind the operation of these devices/systems.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the effects of miniaturization on device performance and applications of MEMS and NEMS.

CO2: Identify the process technology required for fabrication of MEMS and NEMS devices.

CO3: Analyze various micro sensors and actuators.

CO4: Understand quantum mechanics that is applicable at nano scale for NEMS devices.

UNIT I - Over view of MEMS and Microsystems :

Evolution of micro fabrication, difference between Microsystems and Microelectronics, Multidisciplinary nature of Microsystems design and manufacture. Working principles of Micro sensors-acoustic wave, chemical, pressure and thermal sensors. Working principles of Micro actuators-using thermal, piezoelectric and electrostatic forces.

UNIT II - Review of Mechanical Concepts :

Stress, Strain, static bending of thin plates, Deflection Curves for Canti Levers – Fixed beam. Electrostatic Excitation – Columbic Force between the Fixed and Moving Electrodes. Mechanical vibration –general formulation, resonant vibration and design theory of accelerometers.

Scaling laws in miniaturization: Introduction, scaling in Geometry, Rigid body dynamics, Electrostatic forces, Electromagnetic forces and Electricity.

UNIT III - Materials for MEMS and Microsystems :

Active substrate materials, silicon as a substrate Material, Silicon compounds, Silicon Peizoresistors, Galliam arsenide, Quartz, Polymers, Packaging materials and Piezoelectric crystals.

UNIT IV - Microsystem Fabrication Process :

Introduction, Photolithography, Ion implantation, Diffusion, Oxidation chemical vapour deposition technique, physical vapour deposition technique and etching.

UNIT V - Micromanufacturing :

Introduction, Bulk Micro manufacturing, Surface Micromachining and the LIGA process. Microsystem design: Introduction, design considerations, process design, mechanical design. Case study of MEMS pressure sensor fabrication process.

EC443 DIGITAL DESIGN THROUGH VERILOG (Dept. Elective-IV)

Course Description & Objectives:

It is a Hardware Description Language used to design digital systems at various levels of Abstraction. It is used at any level of design.To understand the constructs and conventions of the Verilog HDL programming and to understand the structural, register-transfer level (RTL), and algorithmic levels of abstraction for modeling digital hardware systems.

Course Outcomes :

Upon successful completion of this course, students should be able to:

CO1: Apply the concepts of Digital design to create digital building blocks in Verilog using gate level modeling.

CO2: Design CMOS circuits using switch level modeling with strength and time delays.

CO3: Model the combinational and sequential circuits using behavioral level modeling.

CO4: Understand system tasks, functions, compiler directives and FSM.

UNIT I - Introduction to Verilog & Language Constructs and Conventions :

Verilog as HDL, Levels of Design Description, Concurrency, Simulation and Synthesis, Functional Verification, System Tasks, Programming Language Interface (PLI), Module,Simulation and Synthesis Tools, Test Benches.

Introduction, Keywords, Identifiers, White Space Characters,Comments, Numbers, Strings, Logic Values, Strengths, Data Types, Scalars and Vectors, Parameters,Memory, Operators, System Tasks, Exercises.

UNIT II - Gate Level Modeling :

Introduction, AND Gate Primitive, Module Structure, Other Gate Primitives,Illustrative Examples, Tri-State Gates, Array of Instances of Primitives, Additional Examples, Design of Flipflops with Gate Primitives, Delays, Strengths and Contention Resolution, Net Types, Design of BasicCircuits, Exercises.

UNIT III - Modeling at Data Flow Level & Switch Level Modeling :

Introduction, Continuous Assignment Structures, Delays and Continuous Assignments, Assignment to Vectors, Operators, Introduction, Basic Transistor Switches, CMOS Switch, Bi-directional Gates, Time Delays with Switch Primitives, Instantiations with Strengths and Delays, Strength Contention with Trireg Nets, Exercises.

UNIT IV - Behavioral Modeling :

Introduction, Operations and Assignments, Functional Bifurcation, *Initial* Construct,*Always* Construct, Examples, Assignments with Delays, *Wait* construct, Multiple Always Blocks, Designs at Behavioral Level, Blocking and Non-blocking Assignments, The *case* statement, Simulation Flow.*if* and *if-else* constructs, *assign-deassign* construct, *repeat* construct, *for* loop, the *disable* construct, *while* loop, *forever* loop, parallel blocks, *force-release* construct, Event.

UNIT V - System Tasks, Compiler Directives and SubPrograms :

Introduction, Parameters, Path Delays, Module Parameters, System Tasks and Functions, File-Based Tasks and Functions, Compiler Directives, Hierarchical Access, General Observations, Exercises.

Introduction, Function, Tasks, User- Defined Primitives(UDP), FSM Design (Moore and Mealy Machines).

EC445 CELLULAR & MOBILE COMMUNICATIONS (Dept.Elective-IV)

Course Description & Objectives:

This course will provide the basics to the students for applying math and engineering concepts in the analysis and design of mobile communication systems. The main objective is to have an understanding of digital cellular systems (GSM, CDMA), 3G systems, PANs like WLAN, Bluetooth technologies

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the basic mechanisms of cellular mobile systems and multiple access techniques.

CO2: Analyze various methods of improving cellular capacity.

CO3: Understand the different generations of cellular technologies, their architectures and protocols.

CO4: AnalyzePersonal Area Networks such as WLAN and Bluetooth.

UNIT I - Introduction to Wireless Communications & Multiple Access Techniques for Wireless Communication

Evolution of Mobile Radio Communications, Mobile radiotelephony in USA and around the world, Examples of wireless Communication Systems – Paging, Cordless Telephone systems and Cellular Telephone systems, Trends in Wireless and Personnel Communications. FDMA, TDMA, Spread Spectrum, Multiple access, SDMA, Packet radio, Packet radio protocols, CSMA protocols, Reservation Protocols

UNIT II - The Cellular Concept – System Design Fundamentals :

Introduction, Frequency reuse, Channel Assignment strategies, Handoff Strategies – Prioritizing Handoffs, Practical Handoff Considerations, Interference and System Capacity – Co-channel Interference and System Capacity, Channel Planning for Wireless Systems, Adjacent Channel Interference, Power Control for Reducing Interference, Trunking and Grade Of Service, Improving Coverage and Capacity in Cellular Systems – Cell Splitting, Sectoring, Repeaters for Range Extension, A Microcell Zone Concept.

UNIT III - Cellular Wireless Networks :

Principles of Cellular Networks - Cellular Network Organization, Operation of Cellular System, Mobile Radio Propagation Effects, Handoff and Power Control, First Generation Analogue System – Spectral Allocation, Operation, AMPS Control channels, Second Generation (2G) TDMA Systems - First and Second Generation Cellular Systems, TDMA Design consideration, GSM Network and its Architecture, GSM Signalling Protocol Architecture , 2G CDMA Systems – CDMA, CDMA design consideration, IS-95, 3G Systems – CDMA Design Considerations, 3G WCDMA(UMTS), 3GCDMA 2000, 3G TD-SCDMA.

UNIT IV - Wireless Networking :

Cordless systems, Wireless local loop, IEEE 802.16 fixed broadband wireless access standard, Mobile IP & Wireless application protocol.

UNIT V - Wireless LANS & Bluetooth and IEEE 802.15 :

WLAN Overview, Infrared LANs, Spread spectrum LANs, Narrowband microwave LANs, IEEE 802 Protocol architecture, IEEE 802.11 Architecture and services, IEEE 802.11 Medium access control, IEEE 802.11 Physical layer. Bluetooth overview, Radio specification, Baseband specification, Link manager specification, Logical link control and adaptation protocol, IEEE 802.15 standards

TEXT BOOKS:

EC447 NANO ELECTRONICS
(Dept. Elective - IV)

Course Description & Objectives:

To introduce the students to nanoelectronics, nanodevices and molecular electronics.To identify quantum mechanics behind nano-electronics. To describe the principle and the operation of nano-electronic devices. To explain the principle and application of single electron devices.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Understand the history, types and mechanism of Nano Technology.

CO2: Outline the concepts of CNT and Molecular Electronics.

CO3: Analyze the fundamentals of Nano Electronics and Principles of Spintronics and QCA.

CO4: Identify materials for Silicon MOSFET and quantum transport devices.

UNIT I - Introduction to Nano Electronics :

Basics of nanoelectronics – capabilities of nanoelectronics – physical fundamentals of nanoelectronics – basics of information theory – the tools for micro and nano fabrication – basics of lithographic techniques for nanoelectronics.

UNIT II - Fundamentals of Nano Electronics :

Quantum electron devices – from classical to quantum physics: upcoming electronic devices – electrons in mesoscopic structure – short channel MOS transistor – split gate transistor – Electron wave transistor – Electron spin transistor – quantum cellular automate – quantum dot array – Principles of Single Electron Transistor (SET) – SET circuit design – comparison between FET and SET circuit design.

UNIT III - Silicon MOSFETs & Quantum Transport Devices :

Silicon MOSFETS - Novel materials and alternate concepts:- fundamentals of MOSFET Devices- scaling rules – silicon-dioxide based gate dielectrics – metal gates – junctions & contacts – advanced MOSFET concepts.Quantum transport devices based on resonant tunneling:- Electron tunneling – resonant tunneling diodes – resonant tunneling devices; Single electron devices for logic applications:- Single electron devices – applications of single electron devices to logic circuits.

UNIT IV - Carbon Nano Tubes :

Carbon Nanotube: Fullerenes - types of nanotubes – formation of nanotubes –assemblies – purification of carbon nanotubes – electronic propertics – synthesis of carbon nanotubes – carbon nanotube interconnects – carbon nanotube FETs –Nanotube for memory applications – prospects of an all carbon nanotube nanoelectronics.

UNIT V - Molecular Electronics :

Electrodes & contacts – functions – molecular electronic devices – first test systems –simulation and circuit design – fabrication; Future applications: MEMS – robots – random access memory – mass storage devices.

EC449-DIGITAL SIGNAL PROCESSING LAB

Course Description & Objectives:

The course will introduce the students to solve and simulate problems in the areas of communications and signal processing using MATLAB environment and programming aspects and programming of DSP hardware for real-time signal processing applications.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Design of analog and digital Filters for a given specification

CO2: Verify various transform techniques and filters using simulation and experimentaion.

List of Experiments

Part - A: Using MATLAB

1. Generation and operations on discrete time signals.
2. To verify linear convolution and correlation.
3. To find and sketch impulse and step response.
4. To find the FFT of given 1-D signal and plot.
5. To verify circular convolution.
6. FIR filter design using different window techniques.
7. IIR filter design using analog approximations.
8. Filter design using filter design analysis tool (fdatool).
9. Experiment based on spectrum estimation.
10. Experiments based on simulink and signal processing block set.

VFSTR UNIVERSITY

Part - B: DSP Processors

1. To study the architecture of DSP chips TMS 320 C 5X / 6X and instruction set.
2. Implementation of Linear and circular convolution on DSP Chips (TMS-320C6713).
3. Filter design and implementation using DSP chips (TMS-320C6713).
4. Filter design using FPGA Boards.

EC451- MICROWAVE ENGINEERING LAB

Course Description & Objectives:

The lab course will give a practical exposure to students to learn the characteristics of Microwave components.

To gain the practical hands on experience by exposing the students to various microwave components.

Course outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Demonstrate the microwave bench setups and microwave components (Lab + Minor project).

CO2: Experiment on Wave guide and antennameasurements.

List of Experiments:

1. To verify the relationship between free space wavelength, Guide Wavelength and Cut-off wavelength.
2. Measurement of Low and High VSWR using Microwave bench.
3. Radiation pattern Measurement of rectangular wave-guide.
4 Radiation pattern Measurement of twisted wave-guide.
5. Radiation pattern Measurement of Horn Antenna
6. Gain measurement for Horn Antenna
7. Radiation pattern Measurement of Parabolic Dish Antenna
8. Attenuation measurement.
9. Scattering parameters of circulator.
10. Scattering parameters of magic Tee.
11. Measurement of coupling factor and directivity of directional coupler.
12. Mode characteristics of reflex klystron.
13. Characteristics of Gunn Oscillator.

EC453-INSTRUMENTATION LAB

Course* Description & *Objective:

The lab course will give a practical exposure to students to learn the types of Measuring Instruments and their Characteristics.

Course Outcomes:

Upon successful completion of this lab course, students should be able to:

CO1: Demonstrate the characteristics of various sensors.

CO2: Experiment with different measurement systems using NI Lab-View and hardware equipment.

Section - A

1. LVDT for displacement measurements.
2. LDR for distance measurement.
3. R.T.D and Thermocouple for temperature measurements.
4. Strain Gauge and Piezo-Electric Pick up for pressure measurements.
5. Capacitive Pick up for Angular displacement measurement.
6. Inductive Pick up for distance measurement.
7. Magnetic Pick up and Photo Electric Pick up for DC motor speed measurement.

Section – B

1. Data acquisition system for Temperature (Pressure, light intensity) and transport over ETHERNET
2. Parameter measurement using HART, CAN, GPIB & PROFIBUSES.
3. Measuring Temperature with RTD using NI Lab View.
4. Measuring Pressure with Strain Gauge using NI Lab View.
5. Measuring Temperature with Thermocouple using NI Lab View.

6. Single channel measurements – FFT, Power Spectrum using NI Lab View.
7. Dual Channel measurements – Frequency Response using NI Lab View.
8. Generating a Square Pulse and a Pulse Train using NI Lab View.

EC412 SENSORS AND ACTUATORS (Dept. Elective - V)

Course Description &objectives:

The course introduce the student to the different types of sensors, signal conditioning circuits, and actuators for Automation in science, Engineering and medicine. The course objective is to understand the basic working principles of different sensors and Actuators and to introduce the operation of various electronic Instruments which are used to measure the basic parameters.

Course Outcome :

Upon successful completion of this course, students should be able to:

CO1: Understand the basic working principles Actuators.

CO2: Identify various sensors, Transducers and their brief Performance specifications.

CO3: Understand principle of working of various transducers used to measure Temperature, Displacement, Level, and various miscellaneous other sensors.

CO4: Choose Suitable sensor/transducer for a given physical variable and understand its principle, characteristics.

UNIT I- Sensor -I :

Basic sensor technology, sensor systems, Characteristics, conditioning bridge circuits, amplifiers for signal conditioning, different ADCs. Temperature sensors: RTD, thermister, thermocouple, basic principles, resistance temperature, characteristics, material required, application comparison, Position sensor, LVDT. Displacement: capacitive sensors, potentiometer sensors. Speed: Hall Effect sensors.

UNIT II- Sensor –II :

IR sensors for distant measurement: basic principle and applications. Accelerometer: characteristic, shock, vibration, pressure sensors, Flow, level, force, weight, sensors. Bio sensors, humidity, optical and thermal infrared detectors.

Unit III- Electronic instrumentation :

Instrumentation and measurement systems, measurement system performance, static calibration, errors in measurement, true value, accuracy and precision, linearity, hysteresis, Errors in ammeters and voltmeters, permanent magnet moving coil, ohmmeters, measurement of self inductance, Schering bridge, measurement of frequency, sources of errors in bridge circuits,

Unit IV- Electronic Measurements :

CRO: Electro static deflection, post deflection acceleration of electron beam, observation of wave forms on CRO, measurements of voltages and currents, multi input oscilloscopes, Negative resistance oscillators, square wave and pulse generators, Function generator, Q meter.

UNIT V- Actuators :

The Electromechanical Relay working principle, Electrical Relay Contact Types. Working principle and applications of solenoid valves, Linear Solenoid Construction. Working of Brushed Motor, Brushless Motor. Working principle and block diagram of Servo Motor, stepper motor

EC414 WIRELESS SENSOR NETWORKS
(Dept. Elective - V)

Course Description &objectives:

This course will provide all students with the fundamental concepts associated with Sensor networks, Architectures and tools The course will allow students to become expert in new and evolving areas of Wireless sensor networks engineering including Network platform Tools.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Understand the fundamental principles and applications of wireless sensor networks.

CO2: Understand the architecture of the sensor node and the formation of sensor network with multiple nodes.

CO3: Analyse and compare various MAC and routing protocols for sensor networks.

CO4: Design the network architecture for required applications using sensor networks.

UNIT I - Overview of Wireless Sensor Networks :

Challenges for Wireless Sensor Networks, Enabling Technologies For Wireless Sensor Networks.

UNIT II - Architectures :

Single-Node Architecture - Hardware Components, Energy Consumption of Sensor Nodes , Operating Systems and Execution Environments, Network Architecture -Sensor Network Scenarios, Optimization Goals and Figures of Merit, Gateway Concepts.

UNIT III - Networking Sensors :

Physical Layer and Transceiver Design Considerations, MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols And Wakeup Concepts - S-MAC , The Mediation Device Protocol, Wakeup Radio Concepts, Address and Name Management,Assignment of MAC Addresses, Routing Protocols- Energy-Efficient Routing,Geographic Routing.

UNIT IV- Infrastucture Establishment :

Topology Control, Clustering, Time Synchronization, Localization and Positioning,Sensor Tasking and Control.

UNIT V - Sensor Network Platforms and Tools :

Sensor Node Hardware – Berkeley Motes, Programming Challenges, Node-level software platforms, Node-level Simulators, State-centric programming.

TEXT BOOKS :

EC416 BIOMEDICAL SIGNAL PROCESSING

(Dept. Elective - V)

Course Description and Objectives:

This course will introduce the students' fundamental concepts of Biomedical signals, properties and its digital processing for identification of diseases. Students will learn DFT, FFT, Filtering Techniques, ECG, EEG and its analysis.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Analyze the signals using DFT and FFT.

CO2: Develop the filters for processing biomedical signals.

CO3: Understand the ECG and EEG signal and its characteristics.

CO4: Analyze the ECG and EEG signals for diagnosis purpose.

UNIT I - Simple signal conversion systems :

conversion requirement for biomedical signals – signal conversion circuits. Discrete Fourier Transform (DFT) – Properties – circular and sectioned convolution – Filtering long duration sequences - FFT computation using DIT and DIF algorithms.

UNIT II – FIR and IIR design :

Windowing techniques – Need and choice of Windows – Linear phase characteristics. IIR design: Analog filter design –Butterworth and Chebyshev approximations; digital design using impulse invariant and bilinear transformation– Warping, prewarping – Frequency transformation.

UNIT III - Adaptive filters :

Principle noise canceller model – 50 Hz adaptive cancelling using a sine wave model – Maternal ECG cancellation in fetal electrocardiography – ECG cancellation in EMG recording – High frequency noise cancellation in Electro surgery. Signal averaging – Basics and limitations.

UNIT IV - EEG Signal Characteristics :

EEG analysis - time and frequency domain methods – Parametric model – Phenomenological model–linear prediction theory – Autoregressive method.

UNIT V - ECG QRS Detection Techniques :

Estimation of R-R interval – Estimation of ST segment inclination – Arrhythmia analysis monitoring – Long term ECG recording – Basics of ECG data reduction techniques.

TEXT BOOKS :

1. P.Ramesh Babu, “Digital Signal Processing”, Second Edition, Scitech publications, Chennai, 2003 (UNITS I & II)

EC418 DIGITAL IMAGE PROCESSING

(Dept. Elective - VI)

Course Description & objectives:

To introduce to students the analytical tools and methods, which are currently used in digital image processing as applied to image information for human viewing. Students will learn to apply these tools in the Laboratory in image restoration, enhancement, compression and segmentation.

Course outcomes:

Upon successful completion of this course, students should be:

CO1: Understand the fundamentals of image processing and transform techniques.

CO2: Analyse the image using various enhancement techniques.

CO3: Understand the noise models and various image restoration approaches.

CO4: Understand and apply segmentation and compression techniques to images.

UNIT I- Digital Image Fundamentals :

Elements of visual perception, Image sensing and acquisition, Image sampling and quantization Basic relationship between pixels, Basic geometric transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT Separable Image Transforms, Walsh, Hadamard , Discrete Cosine Transform, Haar Transform, Slant Transform and Hotelling Transform.

UNIT II- Enhancement :

Spatial Domain methods, Basic grey level transformation, Histogram equalization, Image subtraction, Image averaging, Spatial filtering: Smoothing, sharpening filters, Laplacian filters, Frequency domain filters: Smoothing, Sharpening filters, Homomorphic filtering.

UNIT III - Restoration :

Model of Image Degradation/Restoration process, Noise models, Inverse filtering, Least Mean Square filtering, Constrained Least Square filtering, Blind Image Restoration, Pseudo inverse, Singular Value Decomposition.

UNIT IV - Compression :

Fundamentals of image compression, image compression models, lossless compression, Variable length coding, LZW coding, Bit plane coding, predictive coding, DPCM. Lossy Compression: Transform coding, Wavelet coding, Basics of Image compression standards: JPEG, MPEG, Basics of Vector quantization.

UNIT V - Segmentation :

Detection of discontinuities, Thresholding, Region Based segmentation.

TEXT BOOKS:

EC420 RADAR SYSTEMS
(Dept. Elective - VI)

Course Description & Objectives:

To introduce the components of a radar system and their relationship to overall system performance, the radar operating environment and techniques used to confront it, and top level measures of performance.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Explain the basic operating principle of Radar and derive the Range Equation.

CO2: Analyze the performance of different types of Radar Systems and compare.

CO3: Analyse the performance of simple tracking Radar and different types of Radar Antennas.

CO4: Discuss the Radar signals in Noise & Radar Receivers, Types of displays, and Duplexer types.

UNIT I - Introduction & Radar Range :

Introduction, Nature of Radar, Maximum Unambiguous Range, Radar Waveforms, Simple form of Radar Equation, Radar Block Diagram and Operation, Radar Frequencies and Applications. Radar Equation: Prediction of Range Performance, Minimum Detectable Signal, Receiver Noise and SNR, Integration of Radar Pulses, Radar Cross Section of Targets

UNIT II- CW and Frequency Modulated Radar :

Doppler Effect, CW Radar Block Diagram. Isolation between Transmitter and Receiver, Non-zero IF Receiver, Receiver Bandwidth Requirements, Applications of CW radar. FM-CW Radar, Range and Doppler Measurement, Block Diagram and Characteristics (Approaching/ Receding Targets), FM-CW altimeter, Measurement Errors, Multiple Frequency CW Radar.

UNIT III- MTI and Pulse Doppler Radar :

Introduction, Principle, MTI Radar with - Power Amplifier Transmitter and Power Oscillator Transmitter, Delay Line Cancellers Filter Characteristics, Blind Speeds, Double Cancellation, Staggered PRFs. Range Gated Doppler Filters. MTI Radar Parameters, Limitations to MTI Performance. Non-coherent MTI, MTI versus Pulse Doppler radar.

UNIT IV -Tracking Radar& Radar Antennas :

Tracking with Radar, Sequential Lobing, Conical Scan, Monopulse Tracking Radar Antenna Parameters, Reflector Antennas, Lens Antennas, Cosecant Squared Antenna Patterns, Radomes, Electronically Steered Phased Array Antennas, Phase Shifters, Frequency Scan Arrays, Radiators for Phased Arrays.

UNIT V - Detection of Radar Signals in Noise & Radar Receivers :

Introduction, Matched Filter Receiver Response Characteristics and Derivation, Correlation detection, Detection criteria. Detector Characteristics, Automatic Detection, Constant False Alarm Rate Receiver.

Radar Receivers:Noise Figure and Noise Temperature. Display Types. Duplexers Branch type and Balanced type, Circulators as Duplexers. Introduction to Phased Array Antennas Basic Concepts, Radiation Pattern, Beam Steering and Beam Width changes, Series versus Parallel Feeds, Applications, Advantages and Limitations.

TEXT BOOKS :

EC422 VLSI TESTING & VALIDATION

(Dept. Elective – VI)

Course Description & Objectives:

This course includes the testing of VLSI circuits and their validation. Each VLSI circuits has inbuilt testing process and validation. To make the students involve in the theory and practice of VLSI testing and validations and to introduce advanced techniques for efficiently testing and validating the VLSI design.

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Apply the concept of faults and failure models to generate the number of fault models & Automatic Test Pattern Generator (ATPG) for the given design under test (DUT).

CO2: Identify the fault in given CUT(can be logic circuit or memory) and conclude the solution to test these faults.

CO3: Develop the built in self test with test Patterns.

CO4: Verify the fault diagnosis in combinational circuits, logic and system level design.

UNIT I - Introduction to VLSI Testing :

Introduction - VLSI Testing Process And Test Equipment - Test Economics and Product Quality – Fault Molding-Logic and Fault Simulation.

UNIT II -Test Generation for Combinational and Sequential Circuits :

Test generation for combinational logic circuits - Testable combinational logic circuit design - Test generation for sequential circuits - design of testable sequential circuits

UNIT III - Advanced Testing :

Memory Test- DSP-based analog and mixed signal test- Model based analog and mixed signal test - Delay Test - IDDQ Test.

UNIT IV - Design For Testability :

Design for Testability - Ad-hoc design - Storage cells for scan designs - Generic scan based design - System level DFT approaches.

UNIT V - Self Test and Test Algorithms :

Built-In Self Test - Test pattern generation for BIST - Circular BIST - BIST Architectures - Testable Memory Design - Test algorithms - Test generation for Embedded RAMs.

TEXT BOOKS :

COURSE CONTENTS

I SEM & II SEM

16HS103 ENGINEERING MATHEMATICS - I

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- solve first and second order ordinary differential equations.
- evaluate ordinary differential equations numerically.
- apply the concepts of partial differentiation.
- solve partial differential equations.
- apply software tools to obtain and verify the solutions.

SKILLS:

✓ *Solve given differential equation by suitable method.*

✓ *Compute numerical solutions of differential equation by apt method.*

✓ *Compute maxima/minima of given function.*

✓ *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with MATLAB output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*
- *Estimation of acoustic impedance of a given material.*

UNIT - 1 **L- 9, T-3**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, Homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9, T-3**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form - e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9, T-3**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9, T-3**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation - Partial derivatives, Partial derivatives of higher order; Homogeneous function, Euler's theorem, Total differential coefficient, Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L- 9, T-3**

PARTIAL DIFFERENTIAL EQUATIONS: Formation of partial differential equations, Linear (Lagrange) equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method, Second order linear equations with constant coefficients only, Classifications, Rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Basic mathematical operations using MATLAB.
2. Solving simple expressions.
3. Limits.
4. Continuity.
5. Symbolic differentiation.
6. Symbolic integration.
7. Plotting of curves.
8. Plotting of surfaces.
9. Maxima & minima of functions of one variable.
10. Maxima & minima of functions of two variable.
11. Solving first order O.D.E.
12. Euler's Method and R-K Method.

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co, 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", 44th edition, Khanna Publishers, 2014.
3. Rudra Pratap, "Getting started with MATLAB", Oxford University Publication, 2009.

REFERENCE BOOKS:

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibers, Photonics, Nano and functional materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to:

- Recognize the relevant applications of Ultrasonic waves by the grasp over their production and properties.
- Analyze the characteristics of Laser for suitable applications in the field of industry, medicine and communication and to foster the knowledge on optical fibers to realize fiber optic communication and fiber optic sensors.
- Apply the principles of quantum mechanics to learn the dynamics of free electrons in metals.
- Evaluate efficiency of Solar cell and to understand the functioning of Photonic devices.
- Demonstrate the knowledgeon fabrication and applications ofNano-materialsand latest advanced materials.

SKILLS:

- ✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*
- ✓ *Study the wavelengths of light sources and lasers.*
- ✓ *Estimate the efficiency of a given solar cell.*
- ✓ *Learn about the type of the optical fiber and its ability to propagate light waves from its numerical aperture.*
- ✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves - Piezoelectric method; Properties of ultrasonic waves, Types of ultrasonic waves, Determination of velocity of ultrasonic waves in solids and liquids, SONAR - Medical applications.

NON-DESTRUCTIVE TESTING: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of laser light, Spontaneous and Stimulated emission of radiation, He-Ne laser, CO_2 laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and applications.

FIBER OPTICS: Principle of optical fiber, Acceptance angle, Numerical aperture, Types of fibers, Dispersion and attenuation in optical fibers, Optical fiber communication system, Fiber optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non- linear optical behaviour of materials, Applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, Fabrication of nano materials - Ball milling - Sol-Gel method; Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics/metals, Biomaterials.

TEXT BOOKS:

1. V.Rajendran, "Engineering Physics", 7th edition, McGraw Hill Education (India) Pvt.Ltd., 2014.
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd., 1992.
3. Sukhatme S.P., "Solar Energy", 2nd edition, TMH publication, 2005.
4. Dr. Arumugam "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find the height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measure the temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The objective of this course is to direct the students towards developing their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to:

- Understand and apply the rules of grammar to speak in technical context.
- Strengthen reading and listening comprehension skills to follow academic discussions in the engineering context.
- Develop appropriate vocabulary for carrying out academic writing tasks.
- Attain adequate proficiency to participate in the classroom discussions and make simple presentations.
- Understand and apply the mechanics of writing to produce simple texts for academic purpose.

SKILLS:

✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*

✓ *Apply different sub skills like top down, bottom up approaches to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*

✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*

✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*

✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **ENVIRONMENTAL CONSCIOUSNESS**
  (Climate Change, Green Cover, Pollution, Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles, Prepositions, Sentence types and construction
- Vocabulary : Root, Prefixes, Suffixes
- Composition : Paragraph writing (Descriptive and narrative)
- Laboratory Practice : Introduction to phonetics
  (Organs of Speech, Consonants, Vowels and Diphthongs, Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **EMERGING TECHNOLOGIES**
  (Solar power, Cloud computing, Nanotechnology, Wind energy (to be covered from Energy unit))
- Grammar : Time and tense (Present-past-future; Helping verbs, Modals)
- Vocabulary : Synonyms, Antonyms
- Composition : Letter writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **TRAVEL AND TOURISM**
  (Advantages and disadvantages of travel-tourism, Atithi devo bhava, Tourism in India)
- Grammar : Subject-Verb agreement, Sentence construction
- Vocabulary : Idioms and phrases
- Composition : Letter writing (Formal)
- Laboratory Practice : Situational conversations – Role - Plays
  (Introducing, Greeting, Enquiring, Informing, Requesting, Inviting)

UNIT - 4 **L-9**

- Text : **ENGINEERING ETHICS**
  (Challenger disaster, Biotechnology, Genetic engineering, Protection from natural calamities, How pertinent is the nuclear option? An environment of energy (from Energy Unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence transformation (Degrees, Voice, Speech and Synthesis)
- Vocabulary : Phrasal verbs
  Composition : Note-making, Text, Nandan Nilekani's In Search of Our Energy Solutions (from Energy Unit)
  Summarizing, Text on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational conversations, Role-Plays (Emotions, Directions, Descriptions, Agreements, Refusals, Suggestions)

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

UNIT - 5 **L-9**

- Text : **MEDIA MATTERS**
  (History of media, Language and media, Milestones in media, Manipulation by Media, Thousands march against nuclear power in Tokyo (from Energy Unit), Entertainment media, Interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail – Short message service (SMS), Writing advertisements, Reporting; Social media - Blogging, Facebook, Twitter (acceptable and non acceptable content)
- Laboratory Practice : Group discussions – (Topics from Energy Unit), Dumping of nuclear wastes, Exploration of eco-friendly energy options, Lifting of subsidies on petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to:

- Demonstrate the disassembling and assembling of a personal computer system.
- Install the operating system and other software required in a personal computer system.
- Analyze and visualize the data using various operations in Excel.
- Identify the various threats to users and data.
- Understand the concept of cyber security

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

UNIT - 1 **L-10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L-10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L-8**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and database management systems.

UNIT - 4 **L-8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and other internet applications.

UNIT - 5 **L-9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours-30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools.
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using Analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort & filter using Power Point tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, "Introduction to Computers", 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, "Introduction to Computer Science", 2nd edition, Pearson Education, 2011.
2. Eric Maiwald, "Fundamentals of Network Security", 3rd edition, Tata-McGrawHill, 2004.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- Understanding of how to write simple, but complete C programs.
- Identification of suitable data types for operands and design of expressions having right precedence.
- Application of decision making and iterative features of C Programming language effectively.
- Design and development of problem specific data structures and accessing methods to build large modular programs.
- Development of C programs that are understandable, debuggable, maintainable and more likely to work correctly in the first attempt.

SKILLS:

- ✓ *Identify suitable data types for an application.*
- ✓ *Apply control statements for decision making problems.*
- ✓ *Use multidimension array for matrix application.*
- ✓ *Design a program to calculate average of a class.*
- ✓ *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L-10,T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L-9,T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L-9,T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L-9,T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L-8,T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

ACTIVITIES:

- *Implement matrix operations.*
- *Implement malloc and calloc functions.*
- *Copy the content of one file into the other.*
- *Implement string manipulations functions.*

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours-30

1. Compute the factors of a number.
2. Compute the average of 'n' numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.
8. Using structure of arrays.

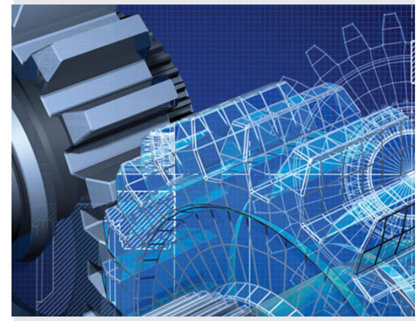
9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

TEXT BOOK:

1. Ajay Mittal, "Programming in C - A practical Approach", 1st edition, Pearson Education, India, 2015.

REFERENCE BOOKS:

1. Reema Thareja, "Introduction to C Programming", 2nd edition, Oxford University Press India, 2015.
2. Herbert Schildt, C, "The Complete Reference", 4th edition, Tata McGraw-Hill, 2000.
3. E. Balagurusamy, "Programming in ANSI C", 4th edition, Tata McGraw- Hill, 2008.



16EE101 BASICS OF ENGINEERING PRODUCTS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- Describe the working principle of Refrigeration and Air conditioning systems.
- Gain awareness on choosing appropriate construction materials.
- Operate and maintenance of basic electrical engineering appliances.
- Analyze the different lighting sources and it's features.
- Understand working of the basic electronics engineering appliances.

SKILLS:

✓ *Identify UPS requirements for a given load.*

✓ *Provide a Lighting scheme for specific working environment.*

✓ *Design a composition of Heating element for a particular application.*

✓ *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

✓ *Provide an earthing for Domestic Outlet.*

✓ *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembe and Assembe the Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design the Electric Wiring system for a prototype house.*
- *Design the UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L- 9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air - Conditioner and Refrigerator, Components, Assembly and disassembly; Working principle of Centrifugal and Reciprocating pumps - Types, Parts and applications, Working principle of Screw jack and its components, Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L- 10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks, Timber - Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel, Simple layout design, Paints, Tiles, fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L-08**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems, Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods, Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and applications.

MOTOR: Electric Motors, Classification, Construction and working principles of motors used in Domestic applications, Mixer grinder, Ceiling and exhaust fan, Hair dryer, Washing machine, Water pump, Air coolers, Vacum cleaner, Computer cooling motor, Electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, Radio, Remote control, Telephone, Microwave oven, Cell phone, PA system, Induction stove, WiFi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box
13. Ceiling Fan and Mixer
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

1. M.S.Shetty, “Concrete Technology”, 1st edition, S.Chand and Co, 2005.
2. S. C. Rangwala, “Engineering Materials”, 36th edition, Charotar Publishing House, Anad, 2009.

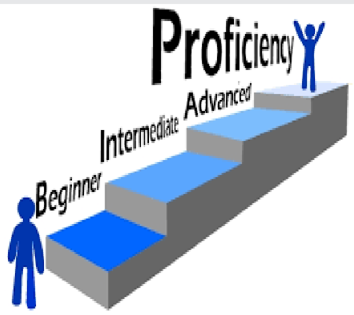
6. Pravin Kumar, “Basic Mechanical Engineering”, 1 st edition, Pearson Publishers, 2013.



16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. The objective of this course is to strengthen the comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to:

- Can understand routine information and factual articles in the news papers and understand general instructions, notifications, announcements, monologues and conversations. (Understand)
- Use functional English to speak and express themselves in everyday social contexts. (Apply & Create)
- Applying sentence structures and word collocations to produce simple and accurate sentences and create short compositions.
- Analyse complex reading and listening materials and draw inferences to evaluate the intentions of the writers and speakers.
- Creating concise and precise communication by analysing the relevance of the context and applying suitable formats.

SKILLS:

✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*

✓ *Read and extract information from different texts and draw inferences by understanding elements like tone and transitional words.*

✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*

✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/Others, Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, Intonation and accent

Speaking – Articulating syllables clearly, Speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, Use of Nouns, Adjectives, Verbs, Prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things and Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages, True or False

Writing – Rewording, Sentence transformation, Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, Short conversations

Vocabulary / Grammar – Use of Adjectives/Adverbs, Comparatives and Superlatives

PRACTICE: Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations, Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines, Inferences, True/False

Writing – Developing hints, Writing short messages/paragraphs

Listening – Searching for factual information, Gap filling

Speaking – Snap Talks, JAM, Elocution

Vocabulary / Grammar – Prepositions, Phrasal Verbs, PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating, Predicting, Negotiating, Planning

SKILL FOCUS:

Reading – Reading for evaluation and appreciation, Comprehension

Writing – Letters, e-mails, 7 C's

Listening – Following long conversations / Interviews

Speaking – Discussions, Debate, Descriptions

Vocabulary / Grammar – Modals, Conditionals, Verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

UNIT - 5 **P-6**

FUNCTIONS: Requesting, Denying, Suggesting, Persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements, Presentations

Vocabulary / Grammar - Punctuation, Cloze tests

PRACTICE: Objective PET Units 25 – 30

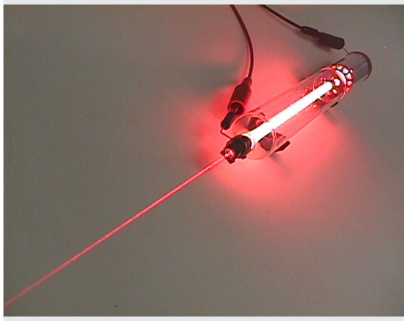
TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, "Objective PET", Student's Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.
2. Annette Capel and Rosemary Nixon, "Introduction to PET", Oxford University Press.

16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Course objectives and Description:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the experiments.The students have to perform at least ten from the list of experiments.

Course Outcomes:

The student will be able to:

- Realize the concept of resonance by conducting the experiments of AC sonometer and Melde'sexperiment.
- Acquire the knowledge on magnetic field theory and thermal conductivity by conductingexperiments,
- Understand Magnetic field along the axis of a circular coil and thermal conductivity of bad conductor through experiments.
- Understand the concepts of light by conducting the experiments of determination of wavelength,
- Understand the numerical aperture of an optical fibre and also from V–I characteristics of Solar celland LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Determination of Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – Efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect - Determination of Seebeck coefficient of a thermo couple.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.

16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- Determine rank of a matrix and solution of a system of linear equations, Eigen values and Eigen vectors.
- Apply Cayley-Hamilton theorem for finding inverse and power of a matrix.
- demonstrate the applications of multiple integrals.
- Understand the concepts of vector calculus.
- Apply software tools to obtain and verify the solutions

SKILLS:

- ✓ *Appreciate various methods to find the rank of a matrix.*
- ✓ *Solve given system of linear equations.*
- ✓ *Compute Eigen values and Eigen vectors of a matrix.*
- ✓ *Compute the power of a matrix by suitable method.*
- ✓ *Evaluate Multiple integrals.*
- ✓ *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9,T-3**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from, Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L-9,T-3**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, Properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, Diagonalisation of a matrix.

UNIT - 3 **L-9,T-3**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in polar coordinates, Change of order of integration, Change of variables, Applications to area in cartesian coordinates and polar coordinates, Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L-9,T-3**

VECTOR DIFFERENTIATION: Vector function, Differentiation, Scalar and vector point function, Gradient, Normal, Divergence, Directional derivative, Curl, Vector identities.

UNIT - 5 **L-9,T-3**

VECTOR INTEGRATION: Line integral, Surface integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Matrix Algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc).
13. Interpolation.

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS:

1. Srimanta Pal and Subodh C. Bhunia, "Engineering Mathematics", Oxford Publications, 2015.
2. B. V. Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.
3. R K Jain and S R K Iyengar, "Advanced Engineering Mathematics", 2nd edition, Narosa Publishing House, 2007.
4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with MATLAB output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with MATLAB output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to:

- Assess the quality of the water samples and identify suitable water purification methods.
- Analyze various batteries and fuel cells based on the principles of electrochemistry
- Analyze various factors affecting corrosion and apply proper corrosion control and prevention methods.
- Evaluate different synthetic procedures and properties of various polymers and apply them for engineering applications.
- Apply the principles of electromagnetic radiation to the spectroscopic methods for the analysis of different materials.

SKILLS:

- ✓ *Analyse the total hardness of water sample.*
- ✓ *Understand the basic principles involved in various batteries.*
- ✓ *Understand the mechanisms of corrosion and various controlling methods.*
- ✓ *Synthesize various polymers.*
- ✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water, Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water, Scales and sludges, Caustic embrittlement, Boiler corrosion, Priming and foaming, Softening methods - Zeolite process, Ion Exchange process; Desalination of brackish water - Reverse osmosis, Electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential, Electrochemical series, Nernst equation, Reference electrodes, Calomel and standard hydrogen electrode, Ion selective electrode, Glass electrode, Determination of pH using glass electrode; Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cells - Hydrogen oxygen, Methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion, Mechanisms of wet corrosion, Bimetallic corrosion, Concentration cell corrosion, Factors influencing the rate of corrosion; Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction, Types of polymerization - Preparation, Properties and applications of polyethylene, PVC, Teflon, Bakelite, Urea formaldehyde, Silicones; Rubber, Vulcanization, Synthetic rubbers - Buna-S, Buna-N, Neoprene; Introduction to conducting polymers; Poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV-Visible spectroscopy - Beer, Lambert's law, Qualitative and quantitative analysis, Block diagram of UV-Visible spectrophotometer, IR spectroscopy - Types of vibrations, Block diagram of IR spectrophotometer.

TEXT BOOKS:

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and Mridula chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.
2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to:

- Communicate the ideas and thoughts to other in the form of pictures.
- Develop the drawing skills while drawing engineering objects
- Implement the concept of quadrant system in drawing practice.
- Construct different engineering objects using drawing tools.
- Sketch simple objects and their pictorial views using AutoCAD

SKILLS:

- ✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*
- ✓ *Draw geometrical objects like polygons, solids of different types.*
- ✓ *Visualize the objects in real time situations.*
- ✓ *Develop 3D views (isometric views).*

UNIT – 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Types of lines, Lettering, Dimensioning, Construction of polygon and conics (Ellipse, Parabola and Hyperbola by general method), Ellipse by oblong method.

UNIT – 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection, Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes, Projections of planes, Simple planes, Planes inclined to one reference planes.

UNIT – 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT – 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder, Simple orthographic views into isometric views through AutoCAD.

UNIT – 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS:

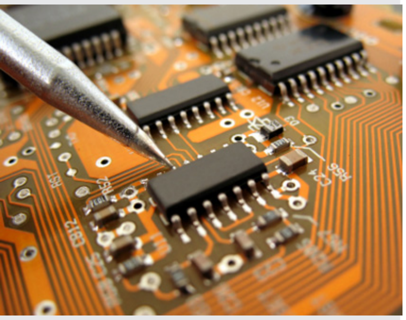
1. N.D.Bhatt, “Engineering Drawing”, 53rd edition, Charotar Publication, 2014.
2. Basant Agrawal, C.M.Agrawal “Engineering Drawing” , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS:

1. J. hole, “Engineering Drawing”, 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, “Engineering drawing”, 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- Analyse the resistive circuits with independent sources and find its solution.
- Solve the AC (single and three phase) and DC circuits using different methods.
- Familiarize the concepts of electromagnetism and it's applications.
- Explain the types of electrical equipment, machines and its applications.
- Acquire the knowledge about the characteristics and working principles of semiconductor diodes, transistor.

SKILLS:

✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*

✓ *Develop a simple loop generator.*

✓ *Design a voltage regulator using Zener diode.*

✓ *Design a half wave rectifier using PN junction diode.*

✓ *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit concepts, Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements, Ohm's Law, Kirchhoff's Laws - Application to simple series, Parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only, Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator, Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems), D.C. Motor, Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours-30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.

6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

TEXT BOOKS:

1. V.K.Mehta, “Principles of Electrical Engineering and Electronics”, 3rd edition, S. Chand Publications, New Delhi, 2010.
2. D.P Kothari, “Basic Electrical and Electronics Engineering”, 1st edition., TMH, New Delhi, 2014.

REFERENCE BOOKS:

1. Millman & Halkias, “Integrated Electronics”, McGraw Hill, 1979.
2. A.K. Thereja and B.L. Thereja, “Electrical Technology”, Vol.– II, S Chand Publications, 2007.
3. U.Bakshi & A.Bakshi, “Basic Electrical Engineering”, 1st edition., Technical Publications, Pune, 2005.

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to:

- Analyse the quality of the water by volumetric methods.
- Apply the principle of electrochemistry to determine the relative strength of oxidizing/reducing agents for the sample analysis.
- Analyse various factors effecting the rate of corrosion by using weight loss method
- Synthesize and analyse various polymers useful for engineering applications.
- Apply instrumentation methods for chemical analysis.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS:

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I, 2009.
2. Dr.Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

The student will be able to:

- Observation and integration of diverse information from variable sources outside of the classroom and helps students to think critically, creatively, resourcefully, and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness
- Collaborating across diverse disciplines and practices to identify and create solutions that conserve and help manage biodiversity for the long term
- Analyze the sources of pollutants and their effects on atmosphere and Adapting eco-friendly technologies and maintain hygienic conditions
- Identify the evidence of Global warming, Ozone depletion and acid rain
- Recognize safe receiving storing and handling of raw and prepared food and maintain hygienic conditions.

SKILLS:

- ✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*
- ✓ *Gain perspectives to adrress the challenges, improvise and devise solutions.*
- ✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*
- ✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*
- ✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT - 1 **L-6**

NATURAL RESOURCES: Environmental studies - Definition scope and its importance, Need for public awareness; Natural resources - Forest resources, Deforestation, Water resources, Properties and conflicts, Mineral resources, Extraction and impacts, Food resources, Modern agriculture methods, Fertilizer pesticide problems, Water logging, Salinity, Energy resources, Renewable and non-renewable energy resources, Harness technology, Solar energy technologies, Land resources, Land degradation, Soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY: Ecosystem - Concept, Structure and functions of an ecosystem, Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems; Biodiversity - Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT - 3 **L-6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY: Solid waste management - Causes, Effects and control measures of municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and noise pollutions, Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, definitions, Applications of the remote sensing; Innovative practices - Objectives, Innovative practices in agriculture and forest community, Bio-villages; Green technology for sustainable development; Life cycle assessment and its concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA: Sustainable development, Water conservation, Cloud seeding, Rainwater harvesting methods watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental legislation - Wildlife protection act, Water act, Forest conservation act, Air act, Environmental protection act; Environmental Impact Asssssment (EIA) - Introduction, Definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed projects / industry / developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION: Food sanitation - Food and drugs Act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water, Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions; Role of youth in the development, Promoting activities, Youth as initiators, Field work/environmental visit - Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment, Common plants, Insects, Birds; Study of simple ecosystems - Pond, River, Hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

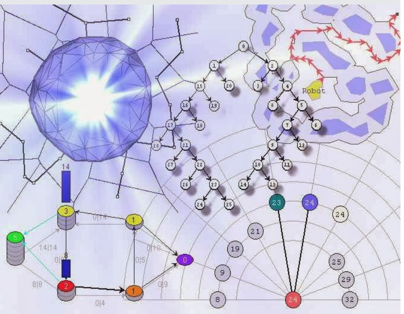
1. Anubha Kaushik and CP Kaushik, “Perspectives in Environmental Studies”, 5th edition, 2016
2. Benny Joseph, “Environmental studies”, 2nd edition, McGraw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, “A Text book of Environmental Studies”, HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, “A Text book of environmental science and Technology”, B S Publications, 2008.
3. Dr. K. Mukkanti, “A Text book of Environmental Studies”, S.CHAND and Company Ltd, 2009.
4. EHILRS and ST, “Text book of Municipal and Rural Sanitation”, M.S Hill, 1998.
5. C. S. Rao, Wiley Eastern Ltd, “Environmental Pollution Control Engineering”, New Age International Ltd, 2001.
6. Dr. M. Anji Reddy, “Introduction to Remote Sensing”, B S Publications, 2004.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*



16CS202 DATA STRUCTURES

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course is aimed at offering fundamental concepts of data structures and explaining how to implement them. It begins with the basic concepts of data and data structures and introduces the primitive and non-primitive data structures in detail. It forms the basis for understanding various ways of representing data and its usage in different computing applications.

Course Outcomes:

The student will be able to:

- Apply advanced C programming techniques such as pointers, dynamic memoryallocation, structures to develop solutions for particular problems.
- Analyze characteristics of various data structures.
- Differentiate between Graphs and Trees.
- Derive the importance of sorting and applying it wherever useful.
- Argue the usefulness of data structures in solving problems.

SKILLS:

✓ *Identify the required data structures for various applications.*

✓ *Identify the sorting algorithm suitable for a given scenario.*

✓ *Implement array or linked list for a given problem.*

✓ *Analyse Pros & Cons of each of the data structure.*

✓ *Usage of trees and graphs.*

UNIT - 1 **L-9**

SORTING AND SEARCHING: Introduction - Data, Data type, Data structure, Primitive and Non-primitive - Data type, Data structure; Storage structures - Sequential and linked storage representations; Applications of structures, Hashing.

SORTING: Selection sort, Bubble sort, Insertion sort, Quick sort, Merge sort.

SEARCHING: Binary search and linear search.

UNIT - 2 **L-9**

LINKED LISTS: Introduction, Types of linked list - Singly linked list, Doubly linked list, Circular linked List; Operations - Insertion, Deletion, Traverse forward/reverse order; Multi lists, Applications of linked lists.

UNIT - 3 **L-9**

STACKS AND QUEUES: Stacks - Introduction, Array and linked representations, Implementation and their applications; Queues - Introduction, Array and linked representations, Implementation and their applications, Types - Linear, Circular and doubly ended queues; Applications.

UNIT - 4 **L-9**

TREES: Introduction, Properties, Binary Tree - Introduction, Properties, Array and linked representations; Tree traversals and their Implementation, Expression trees, BST definition and implementation; AVL Trees - Definition and implementation.

UNIT - 5 **L-9**

GRAPHS: Introduction, Properties, Modeling problems as graphs representations - Adjacency matrix, Adjacency list; Traversals - Breath first search and depth first search; Application of graphs.

ACTIVITIES:

- *Design and Implement a School Management System.*
- *Design and Implement a Social Networking Site.*
- *Implement a project to find out the most common words in the articles.*
- *Design and Implement a Library Book Management System.*
- *Design and Implement a CricBuzz Application.*

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- understand the importance of structure, abstract data type and their basic usability in different applications through different programminglanguages.
- understand the linked implementation and its uses both in linear and non-linear data structure.
- understand various data structures such as stacks, queues, trees, graphs, etc. to solve various computing problems.
- decide a suitable data structure to solve a real world problem.

LIST OF EXPERIMENTS Total hours-30

1. Selection, Bubble, Insertion, Quick and Merge sorting algorithms.
2. Linear and Binary search algorithms.
3. Single linked list, doubly linked list, and circular linked list.
4. Stack using an array and linked list.
5. Queue using an array and linked list.
6. Tree using an array and linked list.
7. Check if given expression is fully parenthesis or not using stack.
8. Tree traversing techniques.

9. BST using an array and linked list.
10. Graph traversal techniques.

TEXT BOOK:

1. ReemaThareja, “Data Structures Using C”, 2nd edition, Oxford University Press, 2014.

REFERENCE BOOKS :

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Course Description and Objectives :

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes :

The student will be able to:

- Identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy,Blacksmithy and House wiring.
- Understand Fabrication of wooden joints.
- Understand joining of metals.
- Make metal joints and sheet metal work.
- Make metal tools like knives, needles, swords, arrows etc.

SKILLS:

- ✓ *Prepare wooden and metal furniture.*
- ✓ *Electrical wiring and power supply in residences.*
- ✓ *Make funnels, trays, locker, steel almirahs etc.*
- ✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*
- ✓ *CNC machines and various machining operations and processes.*

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin smithy and Black smithy.
4. House wiring.
5. Foundry and welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS:

1. S.K. Hazra Choudhury, "Elements of workshop Technology", 11th edition, Media Promoters, 1997.
2. Gopal, T.V., Kumar, T., and Murali, G., "A first course on workshop practice: Theory, Practice and Work Book", Suma Publications, Chennai, 2005.
3. Venkatachalapathy, V. S, "First year Engineering Workshop Practice", Ramalinga Publications, Madurai, 1999.

16EE201 LINEAR SYSTEMS AND SIGNAL ANALYSIS

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course deals with the fundamentals of linear systems, their properties and analyzing methods. The objective of this course is to make the student to understand concepts of Signals, Systems and apply the tools like transform analysis, convolution etc. to analyze the behavior of linear systems.

Course Outcomes:

The student will be able to:

- Classify signals and systems as discrete/continuous, linear/non- Linear, causal/non-causal, time-variant/invariant.
- Compute the output of a continuous-time or discrete-time linearTime-invariant system using convolution in the integral or sum form.
- Develop the continuous-time Fourier transform from the Fourier series and understand related topics such as time scaling, convolution theorem, Parseval's relation, and uncertainty principleAnd Eigen functions of the Fourier operator..
- Characterize and analyze the properties of continues signals and to Compute Laplace transform.
- Characterize and analyze the properties of discrete signals and to Compute Z-transform.
- Develop the discrete signals from inverse z transforms.

SKILLS:

- ✓ *Simulate the test signals using MATLAB.*
- ✓ *Analyze non-sinusoidal signals using fourier representation.*
- ✓ *Identify system stability using impulse response.*
- ✓ *Analyze the harmonic content in a given signal.*
- ✓ *Analyze the system for application in signal processing.*

ACTIVITIES:

- *Analyse the properties of a system and comment on its stability.*
- *Represent a signal in continuous and frequency domains.*
- *Analyze the harmonic content of a signal using Fourier series.*
- *Analyze the physical resemblance of convolution operation.*
- *Analyze the response of a system by Laplace transform.*
- *Analyze the response of a system by z-transform.*

UNIT - 1 **L-10, T-3**

SIGNALS IN NATURAL DOMAIN: Introduction to signals and systems, Description of signals, Description of systems, Properties of systems, Signal classification, Basic signals in detail, Representation of continuous and discrete time signals, Shifting and scaling operations.

UNIT - 2 **L-8, T-3**

SYSTEMS AND PROPERTIES: Description of systems, Properties of systems, Impulse representation, Linear time invariant systems, Properties of systems - Causality, Time invariance, Linearity, Systems with memory; LTI Continuous time systems, Convolution representation.

UNIT - 3 **L-9, T-3**

SIGNALS IN FREQUENCY DOMAIN: Introduction to transformations, Fourier series representation of periodic signals, Convergence of fourier series and Gibb's phenomenon, Fourier transform, Fourier transform of periodic signals and properties, Convolution theorem, Periodic convolution and Parseval's theorem.

UNIT - 4 **L-9, T-3**

LAPLACE TRANSFORM: Laplace transform, Properties of laplace transform, Inverse laplace transform, Rational system functions, Inverse laplace transform of rational functions, Analysis of LTI systems with rational system functions.

UNIT - 5 **L-9, T-3**

Z TRANSFORM : Z transform, Properties of Z transform, Inverse Z transform, Rational system functions, Inverse Z transform of rational functions, Analysis of LTI discrete systems with rational system functions, Sampling theorem.

TEXT BOOKS:

1. A.V. Oppenheim, A.S. Willsky and S.H. Nawab, "Signals and Systems", 2nd edition, Prentice Hall of India, 1997.
2. B.P.Lathi, "Linear Systems and Signals", 2nd edition, Oxford University Press, 2009.

REFERENCE BOOKS:

1. B.P. Lathi, "Signals,Systems & Communications", John Wiley, 1st edition, 2005.
2. Simon Haykin and Van Veen,Wiley, "An Introduction to Signals & Systems", 2nd edition, 2002.
3. John Alan Stuller, "An Introduction to Signals & Systems", 1st edition,Thomson, 2007.
4. H. PHsu "Signals & Systems", 2nd edition, Tata Mc-Graw-Hill Schaum's Outlines, 1995.

16MS201 MANAGEMENT SCIENCE

Hours Per Week :

L	T	P	C
3	-	-	3

Course Description and Objectives:

This course provides an introduction to the evolution of management along with the framework of managerial functions related to organization structure, production, operations, marketing, human resource management, strategy etc. The objective of the course is to introduce the students and make them well versed with the operational functions of management.

Course Outcomes:

The student will be able to:

- Understand the nature and Importance of managerial skills
- Identify the Significance of operations management
- Use production operations in an effective manner through work study, time study etc
- Understand the four P's of marketing for attracting and retaining customers.
- Use methods, tools and techniques for Managing workforce effectively

SKILLS :

✓ *Analyze and improve productivity.*

✓ *Analyze the customer needs, wants and demand.*

✓ *Recognize the need of different types/qualities of Human Resources.*

✓ *Analyze the reasons for the evolution of management.*

✓ *Analyze the philosophies of different management thinkers.*

ACTIVITIES:

- *Solve a test case to identify the various operational functions of management .*
- *Solve a test case to know the importance of marketing.*
- *Solve a test case to know the importance of human resources.*
- *Solve a test case to know the importance and evolution of management discipline.*

UNIT - 1 **L-9**

INTRODUCTION TO MANAGEMENT : Concepts of management and organization, Nature, Importance and functions of management, Systems approach to management, Taylor's scientific management theory, Fayol's principles of management, Mayo's hawthorne experiments, Maslow's theory of human needs, Douglas McGregor's theory X and theory Y, Herzberg's two-factor theory of motivation, Leadership styles, Social responsibilities of management.

UNIT - 2 **L-9**

OPERATIONS MANAGEMENT : Principles and types of plant layout; Methods of production (Job, Batch and Mass Production), Work study - Basic procedure involved in method study and work measurement

UNIT - 3 **L-9**

MATERIALS MANAGEMENT : Objectives, Need for inventory control, EOQ, ABC analysis, Purchase procedure, Stores management and stores records; Statistical quality control - Control charts for variables and attributes (simple problems), Acceptance sampling

UNIT - 4 **L-9**

HUMAN RESOURCES MANAGEMENT (HRM) : Concepts of HRM, Basic functions of HR manager; Manpower planning, Recruitment, Selection, Training and development, Placement, Wage and salary administration, Promotion, Transfer, Separation, Performance appraisal, Grievance handling and welfare administration, Job evaluation and merit rating.

UNIT - 5 **L-9**

MARKETING MANAGEMENT : Evolution of marketing, Functions of marketing selling Vs marketing; 4 P's of marketing, Product mix, Product life cycle, Place mix, Channels of distribution, Price mix, Pricing methods, Promotion mix, Tools of promotions.

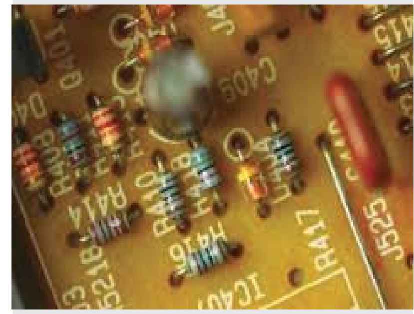
TEXT BOOKS:

1. P. Vijay Kumar, N. Appa Rao, Ashnab and Chnalill, "Introduction to Management Science", 6th edition, Cengage Learning India, 2012.
2. Stoner, Freeman and Gilbert, "Management", 6th edition, Pearson Education, New Delhi, 2004.

REFERENCE BOOKS:

1. Kotler Philip and Keller Kevin Lane, "Marketing Mangement" 12th edition, PHI, 2005.
2. Koontz and Weihrich, "Essentials of Management", 6th edition, TMH, 2005.

16EE203 ELECTRICAL CIRCUIT ANALYSIS



Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course deals with analysis of DC and AC circuits using methods like mesh, node and network theorems. It also introduces the concepts of magnetic circuits and two port networks. The objective of course is to introduce properties of network elements and methods of analysis for various electrical and magnetic circuits.

Course Outcomes:

The student will be able to:

- Analyse basicelectrical and magnetic circuits
- Apply the concepts of series and parallel resonance in networks
- Apply the concepts of series and parallel resonance in networks and analyse balanced and unbalanced three phase Circuits.
- Determinetwo-port parameters and understand concept of coupled circuits.
- Apply the Differential equation and Laplace Transform techniques to solve RL,RC and RLC circuits.
- Realize the electrical circuits practically and verifying them with theoretical knowledge.

SKILLS:

✓ *Determine currents and voltages of all elements in any electrical network.*
✓ *Analyze simple house wiring diagram.*
✓ *Analyze simple magnetic circuits with and without air gap.*
✓ *Calculate power, current and voltage in any three phase circuit.*
✓ *Design suitable fuse for over current protection.*
✓ *Design suitable battery for small applications.*

ACTIVITIES:

- *Design of AC 220V Power Strip for electronic work bench.*
- *Selection of switches , plugs, fuse and wire specifications for domestic loads.*
- *Realize the value of R, L and C for a given application.*
- *Verify different network theorems by conventional approach.*
- *Tune a given circuit for a specified frequency.*
- *Design of Power bank for mobile charger circuit.*

UNIT - 1 **L-10**

CIRCUIT ANALYSIS: Analysis of DC and AC circuits by Mesh and Nodal Analysis - Super mesh and super node analysis, Concept of capacitance, Effects, Energy stored, Series, Parallel and series parallel circuits.

MAGNETIC CIRCUITS: Parallel and Series parallel magnetic circuits-with and without air gap, Fringing effect.

UNIT - 2 **L-8**

NETWORK THEOREMS : Superposition, Thevenin's, Norton's, Reciprocity, Compensation, Maximum Power transfer, Tellegan's and Millman's theorems for both DC and AC circuits

UNIT - 3 **L-9**

RESONANCE: Series and Parallel Resonance, Different combinations, Quality factor, Bandwidth, Selectivity of different circuits.

THREE PHASE SYSTEMS: Three phase voltage generation, Wye and Delta connections, Relationships between line and phase quantities, Balanced and unbalanced systems, Power in three phase circuits.

UNIT - 4 **L-8**

TWO PORT NETWORKS: Open circuit (impedance), Short circuit (admittance), Transmission (ABCD) and Inverse Transmission, Hybrid and inverse hybrid parameters, Interrelation between them, Inter connection of 2-port networks.

COUPLED CIRCUITS: Concept of mutual coupling, Energy considerations, Calculation of equivalent inductance in complex coupled circuit, Coupled impedance, Linear transformer, Ideal transformer considerations.

UNIT - 5 **L-10**

TRANSIENTS : Initial value and final value theorems in laplace transforms, Response of simple R-L, R-C and R-L-C series and parallel circuits subjected to DC and sinusoidal excitations using differential equation approach and laplace transform method with initial conditions, Time constant of R-L, R-C, Series and parallel R-L-C circuits, Response of RL, RC, RLC circuits for impulse and pulse excitations using laplace transform method, Convolution integral, Applications.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Verification of ohm's law, KVL and KCL
2. Determination of mutual inductance for 2 or 3 inductive coils connected in series and parallel.
3. Verification of source transformation technique.
4. Determination of Average and R.M.S. Values of various waveforms.
5. Determination of impedance in complex AC circuits.
6. Measurement of Active and Reactive Power for Star / Delta connected balanced load.
7. Measurement of 3-phase Power by two Wattmeter Method for balanced and unbalanced load (Star / Delta)
8. Verification of Thevenin's , Norton's Theorem , Super-position and Maximum Power Transfer Theorem
9. Determination of Z, Y, h and ABCD Parameters in a Two-Port Network
10. Determination of Time-Response in simple series RL and RC networks

TEXT BOOKS:

1. A.Chakrabarti, "Circuit Theory Analysis & Synthesis, 4th edition, Dhanpat Rai & Co, 2005
2. W.H.Hayt, J.E.Kimmerly and Steven.M.Durbin "Engineering circuit analysis" 6th edition, Tata Mc Graw Hill, 2009.

REFERENCE BOOKS:

16EE205 ELECTROMAGNETIC FIELDS AND TRANSMISSION LINES

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course offers the fundamental knowledge of electro magnetic fields involved in various electrical engineering applications. It introduces Cartesian, Cylindrical and Spherical coordinate systems for Electromagnetic Fields along with the concepts of electrostatics and dynamics for wave propagation in transmission lines and free space. The objective of course is to describe and analyze the facts behind the propagation of signals through transmission lines and free space.

Course Outcomes:

The student will be able to:

- Understand various coordinate systems and vector calculus to electric and magnetic fields.
- Analysethe characteristics, properties and applications of Static Electric fields
- Analysethe characteristics, properties and applications of Static Magnetic Electric fields
- Apply Faraday's Law and Maxwell's Equation to Electro Magneticfields
- Analyse the propagation of Electro Magnetic wave in different media and understand Poynting Vector
- Explain the characteristics of transmission lines used for Electromagnetic Wave propagation

SKILLS:

✓ *Classify the material as linear, isotropic and homogeneous.*

✓ *Draw the magnetic flux patterns for various magnetic sources.*

✓ *Determine electromagnetic field intensities for various kinds of sources in different media.*

✓ *Determine dimensions of the transmission line for various initial conditions.*

✓ *Calculate the transmission line parameters such as characteristic impedance, propagation constant and absorbtion coefficient for mismatched load conditions.*

ACTIVITIES:

- *Draw the field lines due to point charge, line of charges and sheet of charges.*
- *Draw the field lines to illustrate refraction through dielectric.*
- *Draw the field lines to illustrate reflection through a metal plate.*
- *Identify the useful operating frequency range of the given metallic wire.*

UNIT - 1 **L-10, T-3**

CO-ORDINATE SYSTEMS AND VECTOR CALCULUS : Introduction to coordinate systems, Cartesian, Cylindrical and spherical co-ordinate systems, Vector calculus - Differential length, area and volume, Introduction to line, Surface and volume integrals; Definition of Del operator, Gradient, Divergence and curl, Stokes theorem and Laplacian of a scalar.

UNIT - 2 **L-9, T-3**

ELECTROSTATIC FIELDS : Coulomb's law in vector form, Introduction of electric flux, Electric flux density, Electric field intensity, Gauss's law, applications of Gauss's law, Electric field due to continuous distribution of charge, Electric dipole and energy density in electrostatic fields, Electric field in material space - Properties of materials, Convection and conduction currents, Conductors; Polarization in dielectrics, Dielectric constants, Continuity equation and relaxation time, Boundary conditions in electrostatics, Poisson's and Laplace's equations and capacitance.

UNIT - 3 **L-9, T-3**

MAGNETO STATIC FIELDS : Magnetic flux and magnetic flux density, Biot-Savart's law, Ampere's circuit law, Application of Ampere's law, Scalar magnetic and vector magnetic potential, Nature of magnetic materials, Forces due to magnetic field, Magnetic torque and moment, Magnetic dipole, Magnetization in materials, Magnetic boundary conditions, Inductors and inductances, Magnetic energy.

UNIT - 4 **L-8, T-3**

MAXWELL EQUATIONS AND WAVES PROPAGATION : Faraday's Law, Transformer and motional electromotive forces, Displacement current, Maxwell equations in differential and integral form, Electromagnetic wave propagation - Wave propagation in lossy dielectrics, Plane waves in lossless dielectrics, Plane wave in free space, Plane waves in good conductors; Power and the pointing vector, Reflection of a plane wave in a normal incidence.

UNIT - 5 **L-9, T-3**

TRANSMISSION LINES : Introduction to transmission lines with parameters, Transmission line voltage and current equations, Input impedance, Characteristic impedance, Standing wave ratio and power, Some applications of transmission lines.

TEXT BOOKS:

1. William H. Hayt and John. A. Buck, "Engineering Electromagnetics", 7th edition, Mc. Graw-Hill Companies, 2005.
2. M.O.Sadiku, "Elements of Electromagnetics", 2nd edition, Oxford University Press, 1995.

REFERENCE BOOKS:

16EC205 DIGITAL ELECTRONICS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

Digital Electronics deals with fundamentals of number systems, Boolean expressions that are used to realize combinational and sequential circuits. Its objective is to minimize the logical expressions using Boolean postulates, to design various combinational and sequential circuits and to provide with sufficient number of applications to demonstrate the techniques and mathematics used.

Course Outcomes:

Students will be able to:

- Understand the fundamental concepts of digital circuits.
- Designing and practical implementation of Combinational and Sequential logic circuits.
- Analyse the working of ADC and DAC.
- Apply the knowledge of Boolean algebra to implement logic gates.
- Explain the functioning of 8085 microprocessor.

SKILLS:

✓ *Making conversions between numbers of different radices.*

✓ *Identifing the different gates and their properties.*

✓ *Minimize Boolean expression.*

✓ *Constructing different combinational circuits.*

✓ *Constructing different sequential circuits.*

✓ *Verify the functionality of digital circuits.*

✓ *Designing memories.*

ACTIVITIES:

- o *Choose a Gate for digital circuit.*
- o *Design digital circuits using universal gates.*
- o *Design Combinational circuits like adder encoder, decoder.*
- o *Design Sequential circuits like flip flops, counters.*
- o *Design Finite state machines like Mealy and Moore machines.*

UNIT - 1 **L-9**

NUMBER SYSTEMS AND BOOLEAN ALGEBRA: Review of number systems - Conversions, Arithmetic operations, Binary codes, Parity code, Hamming code; Fundamental concepts of Boolean algebra- Basic theorems and properties, Canonical and standard forms, Logic gates, Algebraic simplification and realization with basic gates and universal gates.

UNIT - 2 **L-9**

MINIMIZATION OF SWITCHING FUNCTIONS: Map method, Prime implicants, Don't care combinations, Minimal SOP and POS forms, Tabular method, Prime implicant chart.

UNIT - 3 **L-9**

COMBINATIONAL LOGIC DESIGN: Design using conventional logic gates - Encoder, Decoder, Multiplexer, Demultiplexer, Parity bit generator, Code converters, (Designing with gates along with mention of IC numbers); Basic PLDs - PAL, PLA, ROM and PROM.

UNIT - 4 **L-10**

SEQUENTIAL LOGIC DESIGN: Classification of sequential circuits - Latches, Flip-Flops, SR, JK, T, D, triggering and Excitation tables, Design of sequential circuits; Shift registers, Counters, FSM, Sequence detectors.

UNIT - 5 **L-8**

LOGIC FAMILIES: Introduction to logic families - CMOS logic, Bipolar logic, Transistor logic, TTL families; CMOS/TTL Interfacing.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to :

- understand different digital circuits.
- design combinational circuits.
- design sequential circuits.
- analyze FSM for completely specified and incompletely specified sequential machines.
- analyze different types of memories.

LIST OF EXPERIMENTS Total hours:30

Design and Implementation of

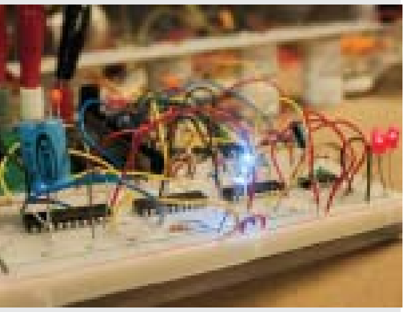
1 Basic Logic Gates.
2 Adders.
3 Subtractor.
4 Decoder.
5 Encoder.
6 Multiplexer.
7 De-Multiplexer.
8 Parity Circuits.
9 Comparator.
10 Flip Flops.
11 Registers.
12 Shift Registers.
13 Counters.
14 Finite State Machines (FSM).

TEXT BOOKS :

1. Morris Mano, "Digital Logic & Computer Design", 1st edition, Pearson, 2013.
2. John F.wakerly, "Digital Design Principles and Practices", 3rd edition, Pearson/PHI/Pearson Education, 2015.

REFERENCE BOOKS :

1. John M. Yarbrough, "Digital Logic Applications and Design", 1st edition, Thomson Publications, 2010.
2. Fletcher, "An Engineering Approach To Digital Design", 1st edition, Prentice Hall of India. 2009.
3. R.P.Jain, "Modern Digital Electronics", 3rd edition, Tata McGraw–Hill publishing company limited, New Delhi, 2010.
4. D. Roy Chowdhury, "Linear Integrated Circuits", 2nd edition, New Age International(p)Ltd, 2012.



16EE207 ELECTRONIC DEVICES AND CIRCUIT THEORY

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course deals with fundamental concepts of semiconductor physics, devices and circuits. The objective of the course is to enable students to hookup and understand working of simple electronic circuits such as clippers, clampers, amplifiers, filters and regulators.

Course Outcomes:

The student will be able to:

- Understand operation of semiconductor devices through energy band diagrams.
- Analyze the characteristics of various semiconductor devices.
- Differentiate between bipolar and unipolar conduction.
- Understand the usefulness of semiconductor devices in circuit making.
- Develop simple electronic circuits for various applications.
- Understand the different semiconductor devices with prescribed characteristics to implement or construct an electronic circuit to give specified output.

SKILLS:

✓ *Identify defective electronic devices.*

✓ *Identify semiconductor diode for a specific application.*

✓ *Identify the transistor type for a given application.*

✓ *Design and simulate simple electronic circuits using Multisim.*

✓ *Design of amplifier for specified gain.*

UNIT – 1 **L-10**

SEMICONDUCTOR DIODES: Intrinsic and extrinsic semi conductors with their energy band diagrams, Mass action law, Formation of pn junction diode, PN-diode working under forward and reverse bias, V-I characteristics of diode, Diode equation, Temperature dependence of V-I characteristics, Energy band diagram of diode, Transition and diffusion capacitances, specifications of diodes, Breakdowns in diodes, Zener diode, Tunnel diode, Varactor diode, LED, Photo diode and LCD.

UNIT – 2 **L-8**

DIODE APPLICATIONS: Basic building blocks of linear mode power supply, Derivations of ripple factor, Efficiency, TUF, Peak factor, Form factor, Percentage regulation and PIV of half wave rectifier, Centre-tapped full wave rectifier and bridge rectifier, Circuit operation and derivation of ripple factor for capacitor filter, Simple zener regulator, Basic operation and types of diode clippers and basic operation and types of diode clampers.

UNIT – 3 **L-9**

TRANSISTORS:

BJT: Formation of PNP and NPN transistors, Transistor current components, Transistor as an amplifier - CB, CE and CC configurations with performance comparison.

FET: Working principles and characteristics of JFET and MOSFET.

UNIT – 4 **L-8**

TRANSISTOR BIASING (BJT & FET): DC load line, AC load line and selection of operating point, Need for biasing, Various biasing techniques - Fixed bias, Collector to base bias and self bias with stability factors; Various compensation circuits, Thermal runaway and thermal stability.

UNIT - 5 **L-10**

SINGLE STAGE AMPLIFIERS:

BJT amplifiers: Small signal low frequency transistor amplifier circuits, h-parameter representation of a transistor, Analysis of single stage transistor amplifier using h-parameters - Voltage gain, Current gain, Input impedance and output impedance; Comparison of transistor configurations in terms of A_i, Z_i, A_v and Z_o, Frequency response of common emitter amplifier, Common base amplifier, Common collector amplifier.

FET amplifiers: FET amplifiers at low frequencies, CS, CD and CG configurations at low frequencies, Gain band width product.

ACTIVITIES:

- *Choose a diode for a cell-phone / laptop / tablet adapter.*
- *Zener diode for voltage regulation.*
- *Design three types of biasing circuits and determine the stability factors in each case.*
- *Transistor as an amplifier for the given specifications.*
- *Design a wideband amplifier with FET.*

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. PN Junction diode characteristics.
2. Zener diode characteristics
3. Design Zener Diode based Voltage Regulator
4. Determination of ripple factor and efficiency of half wave rectifier with and without filter
5. Determination of ripple factor and efficiency of center tapped full wave rectifier with and without filter.
6. Determination of ripple factor and efficiency of bridge rectifier with and without filter.
7. Construction of various diode clipping circuits.
8. Transistor CB characteristics (Input and output).
9. Transistor CE characteristics (Input and output).
10. Transistor CC characteristics (Input and output).
11. FET characteristics.

TEXT BOOKS:

1. J. Millman, C.C. Halkias, "Electronic Devices and Circuits", 9th edition, Tata Mc-Graw Hill, 2012.
2. S.Salivahanan, "Electronic Devices and Circuits" , 5th edition,Tata Mc-Graw Hill, 2010.

REFERENCE BOOKS :

1. R.L.Boylestad and Lovis Nashelsky, "Electronic Devices and Circuits Theory", 10th edition, Pearson Education, 2010.
2. K Thomson, "Electronic Switching Circuits", 2nd edition, Oxford University Press, 2012.
3. Sedra A.S. and K.C. Smith, "Micro Electronic Circuits", 6th edition, Oxford University Press, 2010.

16EE202 DC MACHINES

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course deals with construction, types, working principle, operation and applications of DC Generators and Motors. The objective of the course is to enable the students to understand the characteristics of DC Machines and analyze their performance under different testing conditions.

Course Outcomes:

The student will be able to:

- Explain the operation of DC generator and types
- Identify armature reaction and commutation concepts
- Analyze the characteristics and performance of DC generators.
- Describe the torque developed and performance of DC motors.
- Apply the speed control of DC motors
- Testthe performance of different DC machines.

SKILLS:

- ✓ *Analyze magnetizing characteristics of DC Generators*
- ✓ *Analyze load characteristics of DC Generators*
- ✓ *Speed control of DC Motors*
- ✓ *Parallel operation of DC generators.*
- ✓ *Analyze performance of DC machines by conducting various tests.*

ACTIVITIES:

- *Validate Faraday's laws.*
- *Design a simple loop DC generator.*
- *Speed control of DC motor.*
- *Design a battery operated cooling fan.*
- *Design a battery operated electric car.*

UNIT - 1 **L-10**

CONSTRUCTION, WORKING OF D.C. GENERATORS AND EXCITATION METHODS: D.C. Generators - Constructional details, Principle of operation, Action of commutator; Armature windings types - lap and wave windings; E.M.F equation - Problems; Methods of excitation of generators - Separately excited and self excited; Causes of failure to self excitation and remedial measures.

UNIT - 2 **L-9**

TYPES OF D.C. GENERATORS, ARMATURE REACTION AND COMMUTATION: Types of generators - Shunt, Series and compound, Problems; Armature reaction - Effect of armature reaction, Cross magnetizing and de-magnetizing AT/pole, Compensating winding, Interpoles; Commutation process – Reactance voltage, Methods to improve commutation.

UNIT - 3 **L-10**

CHARACTERISTICS AND PARALLEL OPERATION OF D.C. GENERATORS: Build-up of E.M.F under no load, Critical field resistance and critical speed, Internal and external characteristics of shunt, Series and compound generators, Parallel operation of D.C. shunt and series generators, Use of equalizer bar and cross connection of field windings, Load sharing, Applications of DC generators.

UNIT - 4 **L-8**

WORKING OF D.C. MOTORS, TYPES, SPEED CONTROL METHODS AND STARTERS: Principle of operation, Back E.M.F, Torque equation, Starting of DC motors - Necessity and types of starters, 3 point and 4 point starters; Characteristics of shunt, Series and compound motors, Speed control of DC Motors - Armature and field control, Ward-Leonard system; Applications of DC motors.

UNIT - 5 **L-8**

TESTING OF D.C MACHINES: Types of losses - Constant and Variable losses; Calculation of efficiency - Condition for maximum efficiency; Methods of testing - Direct, Indirect and regenerative testing, Brake test, Swinburne's test, Hopkinson's test, Field's test, Retardation test, Problems.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Determination of critical field resistance and critical speed using magnetization characteristics of DC shunt generator.
2. Load test on DC shunt generator.
3. Load test on DC series generator.
4. Load test on DC compound generator.
5. Hopkinson's test on DC shunt machines.
6. Fields test on DC series machines.
7. Swinburne's test on DC shunt motor.
8. Brake test on DC compound motor.
9. Brake test on DC shunt motor.
10. Retardation test on DC shunt motor.
11. Separation of losses in DC shunt motor.
12. Speed control of D.C. shunt motor.

16EE204 POWER GENERATION SYSTEMS

Hours Per Week :

L	T	P	C
3	1	-	4

Course Description and Objectives:

This course provides an overview of various conventional power generating stations consisting of hydro, thermal, gas, nuclear and non-conventional (solar and wind) power plants. It also deals with various types of electric substations, their layouts and overview of tariff methods. The objective of course is to enable the students to understand the various methods of electric power generation and economical aspects involved in it.

Course Outcomes:

The student will be able to:

- Understand different components and their functioning in thermal and nuclearpower plants.
- Understand different components and their functioning in hydro, gas and combined cycle power plants.
- Understand different components and their functioning in solar and wind power plants.
- Identify the different components and busbar schemes in a substation.
- Analyze the economic aspects of power generation and tariff schemes.
- Develop a prototype, analyze the practical substation and different tariff schemes and arrive at results and conclusions from the learned theoretical knowledge.

SKILLS:

✓ *Understand layout and functioning of conventional power generating plants.*

✓ *Understand layout and functioning of solar and wind power plants.*

✓ *Analyze the different tariff schemes.*

✓ *Analyze the performance indices of a power generating plants.*

✓ *Sketch the layout of substations with specifications of various equipments.*

UNIT - 1 **L-10, T-3**

STEAM AND NUCLEAR POWER GENERATION PLANTS:

Thermal power station: Advantages and disadvantages, Schematic arrangement, Selection of site, Major and auxiliary power plant equipment, Environmental aspects for selecting the site and locations of thermal power stations.

Nuclear power station: Advantages and disadvantages,Schematic arrangement, Selection of site, Radioactivity, Nuclear fuels, Types of reactors - Pressurized water reactors, Boiling water reactors, Gas-cooled reactors; Hazards, Radioactive waste disposal, Environmental aspects for selecting the sites and locations of nuclear power stations.

UNIT - 2 **L-10, T-3**

HYDRO, GAS TURBINE AND COMBINED CYCLE PLANTS:

Hydro power station: Advantages and disadvantages, Schematic arrangement, Choice of site, Constituents of hydro power plant, Hydrographs – Flow duration curve, Mass curve; Pumped Storage plant, Environmental aspects for selecting the sites and locations of hydro power stations.

Gas turbine power plants: Advantages and disadvantages, Schematic arrangement, Equipment and performance.

Combined cycle power pants: Need for Combined cycle power pants, Advantages and disadvantages, Schematic arrangement, types, Integrated gasification combined cycle (IGCC), cogeneration plant, Equipment and performance.

UNIT - 3 **L-8, T-3**

SOLAR AND WIND POWER GENERATION PLANTS:

Need for Renewable energy, Sources and their features.

Solar Power Plant: Importance, Working principle and types, Site selection, Plant layout, Components, Merits and demerits.

Wind Power Plant: Importance, Working principle and types, Site selection, Plant layout, Components, Merits and demerits.

UNIT - 4 **L-8, T-3**

SUBSTATIONS

Indoor and Outdoor substations, Substation layout, Bus bar arrangements in the Sub-Stations -Single bus bar, Sectionalized single bus bar, Main and transfer bus bar system with relevant diagrams.

UNIT - 5 **L-9, T-3**

ECONOMIC ASPECTS OF POWER GENERATION

Economics of Power Generation: Load curve, Load duration and integrated load duration curves, Load, Demand, Diversity, Capacity, Utilization and Plant use factors, Numerical Problems.

Tariff Methods: Costs of generation - Fixed, Semi-fixed and Running Costs; Desirable characteristics of Tariff methods, Tariff methods - Flat rate, Block rate, Two part, Three part, and power factor tariff methods, Numerical problems.

TEXT BOOKS:

1. M.L.Soni, P.V.Gupta,U.S.Bhatnagar and A.Chakraborti, “A Text Book on Power System Engineering”, 1st edition, Dhanpat Rai & Co. Pvt. Ltd., 2007.
2. V.K Mehta and Rohit Mehta, “Principles of Power Systems”, 1st edition, S.Chand & Company Ltd., New Delhi, 2009.

REFERENCE BOOKS:

1. G.D.Rai, “Non Conventional Energy Sources”, 4th edition, Khanna Publishers, New Delhi, 2000.
2. C.L.Wadhwa, “Electrical Power Systems”, 4th edition, New age International (P) Limited, 2008.
3. S.N.Singh, “Electrical Power Generation”, 2nd edition, Transmission and Distribution PHI, 2010.
4. S.P.Sukhatme, J.K.Nayak, “Solar Energy”, 1stedition, Tata Mc-Graw Hill Pvt. Ltd., New Delhi, 2010
5. Godfrey Boyle, “Renewable Energy, Power for a Sustainable Future”, 1stedition, Oxford University Press, U.K., 2012.

ACTIVITIES:

- *Design a prototype of hydro electric power station with turbine.*
- *Design a working model of solar power plant.*
- *Design a prototype of wind energy conversion system.*
- *Study of power consumption trend in VFSTR University.*
- *Study of power tariff scheme in VFSTR University.*

16EE206 POWER ELECTRONIC DEVICES AND CIRCUITS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course deals with various applications of electronic devices for conversion, control and conditioning of the electrical power. It provides an overview of different types of power semiconductor devices, their switching characteristics, operation and application in power conditioning circuits. The objective of this course is to develop expertise in switching techniques, operation and control of AC-DC, DC-DC, DC-AC and AC-AC converters.

Course Outcomes:

The student will be able to:

- Understand the differences between signal level and power level devices.
- Analyse controlled rectifier circuits.
- Design of DC-DC converters for the given application
- Analyse the operation of voltage source inverters.
- Analyse the operation of AC-AC converters.
- Demonstrate the working of all Power Converters and analysing performance with MATLAB software for different loads.

SKILLS:

✓ *Understand the switching characteristics of various power semi conductor devices.*

✓ *Design the commutation circuits for SCRs based on application.*

✓ *Design a SCR based controlled converter for given specifications.*

✓ *Design a buck converter for given specifications.*

✓ *Design a boost converter for given specifications.*

✓ *Design a PWM generator for given duty ratio.*

UNIT - 1 **L-10**

POWER SEMI-CONDUCTOR DEVICES : Structure, Operation, Static and dynamic characteristics of SCR,TRIAC, Power transistor, MOSFET, IGBT and GTO; Protection schemes, Triggering and commutation of SCR.

UNIT - 2 **L-8**

PHASE–CONTROLLED CONVERTERS : Operation and analysis of 2-pulse, 3-pulse, 6-pulse and dual converters; Inverter operation of fully controlled converter, Effect of source inductance, Distortion, Displacement and ripple factor of converters.

UNIT - 3 **L-8**

CHOPPERS : Step-down and step-up choppers, Control strategies - Time ratio and current limit control; Voltage commutated, current commutated and load commutated choppers.

UNIT - 4 **L-9**

INVERTERS : Classification of inverters – Single phase, Three phase, Series and parallel inverters; Voltage control of single and three phase inverters, Current source inverters and harmonic reduction in inverters.

UNIT - 5 **L-10**

AC - AC CONVERTERS : Single phase AC voltage regulators with R and RL loads, Sequence control of AC voltage regulators; Single phase to single phase cyclo converter - Step up and step down with R and RL loads.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Study of characteristics of SCR, MOSFET and IGBT
2. Gate firing circuits for SCR
3. Single phase AC voltage controller with R and RL loads.
4. Single phase fully controlled bridge converter with R and RL loads.
5. Forced commutation circuits.
6. DC Jones chopper
7. Single phase parallel inverter with R and RL load.
8. Single phase cyclo-converter with R and RL load.
9. Single phase half controlled converter with R and RL load.
10. Single phase series inverter with R and RL load.
11. Single phase bridge converter with R and RL load.

TEXT BOOKS:

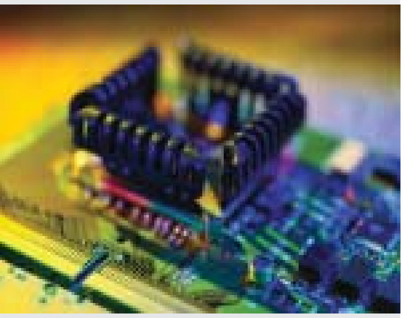
1. P.S.Bimbra, “Power Electronics” 5th edition, Khanna publishers, 2013.
2. M.D. Singh and K.B Khanchandani, “Power Electronics”, 2nd edition, Tata Mc-Graw Hill, 2009.

REFERENCE BOOKS:

1. Vedam Subrahmanyam, “Power Electronics”, 1st edition, New Age, 2001.
2. Ned Mohan, “Power Electronics”, 2nd edition, Wiley, 1995.
3. C.W Lander, “Power Electronics”, 3rd edition, Mc-Graw Hill, 1993.
4. M.H.Rashid, “Power Electronics: Circuits, Devices and Applications”, 3rd edition, Prentice Hall of India, 2009.

ACTIVITIES:

- *Study the data sheets of commercial SCR, GTO and MOSFET.*
- *Design of commutation circuits*
- *Design of gate firing circuits*
- *Design of DC-DC converter for speed control of DC motor*
- *Design of a simple focus light.*
- *Design of a speed regulator for ceiling fan*
- *Design of cyclo converter based heater.*



16EE208 ANALOG ELECTRONICS

Hours Per Week :

L	T	P	C
3	-	2	4

Course Description and Objectives:

This course is an extension of electronic devices and circuit theory and deals with feedback amplifiers, oscillators, multistage amplifiers, OP-amps, ADC, DAC, 555 timers and PLL. The objective of the course is to design simple circuits using these devices.

Course Outcomes:

The student will be able to:

- Understand the characteristics of diode, transistors and applications of op amp and 555 timer.
- Analyse various rectifier and amplifier circuits.
- Design sinusoidal and non-sinusoidal oscillators.
- Apply the knowledge of KVL and KCL to obtain voltage /current/waveform at different points in analog electronic circuits such as diode clippers, clampers
- Conduct experiment using analog electronic components to function as amplifier, comparator, rectifier, ADC and DAC.

SKILLS:

✓ *Analyze the operation of transistor based multistage and feedback amplifiers.*

✓ *Design and simulate amplifier circuits using multisim.*

✓ *Design and analysis of OP-amp based function generator.*

✓ *Realization of multivibrator circuits using 555 timer.*

✓ *Data acquisition using ADC and DAC.*

UNIT – 1 **L-10**

FEEDBACK AMPLIFIERS: Concept and types of feedback amplifiers, Effects of feedbacks, Different topologies of feedback amplifiers and their analysis.

OSCILLATORS: Barkhausen's crieterion for oscillations, Frequency of oscillation for hartley, Colpitts, RC phase shift, Weinbridge and crystal oscillators.

UNIT – 2 **L-8**

HIGH FREQUENCY TRANSISTOR AMPLIFIER CIRCUITS: High frequency model of transistor and its cut-off frequencies, Single stage and multistage amplifiers at high frequencies, Calculation of gain and bandwidth for single and multistage amplifiers.

UNIT - 3 **L-9**

OP-AMP AND ITS APPLICATIONS: Introduction to integrated circuits, Basic information of Op-amp, Ideal and practical Op-amp, Internal circuit, DC and AC characteristics of Op-amp, Modes of operation - Inverting, Non-inverting and differential; Basic application of Op-amp - V to I and I to V converters, Sample and hold circuits, Multipliers, Dividers, Comparators, Differentiators and integrators.

UNIT – 4 **L-9**

555 TIMER: Introduction to 555 timer and its functional diagram; Applications of 555 timer - Schmitt Trigger, Monostable and astable multivibrators, Frequency divider, Linear ramp generator and symmetrical square wave generator.

PHASE LOCKED LOOPS: Introduction to PLL, Principles and description of individual blocks of 565; Applications of PLL - Frequency multiplier and frequency synthesizer.

UNIT – 5 **L-9**

D/A AND A/D CONVERTERS : Introduction to D/A and A/D converters, Basic DAC techniques - Weighted resistor DAC, R-2R ladder DAC, Inverted R-2R DAC, and IC1408 DAC; Different types of ADCs - Parallel comparator type ADC, Counter type ADC, Successive approximation ADC and dual slope ADC; DAC and ADC specifications.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Design of oscillator circuits.
2. Non-linear wave shaping – clippers.
3. Non-linear wave shaping – clampers.
4. Schmitt trigger using 555 timer.
5. Design of astable multivibrator using 555 timer.
6. Design of monostable multivibrator using 555 timer.
7. Design of basic arithmetic circuits such as adder and subtractor.
8. Design of Integrator and differentiator.
9. Design of voltage comparators using OP-Amp.
10. Digital to analog converter (R-2R ladder).
11. Design of parallel comparator type ADC.

TEXT BOOKS :

1. J. Millman and C.C.Halkias, "Electronic Devices and Circuits", 9th edition, Tata Mc-Graw Hill, 2012.
2. D. Roy Chowdhury, "Linear Integrated Circuits", 3rd edition, New Age International (P) Ltd, 2010.

REFERENCE BOOKS:

1. David A. Bell, "Solid State Pulse circuits", 5th edition, Prentice Hall of India, 2011.
2. Ramakanth A. Gayakwad, "Op-Amps and Linear ICs", 5th edition, Prentice Hall of India, 2011.
3. R.L.Boylestad and Lovis Nashelsky, "Electronic Devices and Circuits Theory", 10th edition, Pearson Education, 2010.

ACTIVITIES:

- *Design of colpitts oscillator for a specific frequency.*
- *Design of Hartley oscillator for a specific frequency.*
- *Design of OP-amp based square wave generator.*
- *Design of pulse generator for triggering SCR.*
- *Design of basic arithmetic based circuits such as adder and subtractor.*
- *Design of Integrator and differentiator.*

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, preparing resumé, group discussion and interview skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to :

- Analyse the condition of workplace and develop formal communication skills
- Comprehend the working situation by teaming up and working group activities
- Apply the suitable language and speech pattern in a work place
- Enhance the ability of critical and lateral thinking while addressing the issues at any situation

SKILLS:

- ✓ *Communicate and understand the difference between soft skills and hard skills.*
- ✓ *Professionalism and employability skills.*
- ✓ *Plan career by drawing their SWOT, setting the goal, learn the importance of time and stress management.*
- ✓ *Vocabulary, situational english, group discussion, reading comprehension and listening comprehension which are essential for all competitive examinations.*
- ✓ *Prepare resumé and learn how to face interview.*
- ✓ *Gender sensitive language, good manners, emotional intelligence and essential skills.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - The process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal); Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, Employability skills.

C) CAREER PLANNING: Job vs career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY: Johari Window for SWOT analysis, Setting a SMART goal using the provided grid, Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes and suffixes, Synonyms and antonyms, Collocations, One-word substitutes, Analogies, Idioms and phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student), Vocabulary exercises with hand-outs, Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, Dynamics of group discussion, Intervention,Summarizing and conclusion, Voice modulation, Content generation, Key word approach (KWA), Social, Political, Economic, Legal and technical approach (SPELT), View point of affected part (VAP), Language relevance, Fluency and coherence.

ACTIVITY: Viewing a recorded video of GD and Mock sessions on different types of GD topics - Controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, Understanding employer expectations, Pre-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele-interviews, Video interviews, Frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in group discussion.

B) LISTENING COMPREHENSION: Listening as a skill, Different types of listening, Active and passive listening, Top-down approach, Bottom-up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, Cultural sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression, Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other's views, Assisting others, Sharing, Participating actively.

ACTIVITY: Johari Window, Games and case studies.

III Year B.Tech. EEE I - Semester

L	T	P	TO	C
4	-	-	4	4

EE313 A.C. MACHINES – II

Course Description & Objectives:

To understand the construction of Synchronous generators & motors and special machines. Develop the ability to use Synchronous generators and motors for various practical applications.

Course Outcomes:

- *Describe the principle of operation and construction of synchronous machines.*
- *Determine and compare voltage regulation of alternators by different methods.*
- *Examine the real problem happening in parallel operation of Alternators.*
- *Plot V and inverted V curves for different power factors and loadings and Plot the power circles of Synchronous motor.*
- *Identify the different features of synchronous & special machines*

UNIT I - Construction & Characteristics of Alternators :

Constructional features of Alternators : Types of alternators–revolving field type- rotating armature type – salient pole and non-salient pole field structure. Speed and frequency – cooling.

Armature windings: Single layer – double layer – full and fractional pitch windings – pitch factor, distribution factor, winding factor – expression for induced emf – Harmonics and their reduction.

Load characteristics: Voltage regulation – causes – effective resistance – leakage reactance – armature reaction – synchronous reactance – open circuit and short circuit tests – phasor diagrams.

UNIT II - Voltage Regulation and SC Characteristics :

Methods of predicting regulation : EMF and MMF methods – ZPF characteristic – Potier reactance – ASA method

Regulation of Salient pole generator : Slip test – direct and quadrature axes synchronous reactance – phasor diagrams – regulation.

Armature current oscillograms on sudden short circuit – determination of subtransient and transient reactances, (Xd”, Xd’).

UNIT III - Parallel Operation :

Parallel operation-methods of synchronization-circulating current – effect of change in excitation – effect of change in prime mover torque – influence of governors on load division between parallel units – Hunting of Alternators – synchronizing power.

UNIT IV - Analysis of Synchronous motors:

Synchronous motor : Principle of operation – phasor diagram– effects of changes of load and excitation on the phasor diagrams V - and inverted V-curves at constant power output - Hunting – damping – starting methods.

Mathematical analysis – Expression for power developed various conditions of maxima – stiffness of coupling – phasor diagrams of salient pole motor – expression for power developed-applications.

Graphical Analysis: Excitation circles – Power circles – construction – maximum and minimum conditions.

UNIT V - Special Machines :

Single phase induction motor: Constructional details – starting arrangements – performance curves and applications - equivalent circuit based on double revolving field theory determination of parameters.

A.C. Series motor – Characteristics – phasor diagram – compensated motor-commutation – interpoles – universal motors - applications.

Special Motors : Permanent magnet motors – stepper motors.

4	-	-	4	4

EE315 POWER SYSTEMS – II

Course Description & Objectives:

To find the parameters, regulation and efficiency of different transmission lines. Study various types of insulators and various types of underground cables.

Course Outcomes:

- Compute the transmission line parameters and transposition of lines
- Analyze different transmission line parameters and performance.
- Describe the power system transients and different condition on transmission lines
- Classify the insulators and explain voltage distribution in a string of suspension.
- Explain UG cables and sag and tension calculations on lines.

UNIT I - Transmission Line Parameters :

Types of conductors - calculation of resistance for solid conductors - Calculation of inductance for single phase and three phase, single and double circuit lines, concept of GMR& GMD, symmetrical and asymmetrical conductor configuration with and without transposition, Numerical Problems. Calculation of capacitance for 2 wire and 3 wire systems, effect of ground on capacitance, capacitance Calculations for symmetrical and asymmetrical single and three phase, single and double circuit lines, Numerical Problems.

UNIT II - Performance of Short and Medium Length Transmission Lines:

Classification of Transmission Lines - Short, medium and long line and their model representations - Nominal-T, Nominal-Pie and A, B,C, D Constants for symmetrical & Asymmetrical Networks, Numerical Problems. Mathematical Solutions to estimate regulation and efficiency of all types of lines - Numerical Problems. Performance of Long Transmission Lines: Long Transmission Line-Rigorous Solution, evaluation of A,B,C,D Constants, Interpretation of the Long Line Equations, Incident, Reflected and Refracted Waves-Surge Impedance and SIL of Long Lines, Wave Length and Velocity of Propagation of Waves - Representation of Long Lines - Equivalent-T and Equivalent Pie network models (numerical problems).

UNIT III - Power System Transients:

Types of System Transients - Traveling or Propagation of Surges - Attenuation, Distortion, Reflection and Refraction Coefficients - Termination of lines with different types of conditions - Open Circuited Line, Short Circuited Line, T-Junction, Lumped Reactive Junctions (Numerical Problems). Bewley's Lattice Diagrams (for all the cases mentioned with numerical examples).

UNIT IV - Performance of Transmission lines and Insulators :

Various Factors Governing the Performance of Transmission line:

Skin and Proximity effects Description and effect on Resistance of Solid Conductors -Ferranti effect - Charging Current - Effect on Regulation of the Transmission Line, Shunt Compensation. Corona - Description of the phenomenon, factors affecting corona, critical voltages and power loss, Radio Interference.

Overhead Line Insulators: Types of Insulators, String efficiency and Methods for improvement, Numerical Problems - voltage distribution, calculation of string efficiency, Capacitance grading and Static Shielding.

UNIT V - Mechanical Design and UG Cables :

Sag and Tension Calculations : Sag and Tension Calculations with equal and unequal heights of towers, Effect of Wind and Ice on weight of Conductor, Numerical Problems - Stringing chart and sag template and its applications.

Underground Cables: Types of Cables, Construction, Types of Insulating materials, Calculations of Insulation resistance and stress in insulation, Numerical Problems. Capacitance of Single and 3-Core belted cables, Numerical Problems. Grading of Cables - Capacitance grading, Numerical Problems, Description of Inter-sheath grading.

EE317 POWER ELECTRONIC DEVICES AND CIRCUITS

Course Description & Objectives:

This course is to explore the theory and applications of power electronics systems for high efficiency, renewable and energy saving conversion systems. To know the characteristics of different power electronics switches, drivers and selection of components for different applications. To understanding of the switching behavior and design of power electronic converters.

Course Outcomes:

- Understand the differences between signal level and power level devices
- Analyse controlled rectifier circuits.
- Design of DC-DC converters for the given application.
- Investigate the operation of voltage source inverters.
- Analyse the operation of AC-AC converters

UNIT I - Power semiconductor devices:

Power MOSFET, IGBT, GTO their operation and V-I characteristics- Basic theory of operation of SCR - static characteristics - Two transistor analogy - turn on and turn off methods - firing circuits - Dynamic characteristics-Specifications and ratings - Series and Parallel operation – protection circuits-numerical problems.

UNIT II - Single-Phase Control Rectifiers:

Single phase converters - single pulse and two pulse- mid point and bridge connections with R and RL loads –Effect of source inductance - problems.

UNIT III - Three-Phase Control Rectifiers:

Three phase converters - three pulse and six pulse - mid point and bridge connections - effect of source inductance- Dual converters - Problems - performance factors.

Choppers - principle of operation - Classification - Time ratio control and current limit control strategies - step down chopper - Derivation of load voltage and currents with R, RL loads- Jones Chopper - step up chopper - problems.

UNIT IV - AC Voltage Controllers:

Integral cycle control - Single phase half wave- two SCR's in anti parallel - with R and RL loads - modes of operation of Triac - Triac with R and RL loads- numerical problems .

Cyclo converters - Single phase mid point and bridge- with R and RL loads- step up and step down cyclo converters.

UNIT V - Inverters - single phase inverter:

Basic series inverter –modified- Basic parallel inverter - bridge inverters – THD-current source inverter-voltage control techniques for inverters - pulse width modulation techniques -numerical problems.

EE319 LINEAR CONTROL SYSTEMS

Course Description & Objectives:

This course is to explore the modeling of linear dynamic systems via differential equations and transfer functions utilizing input-output representations; analysis of control systems in the time and frequency domains and using transfer function and state-space methods

Course Outcomes:

1. Formulate differential equations for electromechanical systems.
2. Describe the effects of feedback on control systems.
3. Apply mathematical techniques to perform time response analysis of a control system.
4. Analyse linear control systems for absolute stability and relative stability using Root Locus technique and frequency domain analysis.
5. Design controllers and compensators for the given system to achieve desired specifications.

UNIT I - Introduction to Control Systems :

Introduction: Concepts of Control Systems - Open Loop and closed loop control systems and their differences - Different examples of control systems - Clasification of control systems.

Mathematical Models of Physical Systems : Differentical equations - transfer functions and block diagram representation of systems considering electrical systems as examples Block diagram algebra -Representation by Signal flow graph - reduction using Mason's gain formula - translational and rotational mechanical systems.

UNIT II - Feed-Back Characteristics and Control Components :

Feed-Back Characteristics : What is Feedback? Effects of feedback - reduction of parameter variations by use of feedback-Control over system dynamics - by the use of feedback.

Elements of Control Systems : DC Servo motor - AC Servo motor - Synchro transmitter and Receiver.

UNIT III - Time Response Analysis & Stability :

Time Response Analysis : Standard test signals - Time response of first order systems - Characteristic Equation of Feedback control systems, Transient response of second order systems - Time domain specifications - Steady state response - Steady state errors and error constant.

Concepts of stability : The concept of stability, Routh stability criterion.

UNIT IV - RL Technique & Frequency Response Analysis :

Root Locus Technique : The root locus concept - construction of root loci.

Frequency Response Analysis : Introduction, Frequency domain specifications - Bode diagrams - Determination of Frequency domain specifications from the Bode Diagram - Phase margin and Gain margin - Stability Analysis from Bode Plots. Polar Plots, Nyquist Plots and Nyquist stability criterion

UNIT V - Design and Modern Control Systems :

Design and Compensation Technique : Introduction and Preliminary design considerations - Lead, Lag, Lead-lag. PID controller.

State Space Analysis of Continuous Systems : Concepts of state, state variables and state model, derivation of state models from block diagrams, Diagonalization - Solving the Time Invariant state Equations - State Transition Matrix.

EE321 DIGITAL ELECTRONIC CIRCUITS
(Dept. Elective - I)

Course Description & Objectives:

As part of this course, students: To introduce the concepts and techniques associated with the number systems and codes. To minimize the logical expressions using Boolean postulates. To design various combinational and sequential circuits. To provide with an Sufficient Number of applications for the techniques and mathematics used in this course.

Course Outcomes:

- Assimilate the philosophy of number systems and codes.
- Perceive the Boolean laws and postulates and implementation using logic gates.
- Design and implement Combinational logic circuits.
- Design and implement Sequential logic circuits.
- Expound the nomenclature and technology in the area of logic families and memory devices.

UNIT I - Number System :

Binary arithmetic (Addition, subtraction, multiplication, division), octal number system, hexadecimal number system, 1's and 2's complement. Signed numbers, EX-3, gray code alphanumeric code, EBCDIC, ASCII,, Error detection & correction, parity, 7- bit hamming

UNIT II - Logic gates and Minimization :

Basic gates, Universal gates, and their truth tables, postulates of Boolean algebra, De-Morgan's theorem Min term and Max term representation of logical function, Minimization using K-map- Don't care condition, Quinn Mc-clusky method for minimization.

UNIT III - Combinational Logic :

Half and full adders, parallel adder, subs tractor, decoder (BCD to Seven segment), Encoder, Multiplexer, Demultiplexer, parity generation & checking, Look ahead carry generator.

UNIT IV - Sequential Logic :

Sequential circuits, flip-flops (SR,D,T, JK, Master-slave), timing specifications, asynchronous and synchronous counters-up/down counters. Registers , serial in serial out shift registers.

UNIT V - Memory and Logic Families :

Memory: RAM, ROM,PROM, EPROM and Flash memory, Introduction to Cache memory

Logic Families: Logic levels, propagation delay time, power dissipation fan-out and fan-in, noise margin, Comparison of logic families and their characteristics. TTL (NAND, NOT, TOTEMPOLE), CMOS (NOR,NOT and NAND) integrated circuits .

EC221 SIGNALS AND SYSTEMS
(Dept. Elective - I)

Course Description & Objectives:

This course is an introduction to the basic concepts and theory of analog signal processing. In this course signals & systems, the concepts associated with continuous-time signals and systems are focused.

The objective of this course is to provide understanding of the fundamental properties of linear systems, linear systems tools, especially transform analysis and convolution, to analyze and predict the behavior of linear systems.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- Understand basic signals and their representation using Fourier series. (unit-1)
- Apply the concept of transform techniques, convolution and correlation for continuous time signals (unit-2 and 4)
- Evaluate the step, impulse and system response of a LTI System to arbitrary inputs. (Unit-3)
- Learn the fundamentals of sampling including the implications of sampling theorem. (unit-5)

UNIT I - Introduction & Fourier series Representation of Periodic Signals:

Introduction to signals and systems. Basic signals, classification and operations.

Vectors vs Signals, Orthogonal functions, Representation of signals using orthogonal functions, Mean square error. Representation of Fourier series, Continuous time periodic signals, properties of Fourier series, Dirichlet's conditions, Trigonometric Fourier series , Exponential Fourier series and Complex Fourier spectrum.

UNIT II - Fourier Transforms & Laplace Transforms :

Deriving Fourier transform from Fourier series, Fourier transform of arbitrary signal, Fourier transform of standard signals, Fourier transform of periodic signals, properties of Fourier transforms, Fourier transforms involving impulse function and Signum function, Introduction to Hilbert Transform.

Review of Laplace transforms, Partial fraction expansion, Inverse Laplace transform, Concept of region of convergence (ROC) for Laplace transforms, constraints on ROC for various classes of signals, Properties of L.T's, relation between L.T and F.T. of a signal. Laplace transform of certain signals using waveform synthesis.

UNIT III - LTI Systems & Analysis:

Classification of Systems, Linear Time Invariant (LTI) System, Impulse Response, Step Response, response of a LTI system to arbitrary inputs, Transfer function of a LTI system. Filter characteristics of linear systems. Distortion less transmission, Signal bandwidth, System bandwidth, Ideal LPF, HPF and BPF characteristics, Causality and Paley-Wiener criterion for physical realization, relationship between bandwidth and rise time.

UNIT IV - Convolution & Correlation of Signals :

Concept of convolution in time domain and frequency domain, Graphical representation of Convolution, Convolution property of Fourier transforms. Cross correlation and auto correlation of functions, properties of correlation function, Energy density spectrum, Parseval's theorem, Power density spectrum, Relation between auto correlation function and power spectral density. Relation between convolution and correlation, Detection of periodic signals in the presence of noise by correlation, Extraction of signal from noise by filtering.

UNIT V - Sampling:

Sampling theorem: Graphical and analytical proof for Band Limited Signals, Impulse sampling, Natural and Flat Top Sampling, Reconstruction of signal from its samples, effect of under sampling- Aliasing, Introduction to Band Pass sampling.

TEXT BOOKS:

1. A.V. Oppenheim, A.S. Willsky and S.H. Nawab, "Signals and Systems", 2nd ed.,Prentice Hall of India, 1997.

EE323 ENERGY CONVERSION AND STORAGE TECHNOLOGIES
(Dept. Elective - I)

Course Description & Objectives:

Direct energy conversion systems. Need and necessity of energy storage systems and their desirable characteristics. To discuss on the working of a typical fuel cell, its types and to elaborate on its thermodynamics and kinetics. To detail on the various Hydrogen storage options

Course Outcomes:

- Analyse the basic concepts of energy storage system.
- Apply the energy storage systems in real time application.
- Design of suitable battery configuration.
- Examine various hydrogen storage options.
- Compare the electrical, mechanical and thermal energys storage systems.

UNIT I - Direct Conversion Of Thermal To Electrical Energy:

Thermoelectric Converters –Thermionic converters – MHD – Ferro electric converter – Nernst effect generator.

UNIT II - Chemical & Electromagnetic Energy To Electrical Energy:

Batteries – types – working – Cell capacity; Types & Specifications of Batteries; Charging & Discharging of Battery; Safe disposal of Batteries -performance governing parameters.

UNIT III - Energy Storage Systems:

Energy Storage Technologies - Mechanical energy, Electrical energy, Chemical energy, Thermal energy.

UNIT IV - Fuel Cells:

Basics – types – working – comparative analysis – thermodynamics and kinetics of fuel cell process –performance of fuel cell – applications - advantages and drawbacks - comparison on battery Vs fuel cell

UNIT V - Hydrogen Storage:

Hydrogen storage options – compressed gas – liquid hydrogen – Hydride – chemical Storage – Comparisons. Safety and management of hydrogen.

TEXT BOOKS:

SR004 SEMINAR

Course Description & Objectives:

In this course students are expected to study specialized area by doing literature survey, understanding technical problems and arriving at a status report in that area. During the preparation of seminar, the student is expected to learn investigation techniques, study suitable research papers, understanding concepts, techniques, prevailing results etc., analyze it and present a seminar report.

Course Outcomes:

- Collect information about emerging technologies /market demands/ current trends.
- Organize & Analyze information about emerging technologies /market demands/current trends
- Exhibit effective communication skills, stage courage, and confidence.
- Demonstrate intrapersonal skills
- Prepare a well-organized report employing elements of technical writing and critical thinking

III Year B.Tech. EEE I - Semester

-	-	3	3	2

EE325 A.C. MACHINES LAB

Course Description & Objectives:

To analyse the performance of 1-p and 3- p transformers by conducting various experiments. To analyse the performance of 1-p and 3- p Induction motors by conducting various experiments. To analyse the performance of 3- p Synchronous Machines by conducting various experiments.

Course Outcomes:

- *Test the transformer and find its performance.*
- *Perform parallel operation of transformers.*
- *Test the induction motors and find their performance.*
- *Test the Synchronous Machine and find its performance.*
- *Obtain the synchronous reactrance values for different synchronous machines.*

List of Experiments :

1. O.C. & S.C. Tests on Single phase Transformer
2. Sumpner's test on a pair of single phase transformers
3. Scott connection of transformers
4. No-load & Blocked rotor tests on three phase Induction motor
5. Regulation of a three –phase alternator by synchronous impedance & m.m.f. methods
6. V and Inverted V curves of a three—phase synchronous motor.
7. Equivalent Circuit of a single phase induction motor
8. Determination of Xd and Xq of a salient pole synchronous machine
9. Parallel operation of Single phase Transformers
10. Separation of core losses of a single phase transformer
11. Brake test on three phase Induction Motor
12. Regulation of three-phase alternator by Z.P.F. and A.S.A methods
13. Load Test on three-phase alternator
14. Heat run test on a bank of 3 Nos. of single phase Delta connected transformers
15. Measurement of sequence impedance of a three-phase alternator.

Note : Any 10 of above experiments are to be conducted.

III Year B.Tech. EEE   I - Semester

L	T	P	TO	C
-	-	3	3	2

EE327 ELECTRICAL MEASUREMENTS & INSTRUMENTATION LAB

Course Description & Objectives:

The ability to conduct experiments to determine the constitutive parameters like resistance, inductance and capacitance using bridge methods. The ability to conduct experiments to determine electrical parameters like active power, reactive power, energy using Wattmeter and Energy meters and also to calibrate these instruments. The ability to calibrate meters with the available loads including Power factor meter at different load conditions. The ability to conduct experiments on Transducers like LVDT, strain gauge to find displacement and strain.

Course Outcomes:

- Understand the usage of various types of Analog and Digital meters.
- Examine and calibrate various Wattmeters using direct loading and phantom loading.
- Understand the methods of Measurement of Resistance, Inductance and Capacitance using AC & DC bridges.
- Determine the errors in Potential Transformers and Current Transformers
- Interpret measurement of 3 phase powers using various wattmeter connections.

List of Experiments:

1. Calibration and Testing of single phase energy Meter.
2. Calibration of dynamometer power factor meter.
3. Crompton D.C. Potentiometer – Calibration of PMMC ammeter \ and PMMC voltmeter.
4. Kelvin's double Bridge – Measurement of resistance – Determination of Tolerance.

5. Measurement of % ratio error and phase angle of given C.T. by comparison.
6. Schering bridge & Anderson bridge.
7. Measurement of 3 phase reactive power with single-phase wattmeter.
8. Measurement of parameters of a choke coil using 3 voltmeter and 3 ammeter methods.
9. Calibration LPF wattmeter – by Phantom testing.
10. Measurement of 3 phase power with single watt meter and 2 No's of C.T.
11. C.T. testing using mutual Inductor – Measurement of % ratio error and phase angle of given C.T. by Null method.
12. Dielectric oil testing using H.T. testing Kit
13. LVDT and Stain gauge – characteristics and Calibration
14. Transformer turns ratio measurement using a.c. bridge.
15 A.C. Potentiometer – Polar form/Cartesian form – Calibration of AC Voltmeter, Parameters of Choke.

Note : Any 10 of above experiments are to be conducted.

HS304 PROFESSIONAL COMMUNICATION LAB

Course Description & Objectives:

The Professional Communication exposes students to conventions of corporate communication and documentation procedures involved in the day-to-day functioning of the business world. The course is aimed at improving written communication skills of undergraduate students and preparing them to meet professional challenges in the work spheres. Writing and Personality are not two exclusive spheres of influence and this course will work on the relationship between professional writing and a personality that is able to meet the goals of an organization in creative and innovative ways.

Training Methodology:

The methodology is designed to give hands-on practice to students in formal and informal report writing, structure and format of letters as well as other organization related work.

Course Outcomes:

- Analyze and ability to write business correspondence and reports and proposals clearly and precisely
- Communicate effectively both in their academic as well as professional environment
- Identify clear grasp on the register of business language and ethical communication in communication
- Distinguish the differences between formal and informal communication

Mechanics of writing

- Elements of Technical Writing : Sentence structure - reducing verbosity - arranging ideas logically – building coherence - paragraph level and document level - topic sentence - cohesive devices – transitionals – paraphrasing – précis-writing.
- Mechanics of Writing: Stylistic elements – the rapporteur- the purpose- the reader (audience) - elementary rules of grammar- choice of diction - elementary principles of composition - matters of form – punctuation - conventions of business communication -language and tone - weak links in business correspondence - ethical concerns in business writing.

Business Report Writing

- Parts of the Report: Writing an abstract - features of a good abstract – approach - compare and contrast - cause and effect.
- Types of Technical Reports : Drafting a technical proposal - formal and informal proposals - factual reports, feasibility reports, survey reports – parts of a report - title page –declaration – acknowledgements – table of contents - abstract – introduction – conclusion – citations – references - appendices - oral reports and presentations

Business Letter Writing

- Letter-Writing - Formal and informal letters - structure of formal letters - expressions of salutations, introductory and concluding paragraphs - different types of letters - sales letter - complaint letter - adjustment letter - letter to the editor - covering letter - claim letter – letter of condolence.

Business E- writing:

- E-mail – nature and scope - e-mail etiquette – Common Errors in composing e-mails – Quotations - Inviting quotations - sending quotations –placing orders Office Communication - agenda - notice - circular
- Effective Resume-Writing: Structure and presentation - defining career objective - projecting one's strengths and skill-sets
- Summarizing - formats and styles - covering letter.

Business visual presentations

- Business Proposals: Drafting business proposals - calculating profit and loss-averages - ratios and proportions – partnership - simple interest - compound interest - calculating volumes and areas
- course of action - cause and effect- theme detection - making judgments - logical deductions - analyzing arguments – syllogisms - Venn diagrams - matching definitions -verbal reasoning - numerical reasoning - working out justifications.

EE316 MICROPROCESSOR ARCHITECTURE AND CONTROL

Course Description & Objectives:

To learn the fundamentals of 8086 architecture. To gain knowledge in interfacing devices. To learn the concepts microcontroller and their applications.

Course outcomes:

- Understand the 8086 microprocessor architecture and functional block diagram of 8086 microprocessor along with the pins.
- Apply the programmers model of 8086 with complete instruction set.
- Interface memory and I/O devices with 8255 Programmable peripheral Interface (PPI) to 8086 microprocessor and to analyze the 8259 PIC and 8257 DMA controller.
- Analyze the internal architecture and real time control of 8051 microcontroller.
- Interface the input and output devices like LCD, ADC, DAC, and sensor and stepper motor interface with 8051 microcontroller.

UNIT I - INTRODUCTION TO 16 BIT MICROPROCESSORS – H/W ARCHITECTURE:

8086 – Hardware Architecture, Memory, Registers, Pin diagram, Bus cycles, Maximum and Minimum mode operations and bus cycle, Interrupt processing.

UNIT II - 16 BIT MICROPROCESSOR INSTRUCTION SET AND ASSEMBLY LANGUAGE PROGRAMMING:

Programmer's model of 8086: Assembler directives, instruction set - Data transfer group, Arithmetic group, logical group, control transfer group, miscellaneous instruction groups, programming. Introduction to Procedures and Macros.

UNIT III - MICROPROCESSOR PERIPHERAL INTERFACING - I:

Introduction to I/O Interfacing, Generation of I/O Ports, Programmable Peripheral Interface (PPI)-Intel 8255- Architecture, Modes, LED interfacing, D-to-A converter, A-to-D converter, stepper motor interfacing.

UNIT IV - INTERFACING II:

Programmable interrupt controller Interfacing(8259), Direct Memory Access Controller Interfacing(8257), USART Interfacing(8251).

UNIT V - 8 BIT MICROCONTROLLER- H/W ARCHITECTURE, INSTRUCTION SET AND PROGRAMMING:

Introduction to 8051 Micro-controller, Architecture, Memory organization, Special function registers, Port Operation, Memory Interfacing, I/O Interfacing, Programming 8051 resources, interrupts, Programmer's model of 8051, Operand types, Operand addressing, Data transfer instructions, Arithmetic instructions, Logic instructions, Control transfer instructions.

TEXTBOOKS:

1. Advanced Microprocessors and Peripherals - A. K. Ray and K.M. Bhurchandani, TMH, 2nd Edition 2006.
2. Microprocessors and Interfacing – Hall, TMH, 2nd Edition 2006.

REFERENCE BOOKS:

EE318 SWITCH GEAR AND PROTECTION

Course Description & Objectives:

To understand the need of protection of electric equipment and their protection schemes. To understand operations & characteristics of various electromagnetic and static relays. To understand the operations of various types of circuit breakers and their ratings. To understand the unit protection and over voltage protection of different apparatus in power system.

Course Outcomes:

- Apply quenching mechanisms used in air, oil, sf6 and Vacuum Circuit Breakers
- Design the Relay Settings for different types of relays.
- Analyze the Bus bar Protection and neutral grounding
- Design the Protection schemes for generator and transformer.
- Understand the causes of over voltages and analyze different types of lighting arresters

UNIT I - Introduction to Power System Protection & Circuit Breakers:

Introduction to Power System Protection: Importance and Requirements of Protective system - Overview of Switchgear equipments.

Circuit Breakers: Elementary principles of arc interruption, Recovery, Restricking Voltage - Restricking Phenomenon, Average and Max. RRRV, Numerical Problems. Current Chopping and Resistance Switching. CB ratings and Specifications, Auto reclosures.

Description and Operation of following types of circuit breakers: Minimum Oil Circuit breakers, Air Blast Circuit Breakers, Vacuum and SF6 circuit breakers.

UNIT II - Relays :

Electromagnetic and Static Relays : Principle of Operation and Construction of Attracted armature, Balanced Beam, induction Disc and Induction Cup relays.

Relays Classification: Instantaneous, DMT and IDMT types, Over current, Direction relays, Differential Relays and Percentage Differential Relays, Universal torque equation,

Distance Relays: Impedance, Reactance and Mho Characteristics of Distance Relays and Comparison.

Static Relays: Static Relays verses Electromagnetic Relays.

UNIT III - Fuses, and Grounding Practices:

Fuses: Desirable Characteristics of Fuse Elements, Important terms in Fuses, Types of Fuses, HRC fuse.

Feeder and Bus-Bar Protection : Protection of Lines: Over Current, Carrier Current and Three-zone distance relay protection using Impedance relays. Translay Relay. Protection of Bus bars – Differential protection.

Neutral Grounding : Grounded and Ungrounded Neutral Systems - Methods of Neutral Grounding: Solid, Resistance, Reactance - Arcing Grounds and Grounding Practices.

UNIT IV - Generator & Transformer Protection:

Generator Protection : Protection of generators against Stator faults, Rotor faults, and Abnormal Conditions. Restricted Earth fault and Inter-turn fault Protection. Numerical Problems on % Winding Unprotected.

Transformer Protection : Protection of transformers: Percentage Differential Protection, Numerical Problem on Design of CT s Ratio, Buchholtz relay.

UNIT V - Protection against over voltages :

Generation of Over Voltages in Power Systems - Protection against Lightning Over Voltages - Valve type and Zinc-Oxide Lighting Arresters. Insulation and Coordination -BIL, Impulse Ratio, Standard Impulse Test Wave, Volt-Time Characteristics and Insulation Co-ordination.

TEXT BOOKS:

1. Sunil S Rao, "Switchgear and Protection" 12th ed., Khanna Publlishers, 2007.

MS310 MANAGERIAL ECONOMICS

Course Description & Objectives:

To make the student familiar with the basic concepts and principles of Business Economics. The course aims to develop student's capacity to analyze the economic environment in which business entities operate and understand how managerial decisions can vary under different constraints that each economic environment places on a manager's pursuit of it's goals, focusing on analyzing the functioning of markets and the economic behavior of firms and other economic agents.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

- To understand the nature and scope of Managerial Economics and the role of demand analysis in managerial decision making.
- To interpret long-run, short-run production functions and companies cost analysis using cost output Relationship in the short-run and long-run:
- To design Competitive strategies like pricing, product differentiation etc. according to the market structure
- To estimate the profit or loss position of an organisation using brak-even analysis.
- To analyse the financial position of a company using ratios.

UNIT I - Nature & Scope of Managerial Economics:

Basic tools and techniques of Business Economics, Macro Economic Environment and Managerial decisions.

UNIT II - Demand Analysis:

Types of Demand, Demand determination Concept of Elasticity and measurement, Demand forecasting, Survey & Statistical methods.

UNIT III - Theory of Production:

Production function, Marginal rate of technical substitution, Iso-quants and Iso-costs, production function with one/two variable factors, Law of Variable Proportions, and Returns to Scale, internal and external economies.

UNIT IV - Cost Analysis:

Cost concepts, cost determinants, cost output relationship in the short and long run, Break-Even analysis.

UNIT V - Markets and price determination :

Features and types of different competitive situations – Perfect competition, Monopoly, Monopolistic competition and Oligopoly, pricing methods in practice.

TEXT BOOKS:

4	-	-	4	4

CS223 OBJECT ORIENTED PROGRAMMING THROUGH JAVA

Course description and Objectives:

On Completion of this course, the student will be able to understand fundamentals of object- oriented programming in Java, including defining classes, invoking methods, using class libraries. Have the ability to write a computer program to solve specified problems. Be able to use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes:

- Apply propositional logic, predicate logic and Boolean functions to formally express the mathematical properties.
- Analyze the basic mathematical objects such as sets, relations and functions to verify the mathematical properties.
- Construct solutions to solve different Graph problems includes Coloring, Searching and traversing.
- Construct solutions to solve different Graph problems includes Coloring, Searching and traversing.
- Implement pattern matching and string searching algorithms.

UNIT I - Introduction, Classes and Objects:

Creation of Java, Importance of Java to Internet, Byte code, Java buzzwords, OOP Principles- Encapsulation, Inheritance and Polymorphism, Data types, Variables, Declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Compiling and running of simple Java program, Concepts of classes and objects Class fundamentals – Declaring objects, Assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, this key word, Garbage collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and Inner classes, Exploring the String class.

UNIT II - Inheritance, Packages and Interfaces:

Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, the Object class. Defining, Creating and

Accessing a Package, Understanding CLASSPATH, Importing packages, Differences between classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and Extending interfaces.

UNIT III - Exception Handling, Multithreading:
Concepts of Exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and Finally keywords, Built-in exceptions, Creating own exception Sub classes, Concepts of Multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads, deadlocks, Thread groups.

UNIT IV -

Applets -Applet Class, Applet Architecture, Applet Skeleton - Applet Initialization and Termination, Overriding update(), Simple Applet, Display Methods, Requesting Repainting - A simple banner Applet, Using The Status Window, The HTML APPLET Tag, Passing parameters to Applets, Applet Context and show Document.

Event Handling & AWT Controls: Event sources, Event classes – ActionEvent, AdjustmentEvent, ComponentEvent, Container Event, Focus Event, InputEvent, ItemEvent, KeyEvent and MouseEvent, Delegation event model, Event Listeners, Handling mouse and Keyboard events, Adapter classes.

UNIT - V
AWT: Concepts of components, Container, Panel, Window, Frame, Canvas, Font class, Color class and Graphics. AWT Controls : Buttons, Labels, Text fields, Text area, Check boxes, Check box groups, Lists, Choice, Scrollbars, Menus, Layout Managers - Flow, Border, Grid, Card and Grid bag.

Swing:JApplet, JFrame and JComponent, Icons and Labels, Handling threading issues, Text fields, Buttons–The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

TEXT BOOKS :

EE320 HIGH VOLTAGE DC TRANSMISSION (Dept. Elective - II)

Course Description & Objectives:

To know importance, advantages and applications of HVDC over HVAC transmission system. To know the concepts of 6 pulse and 12 pulse converters and their characteristics. To know the principle of operation of DC Motors. To know the operation of DC link, constant current, constant extinction angle control and firing angle control methods. Able to know the parallel operation of HVDC and HVAC systems, operation MTDC systems. Able to know the converter faults in HVDC, over voltages, AC&DC filters design functions.

Course Outcomes:

- Compare EHV AC and HVDC system and to describe various types of DC links.
- Analyze Graetz circuit for rectifier and inverter mode of operation.
- Describe various methods for the control of HVDC systems.
- Apply the concepts of MTDC systems operation and stability analysis of interconnected systems.
- Competency in designing filters & describe various protection methods for HVDC systems.

UNIT I - Introduction to HVDC Transmission :

Introduction to AC and DC Transmission – application of DC Transmission – description of DC transmission – DC system components and their functions – modern trends in DC Transmission.

UNIT II - Analysis of Converter Circuits :

Pulse Number – Converter configuration – analysis of Graetz circuit – converter bridge characteristics – characteristics of 12 Pulse converter.

UNIT III - HVDC Controllers :

General principle of DC link control – converter control characteristics – system control hierarchy – firing angle control – current and extinction angle control – DC link power control – high level controllers.

UNIT IV - Inter Connected Systems :

Simulation of HVDC systems, Parallel operation of HVDC and AC systems, multi terminal DC systems. Stability of AC/DC interconnected systems Reactive Power requirement, types of forced commutation. Smoothing reactors - Functions, double commutation failure, consequent commutation failure - their prevention.

UNIT V - Filters and Protection :

Introduction to harmonics – generation of harmonics – design of AC filters – DC filters – carrier frequency and RI noise. Basics of protection – DC reactors – voltage and current oscillations – circuit breakers – over voltage protection – switching surges – lightning surges – lightning arresters for DC systems.

TEXT BOOKS:

1. Das Begamudre R, "The E H V A C Transmission" 3rd ed., New Age International, 2007.
2. S. Rao, "HVAC and DC Transmission", 3rd ed., Khanna Publishers, 2001.

EE322 AI TECHNIQUES IN ELECTRICAL ENGINEERING
(Dept. Elective - II)

Course Description & Objectives:

This course is to understand the fundamentals of fuzzy sets, fuzzy logic control systems and artificial neural networks based on biological neuron in electrical engineering. To study and understand the principle of Genetic Algorithms and its applications.

Course Outcomes:

- Understand the basic concepts of biological and artificial neurons and their networks.
- Design artificial neural networks using back propagation algorithm and associative memories.
- Compare classical and fuzzy set theory.
- Design fuzzy logic based electrical systems.
- Apply genetic algorithms for optimization problems in electrical engineering.

UNIT I - Fundamentals of Neural Networks :

Basic concepts of neural networks, Human Brain, Model of an artificial neuron, Neural network architectures, characteristics of neural networks, learning methods, taxonomy of neural network architectures. Broad application areas in Electrical Engineering.

UNIT II - BP Networks and Memories :

Backpropagation networks : Architecture of a Backpropagation network, backpropagation Learning, Illustration, Applications, Effect of tuning parameters of the backpropagation neural network, selection of various parameters in BPN.

Associative Memory : Autocorrelators, Heterocurrelators, BAM.

Application of Neural Networks in some basic problems of Electrical Engineering.

UNIT III - Classical & Fuzzy Sets:

Introduction to classical sets - properties, Operations and relations; Fuzzy sets, Membership, Uncertainty, Operations, properties, fuzzy relations, cardinalities, membership functions.

UNIT IV - Fuzzy Logic System Components:

Fuzzification, Membership value assignment, development of rule base and decision making system, Defuzzification to crisp sets, Defuzzification methods. Fuzzy logic applications: Fuzzy logic control and Fuzzy classification.

Application of Fuzzy logic in some basic problems of Electrical Engineering

UNIT V - Genetic Algorithms :

Fundamentals of Genetic Algorithms : Genetic algorithms : History, basic concepts, Creation of offsprings, working principle, Encoding, Fitness function, Reproduction.

Genetic Modeling : Inheritance operators, Cross over, Inversion and Deletion, Mutation Operator, Bit-wise Operators, Generational Cycle, Convergence

Application of GA in Power Systems and Power Electronics(Qualitative treatment only).

TEXT BOOKS:

1. Rajasekharan and Pai, “Neural Networks, Fuzzy logic, and Genetic algorithms: Synthesis and Applications”, 1st ed., Prentice Hall of India Publication, 2009.

EE324 - EMBEDDED SYSTEMS IN ELECTRICAL ENGINEERING
(Dept. Elective - II)

Course Description & Objectives:

To learn and understand the characteristics of Embedded systems and its architectures. To understand the types of embedded architectures and its variants. To understand and use the CPU bus and its protocols. To understand the operation of real time operating systems. To learn the operation of control systems applications of electrical engineering and design the same.

Course Outcomes:

- Analyse various design issues regarding • Usage of on chip resources • Low power modes • Communication support.
- Design embedded systems using MSP430 series microcontrollers to suit market requirements.
- Solve engineering problems and arrive at solutions in designing embedded systems to support interconnectivity.
- Apply techniques, program skills, On-Chip resources to design networked embedded systems with an understanding of limitations.
- Reason out and practice professional engineering to deliver efficient and cost effective embedded based products to society.

UNIT I - Introduction to Embedded Systems :

Characteristics of Embedding Computing Applications-Concept of Real time Systems,-Challenges in Embedded System Design- Design Process-Requirements, Specifications, Architecture Design- Designing of Components and System Integration

UNIT II - Embedded System Architecture:

Instruction Set Architecture-CISC architecture [8051] and RISC instruction set architecture [ARM processors], DSP Processors, Harvard Architecture-PIC. Coprocessors and Hardware Accelerators, Processor Performance Enhancement-Pipelining, Super-scalar Execution, CPU Power Consumption, Memory System Architecture-, Caches, Virtual Memory, Memory management unit and address Translation.

UNIT III - Designing Embedded Computing Platform:

Designing with Processors-System Architecture, Hardware Design, Implementation-Development Environment, Debugging Techniques, Manufacturing and Testing. Design Using CPU Bus: Bus Protocols, Bus Organization, I/O Device Interfacing, Interfacing Protocols-GPIB, FIREWIRE, USB, Watchdog Timers. 133 EE-Engg&Tech-SRM-2013.

UNIT IV - Operating Systems:

Kernel Features: Real-time Kernels, Polled Loops System, Co-routines, Interruptdriven System, Multi-rate System, Processes and Threads, Context Switching, Cooperative Multi-tasking, Pre-emptive Multi-tasking. Scheduling-Rate-Monotonic Scheduling, Earliest-Deadline First Scheduling, Task Assignment, Fault-Tolerant Scheduling. Inter-process Communication-Real-time Memory Management: Stack Management, Dynamic Allocation-Evaluating and Optimizing Operating System Performance-Response.

UNIT V - Embedded Control Applications:

Open-loop and Closed Loop Control Systems-Application Examples-Washing Machine, Automotive Systems, Auto-focusing digital camera, Air-conditioner, Elevator Control System, ATM System.

SR005 TECHNICAL SEMINAR

Course Description & Objectives:

In this course student is expected to develop knowledge on an emerging field at the intersection of multi-disciplinary areas such as robotics, hybrid vehicles ect., and understandings the concepts , techniques, prevailing results etc., analyze it and present a seminar report.

Course Outcomes:

- Collect information about emerging technologies /market demands/ current trends.
- Organize & Analyze information about emerging technologies /market demands/current trends.
- Exhibit effective communication skills, stage courage, and confidence.
- Demonstrate intrapersonal skills.
- Prepare a well-organized report employing elements of technical writing and critical thinking.

EE326 POWER ELECTRONICS LAB

Course Description & Objectives:

This course aims at obtaining characteristics of power electronic devices. To understand the commutation techniques used in power electronics circuits and to test different power electronics converters.

Course Outcomes:

- Able to Elucidate the basic operation of various power semi conductor devices and passive components.
- Able to analyze the performance of single phase AC voltage controller and AC voltage rectifier circuit with R and RL load.
- Able to analyze the performance of forced commutation circuits and Jones Chopper.
- Able to analyze the performance of Parallel and series inverter with R and RL load.
- Able to analyze the performance of of half controlled converter, Cyclo converter and Dual converter.

List of Experiments:

1. Study of Characteristics of SCR, MOSFET & IGBT
2. Gate firing circuits for SCR's
3. Single Phase AC Voltage Controller with R and RL Loads
4. Single Phase fully controlled bridge converter with R and RL loads
5. Forced Commutation circuits (Class A, Class B, Class C, Class D & Class E)
6. DC Jones chopper with R and RL Loads
7. Single Phase Parallel, inverter with R and RL loads
8. Single Phase Cycloconverter with R and RL loads
9. Single Phase Half controlled converter with R load
10. Three Phase half controlled bridge converter with R-load
11. Single Phase series inverter with R and RL loads
12. Single Phase Bridge converter with R and RL loads
13. Single Phase dual converter with RL loads

Note : Any 10 of above experiments are to be conducted.

EE328 LINEAR CONTROL SYSTEMS LAB

Course Description & Objectives:

This course aims to familiarize with the modeling of dynamical systems and the characteristics of control components like ac servo motor, synchro and magnetic amplifier. To simulate and analyze the stability using MATLAB software and design the compensators.

Course Outcomes:

- Perform conversion of models between State Space and transfer function, time response analysis, stability analysis and error analysis of any LTI system using MATLAB.
- Design a PID controller for any LTI system using MATLAB.
- Experimentally verify the performance characteristics of Magnetic Amplifier, Synchros and AC Servo Motor.
- Analyze the Time Response of Second Order Systems, Temperature Control System and effect of PID controller.
- Program digital logic gates using PLC.

List of Experiments :

1. Time response of Second order system
2. Characteristics of Synchros
3. Programmable logic controller – Study and verification of truth tables of logic gates, simple Boolean expressions and application of speed control of motor.
4. Effect of feedback on DC servo motor
5. Transfer function of DC motor
6. Effect of P, PD, PI, PID Controller on a second order systems
7. Lag and lead compensation – Magnitude and phase plot

8. Transfer function of DC generator

9. Characteristics of magnetic amplifiers

10. Characteristics of AC servo motor

11. Linear system analysis (Time domain analysis, Error analysis) using MATLAB.

12. Design of PID controller and simulation using MATLAB

13. Stability analysis (Bode, Root Locus, Nyquist) of Linear Time Invariant system using MATLAB

14. State space model for classical transfer function using MATLAB – Verification.

Note : Any 10 of above experiments are to be conducted.

EE330 MINI PROJECT

Course Description & Objectives:

To be able to apply some of the techniques/principles to do effective trouble-shooting, time planning for the project, inculcate hardware implementation skills by learning design tools and developing effective communication skill by delivering a seminar based on mini project.

Course Outcomes:

Upon completion of mini project the students will be able to:

- Demonstrate a through and systematic understanding of project contents.
- Understand methodologies and professional way of documentation and communication.
- Know the key stages in development of the project.
- Extend or use the idea in mini project for major project.

EE415 ELECTRIC DRIVES

Course Description & Objectives:

This course describes the structure of Electric Drive systems and their role in various applications such as flexible production systems, industrial ac/dc drives, energy conservation, renewable energy, transportation etc., Understand the basic principles of power electronics in drives using switch-mode converters and pulse width modulation to synthesize the voltages in dc and ac motor drives.

Course Outcomes:

- Understand the fundamental concepts of Electric drives
- Understanding of DC Drives and their performance and also their application in single and three phase controlled rectifiers
- Understanding the four quadrant operation of DC drives and related applications.
- Understand various Induction motor drives.
- Understand various Synchronous motor drives.

UNIT I - Fundamentals of electric drives:

Fundamentals of electric drives - block diagram of an electric drive - parts of electric drives - dynamics of electric drives - Fundamental torque equation, speed torque conventions and Multi-quadrant operation. Equivalent values of drive parameters, components of load torques, nature and classification of load torques, Load Equalization- control of electrical drives - closed loop control.

UNIT II - DC Drives - I :

DC Motors and their performance, starting, speed control, constant torque and constant power control, single phase controlled rectifiers with motor loads - fully controlled and half controlled rectifier fed dc drives - continuous operation, three phase controlled rectifier fed dc drives- Three phase semi and fully controlled converter fed dc drives – Speed and Torque expressions – Speed – Torque characteristics – Problems.

UNIT III - DC Drives - II :

Four Quadrant operation of DC Drives – dual converter fed control, Electric

Braking – Plugging, Dynamic and Regenerative Braking operations – Closed loop operation of DC motor, Chopper fed DC Drives- Single quadrant, Two – quadrant and four quadrant chopper fed DC Drives – Continuous current operation– speed torque characteristics – Problems Three phase induction motor analysis and performance-starting, Braking speed control-variable frequency control from voltage source and from current source.

UNIT IV - Induction Motor Drives :

Various PWM methods. Slip power recovery, Rotor resistance control and their industrial applications.

UNIT V - Synchronous Motor Drives :

Operation from fixed frequency supply- variable frequency control - VSI and CSI fed drives- self-controlled synchronous motor drives employing cycloconverter.

TEXT BOOKS:

1. G opal K Dubey, “Fundamentals of Electric Drives”, 2nd ed., Narosa Publishing house, 2005.
2. MD Singh and K B Khanchandani, “Power Electronics”, 2nd ed., Tata – Mc Graw- Hill Publishing company, 2009.

EE417 RENEWABLE ENERGY SOURCES

Course Description & Objectives:

To understand the differences between conventional and non conventional energy sources. To understand the methodology for conducting Energy Audit. To understand Various solar energy systems and their applications. It also introduces the Wind Power, Biomass energy, Tidal energy and ocean energy as alternative energy sources.

Course Outcomes:

- Understand the main sources of energy and their primary applications in India, and the World.
- Analyze daily global solar radiations at different locations on the Earth
- Understand concepts of Wind energy.
- Understand concepts of Biomass Energy.
- Understand concepts of Ocean Tidal Energy.

UNIT I - Conventional Sources of Energy :

Energy - Conventional, renewable, non-conventional and alternate sources of energy - Energy supply system in India. Coal and Coal technologies - Petroleum and natural gas - nuclear fuels and power plants - Hydro sources and power plants - Energy strategies - energy conservation - energy audit - cost of energy.

UNIT II - Solar Power :

Application of Solar Energy - Various solar energy systems and their applications, radiations, solar spectra-latitude and longitude, Declination angle, solar window, cosine law, seasonal variations, daily variation, hour angle, calculation of angle of incidence, angstroms equation and constants, solar radiation data, daily global radiation calculations.

UNIT III - Wind Power :

Wind energy - energy chains, application - historical background, merits and limitations, nature of wind, planetary and local day / night winds, wind energy quantum, variables and units used in calculations, wind power density Pw, Power calculations, power in wind, power by turbine, efficiency, kinetic energy, incoming velocity Vi, exit velocity Ve, Power, torque thrust calculations, velocity at different heights, site selection, Favourable wind speed range, wind energy wind velocity duration, energy pattern factor.

UNIT IV - Biomass Energy :

Biomass energy resources : Photosynthesis and origin of biomass energy, biomass energy resources, cultivated biomass resources, waste to biomass resources, Terms and definitions, Incineration, wood and wood waste, Harvesting super trees and energy forests, phyrolysis, Thermo chemical biomass conversion to energy, gasification, Anaerobic digestion, Fermentation, Gaseous fuel from biomass.

UNIT V - Ocean & Tidal Energy :

Ocean and Tidal energy conversion, Energy sources in ocean - Ocean tidal, wave and thermal energy, Ocean saline gradient concept, ocean currents, ocean chemical energy, ocean energy conversion routes, electrical and non electrical routes, Bipolar, mono polar HVDC cable transmission Advantages and merits of ocean energy technologies, limitation, preconditions for commercial installation. Tides - spring tide, neap tide, daily and monthly variation, Tidal range, Tidal Power, Types of tidal power plants, single basin & double basin schemes, main requirements in tidal power plants, energy storage, prospects of tidal power, economic factors.

	4	-	-	4	4

EE419 ANALYSIS AND OPERATION OF POWER SYSTEM

Course Description & Objectives:

To Able to understand that in real world, how to analyze the status of power system. To understand the different heat rate curves and economic distribution of loads in thermal generators. To understand typical graphs of power system networks, and basis for Loadflow problem. To solve Loadflows in typical power systems. To understand the basic concepts of fault analysis and its importance. To understand the concept of stability and its importance in power system.

Course Outcomes:

- Understand the Distribution of load economically between the thermal plants
- Model the components of a power system, Perform steady state load flow analysis using Newton – Raphson methods
- Apply symmetrical components to analyze the unsymmetrical faults
- Analyze steady state and transient stabilities; determine transient stability using equal area criterion
- Model LFC and AGC for one and two area power systems

UNIT I - Power System Analysis and Optimal Operation:

Introduction To Power System Analysis And Control: Introduction to Modern Power System Analysis and Operational Studies, Comparison between present and old structure, Importance of Planning, Analysis and Control.

Optimal Operation In Thermal Power Stations: Cost Curve – Incremental fuel and Production costs, Optimum generation allocation with and without line losses, Loss Coefficients, Numerical problems.

UNIT II - Graph Theory & Power Flow Problem:

Power System Graphs: Formation of system Y-bus by inspection method, Power system Z-bus building up algorithm (Without Derivation), Simple Problems up to four bus systems.

Power Flow Problem: Formulation of power flow problem, types of buses, classification of variables, expressions for real and reactive power injections, Solution of static power flow equations by Newton Raphson's method, Jacobian elements, convergence condition. Fast-decoupled method for power flow problem and its derivation from Newton's method, Including Q-limit check, Numerical problems for systems up to 3-buses.

UNIT III - Fault Analysis:

Importance of Fault Analysis in Power systems, Basic Assumptions in Power System Fault Analysis.

Symmetrical Faults: Symmetrical Faults, Problem formulation and solving procedure, Selection of Circuit Breakers.

Unsymmetrical Faults: Introduction to Symmetrical Components, Computation of all Sequence impedances, and Sequence networks for Alternators, Transformers, Transmission Lines and Loads. Representation of Sequence networks for LG, LL and LLG faults and Numerical Problems.

UNIT IV - Power System Stability:

Introduction to Power system stability, Classification of power system stabilities, steady state and transient stability limits. Power angle curve, Derivation of Swing equation, synchronizing power coefficient, Equal area criterion, determination of critical clearing angle, Numerical problems, Methods to improve the stability limits.

UNIT V - Load Frequency Control:

Necessity of keeping frequency constant, Definitions of Control area, Load frequency control of single and 2-area system, Block diagram representation of an isolated power system, Steady state analysis, Dynamic response, Controlled and Uncontrolled case, Tie-line bias control, Proportional plus Integral control of single area and its block diagram representation.

EE421 DSP AND ITS APPLICATIONS

Course Description & Objectives:

To understand the representation of discrete time signals and systems with discrete inputs both in time domain and frequency domain as these constitute basics for DSP. To study both direct and inverse Z-Transforms, DFT (Discrete Fourier Transforms), FFT (Fast Fourier Transforms) and their properties in detail. To design and realize various Infinite Impulse Response (IIR) & Finite Impulse Response (FIR) filters and study their properties. To provide idea about DSP based applications and Wavelet transforms.

Course Outcomes:

- Able to apply different transformations and operations on signal.
- Apply Discrete Fourier transforms and Fast Fourier transform for different types of signals, interpret the information obtained and able to reconstruct it as well as to apply Z-transform on a system to get its response.
- Design of FIRfilters and their realizations.
- Realization of IIR filters.
- Apply to DSP knowledge to electrical drives.

UNIT I - Introduction:

Review of Signals and Systems, linear shift invariant systems, stability, and causality. Linear constant coefficient difference equations. Frequency domain representation of discrete time signals and systems, Review of Z-Transform and properties, Discrete fourier representation of periodic sequences.

UNIT II - Frequency Transformations:

Introduction to DFT – Efficient computation of DFT Properties of DFT – FFT algorithms – Radix-2 FFT algorithms – Decimation in Time – Decimation in Frequency algorithms – Use of FFT algorithms in Linear Filtering.

UNIT III - IIR Filter Design:

Structure of IIR – Analog filter Design - Discrete time IIR filter from continuous time filter – IIR filter design by Impulse Invariance, Bilinear transformation, Approximation of derivatives – (HPF, BPF, BRF) filter design using frequency translation. Realization of IIR Filters- Direct form, Cascade form, Signal flow graph and Transposed structure, Application in speed controller design.

UNIT IV - FIR Filter Design:
Structures of FIR – Linear phase FIR filter – Filter design using windowing techniques, Frequency sampling techniques – Finite word length effects in digital Filters, Comparison of IIR and FIR. Realization of FIR filters- Direct form, Cascade form and linear phase realization, Application in speed controller design.

UNIT V - Applications:

Introduction to Speech processing, Image Processing, Digital Signal Processing Based Speed Control of Industrial Motor Drive, power system protection and planning, Importance in building smart grid.

TEXT BOOKS :

1. John G. Proakis, Dimitris G.Manolakis, “Digital Signal Processing, Principles, Algorithms and Applications”, Pearson Education / PHI, 2007.

EE423 HIGH VOLTAGE ENGINEERING
(Dept. Elective - III)

Course Description & Objectives:

The course provides advanced knowledge associated with high voltage engineering methods, techniques and equipment. Learn fundamentals of the failure mechanisms of solid, liquid and gaseous insulation at high voltages. Learn consequent design principles for high voltage equipment; of the generation of high direct, alternating and impulse voltages for testing high-voltage equipment; and of methods for monitoring and assessing the condition of high-voltage equipment such as dissolved gas analysis for oil-filled transformers and partial discharge in cables. Learn the high-voltage equipment and in particular underground cables, overhead transmission lines, transformers, bushings and switchgear.

Course Outcomes:

- Recognize with the performance of high voltages with regard to different configurations of electrode systems
- Identity theory of breakdown and withstand phenomena of all types of dielectric materials.
- Analyze the techniques of generation of AC,DC and Impulse voltages.
- Apply knowledge for measurement of high voltage and high current AC,DC and Impulse.
- Determine the dielectric property of material used for HV equipment.
- Discover the techniques of testing various equipment's used in HV engineering.

UNIT I - Introduction To High Voltage Technology & Applications :

Electric Field Stresses, Gas / Vacuum as Insulator, Liquid Dielectrics, Solids and Composites, Surge voltages, their distribution and control, Applications of insulating materials in transformers, rotating machines, circuit breakers, cable power capacitors and bushings.

UNIT II - Conduction and break down in gases, liquies & solid dielectrics:

Gases as insulating media, Townsend's criteria of breakdown in gases, Break down in Electro negative gases ,Time lags for Break down ,Streamer Theory of Break down in Gases Paschen's law, pure and commercial liquids, breakdown in pure and commercial liquids. Intrinsic breakdown, electromechanical breakdown, thermal breakdown, Breakdown in composite dielectrics.

UNIT III - Generation of high voltages & currents :

Generation of High Direct Current Voltages, Generation of High alternating voltages, Generation of Impulse Voltages, Generation of Impulse currents, Tripping and control of impulse generators.

UNIT IV - Measurement of High Voltages & Currents :

Measurement of High Direct Current voltages, Measurement of High Voltages alternating and impulse, Measurement of High Currents-direct , alternating and Impulse, Oscilloscope for impulse voltage and current measurements.

UNIT V - High Voltage Testing of Electrical Apparatus :

Measurement of D.C Resistivity, Measurement of Dielectric Constant and loss factor, Partial discharge measurements, Testing of Insulators and bushings, Testing of cables, Testing of Transformers, Radio Interference measurements.

TEXT BOOKS:

EC302 VLSI DESIGN
(Dept. Elective - III)

CourseDescription &Objective:

To introduce students to basic concepts of digital VLSI chip design using the simpler VLSI technology and CMOS devices and manufacturing technology. To Introduce CMOS logic gates and their layout,to design Combinational (e.g., arithmetic) and sequential circuit.

Course Outcomes:

Upon successful completion of this course, students should be able to:

- Program on combinational/sequential circuits.
  (Unit-1)
- Understand the fabrication process of different MOS technologies.
  (Unit-2)
- Analyse the operation and Electrical behaviour of MOS transistors.
  (Unit-3)
- Design VLSI circuits and Layouts of MOS circuits using Lambda based design rules and sub systems using various logic methods.
  (Unit-4 and 5)

UNIT I - Hardware Description Language:

The VHDL Hardware Description Language: Design flow, program structure, types and constants,Functions and procedures, libraries and packages.

The VHDL Design Elements: Structural design elements, data flow design elements, behavioral design elements,

UNIT II - Mos Technology:

Introduction : State of art of different technology, Introduction to IC Technology – MOS, PMOS, NMOS, CMOS &BiCMOS technologies-Oxidation, Lithography, Diffusion, Ion implantation, Metallization, Encapsulation processes, N-MOS, C-MOS fabrication.

UNIT III - Basic Electrical Properties:

MOS Transistor, operation, I_{ds}-V_{ds} relationships, MOS transistor parameters:

threshold Voltage, gm, gds, figure of merit (w_o); Pass transistor, NMOS Inverter, Various pull ups, CMOS Inverter , Zpu/Zpd with and without pass transistor, Bi-CMOS Inverters.

UNIT IV - VLSI Circuit Design Processes:

VLSI Design Flow, MOS Layers, Stick Diagrams, Layouts and Design Rules for NMOS, CMOS and BICMOS circuits, CMOS inverters and gates. The delay unit, Inverter delays, Driving capacitive loads, Propagation delays, wiring capacitances, Introduction to scaling.

UNIT V - Subsystem Design:

Adders-Carry ripple adder, carry propagate adder, Multipliers-Array Multiplier, Booth encoding,Latches,Flip Flops; Simulation, Synthesis, Design Capture Tools, Design For Testability**,** Alternate gate circuits-Pseudo-nMOS, Dynamic CMOS, CMOS Domino Logic and Cascaded Voltage Switch Logic (CVSL),Standard cell, Seaofgates, FPGA.

MT431 AUTOMOTIVE ELECTRONICS
(Dept. Elective - III)

Course Description & Objectives:

To equips the students with fundamentals of automotive electronics. To understand the electronics systems onboard the automobile. To present an overview of technologies in the field. To provide an understanding of different automotive systems used in automobiles.

Course Outcomes:

At the successful completion of AME, the student is expected to have:

- *A broad understanding of automotive technology.*
- *A thorough knowledge of application of electronics in automotive engineering.*
- *Knowledge of automotive sensors and control systems.*
- *Understand the use of microcomputer, sensors, actuators and the use of various instrumentation systems in automobiles.*

UNIT I - Introduction:

Automotive component operation, electrical wiring terminals and switching, multiplexed wiring, systems Circuit diagrams and symbols. Charging Systems and Starting Systems: Charging systems principles, alternations and charging circuits, New developments, requirements of the starting system, basic starting circuit.

UNIT II - Ignition systems:

Ignition fundamentals, electronic ignition systems, programmed ignition, distribution less ignition, direct ignition, spark plugs. Electronic Fuel Control: Basics of combustion, Engine fuelling and exhaust emissions, Electronic control of carburetion, Petrol fuel injection, Diesel fuel injection.

UNIT III - Instrumentation Systems:

Introduction to instrumentation systems, various sensors used for different parameters, driver instrumentation systems, vehicle condition monitoring, trip computer, different types of visual display. Electronic control of braking and traction: Introduction and description, control elements and control methodology, Introduction and description of electronic control of automatic transmission, Control of gear shift and torque converter lockup, Electric power steering, Electronic clutch.

UNIT IV - Engine Management Systems:

Combined ignition and fuel management systems, exhaust emission control, Digital control techniques, complete vehicle control systems, artificial intelligence and engine management.

UNIT V - Microprocessor applications in Automotive engineering:

Lighting and Security Systems: Vehicles lighting Circuits, Signaling Circuits, Central locking and electric windows security systems, Airbags and seat belt tensioners, Miscellaneous safety and comfort systems.

TEXT BOOK:

EE425 ENERGY CONSERVATION & AUDIT (Dept. Elective - IV)

Course Description & Objectives:

Understand the types of electricity tariffs and energy auditing by knowing simple electrical principles. Understand the types of instruments for auditing and assessment, and economic methods for energy analysis by considering case studies. Analysis of transformers, cables and feeders by considering case study models. Understand the economical load flow problems

Course Outcomes:

- Understand and determine the performance of various lighting systems.
- Analyse effective energy management policies, methods and planning.
- Carryout energy audit and economic analysis.
- Design energy utilization systems for heat recovery.
- Design a capacitor bank to address low power factor issues.

UNIT I - Introduction to Energy auditing:

Introduction : System approach, end use approach to efficient use of Electricity; Electricity tariff types.

Energy auditing: Types and objectives, audit instruments, ECO assessment and Economic methods, Specific energy analysis, Minimum energy paths, consumption models, Energy auditing of a typical industrial unit - case studies.

UNIT II - Electric motors:

Energy efficient controls and starting efficiency, motor efficiency and Load analysis, Energy efficient / high efficient Motors - Case studies; Load Matching and selection of motors. Variable speed drives. Pumps and Fans: Efficient Control strategies-optimal selection and sizing, optimal operation and storage - case studies.

UNIT III - Distribution and Reactive Power Management:

Transformer Loading/Efficiency analysis, feeder/cable loss evaluation, case studies.

Reactive power management: Capacitor Sizing, Degree of Compensation, Capacitor losses, Location-placement-Maintenance, case studies.

UNIT IV - Peak Demand Control :

Methodologies, types of Industrial loads, optimal Load scheduling, case studies; Lighting: Energy efficient light sources, Energy conservation in Lighting Schemes, Electronic ballast, Power quality issues, Luminaries, case studies.

UNIT V - Cogeneration:

Types and Schemes, optimal operation of cogeneration plants, case studies. Electric loads of Air conditioning and Refrigeration, Energy conservation measures, Cold storage types – Optimal operation, case studies; Electric water heating: Geysers, Solar Water Heaters, Power Consumption in Compressors, Energy conservation measures; Electrolytic Process; Computer Controls - software - EMS.

TEXT BOOKS:

1. Industrial Energy Management: Principles and Applications by Giovanni Petrecca, The Kluwer international series-207 (1999)
2. Guide to Electric Load Management by Anthony J.Pansini, Kenneth D.Smalling, Pennwell Publications (1988)

EE427 ADVANCED CONTROL SYSTEMS (Dept. Elective - IV)

Course Description & Objectives:

This course deals with state space, describing function, phase plane and stability analysis including controllability and observability. It also deals with modern control and optimal control systems.

Course Outcomes:

- Understand different state model for the given electrical/electro-mechanical systems and have the knowledge to find its solution.
- Model nonlinear systems, and analyse stability using describing function method.
- Analyse the stability of various nonlinear systems using the phase plane trajectory.
- Identify the stability of the given linear and nonlinear system using Lyapunov stability theory.
- Design pole placement controller and/or observer for the given system to achieve desired specifications.

UNIT I - State Space Analysis:

State Space Representation, Solution of State Equation, State Transition Matrix, Canonical Forms – Controllable Canonical Form, Observable Canonical Form, Jordan Canonical Form.

Controllability and observability : Tests for controllability and observability for continuous time systems – Time varying case, minimum energy control, time invariant case, Principle of Duality, Controllability and observability form Jordan canonical form and other canonical forms.

UNIT II - Methods of Analysis:

Describing Function Analysis: Introduction to nonlinear systems, Types of nonlinearities, describing functions, describing function analysis of nonlinear control systems.

Phase-Plane Analysis: Introduction to phase-plane analysis, Method of Isoclines for Constructing Trajectories, singular points, phase-plane analysis of nonlinear control systems.

UNIT III - Stability Analysis:

Stability in the sense of Lyapunov., Lyapunov's stability and Lypanov's instability theorems. Direct method of Lypanov for the Linear and Nonlinear continuous time autonomous systems.

UNIT IV - Modal Control:

Effect of state feedback on controllability and observability, Design of State Feedback Control through Pole placement. Full order observer and reduced order observer.

UNIT V - Optimal Control:

Calculus of Variations: Minimization of functionals of single function, Constrained minimization. Minimum principle. Control variable inequality constraints. Control and state variable inequality constraints. Euler Lagrangine Equation.

Optimal Control: Formulation of optimal control problem. Minimum time, Minimum energy, minimum fuel problems. State regulator problem. Output regulator problem. Tracking problem, Continuous-Time Linear Regulators.

TEXT BOOKS:

1. Modern Control System Theory – by M. Gopal, New Age International Publishers, 2nd edition, 1996

EE429 PROGRAMMABLE LOGIC CONTROLLERS (Dept. Elective - IV)

Course Description & Objectives:

This course deals with importance of PLC and its components. It also deals with Ladder Programming and various functions available.

Course Outcomes:

- Understand the working of PLC system components.
- Develop PLC Programming using Digital logic for Industrial process systems.
- Understand the characteristics of PLC Registers.
- Develop PLC Programming using timers and counters for industrial process systems.
- Develop PLC Programming using data handling functions for a specific application.

UNIT I - PLC Basics:

PLC system, I/O modules and interfacing, CPU processor, programming Equipment, programming formats, construction of PLC ladder diagrams, Devices connected to I/O modules.

PLC Programming: Input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill press operation.

UNIT II - Logic Circuits:

Digital logic gates, programming in the Boolean algebra system, conversion examples, Ladder Diagrams for process control: Ladder diagrams & sequence listings, ladder diagram construction and flowchart for spray process system.

UNIT III - PLC Registers:

Characteristics of Registers, module addressing, holding registers, Input Registers, Output Registers.

UNIT VI - PLC Functions:

Timer functions & Industrial applications, counters, counter function industrial applications, Arithmetic functions, Number comparison functions, number conversion functions

UNIT V - Data Handling functions:

SKIP, Master control Relay, Jump, Move, FIFO, FAL, ONS, CLR & Sweep functions and their applications

TEXT BOOKS:

1. Programmable Logic Controllers- Principles and Applications by John W. Webb & Ronald A. Reiss, Fifth Edition, PHI.
2. Programmable Logic Controllers- Programming Method and Applications – JR.Hackworth &F.D Hackworth Jr. –Pearson, 2004.

EE431 POWER SYSTEMS LAB

Course Description & Objectives:

To analyze the performance of power system networks by conducting various experiments. To study different power system protective equipment by conducting suitable experiments. To develop computer programs for analysis of power systems

Course Outcomes:

- Formulate the bus incidence, impedance and admittance matrices of a power system using MATLAB software.
- Investigate the economic load dispatch problem, load frequency control problem and different faults using MATLAB software.
- Find and examine the efficiency, regulation and ABCD parameters of a 420kv simulated transmission system.
- Examine performance of percentage biased differential relay, over current relay and short circuit problem in DC network fed at one and both end cases.

Group 1: Software/PC related

1. Formation of incidence matrices
2. Building Z_{BUS} using step by step method
3. Formulation of Bus Admittance matrix.
4. Load flow studies by using N-R method.
5. Fault (Single phase ground) analysis using PC
6. Solution of Swing equation.
7. Economic Load Dispatch using Lambda – Iteration method.
8. Simulation of Single area load frequency control with and without integral controller.

Group 2: Hardware/Equipment related

1. Determination of ABCD parameters using Transmission line model
2. Determination of Regulation and efficiency of transmission line using Transmission line model
3. Determination of regulation of transmission line including Ferranti effect.
4. Percentage biased differential relay
5. Finding the sequence impedances of an Alternator and transmission line.
6. Electrical Power transmission line training system.
7. DC network analyzer for short circuit studies.
8. IDMT over current relay

Any 5 from each of the above two groups must be chosen.

IV Year B.Tech. EEE I - Semester

L	T	P	TO	C
-	-	3	3	2

EE433 MICROPROCESSOR PROGRAMMING AND ITS INTERFACING LAB

Course Description & Objectives:

To develop the programming fundamentals of 8086 Microprocessor kit. To interface 8086 Microprocessor kit with external peripherals. To develop the programming concepts in TASM

Course outcomes:

- Able to understand the instruction set of 8086 Microprocessor
- To formulate the programmes and to implement either with 8086/8051. (Programme related to arithmetic, logical and related to I/O interfacing).
- Able to develop the programming with TASM assembler.
- Able to do String operations i.e Moving, Reversing, Comparing, Scanning strings.
- Able to Interface the input and output devices like LCD, ADC, DAC, sensor and stepper motor interface with 8051 microcontroller.

I. Programming of Microprocessor 8086:

1. Introduction to Debug/MASM/TASM
2. Arithmetic operations: Multi-byte Addition, Subtraction, Multiplication, Division.
3. Logical operations: Converting packed BCD to unpacked BCDand BCD to ASCII.
4. Finding Arithmetic mean of given numbers.
5. Finding Sum of Squares, Cubes of given numbers.
6. Searching for Minimum,Maximum of given numbers.
7. Sorting given string in Ascending,Descending order.
8. Reading, Displaying of characters.
9. String operations: Moving, Reversing, Comparing, Scanning strings.

II. Interfacing of Microprocessor 8086:

1. Programable Peripheral Interface-8255.
2. Interfacing DAC: to generate Square, Triangular, Ramp, Staircase waves.
3. Interfacing ADC: to convert analog signal to digital.
4. 8279-Keyboard/ Display interface.
5. Interfacing 8259-Programmable Interrupt Controller.
6. Interfacing a Stepper motor.
7. Interfacing Elevator simulator.
8. Traffic control simulator interface.
9. Serial data transfer using USART-8251 interface.

Any 5 from each of the above two groups must be chosen.

IV Year B.Tech. EEE I - Semester

L	T	P	TO	C
-	-	3	3	2

EE435 ELECTRICAL SYSTEMS SIMULATION LAB

Course Description & Objectives:

This course enables to simulate a given electrical circuits in any environment to analize its dynamic characteristics and to figure out its stability considerations.

Course Outcomes:

- Design single phase and three phase uncontrolled rectifier circuits as per the load specifications using MATLAB/SIMULINK
- Design single phase and three phase controlled Rectifier circuits as per the load specifications using MATLAB/SIMULINK
- Design single phase and three phase AC Voltage Controllerand single phase Cyclo-Converter circuits as per the load specifications using MATLAB/SIMULINK
- Design single phase and three phase Inverter circuits as per the load specifications using MATLAB/SIMULINK
- Design Buck and Boost Chopper circuits as per the input voltage, duty cycle specifications using MATLAB/SIMULINK

List of Experiments :

The following experiments are required to be conducted as compulsory experiments:

1. Simulation of Transient and Parametric Analysis of RLC circuits to an input (i) Pulse (ii) Step and (iii) Sinusoidal signals.
2. Analysis of three phase circuit representing the generator transmission line and load. Plot three phase currents & neutral current.
3. Simulation of single-phase full converter using RLE loads and single phase AC voltage controller using RLE loads.
4. Simulation of DC Circuits (Thevenin's Equivalent, Transfer Function).
5. Linear system analysis (Time domain analysis, error analysis) using MATLAB.
6. Stability analysis (Bode, Root Locus, Nyquist) of Linear Time Invariant Systems using MATLAB.
7. Simulation of Dynamical Systems (Single area and two area Power Systems) using SIMULINK.
8. Circuit Analysis using MATLAB (Sim Power Systems Tools Box)
9. Simulation of Resonant pulse commutation circuit and Buck chopper
10. Simulation of single phase Inver with PWM control
11. Modelling of transformer and simulation of loss less transmission line.
12. Simulation of Op-Amp based Integrator & Differentiator circuits.

Note : Any 10 of above experiments are to be conducted.

L	T	P	TO	C
4	-	-	4	4

EE414 UTILIZATION OF ELECTRICAL ENERGY (Dept. Elective - V)

Course Description & Objectives:

To understand types of drives, speed control and applications of motors. To understand electric heating and welding concepts. To understand types o0f lamps and lightning schemes and light control methods. To understand different types traction systems, features, braking mechanisms and Train movement and energy consumption.

Course Outcomes:

- To understand the operating principles and characteristics of traction motors with respect to speed, temperature, loading condition.
- To acquaint with the different types of heating and welding techniques.
- To study the basic principles of illumination and its measurement.
- To understand the basic principle of electric traction including speed–time curves of different traction services.
- To understand the method of calculation of various traction system for braking, acceleration and other related parameters, including dem and side management.

UNIT I - Utilization and Control of Electric Drives:

Introduction, Factors governing selection of Electric motors, Type of electric drives, starting and running characteristics, speed control, temperature rise, Choice of Rating of motor, Control devices for Industrial motors , Motors for particular services, load equalization.

UNIT II - Electric Heating and Electric Welding:

Introduction, Methods of Transfer of Heat, Classification of Electric Heating methods, resistance heating induction heating and dielectric heating. Electric welding, resistance and arc welding, electric welding equipment, comparison between A.C. and D.C. Welding.

UNIT III - Illumination Engineering:

Introduction, terms used in illumination, laws of illumination, polar curves, photometry, integrating sphere, sources of light, MV and SV lamps, tungsten filament lamps and fluorescent tubes, Basic principles of light control, Types of Lighting schemes, flood lighting, Methods of Lighting Calculations.

UNIT IV - Traction Systems:

Introduction, Different systems of Traction, Systems of electric traction, Systems of track electrification. General features of traction motor, Operating characteristics of D.C Motors, Three Phase Induction motor methods of electric braking-plugging, Rheostatic braking and regenerative braking.

UNIT V - Train movement and energy consumption:

Mechanics of train movement. Typical Speed-time curves for different services – trapezoidal and quadrilateral speed time curves Calculations of tractive effort, power, specific energy consumption for given run, effect of varying acceleration and braking retardation, adhesive weight and braking retardation adhesive weight and coefficient of adhesion.

EE416 SPECIAL ELECTRICAL MACHINES (Dept. Elective - V)

Course Description & Objectives:

This course enable to understand the working principle and construction of commutator motors, stepper motors and switched reluctance motors. To gain knowledge in principle of operation and characteristics of permanent magnet brushless dc motors and synchronous motors.

Course Outcomes:

- To explain theory of operation and control of switched reluctance motor.
- To explain the performance and control of stepper motors, and their applications.
- To describe the operation and characteristics of permanent magnet dc motor.
- To distinguish between brush dc motor and brush less dc motor.
- To explain the theory of travelling magnetic field and applications of linear motors.
- To understand the significance of electrical motors for traction drives.

UNIT I - Stepper Motors:

Constructional features – Principle of operation – Variable reluctance motor – Hybrid motor – Single and multi stack configurations – Theory of torque predictions – Linear and non-linear analysis – Characteristics – Drive circuits.

UNIT II - Switched Reluctance Motors:

Constructional features – Principle of operation – Torque prediction – Power controllers – Non-linear analysis – Microprocessor based control – Characteristics.

UNIT III - Permanent Magnet Brushless D.C. Motors:

Principle of operation – Types – Magnetic circuit analysis – EMF and torque equations – Power controllers – Motor characteristics and control.

UNIT IV - Permanent Magnet Synchronous Motors:

Principle of operation – EMF and torque equations – Reactance – Phasor diagram – Power controllers - Converter - Volt-ampere requirements – Torque speed characteristics - Microprocessor based control.

UNIT V - Commutator Motors:

Construction – Principle of operation - Characteristics – Applications – Universal, repulsion motors and linear induction motors.

TEXT BOOKS:

1. Bimbhra.P.S "Generalized Theory of Electrical Machines", Khanna Publishers, Fifth edition, 2013.
2. Sen.P.C "Principles of Electrical Machines and Power Electronics", John willey & Sons, Second edition, 2008.

EE418 POWER QUALITY
(Dept. Elective - V)

Course Description & Objectives:

This course introduces the basics of power quality assessment and control techniques due to extensive use of power electronic devices in operation and control of electrical systems and apparatus.

Course Outcomes:

- Demonstrate knowledge and understanding of concepts and basic principles of power quality.
- Illustrate and describe solutions for different problems in various ways: verbally, graphically, and using simulation.
- Understand computer modelling, simulation, rendering and presentation techniques.
- Identify problems, list customer needs and requirements and gather relevant information.
- Demonstrate knowledge and understanding of electrical system regulations and standard codes.

UNIT I - Introduction to Power Quality :

Over view of power Quality and quantity standards - IEC and IEEE definitions - voltage fluctuations-transients-unbalance-waveform distortion-power frequency variations.

UNIT II - Voltage Quality & Mitigation Techniques :

Voltage variations, Voltage sags and short interruptions – flicker-longer duration variations - sources – range and impact on sensitive circuits-standards – solutions and mitigations – equipment and techniques.

UNIT III - Transient behaviour :

Transients – origin and classifications – capacitor switching transient – lightning-load switching – impact on users – protection – mitigation.

UNIT IV - Power System Harmonics :

Harmonics – sources – definitions & standards – impacts - calculation and simulation – harmonic power flow - mitigation and control techniques – filtering – passive and active.

UNIT V - Power Quality conditioners:

shunt and series compensators-DStatcom-Dynamic voltage restorer-unified power quality conditioners-case studies.

TEXT BOOKS:

1. Heydt, G.T., “Electric Power Quality”, 2nd ed., Stars in a Circle Publications, Indiana, 1994.
2. Kamran Eshraghian, Eshraghian Dougles and A. Pucknell, “Essentials of VLSI circuits and systems”, 1st ed., PHI, 2009.

EE420 ELECTRICAL DISTRIBUTION SYSTEMS (Dept. Elective - VI)

Course Description & Objectives:

To Understand the distribution system planning and automation. To Understand the Design Considerations of Distribution Feeders. To Understand the different types of distribution substations. To Understand design of protection in distribution systems.

Course Outcomes:

- Differentiate the types of loads and their characteristics and design a radial and loop type distribution feeders.
- Calculate the voltage drop and power loss in a distribution system.
- Recognize the necessity of distribution system protection and devices available for discriminating faults
- Discuss the need of pf correction and voltage drop compensation
- Design a suitable capacitance for voltage control in a Distribution System

UNIT I - Introduction to Distribution Systems :

General Concepts : Introduction to distribution systems, Load modelling and characteristics. Coincidence factor, contribution factor loss factor. Relationship between the load factor and loss factor. Classification of loads (Residential, commercial, Agricultural and Industrial) and their characteristics.

Distribution Feeders : Design Considerations of Distribution Feeders: Radial and loop types of primary feeders, voltage levels, feeder loading; basic design practice of the secondary distribution system.

UNIT II - Substations & Analysis :

Substations : Location of Substations: Rating of distribution substation, service area within primary feeders. Benefits derived through optimal location of substations.

System Analysis : Voltage drop and power-loss calculations: Derivation for voltage drop and power loss in lines, manual methods of solution for radial networks, three phase balanced primary lines.

UNIT III - Distribution System Protection:

Protection : Objectives of distribution system protection, types of common faults and procedure for fault calculations. Protective Devices: Principle of operation of Fuses, Circuit Reclosures, line sectionalizes, and circuit breakers.

Coordination : Coordination of Protective Devices: General coordination procedure.

UNIT IV - Compensation for Power Factor Improvement :

Capacitive compensation for power factor control. Different types of power capacitors, shunt and series capacitors, effect of shunt capacitors (Fixed and switched), Power factor correction, capacitor allocation. Economic justification. Procedure to determine the best capacitor location.

UNIT V - Voltage Control :

Equipment for voltage control, effect of series capacitors, effect of AVB/AVR, line drop compensation.

TEXT BOOKS:

1. Turan Gonen, "Electric Power Distribution system Engineering" 2nd ed., CRC Press, 2010.
2. A.S. Pabla, "Electric Power Distribution", 4th ed., Tata Mc Graw-hill Publishing company, 1997.

4	-	-	4	4

EE422 RELIABILITY ENGINEERING (Dept. Elective - VI)

Course Description & Objectives:

Reliability Engineering subjects deals with basic probability theory and network modeling for the simple system and gives the evaluation techniques, frequency balance approaches. In last unit deals with Monte - Carlo simulation technique.

Course Outcomes:

- Define the concepts of reliability, common reliability functions, parameters and methods of their modeling and prediction.
- Estimate reliability functions and parameters of an item using life testing, Weibull and hazard plotting, stress-stress analysis, and relevant reliability databases.
- Estimate reliability functions and parameters of product/component systems using reliability block diagram, fault tree and event tree.
- Evaluate maintainability and availability of product/component systems, and different maintenance strategies.
- Describe the benefits and elements of reliability program and product liability management.

UNIT I - Basic Probability Theory:

Probability concepts, permutations and combinations, rules for combining probabilities, probability distributions, binomial distribution and properties; effects of redundancy, partial output and unavailability.

UNIT II - Network Modeling of Simple Systems:

Series, parallel and series-parallel systems, partially redundant and stand-by redundant systems; perfect and imperfect switching, complex systems: cut-set method, tie-set method and connection matrix techniques, multi-failure modes.

UNIT III - Reliability Evaluation:

General reliability functions and their evaluation, Poisson distribution, normal distribution, exponential distribution, Weibul distribution; stand-by systems and their reliability evaluation.

Markov chains: Stochastic Transitional Probability Matrix, probability evaluation of different states, continuous Markov process4es: state space diagrams, limiting state probabilities, repairable systems, MTTF evaluation, complex systems.

UNIT IV - Frequency and Duration Techniques:

Application to multi-state problems, frequency balance approach, two-stage repair and installation process, approximate system reliability evaluation.

UNIT V - Monte-Carlo Simulation:

Concepts of simulation, random variables, simulation output, applications of Monte-Carlo technique, reliability and availability of repairable systems and stand-by systems.

TEXT BOOKS:

1. Roy Billington and Ronald N Allen, “Reliability Evaluation of Engineering Systems”, 2nd ed., Springer International Edition, 2008.
2. Roy Billington and Ronald N Allen, “Reliability Evaluation of Power Systems”, 2nd ed., Springer International Edition, 1996.

EE424 MACHINE MODELLING AND ANALYSIS (Dept. Elective - VI)

Course Description & Objectives:

The student learns the mathematical modeling of electrical machines.

Course Outcomes:

- To learn about the basic concepts of AC/ DC machine modeling.
- To study about the dynamic modeling and phase transformation.
- To analyze various methodologies in small signal machine modeling.
- To understand the modeling of synchronous machine modeling.
- To learn the performance and dynamic modeling of synchronous machines.

UNIT I - Elements of generalized theory:

Essentials of rotating electrical machines-conventions-Basic two pole machine-representation of DC and three phase AC machines-Transformer and speed voltages in the armature – Kron's primitive machine – voltage equations – expression for power – Torque.

UNIT II - Linear Transformations:

Linear transformations in machines - invariance of power - Transformation from a displaced brush axis – Transformation from three phases to two phases (a,b,c to a,b,0)-power invariance –transformation from rotating axes (a,b,0) to stationary axes (d,q,0) – park's transformation – physical concepts.

UNIT III - Mathematical Models of DC Machines:

Mathematical model of separately excited, series, shunt and compound DC motors transfer functions of separately excited DC motor – equations in state variable form computation of dynamic characteristics.

UNIT IV - Mathematical Models of Three Phase Induction Motor:

Circuit model-winding inductances-flux linkages-voltage equations-transformation to equivalent two phase representation – equations in the stator frame – equations in rotor reference frame - equations in synchronously rotating frame – expression for Torque – equations in state variable form – equations for sinusoidal voltages – equivalent circuit of the induction motor.

UNIT V - Mathematical Models of Synchronous Motor:

Synchronous motor – circuit model of a three –phase synchronous motor – winding inductances – flux linkages voltage equations – parks transformation to d,q,0 variables – direct and quadrature – axes synchronous inductances and zero sequence inductance – voltage equations in steady state and phasor representation – expression for Torque power angle characteristic of salient pole motor.

TEXT BOOKS:

1. Vedam Subramanyam, “Thyristor control of Electric Drives”, 1st ed., TMH, 2002.
2. Paul C.Krause, Oleg wasynezuk, Scott D. Sudhoff “Analysis of electric machinery and Drive systems”, 2nd ed., John Wiley, 2004.

EE426 PROJECT

Course Description & Objectives:

To be able to apply some of the techniques/principles to do effective trouble-shooting, time planning for the project, inculcate hardware implementation skills by learning design tools and developing effective communication skill by delivering a seminar based on mini project.

Course Outcomes:

- Pursue their interest in Electrical Engg., through design, research, theoretical and experimental approach.
- Apply the theoretical concepts to solve industrial problems with teamwork and multidisciplinary approach.
- Get capable of self education and clearly understand the value of achieving perfection in project implementation & completion.
- Understand methodologies and professional way of documentation and communication.
- Demonstrate a sound technical knowledge of their selected project topic.

IV Year B.Tech. EEE II - Semester

L	T	P	TO	C

EE428 INTERNSHIP

Course Description & Objectives:

The major focus of the semester long internship is to learn professional skills, abilities, and activities practiced in Industry. The purpose of the internship is to provide real-world experience that enables students to put everything they have learned into action. It also can help them gain skills that can be applied to future jobs.

Course Outcomes:

- **Apply the** learned theoretical knowledge into the practical industrial scenario. (Apply)
- Develop strategies like communication, team work, time management, multi-tasking etc in an industrial setup. (Create)
- **Generate new skills and supplement knowledge**. (Create)
- **Analysis / modelling / simulation / design / problem solving / experiment as per the** industrial needs. (Create)
- **Develop a final product/** process, perform testing, arrive at results & conclusions and suggest future directions. (Create)

16HS103 ENGINEERING MATHEMATICS - I

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- recognise and solve different types of first order ordinary differential equations.
- find the complementary functions and particular integral of second and higher order ordinary differential equations with constant coefficients.
- apply the knowledge of ordinary differential equations in some instances.
- solve ordinary differential equations, with initial conditions, numerically.
- find the local maxima/minima of given function of two variables.
- eliminate arbitrary constants/functions from given relations to form partial differential equations.
- solve linear and non-linear partial differential equations of standard types.
- classify second order partial differential equations and solve them.

SKILLS:

✓ *Solve given differential equation by suitable method.*

✓ *Compute numerical solutions of differential equation by apt method.*

✓ *Compute maxima/minima of given function.*

✓ *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with MATLAB output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*
- *Estimation of acoustic impedance of a given material.*

UNIT - 1 **L- 9, T-3**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, Homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9, T-3**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form - e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9, T-3**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9, T-3**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation - Partial derivatives, Partial derivatives of higher order; Homogeneous function, Euler's theorem, Total differential coefficient, Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L- 9, T-3**

PARTIAL DIFFERENTIAL EQUATIONS: Formation of partial differential equations, Linear (Lagrange) equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method, Second order linear equations with constant coefficients only, Classifications, Rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Basic mathematical operations using MATLAB.
2. Solving simple expressions.
3. Limits.
4. Continuity.
5. Symbolic differentiation.
6. Symbolic integration.
7. Plotting of curves.
8. Plotting of surfaces.
9. Maxima & minima of functions of one variable.
10. Maxima & minima of functions of two variable.
11. Solving first order O.D.E.
12. Euler's Method and R-K Method.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	10	-	10

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibers, Photonics, Nano and functional materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to:

- understand the applications of ultrasonics and to calculate the velocity of ultrasonic waves in liquids.
- acquire basic knowledge in Non-destructive techniques.
- understand basic concepts of laser and optical fiber which help in designing and developing new devices in emerging fields.
- grasp the basics of quantum mechanics.
- understand the fabrication of solar devices.
- use nano science and technology for innovative and compact design.
- demonstrate synthesis, properties and applications of nanomaterials and functional materials.

SKILLS:

✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*

✓ *Study the wavelengths of light sources and lasers.*

✓ *Estimate the efficiency of a given solar cell.*

✓ *Learn about the type of the optical fiber and its ability to propagate light waves from its numerical aperture.*

✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves - Piezoelectric method; Properties of ultrasonic waves, Types of ultrasonic waves, Determination of velocity of ultrasonic waves in solids and liquids, SONAR - Medical applications.

NON-DESTRUCTIVE TESTING: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of laser light, Spontaneous and Stimulated emission of radiation, He-Ne laser, CO_2 laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and applications.

FIBER OPTICS: Principle of optical fiber, Acceptance angle, Numerical aperture, Types of fibers, Dispersion and attenuation in optical fibers, Optical fiber communication system, Fiber optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non- linear optical behaviour of materials, Applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, Fabrication of nano materials - Ball milling - Sol-Gel method; Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics/metals, Biomaterials.

TEXT BOOKS:

1. V. Rajendran, "Engineering Physics", 7th edition, McGraw Hill Education (India) Pvt.Ltd., 2014.
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd., 1992.
3. Sukhatme S.P., "Solar Energy", 2nd edition, TMH publication, 2005.
4. Dr. Arumugam "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find the height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measure the temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	15	5	6	4	5

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The objective of this course is to direct the students towards developing their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to:

- acquire an understanding of the rules of grammar.
- strengthen their reading and listening comprehension skills to follow the academic discourse in the engineering classroom.
- have a command of basic vocabulary related to different subject areas.
- have a grasp on the mechanics of writing and express their ideas through construction of simple texts.
- attain language proficiency to participate in the classroom discussions.

SKILLS:

✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*

✓ *Apply different sub skills like top down, bottom up approaches to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*

✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*

✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*

✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **ENVIRONMENTAL CONSCIOUSNESS**
  (Climate Change, Green Cover, Pollution, Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles, Prepositions, Sentence types and construction
- Vocabulary : Root, Prefixes, Suffixes
- Composition : Paragraph writing (Descriptive and narrative)
- Laboratory Practice : Introduction to phonetics
  (Organs of Speech, Consonants, Vowels and Diphthongs, Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **EMERGING TECHNOLOGIES**
  (Solar power, Cloud computing, Nanotechnology, Wind energy (to be covered from Energy unit))
- Grammar : Time and tense (Present-past-future; Helping verbs, Modals)
- Vocabulary : Synonyms, Antonyms
- Composition : Letter writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **TRAVEL AND TOURISM**
  (Advantages and disadvantages of travel-tourism, Atithi devo bhava, Tourism in India)
- Grammar : Subject-Verb agreement, Sentence construction
- Vocabulary : Idioms and phrases
- Composition : Letter writing (Formal)
- Laboratory Practice : Situational conversations – Role - Plays
  (Introducing, Greeting, Enquiring, Informing, Requesting, Inviting)

UNIT - 4 **L-9**

- Text : **ENGINEERING ETHICS**
  (Challenger disaster, Biotechnology, Genetic engineering, Protection from natural calamities, How pertinent is the nuclear option? An environment of energy (from Energy Unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence transformation (Degrees, Voice, Speech and Synthesis)
- Vocabulary : Phrasal verbs
- Composition : Note-making, Text, Nandan Nilekani's In Search of Our Energy Solutions (from Energy Unit)
  Summarizing, Text on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational conversations, Role-Plays (Emotions, Directions, Descriptions, Agreements, Refusals, Suggestions)

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

UNIT - 5 **L-9**

- Text : **MEDIA MATTERS**
  (History of media, Language and media, Milestones in media, Manipulation by Media, Thousands march against nuclear power in Tokyo (from Energy Unit), Entertainment media, Interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail – Short message service (SMS), Writing advertisements, Reporting; Social media - Blogging, Facebook, Twitter (acceptable and non acceptable content)
- Laboratory Practice : Group discussions – (Topics from Energy Unit), Dumping of nuclear wastes, Exploration of eco-friendly energy options, Lifting of subsidies on petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to:

- understand the terms and concepts of Computer Science and Information Technology (hardware, software, networking, security, Internet/Web, and Technologies).
- use the products and services of computers.
- use Internet/Web services as a resource for developing shared applications.
- install different operating systems and application software.

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L-10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L-10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L-8**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and database management systems.

UNIT - 4 **L-8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and other internet applications.

UNIT - 5 **L-9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours-30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools.
    a. Text formatting and table.
    b. Mathematical equations.
    c. Watermarking using Analysis tool.
    d. Calculate student mark details.
    e. Create four types of charts.
    f. Import external data, sort & filter using Power Point tool.
    g. Create text and images with effects.
    h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, “Introduction to Computers”, 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, “Introduction to Computer Science”, 2nd edition, Pearson Education, 2011.
2. Eric Maiwald, “Fundamentals of Network Security”, 3rd edition, Tata-McGrawHill, 2004.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
48	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- understand the basic terminology used in computer programming to write, compile & debug programs in 'C' language.
- use different data types to design programs involving decisions, loops and functions.
- understand the allocation and Usage of dynamic memory.
- understand the usage of files & structures.

SKILLS:

✓ *Identify suitable data types for an application.*

✓ *Apply control statements for decision making problems.*

✓ *Use multidimension array for matrix application.*

✓ *Design a program to calculate average of a class.*

✓ *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L- 10,T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L- 9,T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L- 9,T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L- 9,T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L- 8,T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours-30

1. Compute the factors of a number.
2. Compute the average of 'n' numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.
8. Using structure of arrays.

ACTIVITIES:

- *Implement matrix operations.*
- *Implement malloc and calloc functions.*
- *Copy the content of one file into the other.*
- *Implement string manipulations functions.*

9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

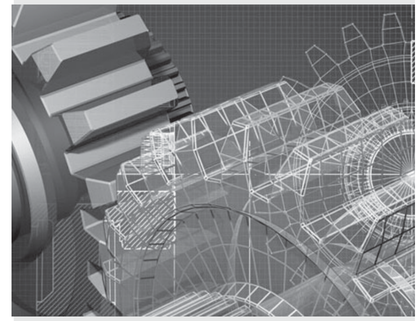
REFERENCE BOOKS:

1. Reema Thareja, "Introduction to C Programming", 2nd edition, Oxford University Press India, 2015.
2. Herbert Schildt, C, "The Complete Reference", 4th edition, Tata McGraw-Hill, 2000.
3. E. Balagurusamy, "Programming in ANSI C", 4th edition, Tata McGraw- Hill, 2008.

16EE101 BASICS OF ENGINEERING PRODUCTS



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- gain knowledge and hands-on experience on various engineering products.
- install, operate, maintain and troubleshoot basic mechanical, electrical and electronic appliances.
- understand the concept of conservation of energy.
- gain awareness on choosing appropriate construction materials.

SKILLS:

✓ *Identify UPS requirements for a given load.*

✓ *Provide a Lighting scheme for specific working environment.*

✓ *Design a composition of Heating element for a particular application.*

✓ *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

✓ *Provide an earthing for Domestic Outlet.*

✓ *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembe and Assembe the Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design the Electric Wiring system for a prototype house.*
- *Design the UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L-9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air - Conditioner and Refrigerator, Components, Assembly and disassembly; Working principle of Centrifugal and Reciprocating pumps - Types, Parts and applications, Working principle of Screw jack and its components, Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L-10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks, Timber - Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel, Simple layout design, Paints, Tiles, fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L-08**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems, Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods, Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and applications.

MOTOR: Electric Motors, Classification, Construction and working principles of motors used in Domestic applications, Mixer grinder, Ceiling and exhaust fan, Hair dryer, Washing machine, Water pump, Air coolers, Vacum cleaner, Computer cooling motor, Electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, Radio, Remote control, Telephone, Microwave oven, Cell phone, PA system, Induction stove, WiFi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box
13. Ceiling Fan and Mixer
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

1. M.S.Shetty, "Concrete Technology", 1st edition, S.Chand and Co, 2005.

5. Marshall Brain, "How Stuff Works", 1 st edition, John Wiley&Sons, 2001.
6. Pravin Kumar, "Basic Mechanical Engineering", 1 st edition, Pearson Publishers, 2013.

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
0	-	30	-	-	-	-	-	-

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. The objective of this course is to strengthen the comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to:

- use functional English to speak and express themselves in different social contexts
- write simple letters, narratives, factual reports and descriptive passages for both academic and non-academic purposes in English.
- gain proficiency to undergo Preliminary English Test (PET), an Intermediate Level English Certification Test administered by Cambridge English Language Assessment, UK.

SKILLS:

✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*

✓ *Read and extract information from different texts and draw inferences by understanding elements like tone and transitional words.*

✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*

✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/Others, Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, Intonation and accent

Speaking – Articulating syllables clearly, Speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, Use of Nouns, Adjectives, Verbs, Prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things and Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages, True or False

Writing – Rewording, Sentence transformation, Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, Short conversations

Vocabulary / Grammar – Use of Adjectives/Adverbs, Comparatives and Superlatives

PRACTICE: Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations, Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines, Inferences, True/False

Writing – Developing hints, Writing short messages/paragraphs

Listening – Searching for factual information, Gap filling

Speaking – Snap Talks, JAM, Elocution

Vocabulary / Grammar – Prepositions, Phrasal Verbs, PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating, Predicting, Negotiating, Planning

SKILL FOCUS:

Reading – Reading for evaluation and appreciation, Comprehension

Writing – Letters, e-mails, 7 C's

Listening – Following long conversations / Interviews

Speaking – Discussions, Debate, Descriptions

Vocabulary / Grammar – Modals, Conditionals, Verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

UNIT - 5 **P-6**

FUNCTIONS: Requesting, Denying, Suggesting, Persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements, Presentations

Vocabulary / Grammar - Punctuation, Cloze tests

PRACTICE: Objective PET Units 25 – 30

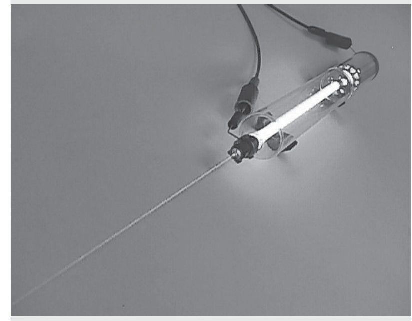
TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, "Objective PET", Student's Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.
2. Annette Capel and Rosemary Nixon, "Introduction to PET", Oxford University Press.

16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course objectives and Description:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the experiments.The students have to perform at least ten from the list of experiments.

Course Outcomes:

The student will be able to:

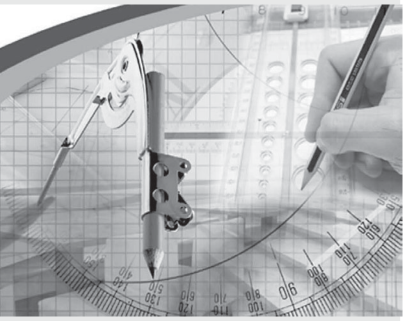
- realize the concept of resonance by conducting the experiments of AC sonometer and Melde's experiment.
- acquire the knowledge on magnetic field theory and thermal conductivity by conducting experiments, field along the axis of a circular coil and thermal conductivity of bad conductor
- understand the concepts of light by conducting the experiments of determination of wave length, numerical aperture of an optical fibre and also from V–I characteristics of Solar cell and LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Determination of Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – Efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect - Determination of Seebeck coefficient of a thermo couple.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.



16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- carry out the basic operations of matrix algebra.
- use row operations to reduce a matrix to echelon form, normal form.
- determine consistency of a system linear equations.
- compute eigen values and eigen vectors.
- evaluate double integrals and triple integrals.
- evaluate double integrals in polar coordinates.
- utilize Cartesian and polar coordinates to find area.
- understand the concept of gradient, divergance and curl.
- apply vector integral theorems in finding surface and volume integrals.

SKILLS:

- ✓ *Appreciate various methods to find the rank of a matrix.*
- ✓ *Solve given system of linear equations.*
- ✓ *Compute Eigen values and Eigen vectors of a matrix.*
- ✓ *Compute the power of a matrix by suitable method.*
- ✓ *Evaluate Multiple integrals.*
- ✓ *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9,T-3**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from, Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L-9,T-3**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, Properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, Diagonalisation of a matrix.

UNIT - 3 **L-9,T-3**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in polar coordinates, Change of order of integration, Change of variables, Applications to area in cartesian coordinates and polar coordinates, Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L-9,T-3**

VECTOR DIFFERENTIATION: Vector function, Differentiation, Scalar and vector point function, Gradient, Normal, Divergence, Directional derivative, Curl, Vector identities.

UNIT - 5 **L-9,T-3**

VECTOR INTEGRATION: Line integral, Surface integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Matrix Algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc).
13. Interpolation.

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS:

2. B. V. Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.
3. R K Jain and S R K Iyengar, "Advanced Engineering Mathematics", 2nd edition, Narosa Publishing House, 2007.
4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with MATLAB output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with MATLAB output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to:

- understand the limitations of using hard water for domestic and industrial purposes.
- choose and apply suitable methods to soften the hard water for industrial and domestic applications.
- understand electrochemistry and its importance for applications such as fuel cells, modern lithium ion batteries etc.
- understand the types of corrosion and their implications followed by their control and prevention methods.
- familiarize the preparation, properties and applications of various polymers.

SKILLS:

✓ *Analyse the total hardness of water sample.*

✓ *Understand the basic principles involved in various batteries.*

✓ *Understand the mechanisms of corrosion and various controlling methods.*

✓ *Synthesize various polymers.*

✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water, Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water, Scales and sludges, Caustic embrittlement, Boiler corrosion, Priming and foaming, Softening methods - Zeolite process, Ion Exchange process; Desalination of brackish water - Reverse osmosis, Electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential, Electrochemical series, Nernst equation, Reference electrodes, Calomel and standard hydrogen electrode, Ion selective electrode, Glass electrode, Determination of pH using glass electrode; Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cells - Hydrogen oxygen, Methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion, Mechanisms of wet corrosion, Bimetallic corrosion, Concentration cell corrosion, Factors influencing the rate of corrosion; Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction, Types of polymerization - Preparation, Properties and applications of polyethylene, PVC, Teflon, Bakelite, Urea formaldehyde, Silicones; Rubber, Vulcanization, Synthetic rubbers - Buna-S, Buna-N, Neoprene; Introduction to conducting polymers; Poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV-Visible spectroscopy - Beer, Lambert's law, Qualitative and quantitative analysis, Block diagram of UV-Visible spectrophotometer, IR spectroscopy - Types of vibrations, Block diagram of IR spectrophotometer.

TEXT BOOKS:

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and Mridula chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.
2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Total Hours :

L	T	P
15		45

WA/RA	SSH/HSH	CS	SA	S	BS
6	15	-	5	-	-

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to:

- sketch engineering objects in the freehand mode.
- create geometric construction with hand tools.
- create dimensions of objects.
- prepare plan and elevation of any pictorial view.
- draw freehand lettering.
- make isometric sketches using graphics.
- draw orthographic multi-view sketches using graphics.

SKILLS:

- ✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*
- ✓ *Draw geometrical objects like polygons, solids of different types.*
- ✓ *Visualize the objects in real time situations.*
- ✓ *Develop 3D views (isometric views).*

UNIT – 1 **L-3,P-10**

INTRODUCTION TO ENGINEERING DRAWING: Types of lines, Lettering, Dimensioning, Construction of polygon and conics (Ellipse, Parabola and Hyperbola by general method), Ellipse by oblong method.

UNIT – 2 **L-3,P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection, Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes, Projections of planes, Simple planes, Planes inclined to one reference planes.

UNIT – 3 **L-3,P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT – 4 **L-3,P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder, Simple orthographic views into isometric views through AutoCAD.

UNIT – 5 **L-3,P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS:

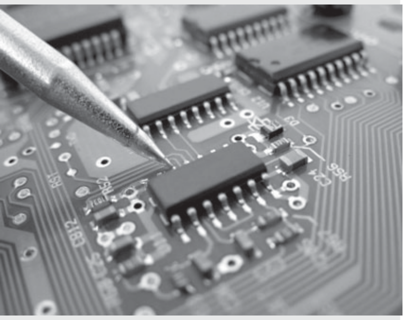
1. N.D.Bhatt, "Engineering Drawing", 53rd edition, Charotar Publication, 2014.
2. Basant Agrawal, C.M.Agrawal "Engineering Drawing" , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS:

1. J. hole, "Engineering Drawing", 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, "Engineering drawing", 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	5

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- understand the notation and usage of components in electric circuits.
- analyze AC (single and three phase) and DC, AC circuits using different methods and laws.
- operate various electrical machines.
- understand the concepts of semiconductor devices and their operation.

SKILLS:

✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*

✓ *Develop a simple loop generator.*

✓ *Design a voltage regulator using Zener diode.*

✓ *Design a half wave rectifier using PN junction diode.*

✓ *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit concepts, Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements, Ohm's Law, Kirchhoff's Laws - Application to simple series, Parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only, Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator, Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems), D.C. Motor, Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours-30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to:

- analyse the total hardness present in water samples.
- determine the total alkalinity of water used in industries.
- acquire the knowledge on polymers used as insulators.
- familiarize advanced techniques in chemical analysis using conductometer and pH meter.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS:

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I, 2009.
2. Dr.Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	20	4	-	4	-

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

The student will be able to:

- observe and integrate the diverse information from sources outside the classroom.
- think critically, creatively, resourcefully and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness.
- adapt eco-friendly technologies in order to maintain hygienic conditions.
- understand the human activities that are detrimental to environment.
- collaborate across diverse disciplines to identify and create solutions that conserve and help maintain biodiversity in the long term.
- discuss the issues involved in the generation of renewable energy resources.

SKILLS:

- ✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning.*
- ✓ *Gain perspectives to adrress the challenges, improvise and devise solutions.*
- ✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches.*
- ✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*
- ✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem.*

UNIT - 1 **L-6**

NATURAL RESOURCES: Environmental studies - Definition scope and its importance, Need for public awareness; Natural resources - Forest resources, Deforestation, Water resources, Properties and conflicts, Mineral resources, Extraction and impacts, Food resources, Modern agriculture methods, Fertilizer pesticide problems, Water logging, Salinity, Energy resources, Renewable and non-renewable energy resources, Harness technology, Solar energy technologies, Land resources, Land degradation, Soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

ECOSYSTEMS AND BIODIVERSITY: Ecosystem - Concept, Structure and functions of an ecosystem, Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems; Biodiversity - Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT - 3 **L-6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY: Solid waste management - Causes, Effects and control measures of municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and noise pollutions, Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, definitions, Applications of the remote sensing; Innovative practices - Objectives, Innovative practices in agriculture and forest community, Bio-villages; Green technology for sustainable development; Life cycle assessment and its concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA: Sustainable development, Water conservation, Cloud seeding, Rainwater harvesting methods watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental legislation - Wildlife protection act, Water act, Forest conservation act, Air act, Environmental protection act; Environmental Impact Asssssment (EIA) - Introduction, Definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed projects / industry / developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION: Food sanitation - Food and drugs Act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water, Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions; Role of youth in the development, Promoting activities, Youth as initiators, Field work/environmental visit - Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment, Common plants, Insects, Birds; Study of simple ecosystems - Pond, River, Hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

TEXT BOOKS:

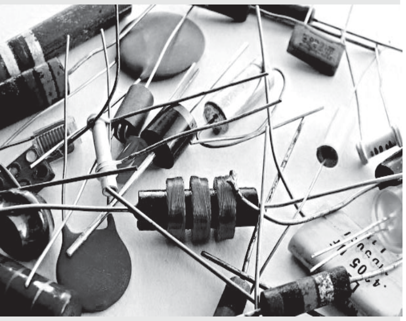
1. Anubha Kaushik and CP Kaushik, "Perspectives in Environmental Studies", 5th edition, 2016
2. Benny Joseph, "Environmental studies", 2nd edition, McGraw Hill Education, 2015.

REFERENCE BOOKS:

1. Dr. M. Chandrasekhar, "A Text book of Environmental Studies", HI-TECH publications, 2006.
2. Dr. M. Anji Reddy, "A Text book of environmental science and Technology", B S Publications, 2008.
3. Dr. K. Mukkanti, "A Text book of Environmental Studies", S.CHAND and Company Ltd, 2009.
4. EHILRS and ST, "Text book of Municipal and Rural Sanitation", M.S Hill, 1998.
5. C. S. Rao, Wiley Eastern Ltd, "Environmental Pollution Control Engineering", New Age International Ltd, 2001.
6. Dr. M. Anji Reddy, "Introduction to Remote Sensing", B S Publications, 2004.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy.*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*



16EC202 ELECTRONIC DEVICES AND CIRCUITS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	48	-	12	3	2

Course Description and Objectives:

This course is aimed at offering fundamental concepts of semiconductor devices and circuits. The objective of the course is to introduce the student to Junction Diode, Transistor, FET and other basic devices that are designed with semiconductor materials. As a first-level course in electronics, it forms the basis for the understanding of advanced electronic courses that are offered in subsequent semesters.

Course Outcomes:

The student will be able to:

- understand semiconductor devices through energy band diagrams.
- analyze characteristics of semiconductor junctions.
- differentiate between bipolar and unipolar conduction.
- understand physics of optical devices.
- understand the usefulness of semiconductor devices in circuit making.
- use these basic circuits to develop various useful applications.

SKILLS :

- ✓ *Identify a Semiconductor Diode for a specific application and power handling capacity.*
- ✓ *Identify the transistor type for a given application (switch/amplifier).*
- ✓ *Recognize the required specifications of the transistor.*
- ✓ *Identify the amplification factor of the given transistor.*
- ✓ *Test the working condition of the transistor.*

UNIT - 1 **L-9**

P-N JUNCTION DIODE: Formation of P-N junction, Energy band diagram of open circuited P-N junction, Operation of forward and reverse biased P-N junction diode, Volt-Ampere characteristics, Temperature dependence on V–I characteristic, Diode resistances and capacitances, Diode equation, Special diodes-Breakdown Mechanisms in a Semi Conductor Diode, Zener diode, V-I characteristics and zener diode as voltage regulator, Tunnel diode, Varactor diode, SCR, LED and photodiode.

UNIT - 2 **L-9**

DIODE APPLICATIONS: The P-N junction diode as a rectifier - Half wave rectifier, Full wave rectifier and bridge rectifier, Harmonic components in a rectifier circuit; Filters - Analysis and comparison of various filters, Inductor filter, Capacitor filter, L- section filter and ð-section filter in terms of ripple factor, A simple regulated power supply circuit; Clipping and clamping circuits - Elementary diode clippers and clamping circuits.

UNIT - 3 **L-9**

TRANSISTOR: Bipolar junction transistor (BJT) - Construction, Principle of operation of PNP and NPN transistors, Characteristics of transistor in common emitter, Common base and common collector configurations; Field effect transistor (FET)-Construction, Symbol and principle of operation of JFET, Pinch-off voltage, JFET characteristics, Comparison of BJT and FET; MOSFET - Construction, working and V-I characteristics of enhancement and depletion MOSFET.

UNIT - 4 **L-8**

BJT and FET BIASING: Transistor biasing and thermal stabilization, DC and AC load lines, Operating point, types of BJT biasing, Thermal runaway and thermal stability, Stabilization against variations in V_{BE}, â and I_{co} , Stability factors, Bias compensation using diodes and transistors **,** Biasing of FET.

UNIT - 5 **L-10**

SINGLE STAGE BJT AND FET AMPLIFIERS: Transistor as an amplifier, Two port network representation and h parameter model of a transistor, Exact and approximate analysis of CE small signal low frequency transistor model, Expressions for voltage gain, Current gain, Input impedance and output impedance using h-parameters, Comparison of transistor amplifier configurations in terms of A_I, R_i, A_V, R_o; FET amplifiers - FET small signal model, Analysis of FET amplifiers (CS, CD and CG configurations) at low frequencies, Expressions for voltage gain, Input impedance and output impedance.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

1. Understand the V-I characteristics of P-N junction diode and hence determine the diode forward, reverse currents, static and dynamic resistances.
2. Analyze the V-I characteristics of zener diode under reverse biased condition and observe the application as voltage regulator.
3. Calculate the efficiency and ripple factor of all rectifiers and analyze their performance with and without filter.
4. Understand the input and o/p characteristics of all BJT configurations in active region and determine its current amplification factors.
5. Understand the drain and transfer characteristics of FET and determine its amplification factor.
6. Understand the diode application as a clipper.

ACTIVITIES:

- *Choose a diode for a Cell-phone/ Laptop/ Tablet adapter/ for various ratings.*
- *Design voltage regulator using zener diode.*
- *Design three types of biasing circuits and determine the stability factors in each case.*
- *Transistor as an amplifier for the given specifications.*
- *Design a wideband amplifier with FET.*

LIST OF EXPERIMENTS Total hours-30

1. P-N Junction diode characteristics.
2. Zener diode characteristics and Zener diode as Voltage regulator.
3. To determine the ripple factor and efficiency of Half wave Rectifier with and without filter.
4. To determine the ripple factor and efficiency of Center tapped Full wave Rectifier with and without filter.
5. To determine the ripple factor and efficiency of Bridge Rectifier with and without filter.
6. Construction of various diode clipping circuits.
7. Transistor CB characteristics (Input and Output).
8. Transistor CE characteristics (Input and Output).
9. Transistor CC characteristics (Input and Output).
10. FET characteristics.

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	45	-	-	-	20	-	-

Course Description and Objectives :

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes :

The student will be able to:

- identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.
- fabrication of wooden joints and understand joining of metals.
- make metal joints and sheet metal work.
- make metal tools like knives, needles, swords, arrows etc.

SKILLS:

✓ *Prepare wooden and metal furniture.*

✓ *Electrical wiring and power supply in residences.*

✓ *Make funnels, trays, locker, steel almirahs etc.*

✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*

✓ *CNC machines and various machining operations and processes.*

ACTIVITIES:

- o *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- o *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- o *Trials on electrical circuit connections.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin smithy and Black smithy.
4. House wiring.
5. Foundry and welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS:

1. S.K. Hazra Choudhury, "Elements of workshop Technology", 11^{th} edition, Media Promoters, 1997.
2. Gopal, T.V., Kumar, T., and Murali, G., "A first course on workshop practice: Theory, Practice and Work Book", Suma Publications, Chennai, 2005.
3. Venkatachalapathy, V. S, "First year Engineering Workshop Practice", Ramalinga Publications, Madurai, 1999.

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

This course deals with descriptive statistics, correlation, regression, and their applications, probability, theoritical distributions and testing of hypothesis. The objective of this course is to enable the student to understand and apply statitical techniques, curve fitting, correlation and regression, probability and also to make the student familiar with discrete, continuous distributions and testing of hypothesis.

Course Outcomes:

The student will be able to:

- distinguish between quantitative and categorical data and represent the data in graphical and tabular forms.
- calculate and interpret measures for the centre and spread of a data set.
- decide how and when to use the normal model.
- calculate and interpret correlation coefficient and regression lines.
- understand the rules of probability and apply them.
- compute probabilities using theoritical distributions.
- test hypothesis for population parameters.

UNIT - 1 **L-12**

DESCRIPTIVE STATISTICS: Basic Definitions, Frequencies, Graphical Representation, Histogram, Ogive curves, Measures of Central tendency, Arithmetic mean, Median, Mode, Mean deviation, Standard Deviation, Symmetry and Skewness, Karl Pearson's Coefficient of skewness.

UNIT - 2 **L-12**

CURVE FITTING, CORRELATION AND REGRESSION: Least squares method, Curve fitting (straight line and parabola only),Covariance, Correlation, Types, Pearson's Coefficient of correlation, Rank correlation, Spearman's rank correlation, Regression, Regression lines.

UNIT - 3 **L-12**

PROBABILITY: Introduction, Definition (Classical and Axiomatic approach), Addition theorem, Conditional probability, Multiplication theorem, Total probability, Bayes theorem.

UNIT - 4 **L-12**

DISTRIBUTIONS: Random variables, Discrete and Continuous variables, Introduction to Distributions.

BINOMIAL DISTRIBUTION: Definition, Mean and Standard deviation, Recurrence relation, Applications, Fitting of binomial distribution.

POISSON DISTRIBUTION: Definition, Mean and Standard deviation, Recurrence relation, Poisson Distribution is an approximation of Binomial distribution, Applications, Fitting of Poisson distribution.

NORMAL DISTRIBUTION: Definition, Normal curve, Mean and Standard deviation, Median, Mode, Normal Distribution applications.

UNIT - 5 **L-12**

TESTING OF HYPOTHESIS: Population and Sampling, Parameters and Statistics, Types of sampling, Test of hypothesis and test of significance: Null hypothesis, Errors, Level of significance, Confidence Limits, Testing large samples, Sample distribution of proportion**,** t-distribution for small sample, Difference between means of small sample, Chi square test for goodness of fit, Chi-square test for test of independence.

TEXT BOOKS:

1. Miller and Freund, Probability and Statistics for engineers, 8th edition, Pearson publishers, 2013.
2. H. K. Dass and Er. Rajanish Verma, Higher Engineering Mathematics, S. Chand & Co., 3rd edition, 2014.

16MS201 MANAGEMENT SCIENCE

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	10	20	5	5	-	-

Course Description and Objectives:

This course provides an introduction to the evolution of management along with the framework of managerial functions related to organization structure, production, operations, marketing, human resource management, strategy etc. The objective of the course is to introduce the students and make them well versed with the operational functions of management.

Course Outcomes:

The student will be able to:

- understand the nature, importance and evolution of management.
- identify the significance of Operations Management.
- carry out production operations through work study.
- understand the markets, customers and competition.
- plan and control the HR function.

SKILLS:

✓ *Analyze and improve productivity.*

✓ *Analyze the customer needs, wants and demand.*

✓ *Recognize the need of different types/qualities of Human Resources.*

✓ *Analyze the reasons for the evolution of management.*

✓ *Analyze the philosophies of different management thinkers.*

ACTIVITIES:

- *Solve a test case to identify the various operational functions of management .*
- *Solve a test case to know the importance of marketing.*
- *Solve a test case to know the importance of human resources.*
- *Solve a test case to know the importance and evolution of management discipline.*

UNIT - 1 **L-9**

INTRODUCTION TO MANAGEMENT: Concepts of Management and organization, Nature, Importance and functions of management, Systems approach to management, Taylor's scientific management theory, Fayol's principles of management, Mayo's hawthorne experiments, Maslow's theory of human needs, Douglas McGregor's theory X and theory Y, Herzberg's two factor theory of motivation, Leadership styles, Social responsibilities of management.

UNIT - 2 **L-9**

OPERATIONS MANAGEMENT: Principles and types of plant layout, Methods of production (Job, Batch and mass production), Work study - Basic procedure involved in method study and work measurement

UNIT - 3 **L-9**

MATERIALS MANAGEMENT: Objectives, Need for inventory control, EOQ, ABC analysis, Purchase procedure, Stores management and stores records, Statistical Quality Control - Control charts for variables and attributes (simple Problems), Acceptance sampling.

UNIT - 4 **L-9**

HUMAN RESOURCES MANAGEMENT (HRM): Concepts of HRM, Basic functions of HR manager, Manpower planning, Recruitment, Selection, Training and development, Placement, Wage and salary administration, Promotion, Transfer, Separation, Performance appraisal, Grievance handling and welfare administration, Job evaluation and merit rating.

UNIT - 5 **L-9**

MARKETING MANAGEMENT: Evolution of marketing, Functions of marketing selling Vs marketing, 4 P's of marketing, Product mix, Product life cycle, Place mix - Channels of distribution, Price mix – pricing methods, Promotion mix, Tools of promotions.

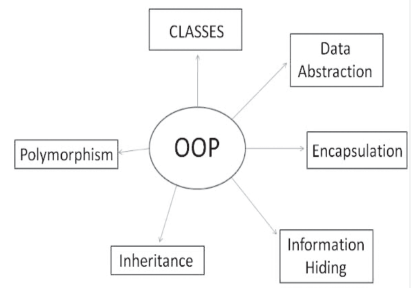
TEXT BOOKS:

1. P. Vijay Kumar, N. Appa Rao and Ashnab and Chnalill, "Introduction to Management Science", 6th edition, Cengage Learning India, 2012.
2. Stoner, Freeman and Gilbert, "Management", 6th edition, Pearson Education, 2004.

REFERENCE BOOKS:

1. Kotler Philip and Keller Kevin Lane, "Marketing Mangement", 12th edition, PHI, 2005.
2. Koontz and Weihrich, "Essentials of Management", 6th edition, TMH, 2005.

16IT201 OBJECT ORIENTED PROGRAMMING



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objective:

This course covers the principles of object oriented programming which includes defining class, creating objects, usage of abstraction, encapsulation, inheritance and polymorphism. Further, it offers concepts of multi-threading, applets, AWT and swings. The objective of this course is to enable the student to develop applications, graphical user interfaces and Internet programs using object oriented concepts.

Course Outcomes:

The student will be able to:

- distinguish between procedure oriented and object oriented concepts of programming.
- understand OOP concepts and features of Java programming.
- apply Object Oriented concepts in problem solving.
- identify requirements of Internet programming.
- develop Graphical User Interfaces (GUI).

SKILLS:

✓ *Create new packages and interfaces.*

✓ *Develop multi-threaded applications.*

✓ *Develop remote applets.*

✓ *Create web applications.*

ACTIVITIES:

- *Implement the concept of encapsulation.*
- *Develop a sample program which exhibits inheritance and polymorphism.*
- *Design and develop Internet programming using applets.*
- *Implement user interface using AWT and Swings.*

UNIT - 1 **L-10**

INTRODUCTION, CLASSES AND OBJECTS: Creation of Java, Importance of Java to Internet, Byte code, Java buzzwords, OOP principles, Encapsulation, Inheritance and polymorphism, Data types, Variables, Declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Compiling and running of simple Java program, Concepts of classes and objects, Class fundamentals, Declaring objects, Assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, This key word, Garbage collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and inner classes, Exploring the string class.

UNIT - 2 **L-8**

INHERITANCE, PACKAGES AND INTERFACES: Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, The object class, Defining, Creating and accessing a package, Understanding classpath, Importing packages, Differences between classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and extending interfaces.

UNIT - 3 **L-9**

EXCEPTION HANDLING, MULTITHREADING: Concepts of exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and finally keywords, Built-in exceptions, Creating own exception, Sub classes, Concepts of multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads, Deadlocks, Thread groups.

UNIT - 4 **L-9**

WINDOW PROGRAMMING: Applet class, Applet architecture, Applet skeleton, Applet initialization and termination, Overriding update( ), Simple applet, Display methods, Requesting repainting, A simple banner applet, Using the status window, The HTML applet tag, Passing parameters to applets, Applet context and show document. Event sources, Event classes, Action event, Adjustment event, Component event, Container event, Focus event, Input event, Item event, Key event and mouse event, Delegation event model, Event listeners, Handling mouse and keyboard events, Adapter classes.

UNIT - 5 **L-9**

AWT AND SWINGS: Concepts of components, Container, Panel, Window, Frame, Canvas, Font class, Color class and graphics, AWT Controls, Buttons, Labels, Text fields, Text area, Check boxes, Check box groups, Lists, Choice, Scrollbars, Menus, Layout managers, Flow, Border, Grid, Card and grid bag .JApplet, JFrame and JComponent, Icons and labels, Handling threading issues, Text fields, Buttons, The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed panes, Scroll panes, Trees, and Tables.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS: Total Hrs: 30

1. Java program to read an integer and print all prime numbers upto that integer.
2. Java program that checks whether a given string is a palindrome or not.
3. Arrange given list of names in the ascending order.

4. Java Program that reads a line of integers and then displays each integer and the sum of all the integers (use StringTokenizer class).

5. Java program that reads a file and displays the file on the screen, with a line number before each line.

6. Display the number of characters, words and lines in a text file.

7. Develop Java program for creating multiple threads

   a) Using Thread class.

   b) Using Runnable interface.

8. Program that illustrates how a run time polymorphism is achieved.

9. Implement a Java program that illustrates the following

   a) Creation of simple package.

   b) Accessing a package.

   c) Implementing interfaces.

10. Write a Java program that illustrates the following

    a) Handling predefined exceptions.

    b) Handling user defined exceptions.

11. APPLETS - working with

    a) Frames and various controls.

    b) Dialogs and Menus.

    c) Panel and Layout.

    d) Graphics.

    e) Colors and fonts.

16CS202 DATA STRUCTURES

Hours Per Week:

L	T	P	C
3	-	2	4

Total Hours:

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	8	5	-	-

Course Description and Objectives:

This course is aimed at offering fundamental concepts of data structures and explain how to implement them. It begins with the basic concepts of data, data structures and then introduces the primitive and non-primitive data structures in detail. It forms the basis for understanding various ways of representing data and its usage in different computing applications.

Course Outcomes:

The student will be able to:

- apply advanced C programming techniques such as pointers, dynamic memory allocation, structures to develop solutions for particular problems.
- analyze characteristics of various data structures.
- differentiate between Graphs and Trees.
- derive the importance of sorting and applying it wherever useful.
- argue the usefulness of data structures in solving problems.

SKILLS:

✓ *Analyse the data structure required for various applications.*

✓ *Develop the sorting algorithm suitable for a given scenario.*

✓ *Implement array or linked list for a given problem.*

✓ *Describe Pros & Cons of each data structure.*

✓ *Usage of trees and graphs.*

UNIT - 1 **L-9**

SORTING AND SEARCHING: Introduction - Data, Data type, Data Structure, Primitive and Non-primitive - Data type, Data Structure; Storage structures - Sequential and Linked storage representations; Applications of Structures, Hashing.

SORTING: Selection Sort, Bubble Sort, Insertion Sort, Quick Sort, Merge Sort.

SEARCHING: Binary Search and Linear Search.

UNIT - 2 **L-9**

LINKED LISTS: Introduction, Types of Linked List - Singly Linked List, Doubly Linked List, Circular Linked List; Operations - Insertion, Deletion, Traverse forward/reverse order; Multi lists, Applications of Linked Lists.

UNIT - 3 **L-9**

STACKS AND QUEUES: Stacks - Introduction, Array and Linked representations, Implementation and their applications; Queues - Introduction, Array and Linked representations, Implementation and their applications, Types - Linear, Circular and Doubly ended queues; Applications.

UNIT - 4 **L-9**

TREES: Introduction, Properties, Binary Tree - Introduction, Properties, Array and Linked representations; Tree traversals and their Implementation, Expression trees, BST Definition and implementation; AVL Trees - Definition and Implementation.

UNIT - 5 **L-9**

GRAPHS: Introduction, Properties, Modeling problems as graphs representations - Adjacency matrix, Adjacency list; Traversals - Breath first search and Depth first search; Application of graphs.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to :

- understand the importance of structure, abstract data type and their basic usability in different applications through different programminglanguages.
- understand the linked implementation and its uses both in linear and non-linear data structure.
- understand various data structures such as stacks, queues, trees, graphs, etc. to solve various computing problems.
- decide a suitable data structure to solve a real world problem.

LIST OF EXPERIMENTS: Total hours: 30

1. Selection, Bubble, Insertion, Quick and Merge sorting algorithms.
2. Linear and Binary search algorithms.
3. Single linked list, doubly linked list, and circular linked list.
4. Stack using an array and linked list.
5. Queue using an array and linked list.
6. Tree using an array and linked list.
7. Check if given expression is fully parenthesis or not using stack.
8. Tree traversing techniques.
9. BST using an array and linked list.
10. Graph traversal techniques.

ACTIVITIES:

- *Design and Implement a School Management System.*
- *Design and Implement a Social Networking Site.*
- *Implement a project to find out the most common words in the articles.*
- *Design and Implement a Library Book Management System.*
- *Design and Implement a CricBuzz Application.*

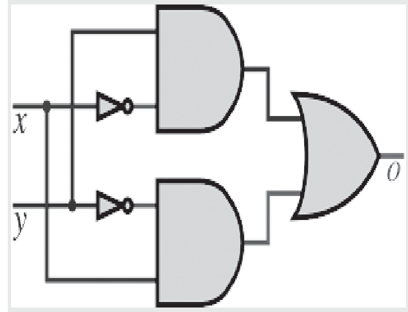
16CS203 DIGITAL LOGIC DESIGN



Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	7	8	2	2

Course Description and Objectives:

This course introduces the topics such as number systems, analysis and design of combinational and sequential circuits, digital circuit design optimization methods using multiplexers, decoders, registers, counters and programmable logic arrays. The objective of this course is to offer the knowledge and skill of conversions between different number systems, design of logical gates, minimization of switching functions, effective memory utilization and design of synchronous and asynchronous counters.

Course Outcomes:

The student will be able to:

- determine philosophy of number systems and codes.
- minimize switching functions using Boolean algebra, Karnaugh maps and tabular method.
- design combinational and sequential logic circuits using conventional gates.
- gain knowledge of the ROM, RAM, PROM, PLD etc.

SKILLS :

✓ *Perform number conversion.*

✓ *Synthesize boolean algebra.*

✓ *Construct combinational circuits like, decoders, encoders, multiplexers etc.*

✓ *Analyze counters, shift registers etc.*

✓ *Construction of PLA and PLD.*

ACTIVITIES:

- *Design of logical circuits using universal gates and basic gates.*
- *Reduction of Boolean function using K-maps.*
- *Construction of one stage ALU circuit.*
- *Design of the n-bit decoder and encoder.*
- *Design of combinational circuits using different types of flip-flops.*
- *Design of PLA for the given Boolean expression.*
- *Design of PLD for the given Bolean expression.*
- *Design of different types of counters.*

UNIT - 1 **L-9,T-3**

NUMBER SYSTEMS AND BOOLEAN ALGEBRA: Number system **-** Binary numbers, Number base conversions, Octal and hexadecimal numbers, Complements of numbers, Signed binary numbers, Binary codes, Binary logic. Boolean Algebra **-** Basic definitions, Basic theorems and properties of Boolean algebra.

UNIT - 2 **L-9,T-3**

LOGIC GATES AND GATE-LEVEL MINIMIZATION: Boolean functions, Canonical and standard forms, Digital logic gates, The map method, Four - variable k-map, Product-of-sums simplification, Don't-care conditions, NAND and NOR implementation, Other two-level implementations, Exclusive-or function.

UNIT -3 **L-9,T-3**

COMBINATIONAL LOGIC: Combinational circuits, Analysis and design procedure, Binary adder–subtractor, Decimal adder, Binary multiplier, Magnitude comparator, Decoders, Encoders, Multiplexers, De-mutliplexers.

UNIT - 4 **L-9,T-3**

SEQUENTIAL LOGIC: Sequential circuits, Storage elements-Latches, Flip-flops, Analysis of clocked sequential circuits, Design procedure, Registers, Counters.

UNIT - 5 **L-9,T-3**

PROGRAMMABLE LOGIC DEVICES: Programmable logic, PLDs, ROM, Types of ROM, Combinational Programmable Devices, Programmable Logic Array, Programmable Read Only Memory.

TEXT BOOK:

1. M Morris Mano and Michael D. Ciletti, " Digital Design", 5th edition, Pearson Education, 2013.

REFERENCE BOOKS:

1. H Taub and D Schilling, "Digital Integrated Electronics", 2nd edition, TataMc Graw-Hill, 2004.
2. Z. Kohavi, "Switching and Finite Automata Theory", 2nd edition, Tata McGraw-Hill, 2008.

16CS302 WEB TECHNOLOGIES

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	15	30	5	40	5	8	5	2

Course Description and Objectives:

This course offers the basic concepts used to develop static web pages and it also provides knolwedge of Internet programming concepts, Web Servers and Web Application Servers, Design Methodologies with concentration on Object-Oriented concepts. The objective of this course is to build web applications using JSP and client side script technologies and also to build XML applications that span multiple domains.

Course Outcomes:

The student will be able to:

- develop a dynamic webpage using Java script and DHTML.
- write a well formed / valid XML document.
- connect a Java program to a DBMS and perform insert, update and delete operations on DBMS table.
- write a server side Java application called Servlet to catch form data sent from client, process it and store it in the database.
- write a server side Java application called JSP to catch form data sent from client and store it in the database.

SKILLS:

✓ *Perform client side validation using Java script.*

✓ *Store and retrieve data using JDBC.*

✓ *Generate dynamic contents using Servlets.*

✓ *Generate dynamic contents using JSPs.*

✓ *Overcome problems in Servlets and JSP using Struts Programs.*

✓ *Develop a working system of web application or web site.*

ACTIVITIES:

- *Choose a real time problem to develop a web application or web site.*
- *Identify number of web pages to be created.*
- *Choose a template for the web site.*
- *Develop each web page using the template and HTML, CSS languages.*
- *Install a web server like tomcat.*
- *Publish the developed web pages to the web server.*
- *Identify which pages from the above web site needs to be dynamically generated.*
- *Upgrade those pages to either servlets or JSP.*
- *Connect to DBMS.*

UNIT - 1 **L-9,T-3**

INTRODUCTION TO HTML AND JAVASCRIPT: HTML**-** HTML Common tags, Block level and inline Elements, Lists, Tables, Images, Forms, Frames, Cascading style sheets, CSS Properties; Java Script-Introduction to Java script, Objects in Java script, Dynamic HTML with Java script.

UNIT - 2 **L-9,T-3**

JDBC: Data base, Database schema, A brief overview of the JDBC process, JDBC driver types, JDBC Packages, Database connection, Associating the JDBC-ODBC bridge with database, Creating, Inserting, Updating and deleting data in database tables, Result set, Metadata.

UNIT - 3 **L-9,T-3**

WEB SERVERS AND SERVLETS: Tomcat web server, Introduction to Servlets, Advantage of servlets over "Traditional" CGI, Basic servlet structure, Simple servlet generating plain text, Compiling and installing the servlet, Invoking the servlet, Lifecycle of a servlet, The servlet API, Reading servlet parameters, Reading initialization parameters, Context parameters, Handling Http request & responses, Using cookies-session tracking, Servlet with JDBC.

UNIT - 4 **L-9,T-3**

INTRODUCTION TO JSP: The Problems with servlet, The anatomy of a JSP Page, JSP Processing, JSP application development, Generating dynamic content, Using scripting elements, Implicit JSP objects, Declaring variables and methods,Sharing data between JSP pages, Users passing control and data between pages, JSP application design with JDBC, JSP application design with MVC.

UNIT - 5 **L-9,T-3**

SEMANTIC WEB THE FUTURE OF THE INTERNET: Introduction, The syntactic web, The semantic web, How the semantic web will work, What the semantic web is not, What will be the side effects of the semantic web.

ONTOLOGY IN COMPUTER SCIENCE: Defining the term ontology, Differences among taxonomies, thesauri, ontologies, taxonomies versus ontologies, Thesauri versus ontologies, Classifying ontologies - according to a semantic spectrum, Classifying ontologies according to their generality, Classifying ontologies according to the information represented; Web ontology - description languages, Ontologies, Categories, Intelligence.

KNOWLEDGE REPRESENTATION IN DESCRIPTION LOGIC: Introduction, An informal example, The family of attributive languages, Concept descriptions; Terminologies - Assertions, Inference problems, Inference problems for concept descriptions inference problems for assertions.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- understand computers communication over network.
- send data to and from a server.
- create a web page and display it on browser.
- develop a web site.

List of Experiments: Total Hours: 30

1. Create a HTML page having four frames named
   a. top
   b. center
   c. bottom
   d. left

   The top frame should contain company logo and title. The bottom frame should contain copy right information. The left frame should contain various links like Home, Products, Services, Branches, About us, etc. When clicked on those links, the contents should appear in the display on to center frame.

2. Create a HTML document to demonstrate Form Elements that includes Form, input-text, password, radio, checkbox, hidden, button, submit, reset, label, text area, select, option, file upload.

3. Write a HTML program with at least two <h1>, two images, two buttons and appropriate CSS to display
   a. All <h1> with font-size 12pt, and bold in Verdana font using Inline CSS.
   b. All <img> with border color yellow, thickness 10px using Document Level CSS
   c. All <input type='button'> should change background color to red on mouse over them using External CSS.

4. Design a HTML page having a text box and four buttons viz Factorial, Fibonacci, Prime, and Palindrome. When a button is pressed an appropriate java script function should be called to display the following:
   a. factorial of that number
   b. fibonacci series up to that number
   c. prime numbers up to that number
   d. is it palindrome or not?

5. Write Java script programs to demonstrate the following objects with atleast five methods:
   a. Math.
   b. String.
   c. Array.
   d. Date.

6. Write a Java script program to display message on OnBlur and OnFocus events.

7. Create an XML document where CSEBooks is the root tag, it consists of 5 books named as(book1, book2, book3, book4, book5) whose copies of books are 10 and provide the child tag such as author, title, pages, price for all books.

8. For the above program, provide an associate DTD.
9. Create an XML document where automobiles is the root tag, it consists of 5 vehicles named as (vehicle1, vehicle2, vehicle3, vehicle4, vehicle5) and use attributes type, model, engine number, color, cc.
10. For the above program, provide an associated Schema.
11. Write a Java program to connect to a database server using JDBC and insert 10 students information of user choice in to student table.
12. Write a Java program to display all records in the student table.
13. Develop a simple Servlet to display Welcome to Servlet.
14. Develop a Servlet to validate user name and password with the data stored in Servlet configuration file. Display authorized user if she/he is authorized else display unauthorized user.
15. Demonstrate Life cycle of Servlet.
16. Develop a Servlet to validate user name and password stored in the database. Display authorized user is she/he is authorized else display unauthorized user.
17. Write a Servlet program to store student details sent from registration form in to the database.
18. Write JSP Program to store student information sent from registration page into database.
19. Develop a program to validate username and password that are stored in database using JSP.
20. Write an appropriate JSP page to insert, update and delete data in student table in a single application with proper linking of JSP pages and session management.

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P
-	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, preparing resumé, group discussion and interview skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to :

- think critically on issues for informed decision making and know how to communicate effectively through choice of appropriate language and speech, while dealing with others at the workplace.
- identify and introspect on individual strengths and weaknesses.
- improve levels of self-awareness and self-worth for greater efficacy at workplace.

SKILLS:

✓ *Communicate and understand the difference between soft skills and hard skills.*

✓ *Professionalism and employability skills.*

✓ *Plan career by drawing their SWOT, setting the goal, learn the importance of time and stress management.*

✓ *Vocabulary, situational english, group discussion, reading comprehension and listening comprehension which are essential for all competitive examinations.*

✓ *Prepare resumé and learn how to face interview.*

✓ *Gender sensitive language, good manners, emotional intelligence and essential skills.*

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - The process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal); Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, Employability skills.

C) CAREER PLANNING: Job vs career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY: Johari Window for SWOT analysis, Setting a SMART goal using the provided grid, Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes and suffixes, Synonyms and antonyms, Collocations, One-word substitutes, Analogies, Idioms and phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student), Vocabulary exercises with hand-outs, Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, Dynamics of group discussion, Intervention,Summarizing and conclusion, Voice modulation, Content generation, Key word approach (KWA), Social, Political, Economic, Legal and technical approach (SPELT), View point of affected part (VAP), Language relevance, Fluency and coherence.

ACTIVITY: Viewing a recorded video of GD and Mock sessions on different types of GD topics - Controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, Understanding employer expectations, Pre-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele-interviews, Video interviews, Frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in group discussion.

B) LISTENING COMPREHENSION: Listening as a skill, Different types of listening, Active and passive listening, Top-down approach, Bottom-up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, Cultural sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression, Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other's views, Assisting others, Sharing, Participating actively.

ACTIVITY: Johari Window, Games and case studies.

16CS205 COMPUTER ORGANIZATION AND ARCHITECTURE

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	7	8	2	2

Course Description and Objectives:

This course introduces Register Transfer Language, Computer Arithmetic, Basic Computer Organization and Design, Pipeline processing, Memory and Input Output Organizations. Further it helps to understand and analyze the functions and organizations of modern digital computers. It also offers students learning experience in the design and development of solutions and applications for modern digital computer systems using assembly language. The objective of the course is to enable the students to understand the basic structure and operation of a digital computer and also to know in detail the operation of the arithmetic unit, logical unit, control unit, different ways of communicating with I/O devices and the hierarchical memory system.

Course Outcomes:

The student will be able to:

- demonstrate the understanding of the basic principles of organization and operations of digital computers using assembly language.
- evaluate the technical issues of digital computer systems including arithmetic logic unit, control unit, communication with peripheral devices and interrupt handling.
- develop solutions related to the organization of digital computer systems.
- recognize and identify the developmental nature of technology related to modern digital computers.

SKILLS:

- ✓ *Writing assembly language programs that make use of various hardware resources.*
- ✓ *Perform fixed and floating point arithmetic operations.*
- ✓ *Identifying the types of memories and their uses.*
- ✓ *Perform data transfer mechanism in digital computer.*

UNIT - 1 **L-9,T-2**

INTRODUCTION &RTL: Organization and architecture, Block diagram of digital computer, Structure and function. Register transfer language – Register transfer bus and memory transfers.

UNIT - 2 **L-9,T-4**

COMPUTER ARITHMETIC: Arithmetic micro operations, Logic micro operations, Shift micro operations and Arithmetic logic shift unit. Addition and subtraction, Multiplication algorithms and Division algorithms, Floating point representation and its operations.

UNIT - 3 **L-9,T-4**

BASIC COMPUTER ORGANIZATION AND DESIGN: Instruction codes, Computer registers, Computer instructions, Instruction cycle, Memory–Reference instructions, Register reference instructions, Input-Output and Interrupt, Stack organization, Instruction formats, Addressing modes, Data transfer and manipulation, Program control, Reduced instruction set computer.

UNIT - 4 **L-9,T-3**

PIPELINE PROCESSING & MEMORY ORGANIZATION: Pipeline processing-Parallel processing, Pipelining, Arithmetic pipeline, Instruction pipeline, RISC pipeline. The memory organization - Memory Hierarchy, Main memory, Auxiliary memory, Associative memory, Cache memory, Virtual memory**.**

UNIT - 5 **L-9,T-2**

INPUT- OUTPUT ORGANIZATION: Peripheral devices, Input-Output interface, Asynchronous data transfer, Modes of transfer, Priority interrupt, Direct memory access, Input-Output processor (IOP), Serial communication.

TEXT BOOKS:

1. M.Moris Mano, “Computer Systems Architecture”, 3rd edition, Pearson/Prentice Hall India, 2007.
2. William Stallings, “Computer Organization and Architecture”, 7th edition, Pearson/Prentice Hall India , 2007.

3. David A Patterso and John L Hennessy, “Computer Organization and Design - The Hardware/ Software Interface, ARM edition”, 5th edition, Elsevier, 2009.

ACTIVITIES:

- *development of assembly language programs that levarage the underlying hardware resources efficiently.*

16IT202 ADVACED DATA STRUCTURES

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
3	50	4	6	3	2

Course Description and Objective:

This course focuses on study and implementation of advanced data structures such as hash tables, priority queues, balanced search trees and graphs. In addition, it covers analysis of different sorting algorithms and file structures. The objective of this course is to provide the student to the implementation of dictionaries, non-linear data structures and permanent storage structures.

Course Outcomes:

The student will be able to:

- identify the procedure to balance the tree structures.
- design and implement abstract data types such as dictionaries, balanced tree and graphs.
- choose appropriate abstract data types for a given application.
- apply relevant sorting algorithm to a given problem.
- understand and implement persistant storage structures.

SKILLS:

- ✓ *Identify the usage of indexing in searching applications.*
- ✓ *Pros and cons of balanced tree structures.*
- ✓ *Find the shortest path between cities and test the electronic circuits.*
- ✓ *Analyze the storage space and time complexity of sorting algorithms.*
- ✓ *Identify the need of persistant storage structures in real time applications.*

UNIT - 1 **L-10**

DICTIONARIES: Sets, Dictionaries, Hash tables, Open hashing, Closed hashing (rehashing methods), Hashing functions(division method, multiplication method, universal hashing), Analysis of closed hashing result (unsuccessful search, Insertion, Successful search, Deletion), Hash table restructuring, Skip lists, Analysis of skip lists.

UNIT - 2 **L-9**

BALANCED TREES: AVL trees,Maximum height of an AVL tree, Insertions and deletions, 2-3 trees, Insertion, Deletion, Priority queues, Binary heaps, Implementation of insert and delete minimum, Creating heap, Binomial queues, Binomial queue operations, Binomial amortized analysis, Lazy binomial queues.

UNIT - 3 **L-9**

GRAPHS: Operations on graphs vertex insertion, Vertex deletion, Find vertex, Edge addition, Edge deletion, Graph traversals, Depth first search and breadth first search, Graph storage representation, Adjacency matrix, Adjacency lists.

GRAPH ALGORITHMS: Minimum cost spanning trees, Prim's algorithm, Kruskal's algorithm, Shortest path algorithms, Dijkstra's algorithm, All pairs shortest paths problem, Floyd's algorithm, Warshall's algorithm.

UNIT - 4 **L-9**

SORTING METHODS: Order statistics, Lower bound on complexity for sorting methods, Lower bound on worst case complexity, Lower bound on average case complexity, Heap sort, Quick sort, Radix sorting, Merge sort.

UNIT - 5 **L-8**

PATTERN MATCHING AND TRIES: Pattern matching algorithms, The Boyer–Moore algorithm, The Knuth-Morris-Pratt algorithm, Tries, Definitions and concepts of digital search tree, Binary trie, patricia, Multi-way tries, File structures, Fundamental file processing operations, Opening files, Closing files, Reading and writing file contents, Special characters in files, Field and record organization, Managing fixed-length, Fixed-field buffers.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS: Total hrs: 30

1. Dictionary using hashing (division method, multiplication method, universal hashing).
2. Insertion and deletion on AVL trees.
3. Insertion and deletion on 2-3 trees.
4. Operations on binary heap.
5. Implement operations on graphs

   i) vertex insertion.

   ii) Vertex deletion.

   iii) finding vertex.

   iv) edge addition and deletion.

ACTIVITIES:

- *Implementation of dictionaries using hash tables.*
- *Optimization of various searching algorithms using balanced trees.*
- *Explore the time complexity and space complexity of data structures.*
- *Case study on applications of file structures.*

6. Depth first search for a graph nonrecursively.
7. Breadth first search for a graph nonrecursively.
8. Prim's algorithm to generate a minimum cost spanning tree.
9. Krushkal's algorithm to generate a minimum cost spanning tree.
10. Dijkstra's algorithm to find shortest path in the graph.
11. Pattern matching using Boyer-Moore algorithm.
12. Knuth-Morris-Pratt algorithm for pattern matching.

16CS201 DATABASE MANAGEMENT SYSTEMS

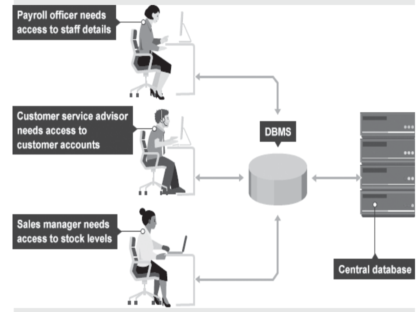
Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	2



Course Description and Objectives:

This course presents an introduction to database management systems with an emphasis on how to organize, maintain and retrieve data efficiently and effectively from a database. It concentrates on requirements gathering and conceptual, logical, physical database design. The objective of the course is to make the student to understand database management concepts such as database design, transaction processing and query optimization.

Course Outcomes:

The student will be able to:

- understand the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- design Entity Relationship(ER) models to represent simple database application scenarios.
- convert the ER-model to relational tables, populate relational database and formulate SQL queries.
- construct simple and complex queries using Structured Query Language (SQL).
- improve the database design by normalization.
- familiarise with basic database storage structures and access techniques.

SKILLS:

✓ *Design a conceptual database using ER-Model.*

✓ *Convert ER- Model to RDBMS.*

✓ *Formulate database queries using* Structured Query Language (SQL).

✓ *Build and run DDL and DML commands.*

✓ Design and implement normalized databases.

✓ Construct B+ Trees.

ACTIVITIES:

- *Design of ER diagram for the development of web applications.*
- *Transformation of ER diagram into a relational schema.*
- *Creation of relations with entity and referential integrity constraints for a given relational schema*
- *Representation of queries using Relational Algebra.*
- *Formulation of queries using SQL.*
- *Design of relational database using normalization techniques.*
- *Development of relational schema for enterprise level web applications.*

UNIT - 1 **L-9,T-3**

INTRODUCTION TO DATABASES: Characteristics of the Database Approach, People who work with databases, Advantages of using the DBMS approach, Data Models, Schemas and Instances, Three-Schema Architecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architectures for DBMSs.

UNIT - 2 **L-9,T-3**

CONCEPTUAL DESIGN AND DATABASE DESIGN: High-Level Conceptual Data Models for Database Design, A Sample Database Application, Entity Types, Entity Sets, Attributes and Keys, Relationship Types, Relationship Sets, Roles and Structural Constraints, Weak Entity Types, Refining the ER Design for the Company Database, ER Diagrams, Naming Conventions and Design Issues, Subclasses, Super classes and Inheritance, Specialization and Generalization, Constraints and Characteristics of Specialization and Generalization Hierarchies, Modeling of UNION Types Using Categories.

UNIT - 3 **L-9,T-3**

RELATIONAL DATA MODEL AND SQL: Relational Database Design Using ER-to-Relational Mapping, Mapping EER Model Constructs to Relations, Relational Model Concepts, Relational Model Constraints and Relational Database Schemas, Update Operations, Transactions and Dealing with Constraint Violations, SQL Data Definition and Data Types, Specifying Constraints in SQL, Basic Retrieval Queries in SQL, INSERT, DELETE and UPDATE Statements in SQL, Complex SQL Retrieval Queries, Specifying Constraints as Assertions and Actions as Triggers, Views (Virtual Tables) in SQL, Relational Algebra.

UNIT - 4 **L-9,T-3**

DATABASE DESIGN THEORY AND NORMALIZATION: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys, General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form, Multivalued Dependency and Fourth Normal Form, Join Dependencies and Fifth Normal Form, Properties of Relational Decompositions.

UNIT - 5 **L-9,T-3**

TRANSACTION PROCESSING, CONCURRENCY CONTROL AND RECOVERY: Transaction and System Concepts, Desirable Properties of Transactions, Two-Phase Locking Techniques, Timestamp Ordering, Recovery Concepts, The ARIES Recovery Algorithm, Recovery in Multi-database Systems, Primary File Organizations, Single level and Multilevel indexes, Dynamic Multilevel Indexes Using B+ Trees.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- ✓ understand, analyze, and apply common SQL Statements including DDL, DML and DCL statements to perform different operations.
- ✓ apply PL/SQL blocks using Cursors and Triggers.
- ✓ design and implement a database for a given problem.

List of experiments Total Hours 30

1. ER Design tool (ex. TOAD)
2. MYSQL RDBMS

3. Table Creation, Constraints, Insert, Select Commands, Update and Delete Commands.
4. Nested Queries and Join Queries.
5. Views.
6. Design and development of database using MYSQL.
7. High level programming language extensions (Control structures, Procedures and Functions).
8. Front end Tools.
9. Forms.
10. Triggers.
11. Menu Design.
12. Reports.

16CS204 DISCRETE MATHEMATICAL STRUCTURES

Hours Per Week:

L	T	P	C
3	-	-	3

Total Hours:

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	40	3	8	5	2

Course Description and Objectives:

This course deals with the analysis of computational processes using analytical and combinatorial methods such as propositional logic, predicate logic, set theory, relations, functions, recurrence relations and graph theory. The objective of this course is to make the students to familiarize with required mathematical foundations of Computer Science.

Course Outcomes:

The student will be able to:

- use logical notation to define and reason about fundamental mathematical concepts such as sets, relations, functions, recurrence relations and graph theory applications.
- evaluate elementary mathematical arguments, identify erroneous reasoning, combine induction hypotheses and simple induction proofs.
- prove elementary properties of modular arithmetic and explain their applications in Computer Science.

SKILLS:

✓ *Design of logical gates using propositions.*

✓ *Prove the basic mathematical theorems through direct or indirect proofs.*

✓ *Solving various types of problems on sets & relations to understand some basic properties of trees, graphs and related discrete structures.*

✓ *Solving a problem in recursive manner and estimation of time complexity.*

UNIT - 1 **L-9**

MATHEMATICAL LOGIC: Propositions, Negation, Disjunction and Conjunction, Well-formed formulas, Truth tables, Tautology, Implication and Equivalence, Normal forms – DNF, CNF, PDNF, PCNF.

UNIT - 2 **L-9**

PREDICATES AND QUANTIFIERS: Natural Deduction, Rules of Inference, Methods of proofs, Mathematical Induction.

UNIT - 3 **L-9**

SET THEORY: Set, Properties, Relation, Properties of Binary Relations, Equivalence, Compatibility and partial ordering relations, Hasse diagram, Lattice and its properties, Peano postulates, Pigeon hole principles and its application.

UNIT - 4 **L-9**

RECURRENCE RELATION: Generating Functions, Function of Sequences, Calculating Coefficient of generating function, Recurrence relations, Recurrence relation by substitution and Generating functions, Characteristics, roots solution of Non-homogeneous recurrence relation.

UNIT - 5 **L-9**

GRAPH THEORY: Introduction, Graphs, Isomorphism and Sub graphs, Multi graphs and Euler circuits, Hamiltonian graphs, Chromatic numbers, Euler graph, Hamiltonian path, Trees, Tree traversals, Spanning trees, Minimal spanning trees**.**

TEXT BOOKS:

1. Trembly J.P. and Manohar, "Discrete Mathematical Structures with applications to computer science", 6th edition, Tata Mc-Graw Hill, 2006.
2. Ralph and P.Grimaldi, "Discrete and Combinational Mathematics- an Applied Introduction", 5th edition, Pearson Education, 2014.

REFERENCE BOOKS:

1. Kenneth H. Rosen, "Discrete Mathematics and its Applications", 7th edition, Tata Mc-Graw Hill, 2012.
2. Thomas Koshy, "Discrete Mathematics with Applications", 1st edition, Elsevier, 2003.
3. Bernand Kolman, Roberty C. Busby and Sharn Cutter Ross, "Discrete Mathematical Structures", 2nd edition, Pearson Education/Prentice Hall India, 2013.
4. Garry Haggard, "Discrete Mathematics for Computer science", 1st edition, Thomson, 2007.
5. J.L. Mott, A. Kandel and T.P. Baker, "Discrete Mathematics for Computer Scientists and Mathematicians", 2nd edition, Prentice Hall India, 2009.
6. Grass Man and Trembley, "Logic and Discrete Mathematics", 2nd edition, Pearson Education/ Prentice Hall India, 2013.

ACTIVITIES:

- *Construction of Logical circuits using Truth tables.*
- *Gates minimization using Normal forms.*
- *Finding shortest path in graphs using different algorithms.*
- *Study on Pigeonhole principle.*
- *Finding solutions to non homogeneous linear equations.*
- *Study on different tree traversals.*
- *Checking logical equivalences.*

16EL103 PROFESSIONAL COMMUNICATION LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P
-	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

The Professional Communication Laboratory course is aimed at improving professional communication skills (LSRW – Listening, Speaking, Reading and Writing) of undergraduate students and preparing them for their profession as engineers and managers. This course will help students to understand professional communication and personality as two interlinked spheres of influence, and provide them with exposure to conventions of corporate communication involved in the functioning of the business world.

Course Outcomes:

The student will be able to :

- clear industry recognized certification such as BEC Vantage by the University of Cambridge.
- stand out both in the professional setting as well as for further pursuits in the academic world.
- succeed confidently in all four critical components of communication - LSRW (listening, speaking, reading and writing).

SKILLS:

✓ *Grammar rules in writing sentences, paragraphs and paraphrasing.*

✓ *Compose business emails, memos, letters, reports and proposals.*

✓ *Comprehend business articles and documents.*

✓ *Use of expressions in professional context and acquire presentation skills like one minute talk and pair discussion.*

✓ *Familiarize and comprehend British accent by listening to recorded speeches and discussions.*

UNIT - 1 **Learning-3 Hrs+ Practice -3Hrs =06 Hrs**

BUSINESS ENGLISH VOCABULARY: Glossary of most commonly used words (formal and informal usage) **Elements of Technical Writing**- Sentence structure, reducing verbosity, arranging ideas logically, building coherence, paragraph level and document level, topic sentence, cohesive devices, transitional words, paraphrasing and précis-writing.

Mechanics of Writing- Stylistic elements, the rapporteur, the purpose, the reader's viewpoint (audience), elementary rules of grammar, choice of diction, elementary principles of composition, matters of form, punctuation, conventions of business communication, language and professional tone, weak links in business correspondence, ethical concerns in business writing, code of conduct (not sending illegal, offensive, disparaging personal remarks or comments) in written business communication.

UNIT - 2 **Learning-3 Hrs+ Practice -3Hrs =06 Hrs**

BUSINESS CORRESPONDENCE: E-mail- nature and scope, e-mail etiquette, clear call for action, common errors in composing e-mails, office communication such as meeting agenda and minutes of the meeting, notice, circular and memo.

Letter Writing - Formal and informal letters, structure of formal letters, expressions of salutations, different types of letters [such as sales letter, complaint letter, response to the complaint letter (dispute resolution), letter of permission, letter of enquiring, claim letter, letter of apology etc]; Introductory and concluding paragraphs and clear call for action.

PROFESSIONAL PROPOSAL/REPORT: Differentiating proposals and reports, Drafting formal business proposals, types of reports such as factual reports, feasibility reports and survey reports, parts of a report (such as title page, declaration, acknowledgements, table of contents, abstract, introduction, findings, conclusions, recommendations, citations, references and appendices).

UNIT - 3 **Learning-3 Hrs+ Practice -3Hrs =06 Hrs**

SPEAKING: Speaking in business context, assertiveness, politeness, making requests, queries and questions, negotiations, asking for information, offering suggestions, conflict resolution, contacting clients, initiating, addressing delegates (in public), features of a good power point presentation (making the PPT), delivering the presentation effectively, telephone etiquettes, delivering seminar/proposal/ report effectively, team meeting etiquettes (face to face and conference call), making effective one minute presentations.

UNIT - 4 **Learning-3 Hrs+ Practice -3Hrs =06 Hrs**

READING: Reading and comprehending business documents, learning business register, regularizing the habit of reading business news, suitable vocabulary, skimming and scanning text for effective and speedy reading and dealing with ideas from different sectors of corporate world in different business contexts.

UNIT - 5 **Learning-3 Hrs+ Practice -3Hrs =06 Hrs**

LISTENING: Specific information in business context, listening to telephonic conversations/messages and understanding the correct intended meaning, understanding the questions asked in interviews or in professional settings, summarizing speaker's opinion or suggestion and enable active listening.

TEXT BOOKS: BEC

1. G. B. Hart, "Cambridge English Business Bench Mark: Upper Intermediate', 2nd edition, CUP, 2004.
2. CUP, Cambridge: BEC VANTAGE: Practice Tests, CUP, 2002.

ONLINE REFERENCES:

1. http://www.cambridgeenglish.org/exams/business-certificates/business vantage/ preparation/
2. https://www.youtube.com/watch?v=qxFtn9pGaTI.

ACTIVITIES:

- *Basic grammar practice, framing paragraphs on topics allocated.*
- *Paraphrasing an article or a video in your own words. Finding topic sentences in newspaper articles.*
- *Finding out new words from a professional viewpoint. Understanding the meaning and its usage.*
- *Perusing samples of well prepared proposals and reports.*
- *Draft different proposals/reports on topics assigned.*
- *Watching videos/ listening to audios of business presentations.*
- *Classroom activities of team and individual presentations.*
- *Using PPTs, mock exercises for BEC speaking.*
- *Presenting (speaking) the written components completed in Unit 1.*
- *Hand-outs; matching the statements with texts.*
- *Finding missing appropriate sentence in the text from multiple choice, multiple choices.*
- *Using right vocabulary as per the given context and editing a paragraph.*

CS234 WEB TECHNOLOGIES

Course Description and Objectives:

On completion of this course, a student will be familiar with client server architecture and able to develop a web application using java technologies. Students will gain the skills and project-based experience needed for entry into web application and development careers. Students will be able to use a variety of strategies and tools to create websites and also integrate with IDE's for fast development of web applications.

Course Outcomes:

- *Students are able to develop a dynamic webpage by the use of java script and DHTML.*
- *Students will be able to write a well formed / valid XML document.*
- *Students will be able to connect a java program to a DBMS and perform insert, update and delete operations on DBMS table.*
- *Students will be able to write a server side java application called Servlet to catch form data sent from client, process it and store it on database.*
- *Students will be able to write a server side java application called JSP to catch form data sent from client and store it on database.*

UNIT I - Introduction to Tier Architecture & **HTML**

Client/Server Architecture**,** J2EE Multi Tier Architecture. HTML Common tags-Block Level and Inline Elements, Lists, Tables, Images, Forms, Frames; Cascading Style sheets, CSS Properties;

UNIT II - Java Script & XML

Introduction to Java Script, Objects in Java Script, Dynamic HTML with Java Script.

The Need for XML, SGML and XML, Well-Formed XML, Valid XML, Displaying XML, XML Application Languages, Document type definition, XML Schema.

UNIT III - JDBC

Data Base, Database Schema, A Brief Overview Of The JDBC Process, JDBC Driver Types, JDBC Packages, Database Connection, Associating The JDBC-ODBC Bridge With Database, Creating, Inserting, Updating And Deleting Data In Database Tables, Result Set, Metadata.

UNIT IV - Web Servers and Servlets

Tomcat web server, Introduction to Servlets: Servlets, the Advantage of Servlets over “Traditional” CGI, Basic Servlet Structure, Simple Servlet Generating Plain Text, Compiling and Installing the Servlet, Invoking the Servlet, Lifecycle of a Servlet, The Servlet API, Reading Servlet parameters, Reading Initialization parameters, Context Parameters, Handling Http Request & Responses, Using Cookies-Session Tracking, Servlet with JDBC.

UNIT V - Introduction to JSP

The Problem with Servlet. The Anatomy of a JSP Page, JSP Processing, JSP Application Development: Generating Dynamic Content, Using Scripting Elements, Implicit JSP Objects, Declaring Variables and Methods , Sharing Data Between JSP pages, Users Passing Control and Data between Pages, JSP application design with JDBC, JSP Application Design with MVC.

TEXT BOOKS:

1. Beginning Web Programming-Jon Duckett, WROX, 2008.
2. Core Servlets and Java Server pages Vol. 1: Core Technologies By Marty Hall and Larry Brown Pearson, 2006.

CS313 COMPUTER NETWORKS

Course Description and Objectives:

This course will focus on imparting knowledge about the aspects of data communication and computer network systems with the required basic principles behind them. This course provides essential knowledge about the OSI model and TCP/IP model. It creates a good foundation covering the physical, data link, network, transport, and application layers.

Course Outcomes:

- *To understand the communication basics.*
- *To have the knowledge of different networks.*
- *To know about different protocols.*
- *To understand how to find the routes by using different routing algorithms.*
- *To understand the basics of Internet.*

UNIT I - Introduction

Use of computer networks, network hardware, network software, reference models, example networks.

UNIT II - Physical layer, Data link layer & Medium access control sublayer

Guided Transmission Media.

Design issues, Error detection & correction, Elementary data link protocols, Sliding window protocols.

The channel allocation problem, multiple access protocols.

UNIT III - Network Layer

Design issues, Routing algorithms, Congestion control algorithms, Quality of Service (QOS), Internetworking, the network layer in the Internet.

UNIT IV - Transport layer

The transport service, elements of transport protocols, the internet transport protocols: UDP & TCP.

UNIT V - Application Layer
DNS-Domain Name System. The World Wide Web, Multimedia.

CS315 OPERATING SYSTEMS

Course Description and Objectives:

In this course students should understand how the operating system effectively manages system resources.

Course Outcomes:

- õ *To understand the types of Operating systems and analyze the process scheduling Algorithms and Case study on processing Scheduling.*
- õ *To understand the resource sharing among the processes in the system.*
- õ *To understand how to manage the memory during the process execution (Memory Management) and File Management system.*

UNIT I - Introduction
What Operating System do, Operating System structure. Process Concept: Overview, Process scheduling, Operations on process, Inter process communication. Process Scheduling: Scheduling Criteria, Scheduling Algorithms, Multiple-Processor Scheduling, Case Study: Process scheduling in Linux.

UNIT II - Process Synchronization
The Critical-Section Problem, Peterson’s Solution, Synchronization Hardware, Semaphores, Monitors, Classical problems of synchronization, Case Study : Process Synchronization in Linux.

.

UNIT III - Deadlocks
Deadlock Characterization, Methods of Handling Deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock Detection and Recovery.

UNIT IV - Memory Management
Continuous memory allocation, paging, structure of the page table, segmentation, demand paging, page replacement algorithms.

UNIT V - File System

File Concept, Access Methods, Directory Structure, File System Mounting, File Sharing, Protection, File-System Structure, File System Implementation, Directory Implementation, Allocation Methods, Free Space Management. Secondary-Storage Structure: Overview of Mass-Storage Structure, Disk Structure, Disk Scheduling, RAID Structure.

TEXT BOOK:

III Year B.Tech. IT I - Semester

L	T	P	To	C
4	-	-	4	4

CS317 COMPILER DESIGN

Course Description & Objectives:

To understand, design and implement a lexical analyzer , parser and code generation schemes. To understand optimization of codes and runtime environments.

Course Outcomes:

On completion of the course the student will:

- *Be able to prove an understanding of a program language structure and its translation to executable code by constructing and demonstrating a compiler for a language defined by a certain grammar.*
- *Prove knowledge of ongoing events when executing programs written in high level language. This is done by explaining and demonstrating these events while running a simple program translated by a personally designed compiler.*
- *Know how to design a compiler for a regular high level language.*

UNIT I - Introduction to Compiling

Compilers – Analysis of the source program – Phases of a compiler – Cousins of the Compiler – Grouping of Phases – Compiler construction tools – Lexical Analysis – Role of Lexical Analyzer – Input Buffering – Specification of Tokens, data structures in compilation – LEX lexical analyzer generator

UNIT II - Syntax Analysis

Role of the parser –Writing Grammars –Context-Free Grammars – Top Down parsing –Recursive Descent Parsing – Predictive Parsing – Bottom-up parsing – Shift Reduce Parsing – Operator Precedent Parsing – LR Parsers – SLR Parser – Canonical LR Parser – LALR Parser ,YACC – automatic parser generator.

UNIT III - Semantic analysis

Intermediate forms of source Programs – abstract syntax tree, polish notation and three address codes. Attributed grammars, Syntax directed translation, Conversion of popular Programming languages language Constructs into Intermediate code forms, Declarations – Assignment Statements –Boolean Expressions.

UNIT IV - Code optimization and Run Time Environments

Introduction– Principal Sources of Optimization –Optimization of basic Blocks – Introduction to Global Data Flow Analysis - Basic blocks, Flow graphs, data flow equation, global optimization, data flow analysis for structured Programs.

UNIT V - Code Generation

Issues in the design of code generator – The target machine – Next-use Information – A simple Code generator – DAG representation of Basic Blocks – Peephole Optimization.

IT303 DIGITAL IMAGE PROCESSING
(Elective-I)

Course Description and Objectives:

To introduce to students the analytical tools and methods, which are currently used in digital image processing as applied to image information for human viewing. Students will learn to apply these tools in the laboratory in image restoration, enhancement, compression and segmentation.

Course Outcomes:

- *Understand how images are formed, sampled, quantized and represented digitally.*
- *Understand how image are processed by discrete, linear, time-invariant systems*
- *Understand how color is represented*
- *Understand how image information can be modeled analytically*
- *Understand the principles of image compression*

UNIT I - Digital Image Fundamentals

Elements of visual perception, Image sensing and acquisition, Image sampling and quantization Basic relationship between pixels, Basic geometric transformations, Introduction to Fourier Transform and DFT, Properties of 2D Fourier Transform, FFT Separable Image Transforms, Walsh, Hadamard, Discrete Cosine Transform, Haar Transform, Slant Transform and Hotelling Transform.

UNIT II - Enhancement

Spatial Domain methods**,** Basic grey level transformation, Histogram equalization, Image subtraction, Image averaging, Spatial filtering: Smoothing, sharpening filters, Laplacian filters, Frequency domain filters: Smoothing, Sharpening filters, Homomorphic filtering.

UNIT III - Restoration

Model of Image Degradation/restoration process, Noise models, Inverse filtering, Least mean square filtering, Constrained least square filtering, Blind image restoration, Pseudo inverse, Singular value decomposition.

UNIT IV - Compression

Fundamentals of image compression, image compression models, lossless compression**,** Variable length coding, LZW coding, Bit plane coding, predictive coding, DPCM. Lossy Compression: Transform coding, Wavelet coding, Basics of Image compression standards: JPEG, MPEG, Basics of Vector quantization.

UNIT V - Segmentation

Detection of discontinuities, Thresholding , Region Based segmentation.

CS332 ARTIFICIAL INTELLIGENCE

(Elective-II)

Course Description and Objectives:

Provide knowledge of ideas and techniques underlying the design of intelligent computer systems. Develop problem solving skills in students. Provide knowledge of the tools and applications of AI. Lay the foundation for research areas like Natural language Processing(NLP) and Machine learning(ML).

Course Outcomes:

- *Basic knowledge of AI principles, techniques, Expert Systems*
- *Applications of basic AI techniques for problem solving.*
- *Knowledge representation and new knowledge deduction in intelligent systems.*
- *A brief idea of NLP, and Machine learning techniques.*

UNIT I - Introduction to Intelligent Systems

Introduction- What is AI? Examples of AI systems, Brief history of AI. Intelligent Agent- Agents and environments, The concept of rationality, The nature of environments, Structure of agents, stimulus-response agents (simple reflex agents), Model based agents, Goal based agents, Utility based agents, Learning agents.

UNIT II - Problem Solving

Searching: Solving problems by searching, A* algorithm, AO* algorithm, Heuristic functions, Hill climbing. Searching game trees (Adversarial search): Games, Optimal decisions in games, Minimax procedure, Alpha-beta pruning.

UNIT III - Knowledge Representation and Reasoning & First order logic

Propositional logic: Logical agents, reasoning patterns in propositional logic, Inference in propositional logic i.e. Resolution, Forward chaining, Backward chaining.

Reasoning patterns in First order logic, Inference in First order logic i.e. Resolution, Forward chaining, Backward chaining.

UNIT IV - Planning

The planning problem, planning with state space search, partial order planning, planning graphs, planning with propositional logic, analysis with planning approaches.

UNIT V - Learning

Forms of learning, Inductive learning, Learning Decision Trees, Ensemble Learning, Why learning works. Natural Language Processing(NLP): Introduction, Understanding, Perception, Machine learning.

CS334 PRINCIPLES OF PROGRAMMING LANGUAGES
(Elective-I)

Course Description and Objectives:

After the completion of this course Student should be able to understand how to design a new Programming Language. Know the differences between Structured and unstructured programming constructs.

Course Outcomes:

On completion of the course the student will:

- ***U**nderstand the concepts in programming languages*
- *The way of using those constructs in different programming languages.*
- *Familiar with the design of a new programming language.*

UNIT I - Syntax and Semantics of Programming Languages

Reasons for studying concepts of programming languages, Programming domains, Language Evaluation Criteria, Von Neuman Architecture, Language categories, Implementation Methods, Programming environments, General Problem of describing Syntax – Language. Recognizers and Language Generators, Formal methods of describing syntax – BNF, EBNF , Attribute grammars, Dynamic Semantics – Axiomatic , Operational and Denotational semantics.

UNIT II - Variables and Data Types

Names, Variables, Concept of binding, Type checking, Strong typing, Type compatibility, Named constants, Variable initialization, Data types – Primitive, Character, User defined, Array, Associative Arrays, Record, Union, Pointer and Reference types, Design and implementation uses related to these data types.

UNIT III - Expressions and Statements

Arithmetic, Relational and Boolean expressions, Short circuit evaluation, Mixed mode assignment, Assignment Statements, Statement-Level Control structures – Introduction, Selection and Iteration statements, Unconditional branching, Guarded commands.

UNIT IV - Subprograms, Blocks, Abstraction and OOP

Fundamentals of sub-programs, Static and Dynamic, Scope and lifetime of variable, Design issues of subprograms, Local referencing environments, Parameter passing methods, Overloaded sub-programs, Generic sub-programs, Parameters that are sub-program names, Design issues for functions, User defined overloaded operators, Co routines.

UNIT V - Concurrency and Exception Handling

Subprogram level concurrency, Introduction to Exception Handling, Exception Handling in Ada, C++ and Java, Functional Programming languages-Haskell, LISP

TEXT BOOKS:

IT305 ADVANCED COMPUTER ARCHITECTURE

(Elective – I)

Course Description & Objectives :

The course focuses on processor design, pipelining, superscalar, out-of order execution, caches (memory hierarchies), virtual memory, storage systems, and simulation techniques. Advanced topics include a survey of parallel architectures and future directions in computer architecture

Course Outcomes:

At the end of this course students should:

- *Understand pipelining, instruction set architectures, memory addressing.*
- *Understand the performance metrics of microprocessors, memory, networks, and disks*
- *Understand the various techniques to enhance a processors ability to exploit Instruction-level parallelism (ILP), and its challenges.*
- *Understand exploiting ILP using dynamic scheduling, multiple issue, and speculation.*
- *Understand multithreading by using ILP and supporting thread-level parallelism (TLP).*

UNIT I - Fundamentals of Computer design

Technology trends - cost- measuring and reporting performance quantitative principles of computer design. Instruction set principles and examples- classifying instruction set- memory addressing- type and size of operands- addressing modes for signal processing-operations in the instruction set- instructions for control flow- encoding an instruction set.-the role of compiler

UNIT II - Instruction level parallelism (ILP)

Over coming data hazards- reducing branch costs –high performance instruction delivery- hardware based speculation- limitation of ILP ILP software approach- compiler techniques- static branch protection - VLIW approach - H.W support for more ILP at compile time- H.W verses S.W Solutions

UNIT III - Memory hierarchy design

Cache performance- reducing cache misses penalty and miss rate – virtual memory- protection and examples of VM.

Multiprocessors and thread level parallelism- symmetric shared memory architectures- distributed shared memory- Synchronization- multi threading.

UNIT IV - Storage systems

Types – Buses - RAID- errors and failures- bench marking a storage device- designing a I/O system.

UNIT V - Inter connection networks and clusters

Interconnection network media – practical issues in interconnecting networks- examples – clusters- designing a cluster.

CS236 WEB TECHNOLOGIES LAB

Course Description & Objectives:

To create fully functional website with MVC architecture.

Course Outcomes:

- õ *Understand the various steps in designing a creative and dynamic website.*
- õ *They will able to write html, JavaScript, CSS and applet codes.*
- õ *They will have clear understanding of hierarchy of objects in HTML and XML.*
- õ *Finally they can create good, effective and customized websites.*
- õ *Know regarding internet related technologies. Systematic way of developing a website.*

List of Experiments:

Lab Cycle – 1

1. Create an HTML page having Four frames named
   a. Top
   b. Center
   c. Bottom
   d. Left

   The Top frame should contain company logo and title. The bottom frame should contain copy right information. The Left frame should contain various links like Home, Products, Services, Branches, about us, etc. When we click on those links, the contents should come in to Center Frame.
2. Create a HTML document to demonstrate Form Elements that includes Form, input-text, password, radio, checkbox, hidden, button, submit, reset, label, text area, select, option, file upload.
3. Write a HTML program with at least two <h1>, two images, two buttons and appropriate CSS to display

   a. All <h1> with font-size 12pt, and bold in Verdana font using Inline CSS.
   b. All <img> with border color yellow, thickness 10px using Document Level CSS
   c. All <input type='button'> should change background color to red on mouse over them using External CSS.
4. Design an HTML having a text box and four buttons viz Factorial, Fibonacci, Prime, and Palindrome. When a button is pressed an appropriate java script function should be called to display
   a. Factorial of that number
   b. Fibonacci series up to that number
   c. Prime numbers up to that number
   d. Is it palindrome or not
5. Write java script programs to demonstrate
   a. Math Object with at least five methods.
   b. String Object with at least five methods.
   c. Array Object with at least five methods.
   d. Date Object with at least five methods.
6. Write a java script program to display message on OnBlur and OnFocus events.
7. Create an XML document where CSEBooks is the root tag, it consists of 5 books named as(book1, book2, book3, book4, book5) whose copies of books are 10 and provide the child tag such as author, title, pages, price for all books.
8. For the above program, provide an associate DTD.
9. Create an XML document where automobiles is the root tag, it consists of 5 vehicles named as (vehicle1, vehicle2, vehicle3, vehicle4, vehicle5) and use attributes type, model, engine no, color, cc.
10. For the above program, provide an associated Schema.

Lab Cycle – 2

1. Write a java program to connect to a database server using JDBC and insert 10 students information of user choice in to student table.
2. Write a java program to display all records in the student table.

3. Develop a simple Servlet to display Welcome to Servlet.
4. Develop a Servlet to validate user name and password with the data stored in Servlet configuration file. Display authorized user if she/he is authorized else display unauthorized user.
5. Demonstrate Life cycle of Servlet
6. Develop a Servlet to validate user name and password stored in database. Display authorized user is she/he is authorized else display unauthorized user.
7. Write a Servlet program to store student details sent from registration form in to database table.
8. Write JSP Program to store student information sent from registration page into database table.
9. Develop a program to validate username and password that are stored in Database table using JSP.
10. Write appropriate JSP pages to insert, update and delete data in student table in a single application with proper linking of JSP pages and session management.

CS329 COMPUTER NETWORKS LAB

Course Description & Objectives:

Learn basic concepts of computer networking and acquire practical notions of protocols with the emphasis on TCP/IP.Able to explain, configure, verify, and troubleshoot complex computer networks problem. A lab provides a practical approach to Ethernet/Internet networking: networks are assembled, and experiments are made to understand the layered architecture and how do some important protocols work.

Course Outcomes:

- *After completing the course, students will be able to:*
- *Understand the structure and organization of computer networks; including the division into network layers, role of each layer, and relationships between the layers.*
- *Understand the basic concepts of application layer protocol design; including client/server models, peer to peer models, and network naming.*
- *In depth understanding of transport layer concepts and protocol design; including connection oriented and connection-less models, techniques to provide reliable data delivery and algorithms for congestion control and flow control.*
- *In depth understanding of network layer concepts and protocol design; including virtual circuit and datagram network designs, datagram forwarding, routing algorithms, and network interconnections.*

List of experiments:

1. Study of Network devices in detail
2. Connect the computers in Local Area Network
3. Implementation of Data Link Framing method - Character Count.
4. Implementation of Data link framing method - Bit stuffing and De stuffing.

5. Implementation of Error detection method - even and odd parity.
6. Implementation of Error detection method - CRC Polynomials.
7. Implementation of Data Link protocols - Unrestricted simplex protocol
8. Implementation of data link protocols - Stop and Wait protocol
9. Implementation of routing algorithms - Dijkstra's algorithm
10. Study of Network IP Addressing
11. Study of sockets in detail
12. Design TCP client and server application to transfer file
13. Design UDP client and server application to transfer file
14. Working on Network Protocol Analyzer Tool (Ethereal/Wireshark) Working on NMAP Tool for Port scanning.

III Year B.Tech. IT   I - Semester

L	T	P	To	C

CS331 OPERATING SYSTEMS LAB

Course Description & Objectives:

To provide an understanding of the design aspects of operating system

Course Outcomes:

- *Programs on process creation and synchronization,*
- *Inter process communication including shared memory, pipes and messages*
- *Simulation of CPU Scheduling Algorithms. (FCFS, RR, SJF, Priority, Multilevel Queuing)*
- *Simulation of Banker's Algorithm for Deadlock Avoidance, Prevention*
- *Program for FIFO, LRU, and OPTIMAL page replacement algorithm.*

(Implement the following on LINUX or other UNIX like platform. Use C for high level language Implementation)

Write programs using the following system calls of UNIX operating system:

1. fork, exec, getpid, exit, wait, close, stat, opendir, readdir
2. Write programs using the I/O System calls of UNIX operating system. (open, read, write, etc)
3. Write C programs to simulate UNIX commands like ls, grep, etc.
4. Given the list of processes, their CPU burst times and arrival times. Display/print the Gantt chart for FCFS and SJF. For each of the scheduling policies, compute and print the average waiting time and average turnaround time.
5. Given the list of processes, their CPU burst times and arrival times. Display/print the Gantt chart for Priority and Round robin. For each of the scheduling policies, compute and print the average waiting time and average turnaround time.
6. Develop Application using Inter-Process-Communication (Using shared memory, pipes or message queues).
7. Implement the Producer-Consumer problem using semaphores (Using UNIX system calls)

8. Implement some Memory management schemes like Paging and Segmentation.
9. Implement some Memory management schemes like FIRST FIT, BEST FIT & WORST FIT.
10. Implement any file allocation techniques (Contiguous, Linked or Indexed)

TEXT BOOKS:

CS322 OBJECT ORIENTED ANALYSIS & DESIGN

Course Description and Objectives:

This course explains how a software design may be represented as a set of interacting objects that manage their own state and operations. It describes the activities in the object - oriented design process and introduces various models that can be used to describe an object-oriented design.

Course Outcomes:

- õ *To understand the fundamental principles of Object Oriented programming.*
- õ *To master key principles in Object Oriented analysis, design, and development.*
- õ *Be familiar with the application of the Unified Modelling Language (UML) towards analysis and design.*
- õ *To know common patterns in Object Oriented design and implement them.*
- õ *To be familiar with alternative development processes.*

UNIT I - Introduction to UML

Importance of Modeling, Principles of Modeling, Object Oriented Modeling, Conceptual model of the UML, Architecture, Software Development Life Cycle.

UNIT II - Basic Structural Modeling & Basic Behavioral Modeling

Classes, Relationships, Common Mechanisms, and Diagrams. Use cases, Use case Diagrams, Interactions, Interaction Diagrams, Activity Diagrams.

UNIT III - Class & Object Diagrams

Terms, Concepts, Modeling Techniques for Class & Object Diagrams.

UNIT IV - Advanced Structural Modeling & Advanced Behavioral Modeling

Advanced Classes, Advanced Relationships, Interfaces, Types and Roles, Packages.

Events and Signals, State Machines, Processes and Threads, Time and Space, State Chart Diagrams.

UNIT V - Architectural Modeling

Component, Deployment, Component Diagrams and Deployment Diagrams.

TEXT BOOKS:

1. Booch G., Rumbaugh J. & Jacobsons I., “The Unified Modeling Language User Guide”, Addison Wesley, 2002.

REFERENCE BOOKS:

1. Meilir Page-Jones, “Fundamentals of Object Oriented Design in UML”, 4th ed., Pearson Education, 2008.

CS324 MIDDLEWARE TECHNOLOGIES

Course Description and Objectives:

The main objective of this course is to get on awareness of a the various technologies which can help in the implementation of the various live project

Course Outcomes:

Upon completion of the subject, students will be able to:

- *Understand the basic structure of distributed systems;*
- *Understand the motivation of using middleware;*
- *Understand the basic concepts underlying the ASP.net and C#.net;*
- *Learn to make judgment in choosing a suitable middleware for application problems;*
- *Understand the basic concepts of Web Services and EJB.*

UNIT I - Emergence of Middleware

Introduction,Objects, Web Services,Middleware Elements, Vendor Architecture, interoperability,Middleware in distributed applications, Types of Middleware,RMI, JDBC,Client/Server CORBA Style.

UNIT II - ASP.NET

Introduction,Lifecycle,ServerControls,Basic Controls,Directives,Validators, Database Access,ADO.Net,File Uploading, Data Sources, Data Binding,Custom Controls,Security,Data Caching,Multithreading, Deployment.

UNIT III - Fundamentals of C#& .NET platform

Comprehensive .NET Assemblies.OOPs with C#, Attributes, Reflection, Properties, Indexers ,Delegates ,Events,Collections, Generics,Anonymous Methods, Unsafe Codes and Multithreading

UNIT IV - Web Services

Introduction,Architecture, Components,Security,XML Web Service Standards,Creating Web Services,Extending Web Services, Messaging Protocol,describing,discovering,securing

UNIT V - EJB

Java Bean Component Model,EJB Architecture,Session Bean,Java Message Service,Message Driven Bean,Entity Bean

TEXT BOOKS:

IT308 MICROPROCESSORS & MICROCONTROLLERS

Course description and Objectives:

To develop an in-depth understanding of the operation of microprocessors and microcontrollers, machine language programming & interfacing techniques.

Course Outcomes:

- õ *The student will learn the internal organization of some popular microprocessors /microcontrollers.*
- õ *The student will learn hardware and software interaction and integration.*
- õ *The students will learn the design of microprocessors/ microcontrollers-based systems.*

UNIT I - Introduction to Microprocessor

An over view of 8085 - Architecture of 8086 Microprocessor - Signal descriptions of 8086 – Physical memory organization – general bus operation - Special processor activities – Minimum mode 8086 system and timings - Minimum mode 8086 system and timings – Comparison between 8086 and 8088.

UNIT II - Assembly Language Programming

Machine Language instruction formats – Addressing modes of 8086 – instruction set of 8086 – Assembler directives and operators – Assembly language programming – interrupts and interrupt service routines – Macros.

UNIT III - Interfacing

Semiconductor memory interfacing – Interfacing I/O ports – PIO 8255 – modes of operation of 8255 – interfacing analog to digital converters – interfacing digital to analog converters – stepper motor interfacing.

UNIT IV - Advanced Processors

Introduction to 80286, Salient Features of 80386, Real and Protected Mode Segmentation & Paging, Salient Features of Pentium, Branch Prediction, Overview of RISC Processors.

UNIT V - 8051 Microcontroller

Overview of 8051 microcontroller Architecture - I/O Ports - Memory organization - addressing modes and instruction set of 8051 - simple programs.

TEXT BOOKS :

1. Advanced microprocessor and Peripherals - A.K.Ray and K.M.Bhurchandi, TMH, 2000.
2. 8051 Micro Controller Architecture, Programming and Applications by Kenneth J.Ayala, 2009.

CS435 SOFTWARE TESTING METHODOLOGIES

Course Description and Objectives:

Software testing is a subject where the student will learn and apply basic skills needed to create and automate the test plan of a software project. It aims to describe principles and strategies for generating system test cases and to understand the essential characteristics of tools used for test automation.

Course Outcomes:

Students who have completed this course would have learned

- õ *Various test processes and continuous quality improvement*
- õ *Types of errors and fault models*
- õ *Methods of test generation from requirements*
- õ *Behavior modeling using UML: Finite state machines (FSM)*
- õ *Test adequacy assessment using: control flow, data flow, and program mutations*

UNIT I - Introduction

Purpose of testing, Dichotomies, model for testing, consequences of bugs, taxonomy of bugs Flow graphs and Path testing: Basics concepts of path testing, predicates, path predicates and achievable paths, path sensitizing, path instrumentation, application of path testing.

UNIT II - Transaction Flow Testing & Domain Testing

Transaction flows, transaction flow testing techniques. Dataflow testing:- Basics of dataflow testing, strategies in dataflow testing, application of dataflow testing.

Domains and paths, Nice & ugly domains, domain testing, domains and interfaces testing, domain and interface testing, domains and testability.

UNIT III - Paths, Path products and Regular expressions

Path products & path expression, reduction procedure, applications, regular expressions & flow anomaly detection.

VFSTR UNIVERSITY

UNIT IV - Logic Based Testing & State, State Graphs and Transition testing

Overview, decision tables, path expressions, kv charts, specifications.
State graphs, good & bad state graphs, state testing, Testability tips.

UNIT V - Graph Matrices and Application

Motivational overview, matrix of graph, relations, power of a matrix, node reduction algorithm, building tools. Usage of JMeter and Winrunner tools for functional / Regression testing (Ref Text book2).

TEXT BOOKS:

1. Boris Beizer, “Software Testing Techniques”, 2nd ed., Dreamtech, 2006.

IT310 SOFT COMPUTING

(Elective-II)

Course Description and Objectives:

To know about the components and building block hypothesis of Genetic algorithm. To understand the features of neural network and its applications and to study the fuzzy logic components

Course Outcomes:

- *Implement machine learning through neural networks.*
- *Gain Knowledge to develop Genetic Algorithm and Support vector machine based machine learning system.*
- *Understand fuzzy concepts and develop a Fuzzy expert system to derive decisions.*
- *Able to Model Neuro Fuzzy system for data clustering and classification.*

UNIT I - Neural Networks

History, overview of biological Neuro-system, Mathematical Models of Neurons, ANN architecture, Learning rules, Learning Paradigms-Supervised, Unsupervised and reinforcement Learning, ANN training Algorithms-perceptions, Training rules, Delta.

UNIT II - Fuzzy Logic

Back Propagation Algorithm, Multilayer Perceptron Model, Hopfield Networks, Associative Memories, Applications of Artificial Neural Networks.

Introduction to Fuzzy Logic, Classical and Fuzzy Sets: Overview of Classical Sets, Membership Function, Fuzzy rule generation.

UNIT III- Operations on Fuzzy Sets & Fuzzy Arithmetic

Compliment, Intersections, Unions, Combinations of Operations, Aggregation Operations.

Fuzzy Numbers, Linguistic Variables, Arithmetic Operations on Intervals & Numbers, Lattice of Fuzzy Numbers, Fuzzy Equations.

UNIT IV - Fuzzy Logic

Classical Logic, Multivalued Logics, Fuzzy Propositions, Fuzzy Qualifiers, Linguistic Hedges. Uncertainty based Information : Information & Uncertainty, Nonspecificity of Fuzzy & Crisp Sets, Fuzziness of Fuzzy Sets.

UNIT V - Application of Fuzzy Logic & Genetic Algorithm

Introduction of Neuro - Fuzzy Systems, Architecture of Neuro Fuzzy Networks. Medicine, Economics etc. An Overview, GA in problem solving, Implementation of GA

TEXT BOOKS:

CS425 DATAWAREHOUSING & DATAMINING

Course Description and Objectives:

This course is about knowing of how to make use of historical data so that high end business decision can be taken for the growth of an organization. The main objective of this course is to designing the intelligent machines which can take risk business decisions behalf of humans using the datamining techniques like classification, clustering, outlier detection, association rule mining.

Course Outcomes:

Students are able to

- *Learn the basic concepts of Database Technology Evaluation steps and also understood the need of data mining and its functionalities*
- *Explore the efficient and effective maintenance of Data Warehouses.*
- *Apply the data mining functionalities like Clustering, Classification, Association Analysis to real world data.*
- *Discover interesting patterns and association rules from huge volume of data used to do classifications and predictions.*
- *Gain knowledge on developing areas like Web Mining, Text Mining, and Spatial Mining.*

UNIT I - Introduction & Data Warehousing and Online Analytical Processing

Why Data Mining, What is Data Mining, Kinds of Data, Kinds of Patterns, and Technologies used, Kinds of applications adopted, Major issues in Data Mining.

Basic Concepts, Data Warehouse Modeling, Data Warehouse Design and Usage, Data Warehouse Implementation, Data Generalization by Attribute-Oriented Induction

UNIT II - About Data & Data Preprocessing

Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity. An Overview, Data Cleaning, Data Integration, Data Reduction, Data Transformation and Data Discretization

UNIT III - Data Cube Technology, Mining Frequent Patterns, Associations, and Correlations & Advanced Pattern Mining

Preliminary Concepts, Data Cube Computation Methods, Processing Advanced Kinds of Queries by Exploring Cube Technology, Multidimensional Data Analysis in Cube Space

Basic Concepts and Methods: Basic Concepts, Frequent Itemset Mining Methods, Which Patterns Are Interesting?—Pattern Evaluation Methods

Pattern Mining in Multilevel, Multidimensional Space, Constraint-Based Frequent Pattern Mining

UNIT IV - Classification & Advanced Classification

Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule-Based Classification, Model Evaluation and Selection, Techniques to Improve Classification Accuracy

Bayesian Belief Networks, Classification by Back propagation, Support Vector Machines, Classification Using Frequent Patterns, Lazy Learners, Other Classification Methods

UNIT V - Cluster Analysis & Advanced Cluster Analysis

Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid-Based Methods, Evaluation of Clustering

Probabilistic Model-Based Clustering, Clustering High-Dimensional Data

TEXT BOOKS:

1. Jiawei Han Micheline Kamber – "Data Mining Concepts & Techniques", Third Edition, Morgan Kaufmann Publishers, 2012.

CS427 CRYPTOGRAPHY AND NETWORK SECURITY

Course Description and Objectives:

This Course focuses towards the introduction of network security using various cryptographic algorithms and understanding network security applications. It also focuses on the practical applications that have been implemented and are in use to provide email and web security.

Course Outcomes:

On successful completion of this course, the students

- *Will have knowledge and understanding of: Classical encryption techniques, Block ciphers and the Data Encryption Standard, Basics of finite fields, Advanced Encryption Standard, Contemporary symmetric ciphers, Confidentiality using symmetric encryption, Basics of number theory, Key management, Public key cryptosystems, Message authentication, Hash functions and algorithms, Digital signatures and authentication protocols, Network security practice, Applications, E-Mail, IP and web security, System security, Intruders, Malicious software, Firewalls.*
- *Will develop their skills in: the programming of symmetric and/or asymmetric ciphers and their use in the networks.*
- *Will learn protocols used in Web Security and Transport layer Security*

UNIT I - NETWORK SECURITY INTRODUCTION

Security attacks – Security services – Security Mechanisms – A Model for Network Security Model Classical Encryption Techniques – Symmetric Cipher Model – Substitution Techniques – Transposition Techniques – Rotor Machines – Steganography

UNIT II - BLOCK CIPHERS AND DATA ENCRYPTION STANDARD

Block Cipher Principles – Data Encryption Standard – Strength of DES – Differential and Linear Cryptanalysis - Block Cipher Design Principles.- Advanced Encryption Standard – Evaluation Criteria of AES – AES Cipher – More on Symmetric Ciphers – Multiple encryption and Triple DES – Block Cipher Modes of Operation – RC4.

UNIT III - PUBLIC-KEY ENCRYPTION AND HASH FUNCITONS

Principles of Public –Key Cryptosystems – RSA Algorithm – Key Management – Message Authentication and Hash Functions – Authentication Requirements – Authentication Functions – Message Authentication – Hash Functions – Security of Hash Functions and MACs- Digital Signatures - Authentication Protocols – Digital Signature Standard.

UNIT IV - NETWORK SECURITY APPLICATIONS

Kerberos – X.509 Authentication Service – Public Key Infrastructure – Pretty Good Privacy – S/MIME- IP Security Overview – IP Security architecture- Authentication Header – Encapsulating Security Payload – Combining Security associations – Key Management

UNIT V - Web Security

Secure Socket Layer and Transport Layer Security – Secure Electronic Transaction. SYSTEM SECURITY Intruders – Intrusion Detection – Password Management – Malicious Software - Firewalls – Trusted Systems.

CS443 BIG DATA ANALYTICS

Course Description and Objectives:

The main objectives of this course is to enable the students with basic data analytic skills like regression analysis, classification techniques, clustering techniques, association rule mining. Further, this course also enables the students how to scale the above algorithms with different data environments like massive amount of data, streaming data, distributed data and provides hands on experience on real world problems using above theoretical background.

Course Outcomes

- *Necessary theory background for processing analytics.*
- *Processing analytics on small scale data.*
- *Mining from massive datasets.*
- *Mining from distributed datasets.*

UNIT I - Introduction To Big Data

Introduction to BigData Platform – Traits of Big data -Challenges of Conventional Systems - Web Data – Evolution Of Analytic Scalability - Analytic Processes and Tools - Analysis vs Reporting - - Statistical Concepts: Sampling Distributions - Re-Sampling - Statistical Inference - Prediction Error.

UNIT II - Data Analysis

Regression Modeling - Multivariate Analysis - Bayesian Modeling - Inference - Support Vector and Kernel Methods - Analysis of Time Series: Linear Systems Analysis - Nonlinear Dynamics - Rule Induction - Neural Networks: Learning

UNIT III - Advanced Learning And Introduction To Streaming

Generalization - Competitive Learning - Principal Component Analysis and Neural Networks - Fuzzy Logic: Extracting Fuzzy Models from Data – Fuzzy c-Means- Stochastic Search Methods. Introduction to Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams

UNIT IV - Frequent Itemsets And Clustering

Mining Frequent Itemsets - Market Based Model – Apriori Algorithm, FP-Growth, Dynamic Item set Algorithm – Clustering Techniques – Hierarchical – K-Means, K-medoid, CURE- Clustering High Dimensional Data – CLIQUE– Clustering in Non-Euclidean Space – Clustering for Streams and Parallelism.

UNIT V - Frameworks And Visualization

MapReduce – Hadoop, Hive, MapR – Sharding – NoSQL Databases - S3 - Hadoop Distributed

File Systems – Visualizations - Visual Data Analysis Techniques - Interaction Techniques; Systems and Analytics Applications.

CS439 SOFTWARE PROJECT MANAGEMENT
(Elective-III)

Course Description and Objectives:

Students will be introduced to the following aspects of project management related to managing small software development and To describe activities of SPM highlights and train in the planning and implementation of project management. It brings a specific project to complete on time and on budget.

Course Outcomes:

- *identify and describe the impact different project contexts will have upon all aspects of a software development project, including an understanding of the role professional ethics plays in the conduct of successful software development*
- *identify and describe the key phases of project management and the key skills associated with each*
- *determine an appropriate project management approach through an evaluation of the business context and project scope and knowledge of agile and traditional project management approaches*
- *demonstrate through application, knowledge of the key project management skills, such as product and work break-down structure, schedule; governance including progress reporting, risk and quality management*
- *as part of a small team research and produce a concise piece of writing suitable for presentation to senior management demonstrate an ability to present their ideas both formally and informally to a group of their peers.*

UNIT I - Conventional Software Management & Improving Software Economics

The waterfall model, conventional software Management performance. Evolution of Software Economics : Software Economics, pragmatic software cost estimation.

Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections.

UNIT II - The old way and the new & Life cycle phases

The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

Engineering and production stages, inception, Elaboration, construction, transition phases.

UNIT III - Artifacts of the process

The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts. Model based software architectures : A Management perspective and technical perspective.

UNIT IV - Iterative Process Planning & Project Organizations and Responsibilities

Work breakdown structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning. Line-of-Business Organizations, Project Organizations, evolution of Organizations. Process Automation : Automation Building blocks, The Project Environment.

UNIT V - Project Control and Process instrumentation & Future Software Project Management

The seven core Metrics, Management indicators, quality indicators, life cycle expectations, pragmatic Software Metrics, Metrics automation.

Modern Project Profiles, Next generation Software economics, modern process transitions.

CS426 HUMAN COMPUTER INTERACTION

(Elective-III)

Course Description and Objectives:

The student will learn how interaction with computers takes place at user interface, which comprises both hardware and software. To facilitate communication between students of psychology, design, and computer science on user interface development projects. To facilitate communication between students of psychology, design, and computer science on user interface development projects.

Course Outcomes:

- *The student will learn, The importance of User Interface and interaction with computers using a Graphical User Interface and Keyboard and function keys along with video drivers*
- *To provide the future user interface designer with concepts and strategies for making design decisions.*
- *To expose the future user interface designer to tools, techniques, and ideas for interface design.*
- *To introduce the student to the literature of human-computer interaction.*

UNIT I - Introduction

Importance of user Interface - definition, importance of good design. Benefits of good design. A brief history of Screen design, The graphical user interface - popularity of graphics, the concept of direct manipulation, graphical system, Characteristics, Web user - Interface popularity, characteristics- Principles of user interface.

UNIT II - Design process

Human interaction with computers, importance of human characteristics human consideration, Human interaction speeds, and understanding business junctions.

UNIT III - Screen Designing

Design goals - Screen planning and purpose, organizing screen elements, ordering of screen data and content - screen navigation and flow - Visually pleasing composition - amount of information - focus and emphasis - presentation information simply and meaningfully – information Screen Designing:- Design goals - Screen planning and purpose, organizing screen elements, ordering of screen data and content - screen navigation and flow - Visually pleasing composition - amount of information - focus and emphasis - presentation information simply and meaningfully - information retrieval on web - statistical graphics - Technological consideration in interface design.

UNIT IV - Windows

New and Navigation schemes selection of window, selection of devices based and screen based controls. Components - text and messages, Icons and increases - Multimedia, colors, uses problems, choosing colors.

UNIT V - Software tools

Specification methods, interface - Building Tools. Interaction Devices - Keyboard and function keys - pointing devices - speech recognition digitization and generation - image and video displays - drivers.

TEXT BOOKS:

CS434 MULTIMEDIA SYSTEMS
(Elective-III)

Course Description and Objectives:

Understand the characteristics of multimedia systems and how to address issues Be aware of the differences among multimedia authoring systems. Be familiar with the software development process as practiced in a multimedia development environment Be able to design, write, document, debug and evaluate a non trivial multimedia system. Appreciate and understand the legal and ethical issues associated with developing multimedia systems, particularly in regard to use of media clips developed by others.

Course Outcomes:

- õ *Write action script for a particular problem.*
- õ *Design and Draw customized GUI components.*
- õ *Apply Transformations on Components.*
- õ *To make use of fundamental concepts and formulate best practices*

UNIT I

Introduction to Multimedia, Media and Data Streams, Sound/Audio, Images and Graphics, Video and Animation.

UNIT II

Data Compression, Optical Storage Media; Computer Technology, Multimedia Operating Systems.

UNIT III

Networking Systems, Multimedia Communication Systems; Database Systems.

UNIT IV

Multimedia Architecture; Multimedia Documents, Hypertext and MHEG.

UNIT V

User Interfaces, Synchronization, Abstractions for Programming; Multimedia Application Development; Virtual Reality; Future Directions.

TEXT BOOKS:

1. Ralf Steinmetz, Klara Nahrstedt "Multimedia: Computing Communications & Applications" Pearson Education (2004)
2. Parekh Ranjan "Principles of Multimedia" Tata McGraw-Hill (2007)

IT407 DISTRIBUTED COMPUTING
(Elective-III)

Course Description and Objectives:

To list the principles underlying the functioning of distributed systems, describe the problems and challenges associated with these principles, and evaluate the effectiveness and shortcomings of their solutions. Course Objective Should be in single paragraph

To build distributed system software using basic OS mechanisms as well as higher-level Middleware and languages.

Course Outcomes:

To be able to:

- *Distinguish the theoretical and conceptual foundations of distributed computing.*
- *Recognize the inherent difficulties that arise due to distributed-ness of computing resources.*
- *Recognize the feasibilities and the impossibilities in managing resources.*
- *Identify the problems in developing distributed applications.*

UNIT I - Basic Distributed System Concepts

Introduction, Distributed Computing Models, Software Concepts, Issues in Designing Distributed Systems, Client–Server Model.

UNIT II - Network & Inter Process Communication

LAN and WAN Technologies, Protocols for Network Systems, Protocols for Distributed Systems, Message Passing, Group Communication, API for Internet Protocol, RPC Communication

UNIT III - Synchronization

Clock Synchronization, Logical Clocks, Global State, Mutual Exclusion, Election Algorithms, Deadlocks in Distributed Systems

UNIT IV - Distributed System Management

Load-balancing Approach, Load-sharing Approach, Threads, Fault Tolerance, Basic Concepts of DSM, File Models in DFS

UNIT V - Emerging Trends in Distributed Computing

Grid Computing, SOA, Cloud Computing, The Future of Emerging Trends.

TEXT BOOKS:

1. Distributed Computing, S.Mahajan and S.Shah, Oxford University Press.
2. Distributed Computing, Principles, Algorithms and Systems, Ajay D. Kshemakalyani & Mukesh Singhal, Cambrigde, rp 2010

REFERENCE BOOKS:

1. Distributed Systems Concepts and Design, G Coulouris, J Dollimore and T Kindberg, Fourth Edition, Pearson Education.
2. Distributed Systems, S.Ghosh, Chapman & Hall/CRC, Taylor & Francis Group, 2010.

CS336 SIMULATION AND MODELING
(Elective-IV)

Course Description and Objectives:

The objective of this course is to teach students methods for modeling of systems using discrete event simulation. Emphasis of the course will be on modeling and on the use of simulation software. The students are expected to understand the importance of simulation in IT sector, manufacturing, telecommunication, and service industries etc. By the end of the course students will be able to formulate simulation model for a given problem, implement the model in software and perform simulation analysis of the system.

Course outcomes:

- *Students will be enable to understand the types of system models.*
- *Students will be able to generate random variables and random numbers.*
- *Students can verify and validate simulation models.*

UNIT I - The concepts of a system,system modeling,types of models &System studies

Static physical models,dynamic physical models,static mathematical models,dynamic mathematical models,principles used in modeling.

A corporate model:Environment segment,production segment,management segment. Types of system study.

UNIT II - Mathematical and Statistical Models

Probability concepts, Queuing Models, Methods for generating random variables and Validation of random numbers.

UNIT III - Analysis of simulation data Input modeling & Verification and validation of simulation models

Data collection,identifying the distribution with data, parameter estimation, goodness of fit test,fitting a non stationary Poisson process, selecting input models with out data,multivariate and time series input models.

Model building,verification and validation ,verification of simulation models,calibration and validation of models.

UNIT IV

Experiments-Simulation of different systems, Analysis, validation and verification of input and output simulated data, study of alternate techniques.

UNIT V - Simulation of manufacturing and material handling systems & Manufacturing example

Manufacturing and material handling simulation,goals and performance measures,issues in manufacturing and material handling simulations,case studies of the simulation of manufacturing and material handling systems. A job shop analysis,simualtion of computer systems:simulation tools,model input,high level computer system simulation,memory simulation.

TEXT BOOKS:

1. Geoffrey Gordon, "System Simulation", Second edition, Prentice Hall, India, 2002[unit I]
2. Jerry Banks and John S.Carson, Barry L.Nelson, David M.Nicol, "Discrete Event System Simulation", fourth edition, Prentice Hall, India, 2002[unit II,III,IV,V]

REFERENCE BOOKS:

1. Robert E.Shannon, "System Simulation The art and science", Prentice Hall, New Jersey, 1995.
2. D.S. Hira, "System Simulation", S.Chand and company Ltd, New Delhi, 2000

		4	-	-	4	4

CS319 OPEN SYSTEMS FOR WEB TECHNOLOGIES
(Elective-IV)

Course Description and Objectives:

It makes familiar of Open Source technologies like LINUX, MySQL, CGI, PHP, Webserver and various tools which are used to develop web programming.

Course Outcomes:

- *Students can develop web pages using HTML*
- *Can write dynamic web pages*
- *Can write server programs handling database connection*
- *Can generate responses accordingly*

UNIT I - Introduction & Open Source Operating Systems

Nature of Open sources –Maturity Model- Design Strategy-Support Models-Advantages – Application of Open Sources.

General Overview - Case Study: Linux - Files and Directories - Intermediate File Management - Process Management-Memory Addressing - Process Scheduling - Signals – Virtual File System- Page Cache- Program Execution.

UNIT II - Open source Database

General Overview- Case Study: MySQL -Introduction – MySQL Basic- Directory Structure-Creating Users and Super Users- Designing a Relational Database-Managing Databases, Tables and Indexes-Operators-functions-Transaction Management

UNIT III - Open source programming languages

General Overview - Case Study: PHP -Introduction – Basics of PHP- functions-Error Handling- Interaction between PHP and MySQL Database using Forms-Using PHP to manipulate and Retrieve Data in MySQL.

UNIT IV - Open source web server

General Overview of Web Server - Case Study: Apache Web server – Working with Web Server – Configuring and using Apache Web services-Case Study Apache Tomcat.

UNIT V - Open source tools and technologies

Open Source IDE-Modeling Tools- Mozilla Firefox- Wikipedia- Eclipse

TEXT BOOKS:

1. Dan Woods and Gautam Guliani,"Open Source for the Enterprise: Managing Risks, Reaping Rewards", O'Reilly, Shroff Publishers and Distributors, 2005.
2. Daniel.P.Bovet and Marco Cesati," Understanding the Linux Kernel ", O, Reilly, 2007.

		4	-	-	4	4

CS433 EMBEDDED SYSTEMS
(Elective-IV)

Course Description and Objectives:

Emphasis on Comprehensive treatment of Embedded Hardware and Real Time Operating systems along with case studies in tune with the requirements of Industry. The example-driven approach will put students on a fast track to understanding embedded-system programming and applying what they learn to their projects.

Course Outcomes:

Upon successful completion of this course, students will be able to:

- õ *Understand what is a embedded system and microcontroller.*
- õ *Understand different components of a microcontroller and their interactions.*
- õ *Become familiar with programming environment used to develop embedded systems*
- õ *Understand key concepts of embedded systems like I/O, timers, interrupts, interaction with peripheral devices*

UNIT I - Introduction to Embedded Systems

Definition, Applications of ES, Examples of Embedded Systems, Embedded Hardware Units and Devices, Embedded Software, Design Metrics in ES, Challenges in ES Design.

UNIT II - Architecture of 8051

8051 Micro Controller Hardware, Input/Output Ports and Circuits, External Memory, Counter and Timers, Serial data Input/Output, Interrupts.

UNIT III - Programming Model of 8051

Data Transfer and Logical Instructions , Arithmetic Operations, Decimal Arithmetic, Jump and Call Instructions, Further Details on Interrupts.

UNIT IV - Real Time Operating Systems

Introduction, Tasks and Task States, Tasks and Data, Reentrancy, Semaphores and Shared Data, Basic Design Principles, Inter Process Communication: Message Queues, Mailboxes and Pipes.

UNIT V - Embedded Software Development

Timer Functions, Events, Memory Management, Interrupt Routines in an RTOS Environment, Host and Target Machines, Linker/Locator for Embedded Software, getting Embedded Software into the Target System.

TEXT BOOKS:

1. Raj Kamal, “Embedded Systems”, 2nd ed., TMH, 2009.
2. Kenneth J. Ayala, Thomson, “The 8051 Microcontroller”, 3rd ed., 2008.

5. Frank Vahid, Tony Givargis, John Wiley, “Embedded System Design”, Microcontrollers, 3rd ed.,Pearson Education, 2008.

IV Year B.Tech. IT	I - Semester	L	T	P	To	C
		4	-	-	4	4

IT409 ROBOTICS
(Elective-IV)

Course Description and Objectives:

To study the concepts relevant in designing robots controlled by microcontrollers.

Course Outcomes:

To study microcontroller operations for robotics.

- *To study how different interfaces are actually implemented in a microcontroller.*
- *To learn how Microchip PIC micro PIC16F627 can be erased and reprogrammed.*
- *To learn how different sensors, outputs, and peripherals can be wired to a microcontroller to work cooperatively and create a high-level control program.*
- *To design robots in a real time environment.*

UNIT I - MICROCONTROLLER IN ROBOTS

Support components - Memory and device programming – Interrupts - Built in peripherals - Interfacing the controller to robots.

UNIT II - SOFTWARE DEVELOPMENT

Source files, object files, libraries, linkers and hex files – Assemblers – Interpreters – Compilers - Simulators and Emulators - Integrated development environments.

UNIT III - THE MICROCHIP PIC micro (R) MICROCONTROLLER

Different PIC micro MCU devices and features - Application development tools - Basic circuit requirements - The PIC16F627 - EL cheapo PIC micro programmer circuit.

UNIT IV - THE MICROCONTROLLER CONNECTIONS

Hardware interface sequencing- Robot C programming template – Protyping with the PIC micro microcontroller – Intercomputer communications- RS232 - HyperTerminal RS 232 terminal emulator- RS 232 interface example between PC and PIC micro MCU – Bidirectional synchronous interfaces – Output devices – LEDS – PWM power level control – Sensors – Whiskers for physical object detection – iR collision detection sensors- IR remote controls- Ultrasonic distance measurement- Light level sensors- Sound sensors- Odometry for motor control and navigation – Radio control servos.

UNIT V - BRINGING ROBOTS TO LIFE

Real time operating system (RTOS) – Example application running in an RTOS – State machines – Randomly moving a robot application with IR remote control - Behavioral programming - Neural networks and Artificial intelligence.

TEXT BOOKS:

1. Myke Predko, "Programming Robot Controllers" – McGrawHill, 1st edition, 2003.

CS447 DATA WAREHOUSE AND DATA MINING LAB

Course Description and Objectives:

The main objective of this lab is to impart the knowledge on how to implement classical models and algorithms in data warehousing and data mining and to characterize the kinds of patterns that can be discovered by association rule mining, classification and clustering. At the end to compare and contrast different conceptions of data mining.

Course Outcomes:

Students can able

- *To evaluate the different models of OLAP and data preprocessing.*
- *To enlist various algorithms used in information analysis of Data Mining Techniques.*
- *To demonstrate the knowledge retrieved through solving problems*

List of Experiments

1. Explore various commands given in PL/SQL in Oracle 8.0
2. Execute multi-dimensional data model using SQL queries.
3. Implement various OLAP operations such as slice, dice, roll up, drill up, pivot etc.
4. Implementation of Text Mining on the data warehouse
5. Explore the correlation-ship analysis between the data set
6. Evaluate attribute relevance analysis on a weather data warehouse
7. Evaluate Information Gain of an attribute in the student database
8. Experiment to predict the class using the Bayesian classification
9. Find out a weight & bias updating using the Back Propagation Neural Network
10. To perform various data mining algorithms on the give data base using WEKA

REFERENCE BOOKS:

1. Jiawei Han, Micheline Kamber " Data Mining: Concepts and Techniques" 3rd edition, Morgan Kaufmann, 2012

-	-	3	3	2

CS449 CRYPTOGRAPHY & NETWORK SECURITY LAB

Course Description and Objectives:

After the success full completion of this course the student is enable towards learning and overcome security attacks in future.

Course Outcomes:

- õ *Understand computer security principles and discuss ethical issues for theft of information. Identify threat models and common computer network security goals*
- õ *Explain various encryption algorithms, hashing functions, one-way authentication and public key cryptology*
- õ *Analyze firewalls, DOS attacks and defense types. Dramatize example scenarios in DNS and IPSec applications*

List of Experiments

1. Write program for Ceaser cipher encryption and decryption
2. Write program for Mono alphabetic cipher encryption and decryption
3. Implementation of Play Fair cipher
4. Implementation of Vigenere cipher (Polyalphabetic substitution)
5. Implementation of Hill cipher
6. Implementation of Rail Fence cipher
7. Implementation of S-DES algorithm for data encryption
8. Implement RSA asymmetric (public key and private key)-Encryption
9. Implement Euclidean and Extended Euclidean algorithm for calculating the GCD
10. Working with PGP

REFERENCE BOOKS:

5. Introduction to Cryptography Buchmann, Springer
6. Problem solving with C++, The OOP, 4th ed, W.Savitch, Pearson education.

IV Year B.Tech. IT I - Semester

L	T	P	To	C
-	-	3	3	2

IT407 FREE OPEN SOURCE SOFTWARE (FOSS) LAB

Course Description and Objectives:

To expose students to FOSS environment and introduce them to use open source packages.

Course Outcomes:

- Ability to Install, Configure and Program in Linux
- Provide and manage services in Linux
- Ability to Network using Linux with security

1. **Kernel configuration, compilation and installation :** Download / access The latest kernel source code from kernel.org,compile the kernel and install it in the local system.Try to view the source code of the kernel

2. **Virtualisation environment** (e.g., xen, kqemu or lguest) to test an applications,new kernels and isolate applications. It could also be used to expose students to other alternate OSs like *BSD

3. **Compiling from source :** learn about the various build systems used like the auto* family, cmake, ant etc. instead of just running the commands. This could involve the full process like fetching from a cvs and also include autoconf,automake etc.,

4. **Introduction to packet management system** : Given a set of RPM or DEB, how to build and maintain, serve packages over http or ftp. and also how do you configure client systems to access the package repository.

5. **Installing various software packages** Either the package is yet to be installed or an older version is existing. The student can practice installing the latest version. Of course, this might need internet access
   5.1Install samba and share files to windows
   5.2 Install Common Unix Printing System (CUPS)

6. **Write userspace drivers using fuse** — easier to debug and less dangerous to the system (Writing full-fledged drivers is difficult at student level)
7. **GUI programming** : a sample programme – using Gambas since the students have VB knowledge. However, one should try using GTK or QT
8. **Version Control System** setup and usage using RCS, CVS, SVN
9. **Text processing with Perl**: simple programs, connecting with database e.g., MYSQL
10. **Running PHP** : simple applications like login forms after setting up a LAMP stack
11. **Running Python** : some simple exercise – e.g. Connecting with MySql database tables, etc.,

		4	-	-	4	4

CS330 NETWORK PROGRAMMING
(Elective – V)

Course Description and Objectives:

The main objectives of this course is to provide hands on experience on the usage of the multiprocessing systems like UNIX for basic communication needs among processes and further, how the basic communication between two computers can be enabled using socket programming.

Course Outcomes:

- *demonstrate advanced knowledge of networking*
- *make use of various solutions to perform inter-process communications*
- *demonstrate knowledge of protocols and languages used in Web and multimedia delivery*
- *demonstrate advanced knowledge of programming for network communications*
- *describe major technologies used in network communications*

UNIT I - Introduction to Network Programming

OSI model, Unix standards, TCP and UDP & TCP connection establishment and Format, Buffer sizes and limitation, standard internet services.

Inter Process Communication - Pipes, FIFOs

UNIT II - Elementary Sockets & Elementary TCP sockets

Address structures, value – result arguments, Byte ordering and manipulation function and related functions.

Socket, connect, bind, listen, accept, fork and exec function, concurrent servers. Close function and related function.

UNIT III - TCP client server

Introduction, TCP Echo server functions, Normal startup, terminate and signal handling server process termination.

UNIT IV - I/O Multiplexing and socket options

I/O Models, select function, Batch input, shutdown function, poll function, TCP Echo server. Socket Options getsockopt and setsockopt functions. Socket states, Generic socket option.

UNIT IV - Elementary UDP sockets

Introduction UDP Echo server function, lost datagram. Elementary name and Address conversions - DNS-Resource Records, Resolver and name servers.

TEXT BOOK :

IT414 BIOMETRICS

(Elective – V)

Course Description and Objectives:

To understand the state-of-the-art in biometric technologies. To survey the currently available biometric systems. To explore ways to improve some of the current techniques. To learn and implement some of the biometrics authentication and to explore new techniques

Course Outcomes:

This course is to provide an understanding of:

- *The types of biological data*
- *The computational problems that arise while analyzing biological data*
- *A set of algorithms that have important applications in computational biology, but which have key applications outside of biology as well.*
- *Core set of widely used algorithms in computational biology*

UNIT I - Introduction

Benefits of biometric security – Verification and identification – Basic working of biometric matching – Accuracy – False match rate – False non-match rate – Failure to enroll rate – Derived metrics – Layered biometric solutions.

UNIT II

Finger scan – Features – Components – Operation (Steps) – Competing finger Scan technologies – Strength and weakness. Types of algorithms used for interpretation.

Facial Scan - Features – Components – Operation (Steps) – Competing facial Scan technologies – Strength and weakness.

UNIT III

Iris Scan - Features – Components – Operation (Steps) – Competing iris Scan technologies – Strength and weakness.

UNIT IV

Voice Scan - Features – Components – Operation (Steps) – Competing voice Scan (facial) technologies – Strength and weakness.

Other physiological biometrics – Hand scan – Retina scan – AFIS (Automatic Finger Print Identification Systems) – Behavioral Biometrics – Signature scan-keystroke scan.

UNIT V

Biometrics Application – Biometric Solution Matrix – Bio privacy – Comparison of privacy factor in different biometrics technologies – Designing privacy sympathetic biometric systems. Biometric standards – (BioAPI , BAPI) – Biometric middleware

Biometrics for Network Security. Statistical measures of Biometrics. Biometric Transactions.

TEXT BOOKS:

1. Biometrics – Identity Verification in a Networked World – Samir Nanavati, Michael Thieme, Raj Nanavati, WILEY
2. Biometrics for Network Security- Paul Reid, 1/e, Pearson Education.

REFERENCE BOOK:

IT416 DESIGN PATTERNS
(Elective-V)

Course Description and Objectives:

Contrast different implementations of a pattern. Contrast the difference in intentions between structurally similar patterns. Demonstrate the use of patterns in isolated software subsystems. Apply appropriate patterns in the design of a small software system

Course Outcomes:

- *Analyze the design of a software system to identify logical components*
- *Select appropriate design patterns to refractor an existing design*
- *Compare design tradeoffs between different patterns and/or different implementations of the same pattern*
- *Compare the benefit of pattern usage versus non usage*

UNIT I - Introduction To Design Patterns

What is a Design Pattern, Design pattern in Smalltalk MVC, Describing the design patterns, How design pattern solve Design problems ,how to select a design pattern and how to use a design pattern

UNIT II - Architectural Patterns

Procedural, Layered, Object Oriented, Data Flow, Implicit Invocation, Black Board, FSM, Feedback Control System MVC

UNIT III - Creational Patterns

Singleton Pattern, Prototype Pattern, Builder Pattern, Factory Method Pattern, Abstract Factory Pattern

UNIT IV - Structural Patterns

Adapter Pattern, Flyweight Pattern, Bridge Pattern, Proxy Pattern, Composite Pattern, Facade Pattern, Decorator Pattern

UNIT V - Behavioral Pattern

Memento Pattern, Observer Pattern, State Pattern, Template Pattern, Strategy Pattern , Iterator Pattern, Interpreter Pattern, Chain of Responsibility Pattern, Visitor Pattern, Command Patter, Mediator Pattern

TEXT BOOKS:

1. Design patterns : Elements of Reusable Object-Oriented Software- Erich Gamma,Richard Helm, Ralph, Addison-Wesley.
2. Design Patterns Explained: A New Perspective on Object-Oriented Design (2nd Edition) Pearson Education – Alan Shalloway

REFERENCE BOOK:

1. Eric Freeman – "Head First Design Patterns " 1st edition Oreilly –spd 2004

IV Year B.Tech. IT II - Semester

L	T	P	To	C
4	-	-	4	4

IT418 J2EE
(Elective-V)

Course Description and Objectives:

To understand the developments of enterprise applications using 'Java 2 Platform, Enterprise Edition (J2EE)'.EJB technology enables rapid and simplified development of distributed, transactional, secure and portable applications based on Java technology. After the course completion, student will be able to read, compose, and send electronic messages using 'Java Mail API'. It also enables XML-based protocol to let applications exchange information over HTTP.

Course Outcomes:

- *Understand MVC pattern*
- *Master static web development technology, e.g. HTML and JS etc.*
- *Be familiar with Servlet grammar and programming technology*
- *Know and master the JSP grammar and programming skills*
- *Develop simple Web system using J2EE*
- *Be familiar with related Web test technology*

UNIT I - Introduction

J2EE,J2EE Overview, Why J2EE?,J2EE Architecture, the birth of J2EE,distributivesystems,the tier,J2EE multitier architecture, client tier architecture, web tier implementation, EJB tier implementation, enterprise information systems tier implementation, myths of using inheritance, maintainable classes.

UNIT II - J2EE database concepts

Data, data base, tables, database schema, the art of indexing, jdbc objects, the concept of jdbc, jdbc driver types, jdbc packages, a brief overview of the jdbc process, database connection, associating the jdbc-odbc bridge with database, result set, transaction processing, metadata, data types, exceptions.

UNIT III - JDBC and Embedded SQL

Model programs, tables, indexing, inserting data into tables, selecting data from a table, metadata, updating tables, deleting data from a table, joining tables, calculating data, grouping and bordering data, sub-queries, view. Struts Framework: What is Struts? Struts Architecture.

UNIT IV - RMI

Java mail API, java interface definition language and cobra, java RMI (remote method invocation) java msg service, security RMI overview, RMI architecture, example demonstrating RMI.

UNIT V - Electronic business XML

Java API for XML registries (JAXR), web services description languages (WSDL).

TEXT-BOOK:

IT420 ENTERPRISE RESOURCE PLANNING
(Elective-VI)

Course Description and Objectives:

This subject provides students with the basic concepts of ERP systems for manufacturing or service companies, and the differences among MRP, MRP II, and ERP systems and in-depth knowledge of major ERP components, including material requirements planning, master production scheduling, and capacity requirements planning.

Course Outcomes:

Upon completion of the subject, students will be able to

- *Examine systematically the planning mechanisms in an enterprise, and identify all components in an ERP system and the relationships among the components;*
- *Understand production planning in an ERP system, and systematically develop plans for an enterprise;*
- *Use methods to determine the correct purchasing quantity and right time to buy an item, and apply these methods to material management;*
- *Understand the difficulties of a manufacturing execution system, select a suitable performance measure for different objectives, and apply priority rules to shop floor control.*

UNIT I - Introduction to ERP

ERP Introduction, Benefits, Origin, Evolution and Structure**:** Conceptual Model of ERP, The Evolution of ERP, The Structure of ERP.

UNIT II - ERP Technologies

Business Process Reengineering, Data ware Housing, Data Mining, Online Analytic Processing(OLAP), Product Life Cycle Management(PLM),LAP, Supply chain management.

UNIT III - ERP Modules

ERP Marketplace and Marketplace Dynamics**:** Market Overview, Marketplace Dynamics, The Changing ERP Market.

ERP- Functional Modules: Introduction, Functional Modules of ERP Software, Integration of ERP, Supply chain and Customer Relationship Applications.

UNIT IV - ERP Implementation

Basics, ERP Implementation Life Cycle, Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.

UNIT V - ERP & E-Commerce

Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into organizational culture. Using ERP tool: either SAP or ORACLE format to case study

TEXT BOOKS:

1. Alexis Leon, “ERP Demystified”, Tata McGraw Hill
2. Rahul V. Altekar “Enterprise Resource Planning”, Tata McGraw Hill

REFERENCE BOOKS:

1. Vinod Kumar Garg and Venkitakrishnan N K, “Enterprise Resource Planning – Concepts and Practice”, PHI
2. Joseph A Brady, Ellen F Monk, Bret Wagner, “Concepts in Enterprise Resource Planning”, Thompson Course Technology
3. Mary Summer, “Enterprise Resource Planning”- Pearson Education

IT422 M – COMMERCE
(Elective-VI)

Course Description and Objectives:

To understand the E – commerce strategies and value chains. To understand M-commerce services, M – commerce infrastructure and applications. To apply mobile commerce in business-to-business application.

Course Outcomes:

- *Able to apply E – commerce principles in market place.*
- *Able to apply M – commerce principles to various business domains*
- *Understand the theory and applications of M-commerce in business domain*
- *Able to build M – commerce business models.*

UNIT I - Electronic Commerce

Traditional commerce and E-commerce, Internet and WWW, Role of WWW, Value Chains, Strategic Business And Industry Value Chains, Role of E-commerce, Packet Switched Networks, TCP/IP Protocol Script, Internet Utility Programmes, SGML, HTML And XML, Web Client and Servers, Web Client/ Server Architecture, Intranet and Extranets, Web Based Tools for E-commerce, Security.

UNIT II - Mobile Commerce

Introduction, Infrastructure of M–Commerce, Types of Mobile Commerce Services, Technologies of Wireless Business, Benefits and Limitations, Support, Mobile Marketing & Advertisement, Non–Internet Applications in M–Commerce, Wireless/Wired Commerce Comparisons.

UNIT III - Mobile Commerce Technology

A Framework for the Study of Mobile Commerce, NTT DOCOMO’s I-Mode, Wireless Devices for Mobile Commerce, Towards a Classification Framework for Mobile Location Based Services, Wireless Personal and Local Area Networks,The Impact of Technology, Advances on Strategy Formulation in Mobile Communications Networks.

UNITIV - Mobile Commerce Theory and Applications:

The Ecology of Mobile Commerce, The Wireless Application Protocol, Mobile Business Services, Mobile Portal, Factors Influencing the Adoption of Mobile Gaming Services, Mobile Data Technologies and Small Business Adoption and Diffusion, E–commerce in the Automotive Industry, Location–Based Services, Criteria for Adoption and Solution Deployment, The Role of Mobile Advertising in Building a Brand, M–commerce Business Models.

UNIT V - Business To Business Mobile E- Commerce

Enterprise Enablement, Email and Messaging, Field Force Automation (Insurance, Real Estate, Maintenance, Healthcare), Field Sales Support (Content Access, Inventory), Asset Tracking and Maintenance/Management, Remote IT Support, Customer Retention (B2C Services, Financial, Special Deals), Warehouse Automation, Security.

TEXT BOOKS:

1. E.BrianMennecke, J.TroyStrader, “Mobile Commerce: Technology,Theory and Applications”, Idea Group Inc., IRM press, 2003.
2. Ravi Kalakota, B.AndrewWhinston, “Frontiers of Electronic Commerce”, Pearson Education, 2003.

REFERENCE BOOKS:

2. Paul May, “Mobile Commerce: Opportunities, Applications, and Technologies of Wireless Business” Cambridge University Press March 2001.

IV Year B.Tech. IT II - Semester	L	T	P	To	C
	4	-	-	4	4

IT424 ETHICAL PRACTICES IN IT

(Elective-VI)

Course Description and Objectives:

To create an awareness on Engineering Ethics and Human Values. To instill Moral and Social Values and Loyalty. To appreciate the workplace rights of Others, responsibilities and Safety of others.

Course Outcomes:

- *Locate, describe, and apply the content of at least one example of a law (state, national, or international) dealing with engineering ethics.*
- *Locate, describe, and apply the content of the code of ethics/conduct of at least one professional society.*
- *Prepare, describe, and defend their own personal definition of what makes for an ethical engineer.*

UNIT I - ENGINEERING ETHICS

Senses of ‘Engineering Ethics’ – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg’s theory – Gilligan’s theory – Consensus and Controversy – Professions and Professionalism – Professional Ideals and Virtues – Uses of Ethical Theories

UNIT II - ENGINEERING AS SOCIAL EXPERIMENTATION

Engineering as Experimentation – Engineers as responsible Experimenters – Research Ethics - Codes of Ethics – Industrial Standards - A Balanced Outlook on Law – The Challenger Case Study

UNIT III - ENGINEER’S RESPONSIBILITY FOR SAFETY

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis – Reducing Risk – The Government Regulator’s Approach to Risk - Chernobyl Case Studies and Bhopal

UNIT IV - RESPONSIBILITIES AND RIGHTS

Collegiality and Loyalty – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) - Discrimination

UNIT V - GLOBAL ISSUES

Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct

TEXT BOOKS:

1. Mike Martin and Roland Schinzinger, “Ethics in Engineering”, McGraw Hill, New York,2005.
2. Charles E Harris, Michael S Pritchard and Michael J Rabins, “Engineering Ethics – Concepts and Cases”, Thompson Learning, 2000.

4	-	-	4	4

CS441 BUSINESS INTELLIGENCE
(Elective-VI)

Course Description and Objective:

The study of Web technologies course is fundamental to Computer Science and Engineering. This course enables students to understand web page site planning, management and maintenance. The main objective behind introduction of this course is also to develop web sites which are secure and dynamic in nature and writing scripts which get executed on server as well.

Course outcomes:

On successful completion of this course students should be able to obtain:

- *Understand the principles of business intelligence*
- *Understand the data warehousing principles*
- *Understand reporting and visualisation techniques*
- *Understand data mining techniques*

UNIT I - Introduction to Business Intelligence

Introduction to digital data and its types – structured, semistructuredand unstructured, Introduction to OLTP and OLAP (MOLAP, ROLAP, HOLAP), BI Definitions &Concepts, BI Framework, Data Warehousing concepts and its role in BI, BI Infrastructure Components – BIProcess, BI Technology, BI Roles & Responsibilities, Business Applications of BI, BI best practices

UNIT II - Basics of Data Integration

Concepts of data integration, needs and advantages of using data integration,introduction to common data integration approaches, Meta data - types and sources.

UNIT III - Introduction of Extraction Transformation Loading

Introduction to data quality, data profiling conceptsand applications, introduction to ETL using Pentaho data Integration (formerly Kettle).

UNIT IV - Introduction to Multi-Dimensional Data Modeling

Introduction to data and dimension modeling,multidimensional data model, ER Modeling vs multi dimensional modeling, concepts of dimensions, facts,cubes, attribute, hierarchies, star and snowflake schema, introduction to business metrics and KPIs, creatingcubes using Microsoft Excel.

UNIT V - Basics of Enterprise Reporting

A typical enterprise, Malcolm Baldrige - quality performance framework, balanced scorecard, enterprise dashboard, balanced scorecard vs. enterprise dashboard, enterprisereporting using MS Access / MS Excel, best practices in the design of enterprise dashboards

TEXT BOOKS :

1. Mike Biere, "Business Intelligence for the Enterprise", 1st ed., IBM Press, 2009.

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of Matlab related to above concepts.

Course Outcomes:

The student will be able to:

- recognise and solve different types of first order ordinary differential equations.
- find the complementary functions and particular integral of second and higher order ordinary differential equations with constant coefficients.
- apply the knowledge of ordinary differential equations in some instances.
- solve ordinary differential equations, with initial conditions, numerically.
- find the local maxima/minima of given function of two variables.
- eliminate arbitrary constants/functions from given relations to form partial differential equations.
- solve linear and non-linear partial differential equations of standard types.
- classify second order partial differential equations and solve them.

SKILLS:

ü *Solve given differential equation by suitable method.*

ü *Compute numerical solutions of differential equation by apt method.*

ü *Compute maxima/minima of given function.*

ü *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with Matlab output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*

UNIT - 1 **L- 9**

FIRST ORDER DIFFERENTIAL EQUATIONS : Variable separable, homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L- 9**

SECOND ORDER DIFFERENTIAL EQUATIONS : Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form : e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L- 9**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS : Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS : Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L- 9**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES : Review of partial differentiation: Partial derivatives, Partial derivatives of higher order, Homogeneous function, Euler's theorem, Total differential coefficient. Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions

UNIT - 5 **L- 9**

PARTIAL DIFFERENTIAL EQUATIONS : Formation of Partial Differential Equations, Linear (Lagrange) Equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method.Second order linear equations with constant coefficients only, classifications, rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS

Total hours: 30

1. Basic mathematical operations using MatLab
2. Solving simple expressions
3. Limits
4. Continuity
5. Symbolic differentiation
6. Symbolic integration
7. Plotting of curves
8. Plotting of surfaces
9. Maxima & minima of functions of one variable
10. Maxima & minima of functions of two variable
11. Solving first order O.D.E.
12. Euler's Method and R-K Method

TEXT BOOKS:

1. H. K. Dass and Er. Rajanish Verma, "Higher Engineering Mathematics", 3rd revised edition, S. Chand & Co., 2014
2. B. S. Grewal, "Higher Engineering Mathematics", 44th edition, Khanna Publishers, 2014.
3. Rudra Pratap, "Getting started with MatLab", Oxford University Publication, 2009.

REFERENCE BOOKS:

2. B. V. Ramana, "Advanced Engineering Mathematics", McGraw Hill Education, 25th reprint, 2015.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	45	30	10	-	10

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibres, Photonics, Nano and funcational materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to :

- understand the applications of ultrasonics and to calculate the velocity of ultrasonic waves in liquids.
- acquire basic knowledge in Non-destructive techniques.
- understand basic concepts of laser and optical fibre which help in designing and developing new devices in emerging fields.
- grasp the basics of quantum mechanics.
- understand the fabrication of solar devices.
- use nano science and technology for innovative and compact design.
- demonstrate synthesis, properties and applications of nanomaterials and functional materials.

SKILLS:

ü *Determine the velocity of ultrasonics in a given liquid using interferometer.*

ü *Study the wavelengths of light sources and lasers.*

ü *Estimate the efficiency of a given solar cell.*

ü *Learn about the type of the optical fibre and their ability to propagate light waves from its numerical aperture.*

ü *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L- 9**

ULTRASONICS : Introduction – production of ultrasonic waves – piezoelectric method – Properties of ultrasonic waves – Types of ultrasonic waves – Determination of Velocity of ultrasonic waves in solids and liquids – SONAR - Medical Applications.

NDT: Introduction - Types-visual inspection-liquid penetrate testing – Ultrasonic Testing Systems – X - Ray Radiography.

UNIT - 2 **L- 9**

LASERS : Characteristics of Laser light – Spontaneous and Stimulated emission of radiation – He-Ne Laser – CO_2 Laser – Semiconductor laser - Applications.

HOLOGRAPHY: Holography and Applications.

FIBER OPTICS : Principle of optical fibre – Acceptance angle – Numerical Aperture – Types of fibres – Dispersion and Attenuation in optical fibres – Optical fibre communication system - Fibre Optic sensors.

UNIT - 3 **L- 9**

QUANTUM MECHANICS : Introduction- Matter waves - Schroedinger's time independent wave equation - Physical significance of the wave function - Particle in one dimensional potential well – Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS : Introduction – Classical free electron theory – Electrical conductivity of metal – Quantum free electron theory - Fermi - Dirac distribution function and its variation with temperature

PARTICLE ACCELERATORS: Introduction- Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L- 9**

SOLAR ENERGY: Solar radiation – Photovoltaic effect – Solar cells – Efficiency of solar cell – Solar thermal energy conversion systems.

PHOTONICS: LED – LCD – Photo conducting materials – Photo detectors –Photonic crystals - Non-linear optical behaviour of materials - Applications.

UNIT - 5 **L- 9**

NANO MATERIALS: Introduction – Fabrication of nano materials – Ball milling - Sol-Gel – Physical and chemical properties of nano materials – Applications.

FUNCTIONAL MATERIALS: Smart materials – Shape memory alloys – Chromic materials (Thermo, Photo and electro) – Metallic glasses – Advanced ceramics – Composites, Fiber reinforced plastics / metals – Biomaterials.

TEXT BOOKS:

1. V.Rajendran, *"Engineering Physics"*, 7th edition, TMH Publications, 2014
2. D.K. Bhattacharya and Poonam Tandon, *"Engineering Physics"*, Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd, 1992.
3. Sukhatme S.P, "Solar Energy", 2nd edition, TMH publication, 2005.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Finding height of a room using laser.*
- *Identifying the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measuring temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	15	5	6	4	5

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The teaching efforts in this course will be directed towards making students develop their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to :

- acquire an understanding of the rules of grammar.
- strengthen their reading and listening comprehension skills to follow the academic discourse in the engineering classroom.
- have a command of basic vocabulary related to different subject areas.
- have a grasp on the mechanics of writing and express their ideas through construction of simple texts.
- attain language proficiency to participate in the classroom discussions.

SKILLS:

ü *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*

ü *Apply different sub skills like top down, bottoms up approachs to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*

ü *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*

ü *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*

ü *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **Environmental Consciousness**
  (Climate Change – Green Cover – Pollution - Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles – Prepositions – Sentence Types and Construction
- Vocabulary : Root – Prefixes - Suffixes
- Composition : Paragraph Writing (Descriptive and Narrative)
- Laboratory Practice : Introduction to Phonetics
  (Organs of Speech; Consonants, Vowels & Diphthongs; Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **Emerging Technologies**
  (Solar Power – Cloud Computing – Nanotechnology- Wind energy (to be covered from Energy unit))
- Grammar : Time and Tense (Present-Past-Future; Helping Verbs; Modals)
- Vocabulary : Synonyms – Antonyms
- Composition : Letter Writing (Informal)
- Laboratory Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **Travel and Tourism**
  (Advantages and Disadvantages of Travel-Tourism – Atithi Devo bhava – Tourism in India)
- Grammar : Subject-Verb Agreement - Sentence Construction
- Vocabulary : Idioms & Phrases
- Composition : Letter Writing (Formal)
- Laboratory Practice : Situational Conversations – Role-Plays
  (Introducing; Greeting; Enquiring; Informing; Requesting; Inviting)

UNIT - 4 **L-9**

- Text : **Engineering Ethics**
  (Challenger Disaster – Biotechnology – Genetic Engineering – Protection from Natural Calamities- How pertinent is the nuclear option? An Environment of Energy (from Energy unit))
  Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence Transformation (Degrees, Voice, Speech & Synthesis)
- Vocabulary : Phrasal Verbs
- Composition : Note-making – Text - Nandan Nilekani's In search of our energy solutions (from Energy Unit)
  Summarizing, Text on "Flight from conversation" (New York Times)
- Laboratory Practice : Situational Conversations – Role-Plays (Emotions; Directions;

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD & CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

Descriptions; Agreements; Refusals; Suggestions)

UNIT - 5 **L-9**

- Text : **Media Matters**
  (History of Media – Language and Media – Milestones in Media – Manipulation by Media – Thousands march against nuclear power in Tokyo (from Energy Unit) - Entertainment Media – Interviews)
- Grammar : Common Errors
- Vocabulary : One-word Substitutes
- Composition : E-mail – Short Message Service (SMS) - Writing Advertisements, Reporting, Social Media: Blogging, Facebook, Twitter (acceptable & non acceptable content)
- Laboratory Practice : Group Discussions – (Topics from Energy unit) – Dumping of nuclear wastes, Exploration of eco-friendly energy options- lifting of subsidies on Petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to :

- understand the terms and concepts of Computer Science and Information Technology (hardware, software, networking, security, Internet/Web, and Technologies).
- use the products and services of computers.
- use Internet/Web services as a resource for developing shared applications.
- install different operating systems and application software.

SKILLS:

ü *Assemble and disassemble the personal computer system.*

ü *Install different desktop operating systems.*

ü *Use the basic text processing, simple data analysis and data presentation tools.*

ü *Configure network parameters.*

ü *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L- 10**

COMPUTING SYSTEMS : Introduction to computer, computers for individuals, importance of computers, parts of computer system, memory devices, input and out devices, types of monitors, types of printers, number systems, bits and bytes, text codes and types of processors.

UNIT - 2 **L- 10**

OPERATING SYSTEMS : Types of operating systems, user interfaces, PC operating systems, network operating systems, types of software, programming languages, compiler and interpreter, program control flow and algorithm.

UNIT - 3 **L- 08**

NETWORKS & DATABASES : Networking basics, uses of network, types of networks, network hardware, introduction to data bases and database management systems.

UNIT - 4 **L- 8**

INTERNET AND WWW : Internet's services, world wide web, browser setups, using search engine, email and other internet applications.

UNIT - 5 **L- 9**

CYBER SECURITY : The need of computer security, basic security concepts, threats of users, online spying tools, threats to data, cybercrime, protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS

Total hours: 30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools
   a. Text formatting and table.
   b. Mathematical equations.
   c. Watermarking using Analysis tool.
   d. Calculate student mark details.
   e. Create four types of charts.
   f. Import external data, sort & filter using Power Point tool.
   g. Create text and images with effects.
   h. Create animation and sound effects.
7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

TEXT BOOK :

1. Peter Norton, *"Introduction to Computers"*, 7th edition, Tata-McGrawHill, 2010.

REFERENCE BOOKS:

1. ITL Education Solution Limited, *"Introduction to Computer Science"*, 2nd edition, Pearson Education, 2011.

16CS102 COMPUTER PROGRAMMING

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
48	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a ‘C’ program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- understand the basic terminology used in computer programming to write, compile & debug programs in ‘C’ language.
- use different data types to design programs involving decisions, loops and functions.
- understand the allocation and Usage of dynamic memory.
- understand the usage of files & structures.

SKILLS:

ü *Identify suitable data types for an application.*

ü *Apply control statements for decision making problems.*

ü *Use multidimension array for matrix application.*

ü *Design a program to calculate average of a class.*

ü *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L- 10**

INTRODUCTION TO C PROGRAMMING : Structure of C program: comments, processor statement, function header statement, variable declaration statement and executable statement; C character set: constants, identifiers, operators, punctuations, keywords, modifiers, identifiers, variables, c scopes, basic data types, type qualifiers, storage classes, reading and writing characters, formatted I/O.

UNIT - 2 **L- 10**

OPERATORS AND CONTROL STATEMENTS : Operators: assignment, arithmetic, relational, logical, bitwise, ternary, address, indirection, size of, dot, arrow, and parentheses operators; expressions precedence of operators, associative rules; control statements: category of statements, selection, iteration, jump, label, expression and block.

UNIT - 3 **L- 10**

FUNCTIONS AND ARRAYS : Function: declaration, prototype, definition, calling by value and call by address, standard library functions and recursive functions; Array: declaration, initialization, reading, writing, accessing and passing as a parameter to functions, 2D-arrays, multidimensional arrays.

UNIT - 4 **L- 9**

STRINGS AND POINTERS : Strings: declaration, string library functions, array of strings, command line arguments; pointers: declaration, initializing pointers, multiple indirection, relationship between arrays and pointers; scaling up: array of arrays, array of pointers, pointer to a pointer, pointer to an array; pointer to functions, dynamic memory allocation functions.

UNIT - 5 **L- 9**

STRUCTURES AND FILES : Structures - declaration, initialization and accessing, array of structures and passing structures to functions, structure pointers, arrays and structures within structures, unions, bit-fields, types and enumerations; Files - I/O and processing operations on text and binary files; pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- choose programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours: 30

1. Compute the factors of a number.
2. Compute the average of 'n' numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.
8. Using structure of arrays.
9. Find the reversal of a number.
10. Find the frequency of each number in the array.

ACTIVITIES:

- o *Implement matrix operations.*
- o *Implement malloc and calloc functions.*
- o *Copy the content of one file into the other.*
- o *Implement string manipulations functions.*

11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

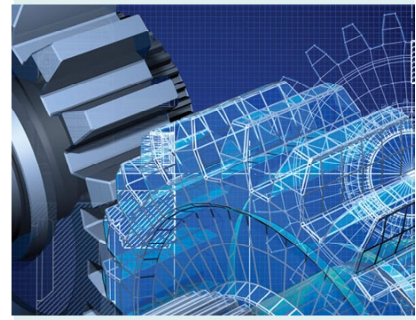
16EE101 BASICS OF ENGINEERING PRODUCTS



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- gain knowledge and hands-on experience on various engineering products.
- install, operate, maintain and troubleshoot basic mechanical, electrical and electronic appliances.
- understand the concept of conservation of energy.
- gain awareness on choosing appropriate construction materials.

SKILLS:

ü *Identify UPS requirements for a given load.*

ü *Provide a Lighting scheme for specific working environment.*

ü *Design a composition of Heating element for a particular application.*

ü *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

ü *Provide an earthing for Domestic Outlet.*

ü *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembling and Assembling of Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Providing Earthing for Domestic Outlet.*
- *Designing Electric Wiring system for a prototype house.*
- *Designing UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L- 9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air-conditioner and Refrigerator- components, assembly and disassembly, Working principle of Centrifugal and Reciprocating pumps: Types, parts and applications, working principle of Screw jack and its components. Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L- 10**

BRICKS : General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks.

Timber: Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS : Types and composition of Cement, Setting of cement, Tests for physical properties of cement, Different grades of cement.

AGGREGATES : Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel.

Simple layout design, paints, tiles,fittings, ventilation, furniture and green house aspects.

UNIT - 3 **L- 08**

ELECTRIC ENERGY SYSTEMS : Overview of Power System Structure, Conventional and Non Conventional Generations - Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems

Methods of Electrical Wiring Systems - Wiring procedure and calculations – Wiring methods.

Un-Interruptible Power Supply (UPS), Components in UPS, its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT : Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT : Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and Applications.

MOTOR : Electric Motors, Classification, Construction and Working principles of motors used in Domestic Applications, Mixer Grinder, Ceiling and Exhaust Fan, Hair Dryer, Washing Machine, Water Pump, Air Coolers, Vacum Cleaner, Computer Cooling Motor, Electric Bike.

UNIT - 5 **L- 8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of Television, Radio, Remote Control, Telephone, Microwave Oven, Cell phone, PA system, Induction Stove, WiFi Router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box.
13. Ceiling Fan and Mixer.
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

1. M.S.Shetty, “Concrete Technology”, 1st edition, S.Chand and Co, 2005.

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Total Hours :

L	T	P
0	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. Students will strengthen their comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to :

- use functional English to speak and express themselves in different social contexts
- write simple letters, narratives, factual reports and descriptive passages for both academic and non-academic purposes in English.
- gain proficiency to undergo Preliminary English Test (PET), an Intermediate Level English Certification Test administered by Cambridge English Language Assessment, UK.

SKILLS:

- *Ability to use appropriate words in right order for effective sentence formation, and writing short texts.*
- *Ability to read and extract information from different texts & draw inferences by understanding elements like tone and transitional words.*
- *Ability to understand short and long spoken discourses through analysis of elements like stress and intonation.*
- *Ability to articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

Functions : Introducing Self/others; Expressing needs/feelings/opinions (SWOT Analysis)

Skill Focus:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, intonation and accent

Speaking – Articulating syllables clearly, speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, use of nouns, adjectives, verbs, prepositions in the sentence structure

Practice: Objective PET Units 1 - 6

UNIT - 2 **P-6**

Functions : Defining; Describing People, Places, Things, Process.

Skill Focus:

Reading – Inferences from sentences and short messages – True or False

Writing – Rewording – Sentence transformation - Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, short conversations

Vocabulary / Grammar – Use of adjectives/adverbs, Comparatives and Superlatives

Practice : Objective PET Units 7 – 12

UNIT - 3 **P-6**

Functions : Describing Spatial and Temporal Relations; Giving Directions/Instructions

Skill Focus :

Reading – Reading between the lines – Inferences – True/False

Writing – Developing hints - Writing short messages/paragraphs

Listening – Searching for factual information - Gap filling

Speaking – Snap talks, JAM, Elocution

Vocabulary / Grammar – Prepositions; Phrasal Verbs; PET word list

Practice: Objective PET Units 13 - 18

UNIT - 4 **P-6**

Functions : Narrating; Predicting; Negotiating; Planning

Skill Focus:

Reading – Reading for evaluation and appreciation - Comprehension

Writing – Letters – e-mails – 7 C's

Listening – Following long conversations / interviews

Speaking – Discussions – Debate - Descriptions

Vocabulary / Grammar – Modals – Conditionals - verb forms (Time and Tense)

Practice: Objective PET Units 19 – 24

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

UNIT - 5 **P-6**

Functions: Requesting; Denying; Suggesting; persuading

Skill Focus:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements - Presentations

Vocabulary / Grammar – Punctuation – Cloze tests

Practice: Objective PET Units 25 – 30

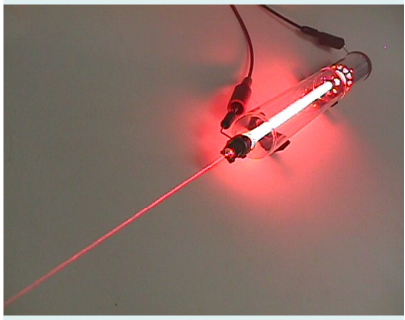
TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, *“Objective PET”*, Student’s Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8
2. Annette Capel and Rosemary Nixon, *“Introduction to PET”*, Oxford University Press,

16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	30

Course objectives and Description:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the following experiments.The students have to perform at least 10 experiments from the list of experiments.

Course Outcomes:

The student will be able to:

- realize the concept of resonance by conducting the experiments of AC sonometer and Melde's experiment.
- acquire the knowledge on magnetic field theory, thermal conductivity by conducting experiments of field along the axis of a circular coil and thermal conductivity of bad conductor
- understand the concepts of light by conducting the experiments of determination of wave length, numerical aperture of an optical fibre and also from V–I characteristics of Solar cell and LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect.

REFERENCE BOOKS :

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.

16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration, to make the student to use different mathematical tools of Mat lab related to above concepts.

Course Outcomes:

The student will be able to :

· carry out the basic operations of matrix algebra.

· use row operations to reduce a matrix to echelon form, normal form.

· determine consistency of a system linear equations.

· compute eigen values and eigen vectors.

· evaluate double integrals and triple integrals.

· evaluate double integrals in polar coordinates.

· utilize Cartesian and polar coordinates to find area.

· understand the concept of gradient, divergance and curl.

· apply vector integral theorems in finding surface and volume integrals.

SKILLS:

ü *Appreciate various methods to find the rank of a matrix.*

ü *Solve given system of linear equations.*

ü *Compute Eigen values and Eigen vectors of a matrix.*

ü *Compute the power of a matrix by suitable method.*

ü *Evaluate Multiple integrals.*

ü *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from; Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L- 9**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, diagonalisation of a matrix.

UNIT - 3 **L- 9**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in Polar coordinates, Change of order of integration, Change of variables, Applications to Area in Cartesian coordinates and polar coordinates; Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L- 9**

VECTOR DIFFERENTIATION: Vector Function, Differentiation, Scalar and Vector point function, Gradient, Normal, Divergence, Directional Derivative, Curl, Vector identities.

UNIT - 5 **L- 9**

VECTOR INTEGRATION: Line Integral, Surface Integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Matrix Algebra.
2. Rank of a matrix
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc.).
13. Interpolation.

TEXT BOOKS :

1. H. K. Dass and Er. Rajanish Verma, *"Higher Engineering Mathematics"*, 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, *"Higher Engineering Mathematics"*, Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, *"Getting started with Matlab"*, Oxford University Press, 2009.

REFERENCE BOOKS :

1. Srimanta Pal and Subodh C. Bhunia, *"Engineering Mathematics"*, Oxford Publications, 2015.

4. Erwin Kreyszig, *"Advanced Engineering Mathematics"*, 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with Matlab output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with Matlab output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with Matlab output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to :

- understand the limitations of using hard water for domestic and industrial purposes.
- choose and apply suitable methods to soften the hard water for industrial and domestic applications.
- understand electrochemistry and its importance for applications such as fuel cells, modern lithium ion batteries etc.
- understand the types of corrosion and their implications followed by their control and prevention methods.
- familiarize the preparation, properties and applications of various polymers.

SKILLS:

ü *Analyse the total hardness of water sample.*

ü *Understand the basic principles involved in various batteries.*

ü *Understand the mechanisms of corrosion and various controlling methods.*

ü *Synthesize various polymers.*

ü *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L- 9**

WATER TECHNOLOGY : Introduction, WHO, BIS standards of water, Hardness of water - Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water-Scales and Sludges - Caustic embrittlement - Boiler Corrosion - Priming and Foaming; Softening Methods - Zeolite process, Ion Exchange process; Desalination of Brackish water-Reverse Osmosis, Electrodialysis.

UNIT - 2 **L- 9**

ELECTRO CHEMISTRY: Electrode Potential, Electrochemical Series, Nernst Equation, Reference Electrodes - Calomel and Standard Hydrogen Electrode, Ion Selective Electrode, Glass Electrode; Determination of pH by pH meter, Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cell - Hydrogen Oxygen, Methanol Oxygen.

UNIT - 3 **L- 9**

SCIENCE OF CORROSION : Introduction, Dry corrosion, Wet corrosion - Mechanisms of wet corrosion; Bimetallic corrosion - Concentration cell corrosion; Factors influencing the rate of corrosion, Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L- 9**

POLYMERS: Introduction, Types of Polymerization - Preparation, Properties and applications of Polyethylene, PVC, Teflon, Bakelite, Urea Formaldehyde, Silicones, Rubber – Vulcanization; Synthetic Rubbers - Buna-S, Buna-N, Neoprene; Introduction to Conducting polymers - Poly thiophene.

UNIT - 5 **L- 9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV - Visible Spectroscopy- Beer - Lambert's law - Qualitative and Quantitative Analysis; Block diagram of UV- Visible Spectrophotometer ; IR Spectroscopy - Types of Vibrations - Block diagram of IR Spectrophotometer.

TEXT BOOKS :

1. P.C Jain and Monica Jain, *"Engineering Chemistry"*, 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "*A Text book of Engineering Chemistry Engineering Materials and Applications"*, 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and Mridula chugh, *"Engineering Chemistry"*, 1st edition, Pearson publication, 2015.
2. M.R. Senapati, *"Advanced Engineering Chemistry"* 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, *"Instrumental methods of Analysis"*, 7th edition, CBS Publications,1986.

6. Dr.Sunita Rattan, *"Experiments in Applied Chemistry"* by S.K. Kataria & Sons

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Total Hours :

L	T	P
15		45

WA/RA	SSH/HSH	CS	SA	S	BS
6	15	-	5	-	-

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an "International language of Engineers". It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to :

- sketch engineering objects in the freehand mode.
- create geometric construction with hand tools.
- create dimensions of objects.
- prepare plan and elevation of any pictorial view.
- draw freehand lettering.
- make isometric sketches using graphics.
- draw orthographic multi-view sketches using graphics.

SKILLS:

ü *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*

ü *Draw geometrical objects like polygons, solids of different types.*

ü *Visualize the objects in real time situations.*

ü *Develop 3D views (isometric views).*

UNIT – 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Introduction to Engineering Drawing: Types of lines, lettering, dimensioning Construction of polygon and Conics (Ellipse, Parabola and Hyperbola by general method), ellipse by oblong method.

UNIT – 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection-Planes of projections; Projections of points; Projection of straight lines; Inclined to one plane and both the planes; Projections of planes; Simple planes, Planes inclined to one reference planes.

UNIT – 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, pyramids, cylinders, cones, solid axis inclined to one plane.

UNIT – 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: - Isometric drawing of simple objects- Isometric view of prisms; Pyramids; Cone and cylinder – Simple orthographic views into isometric views through AutoCAD.

UNIT – 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: - Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS :

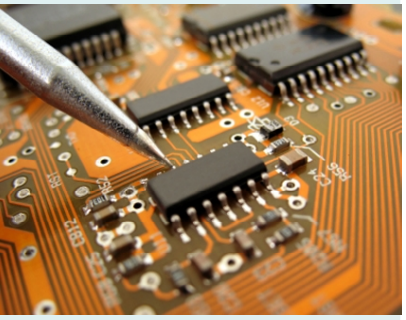
1. N.D.Bhatt, “Engineering Drawing”, 53rd edition., Charotar Publication, 2014.
2. Basant Agrawal , C.M.Agrawal “Engineering Drawing” , 2nd edition., Tata McGraw Hill,2014.

REFERENCE BOOKS :

1. J. hole, *“Engineering Drawing”*, 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, *“Engineering drawing”*, 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	5

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- understand the notation and usage of components in electric circuits.
- analyze AC (single and three phase) and DC. AC circuits using different methods and laws.
- operate various electrical machines.
- understand the concepts of Semiconductor devices and their operation.

SKILLS:

- ü *Distinguish between linear and nonlinear elements by looking at VI characteristics.*
- ü *Develop a simple loop generator.*
- ü *Design a voltage regulator using Zener diode.*
- ü *Design a half wave rectifier using PN junction diode.*
- ü *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit Concepts: Concepts of network, Active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, R, L and C as linear elements; Ohm's Law; Kirchhoff's Laws: Application to simple series, parallel circuits, Mesh and nodal analysis of simple resistive circuits.(Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - frequency, average value, R.M.S. value, form factor, peak factor for sinusoidal only; Phasor representation of alternating quantities; Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, reluctance, flux and flux density, concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine; D.C. Generator; Principle of operation; EMF equation; types of D.C. generators (simple numerical problems).

D.C. Motor: Principle of operation, Torque equation, types of D.C. motors (simple numerical problems)

A.C MACHINES: Principle of operation of three phase induction motors, slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory; Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours: 30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

5. Measurement of Power in single phase resistive load circuit.
6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

TEXT BOOKS:

1. V.K.Mehta, "Principles of Electrical Engineering and Electronics", 3rd edition, S. Chand Publications, New Delhi, 2010.
2. D.P Kothari, "Basic Electrical and Electronics Engineering", 1st edition., TMH, New Delhi, 2014.

REFERENCE BOOKS:

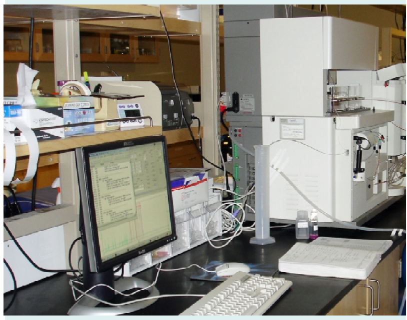
16HS111 ENGINEERING CHEMISTRY LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	30

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to :

- analyse the total hardness present in water samples.
- determine the total alkalinity of water used in industries.
- acquire the knowledge on polymers used as insulators.
- familiarize advanced techniques in chemical analysis using conductometer and pH meter.

LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

16ME102 ENGINEERING MECHANICS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	30	-	5	-	5

Course Description and Objectives:

Engineering Mechanics applies principles of mechanics to solve common engineering problems. The goal of this course is to expose students to problems in mechanics as applied to real-world scenarios.

The course uses the Laws of Mechanics to predict forces in machines and structures. This course is prerequisite for courses like Mechanics of Machines, Stress Analysis, Design of Mechanical Systems and others.

Course Outcomes:

The student will be able to:

- use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- apply basic knowledge of mathematics and physics to solve real-world problems such as dams, bridges, fly overs, buildings, large structures etc.,

SKILLS:

ü *Solving classical mechanics problems involving system of forces*

ü *In-depth understanding of rigid bodies.*

ü *Applying principles of centre of gravity and moment of inertia*

UNIT - 1 **L-10; T-3**

GENERAL PRINCIPLES: Introduction to engineering mechanics; idealization in mechanic's basic concepts; vectors and scalar quantity; laws of mechanics.
FORCE SYSTEM AND RESULTANT: Concept of force; representation of force; system of forces; resolution of forces using rectangular components.
MOMENTS AND COUPLES: Introduction; moment of force; varignon's theorem; resultant of parallel forces; couple and moment of couple; characteristic of couple.

UNIT - 2 **L-8; T-3**

EQUILIBRIUM OF BODIES: Conditions of equilibrium for a coplanar force system and coplanar non parallel non concurrent force system; principle of equilibrium (two ; three ; force principle) ; Lami's theorem
TRUSS: Introduction; classification of truss; fundamental of truss; analysis of truss (method of joints and method of section)

UNIT - 3 **L-10; T-3**

FRICTION: Introduction ; classification of friction ; coefficient of friction ; laws of friction ; angle of friction ; angle of repose ; cone of friction ; ladder friction ; wedge friction

UNIT - 4 **L-10; T-3**

CENTROID: Introduction; centroid of lines; centroid of surfaces; determine of centroid of simple figures; centroid of composite figures; centroid of a parabolic spandrel
CENTER OF GRAVITY: Introduction; center of gravity; location of center of gravity - right circular cone and solid hemisphere; center of mass; theorem of Pappus.

UNIT - 5 **L-10; T-3**

MOMENT OF INERTIA: Moment of inertia of plane areas ; polar moment of an area ; radius of gyration of area; parallel axis theorem ;perpendicular axis theorem; moment of inertia of composite areas. Mass moment of inertia; introduction; radius of gyration of mass; mass moment of inertia of rod; rectangular plate ; right circular cylinder ; circular ring ; circular plate.

16CH104 MATERIALS SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
8	60	-	10	-	-

Course Description and Objectives:

This course will emphasize the structure-property relationships of engineering materials. The objective of this course is to provide knowledge in basic principles of material science and also to study structure of materials at all length scales.

Course Outcomes:

The student will be able to:

- understand crystal structure of various materials and techniques used for structure determination.
- understand the influence of defects on the properties of materials
- understand the fundamentals of equilibrium phase diagrams.
- gain knowledge on various fabrication techniques used for manufacturing common engineering materials.

SKILLS:

- ü *Identify the type of material: ceramic, polymer, metal or composite.*
- ü *Select materials with suitable properties for a given application.*
- ü *Predict the type of fracture/failure in a material.*
- ü *Read and draw conclusion from binary phase diagrams.*
- ü *Suggest manufacturing methods for metals, ceramics and polymeric materials.*
- ü *Determine basic mechanical properties of materials using universal testing machine.*

UNIT - 1 **L- 09**

BONDING IN SOLIDS: Inter atomic forces and potential energy, Types of bonds: primary and secondary, Variation in bonding character and resulting properties

CRYSTAL STRUCTURE : Classification of crystal systems – SC, BCC, FCC & HCP crystal structures with examples, Atomic packing factor, coordination number, determination of miller indices of planes & directions of cubic and hexagonal crystals, linear and planar densities, separation between successive planes, Crystal structure determination: Bragg law, powder method.

UNIT - 2 **L- 10**

CRYSTAL DEFECTS: Point defects, Dislocations: edge, screw and mixed, burgers vectors, energy of dislocation, motion of dislocation, dislocation density. Grain boundary, stacking faults and twin boundary.

PHASE DIAGRAMS: Gibb's phase rule & terms involved – Reduced phase rule, tie line and lever rules, Two component systems–invariant reactions – Eutectic system & Iron-Carbon system.

UNIT - 3 **L- 09**

MATERIALS FABRICATION TECHNIQUES: Fabrication of Metals: forming operations, casting, Fabrication of Ceramics: particulate forming processes, cementation. Forming techniques of Plastics: compression, transfer and injection molding, extrusion, blow molding.

MECHANICAL PROPERTIES: Stress-strain relations of various solids – Elastic, Anelastic, Visco-elastic and plastic deformations in solids, creep and fatigue, fracture: Brittle and Ductile, fracture toughness, ductile to brittle transitions.

UNIT - 4 **L- 08**

ELECTRICAL & SEMICONDUCTING PROPERTIES: Ohm's Law, Electrical Conductivity, Electronic and Ionic Conduction, Energy Band Structures in Solids, Classification of solids based on band models, Electron Mobility, Electrical Resistivity of Metals, Intrinsic Semiconduction, Extrinsic Semiconduction, The temperature dependence of Carrier Concentration, Factors That Affect Carrier Mobility.

UNIT - 5 **L- 08**

DIELECTRIC AND MAGNETIC PROPERTIES: Dielectric behavior: capacitance, polarization, frequency dependence of dielectric constant, dielectric strength. Types of magnetism, Ferromagnetism-Domain theory-hystersis behavior, ferrimagnetism, soft and hard magnets – application of magnetic materials.

TEXT BOOKS:

2. V.Raghavan, "Materials Science and Engineering:A First Course", 5th edition, PHI Learing Pvt. Ltd., 2013.

ACTIVITIES:

- o *Testing the type of failures.*
- o *"Gee Whiz": Wonder presentations.*
- o *Analysis of load test results.*
- o *Study of micro structures of materials.*
- o *Segregation of the given materials.*
- o *Identification of phases in the given phase diagram.*

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	20	-	-

Course Description and Objectives:

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes:

The student will be able to :

- identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.
- fabrication of wooden joints and understand joining of metals.
- make metal joints and sheet metal work.
- make metal tools like knives, needles, swords, arrows etc.

SKILLS:

- *Prepare wooden and metal furniture.*
- *Electrical wiring and power supply in residences.*
- *Make funnels, trays, locker, steel almirahs etc.*
- *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*
- *CNC machines and various machining operations and processes.*

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin Smithy and Black smithy.
4. House wiring.
5. Foundry and Welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

16ME201 MANUFACTURING TECHNOLOGY

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	20	4	6	-	2

Course Description and Objective:

This course offers basic theoretical concepts of operations and applications of manufacturing processes. The objective of this course is to explore basic manufacturing processes such as casting, metal forming, welding and sheet metal processes.

Course Outcomes:

The student will be able to:

- understand various types of manufacturing processes.
- select the processes which are used for manufacturing a particular product.
- identify the advantages and disadvantages of various manufacturing processes.
- differentiate between the hot and cold working processes of metals.

SKILLS:

ü *Identify processes that are suitable for manufacturing different products.*

ü *Design mould cavities for casting of different shapes.*

ü *Distinguish bulk and sheet metal forming.*

ü *Perform welding and other joining operations.*

ACTIVITIES:

- *Design patterns with allowances for a few sample products.*
- *Gating system design and product development using two piece pattern.*
- *Analysis of foundry defects for quality improvement of sand casting.*
- *Joining of metals using TIG and spot resistance welding.*
- *Fabrication of few sample products by using sheet metal operations.*

UNIT - 1 **L-9**

CASTING: Casting terminology sand-moulding process; types of moulding sands;moulding sand composition and its properties Patterns; pattern materials; types of patterns; Pattern allowances; and simple problems on allowances; Cores elements of gating system; types of gates; Design of Gating system and simple problems on Riser and sprue design.

UNIT - 2 **L-9**

SPECIAL CASTING PROCESSES: Investment casting – die casting - centrifugal casting; – shell moulding - continuous casting; stir casting; casting defects; Metal Melting: Cupola; crucible furnaces-Electric resistance furnace.

UNIT - 3 **L-9**

METAL FORMING PROCESS: Hot; cold and warm working – workability-work hardening – recrystallization – annealing. Rolling; theory of rolling; roll mills; simple problems on Maximum draft possible; Contact length; Defects of Rolling Forging – smith forging – drop forging – press and machine forging – forging defects – power hammers. Extrusion: Hot and cold extrusion – direct and indirect extrusion – hydrostatic extrusion – impact extrusion.

UNIT - 4 **L-9**

SHEET METAL OPERATIONS: Shearing – blanking – piercing and problems on energy requirement for shearing operations considering shear.Spinning – drawing – bending. Dies: Progressive dies; combination dies; compound dies - coining; embossing; stretch forming Drawing: Deep drawing; wire drawing; tube drawing. Bending: Theory of bending and types of bending.

UNIT - 5 **L-9**

WELDING: Classification of welding; Gas welding – types of flames welding techniques –arc welding –types- manual metal arc welding-submerged arc welding ;TIG and MIG welding – Thermit welding - Resistance welding-spot; butt; projection; and seam welding; Welding defects .Introduction to soldering and brazing.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. METAL CASTING:

a) Pattern Design and making - for one casting drawing
b) Testing of sand - Properties
c) Moulding; Melting and Casting - Single piece
d) Moulding; Melting and Casting - Two piece pattern
e) Stir-Casting

2. WELDING:

a) ARC Welding Lap and Butt Joint.
b) Spot Welding
c) TIG welding
d) Brazing
e) Gas welding

3. **METAL FORMING:**

   a) Blanking and Piercing operation and study of simple; compound and progressive press tool

   b) Hydraulic Press: Deep drawing and extrusion

   c) Roll Mill

4. **PROCESSING OF PLASTICS**

   a) Injection moulding

   b) Blow moulding

TEXT BOOKS:

2. Sarma P.C, “Production Technology”, 3rd edition, S.Chand and Co, 2008.

16ME202 MATERIAL SCIENCE AND METALLURGY

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
30	60	-	10	-	10

Course Description and Objective:

This course offers fundamentals of crystallography, metallurgy, heat treatment, powder metallurgy, strengthening mechanisms, ceramics and composites. The objective of this course is to impart basic knowledge on various classes of materials, structures and its properties.

Course Outcomes:

The student will be able to:

- understand the various aspects of materials and metallurgical engineering.
- explain iron-iron carbide phase diagram with isomorphous reactions.
- apply any heat treatment process for any specific application and requirement.
- describe powder production methods for different metals.
- identify suitable strengthening mechanisms for metals and alloys.
- understand various structures of ceramic materials and their governing rules .
- recognize composites and its types based on their matrix and reinforcing agents.

SKILLS:

ü *Specify carbon compositions in cast iron and steels.*

ü *Identify the effects of alloying elements on properties of cast iron and steels.*

ü *Recognize series of heat treatment processes to achieve desired properties for a specific application.*

ü *Use various powder production and compacting techniques for intricate parts.*

ü *Classify ceramic materials on the basis of bonding and structures.*

ü *Differentiate composites based on its constituent materials.*

UNIT - 1 **L-9**

IRON -IRON CARBIDE DIAGRAM; CONSTITUTION; MICROSTRUCTURES AND PROPERTIES:

CAST IRON AND STEELS: Constitution and properties of gray, white, malleable andspherodial graphite cast irons; Effect of Silicon, Manganese, Sulphur; Phosphorous and other elements on the properties of Cast Iron. Effect of alloying elements such as Manganese, Nickel, Chromium, Molybdenum, Vanadium, Tungsten, Cobalt and Boron on steels; Plain Carbon Steels; Stainless Steel.

UNIT - 2 **L-9**

HEAT TREATMENT OF STEEL: Annealing, Normalizing, Hardening, Carburizing, Nitriding, Cyaniding, Induction hardening, Flame hardening, Aging, Age hardening, Hardenability; Controlled atmosphere in heat treatments; TTT and CCT Diagrams.

UNIT - 3 **L-9**

STRENGTHENING MECHANISMS: strengthening by grain-size reduction; solid solution strengthening; strain hardening; Recovery; recrystallization and grain growth; dispersion hardening.

POWDER METALLURGY: Introduction to powder metallurgy; advantages of powder metallurgy; manufacturing processes; production of metal powders, compacting, sintering, products of powder metallurgy.

UNIT - 4 **L-9**

CERAMICS: Ceramics as a class of material; classification of ceramics; bonding and structure of various ceramic materials-AX, $A_m x_p$, $A_m B_n X_p$ types crystal structures; Rules: Pauling, Zachariasen Stanworth; structure of silicates; defects in ceramics.

UNIT - 5 **L-9**

COMPOSITES: Introduction, types of composites based on matrix, reinforcement; influence of fiber length; concentration and orientation; mechanical properties of FRP; Manufacturing methods for composites: MMCs; liquid-metal infiltration, stir casting PMCs: hand layup, extrusion, injection moulding, compression moulding.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours:30

1. Microstructure of mild steels; low carbon steels; high – C steels.
2. Microstructures of cast Irons.
3. Microstructures of heat treated steels.
4. Hardenability of steels by Jominy end quench test.
5. Hardness of various treated and untreated steels.
6. Fiber reinforced composites
7. Microstructure and hardness of plastically deformed materials

TEXT BOOKS:

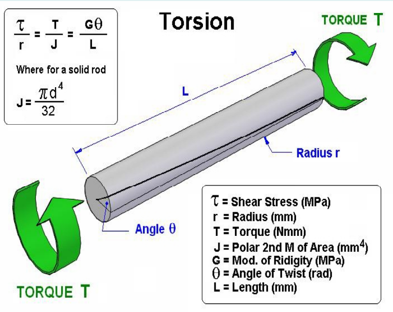
4. http://ocw.mit.edu/courses/materials-science-and-engineering/3-012-fundamentals-of materials-science-fall-2005/lecture-notes/

ACTIVITIES:

- o *Sample preparation for morphological analysis.*
- o *Manufactu -ring of a few intricate parts using metal powders and testing their properties.*
- o *Strengthen-ing of materials using severe plastic deformation and testing their properties.*
- o *Fabrication of fiber reinforced polymer composites and testing their properties.*



16ME203 MECHANICS OF SOLIDS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	20	-	5	5	5

Course Description and Objective:

This course deals with the fundamental concepts of mechanics of deformable solids, static equilibrium, stress analysis of pressure vessels and geometry of deformation. The objective of this course is to enable the students to solve problems in solid mechanics and design various types of structural members subjected to different types of loads.

Course Outcomes:

The student will be able to:

- understand the concepts of stress-strain for homogenous and isotropic materials.
- draw shear force and bending moment diagrams for beams subjected to different boundary and loading conditions.
- derive flexural formula and calculate shear stress variation for various cross sections.
- calculate stresses and strains for thin walls of spherical and cylindrical pressure vessels.
- determine the deflections and slopes produced by axial, torsional, and flexural loads.

SKILLS:

ü *Plot stress-strain curves for various engineering materials.*

ü *Calculate axial deflection for various boundary conditions.*

ü *Analyze thermal stresses for statically determinate and indeterminate structures.*

ü *Identify shear stress distribution for different cross sections.*

ü *Calculate torsion of circular shafts fixed at both the ends.*

ü *Understand the concepts of columns and struts for different end conditions.*

UNIT - 1 **L-9**

SIMPLE STRESSES AND STRAINS: Types of Stresses and Strains,Hooke's law-Stress strain diagram for ductile and Brittle materials; Elastic Constants – relations; Stress analysis of simple and compound bars; Thermal Stresses stress on an inclined plane; principle stresses – Mohr circle.

UNIT - 2 **L-9**

SHEAR FORCE AND BENDING MOMENT: Types of loads and beams,Shear force and bending moment diagrams of Cantilever, Simply supported and over-hanging beams subjected to different types of loads; Point of contra flexure.
DEFLECTION OF BEAMS: deflection equation for elastic curve of a beam,deflection and slope for cantilever and simply supported beams for different types of loads using double integration, Macaulay's and Area moment methods.

UNIT - 3 **L-9**

FLEXURE AND SHEAR STRESSES: Assumptions in theory of simple bending,derivation of flexural formula,Bending stresses for various cross sections in beams. Variation of shear stress in beams and shear stress distribution for various cross sections.

UNIT - 4 **L-9**

TORSION: Assumption and derivation of torsion equation; shear stress distribution for circular shafts , percentage of weight reduction (solid and hollow) fixed at both the ends.

UNIT - 5 **L-9**

THIN SHELLS: Introduction, hoop and longitudinal stresses-strains
COLUMNS AND STRUCTS: Euler's Formula for critical load of columns for different end conditions; Limitations of Euler's theory; Rankines formula; Simple Numerical problems

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours:30

1. Tensile test on mild steel
2. Deflection test on
   a) Simply supported beam.
   b) Cantilever beam.
3. Torsion test on solid circular shaft.
4. Brinell and Rockwell hardness test.
5. Impact test.

TEXT BOOKS:

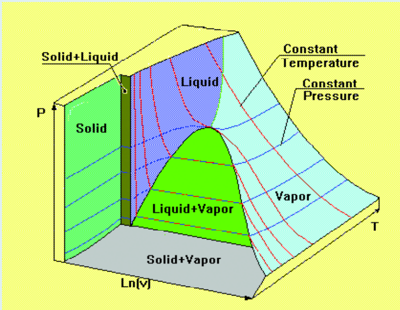
1. S.S.Bhavikatti, "Strength of Materials", 3rd edition, New Age International Publishers, 1998.
2. Gere & Timoshenko, "Strength of Materials", 2nd edition, CBS Publishers, 2006.

REFERENCE BOOKS:

1. Egor P. Popov, "Engineering Mechanics of Solids", 3rd edition, Prentice Hall of India, 1997.
2. Arthur P. Borsei, "Advanced Mechanics of Materials", 6th edition, John Wiley and Sons, 2003.

ACTIVITIES:

- o *Tensile test on mild steel and indicate the principal plane on which the crack appears.*
- o *Torsion test for a solid circular shaft.*
- o *Impact test on V-notch.*
- o *Deflection of beams under transverse loading.*
- o *Write a program for assessing deflection of beams for various support conditions.*



16ME204 THERMODYNAMICS

Hours Per Week :

L	T	P	C
4	-	-	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
60	-	-	15	40	-	-	-	-

Course Description and Objective:

This course offers a basic understanding of heat and work interactions for various thermodynamic processes. The objective of this course is to recognize different forms of energy and restrictions imposed by the first and second law of Thermodynamics on conversion from one form to another.

Course Outcomes:

The student will be able to:

- distinguish various temperature scales.
- understand the fundamentals of the first and second laws of thermodynamics.
- apply steady flow energy equation for various thermodynamic devices.
- identify the possibility of a proposed process.
- evaluate steam properties at various regions on a thermodynamic plot.
- calculate apparent molecular weight and gas constant for a given mixture.
- differentiate air standard cycles from actual cycles.

SKILLS:

- *Classify thermodynamic systems based on mass and energy interactions.*
- *Apply thermodynamic laws to analyze performance of various devices and cycles.*
- *Evaluate properties of steam for subcooled, super heated and wet steams.*
- *Obtain the thermodynamic property data from various property tables and charts.*
- *Calculate efficiencies of various air standard cycles and compare it with ideal efficiency.*

UNIT - 1 **L-12**

BASIC CONCEPTS AND FIRST LAW OF THERMODYNAMICS: Concept of Continuum; Thermodynamic equilibrium; system, boundary and surroundings; State, Property, Process, Cycle, Reversibility, Quasi–static Process, Irreversible Process, Causes of Irreversibility; Work and Heat; Point and Path function; Zeroth Law of Thermodynamics; Concept of quality of Temperature; PMM-I Joule's Experiments; First law of Thermodynamics; Corollaries, First law applied to a Process, applied to a flow system, Steady Flow Energy Equation.

UNIT - 2 **L-12**

SECOND LAW OF THERMODYNAMICS; ENTROPY AND AVAILABILITY: Limitations of the First Law; Thermal Reservoir, Heat Engine, Heat pump, Parameters of performance; Second Law of Thermodynamics, Kelvin-Planck and Clausius Statements - Corollaries; PMM-II; Carnot's principle; Carnot cycle; Clausius Inequality.

ENTROPY: Principle of Entropy Increase; Availability and Irreversibility; Thermodynamic Potentials; Gibbs and Helmholtz Functions; Elementary Treatment of the Third Law of Thermodynamics.

UNIT - 3 **L-12**

PROPERTIES OF PURE SUBSTANCES: Pure Substances; p-V-T- surfaces; T-S and h-s diagrams; Phase - Transformations; Triple point at critical state properties during change of phase; Dryness Fraction Mollier charts; Various Thermodynamic processes and energy Transfer.

UNIT - 4 **L-12**

IDEAL AND REAL GASES; GAS MIXTURES: Perfect Gas Law, Equation of State, specific and Universal Gas constants; Vander Waals Equation of State –Compressibility charts variable specific Heats – Gas Tables; Gas mixtures – Avagadro'slaw, Dalton's law of partial pressure; T-dS relations; Maxwell relations; Clausius Clapeyron equations; Joule Thomson Coefficient.

UNIT - 5 **L-12**

POWER CYCLES: Otto, Diesel, Dual cycles; Ericsson, Stirling, Carnot Cycles–Description and representation on P–V and T-S diagram; Thermal Efficiency; Mean Effective Pressures on Air standard basis – comparison of Cycles.

Course Description and Objective:

This laboratory course deals with modeling of machine components using softwares such as AutoCAD and Solid Works. The objective of this laboratory is to enable the students understand and perform basic modeling of components used in various engineering applications.

Course Outcomes:

The student will be able to:

- understand 2D modeling of orthographic and isometric views.
- plot different views of machine elements.
- analyze 3D modeling of machine components.
- draft orthographic views from 3D model.
- assemble machine components using solid works.

SKILLS:

- *Draw the 3-D view for mechanical components such as bolts, nuts, blocks etc*
- *Convert the given drawing into 2-D or 3-D*
- *Draw orthographic projections and sections*
- *Convert sketches to technical drawings*
- *Use AutoCad for 2-D and 3-D drawings*

UNIT - 1 **P-9**

ISOMETRIC AND ORTHOGRAPHIC PROJECTIONS (AUTOCAD)

Computer aided drawing; Isometric Projection, Orthographic Projection, Isometric view of simple and compound 3D bodies.

UNIT - 2 **P-9**

Sectional Views (AutoCAD)

Sectional front view; top view and side view of different machine components such as parts of screw jack; stuffing box etc.

UNIT - 3 **P-9**

3D MODELING (SOLID WORKS)

Generation of various 3D models through extrusion, revolve, sweep, rib. Modification of the models using various edge operations such as chamfer; fillet etc.Modelling of surfaces using feature based and Boolean based operations.

UNIT - 4 **P-9**

DRAFTING (SOLID WORKS)

Front view, top view, side view, sectional views and isometric view of different machine components;

UNIT - 5 **P-9**

ASSEMBLY (SOLID WORKS)

Assembly modeling; Study of various standard assembly operations; assembling of simple components like Nut and Bolt; Sleeve and cotter joint; Knuckle joint; universal joint; couplings; shaft and journal bearing.

TEXT BOOK:

1. K.L.Narayana, P.Kanniah and K.Venkata Reddy, “Machine Drawing” 3rd edition, New Age international publishers, 2014.

REFERENCE BOOK:

1. P.S.Gill “A Textbook of Machine Drawing” 18th edition, S.K.Kataria& Sons, reprint 2015.

2. https://www.youtube.com/watch?v=59rhPE3dXq8andlist=PLCK4TnRpcHSYLqReZFKyU-QFE9KOiPg0g

ACTIVITIES:

- *Convert mechanical drawings into AutoCAD sketches and vice-versa.*
- *Draw 2-D sketches for various mechanical components such as bolts, nuts etc.*
- *Convert the production drawing into isometric diagram on CAD.*
- *Draw 3-D assembly drawings of engine parts such as connecting rod, stuffing box etc.*

16MS201 MANAGEMENT SCIENCE

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

This course provides an introduction to the evolution of management along with the framework of managerial functions related to organization structure, production, operations, marketing, human resource management, strategy etc. The objective of the course is to introduce the students and make them well versed with the operational functions of management.

Course Outcomes:

The student will be able to:

- understand the nature, importance and evolution of management.
- identify the significance of Operations Management.
- carry out production operations through work study.
- understand the markets, customers and competition.
- plan and control the HR function.

SKILLS :

ü *Analyze and improve productivity.*

ü *Analyze the customer needs, wants and demand.*

ü *Recognize the need of different types/qualities of Human Resources.*

ü *Analyze the reasons for the evolution of management.*

ü *Analyze the philosophies of different management thinkers.*

UNIT - 1 **L-9**

INTRODUCTION TO MANAGEMENT : Concepts of Management and organization; nature, importance and Functions of Management; Systems approach to Management; Taylor's Scientific Management Theory, Fayol's Principles of Management, Mayo's Hawthorne Experiments, Maslow's Theory of Human Needs, Douglas McGregor's Theory X and Theory Y, Herzberg's Two-Factor Theory of Motivation, Leadership Styles, Social responsibilities of Management.

UNIT - 2 **L-9**

OPERATIONS MANAGEMENT : Principles and Types of Plant Layout; Methods of production (Job, Batch and Mass Production), Work Study - Basic procedure involved in Method Study and Work Measurement

UNIT - 3 **L-9**

MATERIALS MANAGEMENT : Objectives, Need for Inventory control, EOQ, ABC Analysis, Purchase Procedure, Stores Management and Stores Records;

STATISTICAL QUALITY CONTROL: control charts for variables and attributes (simple Problems), Acceptance Sampling

UNIT - 4 **L-9**

HUMAN RESOURCES MANAGEMENT (HRM) : Concepts of HRM, Basic functions of HR Manager; Manpower planning, Recruitment, Selection, Training and Development, Placement, Wage and Salary Administration, Promotion, Transfer, Separation, Performance Appraisal, Grievance Handling and Welfare Administration, Job Evaluation and Merit Rating.

UNIT - 5 **L-9**

MARKETING MANAGEMENT : Evolution of Marketing, Functions of Marketing Selling Vs Marketing; 4 P's of Marketing – Product Mix, Product Life Cycle, Place Mix – Channels of Distribution, Price Mix – Pricing Methods, Promotion Mix, Tools of Promotions.

TEXT BOOKS:

1. P. Vijay Kumar, N. Appa Rao, Ashnab and Chnalill, "Introduction to Management Science", 6th edition, Cengage Learning India, 2012.
2. Stoner, Freeman and Gilbert, "Management", 6th edition, Pearson Education, New Delhi, 2004.

REFERENCE BOOKS:

1. Kotler Philip and Keller Kevin Lane, "Marketing Mangement" 12th edition, PHI, 2005.
2. Koontz and Weihrich, "Essentials of Management", 6th edition, TMH, 2005.

ACTIVITIES:

- *Solve a test case to identify the various operational functions of management .*
- *Solve a test case to know the importance of marketing.*
- *Solve a test case to know the importance of human resources.*
- *Solve a test case to know the importance and evolution of management discipline.*

16HS301 PROFESSIONAL ETHICS

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
30	-	-	10	-	-

Course Description and Objectives:

This course offers insight into workplace rights of people, their safety concerns and more importantly the ethics that are to be followed by professionals and corporates. The objective of the course is to bring in awareness among the students about human values, social responsibility and the ethics to be followed by engineering professionals.

Course Outcomes:

The student will be able to:

- understand professional responsibilities and ethics in the workplace.
- have knowledge of contemporary issues related to personal and professional interactions at the workplace.
- understand the impact of engineering solutions in global and societal context.

SKILLS:

- *Analyze the issues faced by society and business world related to safe technologies/ practices, employee rights, resource sharing and allocation, team work, organizational dynamics, legislations related to business and technology, discrimination.*
- *Appreciate the need for workplace etiquette and proper code of conduct.*
- *Construct and evaluate arguments during decision making by considering viewpoints of all the stakeholders.*
- *Analyze one's own beliefs and values during interpersonal and intra-organizational conflicts.*
- *Detect inconsistencies and common errors in reasoning during discussions and practices.*

UNIT - 1 **L- 06**

HUMAN VALUES : Morals, Values and Ethics – Integrity – Work Ethic – Service Learning – Civic Virtue – Respect for Others – Living Peacefully – Caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality.

UNIT - 2 **L- 06**

ENGINEERING ETHICS & ENGINEERING AS SOCIAL EXPERIMENTATION : Engineering Ethics - Variety of moral issues – types of inquiry moral dilemmas – moral autonomy – The problems of Many Hands – Kohlburg's theory – Gilligan's theory Impediments to Responsible Action.

Engineering as social experimentation - Codes of ethics - a balanced outlook on law - the challenger case study.

UNIT - 3 **L- 06**

ENGINEER'S RESPONSIBILITY FOR SAFETY : Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis – Reducing Risk – The Government Regulator's Approach to Risk - Chernobyl Case Studies and Bhopal.

UNIT - 4 **L- 06**

WORKPLACE RIGHTS AND RESPONSIBILITIES & WORK ENVIRONMENT : Workplace Rights and Responsibilities : Engineers and Managers. Oganizational complaint procedures. Government agencies. Resolving Employee concerns. Limits on acceptable behaviour in large corporation. Work Environment : Ethical and legal considerations, Organizational responses to offensive behaviour and harassment. Ethics in a Global Context.

UNIT - 5 **L- 06**

GLOBAL ISSUES : Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct

TEXT BOOK:

1. Mike Martin and Roland Schinzinger, "Ethics in Engineering", McGraw Hill, New York, 2005

REFERENCE BOOKS:

1. Prof. (Col) P S Bajaj and Dr. Raj Agrawal, "Business Ethics – An Indian Perspective", Biztantra, New Delhi, 2004
2. Charles E Harris, Michael S. Protchard and Michael J Rabins, "Engineering Ethics – Concepts and Cases", Wadsworth Thompson Learning, United States, 2000.
3. Edmund G Seebauer and Robert L Barry, "Fundamentals of Ethics for Scientists and Engineers", Oxford University Press, Oxford, 2001.

ACTIVITIES:

- *Discuss a typical case study on workers strike and analyze the conflict of interest among different stakeholders.*
- *Reading and analyzing a prisoner's narrative of police abuse in custody.*
- *Watching and discussing a video report on mishaps such as space shuttle mishap.*
- *Analyze and comment on disasters such as Chernobyl, Bhopal etc.*
- *Analyzing the HR policies documents of a typical company on issues such as working hours, employee security and health care.*

16ME206 FLUID MECHANICS AND HYDRAULIC MACHINES

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	15	40	8	4	-	2

Course Description and Objective:

This course offers basic knowledge on fluid statics, dynamics and hydraulic machines. The objective of this course is to enable the student to understand laws of fluid mechanics and evaluate pressure, velocity and acceleration fields for various fluid flows and performance parameters for hydraulic machinery

Course Outcomes:

The student will be able to:

- identify importance of various fluid properties at rest and in transit.
- derive and apply general governing equations for various fluid flows.
- understand the concept of boundary layer theory and flow seperation.
- plot velocity and pressure profiles for any given fluid flow.
- evaluate the perfomance characteristics of hydraulic turbines and pumps.

SKILLS:

ü *Solve problems involving fluid properties and shear forces resulting from Newtonian fluids.*

ü *Calculate the magnitude and location of hydrostatic forces on flat plates and curved surfaces immersed in a static fluid.*

ü *Analyze fluid systems using the integral form of the continuity, momentum, impulse momentum, and energy equation.*

ü *Measure velocity and fluid flow rates using flow measuring devices.*

ü *Distinguish laminar and turbulent flows through pipes.*

ü *Identify major and minor losses associated with pipe flow*

ü *Apply the concepts of impulse momentum principle for hydraulic machines.*

ü *Perform basic vector analysis of different types of turbines and pumps.*

UNIT - 1 **L-9**

BASICS OF FLUID ANDFLUID STATICS: Units and Dimensions - Properties of fluids - density; specific gravity; specific weight; viscosity; compressibility; vapour pressure; Capillarity and surface tension. Forces on immersed surfaces. Introduction about center of pressure and buoyancy. Piezometer; U-tube and Differential Manometers.

UNIT - 2 **L-9**

FLUID KINEMATICS AND DYNAMICS: Flow characteristics; concepts of system and control volume -Continuity equation - application of control volume to continuity - Energy equation – Euler equation - Bernoulli equation and Momentum equation.

UNIT - 3 **L-9**

FLOW THROUGH CIRCULAR CONDUITS: Laminar flow through circular tubes and boundary layer concepts -Boundary layer thickness – Hydraulic and energy gradient - Darcy equation on pipe roughness - Friction factor - Minor losses – Flow through pipes in series and in parallel.

UNIT - 4 **L-9**

ROTO DYNAMIC MACHINES: Impact of jets -fixed and moving vanes-classification of turbines; impulse and reaction turbines; Pelton wheel; Francis turbine; Kaplan turbine-working proportions; work done; efficiencies; draft tube theory-efficiency.

UNIT - 5 **L-9**

CENTRIFUGAL AND RECIPROCATING PUMPS: Classification; working Principles -Manometric head losses and efficiencies-specific speed-pumps in series and parallel. Reciprocating pumps-working-Discharge-slip-indicator diagram; Air vessels.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours:30

1. Impact of jets on vanes.
2. Pelton wheel.
3. Francis turbine.
4. Kaplan turbine.
5. Single stage centrifugal pump.
6. Multi stage centrifugal pump.
7. Reciprocating pump.
8. Venturimeter.
9. Orifice meter.
10. Friction factor for a given pipe line.
11. Minor losses in a pipeline.
12. Verification of Bernoulli's equation.

ACTIVITIES:

- *Evaluate various fluid properties.*
- *Pressure measurement using manometers*
- *Flow measurement using venturimeter and orificemeter*
- *Determination of flowrate in realtime applications*
- *Evaluate the performance of centrifugal pump.*

TEXT BOOKS :

1. P.N.Modi and Seth, "Fluid Mechanics and Hydraulic Machines",15th edition, Standard Book House, 2002.

16ME207 KINEMATICS OF MACHINES

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	20	40	5	5	5	3

Course Description and Objective:

This course offers kinematic aspects of mechanical machines and major parts in running the machines. The objective of the course is to understand various parts involved in kinematics of machines for different applications.

Course Outcomes:

The student will be able to:

- understand common mechanisms that are used in machines in everyday life.
- analyze velocity and acceleration in different mechanisms.
- distinguish various types of steering gear mechanism
- draw cam profiles and follower mechanisms.
- understand the applications of gear and belt drives.

SKILLS:

- *Compute degrees of freedom in different types of mechanisms*
- *Determine velocity and acceleration at different points on links in a mechanism.*
- *Select different pairs for various applications viz., cams, gears, gear trains and belt drives.*
- *Identify various straight line motion mechanisms.*

ACTIVITIES:

- *Creation of various joints.*
- *Perform inversions of various mechanisms.*
- *Draw velocity and acceleration diagrams.*
- *Calculate the coefficient of friction and tensions between belt and pulley.*
- *Draw cam profiles for a given application.*

UNIT - 1 **L-9**

INTRODUCTION: Statics and dynamics; links-classification; constrained motion-types; kinematic pairs-classification; kinematic chains; mechanisms; degrees of freedom; inversions of quadratic chain; single slider crank chain and double slider crank chain. Straight line motion mechanisms: classification of straight line motion mechanisms; peaucellier's, grass hopper and Pantograph mechanisms

UNIT - 2 **L-9**

VELOCITY AND ACCELERATION IN MECHANISMS: Steering gear mechanism: Davis and Ackerman steering gear; Single and Double Hook's Joint analysis. Motion of a link in machine; velocity of a point on a link – Instantaneous center – types of instantaneous centers – kennedy theorem – velocity measurement by relative velocity and Instantaneous center method.

UNIT - 3 **L-9**

CAMS: Nomenclatures; Types of cams and followers; types of follower motion; generation of cam profiles for uniform velocity; uniform acceleration and simple harmonic motion. Maximum velocity and maximum acceleration; analysis of roller follower and circular cam with straight flanks.

UNIT - 4 **L-9**

GEARS: Friction wheels and toothed gears- types-law of gearing; condition of constant velocity ratio for transmission of motion; velocity of sliding; cycloidal and involute teeth profiles; expressions for arc of contact and path of contact; interference - condition for minimum number of teeth to avoid interference.

UNIT - 5 **L-9**

GEAR TRAINS: Introduction; Types of Gear Trains – Simple; Compound; Reverted and epicyclic gear train; velocity ratio – epicyclic gear train with bevel gears.
BELTS: Introduction, types of belts, materials, length of open and cross belt drive, slip and creep of the belt, power transmission by a belt, angle of contact, centrifugal tension, condition for maximum power transmission, initial tension.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Kinematic links, pairs, chain and mechanisms.
2. Inversion of four bar mechanisms.
3. Velocity diagram for four bar and slider crank mechanism.
4. Hook joint or universal joint
5. Various types of steering gear mechanisms
6. Cam and follower arrangement.
7. Gears and determination of gear efficiency
8. Different types of gear trains.
9. Various types of belt drives.
10. Coefficient of friction between belt and pulley.

TEXT BOOKS:

1. A.Ghosh and A.K. Mallik, "Theory of Mechanisms and Machines", 2nd edition, Affiliated EWP Press, 2007.

2. S.S. Rattan, "Theory of Machines", 4th edition, Tata McGraw-Hill Publishing Company Limited, New Delhi, 2009.

REFERENCE BOOKS:

1. Jagdish Lal, "Theory of Mechanisms and Machines", 2nd edition, Metropolitan Book Company, 2002.

16ME208 METAL CUTTING AND MACHINE TOOLS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
20	15	5	5	5	3

Course Description and Objective:

This course deals with the fundamentals of metal removal principles and processes. The objective of this course is to acquire knowledge on cutting tool geometry and its significance. In addition it deals with the operations and applications of various general purpose conventional machine tools.

Course Outcomes:

The student will be able to:

- designate various standard systems of cutting tool geometry.
- ascertain the benefits and state the purposes of determining cutting forces.
- classify different types of lathes.
- state the basic functions and purposes of using drilling and milling machines.
- identify the factors that govern machining time.
- perform turning, drilling, milling, grinding and shaping operations.

SKILLS:

- ü *Demonstrate tool geometry and define tool angles followed in various systems*
- ü *Develop Merchant's circle diagram and indicate forces and their relations*
- ü *Assess tool life of cutting tools*
- ü *Evaluate the machining time required for various metal removal processes*
- ü *Illustrate various techniques, advantages and applications of super finishing processess*

UNIT - 1 **L-9**

INTRODUCTION:

PRINCIPLES AND ELEMENTS OF MACHINING - Machine Tools classification; Types of cutting tools ; Geometry of single point cutting tool, chip formation and types of chips, chip breakers. Orthogonal and Oblique cutting; Forces of a single point cutting tool; Chip thickness ratio; Merchant's force diagram; Velocity relationship; Machinability; Cutting speed, feed, depth of cut. Tool life and Wear Tool materials.

UNIT - 2 **L-9**

LATHE:

CLASSIFICATION: line diagram of lathe; Lathe Parts; Lathe specifications.
LATHE OPERATIONS: Turning, Facing, Taper turning, Drilling, Boring, Knurling and Thread cutting.
WORK HOLDING DEVICES: Three jaw chuck, Four jaw chuck, Combination chuck and other work holding devices.
CAPSTAN AND TURRET LATHE: Constructional features; Comparison of capstan, turret and conventional lathe; collet chuck, tool holders; types of tool layout.

UNIT - 3 **L-9**

SHAPER: Line diagram and parts; specifications; quick return mechanism for shapers; work holding devices and shaper operations.
PLANER: Types of planers; specifications; quick return mechanism of a planer; work holding devices.
SLOTTING MACHINE: Line diagram and parts of a slotter; specifications; Ram drive mechanism.

UNIT - 4 **L-9**

DRILLING MACHINE: Classification and Specifications; Drill bits; Twist drill; Nomenclature; Tool Holding devices; Drilling operations.
MILLING MACHINE: Classification of Milling Machines; Parts and Specifications; Types of milling cutters; Milling Operations; Indexing; Types of indexing methods; Plain and universal dividing heads.

UNIT - 5 **L-9**

GRINDING: Cylindrical - external and internal; surface and center less grinding machines.
GRINDING WHEEL: Specifications; Abrasives; Bonds; Grit; grade and structure of grinding wheel. Wheel truing.
FINE FINISHING PROCESSES: Lapping; Honing and super finishing operations.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Step turning and taper turning using lathe machine.
2. Thread cutting and knurling using lathe machine.
3. Drilling and step boring using lathe machine.
4. Drilling and tapping using drilling machine.
5. Shaping of V groove using shaper.
6. Slotting of a keyway using slotter machine.
7. Milling of gear.
8. Surface grinding operation

ACTIVITIES:

- *Fabricate a few sample components on various machine tools.*
- *Determine the tool materials and machining parameters for various operations.*
- *Calculate machining time for various machining operations.*
- *Determine surface roughness of a material on grinding machine.*

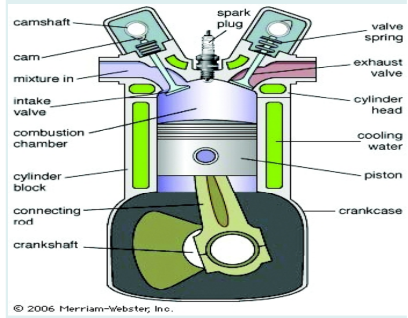
TEXT BOOKS:

1. S.K.Hajra Chowdary, “Workshop Technology”, Vol-II, 15th edition, Media Publishers, 2012.
2. B.S. Raghu Vamsi, “A Course in Workshop Technology”, Vol-II, 2nd edition, Dhanapath Rai and Sons, 2013.

REFERENCE BOOKS:

1. “Hand book of Hindustan Machine Tools, Production Technology”, 3rd edition, Tata McGraw Hill, 2014.
2. R.K. Jain and S.C. Gupta, “Production Technology”, 17th edition, Khanna Publishers, 2011.

16ME209 PRIME MOVERS



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	10	30	-	12	-	2

Course Description and Objective:

This course offers detailed analysis of various thermodynamic applications such as internal combustion engines, steam boiler, chimney, nozzle operations and vapor power cycles. The objective of this course is to understand and evaluate the performance parameters of various types of IC engines and thermal power plant devices such as boilers, nozzle and steam condenser.

Course Outcomes:

The student will be able to:

- distinguish various types of IC engines that are common in everyday life.
- understand the working principles of various sub systems of an IC engine such as carburetor, fuel injector and ignitor.
- evaluate the performance of IC engines, steam boilers, chimney draught and steam nozzle.

SKILLS:

ü *Identify various types of IC engines for a specific application*

ü *Analyze combustion process in various IC engines*

ü *Measure cylinder pressure and fuel consumption in automobiles*

ü *Calculate thermodynamic aspects of reciprocating engines*

ü *Evaluate boiler and nozzle efficiencies*

ACTIVITIES:

- o *Assembly of a 2-stroke diesel engine*
- o *Assembly of a 4-stroke diesel engine*
- o *MATLAB code for calculating indicated power and friction power in IC engines.*
- o *Fabrication of prototype model of a fire tube boiler.*
- o *Fabrication of prototype model of a water tube boiler.*

UNIT - 1 **L-9**

INTRODUCTION: Introduction; Comparison of Air Standard and Actual Cycles, Actual and Fuel-Air Cycles of IC Engines; Classification - Working principles; Valve and Port Timing Diagrams.
ENGINE SYSTEMS: Fuel Carburetor, Fuel Injection System, Ignition, Cooling and Lubrication.

UNIT - 2 **L-9**

COMBUSTION IN S.I ENGINES: Normal, Abnormal Combustion and Detonation; Importance of flame speed, pre-ignition and knocking, anti-knock additives, combustion chamber types.
COMBUSTION IN C.I. ENGINE: Stages of combustion – Delay period and its importance – Diesel Knock– Need for air movement; suction; compression and combustion induced turbulence.

UNIT - 3 **L-9**

PERFORMANCE OF I.C ENGINES: Measurement of cylinder pressure; fuel Consumption; air intake; exhaust gas composition; Brake power –Determination of frictional losses and indicated power – Performance test; Numericals.

UNIT - 4 **L-9**

BOILERS: Classification; Working principles; H.P. Boilers; Mountings and Accessories. Properties of steam-dryness fraction of steam. Performance of boilers - Parameters; equivalent evaporation; efficiency.
DRAUGHT: Classification-artificial and forced draughts. Design of chimney for given draught and discharge; condition for maximum discharge; efficiency of chimney.
STEAM CONDENSERS: Use and Classification of condensers; working principles of different types; vacuum efficiency and condenser efficiency; air leakage - sources and its effects; air pump-cooling water requirement.

UNIT - 5 **L-9**

VAPOUR POWER CYCLES: Rankine cycle; Thermodynamic Analysis; Concept of Mean Temperature of Heat addition; Methods to improve cycle performance; Regeneration and Reheating.
STEAM NOZZLES: Function of nozzle and its types - Flow through nozzles, thermodynamic analysis, assumptions, velocity of nozzle at exit-ideal and actual expansion in nozzle, condition for maximum discharge, criteria to decide nozzle shape, super saturated condition-Wilson line.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Cut section view of an IC engine; valve and port timing diagrams of IC Engines
2. Lubrication of IC engines
3. Fuel injection system
4. Pressure- crank angle diagrams for SI engines
5. Pressure- crank angle diagrams for CI engines
6. Calculations of brake power using different dynamometers
7. Finding friction power using various methods
8. Air and fuel consumption experiments
9. Single stage compressor
10. Multi stage compressors; with and without intercooler.
11. Demonstration of steam boilers.

TEXT BOOKS:

1. Ganesan V, “Internal Combustion Engines”, 2nd edition, TMH. 2007.
2. Yadav R, “Thermal Engineering” , 2nd edition, Central Book Depot, 2005.

REFERENCEBOOKS:

1. Sarkar B.K, “Thermal Engineering”, 2nd edition, Tata McGraw-Hill, 2003.
2. John B. Hey Wood “Fundamentals of I.C. Engines”, 2nd edition, McGraw- Hill, 2004.

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	30	-	-	-	-	-	-

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, Preparing Resume, Group Discussion, and Interview Skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to :

- formulate mathematical models of physical systems and represent them in block diagrams and signal flow graphs equip with requisite professional and inter-personal skills.
- they will possess the ability to think critically on issues for informed decision making and know how to communicate effectively through choice of appropriate language and speech, while dealing with others at the workplace.
- through identification and introspection on individual strengths and weaknesses.
- students will emerge with improved levels of self-awareness and self-worth, for greater efficacy at workplace.

SKILLS:

- ü *Able to Communicate and understand the difference between soft skills and hard skills.*
- ü *Able to learn professionalism and Employability skills.*
- ü *Able to plan Career by drawing their SWOT, Setting the Goal, learn the importance of Time and Stress Management.*
- ü *Able to learn Vocabulary, Situational English, Group Discussion, Reading Comprehension and Listening Comprehension which are essential for all competitive examinations.*
- ü *Able to prepare Resume and learn how to face interview.*
- ü *Able to learn Gender sensitive language, Good manners, emotional intelligence and essential skills.*

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - the process of communication, levels of communication, flow of communication, choice of diction and style with reference to setting (formal, semi-formal or informal); communication networks, barriers to communication, miscommunication, noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, need for soft skills, professionalism, employability skills.

C) CAREER PLANNING:

Job vs. career, Goal setting, SWOT analysis, planning and prioritization, four quadrant time management system, self-management, stress-management.

ACTIVITY: Johari Window for SWOT analysis; Setting a SMART goal using the provided grid; Writing a Statement of Purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, roots, prefixes & suffixes, synonyms & antonyms, collocations, one-word substitutes, analogies, idioms and phrases, contextual guessing of unfamiliar words, task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student) – vocabulary exercises with hand-outs – Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, dynamics of group discussion, intervention, summarizing and conclusion, voice modulation, content generation, Key Word Approach (KWA), Social, Political, Economic, Legal and Technical Approach (SPELT), View Point of Affected Part (VAP), language relevance, fluency and coherence.

ACTIVITY: Viewing a recorded video of GD & Mock sessions on different types of GD topics-controversial, knowledge, case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, defining career objective, projecting one's strengths and skill-sets, summarizing, formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, preparing the resume, writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, understanding employer expectations, pre-interview planning, opening strategies, impressive self-introduction, answering strategies, other critical aspects such as body language, grooming, other types of interviews such as stress-based interviews, tele- interviews, video interviews, frequently asked questions (FAQs) including Behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, techniques for speed reading, understanding the tone, skimming and scanning, appreciating stylistics, impediments for speed reading, eye fixation, sub-vocalization, critical reading, reading based on purpose, reading for information, reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas. (Hand-outs). Newspaper activity with students divided into 4 groups. Each group looks at critical component of communication such as Listening, Speaking, Reading and Writing enabling them to be better communicators as well as be more aware about the current affairs, which help in Group Discussion.

B) LISTENING COMPREHENSION: Listening as a skill, different types of listening, active and passive listening, top-down approach, bottom-up approach, understanding the non verbal cues of communication; intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, cultural sensitivity, social awareness, emotional intelligence, good manners, self-grooming, positive body language, accepting and handling responsibility, assertiveness, problem solving, negotiating skills, networking and creating a good first impression.

Seven essential skills for a team player; attentive listening, intelligent questioning, gently persuading, respecting other's views, assisting others, sharing, participating actively.

ACTIVITY: Johari Window, Games and Case studies.

ME317 DESIGN OF MACHINE ELEMENTS - I

Course Description & Objectives:

To impart knowledge of the basic engineering design against static and dynamic loading by considering strength and rigidity. To train individual components design methodology and selection procedure for various industrial applications.

Course Outcomes:

1. *Designing the components against static loading.*
2. *Designing the components against cyclic loading.*
3. *Designing the fasteners like rivits, bolts and cotter joints.*
4. *Designing power transmission shafts and couplings.*

UNIT - I Introduction to Design :

Steps involved in conventional design – Preferred numbers and significance. Engineering Materials – Classification – Properties – Specifications. Principal stresses - Principal planes - Mohr's circle
Theories of failure - Maximum Principal stress theory - Maximum shear stress theory - Distortion energy theory.
Factor of safety and its importance in design – design for static strength - rigidity.

UNIT - II Design for Fatigue Strength:

Stress concentration - Methods to reduce stress concentration – Fluctuating stresses – Fatigue failure – Endurance limit – Factors influencing fatigue strength – Fatigue stress concentration – Notch sensitivity. Low cycle and high cycle fatigue – Cumulative fatigue – Design for finite and infinite life – Soderberg, Goodman, Gerber equations for fatigue design.

UNIT - III Design of Fastners:

Design of Bolted Joints : Joints designed for simple and eccentric loadings.

Design of Riveted Joints : Lap and butt joint . Failure of riveted joints – Design of boiler joints – Joints of Uniform strength – Eccentrically loaded riveted joints.

UNIT - IV Design of Welds:

Strength of transverse and parallel fillet welds – Butt welds - Eccentrically Loaded welded joints.

Keys, Cotters and Knuckle Joints : Types of Keys - Stresses in Keys - Cotter Joints - Socket and Spigot joints - Sleeve and cotter - Gib and Cotter Joints - Knuckle Joints.

UNIT - V Design of Shafts:

Materials used for shafts – Stresses in shafts – Shafts subjected to fluctuating loads – Combined bending , twisting and axial loads – Design for strength and rigidity.

Design of couplings: Muff, split muff, flanged and bushed pin coupling, Modified Flange Coupling,Oldham Coupling, Universal coupling.

ME319 DYNAMICS OF MACHINES

Course Description & Objective:

The course will focus on the study of forces, motion and inertia in machines and performance of machines under dynamic conditions and their analysis.

Course Outcomes:

1. *Able to do static and dynamic force analysis on slider crank mechanism but also on other mechanisms.*

2. *Able to demonstrate the torque analysis on any kind of fly wheel i.e., either on engine flywheel or machine flywheel*
3. *Able to calculate the brake force analysis on any type of four wheeler*
4. *Able to perform the experiment and measure the torque acting on a dynamometer*
5. *Able to conduct experiment on the effect of the gyroscopic torque on any moving/rotating machine*
6. *Able to demonstrate the working principle of a governor and able to identify different types of governors in actual practice*

UNIT - I Static and Dynamic force Analysis:
Introduction, analytical methods to find displacement, velocity and acceleration of the piston, forces acting on connecting rod and crank.
Flywheel: Turning moment diagram, determination of work done and power from turning moment diagram, fluctuation of energy, flywheels.

UNIT - II Brakes:
Block brakes, band brakes, differential band brakes, self locking and self energizing brakes, braking force analysis of a four wheeler.
Gyroscope: Precision motion and its effect on stability of ships, Aeroplanes, and four wheelers.

UNIT - III Governors:

Watt, Porter and Proell governors, spring loaded governors-Hartnell and Hartung governors, terms associated with governor performance - sensitiveness, isochronism and hunting.

Clutches: Uniform pressure and uniform wear, single plate and multiplate clutches, cone clutch.

UNIT - IV Balancing of Rotating Masses:
Balancing of rotating masses, single and multiple masses acting at single and different planes.
Balancing of Reciprocating Masses: primary, secondary balancing, analytical and graphical methods, unbalanced forces and couples, locomotive balancing- hammer blow, swaying couple and tractive efforts,balancing of inline engines.

UNIT - V Longitudinal Vibrations:
Introduction – Definitions – Types of Vibrations – Free Longitudinal Vibrations – Damped Vibrations – Logarithmic Decrement – Forced Vibrations – Vibrations Isolation and Transmissibility.
Transverse & Torsional vibrations – Whirling of Shafts – critical speeds - Free Torsional vibrations - Two rotor systems.

ME321 MANUFACTURING PROCESS - II

Course Description & Objectives:

To expose students to the metal removal principles and its processes. To acquire deep knowledge of single point and multi point cutting tool geometry and its performance. With the help of various cutting tools and accessories development of various machine tools knowledge is imparted.

Course Outcomes:

1. *Complete knowledge of tool geometry and its performance.*
2. *Force and power requirement calculations for various machining operations.*
3. *Lathe machine and its operations exposure.*
4. *Plain surfaces machining by shaper and planer machine.*
5. *Drilling and milling operations familiarity.*
6. *Super finishing process and its applications.*

UNIT - I Introduction:

Principles and Elements of machining - Types of cutting tools – Geometry of single point cutting tool – chip formation and types of chips, chip breakers. Orthogonal and Oblique cutting – Machinability - Merchant's force diagram – velocity relationship – cutting speed, feed, depth of cut. Tool life and wear – Tool materials.

UNIT - II Lathe:

Classification - line diagram of lathe – Lathe Parts – Lathe specifications.
Work Holding Devices : Three jaw chuck – Four jaw chuck – combination chuck and other work holding devices. Tool holders.
Lathe Operations : Turning, facing – taper turning – thread cutting.
Capstan & Turret Lathe : Differences, collet chuck, tool holders, tool layout.

UNIT - III Shaper:

Line diagram and parts, specifications, quick return mechanism for shapers – work holding devices and shaper operations.
Planer : Types of planers, specifications, quick return mechanism of a planer – work holding devices.
Slotting Machine : Line diagram and parts of a slotter – specifications – Ram drive mechanism.

UNIT - IV Drilling Machine:
Classification and Specifications – Drill bits – twist drill – nomenclature – Tool Holding devices – Drilling operations. Special purpose machines.

Milling Machine : Classification of Milling Machines – Parts and Specifications – types of milling cutters – Milling Operations – Indexing heads – plain and universal dividing heads.

UNIT - V Grinding:

Cylindrical - external and internal, surface and centerless grinding machines.
Grinding Wheel : Specifications - Abrasives, bonds, grit, grade and structure of grinding wheel.
Fine Finishing Processes : Lapping, Honing and superfinishing operations.

ME323 THERMAL ENGINEERING - II

Course Description & Objectives:

To establish an understanding of the types of steam boilers and its performance parameters and working of different steam turbines,steam nozzles, steam condensers gas turbines and jet propulsive devices. To make them understand thoroughly the methods to improve the thermal efficiency of the cycles. To provide students with exposure to the systematic methods for solving engineering problems on boiler performance, steam nozzles, steam condensers, steam turbines jet engines and rocket engines. To build the necessary theoretical background that suits the power sector needs.

Course Outcomes:

1. *Classifydifferent types of boilers and its applications and its various mountings and accessories and its performance parameters.*
2. *Understanding the working phenomenon ofchimney and condition for maximum discharge of mass through it.*
3. *Understand the working of different types of condensers, performance parameters and its applications in steam power plants.*
4. *Calculate the thermal efficiency ofRankine Cycle and methods to improve the efficiency of a steam power plant.*
5. *Understand the working of different types of steam nozzles and its applications, conditions for maximum discharge of steam through it*
6. *Classify different types of steam turbines and working of impulse turbine and its performance parameters and methods of compounding to reduce rotor speed of an impulse turbine.*

UNIT - I Boilers:

Classification - Working principles - H.P. Boilers, Mountings and Accessories. Properties of steam-dryness fraction of steam.

Performance of boilers - Parameters, equivalent evaporation, efficiency.
Draught - classification-artificial and forced draughts. Design of chimney for given draught and discharge,condition for maximum discharge, efficiency of chimney.

Steam Condensers: Use and Classification of condensers, working principles of different types, vacuum efficiency and condenser efficiency, air leakage - sources and its effects, air pump-cooling water requirement.

UNIT - II Vapour Power Cycles:

Rankine cycle, Thermodynamic Analysis, Concept of Mean Temperature of Heat addition, Methods to improve cycle performance, Regeneration & Reheating.

Steam Nozzles: Function of nozzle and its types - Flow through nozzles, thermodynamic analysis,assumptions, velocity of nozzle at exit-ideal and actual expansion in nozzle, condition for maximum discharge,criteria to decide nozzle shape, super saturated condition-Wilson line.

UNIT - III Steam Turbines:

Impulse Turbine : Classification, Mechanical details of Impulse turbine, Velocity diagram -effect of friction - power developed, axial thrust, blade or diagram efficiency - condition for maximum efficiency, De-Laval Turbine - its features.Methods to reduce rotor speed - Velocity compounding and pressure compounding, Velocity and Pressure variation along the flow, combined velocity and pressure compounding of impulse turbine.

Reaction Turbine: Mechanical details - principle of operation, Thermodynamic analysis of a stage, degree of reaction - velocity diagram - Parson's reaction turbine - condition for maximum efficiency.

UNIT - IV Gas Turbines:

Simple gas turbine plant - ideal cycle, essential components - parameters of performance -actual cycle - regeneration, inter cooling and reheating - Closed and Semi-closed cycles - merits and demerits.

UNIT - V Jet Proupulsion:

Classification of jet propulsive engines - Working Principles with schematic diagrams and representation on T.S. diagram. Thrust, Thrust Power and Propulsion Efficiency of Turbo jet engines-Thermodynamic Cycle, Performance Evaluation, Thrust Augmentation Methods.

Rocket Propulsion: Application - Working Principle - Classification - Propellant Type - Thrust, Propulsive Efficiency - Specific Impulse - Solid and Liquid propellant Rocket Engines.

TEXT BOOKS :

ME325 MECHANICAL VIBRATIONS

(Dept. Elective - I)

Course Description & Objectives:

An introductory course in linear mechanical vibrations where students acquire the ability to Formulate mathematical models of problems in vibrations using Newton's second law or energy principles, determine a complete solution to the modeled mechanical vibration problems. Correlate results from the mathematical model to physical characteristics of the actual system. Design of a mechanical system using fundamental principles developed in the class.

Course Outcomes:

1. *Students will be able to construct the equations of motion for free-body diagrams.*
2. *And are able to solve for the motion and the natural frequency of (1) a freely vibrating single degree of freedom undamped motion and (2) a freely vibrating single degree of freedom damped motion.*
3. *To construct the governing differential equation and its solution for a vibrating mass subjected to an arbitrary force. Students will be able to decompose any periodic function into a series of simple harmonic motions using Fourier series analysis.*
4. *Students will be able to solve for the motion and the natural frequency for forced vibration of a single degree of freedom damped or undamped system.*
5. *Students will have an ability to obtain the complete solution for the motion of a single degree of freedom vibratory system (damped or undamped) that is subjected to non-periodic forcing functions.*

6. *To solve vibration problems that contain multiple degrees of freedom. and to obtain numerical solutions to vibration problems by simple algorithms, and display the findings in graphical form.*

UNIT - I Single Degree of Freedom Systems:

Introduction, types of vibrations, Frequency and time period for longitudinal and transverse vibrations, Newton's Law of motion - Energy method, Raleigh's method.

UNIT - II Vibrations:

Free vibration, Forced vibration, Damped vibrations, types of damping, logarithmic decrement, Isolation of vibrations & Transmissibility.

UNIT - III Two Degree-of-Freedom Systems:

Two degrees-of-freedom system, Lagrange's equation, modes of vibration, Principal modes, Principles of orthogonality, Generalized coordinates, Co-ordinate coupling, Dynamic vibration Absorber.

UNIT - IV Multi Degrees-of-Freedom Systems:

Newton's second law to derive equation of motion, Influence co-efficients - Stiffness, Flexibility, Inertia. Eigen values & Eigen vectors.

UNIT - V Transient Vibration of Continuous Systems:

Transient Vibrations - Impulse excitation, Arbitrary excitation, Laplace Transform formulation - Continuous System - longitudinal Vibration of rods, Transverse Vibration of beams, Transverse Vibration of string, Torsional Vibration of shaft.

TEXT BOOKS :

1. G.K. Groover, "Mechanical Vibrations", 4th ed., NEM Chand & Brothers, 2009.

ME327 METROLOGY & INSTRUMENTATION

Course Description & Objectives:

Manufacturing of components with correct dimensions and features like tapers, center positioning and surface finish are essential for quality products. At the same time product inspection should be finished in less time without any error. Metrology course is aimed to provide knowledge of limits, gauges, linear and angular measurements. Different process parameters like temperature, pressure, flow rate are very much important in process industry for the quality production. Students are given sufficient exposure of these through this course.

Course Outcomes:

1. *Sound knowledge in gauge design and gauge selection*
2. *Angle measurement with various measuring instruments*
3. *Different comparators working and selection, measurement of surface finish by different techniques*
4. *Various transducers working and application to physical parameters by the instruments*
5. *Different techniques to measure temperature force and flow.*

UNIT - I Introduction to Metrology:

Line and end standards – Theory of limits, fits and tolerances - Fundamental deviation – types – Grades of tolerances – Fits – Types of fits - Hole basis and shaft basis systems – Interchangeability and selective assembly. Limit Gauges - Taylor's principle – GO and NO GO gauges – plug and ring gauges.

UNIT - II Linear, Angle, Taper and Optical Measurements:

Linear measurements : Slip gauges – Dial indicators – Micrometer.

Angle and Taper measurement : Bevel protractor – Angle slip gauges —sine bar – Taper determination using Rollers and spheres.

Optical Measurements : Optical flats – NPL Interferometer.

UNIT - III comporators & Surface Roughness Measurement:

Comporators : Mechanical – Electrical – Pneumatic comparators.

Surface roughness measurement : Surface roughness and surface texture – Numerical assessment of surface finish – CLA – RMS- Ten point height of irregularity - Measuring Instruments - Profilograph – Talysurf.

UNIT - IV Introduction to Instrumentation & Displacement Measurement:

Introduction to Instrumentation : Generalized configuration and functional description of measuring instruments - Static and dynamic characteristics - Calibration.

Displacement measurements: Theory and construction of various transducers to measure displacement - Resitance type - LVDT – Capacitive type - piezo electric type Instruments

UNIT - V Temperature, Strain Measurements :

Temperature Measurements: various principles of temperature measurements, expansion thermometers, resistance thermometers, thermistors, thermocouples, pyrometers

Strain measurements: Various types of strain measurements, electrical resistance strain gauge, gauge factor - configurations to measure tensile, compressive and bending strains.

TEXT BOOKS:

1. D.S.Kumar, "Mecahnical Measurements & Controls", 5th ed., Metropolitan Book Pvt. Ltd., 2012.

ME 329 RAPID PROTOTYPING

Course Description & Objectives:

This subject provides students with an understanding of the various rapid prototyping, rapid tooling technologies; The knowledge to select appropriate technologies for product development purposes.

Course Outcomes:

1. *Understand the principle, parameters and applications of R P processes*
2. *Recognize various types of rapid tooling*
3. *Identify different allied processes*

UNIT - I Introduction:
Need for the compression in product development, History of RP systems, Survey of applications, Growth of RP industry, Classification of RP systems.

UNIT-II RP Process:
Principle, process parameters, process details and applications of Stereo lithography systems, Selective Laser Sintering, Fused Deposition Modeling,

UNIT-III RP Process:
Principle, process parameters, process details and applications of Laminated Object Manufacturing, Solid Ground Curing, Laser Engineered Net Shaping, 3D Printing.

UNIT-IV Rapid Tooling
Indirect rapid tooling - silicone rubber tooling, aluminum filled epoxy tooling, spray metal tooling, Direct rapid tooling - direct AIM, copper polyamide, sand casting tooling, laminate tooling, soft tooling Vs hard tooling.

UNIT-V Rapid Manufacturing Process:
Rapid Manufacturing Process Optimization- Factors influencing accuracy, data preparation errors, part building errors, errors in finishing, influence of part build orientation.

TEXT BOOKS:

1. Pham D T and Dimov S S, “Rapid Manufacturing”, Verlag, 2001.
2. Paul F Jacobs, “Stereo lithography and other RP&M Technologies”, SME, 1996.

SR002 SEMINAR

Course Description & Objective:

Seminar is offered as an opportunity for graduate students to broaden their knowledge beyond their specific area of research and/or studies. This is important at and beyond the graduate level where our activities are highly focused and specialized from a topical perspective.

III Year B.Tech. Mechanical Engg. I - Semester	L	T	P	To	C
	-	-	3	3	2

ME331 MACHINE TOOLS & METROLOGY LAB

Course Description & Objective:

To create awareness on various mechanical measuring instruments. To make students familiar with various operations on machine tools.

Course Outcomes:

1. *Hands on experience on lathe machine to perform turning, facing, threading operations.*
2. *Practical exposure on flat surface machining, milling and grinding operations.*
3. *Skill development in drilling and threading operations.*
4. *Linear and angular measurements exposure.*

1. Section - A

1. Step turning and taper turning using lathe machine.
2. Thread cutting and knurling using lathe machine.
3. Drilling and step boring using lathe machine.
4. Drilling and Tapping using drilling machine.
5. Shaping of V groove using shaper.
6. Slotting of a keyway using slotter machine.
7. Milling of gear.
8. Surface Grinding.

2. Section - B

1. Length, Depth, Diameter measuring using vernier calipers & micrometer.
2. Bore measurement using bore gauge.
3. Use of gear teeth caliper for checking the chordal addendum and chordal height of spur gear.
4. Angle and taper measurements using Bevel protractor, Sine bar and slip gauges.
5. Screw thread measurement by Three wire method.
6. Surface roughness measurement by Tolysurf.

III Year B.Tech. Mechanical Engg. I - Semester

L	T	P	To	C

ME333 FUELS & I.C. ENGINES LAB

Course Description & Objectives:

The main objective of this lab is to develop an idea of fuel properties and their variation with temperature, determination of kinematic viscosity and calorific value of fuels, understanding of basic internal combustion engine performance, determination of friction power and volumetric efficiency of I.C. engines and the use of multi-stage compression.

Course Outcomes:

After the completion of this course, the student should be able to:

1. *Understand the complete operation of 2 stroke and 4 stroke I.C engines which can be further confirmed through V.T.D and P.T.D*
2. *Find the performance of 2-S and 4-S engines and the variation of various performance parameters with load and speed.*
3. *Know how to balance the heat energy available in engine cylinder after the combustion process.*
4. *Understand the working and performance evaluation of mechanical power consuming devices like compressors.*
5. *Analyze the performance of the variable compression ratio engine with computerized set up which enables the understanding of pressure variation with crank angle during a cycle of operation.*
6. *Find the kinematic viscosity of fuels and its variation with temperature.*

I. FUELS & LUBRICANTS :

1. Determination of Flash and Fire points of Liquid Fuels / Lubricants: Pensky martens apparatus
2. Carbon Residue Test : Solid/ Liquid Fuels
3. Determination of Viscosity : Liquid Lubricants & Fuels : Saybolts viscometer, Redwood Viscometer, Engler Viscometer.
4. Determination of Calorific Value: Solid/Liquid/Gaseous Fuels: Bomb Calorimeter, Junker Calorimeter.
5. Grease Penetration Test.

II. I.C. ENGINES :

1. I.C. Engines Valve Timing Diagram (Diesel Engine)
2. I.C. Engines Valve Timing Diagram (Petrol Engine)

3. I.C. Engines Performance Test (4 – S Diesel Engines)
4. I.C. Engines Performance Test (2 – S Petrol Engines)
5. Evaluation of Engine friction by conducting morse test on 4-S Multi cylinder Petrol Engine and retardation and motoring test on 4-S diesel engine.
6. I.C. Engines Heat Balance Sheet.
7. Performance Test on Variable Compression Ratio Engines, economical speed test.
8. Performance Test on Reciprocating Air-Compressor Unit
9. Study of Boilers
10. Dis-assembly / Assembly of Engines.

Note : A minimum of total 12 Experiments to be completed by a student.

III Year B.Tech. Mechanical Engg. I - Semester	**L**	**T**	**P**	**To**	**C**
	-	-	3	3	2

ME335 MANUFACTURING DRAWING & INSRUMENTATION LAB

Course Description & Objective:

To provide basic knowledge in the preparation of production drawings and to give exposure on calibration of various instruments.

Course Outcomes:

1. Able to aware of various types of measurements, requirement of calibrations, instruments used errors in measurement etc.
2. Able to perform accurate measurements and measuring instrument for any engineering system.

I. Production Drawing :

Limits and Fits : Types of fits, exercises involving selection / interpretation of fits and estimation of limits from tables.

Form and Positional Tolerances : Introduction and indication of the tolerances of from and position on drawings, deformation of runout and total runout and their indication.

Surface roughness and its indication : Definitions - finishes obtainable from various manufacturing processes, recommended surface roughness on mechanical components.

Part and Assembly Drawings : Drawing of parts from assembly drawings with indications of size, tolerances, roughness, form and position errors etc.

II. Instrumentation :

1. Study and calibration of LVDT transducer for displacement measurement.
2. Calibration of strain gauge for force measurement.
3. Calibration of thermocouple for temperature measurement.
4. Calibration of resistance temperature detector for temperature measurement.
5. Calibration of capacitative pick-ups for angular displacement.
6. Study and calibration of photo and magnetic speed pickups for the measurement of speed.

III Year B.Tech. Mechanical Engg. II-Semester

L	T	P	To	C
3	1	-	4	4

ME318 DESIGN OF MACHINE ELEMENTS - II

Course Description & Objective:

To provide enough hands on experience with the usage of design data book to design standard machine elements like bearings, gears and other elements. Students are familiarized with the design of Internal combustion engine parts to know the way how a system of elements in an engine are designed.

Course Outcomes:

1. *Journal and roller bearing design and selection from the data book*
2. *Gear design against static and dynamic loading along with wear strength*
3. *Stress and load calculations along with deformations of various types of springs*
4. *Power screws design and curved beam application to crane hook design*
5. *Piston, connecting rod and crankshaft design based on maximum bending and twisting moment*

UNIT - I Bearings:

Introduction – Classification of bearings – Hydrodynamic and Hydrostatic lubrication – McKee equation – Design of Journal bearings. Design of Thrust bearings. Rolling contact bearings – Classification and selection of rolling contact bearings – Advantages and limitations of rolling contact bearings – Static load carrying capacity – Dynamic load carrying capacity – Life-load relationship – Selecting the bearing using manufacturers catalogue.

UNIT - II Design of Gears:

Classification of gears – Design of spur gears – Lewis Beam strength equation – Bukingham's equation - Wear strength. Design of helical gear.

UNIT - III Design of Springs:

Introduction to springs – Classification – materials used for springs – Nomenclature in springs – Stresses and deflection of springs – Helical, torsional, Coaxial springs. Laminated springs – Stresses and deflection in Leaf springs – Applications.

UNIT - IV Design of Curved Beams:

Introduction - Stresses in curved beams – Expression for radius of neutral axis for rectangular – Circular, trapezoidal and T-Section - Design of crane hooks, C-Clamps.

Design of Power Screws : Types of thread profiles - Square, Buttress, ACME; design of square threads and nuts, design of screw jack, compound screw and differential screw.

UNIT - V Design of Engine Parts:

Design of Piston – Cylinder, Cylinder liner – Connecting rod – Stress due to whipping action on connecting rod ends – Crank and Crank shafts – Side Crank – Center Crank – Crank Pins, Crank Shafts.

DATA BOOKS :

1. B. Mahadevan, “Design Data Hand Books for Mechanical Engineers.”, 4th ed., CBS Publishers, 2013.

ME320 HEAT TRANSFER

Course Description & Objectives:

This course is designed to introduce a basic study of the phenomena of heat to develop methodologies for solving a wide variety of practical engineering problems, and to provide useful information concerning the performance and design of particular systems. A knowledge-based design problem requiring the formulations of solid conduction and fluid convection and the technique of numerical computation progressively elucidated in different chapters will be assigned and studied in detail. As well, to gain experience in designing experiments for thermal systems, the design, fabrication, and experimentation of a thin film heat flux gage will be attempted as part of laboratory requirements.

Course Outcomes:

1. *Understand the basic laws of heat transfer.*
2. *Account for the consequence of heat transfer in thermal analyses of engineering systems.*
3. *Analyze problems involving steady state heat conduction in simple geometries.*
4. *Develop solutions for transient heat conduction in simple geometries.*
5. *Obtain numerical solutions for conduction and radiation heat transfer problems.*
6. *Understand the fundamentals of convective heat transfer process.*
7. *Evaluate heat transfer coefficients for natural convection.*
8. *Evaluate heat transfer coefficients for forced convection inside ducts.*
9. *Evaluate heat transfer coefficients for forced convection over exterior surfaces.*
10. *Analyze heat exchanger performance by using the method of log mean temperature difference.*
11. *Analyze heat exchanger performance by using the method of heat exchanger effectiveness.*
12. *Calculate radiation heat transfer between black body surfaces.*
13. *Calculate radiation heat exchange between gray body surfaces.*

UNIT - I Introduction:

Modes and mechanisms of heat transfer - Basic laws of heat transfer - General discussion about applications of heat transfer.

Conduction Heat Transfer : Fourier's law - General heat conduction equation in Cartesian, Cylindrical and Spherical coordinates.

UNIT - II One Dimensional Steady State Conduction Heat Transfer:

Homogeneous slabs, hollow cylinders and spheres - overall heat transfer coefficient, electrical analogy - Critical radius of insulation. systems with heat sources or Heat generation. Heat transfer through extended surfaces – rectangular fins.

UNIT - III One Dimensional Transient Conduction Heat Transfer:

Systems with negligible internal resistance -Significance of Biot and Fourier Numbers - Chart solutions of transient conduction systems.

UNIT - IV Convective Heat Transfer:

Concepts about Continuity, Momentum and Energy Equations.Concepts about hydrodynamic and thermal boundary layer and use of empirical correlations for convective heat transfer - Flat plates and Cylinders.

Heat Exchangers : Classification of heat exchangers - overall heat transfer Coefficient and fouling factor -Concepts of LMTD and NTU methods - Heat Exchanger design using LMTD and NTU methods.

UNIT - V Boiling and condensation:

Pool boiling - Regimes, Calculations on Nucleate boiling, Critical Heat flux and Film boiling **:** Film wise and drop wise condensation - Nusselt's Theory of Condensation on a vertical plate.

Radiation Heat Transfer : Emission characteristics and laws of black-body radiation heat exchange between two black bodies - concepts of shape factor - Emissivity - heat exchange between grey bodies -radiation shields - electrical analogy for radiation networks.

ME322 FINITE ELEMENT ANALYSIS

Course Description & Objective:

This course deals with the theory and application of the finite element methods for analyzing structural systems and heat transfer problems.

Course Outcomes:

The students can follow the terminology and basics associated with finite element method. The manual problems solving skills also help to use the analysis package efficiently.

1. *Familiarize with the energy methods used for FEM procedure*
2. *Able to solve 1D static structural bar problems subjected to axial loading*
3. *Able to solve the plane truss problems under different loading*
4. *Able to solve the 2D plane problems associated with plane stress and plane strain by using 3 noded triangular elements*
5. *Familiarize with the higher order elements used for solving 2D problems*
6. *Able to solve complicated integral equations by using numerical methods*

UNIT - I Fundamental Concepts and Energy Methods:

Introduction, Historical background, Stresses and Equilibrium, Boundary conditions, Strain-Displacement relations, Stress-Strain relations, Plane stress, Plane strain problems, Potential energy method. The Rayleigh - Ritz method, Galerkin's method, bar problems only.

One Dimensional problems : Finite element modeling coordinates and shape functions. Assembly of Global stiffness matrix and load vector. Finite element equations, Treatment of boundary conditions, Quadratic shape functions, Simple bar / stepped bar problems by using two noded line elements.

UNIT - II Two-dimensional Problems Using Constant Strain Triangles:

Introduction, Finite element modeling, Constant strain triangle, Problem modeling and boundary conditions.

Plane Trusses: Global and local d.o.f, Truss element stiffness matrix, Analysis of Plane trusses up to four members only.

UNIT - III Two-dimensional Isoparametric Elements and Numerical Integration:

Introduction, shape functions of four-node quadrilateral elements. Numerical integration: 1D,2D Gauss Quadrature (up to 2 / 2 x 2 Gauss points).

Analysis of Beams: Introduction, Finite element formulation, Load vector, element stiffness matrix, boundary considerations, Shear force and bending moment.

UNIT - IV Heat Transfer Analysis:

One dimensional analysis of plane walls, fins. Two dimensional analysis of plane walls.

UNIT - V Dynamic Analysis:

Dynamic considerations, Formulation of finite element model, elemental mass matrices, evaluation of Eigen values and Eigen vectors for a stepped bar.

ME324 CAD / CAM

Course Description & Objective:

To familiarize the students with drafting, design, modeling and manufacturing aspects using computers.

Course Outcomes:

1. *Students will understood the basic structure of CAD, CAM and product development.*
2. *They got the knowledge on working of various input and output devices in computer.*
3. *They will understood the, how the line was generated on computer screen.*
4. *They learn, the mathematical form of object/drawing transformations in 2D and 3D.*
5. *They will understood, the methodology developed for representation of cures and importance of parametric form.*
6. *Got the knowledge on usage of Boolean operations in solid modeling.*

UNIT - I Introduction to CAD/CAM:

Definitions, Applications, product life cycle, Automation, Types of automation, Advantages of CAD/CAM, Basic structure, Input & output devices, CAD procedure, DDA algorithm.

UNIT - II Transformation of Geometry:

2-D, 3-D and Homogenous Coordinate systems, Translation, Scaling, Reflection and Rotation.

Geometric modeling- Requirements, Primitives and Boolean operators, Wireframe model, Curve representation, Cubic Splines, B-splines, Bezier-Curves, Surface model, Solid model - Sweep representation.

UNIT - III NC/CNC Machines:

Introduction, NC components, NC procedure, NC coordinates systems and NC motion control Systems. Applications of NC, Economies of NC,NC Machining center. Computer controls in NC-Introduction to CNC, DNC.

UNIT - IV NC Part Programming:

NC co-ordinate system. Axis movements and interpolation with other axes. Application of rotary axis, Part programming fundamentals. Manual part programming - Programming formats, G-codes and M-codes. Introduction to

Computer Assisted part programming-APT language. Computer aided process planning (retrieval type system and generative type system).

UNIT - V Group Technology & Flexible Manufacturing System:

Introduction, part families, parts Classification and Coding systems, design and manufacturing attributes, Production Flow Analysis (Rank order clustering technique), Benefits of GT. Basics of FMS and lean-manufacturing methods.

TEXT BOOKS:

1. Ibrahim Zeid, "CAD/CAM Theory and Practice", 2nd ed., Tata Mc Graw Hill, 5th reprint, 2010.

ME326 COMPUTATIONAL FLUID DYNAMICS

(Dept. Elective - II)

Course Description & Objective:

Students will be taught to appreciate how computers are used to perform millions of calculations required to simulate the interaction of fluids and gases with the complex surfaces used in engineering.

Course Outcomes:

1. *Understand the process of developing a geometrical model of the flow, applying appropriate boundary conditions, specifying solution parameters, and visualizing and analyzing the results.*
2. *Become conscious of the limitations of CFD and develop an appreciation for the factors limiting the accuracy of CFD solutions.*
3. *To develop an understanding for the major theories, approaches and methodologies used in CFDand apply it to numerically solve the governing equations for fluid flow*
4. *To build up the skills in the actual implementation of CFD methods (e.g. boundary conditions, turbulence modelling etc.)*
5. *Understand and apply finite difference and finite volume methods to fluid flow problems*
6. *Understand how to assess stability and conduct a grid-convergence assessment.*

UNIT - I Governing Equations and Boundary Conditions:

Basics of computational fluid dynamics – Definition and overview of CFD, need, advantages, problem areas, Governing equations of fluid dynamics – Continuity, Momentum and Energy equations –– Physical boundary conditions – Time-averaged equations for Turbulent flow - Turbulence -Kinetic -Energy Equations – mathematical behavior of PDEs in CFD: Elliptic, Parabolic and Hyperbolic equations.

UNIT - II Discretization and Solution Methodologies:

Methods of Deriving the Discretization Equations - Taylor Series formulation – Finite difference method – Control volume Formulation – Detailed treatment of Finite Difference method, explicit and implicit methods, errors and stability analysis.

Solution methodologies: The Lax-Wendroff Technique, MacCormack's Technique, Space marching, Direct and iterative methods, Thomas algorithm, Relaxation method, Alternating Direction Implicit method.

UNIT - III Heat Conduction:

Finite difference and finite volume formulation of steady/transient one-dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems.

UNIT - IV Convection and Diffusion:

Finite volume formulation of steady one-dimensional convection and Diffusion problems, Central, upwind, hybrid and power-law schemes - Discretization equations for two dimensional convection and diffusion.

UNIT - V Calculation of Flow Field:

Representation of the pressure gradient term and continuity equation - Staggered grid - Momentum equations - Pressure and velocity corrections - Pressure - Correction equation, SIMPLE algorithm and its variants.

TEXT BOOKS :

1. Versteeg, H.K, and Malalasekera, W., "An Introduction to Computational Fluid Dynamics : The Finite Volume Method", 2nd ed., Longman Publication, 2004.

ME328 MECHATRONICS

Course Description & Objective:

This course gives an overview of Mechatronics systems and their components for evolving hybrid technologies in various applications.

Course Outcomes:

On successful completion of this module the learner will be able to:

1. *Summerise how mechatronics integrates knowledge from different disciplines in order to realise engineering and consumer products that are useful in everyday life.*

2. *Design static and dynamic boolean logic systems using Combinational, synchronous and asynchronous sequential logic.*
3. *Outline the operation of the fundamental elements of microprocessor systems.*
4. *Select appropriate transducer signal conditioning and devices for data conversion including operational amplifiers for analogue signal processing.*
5. *Implement a continuous-time control design using software on a microprocessor for the Manipulation, Transmission, and Recording of Data.*

UNIT - I Introduction:

Introduction to Mechatronics - Multi disciplinary Scenarios, Systems for Measurement and Control. Microprocessor based controllers, Response of Systems.

UNIT - II Signal Conditioning:

Signal Conditioning, the op-amp, protection, filtering, Wheatstone bridge, digital signals, multiplexers, Data acquisition, Digital signal processing, pulse modulation, displays, magnetic recording, measurement systems, Testing calibration.

UNIT - III System Modeling& Dynamic Response of Systems:

Introduction to Mathematical Modeling, Building Blocks of Mechanical Systems, Electrical Systems, Fluid Systems and thermal systems. Engineering Systems: Rotational, translational, Electro-Mechanical & Hydraulic- Mechanical. Performance measures of first order & second order systems, Transfer function.

UNIT - IV H & P Systems:

Actuation to Hydraulic and Pneumatic Systems, Mechanical Systems, Electrical Systems, Mechanical Switches, Solid State Switches, Operation of Solenoids, AC, DC & Stepper Motors.

UNIT - V Microprocessors & PLC's:

Introduction to digital logic - logic gates - applications of logic gates - sequential logic - Applications - Basic structure of PLCs - selection of a PLC - case studies of mechatronics systems - Microprocessor systems - microcontrollers.

TEXT BOOKS:

1. W. Bolton, "Mechatronics Electronic Control Systems in Mechanical and Electrical Engineering" 3rd ed., Pearson Education, 2009.
2. Appuu Kuttan K K, "Introduction to Mechatronics", 2nd ed., Oxford Press, 2009.

	4	0	-	4	4

ME330 COMPOSITE MATERIALS

Course Description and objective:

This course focuses on contituent materials,processing, testing and various applications of the composites materials.

Course Outcomes:

Uponcompletion of this course, the students will be able to:

1. *know various composite components e.g. reinforcement andmatrices*
2. *develop a knowledge of the manufacturing of composite materials.*
3. *employ principles of material selection and design for composite materials.*
4. *demonstrate basic knowledge on the various composite processing techniques.*
5. *explain International and national standardtesting methods*

UNIT –I Introduction to Composites:

General introduction & concept, Historical development, Concept of Composite materials, material properties that can be improved by forming a composite material& its engineering potential. Basic definitions, Types of composites based on matrix and fiber. Advantages & limitations of Composites

UNIT-II Constituent materials in Composites :

Role and Selection of reinforcement materials, Types of fibers, Mechanical properties of fibers, Glass fibers, Carbon fibers, Aramid fibers, Metal fibers, Alumina fibers, Boron Fibers, Silicon carbide fibers, Quartz and Silica fibers, Multiphase fibers, Whiskers, Flakes etc. Functions of a Matrix, Desired Properties of a Matrix Polymer Matrix (Thermosets and Thermoplastics),Metal matrix, Ceramic matrix, Carbon Matrix, Glass Matrix etc.

Fiber reinforced Polymer (FRP) Laminated composites.Lamina & Laminate Lay-up, Ply-orientation definition

UNIT-III Composite Manufacturing Processes :

Fabrication Techniques:Tooling and Specialty materials, Release agents, Peel plies, release films and fabrics, Bleeder and breather plies, bagging films. Hand Lay-up, Autoclave molding, Fiber-only performs, Wet Lay-up and Spray-up, Filament winding, Pultrusion, Resin Transfer Molding(RTM), Compounding, Injection molding

Recycling of CompositesCategories of scrap composites, Recycling methods for: Thermoplastic matrix composites, Thermoset matrix composites.

UNIT-IV Characterization of Composites:

Mechanical testing of composites, Tensile testing, Compressive testing, Intralaminar shear testing, Inter laminar shear testing, Thermal testing, Fracture testing etc. Environmental Effects on composite.

Strength and Failure theories:Strength of Laminates Failure Mechanics of Composites, Macromechanical Failure Theories, Maximum stress theory, Maximum Strain Theory , Tsai-Hill Theory , Tsai-Wu Theory,Comparison of Failure Theories

UNIT-V Engineering Applications :

Applications of FRP composites. Applications related to Aerospace, Automobile, , Bridge and other Civil Engineering Structures.

Civil Engineering Applications : Typical Applications of FRP Composites in Civil Engineering Adhesively Bonded FRP composites in strengthening of civil engineering structural components such as beams, Columns, Masonry etc.Various Strengthening Techniques, Advantage and Disadvantage of FRP composites laminated plate bonding & Misc. Issues

TEXT BOOKS:

SR002 SEMINAR

Course Description & Objective:

Seminar is offered as an opportunity for graduate students to broaden their knowledge beyond their specific area of research and/or studies. This is important at and beyond the graduate level where our activities are highly focused and specialized from a topical perspective.

III Year B.Tech. Mechanical Engg. II-Semester

L	T	P	To	C
-	-	3	3	2

ME332 MODELING AND SIMULATION LAB

Course Description & Objectives:

This lab is meant for the development of modeling and analysis skills of the machine components using software. This enables the students basic idea regarding modeling activities that are carried in present industries using modeling software.

Course Outcomes:

1. *Students will expertise on modelling tools, for drawing machine components on computer screen.*
2. *Students will gain the knowledge on 3D and assemble drawings of machine components, which helps to understanding its functioning.*
3. *Students will expertise on simulation software, for analyzing machine components.*
4. *Students will gain the knowledge on structural, thermal and modal analysis.*
5. *The graphical and animation of the simulation results helps to the students, to understanding the load or its functional effects on machine components.*

MODELING :

1. **Sketcher:** Development of part drawings for various components in the form of orthographic and isometric. Constraining the drawings. Study of blueprints.

2. **3-D Modeling:** Generation of various 3D models through protrusion, revolve, shell sweep. Creation of various features. Study of parent child relation. Feature based and Boolean based modeling surface.
3. **Assembly:** Assembly modeling, study of various standard assembly operations. Assembling of simple components like Bolt & Nut, Sleeve and cotter joint, Knuckle Joint, shaft with journal bearing.
4. **Sheet metal work:** Basic sheet metal operations, making different sheet metal patterns.

SIMULATION :

1. Static Analysis of Plane Truss
2. Static Analysis of Thick cylinder using 2D axis symmetry
3. Analysis of a plate with center hole
4. Free vibrations analysis of a simply supported beam.
5. Steady state heat transfer in square plate
6. Analysis of plate with center hole at quarter section
7. Static analysis of simple plane truss
8. Steady state heat transfer in composite plate
9. Static analysis of thick cylinder using 3D
10. Analysis of cantilever beam with point load at its end.

ME334 MINIPROJECT

Course Description & Objective:

The main objective of this miniproject is to enable the students analytical and practical exposure by giving the targets like Hands on work, also it is very much essential before the students allow into the main curriculum project work.

III Year B.Tech. Mechanical Engg. II-Semester

L	T	P	To	C
1	-	2	3	2

HS304 PROFESSIONAL COMMUNICATION LAB

Course Rationale:

The Professional Communication exposes students to conventions of corporate communication and documentation procedures involved in the day-to-day functioning of the business world. The course is aimed at improving written communication skills of undergraduate students and preparing them to meet professional challenges in the work spheres. Writing and Personality are not two exclusive spheres of influence and this course will work on the relationship between professional writing and a personality that is able to meet the goals of an organization in creative and innovative ways.

Training Methodology:*The methodology is designed to give hands-on practice to students in formal and informal report writing, structure and format of letters as well as other organization related work.*

Course Description & Objectives:

To enable students to write logical sentences and paragraphs, use appropriate diction, grammar and punctuation.

To expose them to the world of business and business register. To make them compose clear and concise business messages. To produce business documents for mailing to external recipients or intra-organizational circulation. To enable them to speak business English for handling various business situations

Mechanics of writing:

- Elements of Technical Writing : Sentence structure - reducing verbosity - arranging ideas logically – building coherence - paragraph level and document level - topic sentence - cohesive devices – transitionals – paraphrasing – précis-writing.
- Mechanics of Writing: Stylistic elements – the rapporteur- the purpose- the reader (audience) -elementary rules of grammar- choice of diction - elementary principles of composition - matters of form – punctuation - conventions of business communication -language and tone - weak links in business correspondence - ethical concerns in business writing

Business Report Writing:

- Parts of the Report: Writing an abstract - features of a good abstract – approach - compare and contrast - cause and effect.
- Types of Technical Reports : Drafting a technical proposal - formal and informal proposals - factual reports, feasibility reports, survey reports – parts of a report - title page –declaration – acknowledgements – table of contents - abstract – introduction – conclusion – citations – references - appendices - oral reports and presentations

Business Letter Writing:

- Letter-Writing - Formal and informal letters - structure of formal letters - expressions of salutations, introductory and concluding paragraphs - different types of letters - sales letter - complaint letter - adjustment letter - letter to the editor - covering letter - claim letter – letter of condolence.

Business E- writing:

- E-mail – nature and scope - e-mail etiquette – Common Errors in composing e-mails –
- Quotations - Inviting quotations - sending quotations –placing orders

  Office Communication - agenda - notice - circular
- Effective Resume-Writing: Structure and presentation - defining career objective - projecting one's strengths and skill-sets
- Summarizing - formats and styles - covering letter.

Business visual presentations:

- Business Proposals: Drafting business proposals - calculating profit and loss-averages - ratios and proportions – partnership - simple interest - compound interest - calculating volumes and areas
- course of action - cause and effect- theme detection - making judgments - logical deductions - analyzing arguments – syllogisms - Venn diagrams - matching definitions -verbal reasoning - numerical reasoning - working out justifications.

ME421 OPERATIONS RESEARCH

Course Description & Objectives:

Ability to understand and analyze managerial problems in industry so that they are able to use resources (capitals, materials, staffing, and machines) more effectively; knowledge of formulating mathematical models for quantitative analysis of managerial problems in industry; skills in the use of Operations Research approaches and computer tools in solving real problems in industry; Mathematical models for analysis of real problems in Operations Research. Identify and develop operational research models from the verbal description of the real system.

Course Outcomes:

1. *Recognize the importance and value of Operations Research and mathematical modeling in solving practical problems in industry.*
2. *Formulate a managerial decision problem into a mathematical model;*
3. *Understand Operations Research models and apply them to real-life problems;*
4. *Use computer tools to solve a mathematical model for a practical problem.*
5. *Cognitive skills (thinking and analysis)*
6. *Be able to build and solve Transportation Models and Assignment Models.*
7. *Be able to understand the characteristics of different types of decision.*

UNIT - I Definition:

Definition - Characteristics and phases, Applications of OR.

Allocation Models : Linear Programming Problem Formulation - Graphical solution - Simplex method - Artificial variables technique (i.e. Big M method only) - Duality principle, simple problems on dual formulation only.

UNIT - II Transportation Model:

Formulation, IBFS, Optimality test by MODI method, unbalanced transportation problem.

Assignment Model - Formulation - Optimal solution by Hungarian method – Unbalanced Assignment problem- Restricted case.

UNIT - III Sequencing:

Introduction - Optimal solution for processing 'n' jobs through two machines and 'n' jobs through three machines.

Replacement Model: Introduction - Replacement of resources that deteriorate with time - when money value is counted and not counted.

UNIT - IV Theory of Games:

Introduction-classification of games- 2 person zero sum games- Assumptions -solution of games with saddle points - Rectangular games without saddle points, dominance principle - 2 X 2 games by Algebraic method, Matrix method to 3 x 3 games – m X 2 & 2 X n games by graphical method.

Waitingline Models: Introduction – Kendall's Lee notation- single channel with infinite population, Multichannel with infinite population.

UNIT - V Inventory Models:

Introduction - single item - Deterministic models - Purchase inventory models with one price break when shortages are not allowed.

Simulation : Definition - types of simulation models - inventory and queuing problems.

TEXT BOOKS :

ME423 ROBOTICS

Course Description & Objective:

The objective of this course is to establish an understanding of Robot anatomy, design and synthesis of manipulator mechanism, kinematics, end effector, trajectory planning, machine vision, real world interface and problem associated with their design.

Course Outcomes:

1. *Gives an idea to be familiar with the automation and brief history of robot and construction of a manipulator.*
2. *To give the student familiarities with the kinematics of robots and basics of robot control systems.*
3. *To give knowledge about robot end effectors, their design and their pros and cons.*
4. *To give knowledge about various Sensors, their applications in robots and a brief understanding of robot vision.*
5. *To give a wide knowledge about the various real world and industrial application or robot in the current days.*

UNIT - I Introduction:

Definition of automation-programmable automation - flexible automation - Definition of a Robot - Basic Concepts - Robot configurations - characteristics of robots – accuracy and repeatability-load carrying capacity - Actuators - Basic robot motions - Point to point control - Continuous path control.

UNIT - II Kinematics of Robot:

Basic control system concepts – control system analysis – robot actuation and feed back,Manipulators – direct and inverse kinematics – the Denavit-Hartenberg Transformation Method – Coordinate transformation.

UNIT - III Classification of Robot End Effectors:

End effectors. Types of Robot end effectors – Grippers, tools as end effectors – End effectors interfacing. Automated Manufacturing Work Cell – Concepts and Design.

UNIT - IV Sensor & Machine Vision:

Range sensing - Proximity sensing - Touch sensing - Force and Torque sensing. Introduction to Machine vision - Sensing and digitizing - Image processing and analysis. Encoders - tachometers.

UNIT - V Robot Application:

Application and characteristics of robots in machining - Welding - Assembly - Material handling -Loading and unloading – spray painting - inspection – forging -medical surgery - CIM.

ME425   REFRIGERATION AND AIR CONDITIONING

Course Description & Objective:

To introduce history, importance and components of mechanical engineering, concepts of unit operations and unit processes, and current scenario of refrigerants & industrial applications.

Course Outcomes: *.*

1. *Upon successful completion of this course, the student will be able to*
2. *Understand the difference between refrigeration and air conditioning*
3. *Describe the two methods of lowering the temperature of material*
4. *Identifying and describe the three methods of heat transfer*
5. *Understand what kind of refrigeration systems are available*
6. *Understand what kind of air refrigeration systems are available*
7. *Understand what kind of vapor refrigeration systems are available*
8. *Understand what causes matter to change its state*

UNIT - I Air Refrigeration Systems:

Introduction to Refrigeration - Unit of refrigeration,Reversed Carnot Cycle, Bell-Coleman refrigeration system

Air Refrigeration: Actual air refrigeration system - Refrigeration needs of Aircrafts - Adoption of Air refrigeration, Justification - Types of air refrigeration systems - Problems.

Refrigerants: Desirable and undesirable properties - Common refrigerants used - Nomenclature.

UNIT - II Vapour Compression Refrigeration System:

Vapour Compression System. Wet Compression, Dry Compression, Superheated Compression Representation of cycle on T-S, P-H and H-S charts - effect of subcooling and super heating - cycle analysis - Actual Cycle, Influence of various parameters on system performance - use of P-H charts - Problems

System Components: Compressors - General classification - comparison - Advantages and disadvantages.Condensors - Classification - Working. Evaporators - Classification - Working. Expansion Devices - Types -Working.

UNIT - III KVapour Absorption Refrigeration System:

Basic vapour absorption system. Ammonia absorption system,Electrolux refrigeration system Li - Br system, Calculation of COP. Principle and Operation of (i) Steam Jet Refrigeration System, (ii) Thermoelectric Refrigeration and (iii) Vortex tube or Hilsch tube.

UNIT - IV Psychrometry:

Psychrometric Properties and Processes, Need for Ventilation, Infiltration, Concepts of RSHF,ASHF, ESHF and ADP. Concept of human comfort and effective temperature, comfort Air conditioning,Industrial Air conditioning and Requirements.

UNIT - V Equipment of Air-Conditioning Systems:

Air cleaning and filters, Humidifiers and dehumidifiers, Fans and Blowers, Grills and Registers. Heat pump, different heat pump circuits - Application.Air conditioning Load Calculations.

TEXT BOOKS:

1. S.C. Arora & Domkundwar, “A Course in Refrigeration and Air Conditioning”, 2nd ed., Dhanpatrai & Sons, 2009.
2. Dossat, “Principles of Refrigerations”, 2nd ed., Wiley Eastern, 2006.

MS310 MANAGERIAL ECONOMICS

Course Description & Objectives:

To make the student familiar with the basic concepts and principles of Business Economics. The course aims to develop student's capacity to analyze the economic environment in which business entities operate and understand how managerial decisions can vary under different constraints that each economic environment places on a manager's pursuit of it's goals, focusing on analyzing the functioning of markets and the economic behavior of firms and other economic agents.

Course Outcomes:

By the end of this course it is expected that the student will be able to:

1. *Understand nature and scope of managerial economics and its application in managerial decision making*
2. *Demand determinants, elasticity of demand and demand forecasting methods for marketing planning.*
3. *Theory of production, law of variable proportions and returns to scale*
4. *Cost analysis and cost output relationship*
5. *Types of markets and price determination*

UNIT – I Introduction to Managerial Economics:

Nature & Scope of Managerial Economics**- Basic tools and techniques of Business Economics, Macro Economic Environment and Managerial decisions.**

UNIT – II Demand analysis:

Types of Demand, Demand determination Concept of Elasticity and measurement, Demand forecasting, Survey & Statistical methods.

UNIT – III Theory of Production:
Production function, Marginal rate of technical substitution, Iso-quants and Iso-costs, production function with one/two variable factors,Law of Variable Proportions, and Returns to Scale, internal and external economies.

UNIT – IV Cost Analysis:
Cost concepts, cost determinants, cost output relationship in the short and long run, Break-Even analysis.

UNIT-V Markets and price determination:
Features and types of different competitive situations – Perfect competition, Monopoly, Monopolistic competition and Oligopoly, pricing methods in practice.

Text Books:

1. Gupta: Managerial Economics, 1/e TMH, 2005.
2. A.R.Arya Sri, Managerial Economics and Financial Analysis, TMH, 2/e, 2010.

Reference Books:

ME427 AUTOMOBILE ENGINEERING

(Dept. Elective - III)

Course Description & Objectives:

The objective of Automobile Engineering is to develop and understand the principles of conversion in design, construction and working of mechanical systems. Graduates will be equipped to solve multi-disciplinary problems and will be part of future developments in industries. It is anticipated that graduates from the course will play a major/lead role in design, management and coordination of multi-disciplinary projects. The scope of this program is to impart knowledge to graduating students on the basics of automobiles, understanding of mechanical analysis and design. To provide students with sound foundation in the mathematical, scientific and engineering fundamentals necessary to formulate, analyze and solve engineering problems and to prepare them for higher studies and for successful careers in automobile industry.

Course Outcomes:

1. *An ability to communicate effectively.*
2. *An ability to identify, formulates, and solves engineering problems.*
3. *Apply knowledge of science, math, statistics, and engineering technology to solve problems encountered in a professional career in the automotive industry.*
4. *Graduates will be familiar with modern engineering software tools and equipment to analyze automotive engineering problems.*
5. *Graduates will be broadly educated and will have an understanding of the impact of engineering on society and demonstrate awareness of contemporary issues.*

UNIT - I Introduction to an Automobile:

Components of four wheeler automobile, chassis, frame, body, engine, cylinder block and crankcase, cylinder head, liners – pistons, connecting rod – engine valves – valve mechanisms.

UNIT - II SI Engine Fuel Supply System:

Types – fuel pumps – carburettors – functions – mixture strength, simple carburettor – defects and remedies – typical carburettors - Solex carburettor, Zenith Carburettor.

CI engine fuel supply system- functional requirements of an injection system – methods of injection – fuel injection pumps – fuel injector – spray formation.

UNIT - III Engine Lubrication:

Objectives of lubrication –requirements of lubricants- Types of lubrication systems– oil pumps and filters.

Cooling system : Objectives of Cooling – methods of cooling – components of air and water cooling systems – radiators.

UNIT - IV Ignition Systems:

Requirements of an ignition system – types of ignition system – battery ignition system, magneto ignition system and electronic ignition system - Ignition advance methods - Spark plug.

Starting system – starting motor – bendex drive – solenoid switch.

UNIT - V Transmission System:

Requirements of transmission system – principle of clutch- types of clutches- cone clutch, single plate clutch, multi plate clutch, magnetic and centrifugal clutches. Gear boxes- Need of gear box- types- sliding mesh, constant mesh, synchro mesh epicyclic type gear box. propeller shaft , Hotch kiss drive, differential and rear axles.

TEXT BOOKS :

1. Heitner, "Automobile Engineering", 2nd Edition, IPC Transport Press Ltd., 2010.
2. Dr. Kirpal Singh, "Automobile Engineering", Volume - 1 & 2, 9th Edition, Standard Publishers Distributors, 2009.

ME429 POWER PLANT ENGINEERING

Course Description & Objectives:

Understand the sources of energy and their contributions to the energy and power needs of the nation and the world. Know percentages and have understanding for magnitudes of energy and resources used. Describe sources of energy and types of power plants. List different types of fuels used in power plants and estimate their heating values. List types, principles of operations, components and applications of steam turbines, steam Generators, condensers, feed water and circulating water systems.

Course Outcomes:

The expected learning outcomes are that the student will be able to:

1. *Describe sources of energy and type of power plants.*
2. *Should be able to understand the machines and accessories used in thermal power plant.*
3. *Describe basic working principle of Gas turbine and Diesel engine power plant.*
4. *List the principle components and type of nuclear reactors.*
5. *Define terms and factors associated with power plant economics. Calculate present worth depreciation and const of different types of power plants. Estimate the cost of power production per kW.*

UNIT - I Introduction:
Various Energy Sources, types of power plants.

Thermal Power Plant : General Plant Layout, Working of Different circuits, types of coals, coal analysis, coal and ash handling systems. Burning of coal, traveling grate stokers, spreader stokers, retort stokers, pulverized fuel burning system and its components, combustion needs and draught system, cooling towers and ponds.

UNIT - II Diesel Power Plant:

Introduction, field of use - Plant layout with auxiliaries - fuel supply system, air starting equipment, lubrication and cooling system - super charging.

Gas Turbine Plant : Introduction - classification - Layout with auxiliaries - Principles of working of closed and open cycle gas turbines.

UNIT - III Hydrao Electric Power Plant:

Hydrology, Rainfall, Run off and their measurement, hydrograph, Flow duration curve, Mass curve and calculation of storage capacity, site selection of hydro plant, different types of hydro plants.

Power from Non-conventional Sources: Solar Energy : Solar cells, solar energy storage, solar ponds, solar energy utilization and applications.

Wind Power : Basic principle, different types of wind mills, wind energy conversion systems, applications.

UNIT - IV Nuclear Power Plants:

Nuclear Fission, Nuclear Fuels, Components of Reactor, Types of Reactors - Pressurized water reactor, boiling water reactor, fast Breeder reactor, Homogeneous reactor, Gas cooled reactor, Radiation Hazards and shielding - radioactive waste disposal.

UNIT - V Power Plant Economics:

Fixed costs, operating costs, cost per kwh, comparison of fixed and operating costs of hydro, thermal, nuclear plants, power tariffs.

Pollution Control : Introduction, Particulate and gaseous pollutants, thermal pollution and solid waste pollution, methods to control pollution, brief description.

TEXT BOOKS :

1. Mohammad El Wakil, “Power Plant Technology”, 2nd ed., Mc Graw-Hill, 2010.
2. R.K. Rajput, “Power Plant Engineering”, 3rd ed., Lakshmi Publication, 2008.

ME431 NON DESTRUCTIVE TESTING

Course Description & Objective:

To study and understand the various Non Destructive Evaluation and Testing methods, theory and their industrial applications

Course Outcome:

Upon completion of this course, the students can able to use the various Non Destructive Testing and Testing methods understand for defects and characterization of industrial components

UNIT-I Introduction to NDT:

NDT Versus Mechanical testing, Overview of the Non Destructive Testing Methods for the detection of manufacturing defects as well as material characterisation. Relative merits and limitations, Various physical characteristics of materials and their applications in NDT., Visual inspection

UNIT-II Liquid Penetrant Testing:

Principles - types and properties of liquid penetrants - developers - advantages and limitations of various methods - Control and measurement of penetrant process variables - Limitation and Applications

UNIT-III Magnetic Particle Testing:

Theory of magnetism - ferromagnetic, Paramagnetic materials - advantages - Circular magnetisation techniques, Limitation and Applications

UNIT-IV Ultrasonic Inspection Methods:

Equipment/Materials: Principle of pulse echo method, through transmission method, resonance method - Advantages, limitations - Focussing Techniques (SAFT), Time of Flight Diffraction (TOFD), Signal Analysis. Capabilities, Limitation and Applications

UNIT-V Radiography:
Principle, interaction of X-Ray with matter, imaging, film and film less techniques, types and use of filters and screens, geometric factors, Inverse square, law, characteristics of films – graininess, density, speed, contrast, characteristic curves, Penetrameters, Exposure charts, Radiographic equivalence,applications.

TEXT BOOKS:

1. Baldev Raj, T.Jayakumar, M.Thavasimuthu ¡§Practical Non-Destructive Testing¡¨, Narosa Publishing House, 2009.

ME433 NANO TECHNOLOGY
(Dept. Elective - IV)

Course Description & Objectives:

This course is intended to develop interest among the students in the area of nano technology and to initiate research inclination and also brings together relevant knowledge from the disciplines of material science, physics and chemistry to give students a fundamental understanding of the integrated multidisciplinary nature of Nanotechnology.

Course Outcomes:

Upon successful completion of this course, students will be able to:

1. *understand how basic nanosystems work;*
2. *have a sound grounding and expert knowledge in multidisciplinary areas of nanoscience*
3. *use physical reasoning to develop simple nanoscale models to interpret the behavior of such physical systems*

4. *analyse and critically evaluate ideas/information/data and apply relevant scientific principles to solve problems by, for example, creating hypotheses, testing theories and predictions, designing and carrying out experiments and analysing reported data*
5. *be prepared to work in a high tech work force or pursue a research higher degree in nanotechnology*

UNIT - I Genesis of Nano Technology :

Introduction - Nano Science - Nano technology - Nano materials - Scope of applications - topics from nature - Basic principles of Nano science and technology - Basics of quantum mechanics - Quantum Nano structures.

UNIT - II Fabrication of nano Materials:

Introduction - Nano materials - Properties of Nano materials - Techniques used in Nano technology - Top - Down approach - Bottoms-up approach - Tools used in Nano technology - Electron Micro Scope - Atomic Force Microscope (AFM). Synthesis of Nano materials.

UNIT - III Carbon Nano Tubes(CNT):

Introduction - Preparation - Properties - Classification - Fullerens - Applications of Carbon Nano Tubes.

UNIT - IV Domain Application of Nano Technology:

Introduction - Applications of Nano technology - Environment and Energy - Textiles - Agriculture - Electronics & Communication - Computers - Medicine - Space technology.

UNIT - V Projected use & Implications of Nano Technology:

Introduction - Assessment of opportunities - Bottlenecks in implementation of Nano technology - Exploration and Economical concerns of Nano technology - Current research activity.

TEXT BOOKS :

1. Mark Ratner, "Nano technology", 3rd ed., Pearson Education, 2008.
2. Manasi Karkare, "Nano Technology Fundamentals and Applications", 1st ed., I.K. International Publishing House, 2008.

ME435 AUTOMATION IN MANUFACTURING

Course Description & Objective:

To expose the students in the area of automation followed by industries for material handling, storage, automated flow lines, and line balancing systems. To familiarize the methodologies followed for line balancing and verity of automated guided vehicles and other systems. To give the awareness on standard circuit systems followed by industries in the case of pneumatic and hydraulic systems.

Course Outcomes:

1. *Students will understood the automation technology, and its importance in manufacturing process.*
2. *Students gain the knowledge in hydraulic and pneumatic circuits followed in industries.*
3. *Students gain the knowledge on transports system used in industries and its working principle.*
4. *Students will understood, the importance of buffer storage and familiarize its design concept.*
5. *Students will understood the line balancing concept followed in industries and its need.*

UNIT – I Introduction:

Types and strategies of automation, pneumatic and hydraulic components and circuits. Automation in machine tools, Mechanical feeding systems and machine tool control systems.

UNIT – II Automated Flow Lines:

Methods of work part transport, Mechanical buffer storage control function, design and fabrication considerations.

Analysis of Automated flow lines: General terminology and analysis of transfer lines without and with buffer storage, partial automation and implementation aspects.

UNIT – III Assembly Line Balancing:

Assembly process and systems, assembly line, line balancing methods, ways of improving line balance, flexible assembly lines.

UNIT – IV Automated Material Handling:

Types of equipment, functions, analysis and design of material handling systems, conveyor systems, automated guided vehicle systems. Automated storage and retrieval systems; work in process storage, interfacing of handling and storage with manufacturing.

UNIT – V Adaptive Control Systems:

Introduction, adaptive control with optimization, Adaptive control with constraints, Application of A.C. in Machining operations. Use of various parameters such as cutting force, Temperatures,
vibration and acoustic emission.

TEXT BOOKS :

1. M.P. Groover, "Automation, Production Systems and Computer Integrated Manufacturing", 3rd ed., PHI Publications, 2008.
2. Radhakrishnan, "CAD / CAM/ CIM" 3rd ed., Newage Publications, 2009.

CS223 OBJECT ORIENTED PROGRAMMING

Course Description & Objectives:

On Completion of this course, the student will be able to understand fundamentals of object- oriented programming in Java, including defining classes, invoking methods, using class libraries. Have the ability to write a computer program to solve specified problems. Be able to use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes:

The student is expected to have

1. *Understanding of OOP concepts and basics of java programming (Console and GUI based)*
2. *The skills to apply OOP and Java programming in problem solving*
3. *Should have the ability to extend his knowledge of Java programming further on his/her own.*

UNIT - I Introduction, Classes and Objects:
Creation of Java, Importance of Java to Internet, Byte code, Java buzzwords, OOP Principles- Encapsulation, Inheritance and Polymorphism, Data types, Variables, Declaring variables, Dynamic initialization, Scope and life time of variables, Arrays, Operators, Control statements, Type conversion and casting, Compiling and running of simple Java program, Concepts of classes and objects Class fundamentals – Declaring objects, Assigning object reference variables, Introducing methods, Constructors, Usage of static with data and methods, Usage of final with data, Access control, this key word, Garbage collection, Overloading methods and constructors, Call by value, Recursion, Nested classes and Inner classes, Exploring the String class.

UNIT - II Inheritance, Packages and Interfaces:
Basic concepts, Member access rules, Usage of super key word, Forms of inheritance, Method overriding, Abstract classes, Dynamic method dispatch, Using final with inheritance, the Object class. Defining, Creating and Accessing a Package, Understanding CLASSPATH, Importing packages, Differences between classes and interfaces, Defining an interface, Implementing interface, Applying interfaces, Variables in interface and Extending interfaces.

UNIT - III Exception Handling, Multithreading:
Concepts of Exception handling, Types of exceptions, Usage of try, Catch, Throw, Throws and Finally keywords, Built-in exceptions, Creating own exception Sub classes, Concepts of Multithreading, Differences between process and thread, Thread life cycle, Creating multiple threads using Thread class, Runnable interface, Synchronization, Thread priorities, Inter thread communication, Daemon threads, deadlocks, Thread groups.

UNIT - IV Applets:
Applet Class, Applet Architecture, Applet Skeleton - Applet Initialization and Termination, Overriding update(), Simple Applet, Display Methods, Requesting Repainting - A simple banner Applet, Using The Status Window, The HTML APPLET Tag, Passing parameters to Applets, Applet Context and show Document.

Event Handling & AWT Controls: Event sources, Event classes – ActionEvent, AdjustmentEvent, ComponentEvent, Container Event, Focus Event, InputEvent, ItemEvent, KeyEvent and MouseEvent, Delegation event model, Event Listeners, Handling mouse and Keyboard events, Adapter classes.

UNIT - V AWT:
Concepts of components, Container, Panel, Window, Frame, Canvas, Font class, Color class and Graphics. AWT Controls : Buttons, Labels, Text fields, Text area, Check boxes, Check box groups, Lists, Choice, Scrollbars, Menus, Layout Managers - Flow, Border, Grid, Card and Grid bag.

Swing: JApplet, JFrame and JComponent, Icons and Labels, Handling threading issues, Text fields, Buttons – The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

TEXT BOOKS:

1. Herbert Schildt, “The Complete Reference Java J2SE”, 7th ed., TMH Publishing Company Ltd, New Delhi, 2008.
2. Joe Wiggles worth and Paula McMillan, “Java Programming Advanced Topics”, 3rd ed., TMH, 2009.

REFERENCE BOOKS:

1. Cay Horstmann, “Big Java”, 2nd ed., John Wiley and Sons, 2006.

ME437 MECHANISMS & MACHINE DYNAMICS LAB

Course Description & Objectives:

To provide basic knowledge in the working of various mechanisms through practical experiments. It also provides real hands on experience with the detailed functional requirements of various components in a machine.

Course Outcomes:

1. *Mechanisms form the basis of any machine and it is an assemblage of rigid bodies so that they move upon each other with definite relative motion.*
2. *With the study of rigid bodies motions and forces for the transmission systems, machine kinematics and dynamics can be well understood.*

List of Experiments :

1. Static Balancing of rotating masses.
2. Dynamic balancing of rotating masses.
3. Determination of gyroscopic couple.
4. Determination of natural frequency of vibrating system, damped frequency and effect of viscosity on damping.
5. Analysis of forced vibration
6. Study of Mechanisms involved in leg operated air pump.
7. Study of Mechanisms involved in sewing machine.
8. Study of Mechanisms involved in tail stock.
9. Study of Automobile differential mechanism
10. Study of Brake system in two wheeler and four wheeler
11. Study of Clutch system in Automobile

12. Study of fertilizer sprayer.
13. Study of pantograph mechanism.

IV Year B.Tech. Mechanical Engg. I-Semester

L	T	P	To	C
-	-	3	3	2

ME439 HEAT TRANSFER LAB

Course Description & Objective:

Through this course, students will study about the various heat transfer processes, so as to train the students practically to utilize this knowledge in industry.

Course Outcomes:

1. *Should be able to distinguish between the usage of heat transfer correlations to be applied for transient and steady state heat transfer analysis*
2. *Understand the means of accelerating the achievement of steady state in the given forced convection setup by varying the heat input, the duration of heating, the instant at which we start the fan etc.,*
3. *Distinguish between the radiation, convection and conduction practically and be able to apply empirical correlations according to the experimental conditions*
4. *Able to analyze the performance of a heat exchanger in co-current and counter current mode*

List of Experiments

1. Composite Slab Apparatus - To calculate overall heat transfer co-efficient.
2. Heat Transfer through lagged pipe.
3. Heat Transfer through a Concentric Sphere.
4. Thermal Conductivity of given metal rod.
5. Heat transfer through pin-fin
6. Experiment on Transient Heat Conduction.
7. Heat transfer in forced convection apparatus.
8. Heat transfer in natural convection.
9. Parallel and counter flow heat exchanger.
10. Emissivity apparatus.
11. Stefan Boltzman Apparatus.
12. Heat transfer in drop and film wise condensation.
13. Critical Heat flux apparatus.
14. Study of heat pipe and its demonstration.
15. Shell and tube heat exchanger.

Note : A minimum of total 12 Experiments to be completed by a student.

IV Year B.Tech. Mechanical Engg. I-Semester

ME441 HYDRAULICS & PNEUMATICS LAB

Course Description & Objectives:

This lab provides the student with the basic knowledge concerned with the function, processes, and applications of the hydraulic and Pneumatic, electro pneumatic components. The student should recognize to the important hydraulic and pneumatic components and their functions in the simple systems. Also, the students should know the devices used in generating the hydraulic and pneumatic power and how to transmit and control energy.
The student should be able to know the theory of operation, structure and the symbols of the following:
Elements of energy conversion in hydraulic systems (Pumps). Elements energy conversion in pneumatic systems (Compressors). Hydraulic, pneumatic, electro pneumatic actuators. Hydraulic and pneumatic control elements (valves).

Course Outcomes:

After the completion of this laboratory course, the student is able to understand energy conservations in Hydraulic, pneumatic, electro pneumatic systems and also make the devices used in generating the hydraulic and pneumatic power and how to transmit and control energy.

LIST OF EXPERIMENTS

1 Introduction to the hydraulic work benches and lab equipments.
2 Principles of hydraulic systems, power and control circuits, cavitations.
3 Introduction to the pneumatic work benches and lab equipments.
4 Basic pneumatic circuits.
5 Speed control and feedback and timers.
6 Advance pneumatic circuits.
7 Introduction to the electrical work benches and lab equipments.
8 Basic electrical switching circuits.
9 Relay and timer circuits.
10 Electro pneumatic circuits.

ME420 TOTAL QUALITY MANAGEMENT

(Dept. Elective - V)

Course Description & Objectives:

To understand the Total Quality Management concepts, principles and the various tools available to achieve Total Quality Management. To understand the statistical approach for quality control. To create an awareness about the ISO and QS certification process and its need for the industries.

Course Outcomes:

Upon completion of the subject, students will be able to

1. *select and apply appropriate techniques in identifying customer needs, as well as the quality impact that will be used as inputs in TQM methodologies;*
2. *measure the cost of poor quality and process effectiveness and efficiency to track performance quality and to identify areas for improvement;*
3. *understand proven methodologies to enhance management processes, such as benchmarking and business process reengineering;*
4. *Choose a framework to evaluate the performance excellence of an organization, and determine the set of performance indicators that will align people with the objectives of the organization.*

UNIT - I Introduction:

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Deming Philosophy, Barriers to TQM Implementation.

UNIT - II TQM Principles:

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Benefits, Continuous Process Improvement – Juran Trilogy, PDCA Cycle, 5S, Kaizen, Supply Chain Management. Concepts in Performance Measures of Quality.

UNIT - III Statistical Process Control (SPC):

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma.

UNIT - IV TQM Tools:
Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT - V Quality Systems:
Need for ISO 9000 and Other Quality Systems, ISO 9000:20XX Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, ISO 14000 – Concept, Requirements and Benefits.

TEXT BOOKS :

1. Dale H.Besterfiled, "Total Quality Management", 2nd ed., Pearson Education, 2011.
2. James R.Evans & William M.Lidsay, "The Management and Control of Quality", 5th ed., South-Western Publication, 2010.

ME422 UNCONVENTIONAL MANUFACTURING PROCESSES

Course Description & Objectives:
Advanced technology demands new materials with high strength and hardness for the sophisticated products with long life and reliability. Existing conventional manufacturing techniques of traditional machining and forming are unable to cater these materials. Non contact type machining, modern machining techniques using laser beam, electron beam and water jet

machining and its process parameters study is focused. New techniques to develop the product using Rapid prototyping is emphasized.

Course Outcomes:

1. *Water jet, abrasive jet machining techniques and Ultrasonic and plasma arc machining application to high end materials machining*
2. *Electrical and laser techniques like EDM, EBM and LBM and its process parameter study*
3. *Welding techniques and its characteristics using Plasma , Laser and electron beam methods*
4. *Advanced techniques of forming like explosive , electro hydraulic and magnetic forming and extrusion and rolling techniques using non contact type methods.*
5. *Product design and development advanced techniques of Rapid prototyping by various techniques exposure.*

UNIT - I Unconventional Machining Processes:

Introduction to unconventional machining Processes - classification - Abrasive jet machining, ultra sonic machining process. Plasma Arc Machining - Working principle, Equipment and Characteristics. Water Jet Machining, Abrasive Water Jet Machining.

UNIT - II EDM, ECM & LBM :

EDM Circuits, Electric discharge wire cutting, Electron Beam Machining. Electrochemical Machining - Process, Principle, Equipment, Mechanism and Applications. Introduction to laser, production of laser and laser Beam Machining.

UNIT - III Uniconventional Welding Processes:

Laser Beam Welding, Electron Beam Welding, Ultra-Sonic Welding,Plasma Arc Welding, Explosive Welding, Under Water Welding, Micro Welding Processes, Friction stir welding.

UNIT - IV Unconventional Forming Processes:

Explosive forming, Electro hydraulic forming, Electro magnetic forming, Laser Bending, Powder rolling, Spray rolling, Hydro forming, Hydrostatic and Powder extrusion, rotary and isothermal forming.

UNIT - V Rapid Prototyping:

Definition, types of prototypes, Classification of Rapid Prototyping systems. Stereolithography System, Selective laser sintering, Solid ground curing, Laminated object manufacturing.

TEXT BOOKS:

1. Benedict G.F., “Non Traditional Manufacturing Processes”, 1st ed., Marcel Dekker Publication, 1987.

	4	-	-	4	4

ME424 NON-CONVENTIONAL SOURCES OF ENERGY

Course Description & Objective:

This course is aimed to introduce the fundamentals concerned with alternative ways of producing power. It also enables the importance of future energy demand.

Course Outcomes:

1. To know the energy demand of world, nation and available resources to full fill the demand.
2. To know about the conventional energy resources and their effective utilization.
3. To acquire the knowledge of modern energy conversion technologies.
4. To be able to identify available nonconventional (renewable) energy resources and techniques to utilize them effectively.

UNIT – I Principles of Solar Radiation:

Role and potential of new and renewable energy sources. Environmental impact of solar energy, physics of the sun, the solar constant, extraterrestrial and terrestrial solar radiation, solar radiation on tilted surface, instruments for measuring solar radiation and sun shine, solar radiation data.

UNIT – II Solar Energy Collection, Storage and Applications:
Flat plate and concentrating collectors; classification of concentrating collectors, their orientation and thermal analysis. Brief on advanced collectors. Different methods of storage - Sensible, latent heat, stratified and solar ponds. Solar Applications- solar heating and cooling techniques, solar distillation and drying, photovoltaic energy conversion.

UNIT - III Wind Energy:

Sources and potential, horizontal and vertical axis windmills, performance characteristics, Betz criteria.
Bio-mass Energy : Principles of Bio-Conversion, Anaerobic/aerobic digestion, types of Bio-gas digesters, gas yield, combustion characteristics of bio-gas, utilization for cooking, I.C.Engine operation and economic aspects.

UNIT - IV Geothermal Energy & Ocean Energy:
Resources, types of wells, methods of harnessing the energy, potential in India. OTEC, Principles utilization, setting of OTEC plants, thermodynamic cycles. Tidal and wave energy: Potential and conversion techniques, mini-hydel power plants, and their economics.

UNIT - V Direct Energy Conversion:
Need for DEC, Carnot cycle, limitations, principles of DEC. Thermo-electric generators, Seeback, Peltier and Joule Thomson effects, Figure of merit, materials, applications, MHD generators, principles, dissociation and ionization, Hall effect, magnetic flux, MHD accelerator, MHD Engine, power generation systems, electron gas dynamic conversion, economic aspects. Fuel cells, principles, Faraday's laws, thermodynamic aspects, selection of fuels and operating conditions.

ME426 OPERATIONS MANAGEMENT

(Dept. Elective - VI)

Course Description & Objectives:

To understand the concept of various types of manufacturing systems, productivity concept and various types of layouts Emphasize the importance of Production planning and control parameters in manufacturing organizations Be aware of the demand forecasting importance and its various qualitative and quantitative methods. To understand the concept of Capacity planning, Aggregate planning and assembly line balancing. To understand the concept of inventory, classification of inventory and reasons for keeping inventory. Also understand about what the economic order quantity is and how to calculate it. To understand the concept of Automation and its types, Group Technology cells and the concept of MRP-I, MRP-II

Course Outcomes:

Upon course completion, the students will be able to:

1. *To gain an understanding and appreciation of the principles and applications relevant to the planning, design, and operations of manufacturing/service firms.*
2. *To develop skills necessary to effectively analyze and synthesize the many inter-relationships inherent in complex socio-economic productive systems.*
3. *To reinforce analytical skills already learned, and build on these skills to further increase your "portfolio" of useful analytical tools for operations tasks.*
4. *To gain some ability to recognize situations in a production system environment that suggests the use of certain quantitative methods to assist in decision making on operations management and strategy.*
5. *To understand how Enterprise Resource Planning and MRPII systems are used in managing operations*

UNIT – I Introduction to Operations Management:

Production Definition - Types of production systems-Job order, Batch & continuous. Productivity - Definition, Measurement, Factors affecting productivity. Plant layout - Definition, Objectives, Factors Influencing Plant layout. Types of plant layouts - Product, Process, Fixed Position, Combination. Functions of production planning and control.

UNIT - II Planning for Production:

MRP - Definition, Objectives, System, Simple calculations. Demand forecasting techniques - (i.e., least square method, moving average method, Exponential smoothing method).

Single Machine Scheduling: Priority rules - SPT, EDD, FCFS. Terminology - Completion time, Flow time, Tardiness, Lateness, Mean Completion Time, Mean Tardiness. Simple Problems.

UNIT - III Inventory Management:

Inventory management - Functions of inventories - relevant inventory costs - ABC analysis - VED analysis - EOQ model (Purchase and production models without shortages) - Singe and multiple Price breaks without shortages-Simple problems on above concepts.

UNIT - IV Automation:

Definition, Applications, Advantages, Disadvantages.Types of automation - Fixed, Programmable, Flexible. Design of GT cells formation using ROC Algorithms - Clasification of control systems.

UNIT - V Line Balancing:

Definition, Terminology, Line balancing techniques (Rank positional weightage method), Problems on line balancing. Aggregate planning - Definition, Pure Stratagies, Formulation of Aggregate planning problem as a Transportation problem.

EE319 LINEAR CONTROL SYSTEMS

(Interdisciplinary Subject)

Course Description & Objectives:

This course is to explore the modeling of linear dynamic systems via differential equations and transfer functions utilizing input-output representations; analysis of control systems in the time and frequency domains and using transfer function and state-space methods

Course Outcomes:

1. *Able to formulate mathematical models of physical systems and represent them in block diagrams and signal flow graphs*
2. *Able to analyze the words Transient & Steady State Performance of a system.*
3. *Able to understand the stability of an Electrical, Electronics and other physical systems*
4. *Able to Design controllers, compensators and control systems*

UNIT - I Introduction:

Concepts of Control Systems - Open Loop and closed loop control systems and their differences - Different examples of control systems - Clasification of control systems.

Mathematical Models of Physical Systems : Differentical equations - transfer functions and block diagram representation of systems considering electrical systems as examples Block diagram algebra -Representation by Signal flow graph - reduction using Mason’s gain formula - translational and rotational mechanical systems.

UNIT - II Feed-Back Characteristics:

What is Feedback? Effects of feedback - reduction of parameter variations by use of feedback-Control over system dynamics - by the use of feedback.

Elements of Control Systems : DC Servo motor - AC Servo motor - Synchro transmitter and Receiver

UNIT - III Time Response Analysis:

Standard test signals - Time response of first order systems - Characteristic Equation of Feedback control systems, Transient response of second order systems - Time domain specifications - Steady state response - Steady state errors and error constant

Concepts of stability : The concept of stability, Routh stability criterion

UNIT - IV Root Locus Technique:

The root locus concept - construction of root loci

Frequency Response Analysis : Introduction, Frequency domain specifications - Bode diagrams - Determination of Frequency domain specifications from the Bode Diagram - Phase margin

and Gain margin - Stability Analysis from Bode Plots. Polar Plots, Nyquist Plots and Nyquist stability criterion

UNIT - V Design and Compensation Technique:

Introduction and Preliminary design considerations - Lead, Lag, Lead-lag. PID controller.

State Space Analysis of Continuous Systems : Concepts of state, state variables and state model, derivation of state models from block diagrams, Diagonalization - Solving the Time Invariant state Equations - State Transition Matrix.

EE321 DIGITAL ELECTRONICS CIRCUITS

(Interdisciplinary Subject)

Course Description & Objectives:

As part of this course, students:
To introduce the concepts and techniques associated with the number systems and codes. To minimize the logical expressions using Boolean postulates. To design various combinational and sequential circuits. To provide with an Sufficient Number of applications for the techniques and mathematics used in this course.

Course Outcomes:

Upon successful completion of this course, students should be able to:

1. *Determine the philosophy of number systems and codes.*
2. *Simplify the logic expressions using Boolean laws and postulates and design them by using logic gates.*
3. *Minimize the logic expressions using map method and tabular method.*
4. *Design of combinational logic circuits using conventional gates.*
5. *Design of sequential logic circuits.*
6. *Knowledge of the nomenclature and technology in the area of memory devices: ROM, RAM, PROM and logic families like CMOS and TTL.*

UNIT-1 Number System:

Binary arithmetic (Addition, subtraction, multiplication, division), octal number system, hexadecimal number system, 1's and 2's complement. Signed numbers, EX-3, gray code alphanumeric code, EBCDIC, ASCII,, Error detection & correction, parity, 7- bit hamming

UNIT-II Logic gates and Minimization:

Basic gates, Universal gates, and their truth tables, postulates of Boolean algebra, De-Morgan's theorem
Min term and Max term representation of logical function, Minimization using K-map- Don't care condition, Quinn Mc-clusky method for minimization

UNIT-III Combinational Logic

half and full adders, parallel adder, subs tractor, decoder (BCD to Seven segment), Encoder, Multiplexer, Demultiplexer, parity generation & checking, Look ahead carry generator

UNIT-IV Sequential Logic:
Sequential circuits, flip-flops (SR,D,T, JK, Master-slave), timing specifications, asynchronous and synchronous counters-up/down counters. Registers , serial in serial out shift registers.

UNIT-V Memory:
RAM, ROM,PROM, EPROM and Flash memory, Introduction to Cache memory Logic Families: Logic levels, propagation delay time, power dissipation fan-out and fan-in, noise margin, Comparison of logic families and their characteristics. TTL (NAND, NOT, TOTEMPOLE), CMOS (NOR,NOT and NAND) integrated circuits .

Course Description and Objectives:

It is aimed to offer various analytical as well as numerical methods to solve first and second order ordinary differential equations; to impart the knowledge of partial differentiation; to acquaint with the various methods to solve first and second order partial differential equations; to make the student familiar with applications of first order ordinary differential equations. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- recognise and solve different types of first order ordinary differential equations.
- find the complementary functions and particular integral of second and higher order ordinary differential equations with constant coefficients.
- apply the knowledge of ordinary differential equations in some instances.
- solve ordinary differential equations, with initial conditions, numerically.
- find the local maxima/minima of given function of two variables.
- eliminate arbitrary constants/functions from given relations to form partial differential equations.
- solve linear and non-linear partial differential equations of standard types.
- classify second order partial differential equations and solve them.

SKILLS:

✓ *Solve given differential equation by suitable method.*

✓ *Compute numerical solutions of differential equation by apt method.*

✓ *Compute maxima/minima of given function.*

✓ *Solve given partial differential equation by appropriate method.*

ACTIVITIES:

- *Differentiate methods to solve given differential equation.*
- *Compute numerical solutions to differential equation and compare the result with MATLAB output.*
- *Compute maxima/minima of given function.*
- *Differentiate methods to solve given partial differential equation.*
- *Estimation of acoustic impedance of a given material.*

UNIT - 1 **L-9, T-3**

FIRST ORDER DIFFERENTIAL EQUATIONS: Variable separable, Homogeneous differential equations, Linear differential equations, Bernoulli's differential equations, Exact and non-exact differential equations.

UNIT - 2 **L-9, T-3**

SECOND ORDER DIFFERENTIAL EQUATIONS: Linear differential equations with constant coefficients, Homogeneous differential equations of second and higher order, Methods to find particular integral when RHS is of the form - e^{ax}, sinax, cosax and x^n.

UNIT - 3 **L-9, T-3**

APPLICATIONS OF FIRST ORDER DIFFERENTIAL EQUATIONS: Orthogonal trajectories (including polar form), Newton's law of cooling, Law of natural growth and decay.

NUMERICAL METHODS TO SOLVE DIFFERENTIAL EQUATIONS: Taylor series method, Picard's method, Euler's and modified Euler's method, Runge-Kutta method.

UNIT - 4 **L-9, T-3**

MAXIMA/MINIMA OF FUNCTIONS OF TWO VARIABLES: Review of partial differentiation - Partial derivatives, Partial derivatives of higher order; Homogeneous function, Euler's theorem, Total differential coefficient, Maxima and Minima of a function of two variables, Conditions for extreme values, Lagrange method of undetermined multipliers.

JACOBIANS : Definition, Properties, Jacobian of implicit functions.

UNIT - 5 **L-9, T-3**

PARTIAL DIFFERENTIAL EQUATIONS: Formation of partial differential equations, Linear (Lagrange) equations, Method of multipliers, Non-linear partial differential equations (Types), Charpit's method, Second order linear equations with constant coefficients only, Classifications, Rules to find complimentary function and particular integral (special cases).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Basic mathematical operations using MATLAB.
2. Solving simple expressions.
3. Limits.
4. Continuity.
5. Symbolic differentiation.
6. Symbolic integration.
7. Plotting of curves.
8. Plotting of surfaces.
9. Maxima & minima of functions of one variable.
10. Maxima & minima of functions of two variable.
11. Solving first order O.D.E.
12. Euler's Method and R-K Method.

16HS102 ENGINEERING PHYSICS

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	10	-	10

Course Description and Objectives:

Technology is the experimental information for the physicist, where the theories can be tested. Recent technical developments have been the results of collaboration of physicists and engineers.

Study of engineering physics is a unique opportunity to learn the fundamental concepts of physics and apply this knowledge to both scientific and engineering problems.

The present course deals with various fields such as Lasers, Optical fibers, Photonics, Nano and functional materials, make the students to enrich basic knowledge in various fields of physics and apply the same in engineering fields.

Course Outcomes:

The student will be able to:

- understand the applications of ultrasonics and to calculate the velocity of ultrasonic waves in liquids.
- acquire basic knowledge in Non-destructive techniques.
- understand basic concepts of laser and optical fiber which help in designing and developing new devices in emerging fields.
- grasp the basics of quantum mechanics.
- understand the fabrication of solar devices.
- use nano science and technology for innovative and compact design.
- demonstrate synthesis, properties and applications of nanomaterials and functional materials.

SKILLS:

- ✓ *Determine the velocity of ultrasonics in a given liquid using interferometer.*
- ✓ *Study the wavelengths of light sources and lasers.*
- ✓ *Estimate the efficiency of a given solar cell.*
- ✓ *Learn about the type of the optical fiber and its ability to propagate light waves from its numerical aperture.*
- ✓ *Know voltage – current characteristics of a given light emitting diode.*

UNIT - 1 **L-9**

ULTRASONICS: Introduction, Production of ultrasonic waves - Piezoelectric method; Properties of ultrasonic waves, Types of ultrasonic waves, Determination of velocity of ultrasonic waves in solids and liquids, SONAR - Medical applications.

NON-DESTRUCTIVE TESTING: Introduction, Types, Visual inspection, Liquid penetrate testing, Ultrasonic Testing Systems, X - Ray radiography.

UNIT - 2 **L-9**

LASERS: Characteristics of laser light, Spontaneous and Stimulated emission of radiation, He-Ne laser, CO_2 laser, Semiconductor laser, Applications.

HOLOGRAPHY: Holography and applications.

FIBER OPTICS: Principle of optical fiber, Acceptance angle, Numerical aperture, Types of fibers, Dispersion and attenuation in optical fibers, Optical fiber communication system, Fiber optic sensors.

UNIT - 3 **L-9**

QUANTUM MECHANICS: Introduction, Matter waves, Schroedinger's time independent wave equation, Physical significance of the wave function, Particle in one dimensional potential well, Tunneling phenomenon.

FREE ELECTRON THEORY OF METALS: Introduction, Classical free electron theory, Electrical conductivity of metal, Quantum free electron theory, Fermi - Dirac distribution function and its variation with temperature.

PARTICLE ACCELERATORS: Introduction, Cyclotron, Synchrocyclotron, Betatron and applications.

UNIT - 4 **L-9**

SOLAR ENERGY: Solar radiation, Photovoltaic effect, Solar cells, Efficiency of solar cell, Solar thermal energy conversion systems.

PHOTONICS: LED, LCD, Photo conducting materials, Photo detectors, Photonic crystals, Non- linear optical behaviour of materials, Applications.

UNIT - 5 **L-9**

NANO MATERIALS: Introduction, Fabrication of nano materials - Ball milling - Sol-Gel method; Physical and chemical properties of nano materials, Applications.

FUNCTIONAL MATERIALS: Smart materials, Shape memory alloys, Chromic materials (Thermo, Photo and electro), Metallic glasses, Advanced ceramics, Composites, Fiber reinforced plastics/metals, Biomaterials.

TEXT BOOKS:

1. V.Rajendran, "Engineering Physics", 7th edition, McGraw Hill Education (India) Pvt. Ltd., 2014.
2. D.K. Bhattacharya and Poonam Tandon, "Engineering Physics", Oxford University Press, 2015.

REFERENCE BOOKS :

1. M.R. Srinivasan, "Engineering Physics", 1st edition, New Age International Publishers, 2008.
2. M.N. Avadhanulu & P.G. Kshirsagar, "Engineering Physics", 1st edition, Chand and Company Ltd., 1992.
3. Sukhatme S.P., "Solar Energy", 2nd edition, TMH publication, 2005.
4. Arumugam "Materials Science", 3rd edition, Anuradha Publications, 2002.

ACTIVITIES:

- *Estimation of acoustic impedance of a given material.*
- *Measurement of distances using ultrasonic range finder.*
- *Study of linear density of yarn/ fibre using Melde's experiment.*
- *Determination of refractive index of a given liquid using laser.*
- *Find the height of a room using laser.*
- *Identify the type of semi-conductor using Hall effect.*
- *Study of numerical aperture of optical fibres made of different materials.*
- *Design of solar panel to obtain required voltage.*
- *Evaluation of thermal conductivity of materials.*
- *Measure the temperature using thermo couple.*

16HS105 TECHNICAL ENGLISH COMMUNICATION

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	15	5	6	4	5

Course Description and Objectives :

To introduce students the specific use of English for the purpose of Technical Communication that would strengthen their skills in the areas of writing and speaking and thereby enable them to function effectively in their professional sphere. The objective of this course is to direct the students towards developing their technical writing skills in particular and overall language proficiency in general. It will be done by making students peruse good samples of technical writing covering a wide range of contemporary issues relevant to the engineering profession. Students will, also be revisiting, the fundamentals of grammar to get trained on use of standard English.

Course Outcomes:

The student will be able to:

- acquire an understanding of the rules of grammar.
- strengthen their reading and listening comprehension skills to follow the academic discourse in the engineering classroom.
- have a command of basic vocabulary related to different subject areas.
- have a grasp on the mechanics of writing and express their ideas through construction of simple texts.
- attain language proficiency to participate in the classroom discussions.

SKILLS:

✓ *Apply different sub skills like skimming, scanning, reading for information, reading for inference etc to understand different kinds of text.*

✓ *Apply different sub skills like top down, bottom up approaches to listening, and understand phonetic and phonological features of the English language to deconstruct long spoken discourses.*

✓ *Use functional vocabulary relevant to subject areas like environment, tourism, engineering, technology and media to express ideas lucidly.*

✓ *Use appropriate sentence structure, cohesive devices and diction to construct simple text in writing and regular correspondence like e-mails, letters etc.*

✓ *Capture and understand key points during class room discourses through applying sub skills of writing like note-making, paraphrasing and summarizing.*

UNIT - 1 **L-9**

- Text : **ENVIRONMENTAL CONSCIOUSNESS**

  (Climate Change, Green Cover, Pollution, Renewable vs. Non renewable energy sources (from Energy Unit)
- Grammar : Articles, Prepositions, Sentence types and construction
- Vocabulary : Root, Prefixes, Suffixes
- Composition : Paragraph writing (Descriptive and narrative)
- Laboratory

  Practice : Introduction to phonetics (Organs of Speech, Consonants, Vowels and Diphthongs, Syllable, Stress and Intonation)

UNIT - 2 **L-9**

- Text : **EMERGING TECHNOLOGIES**
  (Solar power, Cloud computing, Nanotechnology, Wind energy (to be covered from Energy unit))
- Grammar : Time and tense (Present-past-future; Helping verbs, Modals)
- Vocabulary : Synonyms, Antonyms
- Composition : Letter writing (Informal)
- Laboratory
  Practice : Grammar Practice (Speaking of past, present and future)

UNIT - 3 **L-9**

- Text : **TRAVEL AND TOURISM**
  (Advantages and disadvantages of travel-tourism, Atithi devo bhava, Tourism in India)
- Grammar : Subject-Verb agreement, Sentence construction
- Vocabulary : Idioms and phrases
- Composition : Letter writing (Formal)
- Laboratory
  Practice : Situational conversations – Role - Plays (Introducing, Greeting, Enquiring, Informing, Requesting, Inviting)

UNIT - 4 **L-9**

- Text : **ENGINEERING ETHICS**
  (Challenger disaster, Biotechnology, Genetic engineering, Protection from natural calamities, How pertinent is the nuclear option? An environment of energy (from Energy Unit)) Avoiding sexist language (Gender Sensitization)
- Grammar : Sentence transformation (Degrees, Voice, Speech and Synthesis)
- Vocabulary : Phrasal verbs

  Composition : Note-making, Text, Nandan Nilekani's In Search of Our Energy Solutions

ACTIVITIES:

- *Doing phonetic transcription of selected words from the list provided using talking dictionaries of AHD and CALD.*
- *Completing graded grammar exercises in Rosetta Stone.*
- *Completing graded listening and reading comprehension exercises in Rosetta Stone.*
- *Watching TED videos and making notes.*
- *Watching TED videos to paraphrase and summarize.*
- *Ad- making.*
- *Preparing brochure.*
- *Dialogue writing followed by role play.*
- *Poster designing.*
- *Team presentation with PPTs and Group Discussion.*

(from Energy Unit) Summarizing, Text on “Flight from conversation” (New York Times)

- Laboratory Practice : Situational conversations, Role-Plays (Emotions, Directions, Descriptions, Agreements, Refusals, Suggestions)

UNIT - 5 **L-9**

- Text : **MEDIA MATTERS**
  (History of media, Language and media, Milestones in media, Manipulation by Media, Thousands march against nuclear power in Tokyo (from Energy Unit), Entertainment media, Interviews)
- Grammar : Common errors
- Vocabulary : One-word substitutes
- Composition : E-mail – Short message service (SMS), Writing advertisements, Reporting; Social media - Blogging, Facebook, Twitter (acceptable and non acceptable content)
- Laboratory Practice : Group discussions – (Topics from Energy Unit), Dumping of nuclear wastes, Exploration of eco-friendly energy options, Lifting of subsidies on petrol, Diesel, LPG etc)

16CS101 BASICS OF COMPUTERS AND INTERNET

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	-

Course Description and Objectives:

This course provides students with a working knowledge of the terminology, processes, and components associated with Computers and Internet. Students will get exposure to Building blocks of Computers, Operating Systems, Application software, Networking, Internet, World Wide Web, Security, Maintenance, Information Systems, and the application development processes.

Course Outcomes:

The student will be able to:

- understand the terms and concepts of Computer Science and Information Technology (hardware, software, networking, security, Internet/Web, and Technologies).
- use the products and services of computers.
- use Internet/Web services as a resource for developing shared applications.
- install different operating systems and application software.

SKILLS:

✓ *Assemble and disassemble the personal computer system.*

✓ *Install different desktop operating systems.*

✓ *Use the basic text processing, simple data analysis and data presentation tools.*

✓ *Configure network parameters.*

✓ *Secure the personal computer and information from various external threats.*

ACTIVITIES:

- *Prepare a report on various generations of computers and its peripherals.*
- *Disassembling and assembling of a personal computer system.*
- *Install the Linux operating system and other software required in a personal computer system.*
- *Connect the system to an Ethernet and configure the same.*
- *Prepare an MS Word Document.*
- *Prepare a spread sheet with various mathematical operations, charts and sorting etc.*
- *Make a report on power point presentation for the given topic.*

UNIT - 1 **L-10**

COMPUTING SYSTEMS: Introduction to computer, Computers for individuals, Importance of computers, Parts of computer system, Memory devices, Input and output devices, Types of monitors, Types of printers, Number systems, Bits and bytes, Text codes and types of processors.

UNIT - 2 **L-10**

OPERATING SYSTEMS: Types of operating systems, User interfaces, PC operating systems, Network operating systems, Types of software, Programming languages, Compiler and interpreter, Program control flow and algorithm.

UNIT - 3 **L-8**

NETWORKS AND DATABASES: Networking basics, Uses of network, Types of networks, Network hardware, Introduction to data bases and database management systems.

UNIT - 4 **L-8**

INTERNET AND WWW: Internet's services, World wide web, Browser setups, Using search engine, Email and other internet applications.

UNIT - 5 **L-9**

CYBER SECURITY: The need of computer security, Basic security concepts, Threats of users, Online spying tools, Threats to data, Cybercrime, Protective measures.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- know the usage of the computer systems.
- setup the IDEs for the computer programming languages.
- get exposure on office automation tools like Microsoft Word, Excel, and power point.
- identify the different computer system and data threats and also protect them by installing antivirus software.

LIST OF EXPERIMENTS Total hours-30

1. Demonstrate the Personal Computer Peripherals and get a report on each peripheral.
2. Demonstrate the Personal computer assembling procedure and do the same.
3. Install wide varieties of free and open source operating systems.
4. Demonstrate Network Interface Card (NIC) configuration and any internet browsers options setup.
5. Demonstrate the Java Development Kit (JDK) installation and environmental variable (PATH) setup.
6. Demonstrate the following experiments using Office automation tools.
   a. Text formatting and table.
   b. Mathematical equations.

- c. Watermarking using Analysis tool.
- d. Calculate student mark details.
- e. Create four types of charts.
- f. Import external data, sort & filter using Power Point tool.
- g. Create text and images with effects.
- h. Create animation and sound effects.

7. Demonstrate the installation of anti-virus software to detect different types of virus programs.

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	5

Course Description and Objectives:

This course is aimed at offering fundamental concepts of programming language to the students. It starts with the basics of C-programming and deals with the structure and various attributes required for writing a 'C' program. It also introduces various operators and control statements used in programming. Then it switches to functions and arrays. It goes on with strings, pointers, files & the user defined data types. As a first-level course in computer science, it forms the basis to understand usage of various attributes in writing a program.

Course Outcomes:

The student will be able to :

- understand the basic terminology used in computer programming to write, compile & debug programs in 'C' language.
- use different data types to design programs involving decisions, loops and functions.
- understand the allocation and Usage of dynamic memory.
- understand the usage of files & structures.

SKILLS:

✓ *Identify suitable data types for an application.*

✓ *Apply control statements for decision making problems.*

✓ *Use multidimension array for matrix application.*

✓ *Design a program to calculate average of a class.*

✓ *Analyze the difference between static & dynamic memory allocation.*

UNIT - 1 **L-10, T-3**

INTRODUCTION TO C PROGRAMMING: Structure of C program - Comments, Processor statement, Function header statement, Variable declaration statement and Executable statement; C character set, Constants, Identifiers, Operators, Punctuations, Keywords, Modifiers, Identifiers, Variables, C scopes, Basic data types, Type qualifiers, Storage classes, Reading and writing characters, Formatted I/O.

UNIT - 2 **L-9, T-3**

OPERATORS AND CONTROL STATEMENTS: Operators - Assignment, Arithmetic, Relational, Logical, Bitwise, Ternary, Address, Indirection, Sizeof, Dot, Arrow, Parentheses operators; Expressions - Operator precedence, Associative rules; Control statements - Category of statements, Selection, Iteration, Jump, Label, Expression and Block.

UNIT - 3 **L-9, T-3**

FUNCTIONS AND ARRAYS: Function - Declaration, Prototype, Definition, Calling by value and call by address, Standard library functions and Recursive functions; Array - Declaration, Initialization, Reading, Writing, Accessing and Passing as a parameter to functions, 2D-arrays, Multidimensional arrays.

UNIT - 4 **L-9, T-3**

STRINGS AND POINTERS: Strings - Declaration, String library functions, Array of strings, Command line arguments; Pointers - Declaration, Initializing pointers, Multiple indirection, Relationship between arrays and pointers; Scaling up - Array of arrays, Array of pointers, Pointer to a pointer, Pointer to an array; Pointer to functions, Dynamic memory allocation functions.

UNIT - 5 **L-8, T-3**

STRUCTURES AND FILES: Structures - Declaration, Initialization and accessing, Array of structures and passing structures to functions, Structure pointers, Arrays and structures within structures, Unions, Bit-fields, Types and enumerations; Files - I/O and processing operations on text and binary files; Pre-processor directives.

LABORATORY EXPERIMENTS

Course Outcomes:

Upon successful completion of this course, the student will be able to:

- write, compile and debug programs in C language.
- formulate problems and implement algorithms in C.
- develop programming components that efficiently solve computing problems in real-world.

LIST OF EXPERIMENTS Total hours-30

1. Compute the factors of a number.
2. Compute the average of 'n' numbers.
3. Find whether a number is palindrome or not.
4. Find whether a number is a power of 2 or not.
5. Compute the factorial of a number.
6. Implement any kind of operation (+,-,*,/,%) using a switch case.
7. Swap two values useing call by value and call by reference.

ACTIVITIES:

- *Implement matrix operations.*
- *Implement malloc and calloc functions.*
- *Copy the content of one file into the other.*
- *Implement string manipulations functions.*

8. Using structure of arrays.
9. Find the reversal of a number.
10. Find the frequency of each number in the array.
11. Which takes 0's & 1's as input and the array should consist of all 0's first and then 1's.
12. Copy the first 10 words of a file into the other file.
13. Count the number of words in a file.
14. Create a structure which stores the student's information in a class.
15. Reverse the contents of the array.
16. Implement pointer of pointers.
17. Give n^{th} term of the Fibonacci number.
18. Find the factorial of a number using recursion.
19. Find the number of vowels in a file.
20. Access the structure and union members.

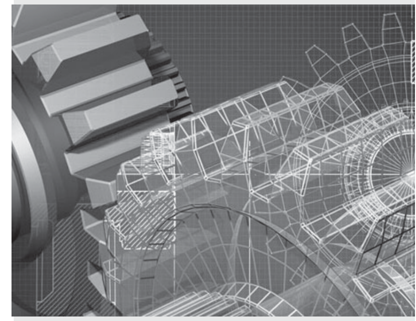
16EE101 BASICS OF ENGINEERING PRODUCTS



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	5	40	-	8	5	-

Course Description and Objectives:

This course enables the students to understand the basics of civil, mechanical, electrical and electronics systems and components used in day-to-day life. It deals with construction materials, power generation principles and working of a few commonly used household appliances. Besides, the student will be able to identify/appreciate various concepts, service and maintainance of engineering products.

Course Outcomes:

The student will be able to:

- gain knowledge and hands-on experience on various engineering products.
- install, operate, maintain and troubleshoot basic mechanical, electrical and electronic appliances.
- understand the concept of conservation of energy.
- gain awareness on choosing appropriate construction materials.

SKILLS:

✓ *Identify UPS requirements for a given load.*

✓ *Provide a Lighting scheme for specific working environment.*

✓ *Design a composition of Heating element for a particular application.*

✓ *Trouble shoot issues relating to Immersion Heater and Induction Heater.*

✓ *Provide an earthing for Domestic Outlet.*

✓ *Select, Configure and maintain a few engineering appliances. Such as TV, Radio, Telephone, Mobile phone, Wifi Router, Micro oven, PA system etc.*

ACTIVITIES:

- *Trouble shooting of immersion heater and induction heaters.*
- *Disassembe and Assembe the Domestic Appliances such as Mixer Grinder, Fan etc.,*
- *Provide Earthing for Domestic Outlet.*
- *Design the Electric Wiring system for a prototype house.*
- *Design the UPS for a defined load.*
- *Practice assembly of a FM radio.*
- *Configure a Wifi Router for required number of users.*

UNIT - 1 **L-9**

WORKING PRINCIPLE OF AC, REFRIGERATOR, PUMPS, IC ENGINES AND SCREW JACK: Working principle of Air - Conditioner and Refrigerator, Components, Assembly and disassembly; Working principle of Centrifugal and Reciprocating pumps - Types, Parts and applications, Working principle of Screw jack and its components, Working principle of IC engines- 2 stroke and 4 stroke.

UNIT - 2 **L-10**

BRICKS: General, Qualities and Classification of bricks, Tests for bricks, Size and Weight of bricks,

Timber - Definition, Qualities of good timber, Decay of timber and Advantages of timber in construction.

CEMENTS: Types and composition of Cement, Setting of cement, Tests for physical properties of

cement, Different grades of cement.

AGGREGATES: Classification of aggregates, Source, Size and Shape of aggregates, Tests for aggregates.

STEEL: Types of steel, Physical properties and Mechanical properties of steel, Simple layout design, Paints, Tiles, fittings, Ventilation, Furniture and green house aspects.

UNIT - 3 **L-8**

ELECTRIC ENERGY SYSTEMS: Overview of Power System Structure, Conventional and Non Conventional Generations, Types of Turbines, Generators, Substations, Towers, Earthing procedure, Protection schemes, Single Phase and Three Phase Systems, Methods of Electrical Wiring Systems, Wiring procedure and calculations, Wiring methods, Un-Interruptible Power Supply (UPS), Components in UPS, Its functionality, Calculation of ratings for UPS components to a specific load.

UNIT - 4 **L-10**

LIGHT: Light Energy, Evolution of Light sources, Working of Incandescent, Fluorescent, MV, SV and LED Lamps, Comparison and Applications.

HEAT: Heat Energy, Modes of Heat Transfer, Resistance and Induction Heating, Comparison and applications.

MOTOR: Electric Motors, Classification, Construction and working principles of motors used in Domestic applications, Mixer grinder, Ceiling and exhaust fan, Hair dryer, Washing machine, Water pump, Air coolers, Vacum cleaner, Computer cooling motor, Electric bike.

UNIT - 5 **L-8**

HOUSE HOLD ELECTRONIC APPLIANCES: Working principles of television, Radio, Remote control, Telephone, Microwave oven, Cell phone, PA system, Induction stove, WiFi router and DTH.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

Demonstration of Modelling / functioning / disassembly / assembly / fault rectification / understanding of the following.

1. Air-conditioners and Refrigerators
2. 2 Stroke and 4 Stroke Engines
3. Reciprocating Pumps
4. Power Screw Jack
5. Size and Water absorption capacity of Bricks
6. Initial and final setting time of Cement
7. Toughness value of coarse aggregates
8. Bulking of Sand
9. Earthing Schemes
10. Electric Wiring
11. UPS system
12. Immersion Heater, Induction Heater and Iron Box
13. Ceiling Fan and Mixer
14. Television
15 Radio
16. Remote Control
17. Telephone
18. Fax Machine
19. Mobile Phone
20. PA System

TEXT BOOKS:

16HS104 ENGLISH PROFICIENCY AND COMMUNICATION SKILLS

Hours Per Week :

L	T	P	C
0	-	2	1

Total Hours :

L	T	P
0	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

To equip the students with Functional English by exposing them to a wide range of language use in different contexts and thereby encourage them to use the language comfortably in real life situations. The objective of this course is to strengthen the comprehension skills of listening and reading by acquiring adequate vocabulary through perusing authentic materials gathered from news papers, journals and other mass communication media.

Course Outcomes:

The student will be able to:

- use functional English to speak and express themselves in different social contexts
- write simple letters, narratives, factual reports and descriptive passages for both academic and non-academic purposes in English.
- gain proficiency to undergo Preliminary English Test (PET), an Intermediate Level English Certification Test administered by Cambridge English Language Assessment, UK.

SKILLS:

- ✓ *Use appropriate words in right order for effective sentence formation, and writing short texts.*
- ✓ *Read and extract information from different texts and draw inferences by understanding elements like tone and transitional words.*
- ✓ *Understand short and long spoken discourses through analysis of elements like stress and intonation.*
- ✓ *Articulate clearly thoughts and ideas on simple every day topics.*

UNIT - 1 **P-6**

FUNCTIONS: Introducing Self/Others, Expressing needs/feelings/opinions (SWOT Analysis)

SKILL FOCUS:

Reading – Understanding factual information

Writing – Word order and sentence formation

Listening – Decoding for meaning following elements of stress, Intonation and accent

Speaking – Articulating syllables clearly, Speaking fluently with correct pronunciation

Vocabulary – Discerning to use right word for the given context

Grammar – Spellings, Use of Nouns, Adjectives, Verbs, Prepositions in the sentence structure

PRACTICE: Objective PET Units 1 - 6

UNIT - 2 **P-6**

FUNCTIONS: Defining; Describing People, Places, Things and Process.

SKILL FOCUS:

Reading – Inferences from sentences and short messages, True or False

Writing – Rewording, Sentence transformation, Convincing

Listening – Understanding the short messages and conversations

Speaking – Role-plays, Short conversations

Vocabulary / Grammar – Use of Adjectives/Adverbs, Comparatives and Superlatives

PRACTICE: Objective PET Units 7 – 12

UNIT - 3 **P-6**

FUNCTIONS: Describing Spatial and Temporal Relations, Giving Directions/Instructions

SKILL FOCUS:

Reading – Reading between the lines, Inferences, True/False

Writing – Developing hints, Writing short messages/paragraphs

Listening – Searching for factual information, Gap filling

Speaking – Snap Talks, JAM, Elocution

Vocabulary / Grammar – Prepositions, Phrasal Verbs, PET word list

PRACTICE: Objective PET Units 13 - 18

UNIT - 4 **P-6**

FUNCTIONS: Narrating, Predicting, Negotiating, Planning

SKILL FOCUS:

ACTIVITIES:

- *SWOT Analysis.*
- *Snap talks.*
- *Spell Bee.*
- *Short conversations.*
- *Role play.*
- *Quiz.*
- *Elocution.*
- *JAM.*
- *Group. Discussion Debate.*
- *Team presentations.*

Reading – Reading for evaluation and appreciation, Comprehension

Writing – Letters, e-mails, 7 C's

Listening – Following long conversations / Interviews

Speaking – Discussions, Debate, Descriptions

Vocabulary / Grammar – Modals, Conditionals, Verb forms (Time and Tense)

PRACTICE: Objective PET Units 19 – 24

UNIT - 5 **P-6**

FUNCTIONS: Requesting, Denying, Suggesting, Persuading

SKILL FOCUS:

Reading – Understanding factual information

Writing – Short Stories, Explanatory Paragraphs

Listening – Inferences from long speeches/conversations

Speaking – Announcements, Presentations

Vocabulary / Grammar - Punctuation, Cloze tests

PRACTICE: Objective PET Units 25 – 30

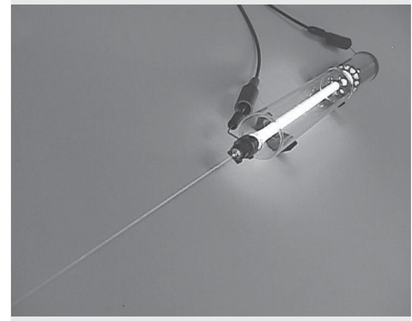
TEXT BOOK:

1. Louise Hashemi and Barbara Thomas, "Objective PET", Student's Book with Answers, 2nd edition, Cambridge University Press, 2015.

REFERENCE BOOKS :

1. Cambridge Preliminary English Test Without Answers 8.
2. Annette Capel and Rosemary Nixon, "Introduction to PET", Oxford University Press.

16HS110 ENGINEERING PHYSICS LABORATORY



Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course objectives and Description:

This lab is intended to make the students realize the theoretical concepts of physics having hands on experience in conducting the experiments.The students have to perform at least ten from the list of experiments.

Course Outcomes:

The student will be able to:

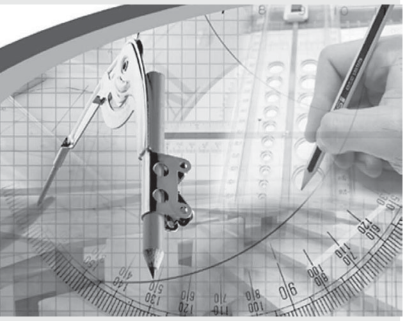
- realize the concept of resonance by conducting the experiments of AC sonometer and Melde's experiment.
- acquire the knowledge on magnetic field theory and thermal conductivity by conducting experiments, field along the axis of a circular coil and thermal conductivity of bad conductor
- understand the concepts of light by conducting the experiments of determination of wave length, numerical aperture of an optical fibre and also from V–I characteristics of Solar cell and LED.

LIST OF EXPERIMENTS

1. Determination of Velocity of ultrasonic waves in liquids.
2. Melde's Experiment - Transverse and Longitudinal modes.
3. Determination of wave length – Helium - Neon laser.
4. Determination of Planck's constant.
5. Determination of Frequency of Alternating current.
6. Field along the axis of a circular coil – Stewart and Gee's apparatus.
7. Band gap of semiconductor.
8. Determination of Hall coefficient.
9. Thermal conductivity of bad conductor - Lee's method.
10. Optical Fibre – Determination of numerical aperture.
11. Solar Cell – Efficiency.
12. Study of V – I characteristics of LED.
13. Seebeck effect - Determination of Seebeck coefficient of a thermo couple.

REFERENCE BOOKS:

1. Jayaraman, "Engineering Physics Laboratory manual", 1st edition, Pearson Education, 2014.
2. Engineering Physics laboratory Manual – Department of Physics, VFSTR University, 2016.



16HS108 ENGINEERING MATHEMATICS – II

Hours Per Week :

L	T	P	C
3	1	2	5

Total Hours :

L	T	P
45	15	30

WA/RA	SSH/HSH	CS	SA	S	BS
10	45	-	-	-	-

Course Description and Objectives:

It is aimed to offer different methods for finding rank of a matrix, solving linear equations using matrices, to compute Eigen values and Eigen vectors, to verify C.H.T and apply it to find power of a matrix. Also, to make the students familiarize with double and triple integrals, to make the student acquainted with the concepts of vector differentiation and integration. To make the student to use different mathematical tools of MATLAB related to above concepts.

Course Outcomes:

The student will be able to:

- carry out the basic operations of matrix algebra.
- use row operations to reduce a matrix to echelon form, normal form.
- determine consistency of a system linear equations.
- compute eigen values and eigen vectors.
- evaluate double integrals and triple integrals.
- evaluate double integrals in polar coordinates.
- utilize Cartesian and polar coordinates to find area.
- understand the concept of gradient, divergance and curl.
- apply vector integral theorems in finding surface and volume integrals.

SKILLS:

- ✓ *Appreciate various methods to find the rank of a matrix.*
- ✓ *Solve given system of linear equations.*
- ✓ *Compute Eigen values and Eigen vectors of a matrix.*
- ✓ *Compute the power of a matrix by suitable method.*
- ✓ *Evaluate Multiple integrals.*
- ✓ *Evaluate surface and volume integrals through vector integral theorems.*

UNIT - 1 **L-9,T-3**

RANK OF MATRIX AND LINEAR EQUATIONS: Rank of a matrix, Normal form, Triangular form, Echelon from, Consistency of system of linear equations, Gauss-Jordan method, Gauss elimination method, Gauss-Siedal method.

UNIT - 2 **L-9,T-3**

EIGEN VALUES AND EIGEN VECTORS: Eigen values, Eigen vectors, Properties (without proofs), Cayley-Hamilton theorem (without proof), Power of a matrix, Diagonalisation of a matrix.

UNIT - 3 **L-9,T-3**

MULTIPLE INTEGRALS: Double integrals, Evaluation, Evaluation in polar coordinates, Change of order of integration, Change of variables, Applications to area in cartesian coordinates and polar coordinates, Triple integrals, Fundamentals, Evaluation of triple integrals.

UNIT - 4 **L-9,T-3**

VECTOR DIFFERENTIATION: Vector function, Differentiation, Scalar and vector point function, Gradient, Normal, Divergence, Directional derivative, Curl, Vector identities.

UNIT - 5 **L-9,T-3**

VECTOR INTEGRATION: Line integral, Surface integral, Volume integral, Green's theorem, Stoke's theorem, Gauss theorem of divesergence (without proofs).

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours-30

1. Matrix Algebra.
2. Rank of a matrix.
3. System of equations (Direct method).
4. System of equations (Cramer's Rule).
5. System of equations (matrix inversion method).
6. Eigen values and Eigen vectors of a matrix.
7. Powers of matrix & Cayley-Hamilton Theorem.
8. Vector algebra.
9. Gradient.
10. Divergence.
11. Curl.
12. Multiple Integrals (Area etc).
13. Interpolation.

TEXT BOOKS:

1. H. K. Dass and Rajanish Verma, "Higher Engineering Mathematics", 3rd edition, S. Chand & Co., 2014.
2. B. S. Grewal, "Higher Engineering Mathematics", Khanna Publishers, 44th edition, 2014.
3. Rudra Pratap, "Getting started with Matlab", Oxford University Press, 2009.

REFERENCE BOOKS:

2. B.V.Ramana, "Advanced Engineering Mathematics", 25th reprint, McGraw Hill Education, 2015.
3. R.K.Jain and S.R.K.Iyengar, "Advanced Engineering Mathematics", 2nd edition, Narosa Publishing House, 2007.
4. Erwin Kreyszig, "Advanced Engineering Mathematics", 8th edition, John Wiley & Sons (Asia) Pvt. Ltd., 2001.

ACTIVITIES:

- *Differentiate the methods to find the rank of a matrix.*
- *Solve given system of linear equations and compare with MATLAB output.*
- *Compute Eigen values and Eigen vectors of a matrix and compare with MATLAB output.*
- *Compute the power of a matrix by suitable method.*
- *Evaluate multiple integrals and compare with MATLAB output.*
- *Evaluate surface and volume integrals through vector integral theorems.*

16HS107 ENGINEERING CHEMISTRY

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P
45	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	45	-	10	-	-

Course Description and Objectives:

This course aims to develop fundamental knowledge on new engineering materials and their significance in science and engineering applications. In addition, characterization of materials using basic and advanced experimental techniques is also offered. Besides, analysis of water sample and treatment method for domestic, commercial and industrial applications are also covered.

Course Outcomes:

The student will be able to:

- understand the limitations of using hard water for domestic and industrial purposes.
- choose and apply suitable methods to soften the hard water for industrial and domestic applications.
- understand electrochemistry and its importance for applications such as fuel cells, modern lithium ion batteries etc.
- understand the types of corrosion and their implications followed by their control and prevention methods.
- familiarize the preparation, properties and applications of various polymers.

SKILLS:

✓ *Analyse the total hardness of water sample.*

✓ *Understand the basic principles involved in various batteries.*

✓ *Understand the mechanisms of corrosion and various controlling methods.*

✓ *Synthesize various polymers.*

✓ *Identify the functional groups present in chemical compounds using Infrared and Ultraviolet instruments.*

UNIT - 1 **L-9**

WATER TECHNOLOGY: Introduction, WHO, BIS standards of water, Hardness of water, Determination of hardness by EDTA (Numerical Problems), Disadvantages of hard water, Scales and sludges, Caustic embrittlement, Boiler corrosion, Priming and foaming, Softening methods - Zeolite process, Ion Exchange process; Desalination of brackish water - Reverse osmosis, Electrodialysis.

UNIT - 2 **L-9**

ELECTRO CHEMISTRY: Electrode potential, Electrochemical series, Nernst equation, Reference electrodes, Calomel and standard hydrogen electrode, Ion selective electrode, Glass electrode, Determination of pH using glass electrode; Primary cell, Secondary cell - Lead-acid storage cell, Lithium ion battery; Fuel cells - Hydrogen oxygen, Methanol oxygen.

UNIT - 3 **L-9**

SCIENCE OF CORROSION: Introduction, Dry corrosion, Wet corrosion, Mechanisms of wet corrosion, Bimetallic corrosion, Concentration cell corrosion, Factors influencing the rate of corrosion; Corrosion control methods - Cathodic protection, Electroplating, Electrolessplating, Corrosion inhibitors.

UNIT - 4 **L-9**

POLYMERS: Introduction, Types of polymerization - Preparation, Properties and applications of polyethylene, PVC, Teflon, Bakelite, Urea formaldehyde, Silicones; Rubber, Vulcanization, Synthetic rubbers - Buna-S, Buna-N, Neoprene; Introduction to conducting polymers; Poly thiophene.

UNIT - 5 **L-9**

INSTRUMENTAL TECHNIQUES: Interaction of radiation with matter, UV-Visible spectroscopy - Beer, Lambert's law, Qualitative and quantitative analysis, Block diagram of UV-Visible spectrophotometer, IR spectroscopy - Types of vibrations, Block diagram of IR spectrophotometer.

TEXT BOOKS:

1. P.C Jain and Monica Jain, "Engineering Chemistry", 17th edition, Dhanpat Rai Publications, 2010.
2. Shashi Chavala, "A Text book of Engineering Chemistry Engineering Materials and Applications", 3rd edition, Dhanpat Rai Publications, 2015.

REFERENCE BOOKS:

1. K.S. Maheswaramma and Mridula Chugh, "Engineering Chemistry", 1st edition, Pearson publication, 2015.
2. M.R. Senapati, "Advanced Engineering Chemistry", 2nd edition, Lakshmi Publications, 2006.
3. H. W. Wilard and Demerit, "Instrumental methods of Analysis", 7th edition, CBS Publications,1986.
4. Gurudeep Raj and Chatwal Anand, "Instrumental Methods of Analysis", 5th edition, Himalaya Publications, 2007.

ACTIVITIES:

- *Collect water samples from different villages near VFSTR University and determine the total hardness, and total alkalinity.*
- *Present the water analysis report to the villagers and suggest proper measures to be taken.*
- *Measure the rate of corrosion of iron objects by weight loss method.*
- *Identify some of the functional groups like carboxylicacid, aldehyde and ketones by I.R. Spectroscopy.*
- *Collect water sample from different villages and estimate the fluoride present in the raw water and suggest some steps for the removal of fluoride.*

16ME101 ENGINEERING GRAPHICS

Hours Per Week :

L	T	P	C
1	-	3	3

Total Hours :

L	T	P
15		45

WA/RA	SSH/HSH	CS	SA	S	BS
6	15	-	5	-	-

Course Description and Objectives:

The main aim of this course is to familiarize the students with the conventional concepts of engineering drawing and computer aided applications in various fields. Engineering graphics is an “International language of Engineers”. It is the most effective method of communicating technical ideas in a 2D and 3D format.

Course Outcomes:

The student will be able to:

- sketch engineering objects in the freehand mode.
- create geometric construction with hand tools.
- create dimensions of objects.
- prepare plan and elevation of any pictorial view.
- draw freehand lettering.
- make isometric sketches using graphics.
- draw orthographic multi-view sketches using graphics.

SKILLS:

- ✓ *Draw free hand sketches, layouts, circuit diagrams, plan and elevations.*
- ✓ *Draw geometrical objects like polygons, solids of different types.*
- ✓ *Visualize the objects in real time situations.*
- ✓ *Develop 3D views (isometric views).*

UNIT – 1 **L-3, P-10**

INTRODUCTION TO ENGINEERING DRAWING: Types of lines, Lettering, Dimensioning, Construction of polygon and conics (Ellipse, Parabola and Hyperbola by general method), Ellipse by oblong method.

UNIT – 2 **L-3, P-8**

ORTHOGRAPHIC PROJECTIONS: Principle of projection, Planes of projections, Projections of points, Projection of straight lines, Inclined to one plane and both the planes, Projections of planes, Simple planes, Planes inclined to one reference planes.

UNIT – 3 **L-3, P-8**

PROJECTIONS OF SOLIDS: Projections of prisms, Pyramids, Cylinders, Cones, Solid axis inclined to one plane.

UNIT – 4 **L-3, P-10**

AUTOCAD: Introduction to AutoCAD

ISOMETRIC VIEWS: Isometric drawing of simple objects, Isometric view of prisms, Pyramids, Cone and cylinder, Simple orthographic views into isometric views through AutoCAD.

UNIT – 5 **L-3, P-9**

ORTHOGRAPHIC VIEWS: Conversion of pictorial views into orthographic views through AutoCAD.

TEXT BOOKS:

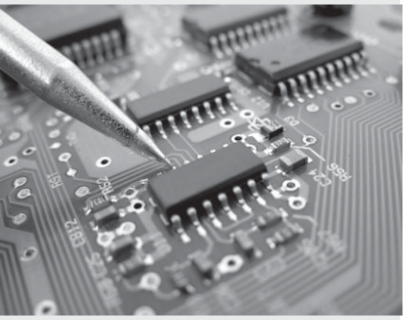
1. N. D. Bhatt, "Engineering Drawing", 53rd edition, Charotar Publication, 2014.
2. Basant Agrawal, C.M.Agrawal, "Engineering Drawing" , 2nd edition, Tata McGraw Hill, 2014.

REFERENCE BOOKS:

1. J. Hole, "Engineering Drawing", 2nd edition, Tata McGraw Hill, 2008.
2. K.L. Narayana, "Engineering drawing", 2nd edition, Scitech Publications, 2008.

ACTIVITIES:

- *Draw line diagram of different machineries.*
- *Draw plan and elevations of buildings and engineering products.*
- *Understand, visualize 3-D components/ products and develop drawings.*
- *Draw different curves used in several engineering applications such as bridges, dams etc.*



16EE102 BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	-	8	5	5

Course Description and Objectives:

This course provides an in-sight into the functioning of basic electrical components like resistor, inductor and capacitor. It deals with the constructional and operational details of both D.C & A.C machines. It also deals with the basic electronic components like P-N Junction Diode, Zener diode, Transistor and their characteristics.

Course Outcomes:

The student will be able to:

- understand the notation and usage of components in electric circuits.
- analyze AC (single and three phase) and DC, AC circuits using different methods and laws.
- operate various electrical machines.
- understand the concepts of semiconductor devices and their operation.

SKILLS:

✓ *Distinguish between linear and nonlinear elements by looking at VI characteristics.*
✓ *Develop a simple loop generator.*
✓ *Design a voltage regulator using Zener diode.*
✓ *Design a half wave rectifier using PN junction diode.*
✓ *Design a full wave rectifier using PN junction diodes.*

UNIT – 1 **L-9**

FUNDAMENTALS OF DC CIRCUITS: Circuit concepts, Concepts of network, Active and passive elements, Voltage and current sources, Concept of linearity and linear network, Unilateral and bilateral elements, R, L and C as linear elements, Ohm's Law, Kirchhoff's Laws - Application to simple series, Parallel circuits, Mesh and nodal analysis of simple resistive circuits (Simple numerical problems).

UNIT – 2 **L-9**

FUNDAMENTALS OF A.C. CIRCUITS: Generation of A.C. voltage - Frequency, Average value, R.M.S. value, Form factor, Peak factor for sinusoidal only, Phasor representation of alternating quantities, Analysis of simple series and parallel A.C. circuits (simple numerical problems).

BALANCED THREE PHASE SYSTEMS: Relation between phase and line quantities of voltages and currents in star and delta connected systems (Elementary treatment only).

UNIT – 3 **L-9**

FUNDAMENTALS OF ELECTROMAGNETISM: Concepts of Magneto motive force, Reluctance, Flux and flux density, Concept of self Inductance and mutual Inductance, Coefficient of coupling (only elementary treatment and Simple numerical problems).

TRANSFORMERS: Principle of operation of single phase transformer, Constructional features, EMF equation (simple numerical problems).

UNIT – 4 **L-9**

DC MACHINES: Constructional details of a D.C. Machine, D.C. Generator, Principle of operation, EMF equation, Types of D.C. generators (simple numerical problems), D.C. Motor, Principle of operation, Torque equation, Types of D.C. motors (simple numerical problems).

A.C MACHINES: Principle of operation of three phase induction motors, Slip ring and squirrel cage motors, Torque equation, Constructional details of synchronous machine.

UNIT – 5 **L-9**

SEMICONDUCTOR DEVICES: Classification of solids based on energy band theory, Intrinsic and Extrinsic semiconductors, P-type and N-type semiconductors, P-N junction diode and its characteristics, Half and Full wave rectifiers, Zener diode and its characteristics, Voltage regulator, Bi polar junction transistor, Operation, Types, Applications.

LABORATORY EXPERIMENTS

Course Outcomes:

The student will be able to:

- apply the ohm's law, KVL and KCL laws to different circuits.
- calculate the power and energy in electric circuits.
- operate and find the transformation ratio of transformer at different loads.
- study and verify the characteristics of semiconductor devices.
- calculate the efficiency of both HWR and FWR.

LIST OF EXPERIMENTS Total hours-30

1. Verification of Ohm's law.
2. Verification of Kirchhoff's current law.
3. Verification of Kirchhoff's voltage law.
4. Measurement of Energy in single phase resistive load circuit.
5. Measurement of Power in single phase resistive load circuit.

ACTIVITIES:

- *Decoding the value of resistors.*
- *Design and fabricate a simple loop permanent magnet generator.*
- *Design and fabricate a simple air cored transformer.*
- *Fabricate full and half wave rectifiers using PN junction diodes.*
- *Fabricate a voltage regulator using Zener diode.*

6. Transformation ratio of a single phase transformer at different loads.
7. Verification of PN junction diode characteristics under both forward and reverse bias.
8. Verification of Zener diode characteristics under both forward and reverse bias.
9. Implementation of Half Wave Rectifier without filter.
10. Implementation of Full Wave Rectifier without filter.

16HS111 ENGINEERING CHEMISTRY LABORATORY

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

Course description and Objectives:

This course is aimed at enlightening the importance of theoretical concepts of chemistry and experimental techniques for characterization of materials.

Course Outcomes:

The student will be able to:

- analyse the total hardness present in water samples.
- determine the total alkalinity of water used in industries.
- acquire the knowledge on polymers used as insulators.
- familiarize advanced techniques in chemical analysis using conductometer and pH meter.

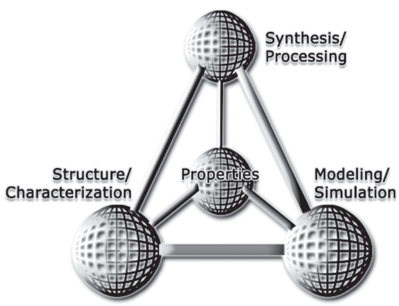
LIST OF EXPERIMENTS

1. Determination of Total Alkalinity of water.
2. Estimation of Total hardness of water.
3. Find the percentage of available chlorine in Bleaching powder.
4. Estimation of Fe (II) by Dichrometry method.
5. Preparation of Phenol - Formaldehyde Resin.
6. Synthesis of Urea- Formaldehyde Resin.
7. Estimation of Concentration of acid by pH metry.
8. Determination of Strength of acid by Conductometry.
9. Measurement of Mn^{+7} by Colorimetry.
10. Determination of concentration of a salt by ion exchange method.
11. Find the concentration of Mn^{+7} and Cr^{+6} by UV-Visible Spectrophotometry.
12. Find the rate of corrosion by weight loss method.

TEXT BOOKS:

1. J.Mendham, R.C.Denney, J.D. Bares, M.Thomas and B.Siva Sankar, “Vogel’s Text book of qualitative Chemical Analysis”, Pearson Publications - Volume I, 2009.

2. Sunita Rattan “Experiments in Applied Chemistry”, S.K. Kataria & Sons Publications, 2008.



16CH104 MATERIALS SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
8	60	-	10	-	-

Course Description and Objectives:

This course will emphasize the structure-property relationships of engineering materials. The objective of this course is to provide knowledge in basic principles of material science and also to study structure of materials at all length scales.

Course Outcomes:

The student will be able to:

- understand crystal structure of various materials and techniques used for structure determination.
- understand the influence of defects on the properties of materials
- understand the fundamentals of equilibrium phase diagrams.
- gain knowledge on various fabrication techniques used for manufacturing common engineering materials.

SKILLS:

✓ *Identify the type of material: ceramic, polymer, metal or composite.*

✓ *Select materials with suitable properties for a given application.*

✓ *Predict the type of fracture/failure in a material.*

✓ *Read and draw conclusion from binary phase diagrams.*

✓ *Suggest manufacturing methods for metals, ceramics and polymeric materials.*

✓ *Determine basic mechanical properties of materials using universal testing machine.*

I-UNIT **L-9**

BONDING IN SOLIDS: Inter atomic forces and potential energy, Types of bonds: primary and secondary, Variation in bonding character and resulting properties

CRYSTAL STRUCTURE : Classification of crystal systems – SC, BCC, FCC & HCP crystal structures with examples, Atomic packing factor, coordination number, determination of miller indices of planes & directions of cubic and hexagonal crystals, linear and planar densities, separation between successive planes, Crystal structure determination: Bragg law, powder method.

II-UNIT **L-10**

CRYSTAL DEFECTS: Point defects, Dislocations: edge, screw and mixed, burgers vectors, energy of dislocation, motion of dislocation, dislocation density. Grain boundary, stacking faults and twin boundary.

PHASE DIAGRAMS: Gibb's phase rule & terms involved – Reduced phase rule, tie line and lever rules, Two component systems–invariant reactions – Eutectic system & Iron-Carbon system.

III-UNIT **L-9**

MATERIALS FABRICATION TECHNIQUES: Fabrication of Metals: forming operations, casting, Fabrication of Ceramics: particulate forming processes, cementation. Forming techniques of Plastics: compression, transfer and injection molding, extrusion, blow molding.

MECHANICAL PROPERTIES: Stress-strain relations of various solids – Elastic, Anelastic, Visco-elastic and plastic deformations in solids, creep and fatigue, fracture: Brittle and Ductile, fracture toughness, ductile to brittle transitions.

IV-UNIT **L-8**

ELECTRICAL & SEMICONDUCTING PROPERTIES: Ohm's Law, Electrical Conductivity, Electronic and Ionic Conduction, Energy Band Structures in Solids, Classification of solids based on band models, Electron Mobility, Electrical Resistivity of Metals, Intrinsic Semiconduction, Extrinsic Semiconduction, The temperature dependence of Carrier Concentration, Factors That Affect Carrier Mobility.

V-UNIT **L-8**

DIELECTRIC AND MAGNETIC PROPERTIES: Dielectric behavior: capacitance, polarization, frequency dependence of dielectric constant, dielectric strength. Types of magnetism, Ferromagnetism-Domain theory-hystersis behavior, ferrimagnetism, soft and hard magnets – application of magnetic materials.

TEXT BOOKS:

1. W. D. Callister, "Materials Science and Engineering: An Introduction," 8th ed., John Wiley & Sons Inc, 2009.
2. V.Raghavan, "Materials Science and Engineering:A First Course", 5th ed., PHI Learing Pvt. Ltd., 2013.

REFERENCE BOOKS:

7. P. Haasen and B. L. Mordike, Physical Metallurgy, 3rd ed., Cambridge University Press, 1996.

ACTIVITIES:

- *Testing the type of failures.*
- *"Gee Whiz": Wonder presentations.*
- *Analysis of load test results.*
- *Study of micro structures of materials.*
- *Segregation of the given materials.*
- *Identification of phases in the given phase diagram.*

16ME102 ENGINEERING MECHANICS

Hours Per Week :

L	T	P	C
3	1	-	4

Total Hours :

L	T	P
45	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
20	30	-	5	-	5

Course Description and Objectives:

Engineering Mechanics applies principles of mechanics to solve common engineering problems. The goal of this course is to expose students to problems in mechanics as applied to real-world scenarios.

The course uses the Laws of Mechanics to predict forces in machines and structures. This course is prerequisite for courses like Mechanics of Machines, Stress Analysis, Design of Mechanical Systems and others.

Course Outcomes:

The student will be able to:

- use scalar and vector analytical techniques for analyzing forces in statically determinate structures.
- apply basic knowledge of mathematics and physics to solve real-world problems such as dams, bridges, fly overs, buildings, large structures etc.

SKILLS:

✓ *Solving classical mechanics problems involving system of forces.*

✓ *In-depth understanding of rigid bodies.*

✓ *Applying principles of center of gravity and moment of inertia.*

UNIT-1 **L-10, T-3**

GENERAL PRINCIPLES: Introduction to engineering mechanics, Idealization in mechanic's basic concepts, Vectors and scalar quantity, Laws of mechanics.

FORCE SYSTEM AND RESULTANT: Concept of force, Representation of force, System of forces, Resolution of forces using rectangular components.

MOMENTS AND COUPLES: Introduction, Moment of force, Varignon's theorem, Resultant of parallel forces, Couple and moment of couple, Characteristic of couple.

UNIT -2 **L-8, T-3**

EQUILIBRIUM OF BODIES: Conditions of equilibrium for a coplanar force system and coplanar non parallel non concurrent force system, Principle of equilibrium (two, three, force principle), Lami's theorem.

TRUSS: Introduction, Classification of truss, Fundamental of truss, Analysis of truss (method of joints and method of section).

UNIT-3 **L-10, T-3**

FRICTION: Introduction, Classification of friction, Coefficient of friction, Laws of friction, Angle of friction, Angle of repose, Cone of friction, Ladder friction, Wedge friction.

UNIT-4 **L-10, T-3**

CENTROID: Introduction, Centroid of lines, Centroid of surfaces, Determine centroid of simple figures, Centroid of composite figures, Centroid of a parabolic spandrel.

CENTER OF GRAVITY: Introduction, Center of gravity, Location of center of gravity - right circular cone and solid hemisphere, Center of mass, Theorem of Pappus.

UNIT-5 **L-10, T-3**

MOMENT OF INERTIA: Moment of inertia of plane areas, Polar moment of an area, Radius of gyration of area, Parallel axis theorem, Perpendicular axis theorem, Moment of inertia of composite areas, Mass moment of inertia- introduction, Radius of gyration of mass, Mass moment of inertia of rod, Rectangular plate, Right circular cylinder, Circular ring, Circular plate.

16ME103 WORKSHOP PRACTICE

Hours Per Week :

L	T	P	C
-	-	3	2

Total Hours :

L	T	P
-	-	45

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	20	-	-

Course Description and Objectives :

This course is aimed to impart knowledge and provide hands-on experience in Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring. In addition it also provides knowledge on various manufacturing processes such as Foundary, Welding, Machine Shops and CNC Machines.

Course Outcomes :

The student will be able to:

- identify various tools connected to the trades such as Carpentry, Fitting, Tinsmithy, Blacksmithy and House wiring.
- fabrication of wooden joints and understand joining of metals.
- make metal joints and sheet metal work.
- make metal tools like knives, needles, swords, arrows etc.

SKILLS:

- ✓ *Prepare wooden and metal furniture.*
- ✓ *Electrical wiring and power supply in residences.*
- ✓ *Make funnels, trays, locker, steel almirahs etc.*
- ✓ *Fabrication of various agriculture tools, hooks, axes, axels, rims etc.*
- ✓ *CNC machines and various machining operations and processes.*

EXERCISES IN THE FOLLOWING TRADES :

1. Carpentry.
2. Fitting.
3. Tin smithy and Black smithy.
4. House wiring.
5. Foundry and welding (Demonstration).
6. Machine shop and CNC (Demonstration).

Note: In each trade, the student has to perform at least two jobs.

TEXT BOOKS:

1. S.K. Hazra Choudhury, "Elements of workshop Technology", 11th edition, Media Promoters, 1997.
2. Gopal, T.V., Kumar, T., and Murali, G., "A first course on workshop practice: Theory, Practice and Work Book", Suma Publications, Chennai, 2005.
3. Venkatachalapathy, V. S, "First year Engineering Workshop Practice", Ramalinga Publications, Madurai, 1999.

ACTIVITIES:

- *To make wooden joints like Mortise and Tenon joint, T-lap Joint which are used to prepare a wooden furniture.*
- *To prepare metal joints and metal sheet products like V-Joint and trays by using mild steel flats and Galvonised iron sheets.*
- *Trials on electrical circuit connections.*

16EL102 SOFT SKILLS LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
-	-	30	-	-	-	-	-	-

Course Description and Objectives:

The Soft Skills Laboratory course is aimed at training undergraduate students on employability skills. Designed to impart work related skills, the course will enable trainees to develop interpersonal communication, leadership, Preparing Resume, Group Discussion, and Interview Skills. It will give them the required competence and confidence to handle professional tasks.

Course Outcomes:

The student will be able to :

- gain requisite professional and inter-personal skills.
- possess the ability to think critically on issues for informed decision making and know how to communicate effectively, through choice of appropriate language and speech, while dealing with others at the workplace.
- identify and introspect on individual strengths and weaknesses, will emerge with improved levels of self-awareness and self-worth, for greater efficacy at workplace.

SKILLS:

✓ *Communicate and understand the difference between soft skills and hard skills.*

✓ *Learn professionalism and Employability skills.*

✓ *Plan Career by drawing their SWOT, Setting the Goal, learn the importance of Time and Stress Management.*

✓ *Learn Vocabulary, Situational English, Group Discussion, Reading Comprehension and Listening Comprehension which are essential for all competitive examinations.*

✓ *Prepare Resume and learn how to face interview.*

✓ *Learn Gender sensitive language, Good manners, emotional intelligence and essential skills.*

ACTIVITIES:

- *Formal and informal communication.*
- *SWOT analysis.*
- *Stephen covey Time Management matrix.*
- *Stress Management techniques.*
- *Vocabulary flash cards.*
- *Situational Dialogues.*
- *Group Discussion.*
- *Resume preparation.*
- *Mock Interview.*
- *Reading comprehension activities.*
- *Listening comprehension Activity by watching the American accent video.*
- *Emotional intelligence, etiquette quiz.*

UNIT - 1 **P-8**

A) COMMUNICATION: Need for effective communication - The process of communication, Levels of communication, Flow of communication, Choice of diction and style with reference to setting (formal, semi-formal or informal); Communication networks, Barriers to communication, Miscommunication, Noise and ways to overcome the barriers.

B) SOFT SKILLS: Difference between soft and hard skills, Need for soft skills, Professionalism, Employability skills.

C) CAREER PLANNING: Job vs career, Goal setting, SWOT analysis, Planning and prioritization, Four quadrant time management system, Self-management, Stress-management.

ACTIVITY: Johari Window for SWOT analysis, Setting a SMART goal using the provided grid, Writing a statement of purpose (SOP).

UNIT - 2 **P-8**

A) VOCABULARY BUILDING: Word etymology, Roots, Prefixes and suffixes, Synonyms and antonyms, Collocations, One-word substitutes, Analogies, Idioms and phrases, Contextual guessing of unfamiliar words, Task-oriented learning (50 words).

ACTIVITY: Making a flash card (one per day by each student), Vocabulary exercises with hand-outs, Vocabulary quiz (evaluation will be a combination of the 50 words provided by the instructor and the flash cards made by the student (one per day).

B) FUNCTIONAL ENGLISH: Situational dialogues, Role plays (including small talk), Self introduction, Opening and closing a telephonic conversation, Making an appointment, Making a query, Offering/ Passing on information, Communicating with superiors, Expressing agreement/objection, Opening bank account (combination of prepared and impromptu situations given to each student).

C) GROUP DISCUSSION: Articulation and flow of oral presentation, Dynamics of group discussion, Intervention,Summarizing and conclusion, Voice modulation, Content generation, Key word approach (KWA), Social, Political, Economic, Legal and technical approach (SPELT), View point of affected part (VAP), Language relevance, Fluency and coherence.

ACTIVITY: Viewing a recorded video of GD and Mock sessions on different types of GD topics - Controversial, Knowledge, Case study (including topics on current affairs).

UNIT - 3 **P-4**

A) RESUME-WRITING: Structure and presentation, Defining career objective, Projecting one's strengths and skill-sets, Summarizing, Formats and styles and covering letter.

ACTIVITY: Appraising some samples of good and bad resumes, Preparing the resume, Writing an effective covering letter.

B) FACING INTERVIEWS: Interview process, Understanding employer expectations, Pre-interview planning, Opening strategies, Impressive self-introduction, Answering strategies, Other critical aspects such as body language, Grooming, Other types of interviews such as stress-based interviews, Tele-interviews, Video interviews, Frequently asked questions (FAQs) including behavioural and HR questions and the aspect looked at by corporate during interviews.

ACTIVITY: Writing responses and practicing through role plays and mock interviews on the FAQs including feedback.

UNIT - 4 **P-4**

A) READING COMPREHENSION: Reading as a skill, Techniques for speed reading, Understanding the tone, Skimming and scanning, Appreciating stylistics, Impediments for speed reading, Eye fixation, Sub-vocalization, Critical reading, Reading based on purpose, Reading for information, Reading for inference.

ACTIVITY: Reading comprehension exercises with texts drawn from diverse subject areas (Hand-outs), Newspaper activity with students divided into 4 groups, Each group looks at critical component of communication such as Listening, Speaking, Reading and writing enabling them to be better communicators as well as be more aware about the current affairs, Which help in group discussion.

B) LISTENING COMPREHENSION: Listening as a skill, Different types of listening, Active and passive listening, Top-down approach, Bottom-up approach, Understanding the non verbal cues of communication, Intonation and stress.

ACTIVITY: Narration of a story, Speech excerpts with different accents (Indian, British, American), listening comprehension exercises with audio and video excerpts.

UNIT - 5 **P-6**

IMPACT OF LANGUAGE ON PERSONALITY: Gender sensitive language in MNCs, Cultural sensitivity, Social awareness, Emotional intelligence, Good manners, Self-grooming, Positive body language, Accepting and handling responsibility, Assertiveness, Problem solving, Negotiating skills, Networking and creating a good first impression, Seven essential skills for a team player, Attentive listening, Intelligent questioning, Gently persuading, Respecting other’s views, Assisting others, Sharing, Participating actively.

ACTIVITY: Johari Window, Games and case studies..

TEXT BOOKS:

1. Edward Holffman, “Ace the Corporate Personality”, McGraw Hill, 2001.
2. Adrian Furnham, “Personality and Intelligence at Work”, Psychology Press, 2008.

8. Rajiv K. Mishra, “Personality Development”, Rupa and Co, 2004.

16HS109 ENVIRONMENTAL SCIENCE AND TECHNOLOGY

Hours Per Week :

L	T	P	C
2	-	-	2

Total Hours :

L	T	P
30	-	-

WA/RA	SSH/HSH	CS	SA	S	BS
10	20	4	-	4	-

Course Description and Objectives:

Environmental Science and Technology offers technological aspects of environmental science and in maintaining environmental integrity in relation to human development. It helps every engineer to plan appropriate strategies for addressing environmental issues and also contribute to the development of innovative technologies for solving such issues. It produces professionals who will ensure sustainable development of the nation in general and environmental in particular.

Course Outcomes:

The student will be able to :

- observe and integrate the diverse information from sources outside the classroom
- think critically, creatively, resourcefully and strategically, including identifying steps needed to reach goals, manage projects, evaluate progress, and adapt approaches, developing both self reliance, and civic mindedness
- adapt eco-friendly technologies in order to maintain hygienic conditions
- understand the human activities that are detrimental to environment
- collaborate across diverse disciplines to identify and create solutions that conserve and help maintain biodiversity in the long term
- discuss the issues involved in the generation of renewable energy resources.

SKILLS:

✓ *Understand structural relationships, abstract models, symbolic languages and deductive reasoning*

✓ *Gain perspectives to adrress the challenges, improvise and devise solutions*

✓ *Identify solutions to environment and development issues, using planning, analysis, modeling, and new approaches*

✓ *Acquire fieldwork techniques to study, observe and prepare documents, charts, PPTs, Models etc.*

✓ *Understand how natural resources should be used judiciously, to protect biodiversity and maintain ecosystem*

UNIT - 1 **L-6**

Environmental Studies: Definition Scope and its importance, Need for Public Awareness, Natural Resources, Forest Resources, Deforestation ; Water resources, Properties and conflicts, Mineral resources, Extraction and impacts, Food resources, Modern agriculture methods, Fertilizer-pesticide problems, Water logging, Salinity, Energy resources, Renewable and non-renewable energy resources, Harness technology, Solar energy technologies, Land resources - land degradation, Soil erosion; Role of an individual in conservation of natural resources.

UNIT - 2 **L-6**

Ecosystem : Concept, Structure and functions of an ecosystem, Food chains, Food webs, Ecological pyramids, Energy flow, Energy regulation, Succession, Biogeochemical cycles, Aquatic ecosystems.

Biodiversity : Introduction, Bio-geographical classification, Values of biodiversity, Biodiversity at global, National and local levels, Hot-spots of biodiversity, Threats to biodiversity, Endangered and endemic species of India, Conservation of biodiversity.

UNIT - 3 **L-6**

WASTE MANAGEMENT AND GREEN TECHNOLOGY

Solid waste Management: Causes, Effects and control measures of Municipal and Industrial wastes; Pollution - Air, Water, Thermal, Soil and Noise Pollutions; Role of an individual in prevention of pollution; Remote sensing / GIS - Introduction, Definitions, Applications of the remote sensing, Innovative practices-objectives, Innovative practices in agriculture and forestry-community, Bio-villages. Green technology for Sustainable development, Life cycle assessment and its Concept.

UNIT - 4 **L-6**

SOCIAL ISSUES AND EIA

Sustainable development, Water conservation, Cloud Seeding, Rainwater Harvesting Methods Watershed management, Global warming, Acid rain, Ozone layer depletion, Environmental Legislation: Wildlife Protection Act, Water Act, Forest Conservation Act, Air Act, Environmental Protection Act. Environmental Impact Assssment (EIA), Introduction, definition of E.I.A and E.I.S, Scope and objectives, Importance of E.I.A in proposed Projects / Industry / Developmental activity.

UNIT - 5 **L-6**

ENVIRONMENTAL SANITATION

Food sanitation **-** food and drugs Act, Food preservations, Milk sanitation, Tests for milk, Pasteurization of the milk; Water , Air, Soil and food borne diseases, Maintenance of sanitary and hygienic conditions, Role of youth in the development, Promoting activities, Youth as initiators and activities.

Field work/Environmental Visit: Visit to a local area to document environmental assets river/ forest/ grassland / hill /mountain, Study of local environment , Common plants, Insects, Birds; Study of simple ecosystems: Pond, River, Hill slopes etc., Visit to industries/water treatment plants/effluent treatment plants.

ACTIVITIES:

- *Painting contests on environmental issues and themes.*
- *Models of energy resources, Pollution and Solid Waste Management-3R strategy*
- *Quiz competition.*
- *Essay writing competition.*
- *Skit, JAM and debate.*
- *Field work and documentation.*
- *Assignments.*

TEXT BOOKS:

1. Anubha Kaushik- CP Kaushik, “Perspectives in Environmental Studies”, 5^{th} edition, 2016

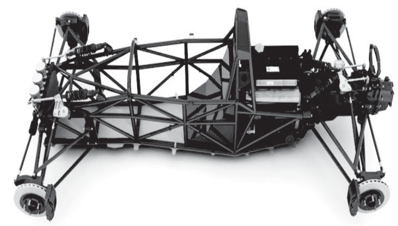
16AE201 AUTOMOTIVE CHASSIS



Hours Per Week :

L	T	P	C
2	-	2	3

Total Hours :

L	T	P
30	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
2	40	2	5	2	2

Course Description and Objectives :

This course aims at offering the fundamental concepts of different types of chassis frame construction and to gain knowledge about different types of steering geometry and front axle. The objective of this course is to offer knowledge on various components of an automobile chassis such as axles, frames, braking system and suspension systems.In addition, this course will enable the student to learn the concepts regarding the ergonomics of an automobile and modern drive line.

Course Outcomes:

The student will be able to:

- understand the different types of chassis frames.
- gain knowledge about different steering geometries and types of front axles.
- understand constructional features and working of various suspension systems
- gain knowledge on the concepts of modern drive line.
- learn about different braking systems like power assisted brakes, disc brakes, etc.

SKILLS:

✓ *Analyse and test the frames.*

✓ *Choose and design an axle according to requirement*

✓ *Identify various steering systems*

✓ *Select a proper test type for brakes*

✓ *Identify different suspension systems in an automobile*

ACTIVITIES:

- *Hands on experience on various chassis frames for long trailers*
- *Visit to a car/ truck manufacturing industry*
- *Conduct tests on different types of brakes*
- *Testing of suspension system components*
- *Dismantling, testing and assembly of chassis components*

UNIT - 1 **L-5**

INTRODUCTION : Layout with reference to power plant, Steering location and drive, Frames, Frameless constructional details, Materials, Testing of frames, Integral body construction.

UNIT - 2 **L-7**

FRONT AXLE STEERING SYSTEMS : Front axle type, Rigid axle and split axle, Constructional Details, Materials, Front wheel geometry viz., Camber, Castor, Kingpin inclination, Toe-in and toe-out. Condition for true rolling motion of road wheels during steering.Steering geometry.Ackermann and Davis steering. Construction details of steering linkages. Different types of steering gear box. Steering linkages layout for conventional and independent suspensions.Turning radius, Instantaneous centre, Wheel wobble and shimmy. Over-steer and under-steer. Power and power assisted steering.

UNIT - 3 **L-6**

DRIVE LINE STUDY : Effect of driving thrust and torque –reaction .Hotchkiss drives. Torque tube drive, radius rods.Propeller shaft.Universal joints.Final drive- different types. Two speed rear axle. Rear axle construction-full floating, three quarter floating and semi-floating arrangements. Differential-conventional type, Non-slip type, Differential locks and differential housing.

UNIT - 4 **L-6**

BRAKING SYSTEM : Type of brakes, Principles of shoe brakes.Constructional details – materials, braking torque developed by leading and trailing shoes. Disc brake, drum brake theory, constructional details, advantages, Brake actuating systems. Factors affecting brake performance, Exhaust brakes, Power and power assisted brakes. Testing of brakes.

UNIT - 5 **L-6**

SUSPENSION SYSTEM : Types of suspension, Factors influencing ride comfort, Types of suspension springs-independent suspension- front and rear. Rubber, Peumatic, Hydro- elastic suspension.Shock absorbers.Types of wheels.Construction of wheel assembly.Types of tyres and constructional details.Static and rolling properties of pneumatic tyres, Tubeless tyres and aspect ratio of tubed tyres.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

Measurement of the following chassis frames:

1. Light duty vehicle frame (Ambassador, Maruthi van etc)
2. Heavy duty vehicle frame (Leyland, Tata etc)

Dismantling and assembling of

3. Front Axle
4. Rear Axle
5. Differential
6. Steering systems along with any two types of steering gear box
7. Braking systems – hydraulic servo vacuum, compressed air power brakes.
8. Leaf spring, coil spring, torsion bar spring, Hydraulic shock absorber

Dismantling and Assembling of

9. Clutch assembly of different types

10. Gear Box

11. Transfer case

TEXT BOOKS:

1. K. Newton, W. Steeds and T. K. Garret, “The Motor Vehicle”, 13th edition, Butterworth Heinemann, 2004.
2. W. Steed, “Mechanics of Road Vehicles”, Iliffe Books,1992.

2	40	2	5	2	2

Course Description and Objectives:

This course provides fundamental concepts in thermodynamics, first and second laws of thermodynamics, entropy and energy, Ideal and real gases and non-reactive ideal gas mixtures and general thermodynamic properties. The objective of this course is to impart analytical and practical problem solving skills in thermodynamics.

Course Outcomes:

The student will be able to:

- distinguish various thermodynamic properties
- understand the first and second laws of thermodynamics and their applications.
- distinguish open and closed system, boundary conditions, work and heat interactions
- develop an understanding of various work interactions, cycles and subsequently apply first and second law of thermodynamics
- evaluate entropy changes in a wide range of processes and determine the reversibility or irreversibility
- understand the concepts of ideal and real gases, gas laws, Maxwell's relations and subsequently apply first and second laws of thermodynamics for an ideal gas and gas mixtures undergoing power and refrigeration cycles.

SKILLS:

✓ *Identify the type of systems, open or closed systems*

✓ *Identify reversible and irreversible processes*

✓ *Identify properties of ideal and real gases*

✓ *Estimate critical wall thickness of insulation*

UNIT - 1 **L- 10**

BASIC CONCEPT AND LAWS OF THERMODYNAMICS Basic concepts, Concept of continuum, Macroscopic approach, Thermodynamic systems, Closed, Open and isolated. Property, State, Path and process, Quasi-static process, Work, Modes of work, Zeroth law of thermodynamics, Concept of temperature and heat. Concept of ideal and real gases. First law of thermodynamics, Application to closed and open systems, Second law of thermodynamics, Reversibility and irreversibility. Carnot cycle reversed Carnot cycle, Efficiency, COP. Thermodynamic temperature Scale, Clausius inequality, Concept of entropy and availability.

UNIT - 2 **L-9**

IDEAL REAL GASES AND THERMODYNAMIC RELATIONS : Gas mixtures, Properties of ideal and real gases, Equation of state, Avagadro's law, Vander Waal's equation of states, Compressibility, and compressibility chart. Dalton's law of partial pressure, Exact differentials, T-D, Relations, Maxwell relations, Clausius Clapeyron equations, Joule Thomson Coefficient.

UNIT - 3 **L-9**

GAS POWER CYCLES : Air standard cycles-Otto-Diesel-Dual-Work output, Efficiency and MEP calculations –comparison of the cycles for same compression ratio and heat addition, Same compression ratio and heat rejection, Same peak pressure, Peak temperature and heat rejection, Same peak pressure and heat input, Same peak pressure and work output , Brayton cycle with inter cooling, Reheating and regeneration.

UNIT - 4 **L- 9**

RECIPROCATING AIR COMPRESSORS & AIR COMPRESSORS & AIR-CONDITIONING : Single acting and double acting air compressors, Work required, Effect of clearance volume, Volumetric efficiency, Isothermal efficiency, Free air delivery, Multistage compression, Condition for minimum work. Fundamentals of refrigeration, C.O.P., Reversed carnot cycle, Simple vapour compression refrigeration system, T-S, P-H diagrams, Simple vapour absorption refrigeration system, Desirable properties of an ideal refrigerant.

UNIT - 5 **L-8**

HEAT TRASNFER : One-dimensional Heat Conduction: Plane wall, Cylinder, Sphere, Composite walls, Critical thickness of insulation, Heat transfer through extended surfaces (simple fins).Convection: Free convection and forced convection, Internal and external flow, Simple Empirical relations. Radiation: Black–Gray bodies, Radiation Shape Factor (RSF)

LIST OF EXPERIMENTS: TOTAL HOURS: 30

THERMODYNAMICS (Any 5 must be performed)

1. Grease penetration Test
2. Viscosity measurement using Redwood viscometer and Saybolt Viscometer
3. Aniline point measurement
4. Carbon residue, cloud and pour point measurement
5. Flash and fire point measurement
6. Water tube and fire tube boilers demonstration
7. Boiler mountings and accessories study and demostration
8. Dryness fraction measurement of steam using steam calorimeter
9. Steam condenser efficiency measurement
10. Steam turbine blade efficiency measurement

ACTIVITIES:

- *Experimentation using Otto, Diesel and dual cycles and determination of their efficiencies*
- *Estimation of critical thickness of insulation for cylinders and spheres*

Heat Transfer (Any 5 must be performed)

1. Overall heat transfer co-efficient measurement using Composite Slab Apparatus
2. Heat Transfer measurement through lagged pipe.
3. Heat Transfer measurement through a Concentric Sphere.
4. Thermal Conductivity of given metal rod.
5. Heat transfer through pin-fin
6. Experiment on Transient Heat Conduction.
7. Heat transfer in forced convection apparatus.
8. Heat transfer in natural convection.
9. Parallel and counter flow heat exchanger.
10. Emissivity apparatus.
11. Stefan Boltzman Apparatus.
12. Heat transfer in drop and film wise condensation.
13. Critical Heat flux apparatus.
14. Study of heat pipe and its demonstration.
15. Shell and tube heat exchanger.

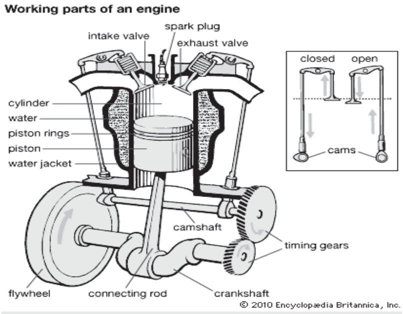
16AE203 FUNDAMENTALS OF IC ENGINES



Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
2	30	2	5	2	2

Course Description and Objectives:

The course offers fundamental knowledge of IC engines, working and combustion processes in SI and CI engines. It also provides knowledge on various fuel systems used in different engines. The objective of this course is to provide fundamental aspects of engines, thermodynamic cycles, fuels, charging techniques, cooling systems and lubrication systems and their functions. It also provides knowledge on recent technological developments in fuel systems of SI and CI engines.

Course Outcomes:

The student will be able to:

- understand the constructional and working principles of SI and CI engines
- familiarize with modern technology in fuel system of SI and CI engines
- learn the concept of combustion of SI and CI engines in microscopic level
- know the basic design of combustion chambers
- know the concept and methods of turbo and super charging
- understand the combustion process

SKILLS:

- ✓ *Identify the influence of fuel on engine performance*
- ✓ *Select suitable engine for different applications*
- ✓ *Identify different* engine constructions
- ✓ *Analyze and design a fuel supply system*
- ✓ *Differentiate different engine constructions*

ACTIVITIES:

- *Perform experiments on SI and CI engines for valve/port timing diagram.*
- *Compare and analyze different engine cycles*
- *Dismantle, inspect and reassemble the engine different fuels*

UNIT - 1 **L-10**

ENGINE CYCLES : Otto, Diesel and Dual air standard cycles, Comparison, Fuel-air cycle, Actual cycle, Deviation of actual cycle from air standard cycle. Introduction to I. C. Engine: History, Basic engine components and nomenclature, Classification with respect to cycle of operation, Working principle, Fuel used, Cylinder arrangement, Cooling method, Purpose, Valve timing diagram, Port timing diagram, Engine selection criteria for different applications.

UNIT - 2 **L-9**

ENGINE CONSTRUCTION : Cylinder head, Cylinder block, Crank case, Sump, Cooling passages, Cylinder liners, Piston types, Piston rings, Connecting rods, Crank shafts, Valves, Valve seat inserts, Valve actuating mechanisms, Drive mechanisms.

UNIT - 3 **L-8**

FUELS : Availability and properties of fuels, Octane number, Cetane number. Biofuels: Various vegetable oils for engines, Esterification, Performance in engines, Performance and emission characteristics, Bio diesel and its characteristics. (Conventional fuels, properties etc.)

UNIT - 4 **L-9**

FUEL SUPPLY SYSTEM IN S.I. ENGINE :Carburetion, Factors affecting carburetion, Mixture requirements, Principal of carburetion, Simple carburettor, Calculation of air fuel ratio, Limitations of carburettor, Altitude compensation, Gasoline injection- Direct, Port, Manifold injection, Electronic fuel injection system. Fuel Supply System in C. I. Engine :Requirements & types of injection systems, fuel injection pumps, Injectors, governor – mechanical, Pneumatic, Common rail fuel injection, Electronic injection system.

UNIT - 5 **L-9**

LUBRICATION SYSTEM : Mechanical friction, Factors affecting friction, Pumping losses, Blow by losses, Lubrication of engine components, Lubricating systems. Cooling System: Temperature distribution of engine components, Need of cooling system, Air cooling, Liquid cooling, Types, Comparison.

LIST OF EXPERIMENTS: TOTAL HOURS: 30

1. Construction details of an IC engine
2. Valve and port timing experiments on SI engines
3. Ignition systems demonstration and study.
4. Fuel feed pumps demonstration
5. Performance tests on four stroke diesel engine
6. Engine friction measurement using Morse test
7. Heat balance test on a multi cylinder engine
8. Air fuel ratio and volumetric efficiency measurement
9. Performance tests on variable compression ratio engines
10. Performance tests on reciprocating air compressor unit
11. Study of boilers
12. Disassembly / assembly of engines.

TEXT BOOKS:

1. V. Ganesan,”Fundamentals of Internal Combustion Engines”, 3rd edition, , Tata McGraw Hill, 2012
2. Heywood J.B, “Internal Combustion Engine Fundamentals”, 2nd edition, McGraw Hill, 2002
3. H. N. Gupta, “Fundamentals of Internal Combustion Engines”, PHI Learning, 2012.

REFERENCE BOOKS:

1. “Automobiles and Pollution” SAE Transactions, 1995.
2. Gill P. W., Smith J. H. and Zurich E. J., “Fundamentals of I. C. Engines”, 3rd edition, Oxford and IBH Pub. Co.,1999.

16AE203 FUNDAMENTALS OF MOTORSPORT ENGINEERING

Hours Per Week :

L	T	P	C
3	-	-	3

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	-	2	30	2	5	2	2

Course Description and Objectives:

This course provides knowledge on funamentals of motorsports engineering and their organization. It also deals with the rules and regulations of a given motor sport. The objective of this course is to offer comprehensive understanding of motor sporting and its organization, rules and regulations, technical standards and specifications.

Course Outcomes:

The student will be able to:

- understand and appreciate the details of motorsports industry
- gain knowledge about the events and competitions
- take part in national and international competitions
- design and build the vehicle as per the rules and regulations

SKILLS:

✓ *Discuss and appreciate motorsport technology evolution*

✓ *Participate in SAE events and motor sports competitions*

UNIT-1 **L- 9**

INTRODUCTION TO MOTORSPORT ENGINEERING : The history of motorsport engineering, Review of motorsport engineering, Pioneers of Motorsport engineering, Motorsport technology evolution review, Secrecy in Motorsport engineering

UNIT-2 **L-9**

LIST OF MOTORSPORT COMPETITIONS FOR STUDENTS : A brief look at all the events students can take part to develop their skills, Formula SAE - Baja, SAE Super mileage.

UNIT-3 **L-10**

PROFESSIONAL MOTORSPORT EVENTS : The various types of professional motorsport events that take place around the world, Cars:Formula One, World rally championship, Touring car championship, GP2, GP3, World Endurance Racing Championship, Dirt track racing, NASCAR, Indy Car, Cross Country rallies, Drag racing, Motorcycles, Moto GP, Superbike, Endurance, Motocross, Super moto, Freestyle, Trials, Cross-country rallies, Speedway, Board track, Drag racing.

UNIT-4 **L-9**

RULES AND REGULATIONS OF MOTORSPORTS : All about the most important book for a motorsport engineer, the rule book - About the world governing bodies of the sport, Why the rule book keeps changing, How to interpret the rule book, Rules for car races, Rules for bikes races

UNIT-5 **L-8**

CAREER IN MOTORSPORTS :A sneak peek into all the awesome jobs, Motorsport Engineer Race Driver / Rider,Test Driver / Rider, Design engineer, Race technician, Aerodynamics Engineer, Race official / steward.

TEXT BOOKS:

1. Andrew Livesey, “Basic Motorsport Engineering”, Routledge, 2012
2. Andrew Livesey, “Advanced Motorsport Engineering”, Routledge, 2012

REFERENCE BOOKS:

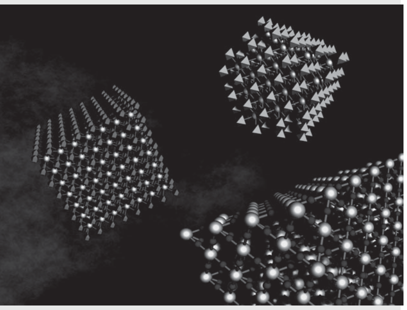
1 Josh Smith, “Smith’s Fundamentals of Motorsport Engineering”, Oxford University Press, 2014
2. Alma Hillier, “Hillier’s Fundamentals of Motor Vehicle Technology” 6th edition, Nelson Thornes, 2007.

WEB LINKS:

1. www.motorsport.com
2. www.motorsportwebsites.co.uk
3. www.motorsportmagazine.com

ACTIVITIES:

- *Analyze a racing sport with respect to its technicalities*
- *Design and develop projects on sports car*



16AE205 MATERIALS FOR AUTOMOBILE INDUSTRY

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P
45	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
2	40	2	5	2	2

Course Description and Objectives:

This course offers the basic classification of materials and different materials used in automotive industry for different components. The objective of this course is to provide the knowledge of properties and applications of ferrous, non-ferrous metals, polymers and composite materials and their production processes.

Course Outcomes:

The student will be able to:

- recognize and understand different materials used in automotive industries
- understand the fundamentals related to production methods of metals and processing of materials for automotive applications
- evaluate mechanical properties of solids, factors affecting such properties in order to select materials
- prepare samples and study various micro structures of steels

SKILLS:

✓ *Distinguish metals, ceramics, polymers and composites.*

✓ *Analyze micro structures of materials such as mild steels, low carbon steels, high carbon steels etc.*

✓ *Measure hardness of steels*

✓ *Prepare samples for micro structure studies*

✓ *Ability to select suitable materials for automobile applications*

UNIT - 1 **L-9**

INTRODUCTION : Classification and characteristics of metals, Ceramics, Polymers and composites.

Iron and Steels: Cast iron – Austempered ductile iron, Compacted graphite iron, Steels -Plain carbon steels, Low alloy steels, HSLA steels, IF steels, Bake hardening steels, TRIP steels, Ultra high strength steels, Stainless steels - production, Properties and applications.

UNIT - 2 **L-9**

NON-FERROUS ALLOYS :Aluminium alloys – Cast alloys, Wrought alloys, Age hardenable alloys, Working and heat treatment, Applications in automobiles, Magnesium alloys – Cast and wrought alloys, Working and heat treatment, Applications. Titanium alloys.

UNIT - 3 **L- 9**

POLYMERS AND CERAMICS : Processing of polymers, Brief description of equipment and process details of extrusion, Injection moulding, Thermoforming, Blow moulding, Concept of polymer design and selection criteria. Preparation and forming of ceramics, Applications.

UNIT - 4 **L-10**

COMPOSITE MATERILS :Production of composite materials and products, Moulding and forming of composites, Machining and joining of composites, Application of composites in automobiles, Metal matrix composites, Polymer matrix composites and ceramic matrix composites, Applications.

UNIT - 5 **L-8**

POWER METALLURGY : Powder metallurgy – principle, Materials and techniques. Automotive applications of powder metallurgical products.

LIST OF EXPERIMENTS: TOTAL HOURS: 30

1. Micro structures of ferrous materials
2. Micro structures of non-ferrous materials
3. Micro structures of composite materials
4. Design of dies and manufacture of composite products
5. Study of micro structures of heat treated steels.
6. Hardness measurement of steels by Jominy End Quench test
7. Rockwell Hardness test
8. Brinell Hardness test

TEXT BOOKS:

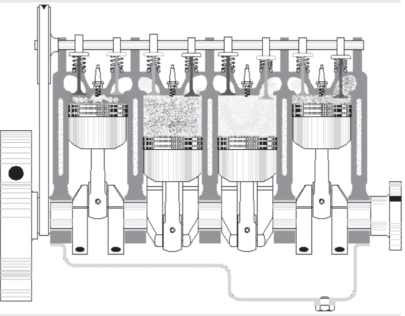
1. Balram Gupta, “Aerospace Materials”, S.Chand and Co., 2015.
2. Dieter G.E, “Mechanical Metallurgy”, McGraw Hill, 1997.

REFERENCE BOOKS:

1. American Society for Metals “Volume 1, 2, 4, 7, 20 and 21”, 1998.
2. John Brown, “Foseco Ferrous and Non Ferrous Foundryman’s Handbook” Butterworth-Heinemann, 1999.

ACTIVITIES:

- *Perform tests to evaluate micro structures of different materials*
- *Measure hardness of different metals*
- *Design of dies and manufacture of products using composite materials*



16AE206 ADVANCED THEORY OF IC ENGINES

Hours Per Week :

L	T	P	C
2	1	-	3

Total Hours :

L	T	P
30	15	-

WA/RA	SSH/HSH	CS	SA	S	BS
2	40	2	5	2	2

Course Description and Objectives:

This course offers comprehensive knowledge on combustion, thermodynamic analysis of IC engines, modeling and simulation of SI and CI engine combustion processes. The Objective of this course is to impart knowledge on thermodynamics aspects in IC engine combustion and formation of different emissions along with mathematical modeling and simulation.

Course Outcomes:

The student will be able to:

- understand the general engineering operation and design compromises involved in spark and compression ignition engines
- be familiar with common IC engine terminologies such as knock, detonation, auto ignition, surface to volume ratio and compression ratio
- apply thermodynamics knowledge to IC engine processes and cycles
- analyze the engine parameters such as friction, torque, mean effective pressure etc.
- understand the mechanisms of combustion and the influence of air fuel ratio on the performance of engines
- understand the influence of variables on undesirable emissions
- gain knowledge on different types of modern engines

SKILLS:

✓ *Formulate/develop alternate fuels*

✓ *Thermodynamic modeling and simulation of IC engines*

✓ *Modelling and simulation of engine emissions*

✓ *Identify the problem and take necessary steps to improve combustion efficiency*

UNIT - 1 **L-5**

INTRODUCTION :Fuel air cycle and Actual cycle analysis, Properties of IC engine fuels, Refining process, Chemical composition and molecular structure of fuels, Octane number, Cetane number. Knock rating of SI engine fuels.

UNIT - 2 **L-8**

COMBUSTION OF FUELS : Combustion Stoichiometry of petrol, Diesel, Alcohol and hydrogen fuels, Chemical energy and heating values, Chemical equilibrium and maximum temperature, SI engine combustion, Flame velocity and area of flame front, Performance number, CI engine combustion. Fuel spray characteristics, Droplet size, Penetration and atomization.

UNIT - 3 **L-6**

COMBUSTION MODELING : Basic concepts of engine simulation, Governing equations, thermodynamic models, SI engine and CI engine models.

UNIT - 4 **L-6**

NON-CONVENTIONAL I.C ENGINES :Adiabatic and L.H.R. engines, Variable compression ratio engine, Wankel rotary combustion engine, Free piston engine, MAN combustion chamber and multi fuel engines, Stratified charge and lean burn engines, Locomotive and marine engines.

UNIT - 5 **L-5**

COMBUSTION ANALYSIS IN I.C ENGINES : Photographic studies of combustion processes, P-Theta diagrams in SI and CI engines, Rate of heat release, hot wire and laser Doppler anemometry and velocimetry for flow and combustion analysis in IC engines.

TEXT BOOKS:

1. Ganesan,V., “Internal combustion engines”, 4th edition ,Tata McGraw Hill, 2012.
2. John,B., Heywood, “ Internal Combustion Engine Fundamentals”, 5th edition , McGraw Hill, 2015 .

REFERENCE BOOKS:

1. Ramalingam. K.K., “Internal Combustion Engine”, 2nd edition , scitech publications, 2009.
2. Ganesan,V., “Compute Simulation of Spark Ignition engine process”, Universities Press, 1996.
3. Benson, R.S., Whitehouse, N.D., “Internal Combustion Engines”, Pergamon Press, 1979.

ACTIVITIES:

- *Formulate equations/ correlations to evaluate effect of various thermodyanmic properties on the efficiency of SI and CI engines.*
- *Develop a program and simulate it for efficiency using thermodynamic relations*
- *Carry out zero dimensional simulation of SI and CI engines*
- *Capture images and analyze combustion processes*

16AG206 STRENGTH OF MATERIALS

Hours Per Week :

L	T	P	C
2	-	2	3

Total Hours :

L	T	P
30	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	-

Course Description and Objectives:

This course deals with concepts of mechanics of deformable solids including static equilibrium, geometry of deformation and behaviour of materials. The objective of this course is to enable the students to have an exposure to the systematic methods of solving engineering problems in solid mechanics. In addition, it also provides the basic mechanical principles underlying modern approaches for design of various types of structural members subject to axial, torsion, bending, transverse shear, and combined loading.

Course Outcomes:

The student will be able to:

- understand the concepts of stress and strain at a point as well as the stress-strain relationships for homogenous and isotropic materials.
- establish relationship between shear load and shear force.
- derive flexural formula for simple bending.
- identify the variation in shear stress-shear strain distribution for various cross sections.
- calculate the stresses and strains associated with thin-wall spherical and cylindrical pressure vessels.
- determine the deflections and rotations produced by the three fundamental types of loads: axial, torsional, and flexural.

SKILLS:

✓ *Measure tensile and compressive strength of materials using Universal Testing Machine.*

✓ *Measure shear strength of materials.*

✓ *Analyze deflections produced by axial, torsional and flexural loads.*

UNIT - 1 **L-5**

SIMPLE STRESSES AND STRAINS : Types of Stresses and Strains, Hooke's law, Stress strain diagram for ductile and Brittle materials, Salient points, Elastic constants and relations, Strain energy; Simple and compound bars, Thermal stresses, Stress on an inclined plane, Principle stresses – Mohr circle, Strain Energy-Resilience, Gradual, Sudden, Impact and Shock loadings.

UNIT - 2 **L-6**

SHEAR FORCE AND BENDING MOMENT : Types of loads and beams, Relation between shear load, Shear force and bending moment, Shear force and bending moment diagrams, Cantilevers – Simply supported beams and overhanging beams subjected to point loads, UDL and uniformly varying loads-Point of contra flexure.

DEFLECTION OF BEAMS: Introduction, Deflection equation for elastic curve of a beam, Deflection, Slope for cantilever beam and simply supported beams – point loads, UDL and uniformly varying loads, Double integration method, Macaulay's method, Area moment methods.

UNIT - 3 **L-6**

FLEXURE AND SHEAR STRESSES : Theory of simple bending, Assumptions, Flexural formula, Bending stresses in beams for various cross sections, Shear stresses in beams, Assumptions and derivation for variation of shear stress, Shear stress distribution for various cross-sections.

UNIT - 4 **L-6**

TORSION : Introduction, Torsion equation, Shear stress distribution for circular solid and hollow shafts, Stepped shafts, Shafts fixed at both the ends.

UNIT - 5 **L-7**

THIN CYLINDRICAL SHELLS : Introduction, Hoop and longitudinal stresses, Strains-Thin spherical shell - stresses; Columns and Struts- Introduction, Euler's Formula for critical load of columns for different end conditions, Limitations of Euler's theory, Rankine's formula, Simple Numerical.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS. **Total hours: 30**

1. Direct tension test.
2. Bending test on

   a) Simply supported beam b) Cantilever beam
3. Torsion test.
4. Hardness test

   a) Brinell hardness test b) Rockwell hardness test
5. Test on springs.
6. Compression test on cube.
7. Impact test.

TEXT BOOKS:

1. L. N. Srinath, "Advanced Mechanics of Solids", 3rd edition, Tata McGraw-Hill, 2010.
2. S. Singh, "Strength of Materials", 2nd edition, Khanna Publications, 2001.

REFERENCE BOOKS:

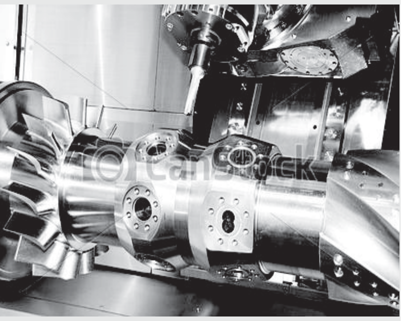
1. Bhavikatti, "Strength of Materials", 3rd edition, New Age International Publishers, 1998.
2. S. Timoshenko, "Strength of Materials", 3rd edition, D. Van Nostrand Company, 2004.
3. P. P. Egor, "Engineering Mechanics of Solids", 2nd edition, Prentice Hall of India, 1999.

WEB LINK:

1. http://ecoursesonline.iasri.res.in/course/view.php?id=9

ACTIVITIES:

- *Measurement of tensile, compressive and shear strength of materials.*
- *Design of cantilever beam.*
- *Design of simply supported and overhanging beams.*



16AE207 MANUFACTURING PROCESSES FOR AUTOMOTIVE COMPONENTS

Hours Per Week :

L	T	P	C
3	-	2	4

Total Hours :

L	T	P	WA/RA	SSH/HSH	CS	SA	S	BS
45	-	30	2	40	2	5	2	2

Course Description and Objectives:

This course offers basic theory of metal working and cutting principles such as foundry, welding, metal forming and machining. The objective of the course is to provide basic knowledge of different manufacturing process used in automobile industry. it also imparts knowledge on NC and CNC machines programming and surface finishing process.

Course Outcomes:

The student will be able to:

- understand and analyze metal working and cutting processes
- select process parameters and tools for obtaining desired machining characteristics
- analyze the effect of various parameters on process characteristics
- understand the processes involved in surface finishing

SKILLS:

- ✓ *Apply the knowledge of various manufacturing processes*
- ✓ *Identify various process parameters and their effect on processes*
- ✓ *Design and analyze various manufacturing processes and their tooling*
- ✓ *Operate different machines and perform various operations*
- ✓ *Program NC and CNC machines*

UNIT - 1 **L-9**

CASTING : Casting terminology, Moulding sand, Types of patterns, Pattern materials, Pattern allowances, Cores, Elements of gating system, Investment casting, Die casting, Centrifugal casting, Casting defects.

UNIT - 2 **L-10**

FORGING : Types of forging, Drop forging, Press and machine forging, Forging defects .

SHEET MATERIAL OPERATIONS : Shearing, Blanking, Piercing, Spinning, Drawing, Bending.

WELDING : Gas welding, Arc welding, TIG, MIG, Soldering and brazing.

UNIT-3 **L-9**

METAL CUTTING: Elements of metal cutting, Chip formation, Types of chips, Tool geometry speed, Feed, Depth of cut.

LATHE : Working principle of lathe, Principle parts of lathe work holders, Turning operations.

SHAPER : Working principle, Principle part of shaper, Shaping operations.

UNIT-4 **L-9**

MILLING Principle of working, Column and knee type milling machine, Milling operations and cutters, Indexing Methods.

GRINDING : Theory of grinding, Cylindrical and surface grinding, Lapping and Honing.

UNIT-5 **L-8**

NUMERICAL CONTROL :NC elements, Structure of CNC Machine tools, CNC part programming, Manual part programming , Computer Aided part programming, DNC machine tools.

LIST OF EXPERIMENTS: TOTAL HOURS: 30

List of experiments - Lathe:

1. Facing and chamfering
2. Step turning
3. Drilling and taper turning
4. Grooving, and knurling
5. Thread cutting – External and internal

List of experiments – special machines:

6. Internal and external dovetail machining in shaper
7. Spur gear Milling
8. Keyway slotting
9. Pocket Milling
10. Grinding

TEXT BOOKS:

1. P.C. Sarma, “Production Technology”, 3rd edition, S. Chand and Co., 2009.
2. M.P. Groover, “Automation, Production Systems and Computer Integrated Manufacturing”, 3rd edition, PHI Publications, 2008.

REFERENCE BOOKS:

1. H.N. Gupta, R.C. Gupta and Arun Mittal, “Manufacturing Processes”, 2nd editon, New Age International, 2009.
2. AmitabaGhosh and A. Kumar Mallik, “Manufacturing Science”, 1st edition, East West Publishers, 2009.
3. Kalpakjian, “Manufacturing Engineering and Technology”, 4th edition., Pearson Education, 2005.

ACTIVITIES:

- *Mould Preperation and casting different components*
- *Perform forging operations such as drop forging and press/ maching forging*
- *Perform facing, chamfering, step turning, drilling and taper turning using lather machine*
- *Perform milling operation to produce a spur gear*
- *Perform grinding operation to improve surface finish*

16AG208 THEORY OF MACHINES

Hours Per Week :

L	T	P	C
2	-	2	3

Total Hours :

L	T	P
30	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
5	40	5	8	5	-

Course Description and Objectives:

This course describes the anatomy of mechanisms, machine elements and their response to static and dynamic forces. The objective of this course is to introduce mathematical models used in kinematic and dynamic analysis of machineries. In addition it provides a basic knowledge on kinematic and dynamic designs of machinery as well as mechanical vibrations.

Course Outcomes:

The student will be able to :

- identify common mechanisms in machines used in everyday life.
- calculate mobility using different degrees of freedom.
- analyze velocity, acceleration mechanisms.
- understand gear design, mechanisms, classifications and standards.
- perform static and dynamic force analysis and balancing of masses.
- understand the types of vibrations developed during functioning of any mechanical system.

SKILLS:

✓ *Identify common mechanisms used in machines and their applications.*

✓ *Simulate various mechanisms using various modelling techniques.*

✓ *Measure vibrations in various mechanisms.*

✓ *Determine degree of freedom for mechanisms.*

UNIT - 1 **L-5**

INTRODUCTION TO MECHANISMS: Links, Classifications of links, Kinematic pairs - Lower pairs, Higher pairs; Kinematic chain, Inversion, Four bar chain and slider crank mechanisms, Determination of Degree of freedom of simple mechanisms, Straight line motion mechanisms- Classification of straight line motion mechanisms, Peaucellier's, Tchebicheff's and pantograph mechanisms.

UNIT - 2 **L-7**

VELOCITY AND ACCELERATION IN MECHANISMS: Motion of a link in machine, Velocity of a point on a link, Instantaneous center, Types of instantaneous centers, Kennedy's theorem, Velocity measurement by instantaneous center method, Relative velocity method, Acceleration of a point on a link, Acceleration in slider crank mechanism, Coriolis component of acceleration.

UNIT - 3 **L-6**

GEARS AND GEAR TRAINS: Introduction, Friction wheels toothed gearing, Types of gears, Law of gearing, Condition for constant velocity ratio for transmission, Form of teeth, Cycloidal and involute profiles, Phenomena of interferences, Condition for minimum number of teeth to avoid interference, Expression for arc of contact and path of contact, Introduction to gear train, Train value, Simple, Compound, Reverted and epicyclic gear train, Method to find gear train value.

UNIT - 4 **L-6**

BALANCING: Balancing of rotating masses, Primary, Secondary balancing ,Balancing of reciprocating masses, Analytical and graphical methods, Unbalanced forces and couples, Hammer blow, Swaying couple, Variation of tractive effort.

UNIT - 5 **L-6**

MECHANICAL VIBRATION: Basic Concepts, Types of vibrations, Determination of natural frequency of simple systems, Vibrations of beams due to point loads, Dunkerley's method, Rayleigh's method, Forced and damped vibrations, Vibration isolation and transmissibility, Whirling of shafts, Critical speeds, Torsional vibrations of two and three rotor systems.

LABORATORY EXPERIMENTS

LIST OF EXPERIMENTS Total hours: 30

1. Characteristics of four bar mechanism.
2. Variation in velocity and acceleration of the slider crank mechanism.
3. Dynamic balancing of the rotating mass system.
4. Study of the free vibration and determination of natural frequency of vibration of Two- Rotor system.
5. Longitudinal and torsional vibration and determination of natural frequency vibration of single rotor system.
6. Study of damped torsional vibration and determination of damping coefficient.
7. Verification of the relation T = $2\pi\sqrt{l/g}$ for a simple pendulum.
8. Determination of whirling speed of shafts.

ACTIVITIES:

- *Design prototypes of different straight line motion mechanisms.*
- *Simulation and modelling of different mechanisms.*
- *Design of quick return motion mechanism.*
- *Measurement and analysis of vibration in different systems.*

TEXT BOOKS:

1. Thomas Bevan, “Theory of Machines”, 3rd edition, CBS Publishers, 2004.

16EL103 PROFESSIONAL COMMUNICATION LABORATORY

Hours Per Week :

L	T	P	C
-	-	2	1

Total Hours :

L	T	P
-	-	30

WA/RA	SSH/HSH	CS	SA	S	BS
-	-	-	-	-	-

Course Description and Objectives:

The Professional Communication Laboratory course is aimed at improving professional communication skills (LSRW – Listening, Speaking, Reading and Writing) of undergraduate students and preparing them for their profession as engineers and managers. This course will help students to understand professional communication and personality as two interlinked spheres of influence, and provide them with exposure to conventions of corporate communication involved in the functioning of the business world.

Course Outcomes:

The student will be able to :

- clear industry recognized certification such as BEC Vantage by the University of Cambridge.
- stand out both in the professional setting as well as for further pursuits in the academic world.
- confidently and successfully attempt all the 4 critical components since this certification looks at LSRW (Listening, Speaking, Reading and Writing) components in great detail.

SKILLS:

- ✓ *Understand and use grammar rules in writing; sentences, paragraphs, paraphrasing.*
- ✓ *Write business emails, memos, letters, reports and proposals.*
- ✓ *Comprehend business articles and documents.*
- ✓ *Use expressions in Professional context and acquire presentation skills like one minute talk and pair discussion in professional context.*
- ✓ *Familiarize and comprehend British accent by listening to recorded speeches and discussions.*

ACTIVITIES:

- *Basic grammar practice, Framing paragraphs on topics allocated.*
- *Paraphrasing an article or a video in your own words Finding topic sentences in newspaper articles.*
- *Finding out new words from a professional viewpoint Understanding the meaning and its usage.*
- *Perusing samples of well prepared proposals and reports.*
- *Draft different proposals/reports on topics assigned.*
- *Watching videos/ listening to audios of business presentations.*
- *Classroom activities of team and individual presentations.*
- *Using PPTs, mock exercises for BEC speaking.*
- *Presenting (speaking) the written components completed in Unit 1.*
- *Hand-outs; matching the statements with texts.*
- *Finding missing*

UNIT - 1 **P-6**

BUSINESS ENGLISH VOCABULARY: Glossary of most commonly used words (formal and informal usage) Elements of technical writing - Sentence structure, Reducing verbosity, Arranging ideas logically, Building coherence, Paragraph level and document level, Topic sentence, Cohesive devices, Transitional words, Paraphrasing and précis-writing; Mechanics of writing - Stylistic elements, The rapporteur, The purpose, The reader's viewpoint (audience); Elementary rules of grammar, Choice of diction, Elementary principles of composition, Matters of form, Punctuation, Conventions of business communication, Language and professional tone, Weak links in business correspondence, Ethical concerns in business writing, Code of conduct (not sending illegal, offensive, Disparaging personal remarks or comments) in written business communication.

UNIT - 2 **P-6**

BUSINESS CORRESPONDENCE: E-mail - Nature and scope, E-mail etiquette, Clear call for action, Common errors in composing e-mails, Office communication such as meeting agenda and minutes of the meeting, Notice, Circular and memo; Letter-Writing - Formal and informal letters, Structure of formal letters, Expressions of salutations, Different types of letters [such as sales letter, Complaint letter, Response to the complaint letter (dispute resolution), Letter of permission, Letter of enquiring, Claim letter - Letter of apology etc]; Introductory and concluding paragraphs and clear call for action.

PROFESSIONAL PROPOSAL/REPORT: Differentiating proposals and reports, Drafting formal business proposals, Types of reports such as factual reports, Feasibility reports and survey reports, Parts of a report (Such as title page, Declaration, Acknowledgements, Table of contents, Abstract, Introduction, Findings, Conclusion and recommendations, Citations, References and appendices).

UNIT - 3 **P-6**

SPEAKING: Speaking in business context, Assertiveness, Politeness, Making requests, Queries and questions, Negotiations, Asking for information, Offering suggestions, Conflict resolution, Contacting clients, Initiating, Addressing delegates (in public), Features of a good power point presentation (making the PPT), Delivering the presentation effectively, Telephone etiquettes, Delivering seminar/proposal/report effectively, Team meeting etiquettes (face to face and conference call), Making effective one minute presentations.

UNIT - 4 **P-6**

READING: Reading and comprehending business documents, Learning business register, Regularizing the habit of reading business news, Suitable vocabulary, Skimming and scanning text for effective and speedy reading and dealing with ideas from different sectors of corporate world in different business contexts.

UNIT - 5 **P-6**

LISTENING: Specific information in business context, Listening to telephonic conversations/messages and understanding the correct intended meaning, Understanding the questions asked in interviews or in professional settings, Summarizing speaker's opinion or suggestion, Enable active listening.

VFSTR UNIVERSITY

III Year - B.Tech

SYLLABUS

I SEM & II SEM

III Year I Semester

L	T	P	To	C
3	1	-	4	4

AE 319 ADVANCED THEORY OF I.C. ENGINES

Course Description & Objectives:

The course aims to develop the students with the knowledge about the advanced theory and working of I.C engines and the phenomena of combustion and modelling.

Course Outcomes:

Upon the successful completion of the course, learners will be able to

1. *Explain the various working cycles of engine*
2. *Describe the various types of combustion in IC engines.*
3. *Illustrate the engine combustion parameters.*
4. *Describe the different types of modern engines.*
5. *Explain the modern electronic engine management system (EMS) of I.C engines.*

UNIT - I: Introduction:

Fuel air cycle and Actual cycle analysis, Properties of IC engine fuels, Refining process, chemical composition and molecular structure of fuels, octane number, cetane number. Knock rating of SI engine fuels.

UNIT - II: Combustion of Fuels:

Combustion Stoichiometry of petrol, diesel, alcohol and hydrogen fuels – Chemical energy and heating values – Chemical equilibrium and maximum temperature – SI engine combustion – Flame velocity and area of flame front –performance number – CI engine combustion. Fuel spray characteristics – droplet size, penetration and atomization.

UNIT - III: Combustion Modelling:

Basic concepts of engine simulation – Governing equations, thermodynamic models – SI engine and CI engine models.

UNIT - IV: Non-Conventional I.C. Engines:

Adiabatic and L.H.R. engines – Variable compression ratio engine – Wankel rotary combustion engine – Free piston engine - MAN combustion chamber and multi fuel engines – Stratified charge and lean burn engines – Locomotive and marine engines.

UNIT – V: Combustion Analysis in I.C. Engines:

Photographic studies of combustion processes – P-è diagrams in SI and CI engines, Rate of heat release – hot wire and laser Doppler anemometry and velocimetry for flow and combustion analysis in IC engines.

TEXT BOOKS:

ME319 DYNAMICS OF MACHINES

Course Description & Objectives:

The course will focus on the study of forces, motion and inertia in machines and performance of machines under dynamic conditions and their analysis.

Course Outcomes:

On completion of the course, the students would be able to:

1. *do static and dynamic force analysis on slider crank mechanism but also on other mechanisms.*
2. *demonstrate the torque analysis on any kind of fly wheel i.e., either on engine flywheel or machine flywheel*
3. *calculate the brake force analysis on any type of four wheeler 4. Able to perform the experiment and measure the torque acting on a dynamometer*
4. *conduct experiment on the effect of the gyroscopic torque on any moving/rotating machine*
5. *demonstrate the working principle of a governor and able to identify different types of governors in actual practice*
6. *design different types of bearings.*

7. *calculate the axial force acting/required to operate any clutch.*
8. *do experiment and find out amount of balancing mass required to keep the system in dynamic equilibrium*
9. *balance various types of reciprocating engines.*
10. *understand the types of vibrations developed during functioning of any mechanical system*
11. *find the critical speed of any rotating shaft carrying weights/rotors by conducting experiment.*

UNIT – I: Static and dynamic force analysis:

Introduction, analytical methods to find displacement, velocity and acceleration of the piston, forces acting on connecting rod and crank. **Flywheel:** Turning moment diagram, determination of work done and power from turning moment diagram, fluctuation of energy, flywheels.

UNIT – II: Brakes:

Block brakes, band brakes, differential band brakes, self locking and self energizing brakes, braking force analysis of a four wheeler. **Gyroscope:** Precision motion and its effect on stability of ships, Aeroplanes, and four wheelers.

UNIT – III: Governors:

Watt, Porter and Proell governors, spring loaded governors-Hartnell and Hartung governors, terms associated with governor performance - sensitiveness, isochronism and hunting. **Clutches:** Uniform pressure and uniform wear, single plate and multiplate clutches, cone clutch.

UNIT – IV: Balancing of Rotating Masses:

Balancing of rotating masses, single and multiple masses acting at single and different planes. **Balancing of Reciprocating Masses:** primary, secondary balancing, analytical and graphical methods, unbalanced forces and couples, locomotive balancing- hammer blow, swaying couple and tractive efforts,balancing of inline engines.

UNIT – V: Longitudinal Vibrations:

Introduction – Definitions – Types of Vibrations –Free Longitudinal Vibrations – Damped Vibrations – Logarithmic Decrement – Forced Vibrations – Vibrations Isolation and Transmissibility. **Transverse & Torsional vibrations** – Whirling of Shafts – critical speeds -Free Torsional vibrations - Two rotor systems.

AE 323 AUTOMOTIVE COMPONENTS DESIGN

Course Description & Objectives:

Course aims to equip the student to analyze the stress and strain on transmission components; and understand, identify and quantify failure modes for the parts. They would be able to demonstrate knowledge on classification /types, functions, materials used, constructional details, methods of manufacturing, Troubles & Remedies.

Course Outcomes:

Upon the successful completion of the course, learners will be able to:

1. *select and design a suitable clutch for the drive system*
2. *select suitable gear ratio and number of speeds to design the gear box for any system.*
3. *estimate the load, moment and stresses on frame members and suspension.*
4. *estimate the load, moment and stresses on front axle and steering system.*
5. *estimate the load, moment and stresses on final drive and rear axle*

UNIT – I: Spur Gears:

Force analysis, Number of teeth, Face width & Beam strength of gear tooth, Incremental dynamic tooth load, Effective load on gear tooth, Estimation of module based on beam strength and wear strength, Spur gear design for maximum power transmission.

Helical Gears: Virtual number of teeth, Tooth proportions, Force analysis, Beam strength and Wear strength of helical gears, Effective load on gear tooth, Herringbone gear.

UNIT – II: Bevel Gears:

Types, Terminology of bevel gears, Force analysis, Beam strength and Wear strength of bevel gears, Effective load on gear tooth, Spiral bevel gears. **Worm Gears**: Terminology, Force analysis, Friction in worm gears, Vector method, Strength rating and wear rating of worm gears, Thermal considerations.

UNIT – III: Gear Box Design:

Ray diagram, gear box configuration and design. **Design of Levers:** Types, Applications in Automobile, design of levers – Rocker arm lever, hand and foot levers.

UNIT – IV: Design and selection of standard components:

Design of flat pulleys, wire ropes, Selection of flat belts,V belts, chains, electric motors, oil seals and gaskets.

UNIT – V: Engine Component Design:

Design of Piston, Piston pin, Connecting Rod, Crankshaft, Cylinder liner, cylinder head.

DESIGN DATA BOOK:

AE 325 AUTOMOTIVE TRANSMISSION

Course Description & Objectives:

To develop the basic knowledge of the students in mechanics, torque conversion areas. To develop the skills of the students in the areas of alternative drives and concepts. To serve as a pre-requisite course for other courses in UG and PG programs specialized studies and research.

Course Outcomes:

On successful completion of this course students will be able to:

1. *understand the concept of gear motions, drive line positions.*
2. *study about different types of gearboxes.*
3. *know about the multi stage and polyphase torque converters, performance characteristics*
4. *study about Automatic transmission*
5. *learn about the different drive systems.*

UNIT I: Vehicle Layouts:

Introduction, Classification of automobile, Types of chassis layout with reference to power plant locations and type of drive, Types of chassis- fully forward, semi forward, Truck or bus chassis, two & three wheeler chassis layout

Clutches: Principle, functions, general requirements, torque capacity, types of clutches, cone clutch, single-plate clutch, diaphragm spring clutch, multi-plate clutch, centrifugal clutch, electromagnetic clutch, lining materials, over-running clutch, Clutch control systems.

UNIT II: Gear Box and Hydrodynamic Drives:

Objective of the gear box. Problems on performance of automobile such as Resistance to motion, Tractive effort, Engine speed & power and acceleration. Determination of gear box ratios for different vehicle applications. Different types of gear boxes.

Principles, performance and limitations of fluid coupling Constructional details of a typical fluid coupling. Reduction of drag torque, Principle, construction and advantages of hydrodynamic torque converters. Performance characteristics, converter couplings. Multi-stage Torque converter and poly phase torque converter.

UNIT III: Automatic Transmission

Ford – T model gear box, Wilson gear box- Cotal electric transmission– Hydraulic control systems of automatic transmission.

UNIT IV: Hydrostatic Drive And Electric Drive

Principle of hydrostatic drive systems. Construction and working of typical drives. Advantages and limitations. Control of hydrostatic transmissions, Principle of electric drive. Early and modified Ward Leonard control systems.

UNIT V: Automatic Transmission Applications

Chevrolet “Turboglide” transmission. Toyota’s Automatic transmission with Electronic control system. Continuously Variable Transmission (CVT) – types – Operations.

AE 327 AUTOMOTIVE CHASSIS (DEPT. ELECTIVE - I)

Course Description & Objectives:

To understand different types of chassis and to gain knowledge about different types of steering geometry and types of front axle. To educate the students regarding the ergonomics of an automobile and to educate about modern drive line.

Course Outcomes:

On successful completion of this course students will be able to:

1. *Understand the different types of chassis frames.*
2. *Gain knowledge about different steering geometry and types of front axle.*
3. *Study about the various suspension systems*
4. *Study about modern drive line.*
5. *Learn about the different braking systems like power brake, assisted brakes, disc brakes.*

UNIT I: Introduction:

Layout with reference to power plant, steering location and drive, frames, Frameless constructional details, materials, testing of frames, integral body construction.

UNIT II: Front Axle Steering System:

Front axle type, rigid axle and split axle, Constructional Details, Materials, Front wheel geometry viz., camber, castor, kingpin inclination, toe-in and toe-out. Condition for true rolling motion of road wheels during steering. Steering geometry. Ackermann and Davis steering. Construction details of steering linkages. Different types of steering gear box. Steering linkages layout for conventional and independent suspensions. Turning radius, instantaneous centre, wheel wobble and shimmy. Over-steer and under-steer. Power and power assisted steering.

UNIT III: Drive Line Study:

Effect of driving thrust and torque –reaction .Hotchkiss drives. Torque tube drive, radius rods. Propeller shaft. Universal joints. Final drive- different types. Two speed rear axle. Rear axle construction-full floating, three quarter floating and semi-floating arrangements. Differential-conventional type, Non-slip type, Differential locks and differential housing.

UNIT IV: Braking System

Type of brakes, Principles of shoe brakes. Constructional details – materials, braking torque developed by leading and trailing shoes. Disc brake, drum brake theory, constructional details, advantages, Brake actuating systems. Factors affecting brake performance, Exhaust brakes, power and power assisted brakes. Testing of brakes.

UNIT V: Suspension Systems:

Types of suspension, Factors influencing ride comfort, Types of suspension springs-independent suspension- front and rear. Rubber, pneumatic, hydro-elastic suspension. Shock absorbers. Types of wheels. Construction of wheel assembly. Types of tyres and constructional details. Static and rolling properties of pneumatic tyres, tubeless tyres and aspect ratio of tubed tyres.

AE 329 TWO AND THREE WHEELERS TECHNOLOGY (DEPT. ELECTIVE - I)

Course Description & Objectives:

To develop the basic knowledge of the students in constructional details of two and three wheelers. To develop the skills of the students in the operating principles.

Course Outcomes:

On successful completion of this course students will be able to:

1. *understand the working of two and four stroke engines.*
2. *understand the functioning of clutch and gear box.*
3. *know the wheels, tyres, suspensions and braking systems.*
4. *familiarize the latest models of two wheelers.*
5. *understand the operations of three wheelers and latest models of three wheelers.*

UNIT I : Power Unit:

Two stroke SI engine, four stroke SI engine; merits and demerits. Symmetrical and unsymmetrical port timing diagrams. Types of scavenging processes;

merits and demerits, scavenging pumps. Rotary valve engine. Fuel system. Lubrication system. Magneto coil and battery coil spark ignition system, electronic ignition system. Starting system; Kick starter system.

UNIT II : Chassis and Sub-Systems:

Mainframe and its types. Chassis and shaft drive, Single, multiple plates and centrifugal clutches. Gear box and gear controls. Front and rear suspension systems. Shock absorbers. Panel meters and controls on handle bar.

UNIT III: Brakes, Wheels and Tyres

Drum brakes, disc brakes, front and rear brake links, layouts. Spoked wheel, cast wheel, disc wheel, disc types. Tyres and tubes.

UNIT IV: Two Wheelers:

Case study of major Indian models of motorcycles, scooters and mopeds. TVS mopeds and motorcycles, HeroHonda motorcycles, Bajaji scooters and motorcycles, Yamaha, Enfield motorcycles. Servicing and maintenance.

UNIT V: Three Wheelers:

Case study of Indian models. Auto rickshaws, pickup van, delivery van and trailer. Maintenance:& Fault tracing.

ME 327 METROLOGY & INSTRUMENTATION (DEPT. ELECTIVE - I)

Course Description & Objectives:

Metrology course is aimed to provide knowledge of limits, gauges, linear and angular measurements. Different process parameters like temperature, pressure, flow rate are very much important in process industry for the quality production. Students are given sufficient exposure of these techniques through this course.

Course Outcomes:

On completion of the course, the student would acquire:

1. *sound knowledge in gauge design and gauge selection*
2. *angle measurement with various measuring instruments*
3. *different comparators working and selection, measurement of surface finish by different techniques*
4. *various transducers working and application to physical parameters by the instruments*
5. *different techniques to measure temperature force and flow.*

UNIT – I: Introduction to metrology:

Line and end standards – Theory of limits, fits and tolerances - Fundamental deviation – types – Grades of tolerances – Fits – Types of fits - Hole basis and shaft basis systems – Interchangeability and selective assembly. Limit Gauges - Taylor's principle – GO and NO GO
gauges – plug and ring gauges.

UNIT – II: Linear, Angle,Taper and Optical measurements:

Linear measurements : Slip gauges – Dial indicators – Micrometer. **Angle and Taper measurement :** Bevel protractor – Angle slip gauges —sine bar – Taper determination using Rollers and spheres. **Optical Measurements:** Optical flats – NPL Interferometer.

UNIT – III: Comporators & Surface roughness measurement:

Comporators : Mechanical – Electrical – Pneumatic comparators. **Surface roughness measurement :** Surface roughness and surface texture – Numerical assessment of surface finish – CLA – RMS- Ten point height of irregularity - Measuring Instruments - Profilograph – Talysurf.

UNIT – IV: Introduction to Instrumentation & Displacement measurements:

Generalized configuration and functional description of measuring instruments - Static and dynamic characteristics - Calibration. Displacement measurements: Theory and construction of various transducers to measure displacement - Resitance type - LVDT – Capacitive type - piezo electric type Instruments

UNIT – V: Temperature, Strain Measurements:

Temperature Measurements: various principles of temperature measurements, expansion thermometers, resistance thermometers, thermistors, thermocouples, pyrometers **Strain measurements:** Various types of strain measurements, electrical resistance strain gauge, gauge factor - configurations to measure tensile, compressive and bending strains.

AE 331 VEHICLE EVALUATION & MAINTENANCE LAB

Course Description & Objectives:

To develop the Practical knowledge in the field of Automobile Engine components. To impart the fundamental knowledge in evaluation & maintenance.

Course Outcomes:

On successful completion of this course students will be able to understand the complete methodology of evaluation & maintenance of automobile and develop skills in dismantling & assembling of automobile components using instruments and special tools. They would acquire knowledge and skills in the fundamental disciplines of an evaluation & maintenance concepts of an automobile components..

List of experiments:

1. Study and layout of an automobile repair, service and maintenance shop.
2. Study and preparation of different statements/records required for the repair and maintenance works.
3. Study and preparation of the list of different types of tools and instruments required.
4. Minor and major tune up of gasoline and diesel engines
5. Fault diagnosis in electrical ignition system, gasoline fuel system, diesel fuel system and rectification
6. Study of the electrical systems such as head lights, side or parking

lights, trafficator lights, electric horn system, windscreen wiper system, starter system and charging system.

7. Study and checking of wheel alignment

8. Simple tinkering, soldering works of body panels, study of door lock and window glass rising mechanisms.

9. Practice of the following:

i) Adjustment of pedal play in clutch, brake, hand brake lever and steering wheel play

ii) Air bleeding from hydraulic brakes, air bleeding of diesel fuel system

iii) Wheel bearings tightening and adjustment

10. Practice of the following

i) Adjustment of head lights beam

ii) Removal and fitting of tyre and tube

III Year I Semester	L	T	P	To	C
	-	-	3	3	2

AE 333 AUTOMOTIVE CHASSIS AND TRANSMISSION LAB

Course Description & Objectives:

To develop the practical knowledge in the field of automobile engineering by imparting the fundamental knowledge of chassis and running system.

Course Outcomes:

On successful completion of this course students will be able to understand the various types of frames and develop skills in dismantling and assembling of chassis components. They would be able to undertake minor repairs and trouble shoots the breakdowns and demonstrate front wheel steering geometry and steering system layout along with power steering, steering gear boxes etc.

List of experiments:

Chassis Lab

1. Demonstration of front wheel steering geometry and steering system layout.

2. Demonstration of power steering.
3. Demonstration of steering gear boxes.
4. Experiment on computerized wheel balancing and front wheel alignment.
5. To open the master cylinder, wheel cylinder, identify the different components, sketch & assemble.
6. Demonstration of compressed air, vacuum servo and parking brake.
7. Demonstration of conventional leaf spring suspensions of light, heavy vehicle.

Transmission Lab

1. Demonstration, study and sketching of different vehicle layouts and its comparison.
2. Demonstration, study and prepare dimensional sketch of single plate clutch.
3. Demonstration, study and prepare dimensional sketch of multiplate clutch..
4. Demonstration, study and prepare dimensional sketch of Sliding mesh gear box.
5. Demonstration, study and prepare dimensional sketch of Continuous variable transmission unit (CVT).
6. Demonstration, study and prepare dimensional sketch of differential and final drive

III Year I Semester

L	T	P	To	C
-	-	3	3	2

AE 335 TWO AND THREE WHEELERS TECHNOLOGY LABORATORY

Course Description & Objectives:

To develop the basic knowledge of the students in constructional details of two and Three Wheelers and to develop the skills of the students in the operating principles.

Course Outcomes:

On successful completion of this course students will be able to understand the working of two and four stroke engines and the functioning of clutch and gear box. They would be knowing the wheels, tyres, suspensions and braking systems and familiarize the latest models of two wheelers

List of experiments:

1. Performance test of a two wheeler using chassis dynamometer.
2. Performance test on shock absorber
3. Performance test on shock absorber
4. Two wheeler chain test
5. Brake and Clutch adjustment as per specification
6. Dismantling and assembling of two wheeler gear box and finding gear ratios
7. Dismantling and assembling of three wheeler box and finding gear ratios
8. Three wheeler brake and clutch play adjustment
9. Dismantling and assembling of three wheeler steering system.
10. Study of three wheeler chassis frame and power transmission system

III Year II Semester

L	T	P	To	C
4	-	-	4	4

AE 320 VEHICLE BODY ENGINEERING

Course Description & Objectives:

To develop the basic knowledge of the students in design of the vehicles body to give maximum comfort for the passengers and exposed to the methods of stream lining the vehicles body to minimize drag.

Course Outcomes:

On successful completion of this course students will be able to:

1. *understand the concept of car body design, passenger safety, crumple zone and crash testing.*
2. *know the concepts of wind tunnel testing and vehicle body optimization techniques to reduce drag.*
3. *familiarize the various types of bus body construction, seating layout, regulations and comfort.*
4. *understand the various heavy vehicle bodies, driver's visibility and cabin design.*
5. *know the different types of materials and painting techniques for vehicle body.*

UNIT- I: Car Body:

Types: saloon, convertibles, limousine, estate car, racing and sports car. Visibility: regulations, driver's visibility, tests for visibility, methods of improving visibility and space in cars. Safety: safety design, safety equipments for cars. Car body construction; design criteria, prototype making, initial tests, crash tests on full scale model, Dummies and Instrumentation.

UNIT-II : Vehicle Aerodynamics:

Objectives. Vehicle drag and types; various types of forces and moments, effects of forces and moments, side wind effects on forces and moments, Various body optimization techniques for minimum drag, wind tunnel testing: flow visualization techniques, scale model testing, component balance to measure forces and moments.

UNIT- III: Bus Body:

Types: mini bus, single decker, double-decker, two level and articulated bus. Bus body layout; floor height, engine location, entrance and exit location, seating dimensions. Constructional details: frame construction, double skin construction, types of metal sections used, Regulations, Conventional and integral type construction.

UNIT-IV: Commercial Vehicle:

Types of body; flat platform, drop side, fixed side, tipper body, tanker body, Light commercial vehicle body types. Dimensions of driver's seat relation to controls. Drivers cab design.

UNIT –V: Body Materials, Trim and Mechanisms:

Steel sheet, timber, plastic, GRP, properties of materials; Corrosion, anticorrosion methods. Selection of paint and painting process. Body trim items. Body mechanisms.

ME 320 HEAT TRANSFER

Course Description & Objectives:

This course is designed to introduce a basic study of the phenomena of heat to develop methodologies for solving a wide variety of practical engineering problems, and to provide useful information concerning the performance and design of particular systems.

Course Outcomes:

On completion of the course, the student would be able to:

1. *understand the basic laws of heat transfer.*
2. *account for the consequence of heat transfer in thermal analyses of engineering systems.*
3. *analyze problems involving steady state heat conduction in simple geometries.*
4. *develop solutions for transient heat conduction in simple geometries.*
5. *obtain numerical solutions for conduction and radiation heat transfer problems.*
6. *understand the fundamentals of convective heat transfer process.*
7. *evaluate heat transfer coefficients for natural convection.*
8. *evaluate heat transfer coefficients for forced convection inside ducts.*
9. *evaluate heat transfer coefficients for forced convection over exterior surfaces.*
10. *analyze heat exchanger performance by using the method of log mean temperature difference.*
11. *analyze heat exchanger performance by using the method of heat exchanger effectiveness.*
12. *calculate radiation heat transfer between black body surfaces.*
13. *calculate radiation heat exchange between gray body surfaces.*

UNIT – I: Introduction:

Modes and mechanisms of heat transfer - Basic laws of heat transfer - General discussion about applications of heat transfer. Conduction Heat Transfer: Fourier’s law - General heat conduction equation in Cartesian, Cylindrical and Spherical coordinates.

UNIT – II: One Dimensional Steady State Conduction Heat Transfer:

Homogeneous slabs, hollow cylinders and spheres - overall heat transfer coefficient, electrical analogy - Critical radius of insulation. systems with heat sources or Heat generation. Heat transfer through extended surfaces – rectangular fins.

UNIT – III: One Dimensional Transient Conduction Heat Transfer:

Systems with negligible internal resistance -Significance of Biot and Fourier Numbers – Chart solutions of transient conduction systems.

UNIT – IV: Convective Heat Transfer:

Concepts about Continuity, Momentum and Energy Equations. Concepts about hydrodynamic and thermal boundary layer and use of empirical correlations for convective heat transfer - Flat plates and Cylinders. Heat Exchangers: Classification of heat exchangers - overall heat transfer Coefficient and fouling factor -Concepts of LMTD and NTU methods – Heat Exchanger design using LMTD and NTU methods.

UNIT – V: Boiling and Condensation:

Pool boiling - Regimes, Calculations on Nucleate boiling, Critical Heat flux and Film boiling: Film wise and drop wise condensation - Nusselt's Theory of Condensation on a vertical plate. Radiation Heat Transfer **:** Emission characteristics and laws of black-body radiation heat exchange between two black bodies - concepts of shape factor - Emissivity - heat exchange between grey bodies -radiation shields – electrical analogy for radiation networks.

AE 324 MODERN VEHICLE TECHNOLOGY

Course Description & Objectives:

The objectives are to familiarize with the latest Automobile accessories and equipments of modern vehicle systems with help of electronic systems.

Course Outcomes

On successful completion of this course students will be able to:

1. *know about the Modern Automobile accessories and engine management systems.*
2. *gain knowledge about various suspension systems.*
3. *understand the concept of automotive air-conditioning systems.*
4. *know about various collision warning systems.*
5. *know about passenger comfort and convenient systems.*

UNIT – I: Driver Information Systems:

Introduction, driver support systems – driver information, driver perception, driver convenience, driver monitoring. Vehicle support systems – general vehicle control, collision avoidance, vehicle status monitoring.

UNIT – II: Driver Assisting Systems:

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition, driver assistance systems.

UNIT – III: Safety Systems:

Active and passive safety systems, Airbags, seat belt tightening system, collision warning systems, child lock, anti lock braking systems, traction control, Electronic Stability Programme. Crash worthiness of vehicle, vehicle crash testing, testing with dummies. **Security Systems:** Anti theft technologies, smart card system, number plate coding.

UNIT – IV: Comfort Systems:

Active suspension systems, requirement and characteristics, different types, power steering, collapsible and tiltable steering column, power windows, biometric systems. **Adaptive Control Systems:** Adaptive cruise control, adaptive noise control, anti spin regulation, cylinder cut- off technology.

UNIT – V: Electronic Engine Management:

The Feedback control carburettor, single point and multipoint injection system, working of electronic fuel injector, different types of electronic fuel injection systems like L, K, KE, LU, LH and Motronic, ME & MH systems.

TEXT BOOKS:

AE 326 VEHICLE DYNAMICS

Course Description & Objectives:

Students undergoing this course are expected to apply fundamental knowledge of the students in automotive field in the areas of vehicle vibrations and describe the skills of the students in stability of vehicles and their effects, related with longitudinal, vertical & lateral dynamics.

Course Outcomes:

Upon the successful completion of the course, learners will be able to:

1. describe the basic fundamental of vibration.
2. analyze multi degree freedom system for mode shape in transmission linkages.
3. analyze the vehicle directional stability and roll behavior

4. enumerate the suspension systems, tyre dynamics & directional stability of the vehicle.
5. *analysis the vehicle dynamic by using statistical methods*

UNIT I: Basics of Vibration:

Classification of vibration, definitions, mechanical vibrating systems, mechanical vibration and human comfort. Modeling and simulation studies. Single degree of freedom, multi degree freedom systems, free, forced and damped vibrations. Magnification factor and transmissibility. Vibration absorber. Two degree of freedom system. Modal analysis.

UNIT II: Dynamics of Suspension & Tyres:

Requirements of suspension system. Spring mass frequency, wheel hop, Wheel wobble, wheel shimmy, choice of suspension spring rate. Calculation of effective spring rate. Vehicle suspension in fore and aft & roll axis. Human response to vibration, vehicle ride model. Tire forces and moments, rolling resistance of tires, relationship between tractive effort and longitudinal slip of tyres, cornering properties of tyres, ride properties of tyre.

UNIT III: Stability of Vehicles

Resistance, types of resistance, Load distribution, stability on a curved track slope and a banked road, calculation of tractive effort and reactions for different drives.

UNIT IV: Performance & Handling Characteristics of Vehicles:

Equation of motion and maximum tractive effort. Aerodynamics forces and moments. Power plant and transmission characteristics. Prediction of vehicle performance. Braking performance. Steering geometry. Steady state handling characteristics. Steady state response to steering input. Transient response characteristics. Directional stability of vehicle.

UNIT V: Basics of Car Aerodynamics:

Objects — Vehicle types of drag. Various types of forces and moments. Effects of forces and moments. Various body optimization techniques for minimum drag. Principle of wind tunnel technology. Flow visualization techniques. Test with scale models.

AE328 SPECIAL PURPOSE VEHICLES (DEPT. ELECTIVE -II)

Course Description & Objectives:

To develop the basic knowledge of the students in design of the tractor body to give maximum comfort for the driver. To develop the skills of the students in the areas of off road vehicle safety design and operation

Course Outcomes:

On successful completion of this course students will be able to:

1. *understand the concept of general design of tractors, safety, crumple zone and crash testing.*
2. *know the concepts of cooling system, lubrication system and fuel system of a tractor.*
3. *familiarize the various types of farm tractor transmission systems*
4. *understand the various driver's visibility and cabin design.*
5. *know the different types of farm equipments.*

UNIT – I: General Design of Tractors:

Classification of tractors - Main components of tractor - Safety rules. **Fundamentals of Engine Operation :**Tractor controls and the starting of the tractor engines - Basic notions and definition - Engine cycles – Operation of multicylinder engines - General engine design – Basic engine performance characteristics.

UNIT – II: Engine Mechanism of Tractor:

Cylinder and pistons - Connecting rods and crankshafts - Engine balancing – Construction and operation of the valve mechanism - Valve mechanism components - Valve mechanism troubles.

UNIT – III: Cooling System, Lubrication System and Fuel System:

Cooling system - Classification - Liquid cooling system - Components, Lubricating system servicing and troubles - Air cleaner and turbo charger - Fuel tanks and filters – Fuel pumps.

UNIT – IV: Farm Tractor Transmission System:

Layout, Load distribution, Transmission & Drive line, Steering, Braking system, Wheels &Tyres, Hydraulic system, Auxiliary Systems, Draw bar, PTO Shaft.

UNIT – V: Farm Equipment:

Working attachments of tractors - Farm equipment - Classification – Auxiliary equipment - Trailers and body tipping mechanism.

AE 330 ELECTRONIC ENGINE MANAGEMENT SYSTEMS (DEPT. ELECTIVE - II)

Course Description & Objectives:

The objectives are to familiarize with the latest Automobile accessories and equipments

Course Outcomes:

On successful completion of this course students will be able to:

1. *know about the modern automobile accessories and engine management systems.*

2. *gain knowledge about various pid controls.*
3. *understand the concept of various sensors and actuators.*
4. *know about various si engine management systems.*
5. *know about various c.i. engine management systems.*

UNIT – I: Fundamentals of Automotive Electronics:

]Components for electronic engine management system, open and closed loop control strategies, PID control, Look up tables, introduction to modern control strategies like Fuzzy logic and adaptive control. Parameters to be controlled in SI and CI engines.

UNIT – II: Sensors and Actuators:

Inductive, Hall Effect, hot wire, thermistor, piezo electric, piezoresistive, based sensors. Throttle position, mass air flow, crank shaft position, cam position, engine and wheel speed, steering position, tire pressure, brake pressure, steering torque, fuel level, crash, exhaust oxygen level (two step and linear lambda), knock, engine temperature, manifold temperature and pressure sensors.

UNIT – III: S.I. Engine Management:

Three way catalytic converter, conversion efficiency versus lambda. Layout and working of SI engine management systems like Bosch Monojetronic, L-Jetronic and LH-Jetronic. Group and sequential injection techniques. Working of the fuel system components.Advantages of electronic ignition systems.Types of solid state ignition systems and their principle of operation, Contactless electronic ignition system, Electronic spark timing control.

UNIT – IV: C.I. Engine Management:
